Many inquiries concering the waxing of vegetables have been received in the New York State College of Agriculture during the past year. Commercial growers and shippers, the College reports, want to know how much longer vegetables will keep when waxed, how much waxing costs, how wax is applied, and the equipment necessary.

One method developed at Cornell is simple, using a cold wax emulsion. The emulsions can be applied by dipping to carrots, beets, squash, pumpkins, cucumbers, tomatoes. Eggplants, peppers and many other vegetables. On drying, a very thin film, one ten-thousandth of an inch thick, is left on the vegetable. Thin as this film is, it effectively reduces water losses and shriveling. It is absolutely harmless, has no taste, and can be removed by washing with warm water, which is recommended for all vegetables, waxed or unwaxed, before they are eaten.

The experiments have shown that waxed vegetables can be kept from two to three times as long as the unwaxed ones before they show signs of wilting or breakdown. The cost of materials for waxing is said to be small. Interested growers and shippers, however, are urged by the College to make preliminary tests with a single gallon of wax and a wire basket for dipping before they go ahead on a larger scale.

### STORE YOUR FEEDSTUFFS

"Farm and Ranch again calls attention to the large crop of feedstuffs already produced in the Southwest, or in the making," says an editorial in the July 15 issue. "Many have already sold their oats at the thresher as low as 15 cents per bushel, a price under the cost of production. Grain sorghums give evidence of abundant yields, and again we will have low cash prices. Oats can be kept indefinitely. Trench silos will take care of grain sorghums, sweet sorghums, Sudan, alfalfa and other feedstuffs. Corn and other grains can be stored and treated that weevils will be kept out indefinitely. Why sell at below cost of p oduction and then produce another crop next season? Better save what you have produced as an insurance against next season. There are 10,500 trench silos in Texas and large numbers in Oklahoma, Arkansas, Louisiana and New Mexico. The number could be doubled and still not be overdone. Past experiences should be a warning. There have been years when drouths have reduced pastures and feed supplies to such an extent that animals were straved. There is no reason for a recurrence of such conditions. If Southwestern farmers would take advantage of abundant productions in good years and store for use in years of low production, it would iron out the peaks and valleys of farm income and make for a more permanent form of prosperity.

### GETS HIGH YIELDS ON OLD HILLSIDE FARM

Operating on a sound land improvement program, Wash Walls, Monticello, Drew county, Ark., is making 250 pounds of cotton and 25 bushels of corn an acre on an old hillside farm that has been in cultivation over 100 years, laccording to Clifford Alston, county agent.

The crop yields now are about twice what they were over 40 years ago, Mr. Wells told the county agent.

Planting vetch as a winter cover crop, terracing his land, following a good rotation, and planting large acreages of summer legumes, are the things to which Mr. Walls credits his high crop production on the old farm.

He looks to cotton, fruit, watermelons, and sweet potatoes for his income. This year he planted 83 acres of cotton, 10.4 acres of corn and peas, 4.1 acres of potatoes, 1.9 acres of peanuts, .6 acre of watermelons, and 2 acres of permanent pasture.

Sweet potatoes are the chief source of income. A yield of 200 bushels an acre is made, and they are sold for $1 a bushel. Fifty dollars worth of watermelons an acre are sold each year, while at the present price of cotton, only about $20 an acre can be expected from that crop, the county agent pointed out.

### MAKES FRIED CHICKEN TENDERER, SHE SAYS

Chicken is an especially delightful food when prepared by the oven method, which makes the drumsticks and all savory and tender, advises Miss Grace Armstrong, food specialist at the Illinois college of agriculture. Here is the method.

The pieces of chicken are fried until they are browned thoroughly on the outside, then put in a casserole or roasting pan. The chicken is then baked one-half to one hour in a low oven, which means from 250 to 300 degrees Fahrenheit.

That low temperature is what does the trick when it comes to fixing chicken that "melts in the mouth," the food specialist explains. Whereas a high temperature, as formerly recommended, would tend to dry out the meat, lower temperature leaves it juicy and full of flavor, although cooked through.

Whether or not a coating is applied to the pieces of chicken before they are browned in deep fat is up to the individual person, according to Miss Armstrong. If the pieces are to be fried "as is", they should be wiped dry to avoid spattering when placed in the hot fat.

Flour, used as a coating, browns more quickly than other material, the specialist advises. About one-third cup of flour with one-half teaspoon of salt will do for a 1 1-2 pound bird. If cornmeal is the choice, less than one-half as much cornmeal as flour should be used. Otherwise the crust will be dry and hard.

### TOMATO JUICE NEEDS GOOD QUALITY FRUIT

The country's grocers report that they sell 72 times as much tomato juice as they did 10 years ago.

Tomato juice is refreshing and healthful, and every farm family should provide a supply, advises the Prairie Farmer.

Use ripe, firm, fresh picked tomatoes, the publication says. After they're washed and cored, steam 10 minutes, then put through a sieve right away.

Pour the hot juice into hot containers. If it has cooled, it must be heated to 175 or 180 degrees—but should not be boiled. Add one-half to one teaspoonful of salt to each quart, seal and process in boiling water 45 minutes.

### HAYING TIME

The fertile promises of spring
Fulfill in floret lavender:
When pollinated another swing,
Cut the ripened provender.

Ask any farmer—he will know
The appointed day and hour;
Whet the curved blade, hang it low,
Scythe the fodder, stalk and flower.

Redtop, bluegrass, timothy—
Stuff the haylofts rafter-high:
Food for cattle, loss for me,
As though the green sea had gone dry.

—Harry Elmore Hurd

# Christmas Programs

## *Now Ready!*

Send in Your Order Now for These Spicy, Interesting, Religious Programs that Contain

SPEECHES, RECITATIONS, PLAYLETS AND SONGS

Appropriate for the Holiday Season. The Authors of these programs are active Church and Sunday School workers and know just the Type of program that appeals to the grown-ups and can be rendered by the younger children most efficiently. The story of the Birth of the Saviour of the World is never forgotten in the composition of these programs. Don't wait until our supply is exhausted. Vol. XI. NASHVILLE, TENN., OCTOBER 15, 1938 No. 9.

NOV 1938

# Negro Farmers of the Nation Called to Convention

## ★ ★ ★ ★ ★ ★ ★ ★ ★ Religious Services to be Held Three Times Each Day

## DR. R. C. CROUCH TO DELIVER SERMON

### President of State Body And Dr. Jordan of the S. S. Convention Will Bring Message

Forsyth, Ga.—(Special)—Religious services will characterize the opening of the annual convention of farmers which has been called to meet in this city by President Leon Harris, of the National Federation of Colored Farmers, incorporated. It is understood that the Rev. R. C. Crouch, D. D., president of the Missionary and Educational Convention of Georgia, is down to preach the sermon at 2:00 P. M. October 26th in the chapel of the State Agricultural and Mechanical College, and that the Rev. G. W. Jordan, D. D., of Atlanta has been selected as an alternate. Rev. Dr. Jordon is the president of the Sunday School Convention of the state, and resides in Atlanta. There will be other outstanding religious leaders who have been invited to come down to this "Annual convention site of the farmers of the nation, Forsyth,' for this session.

They are to be here four days, and will have session morning, afternoon and evening. These three daily periods will be opened with devotions, and spiritual fervor will characterize each session. In the song services music from the Jubilee Melody and Folk Song Book will be used.

It is understood that President W. M. Hubbard of State College has agreed to allow the student body to make up a huge chorus to be used at the night session. Dr. Crouch has signified his willingness to deliver the message. Dr. Jordan has already accepted the invitation, so that the ninth annual convention will not only be spiritual and religious, but will take on the air of a national movement where religion and business will go hand in hand, with the religious idea taking the lead.

## HOLSEY IS SPEAKER AT FARMER'S DAY FETE

(From Atlanta Daily World)

Gainesville, Ga.—The fourth annual Farmers' Day took place Labor Day at Archer where four thousand white and colored people came to enjoy the hospitality and fellowship with the farmers and their families of this community.

The program of the day was definitely mapped out under the guidance of the efficient demonstration agent, Mrs. M. Todd McKenzie and the alert county agent, Frank E. Pinder.

The main event of this day was the address delivered by Mr. A. L. Holsey, secretary of the National Negro Business League an Head Field Officer of the Soil Conservation Service.

The milling crowd was informed of the purpose of this day by Mr.

## FARM BUILDING LOAN

### Federal Housing Administration Explained By Deputy

Washington, D. C.—Deputy Administrator Charles C. McGhee says, restoration of the property improve-credit plan other changes in the recently amended National Housing Act should prove particularly interesting and helpful to farmers desiring to finance the cost of repairing, rebuilding or modernizing their homes, barns and other service buildings.

New dwellings, garages, barns, silos, hogs, poultry and milk houses and other such structures may also be built with loans insured by the Federal Housing Administration, this feature of the National Housing Administration being a special opportunity for farmers desiring to improve their living conditions or increase the efficiency of their farm business.

"How to Modernize Your Farm Home," a booklet describing the National Housing Act, as it applies to farmers is now available and free copies may be had by writing the Federal Housing Administration, Washington, D. C.

Under the property improvement

## RICHMOND, VA., RETAIL STORES OPERATED BY NEGRO PROPRIETORS

The 170 retails stores operated in Richmond, fifteenth city in size of Negro population, by 166 Negro active proprietors and firm members in 1935, reported sales of $314,000. According to William L. Austin, Director of the Bureau of the Census, Richmond's Negro retail store proprietors reported only 19 fewer stores in 1935 than were reported by Negro proprietors in the same city in 1929 when 189 retail stores were recorded. In 1935, 119 enterprises were classified as food stores and eating and drinking places. These enterprises represented 70 per cent of all stores operated by Negroes in Richmond.

Sales of $314,000, reported by Richmond's Negro operated retail stores, were $343,961 or 52.3 per cent below sales of $657,961 reported by Negro operated retail stores located in Richmond in 1929. Of sales reported in 1935, 73 food stores, 42.9 per cent of the Negro operated retail stores reported for Richmond in 1935, realized sales which represented 39.8 per cent of total sales. The classification, eating and drinking places, which con-

## GUEST SPEAKERS NAMED

### National Representatives Extended Invitation

His Honor, Governor E. D. Rivers of Georgia.

Former Congressman Patterson, of the Agricultural Department, Washington, D. C.

J. A. (Billboard) Jackson, representing a special Department of Standard Oil Company, New York.

Dr. J. B. Watson, President, Agricultural and Mechanical State College, Pine Bluff, Ark.

Benjamin Jefferson Davis, President, National Negro Press Association, and Editor of The National Baptist Union-Review, Atlanta, Ga.

Henry Allen Boyd, president of Citizens Savings Bank & Trust Company, secretary, National Baptist Publishing Board, Nashville, Tenn.

Mrs. R. R. Morton, wife of former President Morton of Tuskegee Institute, who now resides in Virginia.

Rev. R. C. Crouch, president Miss. and Educational Convention of Ga.

Hon. E. A. Miller, Asst. to Director of Southern Division.

Dr. Jos. H. B. Evans, Farm Security Administration.

Maj. H. C. McCormick, Director Interlocking and Supervisor of Farms, Taft, Okla.

Mr. O. T. Jackson, representing Colored Farmers, Masters, Colo.

Mr. Walter Riley, Tchula, Miss., 1st Vice Pres. N. F. C. F.

Mr. Jas. P. Davis, Head Field Officer, Little Rock, Ark.

Hon. U. S. Brown, Director of State Extension Service of Ga.

Dr. S. V. Sanford, Chancellor of the University of Ga.

Mr. A. L. Holsey, Tuskegee Institute, Alabama.

## NATION SHOULD HELP EDUCATE US, HE SAYS

Baton Rouge, La.—(ANP)— In the opinion of Dr. T. Lynn Smith, head of Louisiana State University's sociology department, the federal government should take over the responsibility of educating Negroes.

"Negroes as a race," Dr. Smith said last week, "are sadly lacking in the skills, habits, technique and attitudes necessary for successful independent existence as free men.

"The nation, which forced the liberation of the Negro salves, has felt the task of educating the former slaves and their descendants to the very communities that were economically ruined in the process.

"Obviously adequate training for Negroes has been and remains a national obligation."

## LA. FARM CONDITIONS

### Qualified Tenants Ejected Who Do Not Follow Methods

(From Black Dispatch)

New Orleans—(ANP)— Examples of attempts at farm peonage of Negro tenant farmers in West Feliciana parish were expressed through the refusal of parish officials to accept farm Security Administration loans, and the ejection of Negro tenant farmers who are too prosperous or who refuse to buy from the landlord's commissary.

This parish was among those designed to receive FSA aid for their farmers, and is reported to have refused because Negroes would be benefited. Negro tenants that applied for loans were told by Millard Springs, parish supervisor of FSA, that he knew of no such loans being made. When approached by representatives of the Louisiana Farmers Union he said that no one was qualified.

In some parishes the use of one of the regulations is being emphasized to refuse the tenants' applications. This regulation states that, "emphasis will be placed on

(Continued on Page 2)

## SOUTHERNERS TAKING HOLD OF OWN ECONOMIC PROBLEMS

Birmingham, Ala—That President Roosevelt's picture of the South, as the country's "Economic Problem No. 1", and the Mellett reporting the President's position, have made a profound impression all through Dixie is evidenced by the response to the call for a "Southern Conference for Human Welfare" to be held in this city.

"We have been literally overwhelmed," says Judge Louise O. Charlton, chairman of the temporary committee. "We felt that if the South was 'Economic Problem No. 1,' it was up to Southerners to find out what could be done about it.

"So we launched the conference idea on a modest scale. We have been surprised and gratified by the response which has come from every Southern state and from representatives of every class, including, of course, outstanding spokesmen for organized labor."

Among the sponsors are leading citizens of Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas and Virginia.

(Continued on Page 2)

## FORSYTH, GEORGIA WILL OPEN WIDE HER GATES

### President Hubbard, Faculty and Students, With Citizens as Hosts

Forsyth, Ga. (Special)—Preparations that embrace every phase of accommodation, entertainment and hospitality in southern style have been arranged by the president and faculty of the State Teachers and Agricultural College, this city, for the ninth annual convention of the Federation of Colored Farmers of the nation. These representatives of the tillers of the soil, stockraisers, poultry promoters, truck garden owners and fruit growers with their affiliated trades representing farmers, are to spend four days in a convention with a program that is far-reaching, at which time they will develop plans, suggest procedure and listen to addresses as well as see exhibits from these people who have been regarded as the back bone of America, because they produce from the soil the wealth of the United States.

Mr. Leon Harris, the president of the organization and the direct head of the association, is to arrive in this city on the morning of the 26th. The citizens will give their welcome on the evening of the 26th in the main auditorium of the college. Five thousand letters and invitations have been mailed out by the secretary-treasurer of this organization, from their office in Nashville, Tenn., while the president, from his home in Moline, Illinois, has contacted the Governor of every state in the Union, inviting him to send a representative from his state to this annual convention. In addition to these, farm administrators, farm agents, representatives from the Agricultural and Adjustment Bureau and every Farm Bureau of the United States have been sent invitations. The presidents of all the land grant colleges have been urged to send a representative here to sit in with and take part in the deliberations of this ninth annual convention. They are

(Continued on Page 2)

## MR. JOHN R. McGHEE WILL PURCHASE FARM

Sledge, Miss.—(Special)—Friends and associates of Mr. John R. McGhee who resides on rural route out of this city, in Quitman County, have learned that he has decided to purchase a farm in one of the fertile sections of the state of Arkansas in close proximity to Pine Bluff. It is understood that the purchase is being negotiated through the Federal Land Bank of St. Louis. They sent this information to Mr. Leon R. Harris, the president of the National Federation of Colored Farmers, because Mr. McGhee has affiliated with that organization for a number of years.

Mr. McGhee is planning to put livestock on the farm, such as horses, mules, cows, sheep and goats, and then to augment these with chickens, ducks and turkeys.

(Continued on Page 2)

## RICHMOND, VA., RETAIL STORES OPERATED BY NEGRO PROPRIETORS

(Continued from page 1)

tains 46 establishments, 27 per cent of the retail stores reported by Richmond's Negro proprietors, accounted for 21.7 per cent of total sales, while 31 "other retail stores," 18.2 per cent of stores reported operated by Negro proprietors in Richmond, realized 28.3 per cent of total sales. Twenty-eight fuel and ice dealers in the other retail store group, reported sales amounting to $85,0000 or 27.1 per cent of total sales.

Total operating expenses amounting to $62,000 was 19.7 per cent of total sales. Forty-five and six-tenths per cent of total operating expenses ($28,256) was required to pay an average of 84 workers employed by Richmond's Negro proprietors of retail stores.

## FORSYTH, GA., WILL OPEN

(Continued from Page 1.)

returning to Forsyth and to the state of Georgia upon the urgent invitation of His Excellency, the Governor, the white state college as well as the Negro state college of Georgia.

The convention will enroll messengers, distribute badges, pass around official programs and give itself over entirely to the work of the organization. The Federation of Colored Farmers in the state of Georgia, through its president, Mr. Price of Atlanta has assured the officials of the National Federation that the state organization will support this convention in every way humanly possible.

Mr. Price is to arrive early Wednesday morning the 26th, so as to be prepared to throw his influence into the betterment of a program already made up, and which will be pushed vigorously.

## MR. JOHN R. McGHEE WILL PURCHASE FARM

(Continued from page 1)

He plans to begin in 1939 raising a diversified crop along with the fowl and livestock. It is said that he is receiving special consideration, with easy long-time payments.

## LA. FARM CONDITIONS

(Continued from Page 1)

the ownership of sufficient stock, and family equipment to operate a family size farm, and the ability of the borrower to make a down payment." As many farmers in the parish pay a yearly rent of from $85 to $100 and buy their equipment and improve their homes and property, this regulation would not disqualify them. Of these conditions Gordon McIntyre of the Farmers Union, stated, "FSA, due to lack of national policy that could protect such cases, is failing to reach them."

**Tenants Forced to Buy and Sell to Landlords.**

Investigation revealed that Negro tenants in the parish are limited to the number of livestock they may raise by the landlord. Recently an unidentified Negro who did not buy at the commissary and who sold livestock without giving the landlord the first preference was ejected. A law recently passed by the state legislature permits the landlord to eject the tenant, and with the parishes refusing FSA loans the tenant is in a sad plight.

Attention was attracted to the poorly provided schools for Negroes in the parish. There is not a high school for Negroes, most of their schools being held in old churches that are virtually shacks. The farmers children in numerous instances walk six or more miles to some of the schools, and some go into the bordering state of Mississippi because the schools are closer. It will be remembered that West Feliciana parish was among the 61 that used the funds apportioned by the state for Negroes for other purposes.

## SOUTHERNERS TAKING HOLD OF OWN ECONOMIC PROBLEMS

(Continued from page 1)

These are the subjects for discussion: Health, education, child labor, race relations, prison reform, labor relations, farm tenantry, suffrage and constitutional rights.

The conference will probably meet in this city early in December, and 1,500 delegates, all Southerners, are expected.

"It would be difficult to exaggerate the significance of this movement," says Dr. H. C. Nixon, field chairman. "We are sure it will demonstrate that the South is courageous and intelligent enough to face facts and to do whatever may be necessary to set its house in order."

## FARM BUILDING LOAN

(Continued from Page 1)

credit plan, owners of farms or tenants having leases which will expire not less than six months after the maturity date of the loan, may borrow up to $10,000 to be used exclusively for property improvements of a permanent character. Installation and purchase of equipment and machinery, such as cream separators, churns, and poultry batteries are no longer eligible for insurance under Title 1, but permanent improvements as barns, pens, feed bins, stalls, troughs, ventilating systems, water systems, electric wiring and silos, for example are eligible.

Property improvement credit loans to farmers are repayable in monthly or seasonal payments for the sale of crops or livestock; but there must be at least one payment a year. Interest and other charges depend upon what arrangement can be made with the bank or private lending agency granting the loans which is repaid in equal monthly installments.

For the first time under the Property Improvement Credit Plan new construction loans of two types may be insured up to $25,000. These are called class 2 loans, and apply to the building of new structures such as barns, garages, service buildings and various kinds of poultry, hogs and milk houses—roadside markets, tourist cabins, gasoline stations and various other industrial and commercial buildings. These loans may run for five years and are payable in equal monthly installments.

Class 3 loans, under Title 1, apply to such new constructions used wholly or in part for residential purposes. Certain property construction requirements as established by the Federal Housing Administration, must be complied with. These loans are also limited to $25,000 in amount, but may run for a period of 10 years and are payable in equal monthly, semi-annual or annual payments.

Whether or not security will be required for loans up to $2,500 is a matter to be decided by the lending institution. Where loans exceed $2,500 the taking of security is strongly urged by the administration. And in case of loans for the erection of Class 1, structures, collateral mortgage security must be furnished. Persons eligible farm owners, farm tenants and prospective buyers, provided they have good credit standing and reasonable ability to repay the loan.

## HOLSEY IS SPEAKER AT FARMER'S DAY FETE

(Continued from page 1)

Pinder, who said it was the desire to have friends and farmers of the other parts of the county and state to come and share with the farmers of Archer in the biggest in Alachua County.

**Mayor Welcomes**

The guests were welcomed to the city by the Honorable Monroe Venable, Mayor of Archer, who said that it was a pleasure to see so many persons present and it was his desire that the day would go out as planned. This official said that much had been done by both the white and colored people of Archer to make this day eventful. A fitting response to the expressions of the Mayor was made by Mr James Jones, retired letter carrier and one of the outstanding farmers of this section.

A brief and appropriate introduction of the speaker, Mr. A. L. Holsey, was made by Mr. Pinder. This gentleman brought greetings to his many listeners from Tuskegee and the National Negro Business League and information concerning the soil conservation service.

The speaker said in part, "We are living in a new day, a day of the New Deal which is launched by the government of this country. The main individual who is responsible for this new philosophy of life is the President of this great democracy, Franklin Delano Roosevelt.

**Keenly Interested**

"A man who is keenly interested in the masses. In the New Deal, the Negroes are sharing a part and they would be receiving a greater portion if they were intelligent of the mechanism or workings of the great. Such information comes to the farmers by the demonstration and county farm agents, by me and others who are connected with the program. Avail yourselves of this information and act accordingly.

This day is growing into statewide significance and is singular or Alachua County. The persons who are responsible for such an event are the demonstration agent and county farm agent. Mrs. McKenzie and Mr. Pinder are to be commended for such outstanding work."

## WITH BOTH HANDS

Montreal Star: A businessman says that a woman should get a man's pay. Well, show us a wife who doesn't.

# TVA DISCRIMINATION BARED IN KNOXVILLE BY CHARLES HOUSTON

### Noted Attorney of N.A.A.C.P. Tells How Agency Has Failed to Benefit Colored Race

Knoxville, Tenn., Sept. 8 (ANP)—Three investigations of discrimination against Negroes in the Tennessee Valley authority, out of which nothing came, will be supplemented by another probe, the congressional investigating committe revealed Thursday after Charles H. Houston, special counsel for the N. A. A. C. P., had finished testifying. Gordon R. Clapp, TVA personnel director, was instructed to make a report.

Atty Houston told the committee he was not opposed to the TVA itself, but merely to its policies. The N. A. A. C. P. had been working on discrimination in the project since 1935. A year later, John P. Davis, now secretary of the National Negro congress, investigated and made a report in the Crisis under the title "TVA: Lily-White Reconstruction." In 1935, Davis made a second probe covered in a report, "The Negro and TVA."

When these reports were brought to the attention of TVA officials, they were analyzed sentence by sentence and another investigation ordered. Dr. A. E. Morgan obtained Dr. Robert C. Weaver, then advisor of Negro affairs in the Department of the Interior, from Sec. Harold Ickes for the investigation, and Dr. Weaver's report sent Nov. 12, 1935, to Dr. Morgan confirmed practically all of Davis' findings. Mr. Houston testified.

Dr. Weaver recommended appointment of a director of Negro work in the office of the TVA coordinator, appointment of Negro representatives in the several departmental staffs, appointment of Negro skilled and professional workers, and appointment of a field agent to contact these workers. But these recommendations have never been carried out nor has a substitute policy been adopted, Mr. Houston said.

The association's counsel pointed out that 24 per cent of the skilled and professional TVA workers come from the entire nation and the rest from the Tennessee valley, but Negroes do not get even one-tenth of one per cent of the 24 per cent.

"The N. A. A. C. P. grievances against the TVA are based on lack of an integrated Negro policy, classification of the Negro as a labor commodity instead of a citizen, introduction of new kinds of segregation in the Tennessee valley and aggrevation of existing kinds, toleration of abuse of colored workers at Chickamauga dam and coercion by some officials to prevent joining labor unions, and refusal to hire Negroes in the skilled trades, advance them in their work or give apprenticeship training in skilled trades and for general enjoyment of TVA benefits," Mr. Houston said.

He pointed out that although Dr. Morgan and Clapp contended Negroes were hired in the same percentage ratio as their population in the valley. this defense by TVA officials is misleading. It refers to construction only and to unskilled labor, and employment is not spread out evenly over all projects. He stressed the fact that the percentage figure was purely artificial and that employment should be on merit and efficiency as required by Section 6 of the act creating the Tennessee Valley authority.

## PEACH TREE BLOOMS AGAIN; FLOWERS ON SIX BRANCHES

Bement, Ill.—A peach tree belonging to John Neal of Bement is in bloom a second time. There are blossoms on six branches.

# JOE LOUIS' INJURY HALTS APPEARANCE IN RING UNTIL '39

### Brown Bomber Hurt his Right Foot in Game of Soft Ball

Chicago, Sept. 24—(ANP)— An injury to his right foot occuring during a slide in a recent softball game placed Joe Louis, world's heavyweight champion, in Provident Hospital Monday for special treatment. He was permitted to return home next day.,

The injury was described by Dr. Homer Cooper, head of Provident's department of orthopedics and fractures, as "a torn lateral ligament of the ankle joint. Joe's foot was placed in a Boehler walking cast, a recent development in the treatment of fractures which has focused the eyes of the medical world upon Provident.

Dr. Cooper declared the champion will be kept inactive for the next three weeks, but it will not affect his fighting when he returns to the ring next year. Joe purposely waited until Monday for this treatment in order to be present at the first Mid West Horse Show held Sunday at the American Giants park in which his mounts won five ribbons.

Louis chose Provident for treatment because he was convinced, he said, that the surgical attention he would receive at the South Side institution was as fine as any to be obtained at any other Chicago hospital.

# FSA TENANT LEASES

The Farm Security Administration announces a new policy under which new tenant farmer borrowers under the rehabilitation program will be required to obtain leases meeting certain minimum standards. The leases must be written. They must cover the points usually dealt with in rental agreements in the locality. The arrangements must be equitable and must promise reasonably secure tenure for the tenant borrower. C. B. Baldwin, Acting Administrator, explained that under the Bankhead-Jones Act "the Farm Security Administration advances loans for the purchase of farms to tenants, sharecroppers and farm laborers. However, this is a long-time program. For the immediate future our new policy on rehabilitation loans will help relieve bad features of tenancy for thousands of families. Each year a million farm families move, largely because of unsatisfactory tenure conditions. Improved leases would stop much of this costly moving."

## STREAMLINED WHEELBARROW

Even the wheelbarrow is being streamlined. The later models have a wheel with a jolt-absorbing pneumatic tire and a ball-bearing hub which saves a lot of push energy. One new model is all steel and has a seamless top tray mounted for level wheeling. However, for some jobs you can't beat the standard wood-frame barrow, modernized with a rubber-tired wheel. The box is quickly unloaded by jerking out the sideboards. Then the flat base is ready to carry anything from a mountain of egg crates to long posts. (County Home, October.)

# Governors of Many States Sent Letters to Nat'l. Federation of Colored Farmers

## Expressions From Chief Executives Of Several States In The Union Felicitating Farmers, Stockraisers, Fruitgrowers, Poultrymen And Tillers Of The Soil Of Every Description

Colorado, Illinois, D. C., Oklahoma and Iowa have named representatives. Other Governors expected to appoint their representatives in time to have them on the scene when the convention opens.

Teller Ammons, Governor
The State of Colorado
Executive Chambers
Denver, August 26, 1938

Miss S. B. Wilson, Sec-Treasurer,
National Federation of Colored Farmers,
447 Fourth Avenue,
Nashville, Tennessee

Dear Miss Wilson:

I am happy to submit to you the name of Mr. O. T. Jackson of Masters, Colorado, as the representative of Colorado farmers.

I will appreciate your contacting Mr. Jackson direct, and give him the information regarding your meeting.

With kindest regards and every good wish for the success of your meeting, I am

Sincerely,
Teller Ammons, Governor.

TA:CS.

E. W. Marland, Governor
State of Oklahoma
Exeeutive Chamber
Oklahoma City
September 21, 1938

Miss S. B. Wilson, Secretary-Treas.
Nat'l Federation of Colored Farmers, Inc.,
447 Fourth Avenue, North,
Nashville, Tennessee.

Dear Sir:

Maj. H. C. McCormick, Director of Interlocking Departments and Supervisor of the Farms at the Oklahoma Hospital for Negro Insane, Taft, will represent the State of Oklahoma at the National Federation of Colored Farmers' Convention, Forsythe, Georgia, Oetober 26, 27, 28, and 29.

Sineerely yours,
E. W. Marland,
Governor of Oklahoma.

EWM:J.

Office of the Governor
State of Illinois
Springfield, Sept. 27, 1938
Henry Horner, Governor

Miss S. B. Wilson,
Secretary-Treasurer,
National Federation of Colored Farmers, Ine.,
447 Fourth Avenue, North,
Nashville, Tennessee.

Dear Miss Wilson:

Governor Horner has asked me to acknowledge your letter of August 20, requesting him to appoint a representative of farmers of the Negro race to attend the National Federation of Colored Farmers' Convention which will be held in Forsythe, Georgia, October 26, 27, 28 and 29 of this year.

Pursuant to your request he has written to Mr. O. H. Harris, Jr., of Mounds, Illinois, asking him to act as a representative for Illinois. However, he has not yet reeeived Mr. Harris' acceptance of this appointment.

Very truly yours,
Arthur P. Brien,
Seeretary to the Governor

Farm Credit Administration
Washington, D. C.
October 5, 1938

Miss S. B. Wilson,
Seeretary-Treasurer,
National Federation of Colored Farmers, Ine.,
447 Fourth Avenue, North,
Nashville, Tennessee.

Dear Miss Wilson:

In further reference to your communications of September 14 and 23, I regret very mueh to tell you that owing to the death of Mr. Hunt the Farm Credit Administration will not be in a position to send a representative to your convention from the Washington office. As you perhaps have learned, Mr. Hunt died here in Washington on Saturday morning, Oetober 1.

We might suggest, however, that if you desire the services of some local representative of this organization that you get in toueh with Mr. J. H. Scarborough, General Agent, Farm Credit Administration of Columbia, Federal Land Bank Building, Columbia, South Carolina. If there is any way by which Mr. Scarborough ean furnish assistance in this regard, I am sure he will be glad to do so.

Very truly yours,
Martha B. Goldman, Secretary,
Negro Relations Seetion.

Nelson G. Kraschel, Governor
State of Iowa
Exeeutive Office
Des Moines, Aug. 26, 1938

Miss S. B. Wilson, Seeretary
National Federation of Colored Farmers, Ine.,
447 Fourth Avenue, North,
Nashville, Tennessee

Dear Miss Wilson:

Replying to your letter of August twentieth, there are practically no colored farmers in the state of Iowa, but I am suggesting the name of Mr. William Baldridge, Sr., Bode, Iowa, as a desirable representative of the eolored people of this state who might be interested.

Mr. Baldridge operates a farm of considerable size and is very well liked as a citizen in his section.

Yours very truly,
N. G. Kraschel.

**Regional fiestas in all the eleven Western States throughout 1939, with the $50,000,000 California World's Fair as a climax, are expected to establish an all time record for travel in the West during the coming year.**

**The world famous native bagpipe band of the Sultan of Johore will be a feature of that nation's exhibit on Treasure Island at the 1939 California World's Fair.**

# ITALIANS, TO AVOID ETHIOPIAN ATTACKS, MAY LEAVE ADDIS ABABA

## Reports Say Natives Continue to Deal Death to Mussolini's Soldiers in Hand to Hand Battles

Cape Town, S. Africa, Sept 29 (ANP)—It was reported here this week that Italian authorities at Addis Ababa, Ethiopia have asked the railroad eompany to bring all their second and third class coaches to Addis Ababa. This has served to revive persistent rumors here, that being hard pressed from all sides, the officials have decided to vaeate Addis Ababa during the rainy season.

Heavy rains are reported falling in all parts of Ethiopia beyond the Hayash River and this, added to the eonstant guerilla warfare of roving Ethiopian tribesmen keeps the Italian troops from venturing far inland. Passengers aboard a mail train arriving in Cape Town from Dire Dawa told of five days' fieree fighting between Ethiopians and Italians between the stations of Ilan-Ola and Valenchiti. Another report told of heavy engagements at Akaki, near Addis Ababa.

It was also learned that recently the Italian High Command at Addis Ababa, in another attempt to retake Gojjam, sent 200 lorries (trucks) of Italian and Arab soldiers from the Asmara side. These soldiers are said to have met the same fate as the others near the Abbai River. Only a few survivors staggered back to Addis Ababa to tell of the battle, said to have been featured by hand-to-hand fighting for four days and nights.

Survivors said the Ethiopian warriors made free use of their swords and their attaeks were so furious and fast that the Italian and Arab soldiers were unable to fire at them, even at close range. Many Ethiopians were reported killed but their victory was so decisive that the Italian Command will not dare send any more troops into that seetor until the rains are over.

Prosperous, well-to-do tribesmen of Chereher provinee, Ethiopia, are reported leaving their lands, and eoffee plantations and migrating to ward British Somaliland. Writing of this exodus, the Djibouti (Freneh Afriea) correspondent of the Cape Town Sun, said:

"The advance parties of these experienee cultivators have already passed Jijiga. If questioned they say they are forced to vaeate their homes for want of food, but the real reason is that they are not satisfied with Italian rule:

"The women are insulted and forcibly taken away from them by white and black Italian soldiers.

"They are forcibly taken away from their homes, kept prisoners in big camps, and forced to work in gangs at the point of bayonet, like the slaves of ancient Rome. They are not allowed to smoke or ehew Kat (without which they cannot work), and given no money for hard labour of one month. So they prefer to leave the lands of their ancestors and go where God will take them. These people have no transport, and a few donkeys carry all their belongings, the young and old members of a family going on foot."

## White Girl Drinks Poison And Dies: Had Love Trouble

Los Angeles, Calif., Sept. 24—(ANP)—Interracial love brought suicide to a beautiful young dark haired white woman, who preferred death rather than life without the love of her Negro Romeo.

The woman, Evelyn Stewart, 25, Monday afternoon drank a quantity of lysol, following a drinking party with her lover and others. Witnesses stated that her lover, Harry Armstrong, had broken relations with the woman because of his reeent marriage to another woman, and Miss Stewart, beeoming heartbroken, drank the fatal potion. She died two hours later after the dose at the Georgia Street Receiving hospital. Harry Jackson of Pasadena discovered the body.

## SPARE THE ROOSTERS

A shift away from the chicken yard's polygymous society, in which hens greatly outnumber roosters, was advoeated as a means of inereasing the nation's egg supply, by Dr. H. D. Goodale, internationally reeognized geneticist of Mount Hope Farm, at Williamstown, Mass., at the annual New Jersey Poultry Breeders' Institute. Too many potentially valuable breeding males are sacrifieed on the altar of expedieney, Dr. Goodale deelared. He deplored the tendency, common on most poultry farms, toward ruthless culling of male birds before their ability as breeders is proved by the high egg produetion of their daughters. The holding and use of more proved sires, he pointed out, would inerease egg produetion. Dr. Goodale urged poultrymen to inerease the number of male birds used in their breeding programs, to substitute more small breeding floeks for the larger ones found on most ehicken farms. "Females are more numerous," he said, "but the male is half the floek." (Science Serviee.)

### IMPROVED GRASS CROPS

"Two new grasses recently introduced by Oregon Experiment Stations present advantages, partieularly from a pasture standpoint, over kinds commonly known to farmers," says Walter J. Hunt in Country Gentleman (October). "These are Superior Reed Canary grass and Tall Feseue No. FC29366. Both were developed with the cooperation of the United States Department of Agriculture and their seed now is in commercial production. Superior Reed Canary grass is adapted to the same wet-land conditions as the ordinary Reed Canary grass, but in addition it makes highly satisfactory growth on land too dry for the ordinary type. Under continued observation, Superior Reed Canary grass has proved taller, slightly later in maturity, leafier, larger seeded and less inclined to seed shattering than the eommon variety. While the Tall Fescue closely resembles Meadow Fescue, it has several distinct advantages, especially for certain sections where Meadow Fescue is a short-lived grass. This new one is a long-lived perennial that starts growth early in the spring and continues late into the fall. In fact, in mild climates, it may prolong its growth through winter. It is one of few grasses that will produce green growth during late summer's dry weather, and although it produces rather coarse forage, it is very palatable. Tall Feseue is chiefly a pasture grass, but can be used for hay."

## Seeks to Get Share Of Teachers Estate

Cincinnati, Sept. 8 (ANP)—An injunetion against executors of the estate of the late Jennie D. Porter, well known Cincinnatian and former pricipal of Stowe school who died in 1936, was asked in U. S. District court here Saturday by an heir-at-law, William M. Porter, a brother of Chieago.

The petition asked that Porter be deelared the sole surviving heir; that the eourt hold null and void parts of the will that set up a trust; that the trustees of the estate, William R. Stewart, Youngstown, Ohio; and Andrew L. Ingram, Cincinnati, be enjoined from paying any further legacies and be ordered to give an aecounting of money they have disbursed.

Porter also asked the eourt to determine the intention of the deceased in certain portions of the will. Attorney Stewart, one of the best known lawyers in his section of Ohio, maintains offices in Youngstown's First National Bank building, and has a elientele mostly white. For years he was a elose friend and confidante of Miss Porter, and they are said to have usually spent their vacations together. A widower for many years, the lawyer did not marry until after Miss Porter's death He married his white stenographer this year.

## RAILROAD PROBLEMS

President Roosevelt has announced that he has asked three railroad presidents and three railroad labor union heads to act as an informal committee of six to diseuss the general problems of a national transportation system and recommend legislation. Mr. Roosevelt reealled that he had sent a message to Congress on the railroad problem this year and expressed the hope that there would be legislation at the next session of Congress. He said he hoped the new informal committee of six would bring in a sufficiently broad plans to make it worth while for Congress and the eountry to study it and, if it seems aeeeptable, to act upon it. He expects a report from the eommittee within a month or six weeks. (Well Street Journal, September 21.)

## REA POWER PLANTS

"Tired of fruitless negotiations for what it calls 'reasonable' wholesale rates, the Rurfal Eleetrification Administration has deeided to take the bull by the horns and expand its financing of generating faciliries in eertain areas," says Business Week (September 17). "One of its engineers is now in the Middle West to start the ball rolling with five or more power plants to serve rural co-ops in Ohio, Miehigan, Minnesota and North Dakota. REA would much prefer to have its untried projects stick to distribution only, purchasing their power from existing sourees in large bloeks, but when it decides that the eeonomie security of a project is threatened it will underwrite a generating station rather than submit to an 'excessive' rate. Curiously enough, in one of the problems states—Minnesota—many REA eo-ops would buy power from municipal plants if they could get a low enough rate."

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## EDITORIALS

From the Bible:

"By the breath of God frost is given: and the breath of the waters is straitened." Job 37:10.

"No work is long when the days go by
On a farm with time to look at the sky.
When the planter stops for a neighborly word
With a wee yellow-bonneted bit of a bird,
Or takes from an hour a corner or two
For gathering flowers with petals of blue."

Hazel Harper Harris.

### A GREAT MAN HAS PASSED ON

Dr. Henry A. Hunt was a great man. Rich in those excellencies of character that make a great man, he devoted an active life to the service of his fellowmen. Always an industrious student, he sought more knowledge that he might be the better able to serve. He was as perfect a teacher as has lived during the past quarter century. He possessed so much patience he could not become discouraged. He possessed so much enthusiasm he could not grow weary. His big heart could not hold the love he had for those, whom he knew depended on his leadership for their progress and welfare.

The farmers of his racial group were his best friends. He knew and understood their problems because he knew and understood these farmers so well. When he put himself early in life, in their place, which he did, he realized at once that the Negro farmer's biggest problem was the problem of livelihood—of maintaining a life worth living—not merely existing. So he advised and taught the farmer the Live-at-home idea, then, the live-in-your-own-home idea, then, the live-better-every-year idea, and the results of his teaching did not bring him disappointment.

His work will not die with him. It will be carried on by thousands—by rural teachers and preachers—by boys and girls,—by dirt farmers in their fields—by farmers' wives in the kitchens. His work will be carried on until the Negro farmer is a well-filled man and a real, accepted citizen of the Nation that gave to the world, Henry A. Hunt.

### THE NATIONAL CONVENTION

The National Federation of Colored Farmers represents the colored farmers of the Nation. When it speaks it must speak for these farmers, all of them. It must not speak just for the best ones, or for the worst ones. It must not speak just for those who are influenced by any particular educational system or institution. It must not speak just for those who happen to be under the wing of the federal or state governments.

So the representatives of this national group of farmers, meeting in convention in a few days, should wisely consider the present status of the colored farmer and unselfishly and courageously seek to find the way to improve his condition that he may become a better and happier citizen. These representatives should realize that the many props the colored farmer is now leaning against will not always be there. Eventually he will have to wear his own shoes, stand on his own legs and plow his own row. He'll even have to provide the shoes, the strength of his legs and the row to plow.

The convention should encourage the colored farmer to do some thinking for himself. It should encourage him to support his friends and fight his enemies. It should encourage him to become more interested in his business and to be more proud of his business. And it should tell the Nation that this group of farmers will be satisfied with nothing less than its full share of the privileges and opportunities all farmers should have.

### SOMETHING TO KISS "GOODBY"

That big foreign market for cotton, talked about so much by those who are dissatisfied with the AAA is gone now, has been gone for several years—and is not coming back. Those who claim that it can be recovered if several suggested "no-control" cotton plans are adopted by the federal government are unwilling to face facts as they are, or, probably what is nearer the truth, are attempting to delude cotton producers that they may become dissatisfied with the present control program and cause its abandonment.

It is well known that many who make their living from cotton, but who never plant it, chop it, or pick it, would make more money if there was no cotton control program. Buyers, exporters, processors and others who handle the cotton crop after the farmer produces it, make more money when cotton is cheap and the crop is large. But cheap cotton has always been the curse of the cotton farmer, and Lord knows, if he is ever going to know anything, he should know this now. A no-control cotton crop would be a big crop and a cheap crop, which would add to the cotton farmers poverty.

What we really need is a control plan for the next three years that would absolutely prevent any cotton surplus at all. If eleven million bales of American cotton is all the world will consume annually, then let's produce that much and no fore, for the next three years anyhow. Such a crop would bring more money to the farmers who raise cotton, and certainly, enough money to those who handle it.

The big foreign market for cotton is gone. Its "done been" gone. If we didn't kiss it "Goodby" ten years ago, then we might as well do the kissing now and forget about it.

## GOVERNORS NAME DELEGATES

Chicago—The governors of four states announce the appointment this week of representatives to attend the ninth annual convention of the National Federation of Colored Farmers, which will meet at State Teachers and Agricultural College, Forsyth, Georgia, October 26-29.

These representatives will bring to the convention greetings from the governors and colored farmers of their respective states, will take part in all discussions and will tell of the experiences of the farmers they represent relative to the many problems affecting all engaged in the business of agriculture.

Colorado is sending A. T. Jackson, prominent farmer of Masters. Mr. Jackson is the owner of a fine farm in the potato section of the state.

Oklahoma is sending Major H. C. McCormick, Director of Interlocking Departments and Supervisor of the Farms at the Oklahoma Hospital for Negro Insane, Taft. He has received his appointment from Gov. Marland. Major McCormick will tell how he has made the state farms at Taft add so much to the support of the Institution, where he has achieved wonderful success.

Gov. Horner of Illinois, has appointed O. H. Harris, prominent farmer of Mounds, in the southern part of the state.

William Boldridge, Sr., of Bode, Iowa, operates a farm of considerable size and is recognized as one of the most progressive citizens of his state. He has received his appointment from Gov. Nelson G. Kraschel.

Mr. Boldridge believes in organization and has long been a staunch supporter of the Federation.

Profanity denotes lack of respect for others.

## STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912.
State of Tennessee,
County of Davidson,

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer is Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. FERGUSON, N. P.

Sworn before me this 27th day of September, 1938.

My commission expires April 4, 1939.

# STAGE SET FOR FARMERS NAT'L CONVENTION

## Ninth Annual Meeting of Colored Farmers Opens in Forsyth, Georgia, October 26th

### HARRIS IS PRESIDENT

Chicago—The National Federation of Colored Farmers is releasing a portion of the program of its ninth annual convention, which will draw together in Forsyth, Ga., at the State Teacher's and Agricultural College, representatives of the nine hundred thousand colored farmers of the nation, October 26-29. These representatives of Race farmers and delegates of Units of organized farmers will come from 21 states.

The convention will discuss new fields and new methods of rural cooperation, it will consider problems of farm relief, marketing of farm products, purchasing of farm homes, share crop contracts, problems of farm laborers, and will receive reports on cooperative buying and selling, farm credit unions, problems of the rural church and school and numerous other subjects of interest to Negro farmers.

Among the featured speakers will be Ex-Congressman Lafayette Patterson of Alabama, principal Administrative Officer, U. S. Dept. of Agriculture, who will come as Secretary Wallace's personal representative, Hon. E. A. Miller, Assistant to Director, Southern Region, Agrucultural Adjustment Administration, James A. Jackson, representing Standard Oil Co., N. Y., Dr. Joseph H. B. Evans, Farm Security Administration, Washington, D. C., Dr. J. B. Watson, president Agriculture and Mechanical College, Pine Bluff, Ark., who will discuss farm ownership, Dr. Henry Allen Boyd, Secretary National Baptist Publishing Board, a director of the Federation, James P. Davis, Head Field Officer, Southern Region, a former president and one of the founders of the Federation, Leon R. Harris, president, and Prof. P. H. Stone, State Agent, Farm Extension Service of Georgia. Many other outstanding leaders of American agriculture will be present and discuss the problems of the colored farmers.

It is planned also to hold sectional meetings this year for farm women's clubs, tenants and sharecroppers, farm laborers, housewives' leagues and prospective farm purchases. Five minutes talks by practical dirt farmers, will, as usual, be an important feature of the convention.

An exhibit of farm and farm home products will be held and some excellent prizes will be awarded.

Dr. W. M. Hubbard, president, and the faculty and student body of State Teachers and Agricultural College, hosts to the convention assure delegates and visitors that everything possible will be done to assure their comfort and convenience and many pleasant entertainment features will be provided.

## HOW TO BUY WOMEN'S COATS

Clarice L. Scott, Bureau of Home Economics, in Agricultural Leaders' Digest (September) contributes an item on the new 24-page picture book issued by the Department—When a Woman Buys a Coat. "In making the study on which this picture book is based," she says, "the Bureau of Home Economics closely scrutinized coats in the shops, on the streets—in fact, every place where coats were sold or worn. Then, in the clothing laboratory, coats that had proved to be either good or bad were ripped open to find out exactly what it was that made them that way. Unlike dresses, many of the points so necessary to good quality in coats are hidden in places hard to get at, and unfamiliar as well. Yet it is very necessary in making a good choice to learn, if not to see, what the material is made of and how it will behave with wear, whether or not the seams have ample allowance and are taped to prevent stretching, what the interlining and lining are, and how warm the coat will be. All of this is told in a pictorial way."

"How long should a hen remain on the eggs?" a woman asked the editor of a poultry journal in a letter.

"Three weeks for chickens and four for ducks," the editor replied.

Three weeks later the woman wrote:

"Thank you very much for your kind advice. The hen remained on the eggs for three weeks and there were no chickens hatched and as I did not care for ducks I took her off the nest and sold the eggs."

Goodness is not found only in faces that are beautiful.

## THE STORY OF THE PRIEST CAN BE EXEMPLIFIED IN THE PREACHER

By A. N. Fields
In Chicago Defender

Virginia Gardner, writing in the Chicago Daily Tribune Thursday, told an interesting story of a Polish Catholic priest, who has grown to be a familiar figure in the factory district of the West Side seeking and finding jobs for his parishioners. This priest is Mgr. James J. Strzycki. He has also established and maintained an employment bureau, and has succeeded in placing many of his church members in positions.

He is not only trying to save their souls after death, but doing his part to save their bodies while they live. This, of course is in keeping with the Master's Christian who taught that "The Kingdom of Heaven is at Hand;" that its realization was possible in our everyday life. This priest walks, he has no car, and it is better for those he serves. Here is a man really interested in his race.

This is the kind of service that many a preacher could render; the time has come for the church to give something to those in dire need. If religion means anything, it means to practice what we preach. No community is more in need of the sympathetic concern of its preachers than ours. We have thousands of people whose habits and conduct should have the correcting influence of the church leaders.

This can only be accomplished through contact of the preacher with the people. It is not enough to advise them on Sunday and then lift the collection and go. This people, new to the ways of life in the big city need constant admonitions from their spiritual advisor. They cannot live upon prayer alone. They must also have bread and meat, that substance of a material kind. Will some of the preachers emulate the Polish priest?

## Facts About Hayes-Chadwell Marriage

Do you know that the church was decorated by the Clark Brothers and all the flowers used by the bride and her maids, and the shoulder bouquets were furnished by them.

Do you know that the dresses worn by the bride and her maids were made by Mrs. Margaret Chadwell, the wife of Mr. John A. Chadwell?

Do you know that the bride's cake was made at the McCann Training School in the Domestic Science Department of which the bride is the instructress?

## Dr. S. N. Vass Dies at Home in N. Carolina

News was received here this last week of the death in Raleigh, N. C., of the Rev. S. N. Vass, well known minister and former secretary of Religious Education of the Sunday School Publishing Board. Dr. Vass had a long and distinguished career as a leader of the Baptist denomination and as a pastor. He was well known in Nashville, where he lived until a few years ago when his health failed and he returned to his home in North Carolina.

**Rev. Matias C. Garcia, Mexican missionary, reports 18 conversions and 14 baptisms in a recent revival at Bastrop, Texas.**

# DIZZIE DEAN SAYS SATCHEL PAIGE IS "GREATEST PITCHER"

### Diz Confesses It's a Shame They Don't Let Colored Lads Play in Big Leagues

Chicago, Sept. 24—(ANP)—Cast another vote for Satchel Paige as the greatest pitcher in organized baseball. This time the ballot comes from none other than the great Dizzy himself, incapacitated ace of the Chicago Cubs staff, who writes a daily column for one of the local afternoon papers. At the same time, Dizzy lamented the absence of star colored players from the big leagues.

Said Dean in Thursday's column:

"A bunch of the fellows gets in a barber session the other day and they start to arguefy about whose the best pitcher they ever see, and some says Lefty Grove and Lefty Gomez and Walter Johnson and old Pete Alexander and Dizzy Vance.

"And they mention Lonnie Warneke and Van Mungo and Carl Hubbell, and Johnny Corriden tells us about Matty, and he sure must of been great, and some of the boys even say old Diz is the best they ever see.

"But I see all them fellows but Matty and Johnson, and I know whose the best pitcher I ever see and its old Satchel Paige, that big lanky colored boy. Say, old Diz is pretty fast back in 1933 and 1934, and you know my fast ball looks like a change of pace alongside that little pistol bullet old Satchel shoots up to the plate. And I really know something about it, because for four, five years, I tour around at the end of the season with All Star teams and I see plenty of old Satch.

"He sure is a pistol. Its too bad those colored boys don't play in the big leagues, because they sure got some great players. That fellow Duncan which catches for Kansas City is most as good a catcher as Babby Hartnett and I can't say no more than that about a catcher.

"I sure get a kick out of him. One time when I pitch against a Southern all-star colored team for a Northern all-star team, and Duncan catches me, and he has a glove that makes that old ball pop, and he makes my pitch sound like a rifle shot, and he tells them hitteers, 'boy, don't get near that plate. Don't let that ball hit you, or it kills you.'

"And can they play around that infield. Say, the way they flip that ball around, you don't know where it is half the time.

"Anyways, that skinny old Satchel Page with those long arms is my idea of the pitcher with the greatest stuff ever did I see."

# CHURCH NEEDS MORE THAN SHOUTING AND SINGING—J. A. BRAY

### C.M.E. Bishop Calls for Aggressive Action Along all Fronts in Chicago Address

Chicago—(ANP)—"The church must be more than a singing place and a shouting camp in order to merit recognition, allegiance and support of the people," said Bishop James A. Bray at a banquet in honor of himself and his wife here Thursday night which was attended by more than 200 leaders of the Colored Methodist Episcopal church in the Chicago area, and several out-of-city-visitors and members of other denominations.

Outlining his quadrennial program for the work in the Seventh Episcopal district over which he presides and in the Chicago area in particular, Bishop Bray advocated the church being "aggressive along all fronts which vitally touch and affect the people's well-being.' He said the church failed when and where it did not advocate "Social up-lift, economic, political and civic welfare of the people as well as religious and universal Christianity." The church is bigger than any race, nation or continent and while individual churches may serve certain racial and national interests, it must not overlook the "Great Commission, Go Ye Into All The World and Minister to the Needs, All the Needs of all The People."

The banquet was tendered at the St. Paul CME church in appreciation of the recent assignment of Bishop and Mrs. Bray to the Chicago area as official heads of the denomination in this section. The bishop's wife was referred to as "The First Lady of the Seventh Episcopal District."

Seated at the honored guests table with Bishop and Mrs. Bray were Doctors Joseph C. Colclough, A. Wayman Ward of Bethel A. M. E. church, Chicago; C. E. Chapman. General Secretary of Public Relations of the CME church, Kansas City, Mo.; Frank Lowery of the Community church, Cassopolis. Michigan; Mrs. I. S. Pinkett and Miss Ward, daughter of A. Wayman Ward.

### WORK

Written for the Christian Science Monitor

No work is hard when the factory turns
The laborer home to a lamp that burns
Where a loved one waits whose heart beats catch
At a step on the porch and a lifted latch,
Where a swift, sweet rustle of pink starched dress
Is a token of simple happiness.

No work is long when the days go by
On a farm with time for a look at the sky,
When the planter stops for a neighborly word
With a wee yellow-bonneted bit of a bird,
Or takes from an hour a corner or two
For gathering flowers with petals of blue.

No work is mean when the world may eat
Bannered corn and tasseled wheat,
When a piece of steel may lift on wings,
A straight young oak make a table for kings,
And sand may be stained-glass windows that lend
Light to cathedrals where prayers ascend.

No work is hard, or long, or mean
When the hands are strong and the heart serene.

Hazel Harper Harris

## Roxborough Seeks Seat In Congress On G. O. P. Ticket

Detroit, Mich., Sept.—(A. N. P.)—Attorney Chas. Roxborough is campaigning actively for congress in the 1st congressional district here. A former state senator, Atty. Roxborough has practiced here for 25 years. He is president of the Plan Commission of the City of Detroit and is running on the Republican ticket. John Roxborough, manager of Joe Louis, the boxer is a brother of Attorney Roxborough.

# KENTUCKY STATE "THOROBREDS" RUN ROUGHSHOD OVER MISSISSIPPI WITH TERRIFIC SCORE RECORD OF 86 TO 0

### Coach Kean Lets Entire Squad See Service in Opening Game of Season; Team Registers 13 Touchdowns and 8 Extra Points

By A. J. Richards

Frankfort, Ky., Oct. 1—Scoring practically every time they had their hand on the ball, the thundering herd of Kentucky State College opened their season here today with an easy 86-0 victory over a thoroughly outclassed eleven from Mississippi Industrial College. The only interest in the contest was the sight of Kentucky backs (all of them) scoring touchdown after touchdown on runs ranging from 10 to 60 yards. it did not matter who Coach Kean had in the lineup, they still were too much for Mississippi.

The entire squad of over forty men saw service in today's contest. The sparkplug of the first eleven was a little back from St. Louis— McCullen —whose runs, passes and kicks were responsible for nineteen points before the game was 10 minutes old. He personally accounted for the first touchdown, passed to Paul White for a second and kicked the extra point; then received a punt on the 47 and raced 53 yards for another score. Later in the final quarter, McCullen came back, dunning 30 or more yards for another touchdown. Other touchdowns were made by Corbett, John James, Rogers, Bailey, Dawson and Thurman. Corbett and Rogers scored two each. All in all the big "Green" team of Kentucky State scored 13 touchdowns and kicked 8 extra points. The game was hardly a good workout but served notice to all opponents of the "Thorobreds" that they will be given some good entertainment when they meet. The Thorobreds play their arch rivals, Wilberforce University, at Frankfort on next Saturday, in a game which should be quite interesting.

Today's first touchdown came after four plays. On the opening kick-off by Jenkins of Mississippi, Paul White, Kentucky end, received the ball on his 30 and returned to Mississippi 29. Blackburn picked up 6 yards, McCullen picked up 8 around end; then McCullen skirted end for the first touchdown. His perfect placement made the score 7-0. After an exchange of punts Kentucky had the ball again on Mississippi 22. Passes from McCullen to Dawson and White respectively resulted in the second Kentucky score. The third score came shortly afterwards, when McCullen, after receiving a Mississippi punt on his 47-yard line, with perfect interference, streaked down the side lines for 53 yards, and a third score. The quarter ended with Kentucky holdin 19-0 advantage.

An entire new team went into the game in the second quarter and provided two touchdowns by Redford Rogers; one on a three yard run around end; another on a 42 yard jaunt around end. Coach Kean's third eleven scored another touchdown in this quarter when Thomas intercepted a Mississippi pass and ran 30 yards for a touchdown. Score at half—Kentucky 39, Mississippi 0.

At the beginning of the third quarter, Bailey, big Kentucky center, intercepted a Mississippi pass and covered 40 yards for another Kentucky touchdown, which with Thurman's placement, made the score 46-0. A 43 yard run shortly thereafter by Thurman made the score 52-0. Thurman again kicked goal. Coach Kean then sent in big George Edwards, freshman back, who immediately passed to Dawson for 27 yards and Kentucky's 9th touchdown. Edwards kicked goal. The score at the end of the third quarted, Kentucky 60, Mississippi 0.

In the final quarter two new faces saw service in the backfield for the Thorobreds. Corbett, a Chicago boy, accounted for two touchdowns on runs of 35 and 20 yards, while Johnny Jones ran some 40 yards for a score. The final Kentucky score came when Coach Kean sent his diminutive flash, McCullen back in the game. This time he intercepted a Mississippi pass on the 50 and ran the remaining yards for the tally that made the final score read 86-0.

Aiding the men, who accounted for so many scores, was the perfect work of two lines, that, from end to end, are almost equal. No individual star appeared, insofar as the entire squad functioned as a unit. Kentucky made 15 first downs to Mississippi's 2

**LINEUP**

| Kentucky 86 | Pos | Miss. 0 |

## 7th Day Adventists' World-Wide Workers To Hold Convention

### Supt. H. E. Ford of Riverside Sanitarium Heads the Group Going to Battle Creek, Mich.

Representatives from this city who will attend the Fall Council of the World-Wide Workers of the Seventh Day Adventists will leave early this month to attend the meeting. Notable among those who will be present will be Mr. H. E. Ford, the superintendent of the Riverside Sanitarium located on Young's Lane, Route 2, right on the banks of the classic Cumberland.

Mr. Ford stated last week that there would be people attending this Conference at Battle Creek, Michigan, October 18-28 from every part of the world where the Seventh Day Adventists have mission stations, operating publishing houses and conducting their religious work through their organized churches.

Mr. Ford will make a full report of the work being done at Riverside Sanitarium showing what has been accomplished during the past twelve months. Leaving the city with him will be other representatives and officials. Rev. Mr. Fountain, pastor of their church at Twelfth Avenue and Harding Street, will be among those expected to go to this Conference in Battle Creek.

### IN PROOF OF IT

Mrs. Gableigh: "The doctor says that if you use your muscles more they won't trouble you."

Husband: "I guess that's right. You never have the tongue ache."

# IMPROVED DEMANDS FOR MEATS WILL CONTINUE

Washington, Oct. 5—The bureau of agricultural economics said today that the consumer demand for meats is expected to improve somewhat during the fall and winter months and for a longer period, "if the present recovery of business activity continues. Consumer income and the demand for meats in 1939 probably will be somewhat greater than in 1938.

Discussing the live stock supply situation, the bureau said that "marketings of grain-fed cattle probably will continue much larger than a year earlier, a fairly large seasonal increase in hog marketings is expected during the next few month, but marketings of cows and heifers this fall are likely to be considerably smaller than a year earlier and probably will decrease seasonally by early winter."

Prices of the better grades of slaughter cattle recently reached new heights for this year, but are much lower than at this time a year ago. Prices of the lower grades of cattle have been declining seasonally since mid-July, but are only moderately lower than a year ago. A continued strong demand for stocker and feeder cattle was reported. Despite seasonally larger supplies, prices of these cattle weakened only slightly in August and early September.

Slaughter supplies of cattle in 1939 may total less than in 1938, the bureau said, with increased marketings of grain-fed cattle being more than offset by reduced marketings of cows and heifers. The tendency to rebuild cattle herds may become more pronounced next year, because of the marked improvement in feed and range conditions since 1936.

# COTTON BALE COVERS

"Extensive use of cotton bagging for baling cotton this year is a practical example in finding new and greater uses for cotton." says an editorial in the New Orleans Times Picayune (September 9). "Under a contract with the Department of Agriculture a mill of New Orleans will supply cotton patterns or covers for 1,000,000 bales this season at a price to the farmer considerably lower than the market price of jute patterns. Net all farmers, of course, will be able to use the cotton patterns this season under the advantages offered by the government. Certain rules as to the variety and quality of the cotton to be baled are involved. But the increase in its use will be vast. The total of 7,000,000 yards of cotton bagging produced in this country in the past 60 years now may be exceeded in one season by the one mill. The government contract fixes a price of 73 cents a pattern for the baling, of which the farmer pays 45 cents and the government 28 cents. The subsidy is an award to farmers who are successful in improving and standardizing their cotton along the lines advocated by the Department of Agriculture. The cotton patterns are said to have certain other distinct advantages, including better protection for the cotton and a standard weight which may induce the trade to adopt a lower tare allowance for cotton-covered bales. Those who have searched so long for ways to broaden the cotton demand at home are to be congratulated."

# LISTEN TO THIS

By Hobart T. Mitchell

An introduction to Sociology by Walter G. Beach, published 1925, on page 135, states about the Negro: Sixty years ago he was a slave. He owned no property; ninety-five per cent were penniless field hands." He was illiterate and without education.

In 1833, Solomon, a free Negro, well known by men of all classes in Macon, Georgia, kept a grocery store, and had more credit than any other merchant in town. Owned a number of slaves and $20,000 worth of property.

In Virginia, free Negroes were required to pay a poll tax of $1.50 in 1813 and $2.50 in 1815. In 1814, 5,547 free Negroes paid $8,322 in taxes and in 1863 they paid $13,065.22 in poll taxes.

Negroes in Baltimore paid $500 in school taxes in 1860 but could not attend the public schools.

In Philadelphia, Negroes had taxable property worth $350,000 in 1832, $359,626 in 1837, and $400,000 in 1847.

In Cincinnati, in 1840, Negroes had acquired $228,000 worth of property. One Negro had $6,000.

George Bentley, a Negro preacher, was preaching in a white church in Giles, Tenn., in 1859.

Kentucky had the greatest number of Negro troops (23,703) in the Civil War.

In 1513 thirty Negroes assisted Balboa in building the first ships made on the Pacific coast.

A Negro owned 200 slaves in South Carolina in 1857.

Roland Hayes, a great Negro singer, was ready only for the sixth grade when he was nineteen years of age.

Paul Robeson, actor, chosen by Walter Camp in 1918 for the "All-American Team". In his first year in college he received seven A's and one B and in his Junior year he won the Phi Beta Kappa key.

Frederick Douglass, born a slave at Tuckohoe, near Easton, Maryland, Feb., 1817, died Feb. 2, 1895, was the first Negro to ride on a battleship as the guest of the United States Navy.

The Eighth Regiment of Chicago, the Black Devils, probably made the last capture in the World's War. The morning of November 11, at 11:10 a. m. they captured a German army train of fifty wagons.

October 16, 1859, John Brown with nineteen assistants, five of whom were Negroes, captured the arsenal at Harper's Ferry.

Two institutions for higher education of the Negro were established before the Civil War, Lincoln University in Pennsylvania (1854) and Wilberforce in Ohio (1856).

Norbert Rillieux, Negro in Louisiana, patented (Dec. 10, 1846) an evaporating pan by which the refining of sugar was revolutionized.

# FORMER NASHVILLIAN WRITES FROM AUSTRALIA OF SCHOOL DAYS HERE

## James L. Edwards Asks About Many Old Friends And Describes His Talented Daughters Of The Stage

From far away Australia, the Globe is in receipt of a long and interesting letter from James L. Edwards in which he reminisces over his childhood days spent in Nashville where he says he was born on Jan. 18, 1898 at 1607 Phillips Street. Now 40, Mr. Edwards says he is younger than at 25, has traveled around the world since leaving Nashville before the World War.

He is the manager of his two daughters who are in the show business, and who, he states, are renowned in the theatrical world. He and the girls, he states, were last in Nashville in 1934 with Blanche Calloway's orchestra.

Mr. Edwards states that he plans to return to Nashville in the near future to clear up some business matters and then leave for England where he plans to live and enter business. "My daughters wish to attend law school in England so when they tire of the glamour of applause and the footlights they can be admitted to the bar."

Mr. Edwards says in part:

"I am James L. Edwards, one of eight children born to Mr. and Mrs. J. E. Edwards formerly of Nashville. Dad was the first colored electrician in the state of Tennessee. We lived at 928 17th Avenue, North next door to Dr. George Moore, Sr. and opposite Fisk Jubilee Hall. My mother died there in 1906 and her funeral was preached by Rev. John Charles Fields, late pastor of Pleasant Green Baptist Church, and her remains were interred by the late Elder Preston Taylor. My father passed six years ago in Cleveland, O. where the rest of our family lives except myself and family. I married 23 years ago.

"An older brother and sister finished Fisk University when I was a kid, but I was a "humdinger"—not bad but mischievous. My playmates were Milo and Gurney Holloway. Prof. Watterman's children, Leonard W. Ellington, J. B. Singleton, Jr., Lenida Crosswait, the Stevens boys—Elmer and Edwin. My older sister's chums were Miss Mary Stevens the then Misses Lillian and Samuella Johnson, Bertha and Alma Dunn, the Dickson girls and many others.

"How often I remember Dr. F. A. Stewart our family doctor also Dr. Dunn calling. I recall my Dad's birthday party in 1904. I was six years of age. Fisk U. caught fire same year. Dr. Stewart was one of the guests at Dad's party. I ate up all of the lady fingers and got "tanned." I recall Dad telling us about the terrible fire at Roger Williams on a rainy night. I received word while in Japan that my mother's pastor, Rev. J. C. Fieds had passed. I wish your paper would advise me if it is true. I'll never forget those Christmas trees at Pleasant Green Church on Jefferson Street.

"We have realized a little fortune in our theatrical work and my writings but I'd gladly give it all to charity just to have my pleasant childhood again down in Nashville, Tenn.

"What has become of Mr. J. C. Napier? Of Boyd's Baptist Publishing Board? Green Hall, McClennon and Clendenning of the former Pan America? Hall and his barber shop? What has become of Dock Liner and his barber shop?

"I recall the Philista Varmth and the Palms Case, corner 5th and Cedar; the Carmack case; the J. H. Hall walls falling. I recall as a kid the old Manhattan, run by Ike Watkins, I think, also Prof. John W. Work and the Jubilee Singers. I was a terror in school and had to be transferred from school to school. Prof. J. P. Crawford of Knowles, Prof. Vassar of Nelson Merry and Prof. W. S. Mosely of Carter I never will forget."

My mother's mother, who is my sweet old grandmother, still lives and I have several aunts, uncles and cousins. They live out on Mt. Nebo Hill in West Nashville. My grandmother is Mrs. Bettie James, 2417 Batavia Street. Her husband, who was my mother's father, used to pastor at Mt. Nebo Baptist Church and also Kayne Avenue Baptist Church. His big funeral was held from Kayne Avenue in April, 1906.

He states that his daughters are now 18 and 19 years old, that he has never spanked them and that they have never smoked, nor drunk beer, wine nor liquors of any kind nor used profanity; never "made a date," are not interested in the masculine sex, but are interested solely in home and their careers. They have been on the stage seven years.

The girls, he says, learned dancing in his studio in New York City, are excellent horse-back riders, motor car drivers, tennis players, neat housekeepers, good cooks and do secretarial work for him. "I reared them," he says "on love, respect, the value of honor and pride and have never had to whip them."

"Is Mattie Cannon who worked for your Publishing Company and the Boyds Publishing Company still in Nashville? I visited Prof. Frank Smith a couple of years ago in his lovely offices in Chicago. He looked fine and regal as ever. How are my favorite teachers, Prof. W. B. Vassar, Sara E. Flagg, Sue Vernon, Ethel Turpin, Miss Dundap, "Fess" Washington, and Prof. Green?

Where is Minus Scovel Richardson and Mrs. Carrie Brown? I thought she was among the loveliest of teachers. I met many Nashvillians while in Chicago, who had gone "high hat," but were hungry. I also met some who were very sweet.

I do a lot of feature stories for the papers here in Sydney, Australia. I have one now ready with the title, "Busy Line."

Kindly give all Nashville my love; I am known in all sections of the city. By the Shombergs in the South, the Dardens in the West, the Boyds in the North, the Loches in the East. My wife and two talented daughters join me in sending greetings to all Nashville. In writing to me, address,

Jas. F. Edwards—Sisters
Forward
Tivoli Circuit
Australia.

# Sharecroppers Live Miserable Lives In State of Louisiana

## Feudal Lords Continue Oppressive Forms of Exploitation, Report

Natchitoches, La.—(By Richard H. Thomas for A. N. P.)—A grim state of woe is the picture of the poverty stricken Negro sharecroppers who live on plantations situated along the banks of the Red river by Natchitoches parish. Plagued with unending debts claimed by the plantation owners, and ravished by exorbitant prices they must pay for groceries advanced them by the commissary store, theirs is an existence worse than European peasantry.

Even though growers have received each year from eight to ten cents per pound for cotton, and the government has paid them for soil conservation, the croppers in many instances have received no cash, or at most yearly settlements amounting to $10 to $15. Accompanying the measly cash paid them is a slip showing a balance due the landlord for debts he claims they owe.

Now and then a tenant gathers enough courage to ask for a settlement. Usually he is told, "the others called it even, You had better too, if you don't want to be turned out on the road."

Tricked of their cash earnings these humble peasants are forced to accept the weekly apportionments granted them at the landlord's store for which they pay prohibitive prices.

Here are a few examples from actual reports of how they are overcharged for their purchases. They pay 5 cents for soap that sells two for a nickle. 75c for syrup that sells 40c per gallon. 20c per pound for coffee that sells 15c a pound and flour ordinarily 75c is sold at $1.

On one plantation tenants were refused kerosene or lamps Another allowed each member of the family one of each of the following articles, a work shirt, overalls, work shoes and a winter undershirt. Some are limited to groceries they may get each week.

Rural slums virtually reek with disease because they are denied even the bare necessities of life. Undernourishd and ill fed grownups and children are slowly perishing for want of decent food and more food than is issued by the commissary store.

# Drive For $500,000 Endowment of Lane College Is Launched

## Campaign Began Oct. 1, and Sponsors Say Entire Fund Will be Raised to Honor Late Bishop Lane

Jackson, Tenn. (Special)—Memorializing the life, work and leadership of the late sainted Bishop Isaac Lane, and at the same time, placing the College that he founded on a firm basis that will make it secure in its future service to the church, race and nation are the great objectives of the campaign for the Lane College Memorial-Endowment Campaign that was launched October 1, 1938. The college seeks to raise an endowment of five hundred thousand dollars.

Dr. B. J. Smith, a prominent general officer of the church, said, "The cause is so worthy and compelling that every dime we are seeking must be raised." Friends everywhere are now beginning to wake up to the realization of what this movement means, and the absolute necessity of our seeing that it is a success. Any person, race or nation that fails to support Christian Education will soon become decadent and as a natural result perish from the face of the earth. This movement calls for a great loyalty and tremendous sacrifice on the part of all lovers of Christian Education.

"The movement is not confined to a state or any racial group. It is in reality inter-racial in interest and national in scope. Let no one get the idea that only colored friends are interested in this particular movement or that the movement is confined to any one state. This is not the case. White friends as well as colored, in all parts of the country are indicating an abiding interest in this movement. The M. E. Church, South has joined hands with the C. M. E. Church in seeing that this, as a project, goes over in a big way. Here these two races in this country have an opportunity of showing to the world that Christian people can do when "they commit their ways unto the Lord" and are led by the spirit of Jesus Christ in their work."

### THE MAN WHO WILL WIN

Give me the man who holds on when others let go; who pushes ahead when others turn back; who stiffens up when others retreat, who knows no such word as can't or give up; and I will show you a man who will win in the end, no matter who opposes him, no matter what obstacles confront him.—O. S. Marden,

# FARMERS OF THE NATION TO MEET

## National Convention to Be Held at Forsyth, Ga., in State College This Year

### President Leon Harris and Secretary S. B. Wilson Set Dates as October 26th to 29th, Inclusive

Forsyth, Ga. (Special)—Tillers of the soil, stock-raisers, fruit-growers, poultry-raisers, with other farmers in diversified crops, will meet in this city at the Georgia State College on October 26-29 inclusive. The official call has already been issued by Mr. Leon Harris, the President of the organization, and countersigned by S. B. Wilson, Secretary-Treasurer. Prof. Hubbard, the president of the state school, who was host to this group one year ago, invited them back to this "Peach Tree" state for the purpose of demonstrating to them the interest that the farmers have in the organization that is calculated to lift them.

A large delegation is expected to be in attendance. Invitations were extended to the Governor of every one of the forty-eight states to send a representative so that greetings could come from the nation. Secretary Wallace of the Department of Agriculture, together with Dr. H. A. Hunt, head of the Farm Credit Administration, Washington, D. C., Hon. E. A. Miller, Assistant Director of Southern Region, Agricultural Administration, Washington, D. C., Mr. J. A. Jackson, representative of the Standard Oil Company, New York City, and the Farm Administrators and Farm Agents from throughout the southeast and southwest, are expected to attend. In addition to this, invitations have been sent to the heads of all the Land Grant Colleges operated for Negroes throughout the United States, to either be present or to send a representative.

President Harris assures the farmers of the nation that the entire four days will be devoted to a program of uplift, dealing only with matters that will help the farmers individually and collectively. Farm credits, farm loans and even plans for purchasing farms on easy payments, will be submitted to the convention.

The President of State College plans to house most of the farmers in the school building, while the citizens of Forsythe, representing both races, have already given assurance that a hospitable welcome will be extended to all.

The Governor of every state invited has sent President Harris letters, messages and greetings in advance, assuring the organization of their good will, their moral sympathy and such support as can be given them not inconsistent with their state funds.

Plans for an extensive exhibit are already underway. Merchants, manufacturers and dealers in farm supplies will be urged to have on the grounds their wares to display, in order that the farmers might get first-hand information on what to get, where to get it and the price to be paid.

The Housewives Organization will be invited to take part. The Exhibit consisting of home economics, such as canning, fruit-drying, quilting, preserving, cake-making, new methods of dairying, meat-curing and other farm helps as were pushed in the past several years, is still being encouraged.

This organization, declared President Harris in a special communication, is the only expression in the form of a National Conventon that the farmers will have this year.

### WHY WE LIKE DOGS

A friend may smile and bid you hail,
Yet wish you with the devil;
But when a good dog wags his tail
You know he's on the level.

## NO SURPLUS OF SOYBEANS

Waterloo Courier: There is one crop that causes no "surplus problem." That crop is soybeans.

An all-time record crop of about 50,000,000 bushels of soybeans is expected in the United States this year. Twenty years ago, the crop was practically unknown to American farmers. In 1919 there were only 471 acres of Iowa farm land planted to soybeans.

There is wide variance of opinions on the agricultural benefits accuring from increased production of soybeans in the middlewest. Not long ago the dean of agriculture at North Dakota university wrote a magazine article in which he contended that the soybean has not benefited the middlewestern dairyman and corn-hog farmer to the extent popularly believed. He charged that the bean had made their pork soft and had edged it on the market for butterfat and lard.

A majority of farmers, however, are loud in their praise of the soybean. It is now predicted that it may become a major cash crop in the middlewest within the next decade and that the oil extracted from the bean will replace much of the vegetable oils now imported from foreign countries.

If the present production of soybeans was to be doubled, it would still be a minor part of the total volume of oil seeds. In the meantime the soybean retains its distinction of being one of the most versatile of all the products raised by the farmer. It can be eaten while growing. It makes excellent hay or silage. The beans are a green vegetable for home use. When pressed, they expel an oil that is used in cooking, salad, soap, paint, varnish, enamel lacquer, linoleum, oil cloth, printing ink, lubrication, etc. The meal that remains after the oil is expelled is an ingredient of mixed feed for animals and of flour for humans. It becomes the basis of a good vegetable glue for veneer and plywood, or it enters into the plastics industry and may be found in various parts of your automobile.

## John H. Lewis Defeats Adamick

Philadelphia, Sept. 24—(ANP)—Although he was badly jarred in the last two rounds, Light Heavyweight Champion had piled up such a commanding lead in the first eight rounds that he won a decision over Jimmy Adamick of Midland, Mich., before 12,000 spectators in a non-title bout at Convention hall Thursday night.

Lewis, 184, clearly outboxed the white fighter who recently drew a year's suspension in Illinois and state associated with the National Boxing Association because of a "queer" bout with lanky Jack Trammell. The light heavy champ scored frequently with both hands to the face and body of 188 pound Adamick.

But in the ninth, Adamick landed a terrific right to John Henry's chin that brought the crowd to its feet yelling for a knockout. Lewis' knees buckled and he staggered to the ropes. Adamick missed with a left hook and they were in a clinch at the bell. The white boy also hurt Lewis with a solid left hook to the body in the 10th. The two judges, however, gave the fight to John Henry with Referee Matt Agie voting it a draw.

Science has discovered what every old man knows—that efficiency increases with years.

## Los Angeles Chosen For '39 Convention Of National Baptists

On Saturday afternoon after invitations had been extended by Louisville, Ky., Detroit, Mich., New York City, N. Y., and Los Angeles, Cal., the Convention stood overwhelmingly favoring Los Angeles for 1939. President Prince asked those who wanted to go to California to stand; after they had stood and were counted by the secretary he asked those who were opposed to going to California to stand; when the count was over it was shown that there was more than a seventy-five majority of those who stood favoring California to those who opposed. Dr. Prince then announced that Los Angeles, California had been selected and that the 1939 session would be held in that city.

The pastor who invited the Convention was the Rev. A. Lively, D. D., pastor of New Hope Baptist Church on Paloma Avenue. Rev. Mr. Lively, in extending the invitation, declared that this was the best time in the history of the Baptists for them to come to the west in order that they might not only see what the Baptists are attempting, but what they have really accomplished. It was decided therefore, according to the anonuncement of the President, to go to California.

# ROOSEVELT WRONG ON PER CAPITA DEBT, PAPER SAYS

## Burden Is Bigger Under New Deal Than For People Of Other Great Nations

Washington, D. C.—That President Roosevelt constantly is being imposed upon by his subordinates with false data concerning great public matters is a matter of common knowledge and great newspapers are finding it necessary to scrutinize the facts and figures of the present President more carefully than heretofore has been their custom. The Republican Digest, published at Hastings, Michigan, in a recent issue tells how the Christian Herald has punctured the recent address Mr. Roosevelt made in which he said that the citizens of the United States are not weighted down with as big a per capita debt as the people of Great Britain and France. The news story is as follows:

**There is an article in the August issue of the CHRISTIAN HERALD, by Harry Scherman, which shows that President Roosevelt did not tell the truth about taxes in his recent speech at Arthurdale.**

**"Taxes, local, state and Federal combined, are nowhere near as high in this country as they are in any other great nation that pretends to be up to date," said President Roosevelt.**

**"Any citizen hearing this categorical statement, on such authority, would take it to mean only one thing: that government costs Americans much less than it does other peoples. The truth is the precise opposite. Government now costs us more than it does any other nation. Few Americans, in and out of office, realize it."**

**Mr. Scherman then calls attention to the debt per capita in 1936 of the United States, Great Britain and France. It was as follows:**

**United States..... $133 per capita**
**Great Britain ..... 123 per capita**
**France ..... 103 per capita**

**Our figures on 1938, which Mr. Scherman does not include in his CHRISTIAN HERALD ARTICLE, shows that the United States debt per capita has more than doubled.**

**"There are now roughly," according to Mr. Scherman, "about 31,500,000 families in the United States.**

**A close estimate of the total government expense in the current fiscal year would be $16,500,000,000 according to the figures compiled by the National Industrial Conference Board. This is an average expense for government in the United States of $523 for each family."**

**Mr. Scherman then goes on to show in his splendid article that the families in the United States that have the lowest cash income are rural, particularly share-croppers. Five hundred and twenty-three dollars must be paid into the government for each of these families whether they pay it or whether some other family pays it for them.**

**"Relief is often presented," continues Mr. Scherman, "as the political excuse for this enormous load of government expense. The query, 'Would you let the people starve?' is supposed to stop the mouths of informed persons who have become concerned about government improvidence, and it often does."**

**"But men and women of good will need not feel conscience-stricken when they call for government economy if they will bear a single fact in mind: Only $90 out of this $523 in the present fiscal year will represent relief, both state and nation."**

**"Whether or not one questions any single aspect of this policy of government relief, if every penny of it were eliminated we would still stagger under a load of $433 a family for government expense."**

**"In any case," this CHRISTIAN HERALD article emphasizes, "one conclusion is unescapable: As the person most likely to be relieved in this nation it is clear irresponsibility on the President's part to give further currency to this pernicious common error as to the load of government expense we all now carry."**

The two-faced man is sooner or later unmasked.

# WRITER VISITS BOTH ENGLAND AND GERMANY, DOESN'T LIKE EITHER

## Hancock, After Sojourn Abroad is Happy to be Back In United States and Tells Why

(By Gordon Hancock for ANP)

New York, Sept. 29—The United States is a great country and blessed are they who understand it. After two months of travel and study it is a source of genuine satisfaction to breathe again the air of these United States. My travels took me through central Europe and through the countries armed and arming for war. Little Czechoslavakia was most imposing as it girded itself to fight Germany. Her soldiers are reputed to be among the best in Europe and although she cannot match Germany in numbers, in courage and equipment she can. Great Britain and France are ready to betray Czechoslavakia just as they did Ethiopia and herein lies the tragedy of Europe and the world.

When the umpire gets "rotten" the game is a farce; and that is what is happening in Europe. Heretofore Great Britain has been the arbiter of international disputes and somehow she has won the confidence of the world and this gives her great power in international matters. But today Great Britain and not Germany is the menace to the peace of the world.

Great Britain is always ready to make concessions which cost her nothing but moral prestige. She is always ready to come to "terms" which leave her with a world wide hegemony. So long as her borders are intact she is ready to appease Hitler and Mussolini and is quite willing to cede territory—of some other smaller nation. It is strange that when the Kaiser called a treaty "a scrap of paper" he was howled down by the world. Yet Great Britain's and Frances treaties are mere "scraps of paper."

The British Empire is tottering and the spineless diplomacy of the present is hastening rather than postponing the dreadful day of its doom. Strangely enough we were treated most kindly in Germany and the least kindly in England. Hitler in his "Mein Kampf" speaks disparagingly of the Negro; yet in Austria and Germany our treatment was most cordial from every point of view. In England much is said about the equality of man yet the treatment closely approximates that of the South.

In Germany the Negro is outlawed as a man but they treat him as a man; in England ever so much is said about "equality" etc., but the treatment of the Negro is far from ideal.

I am convinced that the center of this racialism that prescribes the Negro is in England. History shows that England is the only one of the colonizing nations that religiously forbids its colonists from intermarrying with the natives. This leaves very strained relations between colonists and natives and breeds hatreds that spread throughout the world.

## Bojangle, 10 White Players Dropped At 20th Century

Hollywood, Sept 24 (ANP)—Bill "Bojangles" Robinson, world's greatest tap dancer, has been removed from the yearly contract list at 20th Century-Fox film studios where he has scored many successes with Shirley Temple, and will work on a picture-to-picture basis. He is currently working in "Hard To Get" which started production last week.

At the same time, it was announced that 10 white contract players had also been dropped, among them Ethel Merman, Simone Simon, Claire Trevor and Helen Westley

# CORTEZ W. PETERS TRAINS WHITE BOY FOR EXPERT TYPIST

Washington, Sept. 15—(ANP)—Cortez W. Peters, famed as the second fastest human when it comes to operating a typewriter, has recently trained Ben Posner, white, of Tuscon, Ariz., in speed writing. Posner after spending some time under Peter's tutelage, won the amateur championship of the world in Chicago last June, typing 122 words a minute.

Neither Mr. Peters nor Tangora, the world's champion and the only man who has beat him, entered the competition this year. Mr. Peters is devoting himself to the establishment of a new business school in Chicago. The school, which will be located in the Jones Department Store building on 47th street, will be opened Oct. 3. Mr. Peters operates a school in Washington, D. C., also.

## Educator Dies

Los Angeles—(ANP)—Dr. J. N. Ervin, last president of Jarvis college, Hawkins, Texas, died Monday morning at White Memorial Hospital of a heart attack at the age of 64.

For 24 years he was president of Jarvis. He built it from a small school to an accredited senior college. He was a graduate of Knoxville College and Columbia University.

He is survived by his widow, one daughter, two sons, and five grand-children, and a host of relatives, including Mrs. H. Ward, Professor J. M. Ervin of Los Angeles, and Dr. L. M. Ervin of Chicago.

Funeral and burial took place Tuesday on the Jarvis college grounds.

# "BLACK KINGS OF THE SOIL"

## Mr. Leon Harris, President National Federation Colored Farmers Contributes Article

THE NEGRO JOURNAL OF RELIGION IN ITS ISSUE OF SEPT. 1938 IS GIVEN CREDIT FOR THE ARTICLE

WE were out early, Jim McCollum, Negro farmer, and I, standing on a little rise of ground surveying the level fields of cotton and corn below us. Behind us a big, red sun was creeping up over the blades of a distant cane patch. Jim turned, faced the rising sun and remarked:

"Ev'ry man a king, eh?" Then he looked me straight in the eye and chuckled: "Boy, that ol' sun thar's th' only king down here. An' sometimes he's a pow'ful humdinger."

We had been talking about the drouth which was afflicting that section. It was August. Delta cottion was not yet waisthigh; corn was a failure; gardens were almost perished; sugar cane was blighted. There had not been a good rain since May. But when we got back to the house and sat down to a breakfast of ham and eggs yellow corn-cakes, potatoes fried with onions, coffee and pure cream, four kinds of jelly and preserves, biscuits, ribbon cane syrup, and a cool watermelon right out of the patch to top it off—almost every bit of this basket produced on Jim McCollum's farm—I said to myself: "Old Sol's not the king here. The real king is Jim McCollum!"

The American Negro farmer who owns and loves his farm is the happiest person of color in his native land. I will not venture the assertion that we are an agriculturallyminded race. Perhaps we are not. It is a fact, however, that a farm and farm life nas a peculiar fascination for most of us. In spite of the much heralded "urban opportunities," we simply feel lost off the farm, we feel like we are missing something, and probably we are.

More than one-third of the Negro population of the United States more than four and a half millon, reside on farms. There are 181,000 colored farm owners and more than seven hundred thousand tenants and managers of farms. There are as many colored farmers in the United States as there are inhabitants of the State of Oregon; or Maine; or South Dakota or Rhode Island. The colored farm population equals the population of these four states combined, with the population of the states of Arizona, Colorado and Delaware thrown in for good measure. There are more Negro farmers in the United States than there are people in Boston; almost as many as there are people in St. Louis and about a third as many as there are in Chicago. There are nearly a quarter-million more colored farmers in the nation than there are men employed in all our great steel and iron industries.

In 1930 there were three colored farmers in the state of Nevada. There were 182,578 in the state of Mississippi. There were some in every state in the Union. Nearly one-half of North Carolina's farm owners are colored. The number of colored and white farmers in the states of Louisiana and Georgia are almost equal. There are approximately fifty thousand more colored than white farmers in the state of Mississippi and twenty thousand more colored than white farmers in the state of Mississippi and twenty thousand more colored than white farmers in the state of South Carolina. In Georgia there are forty-five counties which have a larger number of colored than white farmers. In more than two hundred counties in our southern states, colored farmers out-number white farmers two to one.

American Negro farmers are engaged in about every kind of farming known. There are pineapple and orange growers in Florida and California; truck, fruit, and poultry farmers in all the northern states; corn and wheat farmers and stock-raisers in the middle west; colored ranchmen in Montana, Wyoming and Texas; irrigation farmers in Arizona, New Mexico and Colorado; maple syrup producers in Vermont, and fur farmers in Iowa and Minnesota. The oft expressed aphorism, "No matter what it is, a Negro will be in it," certainly holds good in the vocation of farming.

The average amount of principal crops produced yearly in the United States by colored farmers is as follows:

Cotton—four million bales, or 37 per cent of average crop.

Corn—one hundred million bushels, or 3.5 per cent.

Rice—twenty million pounds, or nine per cent.

Wheat—four million bushels or five per cent.

Sweet Potatoes—twelve million bushels, or 21 per cent.

Tobacco—ninety million pounds, or ten per cent.

Watermelons—thirtyfive per cent.

During the past thirty-five years colored farmers have purchased and paid for twice as much acreage as they did during the thirty years following emancipation Today, they own more than eleven million acres of American soil The value of this owned land and building thereon is more than three hundred and thirty-four million dollars. All land in farms operated by colored farmers totals thirty-seven and a half million acres. Prior to the depression years, it was conservatively estimated that Negro farmers' ownership of land was increasing by 16.2 per cent compared with a white ownership increase of 1.8 per cent.

Undoubtedly, persecution by planters and plantation bosses is forcing many Negro tenants to purchase farms, but ambition and a desire for independence is a larger factor. The average colored farmer who loves his job; who is diligent and progressive; realizes that he can produce as much and as well for himself as for the other fellow. If he is a good farmer, he can generally get an opportunity to purchase land on reasonable terms in the community where he is known.

We can cite many cases of successful Negro farmers. For instance, the eighty year old retired blacksmith of near Jackson, Mississippi, who started raising tomatoes. He produces the largest and finest flavored tomatoes grown in the United States and has sold many for as much as fifty cents each. There are many more in the southern states unknown and unsung. A North Carolina gardener of my acquaintance specializes in raising green peppers—the "sweet" variety. He has developed a natural method of coloring his "fruit" by exposing it alternately to sun and shade. He has never been able to produce as much as he could easily sell. Another Carolina Negro farmer, who lives eight miles from the railroad and two miles from the "big" road, has been growing his own special variety of sweet potatoes for twenty years. They literally "melt in your mouth." He ships most of his crop by express or parcel post to wealthy customers in New York and Pennsylvania and, year in and year out, his price remains the same—one dollar per peck!

Many have left the South and have done well. A colored farmerette in Vermont is a large maple syrup producer. A colored florist in Montana supplies a third of that state and ships to adjoining states. One of the largest berry raisers and shippers in Michigan is a black man. A Negro ranchman in Montana ships his stock by carloads and has invested much money in Kansas and Oregon real estate.

During recent years several movements have been started to establish Negro farm communities. Some of these in the South have been successful. They have not fared so well in the North and West. The average colored farmer is still tied tightly to his church, his birthplace and his relatives and he does not like to get far away from either unless he can take the whole "tribe" with him.

Negro farmers are slowly becoming acquainted with the farm cooperative movement and it is hoped by their leaders that ere long a strong cooperative organization of Negro farmers may be established. Until recently, white cooperatives have sought the Negro farmer's allegiance or support. Some are now offering him inducements to unite with them. We fear the offer comes too late. Negroes, in general, have discovered they are better off under their own vine and fig tree and the Negro farmer, in particular, is inclined to stay there. He appreciates the generous and efficient service of his County Agents and teachers, but he will be hard to lead into cooperative organizations where he knows his voice will not be heard and where the most he can hope for are crumbs from the master's table.

These Jim McCollums have no more to worry about today than have any other American farmers They are getting at least a part of their share of the much talked about "relief." We may rest assured that their hard uncommon sense and good old mother-wit will not fail them.

The Negro farmer is a digger, a driver, a pusher and a puller Somehow or other, he is "getting there" all the time. He deserves from his race and from his friends more encouragement than sympathy. He has come a long distance over a mighty rough road and plenty of honor is due him from all of us. There may be some flies on his mule but there are no flies on His Excellency, The Black Farmer Of America.

---

To do good for the love of God, and to do good for the sake of praise, are two different things.

---

We who complain much should look about us for we will be sure to see some one whose plight is worse than our own.

# AGRICULTURAL NOTES

### Complied From Reports of Negro Extension Workers

Mrs. Althea Ayers, Home Demonstration Agent of Madison County, Florida, reports that her club women and girls have canned 1,175 quarts of fruits and vegetables as their part in the Live-at-Home program.

As participants in the National Use-More-Cotton Campaign, Miss Elizabeth Ray, Home Demonstration Agent is encouraging women of 173 farm families of Bullock County, Alabama, to make more mattresses for home use. Miss Ray is conducting a series of mattress-making demonstrations.

Syrup-making equipment which is cooperatively owned by a group of Negro farmers in Falls County, Texas, is serving other farmers in the County. In Fayette County, Texas, another group of Negro farmers own and operate a sawmill.

J. T. Jarmon, Negro County Agent located in Clayton, Alabama, reports that farmers in his county who used Austrian winter peas and other cover crops and otherwise cooperated with the AAA Conservation program increased their yield of corn by from 15 to 20 bushels per acre.

With assistance and encouragement from the County Superintendent of Public Instruction, 4-H Club Girls of South Jacksonville Community in Duval County, Florida, are raising funds for a Community Club House. Mrs. E. M. Powell is the Home Demonstration Agent.

Officials from Washington, D. C., and the State of Georgia and farmers from sixteen counties recently visited the Soil Conservation demonstration farm of Miles Hackney located near Union Point, Georgia. Mr. Hackney is recognized as an ace-farmer by the AAA.

Emery C. Thomas, Negro County Agent located in Dublin, Ga., announces plans for holding the first Farmers and Farm Women's Commencement. Certificates signed by Secretary Henry A. Wallace and State agricultural officials will be awarded to those families who have the highest score in following the AAA Conservation and Live-at-Home programs.

A. G. Facon and E. F. Purvis, Negro Parish Agents in Louisiana, recently conducted groups of farmers from their Parishes to visit the North Louisiana Experiment Station. Cover crop tests with cotton, corn, soybeans, cow peas, and truck crops were among the experiments observed and studied by the farmers.

400 4-H Club Boys and Girls attended the annual Short Course recently held at Georgia State College. Achievement medals for successful year-round club work went to Harry Campbell of Camden County, Marion Rosser of Merriwether County, Isaac George of Bibb County, and Rogers Hurse of Baldwin County.

In the annual Negro Farm and Home tour of Wilcox County, 80 farmers with their wives and 4-H Club members visited seven Negro demonstration farms where improved practices in agricultural conservation and home-making were followed. The tour was under the joint direction of W. E. Street, Negro County Agent and Miss Patsy Graves, Home Demonstration Agent.

4-H Club Girls and Farm Club women of Hillsborough County, Fla., enjoyed their summer outings in new camp buildings. Equipment for the camp kitchen was secured by members saving and canvassing for soap wrappers and redeeming them for the equipment and furnishings. Miss Floy Britt is Home Demonstration Agent. Miss Britt's better-homes campaign also received honorable mention in a nation-wide Better-Homes contest conducted by Purdue University.

# Farmer Shows How To Make Good

Union Point, Ga., Sept. 8 (ANP)—Miles Hackney's 126 acre farm located near here which is recognized by AAA officials as a model demonstration of the value of soil conservation was recently inspected by Negro farmers from 14 counties and by a large group of state and Washington officials.

Because of Mr. Hackney's strict adherence to the AAA program he has succeeded in making farming pay, and since his appointment as Collaborator for the AAA, is much in demand as a speaker at farm meetings throughout the state.

In reply to a question by one of the vistors, Mr. Hackney said, "Cotton now stands forth on my list of crops. Corn and wheat come first; meat, lard butter and eggs second; and feed for work stock third. Recent rains and the boll weevil are not giving me much worry."

Those present, aside from Negro farmers and Negro county extension workers, included E. A. Miller, assistant to director, Southern division, AAA.; Dr. J. A. Evans, administrative assistant, Georgia Extension service; T. H. McGibboney, county commissioner of Green county; President B. F. Hubert, Georgia State college; James P. Davis and A. L. Holsey, field officers, AAA; Mrs. M. A. Turner, Jeanes teacher; V. C. Turner, Alabama 4-H Club leader; and Alexander Hurse, Georgia 4-H Club leader. P. H. Stone, Negro State Extenson leader for Georgia, presided.

# NEGROES IN OFFICES

(American Business)

What are we going to do about the growing numbers of Negroes who are graduating from northern colleges and high schools? The pressure to make jobs for these white-collared workers is becoming more and more acute, as the Negro pressure groups acquire political importance under the new order of things. Recently in New York merchants were forced to make available a certain number of sales and clerical jobs for Negroes, and there is a systematic campaign under way in Chicago and elsewhere to force public utilities to employ more Negroes in office and clerical jobs. We can sympathize with the Negro who made a great sacrifice to get a college education only to fine that he is not wanted in offices where whites predominate. No doubt many of these young men and women would make excellent salesmen and executives. But it would seem that their greatest opportunity is to be found in supplying leadership to their own people, rather than to force themselves into situations where they are not welcome.

---

Everyone is sowing seed—either the seed of God's kingdom or the seed of Satan's.

# THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

### History

In 1922 this organization was founded by James P. Davis, the late Gilchrist Stewart, Cornelius R. Richardson and Leon R. Harris. Mr. Davis, a native of Georgia, had long been engaged in the commission business in his native state and was recognized as the leading authority of his race on the marketing of farm products. Mr. Stewart was a native of South Carolina, the son of a sharecropper, who had risen to eminence in his profession but had not forgotten the severe struggles of those who had nurtured him. Mr. Richardson, also a native son of Georgia, was and is a prominent lawyer. He has devoted much of his time and study to the legal phases of farm and co-operative organizations. Leon R. Harris, a native of Ohio, was reared on a hilly Kentucky farm eighteen miles from a railroad. And for six years he had been a North Carolina dirt farmer, rural school teacher and a leader in farm organization work in that state.

In 1929 Mr. Davis was chosen president and began devoting all his time and efforts for the welfare of the organization. Under his unselfish and inspiring leadership, growth was rapid and substantial.

The organization was incorporated under the laws of Illinois in 1930 and the national office was established in Chicago, the agricultural capital of the nation.

### Purpose And Aims

Quoting briefly from the "foreword" of the N. F. C. F., published in 1928, "It is the hope of the founders of the National Federation of Colored Farmers, to make life on the farm more attractive and more profitable, and to build up in this nation a Negro group of organized, influential and satisfied producers."

To accomplish this purpose the N. F. C. F. has advocated (1) co-operative buying, production and marketing. Local Units have purchased more than a quarter million dollars worth of farm and farm home supplies co-operatively during the past eight years. Local Units have produced and marketed co-operatively, hay, watermelons, string beans, peanuts, sweet potatoes and mixed cars of vegetables. The N. F. C. F. has advocated (2) land ownership. The Federation has assisted hundreds of its members in purchasing farms on reasonable terms. It has also been instrumental in securing better legal sharecrop contracts. It has helped its members by instruction and assistance to take advantage of farm relief legislation. The N. F. C. F. has advocated (3) better farming and better farm living, and through organization, assists in building better colored farm communities.

### Progress

The first local Unit of the N. F. C. F. was chartered at Howard, Miss., in 1929. Today it has a membership in 21 states. It admits to membership farmers, sharecroppers, tenants and farm hands, all members of the Race who are interested in any manner in the important business of farming. The organization has proven its worth. It has been a blessing to thousands of Negro farmers.

### HOW TO ORGANIZE A UNIT OF THE N. F. C. F. IN YOUR COMMUNITY

This is an age of GROUP ACTION. The INDIVIDUAL, working alone, can accomplish little. Colored farmers must ORGANIZE. Your organization is the N. F. C. F. YOU HAVE NO OTHER NATIONAL FARM ORGANIZATION. To organize a Unit of the N. F. C. F. in your community:

1. Make a list of the names of all who can and who should be members of your Unit. This list should include the names of farm owners, tenant farmers, sharecroppers, farm-hands, rural teachers, rural preachers, colored owners of farms in your community who live elsewhere, and all others of our Group who are interested in the business of farming.

2. Appoint a time and a place for a meeting and invite all whose names are on your list to attend it. The farmer's wife is an equal partner in his business and should also attend your organization meeting.

3. Elect the following officers: President, Vice President, Secretary, Treasurer, Market Agent, Chaplain, and Marshal. These and four others you elect constitute your Board of Directors.

4. Collect $3.00 annual dues from each member. Two dollars per member to be sent to the national office, one dollar per member to be put in the local Unit's treasury.

5. Appoint a standing Membership Committee of three members.

6. Appoint an Agent for "The Modern Farmer."

7. Name the time and place for your monthly or bi-monthly meetings.

8. Select a name for your local unit.

### WHAT YOU SHOULD DO AFTER YOU ORGANIZE

After your Unit has been organized and you have elected officers who are efficient and reliable, the first thing you should do is: MAKE A SURVEY OF YOUR COMMUNITY AND REPORT THE FOLLOWING FACTS TO YOUR NATIONAL OFFICE.

1. Number of colored farm owners in your community.
2. Number of colored tenant farmers and sharecroppers in your community.
3. Number of tenant farmers and sharecroppers who desire to purchase farms and who are able financially to make a down payment on a farm.
4. Number of farms or amount of farm acreage which can be purchased in your community.
5. Number of farmers in your community who desire to purchase farms in other communities.
6. Number of farm hands in your community and average daily, weekly, monthly and annual wages they receive.
7. The money crops produced in your community and money crops which may be produced.
8. The money crops which may be produced co-operatively this season or next season.
9. The farm and home supplies used at which a saving may be made by cooperative buying.
10. Is your Unit prepared to engage in co-operative buying?
11. Home owner needs in your community—paint, fencing, household appliances, farm machinery, building, etc.
12. Government assistance desired, seed loans, farm loans, etc.
13. Does your county and community have, or does it need, the services of a Negro Farm Agent and a Negro Home Demonstration Agent.
14. Could a Farm Credit Union be organized in your community.

### General Information

After your Unit is organized a Colored Farm Women's Club and Colored Farm Boys' and Farm Girls' Club should be organized under competent leadership.

Your national office will send you a charter and individual membership cards when annual membership fees of two dollars per member is received.

Local Units can make and adopt by-laws to govern their local organizations. The national office will advise but will not interfere in the set-up or government of a Local Unit.

Local Units may assess and collect monthly payment of dues for the benefit of the Local Unit treasury. Local Units may also pay to the national office annual membership dues out of the local treasury. These dues may be raised by holding entertainments, picnics, or from crop or stock growing projects engaged in by the combined membership of the Local Unit.

The "Modern Farmer" is the official organ of the N. F. C. F. All members should read, subscribe for, and support this monthly farm paper. It is the only paper published for colored farmers.

All Units are required to report monthly to the national office.

## THE RURAL LETTER BOX

Minneapolis Tribune: A streamlined mail box for rural routes was exhibited at the 35th annual convention of rural letter carriers in Washington. Chief among the advantages explained by its inventor Adney Coleman of Alabama, is the ease with which it may be opened. A touch of the finger and the whole cover is automatically raised. This argues Mr. Coleman, is an agreeable change from the old-type box which has a door that "won't stay open, breaks off, sticks or squeaks."

No definite decision was made at the convention in reference to the substitution of new boxes for old. But the carriers looked the streamlined model over carefully with a view to expressing an opinion on it to Postmaster General Farley wh had previously suggested that rural routes be made "not only institutions but ornaments to the countryside."

A great many persons can remember when the present box with all its alleged faults looked pretty good to them. Up until the time it came to stand guard on a weather-beaten post down where their farm property met the main road, they had to drive to town to get their mail. It was fun, of course, going into the postoffice and receiving the family letters through the wicket in the little window. But it was far more exciting to watch the mail carrier with his horse-drawn vehicle and then scamper down the farm road to get the treasures he left in the long box with its flag upraised.

The streamlined box may come in and add its bit to the convenience of farm life. But with all its efficiency, it will never give to country youngsters the thrill that the old and less convenient box gave to rural boys and girls of other days. For it can never carry with it the fascination that went with the early years of the R. F. D.

## IS THIS SO

The following letter addressed to the Union Publication, "Labor," mentions a situation that is proving worrisome to many urban workers of the South.

**Reduction of Crop Acreage Is Driving Workers to the Cities**

To the Editor of LABOR:

I know nothing of labor unions or the workings of organized labor. As a hard-headed business man I know it is to my interests to see labor well paid and well treated.

I deem it my duty to point out where labor, in my judgment, has been sold down the creek. It is due largely to the fact that some of our thrown out of work, both white and agricultural conditions.

Here in the South, by cutting cotton acreage and reducing other farm crops, farm workers are being thrown out of work, both white and colored, and are leaving the farms. They will accept the first job offered and at almost any wage the boss suggests.

As an example, one colored man from this section went to Birmingham and is drawing $1.50 a day. He replaced a man who was getting $4.50.

I don't pretend to know the remedy I do know that organized labor is being injured by this crop-reduction policy and something should be done about it.

Selma, Ala G. M.

## FACTS FOR FARMERS

By Albon L. Holsey

Tuskegee Institute, Ala.—A recent report from Cairo, Egypt to the U. S. Department of Commerce states that cotton growing experiments conducted by the Italian Government in Abyssinia have been so successful it is predicted that Italy will no longer have to import cotton.

A recent report from the Farm Credit Administration stated that 16,000 farm cooperative associations with 3,270,000 members are now doing an annual business amounting to $2,750,000,000. Their services include marketing, buying and insurance.

Economists of the Southern Division, Agricultural Adjustment Administration have made a study of comforts and conveniences available in the 2,740.000 rural farm homes in the 10 principal cotton growing states. The figures show 11 per cent of these homes have telephones as compared with 47 per cent in all the other states. In the 10 cotton states only 3 per cent have electric lights as compared with 19 per cent in the other states. The comparison of bath rooms with running water was 3 per cent for the 10 states as against 12 per cent for the other states.

Since Congress passed the Farm Credit Act of 1935, the FCA reports that "more than 55,000 farm tenants, farm laborers and other operators have bought farms by making moderate down payments and qualifying for Farm Credit Administration financing."

The Bureau of Agricultural Economics reports a slight gain in the total farm population as of January 1, 1938. The Bureau estimates the farm population at 31,819,000 as compared to 31,729,000 a year earlier. More than 1,000,000 persons left farms last year but births and migration to the farms combined to exceed the farm population losses.

J. E. Barr, writing in 'The Agricultural Situation' calls attention to the vast acreage of other crops than wheat, cotton and corn. According to Mr. Carr, dry beans represent a 50 million dollar annual income for farmers. Other minor crops include sugar beets at 50 million dollars, peanuts at 44 million, onions, 23 million and cabbage 20 million.

Under the provisions of the Clarke-McNary Act, the U. S. Forest Service cooperates with the states in producing and distributing forest trees to farmers at cost. During 1938, more than 35,000,000 trees have been distributed and planted on farms. The Forest Service has recently issued a free booklet entitled "Growing Nursery Stock of Southern Pines" to encourage Southern farmers to produce their own pine seedlings.

Secretary Henry A. Wallace estimates that farmers income for this year will be $7,500,000,000 as compared with $4,323,000,000 in 1932.

According to a recent press dispatch the Social Security Board is making an extensive study of the problem of providing Federal Old Age Insurance to 16,000,000 farm laborers, hired girls and other wage earners who are not now included under the Act..

The Farm Security Administration has announced a new system for making long-term loans to energetic farmers for operating capital. FSA officals hope that this plan will encourage longer leases on better terms for the tenant-farmer.

## From New York To Cherbourg

By William Pickens
(For ANP)

"THE QUEEN MARY" is a huge institution,—like a great city square packed with, say, $3,500 people. Or just imagine the Empire State Building being pushed over the ocean at the rate of 35 miles an hour.

The ship had just finished a record run from Cherbourg to New York in 3 days and 21 hours, and as I write we are about to do the West-East record of all time in 4 days and an hour or two. We are now not more than 3 hours from Cherbourg—having passed early in the afternoon the Scilly Islands and the Southernmost part of the island of Great Britain.

The trip has been easy, pleasant and uneventful, so far. The weather has been fine. There was some rain the third day and some heavy, dewey fog on Saturday.

There are a few colored passengers: President and Mrs. Sanford, of Langston University, of Oklahoma; one of their teachers; a professor of Institute, W. Va., College, leader of their party; a Huntington teacher; and a Baltimore teacher.

Miss Tillman, the Langston teacher, sang beautifully in our concert Saturday night. She and the black man who served on the program seem to have been the stars from all comments.

There is also another Negro passenger on his way, he says, to Egypt and Palestine. His profession I do not know, but from the crowd who came down to see him off, he is master of some church or some "club."

From the ship's library, I picked up "Joan of Ark," her life story, by Milton Waldman, as interesting a thing as I have ever read.

Before I left New York the Medical Bureau, aiding Spanish Government with medical supplies, asked me to go to Spain. I shall go, if they get the permit from the state department and cable it to me. If only I had the time, I would go to Egypt this trip, but that must be done in the future, if possible. I must soon visit Africa in its most interesting parts. Life is so short and there is so much to do.

Today many of us attended services of the English church in the great auditorium in the middle of this ship. It is really a great auditorium. The Captain led us through the prayers and chants, and the other incantations. Ceremonially "civilized man" is far from the "savage", but not essentially.

Quite a number of times I've been to France, but I may see more of it this time—more than "Paris".

It's cold today: I have on a winter suit and will use a winter overcoat when I go out, this 14th day of August. No use for mohair and Palm Beach clothes here. It was a bit warmish as we crossed the Gulf Stream. When you come to Europe, north of the Mediterranean countries, bring real clothes.

## UNITED STATES POPULATION

The Census Bureau has estimated the population of the United States on last January 1 at 129,818,000, it was said yesterday by Secretary Roper. This represents an increase of 941,000, or seven-tenths of one percent, from the previous year, Mr. Roper said, and was based on the excess of reported births over deaths and of immigration over emigration. A table presented by the Secretary showed that the annual population increase has stood steadily around seven-tenths of one percent since 1932, although in 1931 the increase was nearly a full one percent. (Press.)

## CHINA'S LOSS; FLORIDA'S GAIN

Pensacola, Fla.—The war in China has brought a new and profitable industry to Florida, and one that promises rich returns in the years to come.

It is the growing of tung nuts from which tung oil is made. The oil is used in the manufacture of paints and dyes, and also as a lubricant for motors.

The industry started in the vicinity of Gaines a few years ago, and has spread rapidly to the north and west, as far as Green Cove Springs and Pensacola.

Today several hundred acres of tung trees are growing in Escambia county alone, and a large acreage in adjoining Santa Rosa county. For several seasons shipments have moved out of Gainesville in carlots.

**Imports Cut Off**

Until recent years America's supply of tung oil was imported from China, but when the Japanese entered China the tung industry became more or less disrupted, so Americans began to look elsewhere for their supply.

They found Florida could produce it, quickly on a profitable basis. The growth of the industry has been phenomenal during the last year or so.

—The Japanese-American.

## TRACTOR CIRCLES FIELD AFTER LIGHTNING KILLS THE DRIVER

Taylorville, Ill.—Thomas Rutherford, 44 years old, a world war veteran, was killed today. He was struck by lightning while plowing on the B. A. Swope farm near Mount Auburn. The tractor made several rounds of the field after Rutherford was struck. The machine finally was stuck in a ditch.

## CALLING ALL DELEGATES AND VISITORS TO THE ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF COLORED FARMERS INC., IN OCTOBER

The National Convention of the National Federation of Colored Farmers, Inc., will meet in Forsyth, Georgia, at the State Teachers and Agricultural College, October 26-29. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our Federation are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of state and federal agricultural departments who plan to attend the Convention should communicate with us at once. Suitable arrangements will be made to entertain all delegates and visitors and all farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.

Arrange to attend the greatest Convention of organized Negro farmers in America.

Sincerely,

LEON R. HARRIS, President.
Box 285, Moline, Illinois.

S. B. WILSON, Sec.-Treas.
447 4th Ave., N., Nashville, Tenn.

# BETTER COTTON FOR FOREIGN SPINNERS

The Bureau of Agricultural Economics is cooperating in a program of the AAA designed to improve marketing practices and to demonstrate to foreign spinners the high quality of American cotton produced in one-variety communities. Other agencies cooperating include the Bureau of Agricultural Engineering, Bureau of Plant Industry, Office of Experiment Stations, Extension Service, and the Farm Credit Administration. The plan is to test the feasibility of assembling, for delivery to spinners, lots of improved cotton produced under approximately uniform growth conditions in organized one-variety communities. This cotton will be ginned under proper conditions, packed uniformly with respect to quality, covered with cotton bagging, and so handled as to insure the placing of a uniformly good product in the hands of the spinner. The Division of Cotton Marketing will provide a market news service for the growers and see that the lots of cotton are kept intact as they pass through the channels of trade in this country; and the Foreign Service Division will follow the lots through in Europe until they are delivered to foreign spinners. The cotton will be purchased from growers by marketing agencies on a net weight basis and will be sold abroad on the same basis. The cotton will be sampled at the gin and information as to variety, grade, staple, and point of production will be available to foreign purchasers. Present indications are that between 10,000 and 12,000 bales will be so handled. To insure that selected cotton will be available for this program, the cooperating marketing agencies will pay 10 points, or 50 cents per bale, above the local market value for cotton of corresponding grade and staple. To offset this higher price and the additional expenses involved in the special handling, the AAA will make payments of $3 per bale to the cooperating marketing agencies. (B. A. E. News, September 15.)

# ROOSEVELT ASKED TO GO TO BAT FOR REAL DEMOCRACY

## Colored Supporters in North Ask President to Seek End of South's Disfranchising Laws

Washington D. C. —Negro New Deal supporters here are calling attention of the Administration to the fact that (what they call) "the present Democratic solidarity of the Negro vote" is seriously imperiled."

They want President Roosevelt to take some aciton or make some gesture that can be labelled "Roosevelt's liberality toward enfranchisement of the southern Negro."

These Negro advisers point to the recent majorities given "Cotton Ed" Smith in South Carolina; and "Red Suspenders" Talmadge and gentleman and scholar" Senator George, in Georgia, all of whom represent the Bourbon forces of the South always inimical to Negro interests or Negro advancement.

These Democratic senatorial candidates campaigned on the issue of "white supremacy," it is said, "most disgustingly."

It is feared that these revived campaign tactics may also revive memories of all the vicious issues and outrages practised by the Old Guard against innocent Negro populations of the deep South in former years.

The aforesaid "Negro Advisers" after a get-together point out that something must be done by the Administration to offset "the perils of the present situation."

# SOYBEAN PROSPECTS

An editorial in the DesMoines Register (September 17) says: "We should be the last to deny that the soybean has a great future in this country. It has taken a long leap forward in Illinois and Iowa in the past three years. But here are two little notes of caution, lest enthusiasts push the new product too fast. Soybean oil competes with lard, because it is one of the vegetable oils shortenings and compounds. To some degree, its expansion will be used in the manufacture of vegetable at the expense of our major industry, hog-raising. Secondly, the boom in soybeans in the past three years is due in part to unusually short supplies of lard and of cottonseed oil, a fact which raised the price of soybean oil above what it would otherwise have been. In the recent government bulletin, 'Soybeans in the United States; Recent Trends and Present Economic Status,' Ernest W. Grove of the Bureau of Agricultural Economics says 'no conclusive answer can be given now' to the question whether soybeans will maintain the advances made under the conditions. Much depends upon consumer attitudes and upon research. Soybean meal compares favorably with other protein concentrates, but soybean oil is still at a disadvantage compared with more commonly used oil. 'Some degree of caution (says Grove) is desirable in considering an increased production of soybeans for crushing purposes. Further increase should occur only in response to sustained or increasing demand.'"

Each day brings death nearer to each individual, therefore we should render our best service to God.

# HERTY PULP RESEARCH

Trustees of the Herty Foundation have announced that careful planning by Dr. Charles H. Herty prior to his death last month will result in his experiments in pulp paper manufacturing being carried on. The Savannah scientist, whose research brought millions of dollars worth of paper mills to the South, had evolved a five-year plan for his experimental laboratory. Sulphate pulping is the first item, with consideration being given both to pines and hardwoods. Then comes sulphite pulping, mechanical pulping, bleaching and pulp purification, stock preparation and machine operation, rayon and miscellaneous. Other matters for future study include determination of optimum coarseness of the grinding wheel in pine pulp for newspaper purposes, minimum power consumption, and heat and chemical treatments, Removal of yellow coloring matter in sulphate pulps from pine and certain hardwoods also will be undertaken. Work of directing the laboratory work is expected to fall upon Dr. Charles H. Carpenter, chief chemist and assistant to the late Georgia scientist. (Columbia, S. C. State, September 14.)

# DISTRIBUTION ON SURPLUSES

A San Francisco report by the Associated Press says a Federal Circuit Court of Appeals opinion, handed down yesterday and applying specifically to the Pacific Coast walnut crop, upheld Secretary Wallace's policy of giving to charitable institutions surplus products which could not be sold without affecting the market of the controlled crops. The policy was designed to aid the underprivileged and end destruction of crops. The court upheld that the act violated no constitutional rights and pointed out that the order was designed to create parity in prices by diminishing surplus supplies.

# Farmers Close Successful 1938 Session in Forsyth, Ga.

## PRESIDENT HUBBARD EXTENDED WELCOME TO N. F. C. F.

### Individual Farmers, Governor's Representatives and Federal Agents Present

***Was Host***

**PROF. Wm. HUBBARD**

**President of A. and T. College Forsyth, Ga., who was host to the National Federation of Colored Farmers annual convention.**

Forsyth, Ga. (Special)—Singing "God be with you 'til we meet again," farmers from many states in the Union closed out their 1938 convention held in this city. They were guests of the State Teachers College, its president and faculty. It was the most outstanding meeting in the whole nine years of the existence of this nation-wide organization. There were many high points reached during the week. Notable among them were the special message from His Excellency, Governor Rivers, the stirring address of former Congressman Patterson, the fine speech and the very outstanding impression made by Dr. Jos. H. D. Evans of the Farm Security Bureau, the excellent utterances of Mr. E. A. Miller, assistant director of the Southern Division of the Agricultural Adjustment Bureau; Dr. J. B. Watson, president of the A. M. & N. College at Pine Bluff, Ark., Prof. Wm. Bell, president of Alcorn College, the state school of Mississippi, and the steady presentations from day to day made by James P. Davis, A. L. Holsey, J. A. (Billboard) Jackson of the Standard Oil Company.

Among the last items of business transacted was awarding of the 1939 convention to Missouri with Lincoln University as hosts and the Jefferson City Capital of the state joining in with the school in urging that the farmers come to the "Show Me' state for 1939. The awards to those who won in the exhibit contest was a high light. All in all, it was three busy days that were not burdensome because of the big-hearted

(Continued on Page 16)

## Governor E. D. Rivers' Special Address to Representative Farmers

## THE COTTON SITUATION

Farmers generally want to understand what affects the price they get for their cotton. The cotton situation both in the United States and in foreign countries largely determines what the price will be.

It is important, therefore, that farmers understand the present cotton situation here and abroad if they are to gage accurately what next year's situation is likely to be—either with or without marketing quotas. Looking at the present picture, farmers see that without quotas both the supply and price situation may become even less favorable; and that cooperators in the A. A. A. program would lose the protection of a market adjusted more nearly in line with demand.

The chief facts about the present situation are:

**Supply:**

The present world supply of all cotton is 52 million bales, of which approximately one-half is American and the other half is foreign cotton. This is the largest world supply of cotton for any season. With a supply so far out of line with demand, farmers are experiencing low prices for cotton.

**Production:**

The farmers of the United States (based on the latest estimate) produced 12.1 million bales this year, which represent a crop 6.3 million bales smaller than the previous year's record crop of almost 19 million bales. Cotton farmers of the world produced this year about 28.5 million bales, or 8.4 million less than in 1937.

**Consumption:**

Last year the amount of all cotton used was about 4.5 million bales less than the amount used the year before. This decrease in consumption was divided about equally between American and foreign cotton. If domestic consumption and exports of American cotton during the last 10 months is at about the same rate as during the first 2 months of the current season, consumption for 1938-39 will be even less than for the previous season. An increase in consumption during the current season of more than a million bales is necessary before the carry-over in 1939 would be less than that in 1938. With no increase in consumption this season, carry-over will even be larger in 1939 than this year.

**Carry-over:**

As a result of the 1937 cotton crop, which was the largest in history, and the decreased consumption last year, cotton farmers faced a record world carry-over of American cotton amounting to 13.7 million bales, or enough to supply the current demand for more than a year. The carry-over of foreign cotton was also a record, being 9.8 million bales. The amount of **all** cotton produced in previous years which was carried over and which competed with the 1938 crop was 23.5 million bales, also the largest world carry-over in history.

**Income:**

A. A. A. payments will add 266 million dollars to the 1938 income of cotton farmers. Income from cotton, including A. A. A. payments, enables cotton farmers to purchase about 73 per cent of what the 1910-14 crops purchased. Income from the sale of the 1938 cotton crop, exclusive of A. A. A. payments, is higher than if there had been no cotton program, but it is estimated at only slightly more than 600 million dollars, or enough to buy only about one-half as much goods and services as the 1910-14 cotton crops brought.

**Next year's carry-over:**

Although production was kept down this year, there is a huge supply of cotton now on hand and the carry-over next August will be unduly large and burdensome.

**Cotton farmers will want to consider carefully how these facts affect them individually and as a group before they decide which way to vote on marketing quotas. It is to reduce burdensome supplies and support farm income that Congress has given cotton farmers the opportunity to use marketing quotas.**

## COMMITTEE'S FULL REPORT

### Resolutions of the Ninth Annual Convention of Farmers

1. We commend the efforts of our national officers and Board of Directors in endeavoring to carry out the original aims and purposes of our organization. They have efficiently and wisely carried on the business of the organization and deserve the encouragement and support of every member. We urge members to acquaint themselves with the functions of the organization that we may double our efforts to support the organization financially by plans already outlined or by a new plan that may be worked out, thus removing the burden now resting upon the founders and ardent supporters of our federation.

2. We recommend that the Convention adopt a definite plan for systematically handling the exhibits that come to it from year to year by cooperating with our land grant colleges, high schools, vocational workers and Extension workers in the several states.

3. The revision of our by-laws since our last annual convention has made the way more clear for those who desire to unite with us. We urge all members to strive to increase the membership of the organization. State and Regional agricultural organizations, Marketing, and Cooperative organizations, now have the privilege of merging, joining, or affiliating with our organization and we especially urge the

(Continued on Page 16)

## SOME FACTS REGARDING THE COTTON SITUATION

Early in December, cotton and tobacco farmers will vote on marketing quotas for the 1939 crop year. This is a matter of important concern to Southern Negro farmers, the majority of whom grow either cotton or tobacco.

In the case of cotton prices have been lower this year than was anticipated. While the low price has been almost wholly due to the 1937 surplus of 13,000,000 bales, certain agitators have sought to use the price situation as a means to make farmers dissatisfied with the Farm Bill.

Negro farmers have a direct interest in the result of these referen-

## MR. ARTHUR CAPPER'S TELEGRAM TO FARMERS

Topeka, Kans., Oct 25, 1938
Leon R. Harris,

National Federation of Colored Farmers State Teachers and Agricultural College, Forsyth, Ga.

Please convey my warmest greetings to the National Convention of your Federation. Colored citizens have much reason to be proud of their achievements in agriculture. I hope you may have a most successful convention and that out of it will come inspiration for a contantly enlarging program.

Arthur Capper.

## RT. REV. BISHOP J. A. HAMLETT WIRES GREETINGS

Chattanooga, Tenn., Oct. 27, 1938
The Annual Convention National Federation Farmers
State Teachers College

I greet you in the name of God who furnishes the soil, sunshine, rain and other elements needed in the big and important business in which you are engaged. Many of our problems will find solution only through the farming industry.

Bishop J. A. Hamlett.

# Security For Farmers

**Facts and Figures From the Farm Security Administration**

Washington, D. C.—All Tenant Farmers and Croppers should know that while deadlines for tenant purchase loans for 1938-1939 have already gone into effect in most states this does not mean that applications cannot be duly filed for the next fiscal year. Applications may be filed at any time. Here is the necessary information:

If you live in a county where loans are to be made this year, get an application blank from the county rehabilitation supervisor. If you do not know his address, you can obtain it from your county agent. If you do not know whether your county is eligible this year, ask your agent.

County committees consisting of three farmers, determine which applicants will be eligible to receive loans. Character, ability and experience are considered in selecting applicants.

A farm which can be operated by family labor is the type usually approved.

Loans will include money needed to repair present buildings, build fences and improve the land, so that the family occupying the farm can have comfortable and healthful surroundings.

Loans are made for a 40-year period at 3 percent interest, but payment in full may be made at any time after 5 years.

Talk over your plans with your county supervisor and county committee before selecting your farm. They will help you.

Figures on Tenant Purchase Applications by Race, Recently Received from the Field, show that Negro tenants applied for 1938-1939 loans in fairly good numbers. For instance:

IN TENNESSEE, where 21 percent of the tenants are Negroes, 20.6 percent of the applicants for TP loans were Negroes.

IN VIRGINIA, which has 26 percent of the tenants Negroes, 23.5 percent of the applicants were Negroes.

NORTH CAROLINA, with 34.5 percent, Negro tenants, had 29.9 percent Negro applicants.

ALABAMA, with 42.9 percent Negro tenants, had 34 percent Negro applicants in 1937-1938—a smaller percentage—20.9—but four times the number of actual applications for 1938-1939.

ARKANSAS' Negro applicants jumped from 17.5 percent of the total for 1937-1938 loans, to 37 percent for 1938-1939. In actual applications 12 1-2 times last year's figures.

MISSISSIPPI has 67.9 percent Negro tenants, but only 19 percent of the aplicants for loans in 1937-1938 were Negro. This number increased to 31.5 percent for 1938-1939.

NOT SO GOOD:

FLORIDA, with 29 percent Negro tenants, had, last year, 17.8 percent of her applicants, Negro, none of whom received loans. This year Negro applicants are dropped to 6.8 percent of the total. White appications rose proportionately.

IN LOUISIANA, 54.9 percent of the tenants are Negro. For 1937-1938, 30 percent of the applicants were Negro. They received 8:5 percent of the loans. This year, 43:5 percent of Louisiana's applicants are Negro.

Figures on tenant purchase loans granted for 1938-1939 have not yet been compiled.

---

Increase in employment at the Newport News Shipyards is expected to stimulate purchase of the Farm Security Homes at Aberdeen Gardens. Prices on these homes have been recently scaled down to meet the needs of the industrial workers for whom they were erected. Plans are being made through which Aberdeen Gardens residents will be enabled to obtain rehabilitation loans for the purchase of poultry, or for garden equipment. Prices on Aberdeen homes now start at $1800 and rents begin at $11.25.

The Farm Security Administration has built a fine school house at Aberdeen, which will be staffed and operated by the county, as soon as the number of pupils on the project warrants this. In the meantime the building is being used as a community and recreation center. Project folk have raised money for volley ball and table tennis equipment, and a real community spirit is developing. A co-operative store will soon be set up.

Mrs. Stevens, home management supervisor at the project, has a model house for her demonstrations.

The last of the drainage work is now going on.

November 1 will mark the first anniversary of the opening of the project.

The Live-at-home Program is making progress at Roanoke farms, North Carolina, where 137 colored families canned 22,000 jars of fruits and vegetables, which included 30 varieties. The colored home economist made 87 farm visits during the month of September. The farm management supervisor made 75 visits.

---

Family selection is now going on at Wolf Pit Farms, North Carolina. As planned at present, two-thirds of the homesteaders on this project will be white, and one-third Negro. Houses will soon be erected.

## *Where Farmers of the Nation Convened*

**Agricultural Teachers College at Forsyth, Georgia, where the National Federation of Colored Farmers held their 1938 Annual Convention. President, Faculty and Student Body.**

# Agriculture Items of Interest

### COTTON CROP PAYMENT

Washington, D. C.—The Federal Crop Reporting Board forecast a cotton crop of 12,212,000 bales, based on conditions as of October 1. This was an increase of 387,000 bales over the September 1 forecast. Such a crop would compare with 18,946,000 bales harvested last year, the largest on record and 13,201,000 bales for the 1927-36 average. The Census Bureau reported cotton of this year's growth ginned prior to October 1 totaled 6,578,313 running bales, compared with 8,260,071 for last year and 6,031,950 for 1936. (Associated Press.)

An A. P. report also says that Secretary Wallace reiterated, in a letter made public after the Crop Reporting Board had forecast an unexpectedly large increase in this year's cotton crop, that new processing taxes should be enacted to finance subsidy payments to cotton growers. His letter, addressed to Senator Smith, of South Carolina replied to demands of a group of southern members of Congress for an additional federal subsidy of 3 cents a pound on this year's cotton or an increase in the rate of federal loans on the crop.

### AAA TOBACCO SUIT RULING

A three-judge federal court has ruled that tobacco farmers who oversell their marketing quotas may be validly "penalized" under federal crop marketing provisions, says an Associated Press report from Macon. Judge Samuel H. Sibley, of Atlanta, said in the opinion that if regulation of marketing of crops is needed, Congress has the authority and not the states. The tobacco marketing act, he ruled, deals only with planting and production. The suit was brought in the Valdosta, Georgia, Division of Federal Court by a group of producers against Nat Smith, Agricultural Adjustment Administration official.

---

### "AGRICULTURAL STATISTICS"

The 1938 volume of "Agricultural Statistics" has come from the press and is being distributed. This year's book contains about 55 more pages than the edition of last year. A large number of new tables were included in the section on fruits and vegetables, giving an historical series of basic statistics for all of the commercial truck crops. The 1938 volume also contains additional tables on feedstuffs, cotton, sugar, miscellaneous crops and farm business, as well as a number of new tables relating to the Soil Conservation Service. Department workers may obtain this from their respective bureaus.

---

### SWEET POTATO ELECTRIC CURING

M. M. Johns, Tennessee Extension Service, author of "Sweet Potato Profits by Electric Curing," in Electricity on the Farm (October) reports that "sweet potato storage houses are being converted from stove heat to automatic electric heat with a resulting increase in percentage of marketable potatoes, improvement in quality and better bank account." "A 2,000-bushel house was constructed in 1927," he says, "at the Junior College at Martin, Tenn., according to plans recommended by the U. S. D. A. It was heated by a coal burning stove located near the center of the building. In 1936, six 1,000 watt strip heaters were placed over the ventilators cut in the floor and twelve 500 watt strip heaters were spaced uniformly over the remaining floor surface. This made a connected heating load of 12 kilowatts. The storage city was increased 400 bushels by removing the stove. The cost of the installation was $160.00. The power consumption for the season (October 14, 1937 to March 11 1938) was 1,960 kilowatt hours. A total of 2,183 bushels were stored at the rate of less than one kilowatt hour per bushel. The average percentage of good potatoes taken from the electrically heated house was 95.8 per cent as compared with 89.1 percent for potatoes cured and stored in conventional stove heated houses."

---

### INTERSTATE TRUCKING

"New factors, often unexpected, continue to arise to complicate the economy of the food industries and to perplex those whose daily task is to cope with the problems of distribution," says Food Industries (October.) "Such problems are typified by the extreme variations of permissible gross weights of vehicles on highways in various states. To illustrate: If a truck shipment originates in Chicago, were the Illinois law permits 72,000 lb. gross weight, and heads for Tennessee, it will be 300 percent too heavy to meet the 18,000 lb. stipulation of Kentucky or Tennessee highway regulations. Rhode Island, which can be traversed by an auto in less than an hour, permits gross weights of 120,000 lb., whereas adjacent Connecticut per-

(Continued on Page 11)

THE

# ANNUAL ADDRESS

THE PRESIDENT

OF THE

NATIONAL FEDERATION OF COLORED FARMERS

## Leon R. Harris

Before the
Ninth Annual Convention of the
National Federation of Colored Farmers

at

State Teachers & Agricultural College

Forsyth, Georgia

---

This has been a good year for the National Federation of Colored Farmers. We have gained more members than we have lost. We have carried on our program with renewed vigor. We have endeavored to clear new fields and to give to Negro farmers substantial national representation which our organization alone can give. Especially during the past few months, we have faced the fact that our farmers are fast becoming organization-conscious, and demand that the job of leadership must be done well. Without fanfare and without confusion—with courage and patience, our organization has sought to adhere rigidly to its original aims and purposes and to do its part toward solving the many vexatious problems affecting the welfare of the Nation's colored farmers. I earnestly hope that our efforts continue to merit the support of all interested in American agriculture.

We must admit, however, that the job of organizing our farmers has just been started. With all the zeal at our command, we must carry on. The basic problems of the farming industry are the colored farmers' problems just as much as they are the white farmers' problems. Negro farmers have also many special problems. These problems are national in scope and it is absolutely necessary that national representation exists to deal with them. Our organization must be equipped for the job.

We must build wisely and well in the community, in the county and in the state. There should be a Unit of the National Federation of Colored Farmers in every colored farm community. Community groups must have a voice--a voice which cannot be silenced by fear—by patronage or bribery. These community groups must be taught and led to cooperate with the great institutions that serve the farming industry—with our Extension Service—Home Demonstration Service—our Land-Grant Colleges and Experiment Stations. And if these great institutions I have mentioned will but cooperate with the community groups, they will find that our dirt farmers will soon develop their own leadership, who will assist in making the work of these institutions easier, their service more acceptable and worth while.

So let us all work together to build and maintain a national organization that will be a credit to our biggest business—this business of farming. Such an organization will do more than any other can do to place our group on an economical level with other groups of the Nation. For the Negro farmer's organization will represent more than half of the Negro population of the Nation—will represent a group which has given and will continue to give to the Nation and to the Race those elements of character that bring respect and honor to the American citizen everywhere, no matter how he looks, or what he wears.

### COOPERATIVE EFFORTS

The National Federation of Colored Farmers organized the first consumer's cooperative in the United States, the majority of the members of which were tenant farmers and sharecroppers. This was accomplished at a time when the cooperative movement among our farmers was something strange, and, naturally, it was misunderstood. None but those of us who bore the toil and endured the pain can realize how great were the obstacles surmounted before we say this favorable result of our efforts in this one community. What was the purpose behind this cooperative movement? To show our farmers if they would stick together, one for all, all for one, they could improve their economic condition, they could earn more, save more, have more and be more. Today sitting in this assembly, is a man who is a farm owner, fairly prosperous. Ten years ago he was a poor sharecropper. Yes, he was one of those who put in a few dollars with the dollars of his neighbor farmers to make that first cooperative purchase of a farm and home supplies. Yes, he got better rice at two cents a pound than the rice he had been paying six cents a pound for. Yes he got better sugar at four cents a pound than the sugar he had been paying ten cents a pound for. But that didn't mean so much. What he got that meant more to him than anything else was this practical, simple lesson in cooperation. It banished discouragement from his soul. It gave him a vision. It kindled within his breast that smouldering fire of independence, that fire which smoulders in the breast of every American citizen. He wanted freedom. Freedom from dependence on the landlord. Freedom from debt-slavery. Freedom from poverty and ignorance. Freedom from the one-crop and the two-room shack. And that man and his neighbors went forth and conquered. This year, ten years later, they have made four trips to Memphis with truckloads of livestock and farm produce, which they sold cooperatively, and every check the Market-Agent has brought back to the community to be divided among those cooperative producers, has been written in four figures, not counting the cents.

Farmers, you have better opportunity to practice cooperation today than you have ever had before. Your money belongs to you. Put it together—save it and make it talk. Under the charter of our organization, every Unit has the privilege of engaging in cooperative purchasing, cooperative production and cooperative marketing.

I wish to warn you however against the folly of attempting to establish marketing cooperatives in your communities if you have the privilege of becoming full members of such cooperatives already in existence. Many such cooperatives have been a blessing to Negro farmers and desire to serve them. They give the colored farmer a square deal. But, I am sorry to say, some of them do not do this, and the colored farmer is justified in refusing to allow them to handle his products. For instance, I know of a cooperative in the fresh vegetable section near the Atlantic coast which found a ready and profitable market for the green beans produced by the white farmers but could not find a market for their colored members' beans until the crop was about to decay in the fields. Then the colored farmers had to sell for what they could get.

Such a situation was "segregation with vengeance." We must not endure such injustice. We don't have to do so. I have been branded a rabid segregationist but I have been misunderstood. I have been in this country ever since before I was born and mostly everywhere I have found two kinds of segregation —a wise kind and a foolish kind. I associate with and enjoy myself with my own people and that is wise segregation. I join a cooperative that gives me a voice and a vote and handles the products of my farm with the products from the farms of my fellow-members, and assures me the same price for my products. It would be foolish for me to segregate myself from such. But when that cooperative does not want my voice or my vote because I am a

# Our Agricultural Problems and The Agricultural Outlook

Address Delivered by LaFayette Patterson, Principal Administrative Officer, Agricultural Adjustment Administration, at Forsyth, Georgia on October 28, 1938.

Mr. President, distinguished guests and friends, I feel greatly honored by having the privilege of bringing you greetings from the Secretary of Agriculture and the Agricultural Adjustment Administration. Your National Federation organized under the leadership of such men as my friend James P. Davis in the sixteen years of its existence has fully justified the faith of its founder. The ideas and tenets as outlined in its charter has the approval of the best people in the country. In meeting with you today I commend your spirit and express the hope that you may carry forward your good work.

Every blessing in civilization brings with it responsibilities. Those of you who have achieved some of the goods which this world has to offer and then all of us who enjoy the blessings of civilization and live under the benefits of a grat country like ours have a tremendous responsibility to meet in order to fill our places. It is gratifying indeed to see the effort you are making to do your part in this civilization.

Many of you here today own your homes. This is something that the Government takes a vital interest in. All down through the history of our Government it has tried to provide people with an opportunity to own homes, but during this Administration particular emphasis has been placed upon the importance of doing away with tenancy and providing people with an opportunity to purchase homes. If I were to undertake to enumerate the number of organizations which have been set up under this Administration to help the individual citizen I would use my entire time without discussing the particular problem of agriculture with you as I wish to do.

### Talk Organization

As farmers you and I are interested in the farm situation and in that connection I should like to discuss briefly our Agricultural Adjustment Program, particularly the problems we face today and future goals for agriculture in this country.

What the farmer needs is a stabilized purchasing power. As we see it, the farmers of the country are entitled to have an income which has a purchasing power equivalent to that of other industries. That yard stick has been termed parity. Agriculture then should have parity income and be stabilized at a level of not less than that. That has been the aim of this Administration under the leadership of President Roosevelt and Secretary Wallace. The farm programs beginning with the Agricultural Adjustment Act of 1933 and those Acts that have followed have aimed at this and I know you are pleased that we have made headway toward this goal.

I shall not discuss these measures in detail. You are acquainted with the basic principles of each of them. The basic principle of the first was the removal of surpluses by adjusting production through benefit payments under contract with farmers which, of course, was declared unconstitutional by the Supreme Court in January 1936. The basic principle of the second passed immediately after the Supreme Court's decision was soil conservation and soil building. Up to that time probably no Act of Congress was ever more timely and in the light of studies and surveys more needed to meet the emergency caused by the annual loss of the fertility of our soil. This is something we all agree upon.

But when large surpluses began to pile up as they did in 1937 it was seen by farmers that although based on as fine a principle as was ever conceived the Soil Conservation Act did not by itself furnish powers adequate to meet the farm problem and the emergency which was being created by the accumulation of large surpluses and resulting low income. The result was Congress enacted the Agricultural Adjustment Act of 1938.

We believe that the principles and philosophy of this Act furnish a magna carta for agriculture in this country. That does not mean that it is perfect and will not need amendments from time to time, but we believe that this Act provides for the best farm program this nation ever had and it contains the best provisions of the sound proposals which have been presented to the Congress.

This Act re-enacts and broadens the Soil Conservation and Domestic Allotment Act of 1936 and by making soil conservation a permanent part of our farm program gives every farmer an opportunity to engage in good farming practices and receive aid from his Government to build his farm into a greater capital investment. It also definitely provides for farmer control of these programs through the election of their committeemen and the administration of the law by farmers in the States and Counties. It gives farmers a definite system of loans to support prices when they fall below certain specified levels and in spite of the fact that the income in the South this year is low the farmers will receive many millions of dollars more by reason of the provisions of this Act than they would otherwise receive. The Act also has provisions definitely protecting the interests of consumers through the principles of the ever normal granary and storage of surplus commodities. It gives farmers the right by a two-thirds vote to regulate the marketing of their commodities to see that large temporary surpluses do not depress the price to ruinous levels.

The Act goes further and sets as its ultimate goal for farmers the attainment of their fair share of the national income and stabilize that income at such a level. In spite of the tremendous difficulties which we face today by large surpluses we are making headway towards this goal. I want to add here that these difficulties are faced not because of this Act, but for the lack of it. Had we had this Act in force the major difficulties we face now with cotton and wheat would not prevail. I have no doubt from my contacts with agricultural problems and those in charge of this program that we shall under the leadership

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

# EDITORIALS

From the Bible: *"Giving thanks always for all things unto God and the Father in the name of our Lord Jesus Christ." Ephesians* 5:20.

"'Tis the wink of an eye, 'tis the draught of a breath,
From the blossom of health to the paleness of death,
From the gilded saloon to the bier and the shroud,—
Oh, why should the spirit of mortal be proud?

—William Knox.

### THE DAY WE GIVE THANKS

Thanksgiving Day, a national holiday, is not observed by colored farmers generally, as it should be observed. We neither say or think "Thanksgiving' as though we were going to do any thanksgiving. The reasons for the holiday are forgotten. If we take the day off at all it is usually to go hunting or to go to town. Yet we claim to have plenty of religion and we should know that Thanksgiving Day is, to a large extent, a religious holiday.

The old-time New England farmers make Thanksgiving Day the best "home" holiday of the year. Early in the morning they attend services at the country church. First of all, they give devout thanks to the good God who has blessed them so abundantly. Then the family gathers around the festal board. The father and the mother are made supremely happy Thanksgiving Day. The children return to the old home,—the grandchildren are there,—the guests come. It is indeed a happy family reunion.

Colored farmers also should make Thanksgiving Day a home and family holiday. Its a mighty fine thing for all the family to get together every once in a while.

### GOOD OUT OF NAZARETH

Chancellor A. L. Hutchins of Forrest City, Arkansas, whose action in condemning the unjust practice of Eastern Arkansas court officials of picking up Negro workers, fining them on trumped up charges and forcing them to work on privately owned plantations, has received the approbation of the entire country, has set a courageous example which should be followed by southern judges at all times and no matter what cost. For this type of peonage exists in more places than eastern Arkansas, and any people who love right and justice, be they black or white, are not going to love or even respect the South as long as such evil is carried on.

We are glad these conditions are coming to light. Not enough of us knew about them. Many good officials, even judges knew about them but were afraid to attack them. It takes plenty of courage to attack evil customs and evil doings in a place where, like Nazareth of the Bible, no good is expected. It is reported that Judge Hutchins' life has been threatened because of his fairness. No wonder less courageous judges have kept still and quiet.

Judge Hutchins has proven himself to be far too big for his job. He should go to the United States Supreme Court.

### NAMES OF PERSONS AND FARMERS WHO RECEIVED RECOGNITION AT THE FORSYTH MEETING

First prizes were offered in the various lines of endeavor by the Farmers Convention which just closed at Forsyth, Ga., after they had been in session for four days. Useful and valuable prizes were awarded.

The first prize, a radio from Sears-Roebuck was awarded to Mr. A. D. Davenport of Lexington, Miss. The next prize, an order of seed from the Hastings Seed Company of Atlanta, Ga., was awarded to Mr. Gordon Thompson of North Carolina. The prize for hog raising was awarded to Mr. R. D. Davenport of Lexington, Miss., which was a pair of pigs from Amos & Andy of Beverly Hills, Cal. A plow was won by Mr. J. T. Chaney of Forsyth, Ga., which plow was given by the S. L. Allen Company of Philadelphia, Pa. A set of files was won by Major McCormick of Taft, Okla. These files were given by the Carborundum Company of Niagara Falls, N. Y. Other files were awarded to Prof. Wm. Hubbard, principal of the State Teachers Agricultural College at Forsyth, Ga.

Your homes are the foundations for future generations; life to an active minded person is always an unfinished s y m p h o n y.—DeKalb County News.

### THE VOICE OF GOD

I sought to hear the voice of God,
And climbed the top-most steeple,
But God declared, "Go down
I dwell among the people."

—Louis I. Newmon.

# DRS. ALEXANDER AND PATTERSON SPEAKERS

**Lakeview, Arkansas Housing Project Opened Nov. 8th**

Washington, D. C.—Dr. Will W. Alexander, Administrator of the Farm Security Administration, United States Department of Agriculture, and Dr. Frederick Douglass Patterson, President of Tuskegee Institute, Alabama, will be the principal speakers at the dedication, November 8, of the Lakeview, Arkansas, all-Negro homestead project.

The Lakeview project, situated in Phillips County, Southeast Arkansas, fifteen miles south of Helena, was initiated by the Old Resettlement Administration, in February, 1936, and later developed by the Farm Security Administration, which succeeded the former agency, in September, 1937.

Located on the rich river lands, along the Arkansas and Misssissippi river, the 5,500 acre project has been developed to provide homes for approximately 100 families, 75 of whom are already established there.

Each farm unit averages 56 acres, and is provided with a farm cottage of modern design, necessary barns, outhouses and sanitary facilities and drilled wells. A community building has been provided, which will also serve as a school. Smith-Hughes teachers will be in charge. An auditorium for meetings and entertainments, rooms for adult education and a library, supplement the classroom facilities.

Emphasis on co-operatives begins with a co-operative store established where a crossroads store once stood. Woodland is held in common for fuel and other purposes. Ginning is also done co-operatively, and the project families have a participation of almost 100 percent in the Health Association.

Dr. Alexander, who heads the Farm Security work, has long been known as a student of racial and economic conditions in the South, and was for fifteen years Director of the Commission on Interracial Cooperation, receiving the Harmon Award for distinguished service in the field of race relations, in 1926.

### MR. A. A. TURNER'S LETTER

**Local District Agent Writes From Tallahassee, Florida On His Inability To Attend Meeting**

A. and M. College, Tallahassee, Wilson, Secretary-Treasurer National Federation of Colored Farmers, Inc., 447 Fourth Avenue, North, Florida, October 2, 1938. Miss S. B. Nashville, Tennessee. Dear Miss Wilson: Since writing you of our intentions to be present at the National Convention of Colored Farmers at Forsyth, Georgia, I wish to advise that a couple of officials from the Washington Office visited our state which caused me to forego my contemplated trip to Forsyth as I wrote you, and as I told Mr. Davis, whom I met in Jasper the past week.

I wired Mr. Davis yesterday, after finding my inability to be present, asking him to use Mr. F. E. Pinder, County Farm Agent of Gainesville, Florida, Alachua County, if necessary to represent our state.

The President of our State Farmers' Association, Mr. J. E. Granberry of Marianna, Florida, had intended to come, and bring a group of farmers in his car, but he took suddenly ill while on a trip to a convention in Panama City the past week, which prevented his coming, and also prevented the attendance of the farmers whom he had arranged to bring from this section of the state.

I hope the meeting was a success this year, and wish to assure you on behalf of our farmers in this state that we encourage and indorse the worthy movement of the National Federation of Colored Farmers, Inc.

Yours very respectfully,
A. A. Turner,
Local District Agent.

# FACTS FOR FARMERS

### TOBACCO TAX CHALLENGED

A group of North Carolina tobacco growers have challenged constitutionality of the Agricultural Adjustment Act and asked for an order restraining collection for penalty taxes on tobacco marketed in excess of individual quotas under the crop control law. (United Press.)

### MERIT SYSTEM

Section 2
Vol. LXX. No. 55
September 19, 1938

The Washington Post (September 16) commenting editorially on the departure of Governor Myers from the Farm Credit Administration, says in part: "The Government service—especially the newer departments and agencies created as the result of emergency conditions—have benefited greatly from the assistance given them in their formative stages by trained individuals drafted from outside Government ranks. In the great majority of cases, however, men of this type tend to return to private employment just at the time when they have gained enough administrative experience to make them exceptionally valuable to the Government. Governor Myers states quite frankly that he is leaving 'because there is no career in Government service in the top positions.' There is no valid reason why the present undesirable system should not be reformed. Except for a limited number of policy-making positions, every official in the Government service should be brought under the merit system and assured continued tenure of office so long as he is capable and honest. Such an extension of the merit system is one of the most important and desirable of the recommendations made by the President's committee on reorganization of the administrative establishments. Certainly the partisan affiliations of an export heading such as organization as the Farm Credit Administration should not concern anybody provided he does his work in a competent and conscientious manner."

### CHEESE RESEARCH IN A TRAILER

"There has been considerable interest on the part of American cheesemakers in the laboratory on wheels being operated at the Wayside Cheese Factory, near Green Bay, Wisconsin, by the Bureau of Dairy Industry, United States Department of Agriculture, and the Department of Dairy Industry, University of Wisconsin," says the National Butter and Cheese Journal (September 10). "The laboratory, housed in a modern trailer, differs from the traveling laboratory in the Green County Swiss cheese area in that its work is entirely of an investigational nature rather than instructive as in the Swiss laboratory. Says Dr. L. A. Rogers, Bureau of Dairy Industry: 'The work we are doing now is not in the nature of service to the cheesemaker but is for the purpose of collecting information which we hope can be used later in establishing and standardizing methods for making a more uniform and better grade of cheese. Work is entirely investigational and no attempt is made to give instruction or assistance to the cheesemaker, although, of course, information and advice may be given incidentally. The laboratory work is done by S. A. Hall, under supervision of H. L. Wilson, Bureau of Dairy Industry, and Dr. W. V. Price, University of Wisconsin. Cost of the investigation is carried by the Bureau of Dairy Industry. Equipped with running water, gas, electricity, and vacuum, the laboratory has incubators, sterilizers, constant temperature water baths, and all of the equipment necessary for making ordinary bacteriological and chemical determinations. 'In fact,' writes Dr. Price, 'the laboratory is equipped with all the apparatus necessary to measure the quality of milk, the changes which take place during curd making, and the composition and reaction of the finished cheese. This work is entirely of a scientific nature. Eventually it is hoped that the results obtained in the American cheese factory will be available for general use of the industry.'"

# NEW COTTON RESISTS WILT

"A new variety of cotton, Delfos 2323-965-425, very resistant to the fusarium wilt disease which prevails in the delta district of Louisiana and Mississippi, will be available for planting approximately 150 acres in 1939," says George H. Dacy in Country Gentleman (October). "The available seed supply will be increased as rapidly as possible for release to growers in the wilt-infested areas. The new variety springs from a single plant found growing vigorously in 1934 in a wilt-infested plot at the Northeast Experiment Station in Louisiana. In a test of sixteen varieties of cotton in 1936 this selection was outstanding in wilt resistance while it also yielded satisfactorily. Last year in another test of ten new-strain and hybird cottons for wilt resistance, it remained practically free of wilt throughout the growing season, produced a splendid stand of one-and-three-sixteenths-inch cotton, and yielded as much as 1100 pounds of seed cotton per acre on the bench and bluff lands at Baton Rouge. Its plants are fairly representative of the Delfes 6102 type in growth habits, boll size, rapidity of fruiting and fiber properties. The new wilt-resistant cotton has been developed by D. C. Neal of the United States Department of Agriculture, in collaboration with C. B. Haddon, superintendent of the Louisiana Station."

Without a generous supply of milk in the diet it is difficult to get enough calcium for building and maintaining strong bones and teeth and for promoting a high level of general health.

# An American Income For Cotton

Adapted from an address by Henry A. Wallace, Secretary of Agriculture, before a meeting of farmers, A. A. A. committeemen, and others, at Fort Worth, Texas, September 30, 1938.

HIGHLIGHTS.—The excess of 6 million bales produced in the 1937 season alone was enough to supply the usual consumption of cotton in the United States for all purposes for a whole year. It is only this year that the pinch resulting from this record crop has begun to be felt in earnest.

I would like to ask those favoring a type of plan that would subsidize increased production to consider carefully several questions:

What if the low price at which we offered cotton merely gave the foreigner a chance to stock up at a bargain? If the price of your export cotton was very low, would it be worth while to sacrifice your soil fertility for the sake of maintaining big volume of exports? Wouldn't it be better if farm women spent more time making a real home, and farm children spent more time going to school, and they all spent less time drudging to help produce cheap cotton? Why should you want to step up your production of cotton? Why should you want to step up your production of cotton in the face of the biggest accumulated surplus of American cotton the world has ever had? Would the increased exports, assuming they could be brought about under such a plan, actually bring back more dollars to the United States than the present volume of exports?

To those who would have the Government make loans at levels having no relation to the facts of supply and demand, I would like to suggest several questions:

What if the loan makes it impossible for you to keep the export markets you now have? Are you not simply piling up future agony for yourselves if the Government takes your cotton at the loan value and accumulates a big supply which must be got rid of some time? Have you fully considered what will be the inevitable effect on the cotton marketing system of the country if the Government makes loans so out of line with supply and demand that it gradually takes possession of the whole cotton supply?

Maybe it would be a good thing if the people having these two contradictory points of view could argue it out with each other. Both groups then might be willing to go along with the rest of us down the middle of the road.

If consumption of American cotton is to be subsidized, the subsidies ought to be applied to domestic consumption rather than exports. Why not, for once, give OUR OWN consumers and OUR OWN workers a break? The problem deserves the earnest attention of all elements of the cotton and textile industry.

The desirable acreage for cotton will continue to depend, of course, on the needs for soil improvement, the size of the carry-over, and the possible outlets But there is no question in my mind that, with conditions as they exist, cotton acreage adjustment is absolutely essential.

Through the parity payments provided for in the Agricultural Adjustment Act of 1938, cotton farmers have a way of increasing their income up toward parity on their normal production. Such parity of income really would amount to more than cotton producers can even hope to get out of any plan which gives them parity only on that portion of the crop consumed in this country. By means of the Agricultural Adjustment Act of 1938 we can hold cotton income closer to parity than in any other way.

Farmers cannot yet be certain that the parity principle established by Congress will be maintained. They will not be certain until some arrangement is made whereby the commodity bears at least a large part of the cost of financing its own program. Then, and then only will a continuing source of revenue be assured. For this purpose, a processing tax on cotton was in effct for 2 1-2 years To go back to that system would be a common-sense thing to do.

Today, as in 1935, the farm program is under fire. To guard it and make it work, we need to keep the never-say-die cooperative spirit of the South.

## WHAT IS THE BEST POLICY FOR COTTON

At Hutchinson, Kansas, speaking before a representative group of wheat farmers from all parts of the West, I discussed the national A. A. A. farm program as it applies to wheat. In that talk I stressed the need of an American income for wheat, and urged that wheat farmers use their program in such a way as to get the equivalent of an American price for their product.

At this time I want to discuss the A. A. A. farm program as it applies to cotton. And just as in Kansas I stressed the importance of an American income for wheat, I want to emphasize here the need for American income for cotton. The problems of these two great export commodities are in many ways parallel, and therefore you as cotton producers have a common interest with the wheat producers in a program that will effectively serve the welfare of both your groups.

Some of you may remember the talk I gave at Memphis, Tenn., exactly 1 year ago tomorrow. On that occasion I called attention to the fact that here were two main schools of thought in the South concerning the best national policy for cotton. One, I said, stood for high cotton prices as the way to cotton prosperity. To get high prices, men holding this view favored rigid production adjustment backed up by marketing controls to hold production down to bottom figures even though it costs us our world markets. Opposed to this high-price low-production policy, I pointed out at Memphis, were those who placed their emphasis entirely on volume regardless of price. These men said the export market was all-important to cotton and that the only real solution of the cotton farmers' problem was a general drastic reduction of the tariff, so that other nations could sell their goods in this country and get dollars with which to buy our cotton. These men were willing to give up the cotton program on the strength of a faint hope that badly needed tariff reforms would quickly come to pass.

I tried to show that either the high-price or unlimited-volume course, if pushed to an extreme, could lead to disaster. The cotton farmers' income depends both on the price received and the volume sold. A good price doesn't help the cotton farmer if he can sell only a small amount of cotton at that price. Big volume doesn't help him either if the price is so low that he can't make both ends meet. All of you at sometimes in the past have been bounced up and down on that price-and-volume seesaw and plenty of people are coaxing you to take another ride.

What the South needed, I suggested, was a sensible middle course which would avoid the disastrous results of either of these extremes and would seek to give the farmer the greatest possible income from cotton. To that end I outlined a six-point, middle-of-the-road program which I thought would serve the best interests of the South. These six points are as good today as they were then.

"First," I said, "this course would continue such moderate adjustment of production as would preserve and build up the fertility of the soil and still allow production of at least as much cotton as the markets of this and other countries have been accustomed to take.

"Second, it would encourage greater consumption of cotton in ways that would raise the standard of living of all our people.

"Third, it would provide for an increased production of home food and feed crops.

"Fourth, it would serve notice to the world that the United States intends to keep its place in the world cotton market, and it would supplement the market price with payments to cooperating farms on and allotted cotton production goal.

"Fifth, it would provide authority for loans to prevent price collapse.

"Sixth, it would provide authority for marketing quotas on the entire crop, to be used after a referendum of producers in time of emergency as a further protection against disaster from crushing surpluses."

When I spoke at Memphis a year ago, the cotton crop was estimated at a little over 16 million bales. This was 3 million bales above ordinary domestic consumption and exports. Under the weight of this big crop, the price of cotton had already fallen from the level of 14 cents which it had reached early in that year, down to less than 9 cents a pound.

This fall in the price of cotton had already brought distress to the South. But the full extent of the emergency caused by that year's crop was yet to come. With each succeeding month the crop report showed that the crop was becoming bigger and bigger. Finally it turned out to be 19 million bales.

Think of it! The excess produced in one season alone was enough to supply the usual consumption of cotton in the United States for all purposes for a whole year! In the face of superabundance like that, those who have been accusing you of practicing "scarcity" ought to hang their heads in shame.

This big crop was partly due to exceptional growing weather. But it was due also to the fact that the Supreme Court decision of 1936 had destroyed the cotton production control program, and farmers had planted 7 million acres more than they had been planting under the old A. A. A.

In that emergency the 9-cent cotton loan was of real importance. It sustained the price of cotton and supported other prices with it.

Cotton loans at too high a level could be very harmful indeed, but in that emergency a moderate cotton loan benefited the Cotton Belt and the entire country.

The cotton loan by itself was not enough. Farmers demanded further action by Congress, and the result was the Agricultural Adjustment Act of 1938. As you all know, the 1938 cotton program includes not only acreage adjustment but also marketing quotas approved by growers under authority of the new act.

The income situation of cotton growers in the 1937 marketing year was not as serious as the fall in the price might have indicated. With 19 million bales to sell or place under the Government loan, the total cash income to farmers from lint, seed, and Government payments was 982 million dollars—only 6 million less than the total for the previous year, which itself had been the highest since 1929.

It is only this year that the pinch resulting from the record crop of 1937 has begun to be felt in earnest.. To offset the huge production of a year ago, farmers found it necessary to plant only about 27 million acres. On this acreage, it is estimated that a crop slightly under 12 million bales will be harvested. The present carry-over of more than 13 million bales is even a little larger than the carry-over of 1932. Doubtless, without the cotton loan and the cotton acreage program, the price of cotton would be down to 4 or 5 cents a pound. As it is, the price is around 8 cents, slightly below the present loan level of 8.3 cents.

What about the export picture? Despite the sharp decrease in 1937 as compared to 1936 we exported only 158 thousand bales more than we did in 1936. And with a still lower price this year our exports instead of being higher are lower than they were for the corresponding period last year. Some people say that the way to get foreign markets back is to let cotton prices fall. Our experience in 1937 and thus far this year clashes with that theory.

Another myth that has been exploded this past year is that bigger production and lower prices of cotton bring increased domestic consumption. Here is what really happened: At from 12 to 14 cents a pound cotton was being consumed in 1936-37 at the rate of 8 million bales a year. But with the biggest cotton production in history and the price fallen to 8 cents a pound, consumption this last year went down by over 2 million bales. The real reason for the decline, of course, was the business recession. Now that business is improving again, cotton consumption is rising too.

Cotton growers' income for the present crop years, it is estimated will be around 865 million dollars. That is 177 million dollars less than a year ago, but it is still twice as much as their income in 1932, when the farm value of the cotton crop was only 425 million dollars and the average income from cotton for each farm family was only 216 dollars.

The present year's income consists of about 500 million dollars from lint, about 100 million from seed, and about 265 million from Government paymentss. Price adjusted payments of 130 million dollars, for which funds were appropriated by Congress a year ago, were intended to be compensation for the 1937 crop. But these payments were contingent on patication in the 1938 A. A. A. program and are being made this year. Therefore they are included, along with conservation payments of 136 million dollars, in the 1938 income.

For 4 years, beginning with 1933, the South enjoyed an annual income from cotton ranging from 820 million dollars. For 4 years, the South was gradually working its way out of the morass of 1932. The improvement has meant a great deal, but with a big population trying to make an income from the land, living standards have still been far from what they ought to be.

Coming after those years of optimism and progress, the recent setback, even though moderate, seems discouraging to many.

And so it is not surprising that they should be asking, Where do we go from here? How can we get the income from our cotton that we need?

I can understand the deep feeling that moves you to ask these questions. The Cotton Belt does need more income. There is no doubt whatever about that. For a long time the South has suffered from serious handicaps.

Many in the South have long felt that freight rates on farm products have been discriminatory, and have hoped that the Federal Government might do something about that situation. Congress responded to that hope recently by directing the Secretary of Agriculture to interest himself in freight rates and to appear, when advisable, before the Interstate Commerce Commission. These freight rate questions are unbelievably complex and difficult to solve, but we'll never solve them unless we begin.

For a long time the South has

(Continued on Page 6)

# An American Income For Cotton

(Continued from page 5)

felt the pinch of an unfair tariff system. For a long time much of the wealth of Texas and other States of the South, like that of the Western States, has been drained off to enrich the great financial centers of the North and East. For a long time the problem of the South has been, as President Roosevelt has so aptly termed it, the Nation's Economic Problem No. 1. In acknowledging the importance of the problem, the President was thinking of the enormous benefit to the whole Nation that a lift in the income of the South would give. To solve that problem, there must be action and I know there will be action.

Nevertheless, I believe it is very important for those of us who are directly concerned with the farm programs to consider carefully what measures we adopt to reach the goal we seek.

Some of these who believe in unlimited production regardless of price are urging their point of view with fresh vigor. They say, Why not produce all we want, and use to a two-price system or domestic allotment plan to assure our domestic price and let exports bring what they will?

Farmers who are asking this question point to their restricted acreage of this past season as responsible for their unsatisfactory income. To the individual who does not see the cotton situation in its wider aspect, this is a natural conclusion. He thinks, "If I could only grow cotton on more acres, I would have the money I need" Farmers of the Southwest especially are apt to feel like that because it is on the newly cultivated lands of this region that large-scale, merchanized production has made the greatest headway.

I have a lot of affection for the phrase, "domestic allotment." It was the phrase use by M. L. Wilson and myself to describe the plan that led up to the A. A. A. At my suggestion, the phrase was included in the title of one of the great pieces of farm legislation we are now administering. To my mind, the best features of the domestic allotment plan, as that significant idea was developed several years ago, are already incorporated in the present program of the A. A. A.

One variation of the plan which has lately been discussed in this part of the country, however, would discard all controls of cotton supply, would take off all restraints on surpluses, and would in effect be a direct subsidy of increased production.

And so it is with genuine friendliness for both the name "domestic allotment" and the essence of the plan as incorporated in the A. A. A., that I would like to ask those favoring a type of plan that would subsidize increased production to consider carefully several questions in regard to it.

Here is one question: Supposing that under such a plan exports for a year or two could be increased from the present level of 6 million bales to 8 or 9 million bales or more, what assurance do you have that the increased exports would actually bring increased foreign consumption of American cotton?

I have good reason to bring this up. I recall that in the depression years foreigners took advantage of our extremely low prices to buy cotton which stayed in their warehouse to compete with our own cotton produced in the years that followed.

In other words, what if the low price at which we offered cotton merely gave foreigners a chance to stock up at a bargain? Would we be actually any better off?

Here is another question: Would the increased exports, assuming they could be brought about under such a plan, actually bring back more dollars to the United States than the present volume of exports?

At the present price of 8 cents a pound, exports of 6 million bales mean an income to cotton producers of 240 million dollars. Suppose that all adjustment of acreage through Government programs were abandoned. Suppose that cotton acreage jumped back up to 40 million acres, which it might actually reach. On this acreage, with ordinary weather, we might expect crops of around 17 million bales a year. This would mean a margin above domestic consumption of 10 or 11 million bales for export Assuming that there were no cotton loans to keep the price of cotton from seeking its natural level, the price of cotton under the weight of a series of big crops like these could conceivably fall as low as 3 cents a pound. At this price, even 11 million bales would bring only 165 million dollars—or 75 millions dollars less than the present volume of 6 million bales bring at 8 cents a pound. Would that be good business?

Under such a plan, even though the price on the domestically consumed portion of the crop were maintained by some means at the 16-cent parity, the total income from cotton would be substantially less than cotton farmers are getting now.

A third question is this: If the price of your export cotton were very low, would it be worth while to sacrifice your soil fertility for the sake of maintaining big volume of exports?

When you export your soil fertility you are exporting part of your farm's capital. If you get a high enough price for your cotton, you can afford to replace that capital by rebuilding the soil. But can you afford to send your soil and labor abroad for practically nothing? Can you afford to plow up your hillsides and sell your labor for 5 cents an hour when the ultimate end is destruction?

Wouldn't it be better if farm women spent more time making a real home, and farm children spent more time going to school, and they all spent less time drudging to help produce cheap cotton?

Everybody would have a better living and more money in the bank, and you know it.

And here is one further question: Why should you want to step up your production of cotton in the face of the biggest accumulated surplus of American cotton the world has ever had? If the present unsatisfactory price resulted from the misfortune of a 1937 crop that was 6 million bales too big, why try to cure the trouble by inviting a series of crops that are just as big as that one? Would it not be better to get rid of the cotton surplus we already have, before rushing into a scheme that would pile new surpluses on top of it? Do you know any sensible business man in the South or anywhere else who would proceed with such a suicide policy with an industrial product?

Those cotton exporters, spinners, and handlers who are always putting more and more pressure on the farmer to produce vast new surpluses ought to consider these things. It is high time that they begin doing some real thinking about the effects of terribly low cotton prices on the prosperity of agriculture, business, and industry. If we can't get rid of our cotton at present prices, how low do they want the price to go?

The real issue is whether farmers are going to give up their present program for one which would mean bigger and bigger cotton crops and cheaper and cheaper cotton. The real issue is whether farmers are going to scrap the present program for one which for a time might give more business and profits to the interests that buy and handle cotton, but which would certainly reduce the income of farmers whether the man who produces the crop with the labor of his own hands is going to become a forgotten man once more.

In some other parts of the Cotton Belt, farmers who believe that exceedingly high prices are all-important propose a totally different plan. They say, Give us higher loans, or price fixing at high figures.

I stated emphatically a few minutes ago that there are situations in which a cotton loan is of vital importance. But to those who would have the Government make loans at levels having no relation to the facts of supply and demand, I would like to suggest several questions.

For one thing, what if the loan makes it impossible for you to keep the export markets you now have?

As we found in 1934, at the time of the 12-cent loan, our foreign competitors may undersell us if we do not let our cotton flow freely into export trade. And a foreign market once lost is difficult to win back.

For another thing, are you not simply piling up future agony for yourselves if the Government takes your cotton at the loan value and accumulates a big supply which must be gotten rid of sometime?

If the scheme of making loans at high rates should be combined with the encouragement of unlimited production, cotton growers would find themselves in no time in a fix that by comparison would make the Farm Board mess seem like a picnic.

Finally, have you fully considered what will be the inevitable effect on the cotton marketing system of the country if the Government makes loans so out of line with supply and demand that it gradually takes possesion of the whole cotton supply?

This probably would mean that the Government would take over the cotton-marketing machinery, and this development would make a drastic change in our business system. I am in favor of following policies which avoid this kind of development as long as possible. But I want to tell you frankly that any plan for Government loans on cotton at rates far out of line with supply and demand will take this country rapidly in the direction of complete Government operation of the entire cotton marketing, processing, and exporting industry.

To farmers and others belonging to the school of thought that would raise prices and forget entirely about volume, I will say the same as to those who want more exports regardless of price, that I am not here to tell you what to think, but I do urge that you face all these questions as squarely as you can.

Maybe it would be a good thing if the people having these two contradictory points of view could argue it out with each other. Both groups then might be willing to go along with the rest of us down the middle road that I described to you a year ago.

Now what about that middle road? Where does it take us, in the light of the cotton situation that confronts us at the end of September 1938?

First, as to exports. I believe that, as I have urged in the case of wheat, we should make sure that we have our fair share of the world's cotton trade. Just how much that fair share ought to be, is a matter for all of us to study. Should it be 6 million bales? Should it be 9 million bales? I don't think we have the final answer, but I believe most of us could agree that our fair share is at least 6 million bales, or somewhat more than our exports were last year. Perhaps, if world cotton consumption increases, our fair share ought to increase in proportion. But I believe, while we are insisting on our fair share of export trade, we should also keep in mind the long-time needs of our soil.

As with wheat, I believe that once we have determined what our share of the world market ought to be, we should be prepared to supply that amount of cotton year after year. With 13 million bales in the cotton carry-over, that is no problem now.

Unlike wheat, however, an outright export subsidy does not appear to be called for in the case of cotton. The reason is that none of the cotton-exporting countries competing with us is using this method, whereas in the case of wheat the use of this method by other countries has forced us to do likewise. If used on a large scale and over a period of time, export subsides employed by competing countries are mutally self-defeating. They amount to an international price war that is bound to be destructive in the end. I believe it is far better for the competing countries to get together and work out trade arrangements on a sensible basis. This old world has got to give up its policies of dog eat dog and learn to live and let live.

Second, as to the use of loans. I believe the cotton loan should be continued to assist producers to hold their cotton and permit them to sell it when they choose, and as a stop-loss measure in times of emergency. But I have already shown that the loan method has serious drawbacks as a means of boosting the price of cotton. For price improvement, I believe other methods, which I shall suggest in a moment, are clearly preferable.

Third, as to conservation of the soil and the growing of home food and feed crops. The A. A. A. conservation program is one of the most constructive measures ever taken on behalf of the South. The 19 million acres in the nine States of the Southern Region that were devoted to soil-conserving uses in 1937 bear decisive witness to the value of this program.

Likewise, the increase in acreage of home food and feed crops being encouraged under the A. A. A. program is enormously important in raising the standard of living of Southern farm families. That increase should go on.

Fourth, as to the encouragement of greater domestic consumption of cotton. There are two ways in which domestic consumption of cotton can be increased. One is through the development of new uses for cotton. The other is through expanding cotton consumption for uses that are already well established.

In finding new uses for cotton, the A. A. A. is doing an important work, partly through supply cotton and cotton materials to nonprofit organizations carrying on experiments and demonstrations, and partly through subsidizing the use of cotton in certain specified ways. I have referred before to the use of cotton as reinforcing for roads. Experiments in the highway field are still going on, one of the newest being the use of cotton fabric to prevent the movement of soil on the slope of highway cuts or fills. Cotton is being tried as a principal material in the construction of houses, especially for roofs and side walls. If this proves to be successful, a vast field will be opened up, for housing promises to be one of the Nation's most important industries during the next few years. Another important use for cotton is in substitution for jute in cotton-bale coverings. Other prospective uses are as bags for wool, for protecting fruit while drying, a linings for irrigation ditches and canals, and in building airplane runways.

Provision has also been made in the new Farm Act for one of the four new regional research laboratories to be established somewhere in the South.

The chemurgic movement has been making progress, too. But not all chemurgic developments are in the direction of increased use of cotton. One new process was patented recently by the great chemical interests sponsoring the chemurgic movement and is already being used on a big scale by one leading tire-manufacturing company. The process apparently will mean the substitution of rayon for cotton in tire manufacture. Tire manufacturing has been one of the main industrial outlets for cotton, furnishing a market for several hundred thousand bales every year. Therefore this single development in substituting rayon for cotton is likely to reduce the market for cotton more than the total increase resulting from all the new outlets that I have just mentioned.

Technical changes of this kind can not be prevented, and I doubt if we would want to prevent them if we could. But it would be an ironic thing if those tire manufacturers who are displacing cotton with rayon should find that the money they save in this way is offset by the loss of tire and automobile sales in the South through the decreased purchasing power of cotton producers. Now that this severe blow is being dealt to

(Continued on Page 7)

## AN AMERICAN INCOME FOR COTTON

(Continued from Page 6)

Southern agriculture, I hope the leaders of the automobile and chemical industries will give sympathetic support to the farmers' own programs.

The second method of expanding domestic consumption is through the increased use of cotton in ways that are long established. As I have already pointed out, the return of business prosperity is already helping to restore cotton consumption to some extent. If all the unemployed were at work and the national income were raised to 90 or 100 billion dollars, domestic cotton consumption would probably be much higher than it ever has been before.

In the meantime, there are millions of families in the United States who are doing without the clothing, bedding, and other household goods they need, simply because they lack the money to buy them. The existence of this great potential market waiting to be filled is a fact of vital importance to the cotton farmer.

That paradox—great warehouses bursting with surplus cotton while thousands of textile workers are without jobs and millions of families are getting along without the cotton goods they need—that paradox is a challenge to the South and the entire Nation. It is a paradox that must be ended if the cotton industry is to take its rightful place in the Nation's economy.

Ending that paradox, I believe is the solution to at least one part of the cotton problem.

At the present time the Government has on its hands about 7 million bales of cotton that are tied up under loans. Holding this cotton off the market helps the price today, but the release of this cotton might lower the price later on. If ways could be found to get a substantial part of this 7 million bales into use, some of the huge weight which is crushing the cotton industry would be removed. If, in addition to the usual consumption, a few million of these bales, for example, could be disposed of in the next year or 18 months, the price of cotton would be strengthened. In addition, we could relax our acreage adjustment program and plant more nearly a normal crop of cotton.

With a recognized need for cotton goods, why is this Government-held cotton not put to use? One of the main reasons is that the cost of processing is, on the average, about twice the value of the raw cotton. Only a fifth of the cotton retail dollar goes to the farmer for cotton. Unless a definite and comprehensive plan for getting the cotton into use is worked out, and the necessary funds provided, it simply stays idle in the Nation's warehouses.

If consumption of American cotton is to be subsidized, the subsidies ought to be applied to domestic consumption rather than exports. Back in the 20's American loans to foreign countries which were never paid were in effect generous gifts of cotton and other farm products to those countries. But if any gifts of cotton are going to be made under the present administration, our own people ought to come first. Why not, for once, give OUR OWN consumers and OUR OWN workers a break?

This whole problem of getting more cotton into consumption is one that President Roosevelt has deeply at heart. With his approval, the Department of Agriculture is setting up a committee to develop specific proposals for dealing with it. The problem deserves the earnest attention of all elements of the cotton and textile industry. I think, therefore, that one of the first steps of the committee might very well be the calling of a conference of representatives of various branches of the industry to find ways and means of getting more cotton used.

The first task would be to make definite estimates of the amounts of cotton that could be used in various ways that would constitute a net addition to the consumption now brought about through regular commercial trade channels—new consumption of cotton for clothing, for mattresses, for bedding, for house insulation, and so on. Home-made mattresses, for example, may offer a possibility. In addition to distribution of cotton goods to families on relief, ways should be found to increase consumption of cotton goods by farmers themselves. It is tragic, but it is true, that among all the classes of people in the United States, the use of cotton goods is just about the smallest among those people who produce the cotton. I think we ought to do something to change that. I believe that to aid in carrying out a plan for increased consumption through relief distribution, textile manufacturers and labor groups would be glad to cooperate to keep the processing costs moderate.

I do not know what each group in the entire industry may be able to contribute to a plan of this sort or how much a plan of this kind would cost. But I DO know that funds could scarcely be used in any better way. Such a plan would bring manifold benefits—at one and the same time it would help the cotton farmers, the textile workers, and the families of the unemployed, and it would give an important stimulus to general business activity.

There is one other way in which some of the Government-held cotton could be utilized. Perhaps a million bales could be definitely set aside as an insurance reserve for starting a crop-insurance program for cotton similar to that now in effect for wheat. When the cotton-insurance program gets under way—say in 1939 or 1940—premiums could be paid by growers in the cash equivalent of cotton, and then in poor crop years they could receive indemnities in the form of some of this cotton held in reserve. Thus the insurance cotton would be definitely kept off the market until a short crop brought the need for some of it to be released.

For too long farming has been the only business not covered by insurance. Let's make farming an insurable business like the others.

Fifth, as to acreage adjustment and marketing quotas. The desirable acreage for cotton will continue to depend, of course, on the needs for soil improvement, the size of the carry-over, and the possible outlets. But there is no question in my mind that with conditions as they exist, cotton-acreage adjustment is absolutely essential. Also you as growers should continue to have the opportunity to vote, as you did last winter, on whether you want marketing quotas on cotton. Through these measures you can use the machinery provided by the Government for surplus control and thus can safeguard yourselves against price collapse.

I feel that a cotton acreage of 25 million to 27 million acres year in and year out is lower than we would like to see. Once we get our surplus in hand, we can expand cotton acreage, but to expand in the face of a 13 million bale carry-over would only result in a larger carry-over, cheaper cotton, and a reduced income.

Sixth, as to an American income for cotton. With such a large part of the American cotton crop being sold abroad, you have always had to accept as your price whatever is the price in the market places of the world. But through the parity payments provided for in the Agricultural Adjustment Act of 1938, you have a way of increasing your income up toward parity on your normal production. Such parity of income really would amount to more than you can even hope to get out of any plan which gives you parity only on that portion of your crop consumed in this country.

An important part of the cotton problem is in the cities. By using the powers of the new Act, we can get parity income as soon as the unemployed are put to work at good wages and as soon as the World War tension lessens. But even while these depression breeders are continuing we can by means of the 1938 A. A. A. hold cotton income closer to parity than in any other way.

As a matter of fact, the income from your crop this year, with Government payments figured in, will be at least a cent a pound above parity on the domestically consumed portion. But you know and I know that you have not yet attained the income that will give you an American standard of living.

To make possible an American standard of living for a larger number of the people of the South further Government payments will be necessary in the future. For next year cotton farmers will have, in addition to their share of fund, their share of the 212 million dollars recently appropriated by the 500 million dollar conservation Congress for parity payments on cotton, corn, wheat, tobacco, and rice. But farmers cannot yet be certain that the parity principle established by Congress will be maintained. They will not be certain until some arrangement is made whereby the commodity bears at least a large part of the cost of financing its own program. Then, and then only, will a continuing source of revenue be assured. For this purpose a processing tax on cotton was in effect for 2 1-2 years.

Through the tax-and-payment system farmers can, in effect, get part of their price directly in the market place and part of it from consumers indirectly in the form of Government payments. That system is the best method I know for securing an American income for cotton. That system has been tried and has been proved to be simple and workable. To go back to that system would be a common-sense thing to do.

There is a greater need today that ever for the vital spark that has carried American agriculture through the past 4 years. As we look upon the troubled world of which we all are a part, we realize that the future will bring serious problems—problems that will call for clear-eyed courage and determination to keep civilization moving onward. We must prepare ourselves to meet the situation which war might bring, remembering that in the 4 years of the World War cotton exports averaged only 5 1-2 million bales, remembering that cotton along with all agriculture was caught in the blowing and the bursting of the war's inflationary bubble.

In a very real sense the cotton farmers, the wheat farmers, and the other farmers are still paying for the last war—paying for lost foreign markets and for dislocations which after two decades still remain unadjusted. We are still paying, even while the world tries to count the possible costs of another conflict.

The farm program of 1938 was made necessary by war and the aftermath of war. And now today with conditions as they are in the world, this farm program has become more vital to you and to the wheat and corn farmers than it has ever been before. Now, more than before, it is needed to assure farmers the fair share of the national income which they must have for better living standards among farm families.

But the need for a farm program does not in itself assure farmers of having it. Farmers needed a national farm program in the early 20's. They needed it in the inflationary period of '28 and '29, and as the depression deepened they needed it more and more. But year after painful year went by before that dire need brought forth a program. It took 20 years of struggle before the farmers finally got a law in 1933 that was based on the principle of farm equality.

You have a farm program based on farm equality now. But can you keep it unless you are willing to fight for it? Today, as in 1935, when the processors made their mass attack on the first Agricultural Adjustment Act, the program is under fire. Now, as then, different schemes are being pushed forward as substitutes and hailed by interests which are and always have been against any farm program of any kind. These interests think that once rid of the present program they can make short of whatever glittering substitute is used to knock it out.

The time has come for farmers the country over to make up their minds where they stand. Without their farm program surpluses will pile up, prices will be ruined, and income will fall. No other program that I know of would give cotton farmers or other farmers as large an income over a period of years.

Of course, we do not want the farm program taken away. And to guard it and make it work we need to keep the never-say-die cooperative spirit of the South. The cotton farmers, the wheat farmers, the corn farmers, and all the other farm groups need to close up their ranks. United action gave farmers the only national farm program they have ever had. If that spirit is maintained, if each one does his part, the farm program will go on.

### RELAXING

Detroit News: A former congressman in Georgia has retired from the rigors of farming and plans a well-earned rest. He sails shortly to hunt lions.

## Our Agricultural Problems

(Continued from Page 3)

of Secretary Wallace and our new Administrator, Honorable R. M. Evans, among whom there are no greater friend of agriculture in these United States and none who understand their problems nor has a deeper sympathy for their struggles than both these gentlemen. Our progress will continue to be onward and upward towards the goal of parity. I want to say that I am proud today to have an humble part with you in this worthy enterprise. The idea of talking aboot repeal of an Act we haven't even tried out because we have difficulties which arose for the lack of this Act!

Under these provisions national acreage allotments are provided for in connection with farm commodities. These allotments are to be based on an acreage the normal production of which with the carry-over will produce abundance for both the domestic and foreign markets and an adequate storage for carry-over to protect consumers against scarcity or unreasonably high prices.

Most of our talks are about the soil conservation and specific agricultural programs carried out in the States and Counties, but there are, I think other very valuable provisions of our agricultural program. For instance, in the Marketing Division of the Department there are hundreds of programs undertaken to help particular commodities out in emergencies enabling farmers to get better prices, and at the same time providing consumers with an opportunity to have some of the commodities which they need so much, and could not obtain otherwise. These programs are also increasing the possibilities for extended use of these commodities in the future. Under the Marketing Division again there have been a number of marketing agreements and orders which help farmers adjust their offerings to what the market will absorb.

It is a proven fact that stabilized farm income at a figure where farmers can purchase the things they need increases employment in industry probably more than anything else. So the goal of an agricultural program is to benefit the entire country. We sometimes hear people criticize the program, which is all right. Constructive criticism is always welcome. We also hear talk of substitutes being offered. There is no objection to that, but I think we should ask ourselves the following question. Where would the farmers be today without a program? Would the substitutes which have been suggested be the cure-all that many think? Would they provide the income which the farmer is entitled to? We believe in the basic principles of the present program. Some instances of annoyance and inequities may have developed. These were almost certain to arise in the hurried development of aly program coming out in such a brief time as this program did, but they can and will be ironed out. I am glad to tell you that our Secretary and our new Administrator with their aides are determined to eliminate them so far as practicable. In other words, should we abandon the program be-

# SONG BOOKS

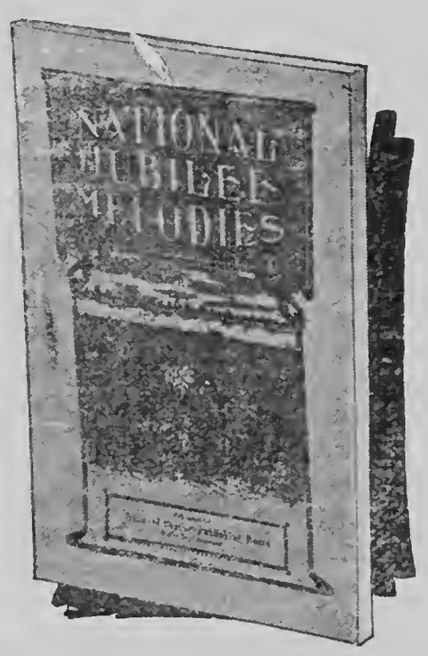
## For Sunday Schools, B. Y. P. U. and Church Worship

## NATIONAL JUBILEE MELODY SONG BOOK

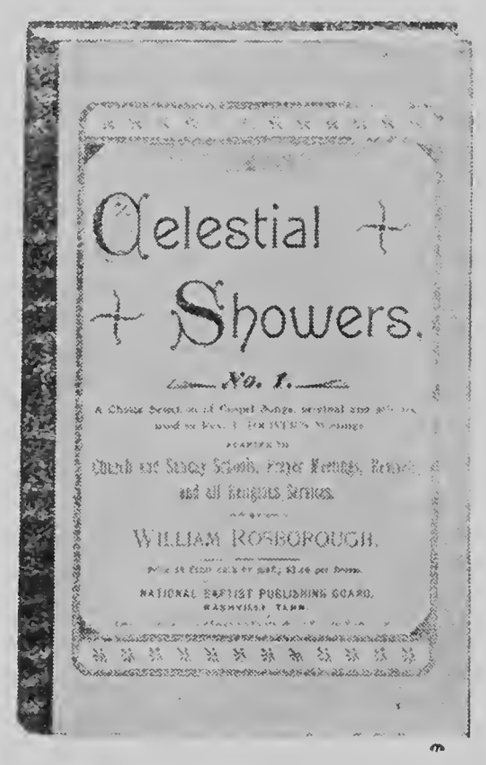
Order today and try these songs in your eleven o'clock service. You'll not regret it.

**PRICE 50c**

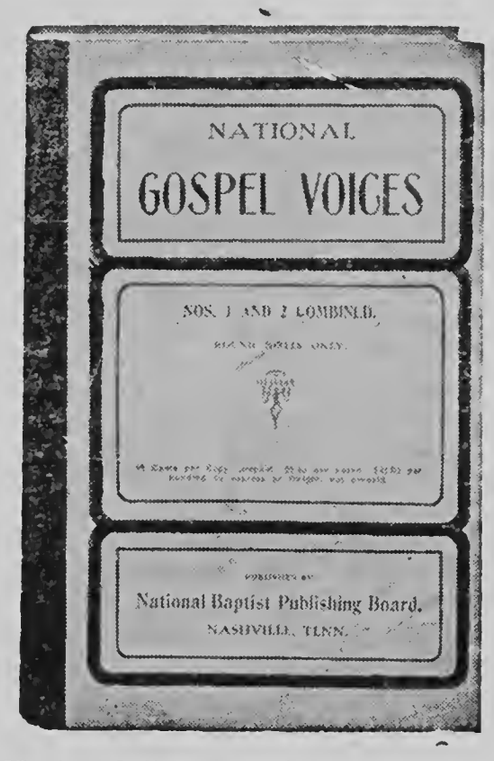
America's original music. Songs from the Plantation and Slave Days. More than two hundred thousand sold in the year of 1935 More now going. Send your order.



### Other Popular and Inspiring Songs Are to be found in these



Celestial Showers 40c each; $4.80 per dozen.



National Gospel Voices Nos. 1 and 2 combined 45c each; $5.40 per doz.

**Write for a Song Book List**

## OUR LATEST PRODUCTION—THE CRAZE OF CHOIRS AND CHORUSES IS OUR . . .

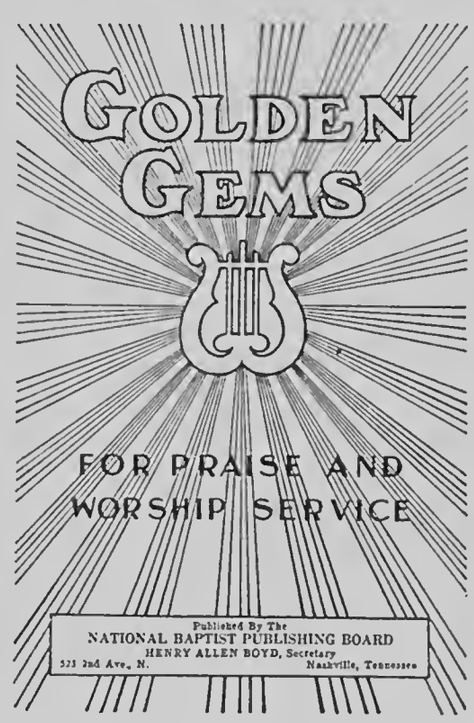
### THIS BOOK

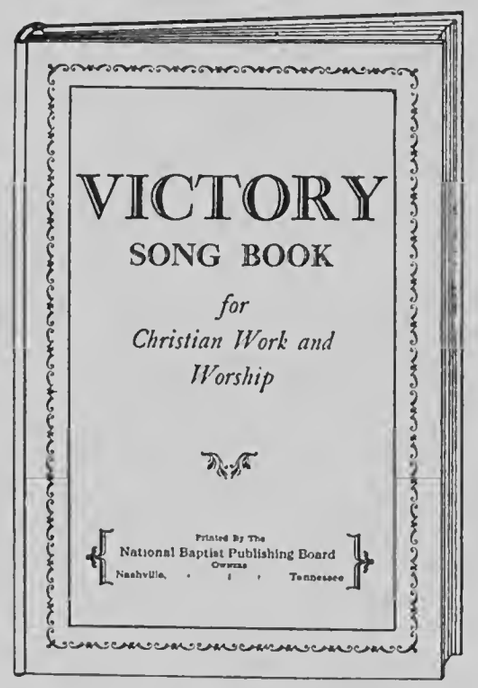
**Contains such Popular Songs as:**

He is Coming Soon
Singing as We Go
He's My Everything
He Understands
He'll Say Well Done
Gospel Waves
Is He Yours
Only Give Me Jesus
Over in the Glory Land
The Unseen King
I'm Out on the Battle-field

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

**Price Only 25c**





## THE VICTORY
### Song Book

*For Christian Work and Worship*

contains spicy, tuneful, popular songs that can be used for solo work, chorus or congregational singing.

## LISTEN TO THIS

By Hobart T. Mitchell

Solomon ordered Hiram of Tyre to secure the services of black men to do the skilled hewing and designing of the timber work on the temple. Solomon declaring that these "black men' were the only men possessed with sufficient skill to take charge and complete the artistic timber work.

The three most important events in the history of American slavery all occurred on the same date.

April 14, 1775—First movement to free American slaves began in Philadelphia, as Quakers organized the first anti-slavery society with Benjamin Franklin as president.

April 14, 1861—The American flag was hauled down from Fort Sumter in Charleston, S. C., harbor as the War Between the States over slavery began.

April 14, 1865—Abraham Lincoln, 56, emancipator of the slaves, was fatally shot in the back of the head in Ford's theatre, Washington, at 10:30 p. m.

Jethro, the Ethiopian, father in law of Moses, who was the author who first employed that, which is to day, our judicial system. (Quote from the Bible) And Moses' father in law said unto him, The thing that thou doest is not good.

Hearken now unto my voice, I will give thee counsel, and God shall be with thee: Be thou for the people to God-ward, that thou mayest bring the causes unto God.

And thou shall teach them ordinances and laws, and shalt show them the way wherein they must walk, and the work that they must do.

Negroes in the United States in 1936 owned some 20,000,000 acres of land or 31,000 square miles.

The first Negro to be elected member of Phi Beta Kappa fraternity was Edward A. Bouchet, 1874, Yale University.

If the prophecy of Daniel is true Christ when he left this earth he had wooly hair.

Hiram R. Revels, the first Negro to serve as United States senator and the first man of the race to appear in either house of Congress completed an unexpired term from Feb. 25, 1870 to March 3, 1871. Senator from Mississippi.

David Walker, a free Negro, the first person of color to attack slavery through the press. "Walker's Appeal' was published in Boston in 1829, which was circulated in the South.

The second settler in Alabama was a Negro. He visited the country with De Sota—liked the climate and the country—stayed and lived with the Indians (1540).

In November, 1910, The Crisis, the official organ of the National Association for the Advancement of Colored People, was first published. In 1911, the Association published its first pamphlet against lynching and held its first large meeting of protest.

The black belt was originally a fertile strip of black soil. The Black Belt of to day is that part of a city where most of the colored population reside.

Free Negroes in Maryland had a right to vote down to 1783. A law was passed in Virginia in 1723 that they were not allowed to vote.

Somewhere I read this little poem. I pass it on to you—

This land is ours by right of birth,
This land is ours by right of toil;
We helped to turn its virgin earth,
Our sweat is in its fruitful soil.

# Christmas Programs

## *Now Ready!*

Send in Your Order Now for These Spicy, Interesting, Religious Programs that Contain

SPEECHES, RECITATIONS, PLAYLETS AND SONGS

Appropriate for the Holiday Season. The Authors of these programs are active Church and Sunday School workers and know just the Type of program that appeals to the grown-ups and can be rendered by the younger children most efficiently. The story of the Birth of the Saviour of the World is never forgotten in the composition of these programs. Don't wait until our supply is exhausted. Order now so your children will have plenty of time to prepare themselves for a perfect performance.

## WHAT IS MARGINAL LAND?

How to determine marginal or sub-marginal land—land on which a man scarcely can raise a rumpus, to say nothing of life-sustaining crops—has always been a puzzle to workers in the federal department of agriculture. Heretofore, marginal and submarginal land has always been that land farmed by the other fellow. Few farmers will admit that the "sod" to which they have devoted a life-time of hard labor, ought, perhaps, to be turned back to grass.

But a new measuring stick has been devised which may serve fairly well in determining what land will and will not sustain a decent standard of living over a 10-year period. When the federal department of agriculture took the farm records it had accumulated under AAA, as to losses and yields, to work out an actuarial basis for crop insurance, the resulting figures were rather disquieting to the department and to farmers.

If, for example, a farmer must give 2 bushels of wheat per acre per year in order to insure himself 75 per cent of a crop which, over the past 10 years, has not averaged more than 6 bushels per acre—then that farmer needs something, to be sure, but it probably isn't crop insurance. What he needs undoubtedly is a chance on better land. The land he has been farming for the past 10 years, for that period, at least, has been either marginal or submarginal land.

Mother Nature is a fickle old dame, it is true. The land that's blowing today may blossom as the rose tomorrow. But for the long pull, much of that land will not justify continuing tillage. Farmers in such areas must be given an opportunity to start over again where nature is not quite so stern and relentless.

—From "Consumer Cooperative."

## FARMERS SHOULD SEEK LOW COST PRODUCTION SAYS EQUIPMENT MAN

Charles D. Wiman, president of Deere & Co., Moline, Ill., told the annual meeting of the Farm Equipment institute at French Lick, Ind., that "we do not lay enough stress on the importance of low cost of production in agriculture."

"While the farmer has no control over the selling prices of his products," Wiman said, "his costs of producing them, within certain limitations, is a matter of management and largely under his own control.

"He may elect to continue inefficient methods, with resultant high costs and little or no margin under his selling prices, or he can follow the practices of management in other industries and greatly reduce his production costs."

Wiman said the equipment outlook for 1939 seems favorable.

A Texas Frontiersman came into camp riding an old mule.

"How much fer th' mule?" asked a bystander.

"Jist a hundred dollars," answered the rider.

"I'll give you five dollars," said the other.

The rider slowly dismounted.

"Stranger," he said, I ain't a'goin' to let a little matter o' ninety-five dollars stand between me and a mule trade. The mule's yourn."

## AGRICULTURE ITEMS OF INTEREST

(Continued from Page 2)

mits only 40,000 lb., a third as much. Kansas has apoted a port of entry system (now duplicated by most of the surrounding states) where 'foreign' trucks must enter at any one of the 66 stipulated ports of entry, there to pass all manner of inspection of equipment and papers. The method is costly, vexatious and time-consuming—and it is changing the character of such commerce from interstate to intrastate. The U. S. Department of Agriculture believes that such vagaries as the foregoing are rather detrimental to farmers..."

### SHAW WATER LILY FARMS

The Shaw water lily farms, which lie just oustide Washington, will become public gardens through a recent purchase by the government. They were started in 1870 and are now thought to be the largest lily farms in the world. There are twenty-five ponds—one that is an acre-and-a-hadf in area—which hold more than a half million lily plants. (Associated Press.)

### BIOLOGICAL ABSTRACTS

Biological Abstracts has grown too big for the average individual subscriber and is about to split into several parts. Due to the fact that Biological Abstracts summarizes everything that appears in the whole field of biology, it has become very thick and costly to public. Practically every biologist is a specialist, reading only the section of the journal devoted to his particular field. The board of editors has announced that Biological Abstracts will henceforward be published in five sections. The individual biologist may subscribe to any section or rections he desires. The entire journal, with all five sections between the same covers will continue to be used by libraries. (Science Service.)

### B. A. E. SEED SECTION

The Bureau of Agricultural Economics announces that effective October 15, the Division of Crop and Livestock Estimates will establish a statistical section for seeds, under the direction of G. C. Elder. This new section will handle all statistics of seed production, stocks, movement, and prices. In the formation of the section there is brought together all the work on the statistics of seed that has hertofore been done by the Hay, Feed and Seed Division and the Division of Crop and Livestock Estimates. It is believed that the work thus combined and enlarged will cover the field more effectively and thoroughly. Mr. Edler entered the then Bureau of Markets as investigator in seed Marketing in 1916, and was put in charge of the seed reporting service when it was started the following year. He is recognized to day as the outstanding authority on seed marketing statistics and information. (B. A. E. News, October 1.)

### COTTON PALE COVERS

Thet first shipment of cotton into North Carolina wrapped in cotton cloth and bound with cotton rope has been received by a mill near Hendersonville, says a Charlotte report in the New York Times. The all-cotton wrapping weighs four and a half pounds against thirteen pounds for jute and iron bands. The shipment was the first under an agreement whereby the manufacturer pays the farmer the difference between the weight of the cotton wrapping and the old jute wrapping. The Federal Government is planning to subsidize manufacturers of the cotton burlap by paying the difference in cost between cotton and jute on a million bales this year.

An item in the Farmer-Stockman (October 1) says: "N. S. Pearse, Secretary of the International Federation of Master Cotton Spinners' and Manufacturers' Association, Manchester, England, wrote recently to a cotton mill in New Orleans: 'I saw in the Cotton Trade Journal an article upon the suggested use of cotton rope in replacement of steel ties on cotton bales. I should be much obliged if you would forward me a copy of the photograph showing the bale tied with cotton ropes. I also see from your advertisement in the same paper that the U. S. Department of Agriculture has contracted with your firm for the supply of cotton bagging sufficient to cover a million bales of cotton. I may say that we hope the movement to cover cotton bales with cotton will increase in your country, as the elimination of jute and sisal fibers will be much appreciated by the cotton spinners of the world. The federation Mr. Pearse represents is composed of the cotton spinners of the United States, Great Britain and 19 other nations and has long advocated the use of cotton bagging. A resolution that cotton should be covered with three-quarter pound standard cotton bagging was adopted by the federation several years ago."

### WORLD LOCUST CONFERENCE

Nature (London, September 24) in an item on the recent Fifth International Locust Conference says: "The great economic importance of the (locust) problem was emphasized by the results of a statistical inquiry organized by the International Centre for Anti-Locust Research in London. The information collected from the majority of the countries suffering from locusts and grasshoppers showed that the average cost of these pests to the world amounts to not less than 15 million pounds per annum. Discussions at the conference were centered mainly round the necessity of establishing permanent organizations for the supervision of the original centres of locust outbreaks, with a view to the prevention of such outbreaks in future. An agreement was reached by the various delegations that such organizations should be established without delay and financed on an international basis. This decision was made possible by the extensive investigations carried out during recent years by an international team of entomologists surveying some of the most inacessible parts of Africa and Arabia. There is every hope that the recommendations made by the conference will be adopted and acted upon by the Governments concerned, and that the control of locusts by the prevention of the swarm formation will become an accomplished fact."

### ALGAE IN THE SOIL

"Scientists have long been aware of the fact that Indian rice crops, despite the absence of any system of manuring, continue year after year without loss of quality," says The Field (London, September 24). "At Queen Mary College it has been conclusively proved that certain of the blue-green algae occurring in the water have the power to absorb nitrogen from the atmosphere and thus, after decay, to enrich the soil and in turn to feed the rice crops. To prove without doubt that the alga itself was absorbing nitrogen, it was first necessary to secure specimens of blue-green algae completely free from bacteria. When these had been obtained it was then established beyond doubt that this low form of plant-life does in fact take in nitrogen and is thus a natural manuring agent. Further research may show how this new knowledge can be extended to agricultural production not only in India but elsewhere."

### COURSE IN FOOD TECHNOLOGY

Realizing the need in the food industries for men trained as good technologists rather than as specialists in a particular branch, University of Washington has introduced a four-year course in food technology This course provides training for students who intend to enter the field of food production as control or research laboratory workers. Emphasis may be placed upon bacteriology, chemistry or food utilization by the selection of various optional courses in the fourth year. The curriculum in food technology is administered by a committee from the departments of bacteriology, chemistry and home economics. (Food Industries, October.)

# Our Agricultural Problems

(Continued from Page 3)

cause it has not within six months taken care of a situation which arose for the lack of this legislation—not because of it?

We sometimes hear farmers oppose the marketing quota features of the present Act, but you must admit they are sound and democratic from the viewpoint that it is left to farmers to determine their own means of adjusting marketing in line with the conditions which face the commodity.

Cotton is far too cheap this year, but if it had not been for the Adjustment Act of 1938 the regulation of marketing and the loans, cotton would have sold for a very much lower price, to say nothing of the cash benefits which the farmers received for compliance with the program. When farmers analyze this situation and the arguments of the opposition who would have us scrap the present program and substitute something else, it seems to me farmers here and other farmers will get in behind this program and especially the marketing quota provisions and continue these inforce by their vote in order to protect themselves against the deluge of turning loose of over 13 million bales surplus plus the 1939 crop on the market. In my judgment, this would bring the most disastrous price and low purchasing power that the cotton farmer has ever experienced.

There are several other provisions of this Act with which we should acquaint ourselves. There is a provision authorizing the Secretary of Agriculture to take part in proceedings before the Interstate Commerce Commission in the interest of getting lower freight rates on farm commodities if in the interest of the public. It also provides for an appropriation to build four great farm laboratories to develop new uses for farm commodities. These will be of far reaching benefit, but there is another provision which stands out as a land mark and if farmers had achieved nothing else in the past ten years than this parity income principle written into the Act they could well afford to congratulate themselves on such an achievement as worth all its cost in effort and sacrifice. As soon as funds are made available for this purpose it will set the American farmer on new high ground.

As the Secretary pointed out in his Fort Worth speech on cotton a few days ago, the Department now has under consideration the development of a program to expedite the removal of surpluses by working in cooperation with industry and the public generally. These facilities are to be coordinated so far as possible to provide consumers an opportunity to use some of the large surpluses which are burdening the market and at the same time fill the needs of millions of people. In my judgment this program has great possibilities. All of these programs are calculated to help the farmers maintain their income and at the same time benefit the general public.

In my remarks I have talked of this program in terms of all farmers, and I know that is what you would have me do, for after all, we are farmers and this program draws no lines of distinction or discrimination. But you may be peculiarly interested in certain phases of this program and its workings, not because there is any line drawn, but because a large number of your folks are affected by these provisions. You are interested in the provisions affecting tenants because the most of your farmers in the South especially are tenants, although there are 10,000,000 to 11,000,000 acres of farm land owned by approximately 200,000 of the people for whom you speak today. Yet there are approximately a million tenants and share croppers whom you are equally as interested in. And I am glad to say that those in charge of these programs from their inception in 1933 have taken a peculiar interest to see that the tenant received what was adjudged his share of the proceeds of the crop and the benefits under the Act. Justice in these matters have been and are very much on the mind of the Secretary and Adjustment officials and, as you know, we have made splendid progress here. There have been a few outstanding abuses of these rights, but they have been the exception rather than the general rule, and immediate effort has been put forth to punish the guilty party and see that justice was done so far as possible with the powers set forth under the different Acts. Then you are especially interested in the provision which increases proportionately the payments of the small farmers.

Income in the South has been low during the last 75 years and today with the cotton situation as it is, is peculiarly so. The great malady we suffer is low income and the aim of this program is to raise the income. Some tenants have been replaced by the use of farm machinery, but not any more so than in industry. In fact, I believe that with the fine and close relationship which exists among land owners and their tenants the tendency has been far less

I think we can all agree that the provisions of this Act are not such as to enhance this tendency and I am positive every effort has been put forth to discourage that endency and give the tenant and share cropper a square deal.

This is not only right, but imperative to the economic welfare of the country for our greatest problem is raising the purchasing power and living standards of these people—whoever and wherever they are and when it is done you may talk of foreign trade, but you will see a market opened up here which will astonish the world.

These programs have centered the attention of the country upon the South and the share-cropper. The share-cropper has been in the South since the Civil War. The AAA programs did not create the tenancy problem or the other acute problems we have in the South—far from it. We have had them for years and not until we began national programs for agriculture did the country awaken to the situation among the share-croppers and the farmers in our low income areas. The programs have been responsible for hundreds of meetings which were attended by Negro farmers, as well as others. The Negro farmer has had an opportunity to learn fundamental facts and to examine his own situation in their light. To a large extent, these programs have brought the Negro farmer out of the eddy in which he lived and back into the current of action and vigorous thought.

Recently a Negro leader in the South said that he felt that the AAA programs were one of the greatest benefits for his people in many years. He said further that the programs had not solved the tenant problem, far from it, nor had they abolished poverty. "But," said he, "they have drawn the attention of the South and the Country to the poverty of the Southland, to the plight of many tenants and they have given the colored farmer something to look to. It is worth a lot for us to be able to call the attention of the United States government to our situation and to things we feel are not right. These programs have given the colored farmers a voice and people who see only the defects of today are overlooking the significance of these programs from a long time viewpoint."

There is no question but what the study, working together and cooperating to work toward a common goal by all farmers regardless of race, creed or color have helped to dissipate prejudice. Any move which acts to bring all farmers together to discuss common problems is bound to result in a better understanding. In connection with this great conservation program we have reached even higher objectives—the conservation of human resources.

This farm income is basic to the welfare of the American people. It has been demonstrated that there is no such thing as prosperity in the nation as a whole unless the farmer is prosperous. Could the income of the farmer today be brought back to parity you would see such stimulation to business and revival of industry that this country has not known in a long time. The farmer would begin to purchase the things he needs.

When I think of the wonderful resources and productive capacity of this country and what it would mean to the people in living stand-

# THE ANNUAL ADDRESS

(Continued from page 3)

Negro, and only wants my stuff when needed to fill up a car of the other fellows' then it would be foolish for me not to segregate myself from such a cooperative and build up one which the producers of my own group. Segregate me all you please but don't mess with my dollars or my cotton, pigs, beans and peanuts. There is no differenee between the eolor of mine and the eolor of the other fellows.

And while we are talking about cooperative efforts I desire to mention cooperative financing. I hope we will take advantage of the opportunity we now have to establish eredit unions in our eommunities. Only seventy-five rural eredit unions have been established but thus is a good beginning. A very few of these have been established by farmers of our group. Units of our organization should establish federal credit unions and we are calling on the teachers in these communities to give inspiration and assist our farmers who wish to understand the prineiples of management and operation of these excellent eooperative eredit ageneies.

## TENANT PROBLEM

The farm tenaney problem is still in the forefront of interest. It will remain there as long as we have seven hundred thousand tenant farmers and shareeroppers among our group and less than two hundred thousand farm owners.

If possible, the growth of tenaney should be halted, and under the Farm Seeurity Aet, passed by Congress last year, some progress has been made.

I do not agree with those who elaim that an agriculture eonsisting entirely of family sized farms would not be able to provide enough farm-stuffs above its own needs to supply the nation. Neither ean I agree with those of our friends who elaim that the large eorporate farm—the farm run as a factory under effieient management—would be best for farm labor and would almost abolish our tenant system. Under the present system, the tenant or shareeropper may not be able to say, "This is my farm," but he ean say, "This is my erop, or, "This is OUR erop." The farm laborer on the corporate farm could not even say that. He would not be a farmer.

Right now I would like to see a farm tenant program adopted that would seek, not so mueh to abolish tenantry, as to find a praetieal way to mutually assist those most eoneerned in this problem, the landlords and tenants themselves. Long time government loans to landlords, now available, will assist greatly in providing better tenant housing. Tenants should also be provided with free, or very low-eost medieal service, and education—education directed toward improved relationships between landlords and tenants is badly needed. And especially here in the South, a way must be found for providing more employment for tenants and sharecroppers, for no healthy man can live and half-deeently support a family who can find work only 140 or 150 days a year.

Tenants and shareeroppers of our group who have left overpopulated sections of the South and gone to other seetions of the nation, may not have helped themselves so much but they have helped the South. I am glad that during the past few years a small fraetion of this immigration has found its way into other rural seetions of the eonntry. The good farmer and the man who loves the farm can always find a farm somewhere to live on.

Our organization must continue to advocate land ownership and assist its members in purchasing farms on reasonable terms. We must also continue to solieit the friendship of those landlords who are fair and just to their eolored tenants and shareeroppers and assure sueh landlords our assistanee and support. And we must gnard well the legal rights of tenants and shareeroppers.

I wish to warn our tenant farmers, shareeroppers and farm laborers against being led blindly and thonghtlessly into rabid, half-red, half-fool organizations now springing up in eertain seetions of the South, the leaders of which are advocating sit-down strikes, stay-at-home strikes and other radical operations as panaceas for the ills that afflict us. Such organizations will do us more harm than good. The solution of many of our problems will continue to require, perhaps for many years, patienee and forbearanee on our part. All that is right and just will eventually prevail. This is an old philosophy but it will ever remain a true philosophy. Beware of organizations and leadership that advoeate strife and malice and hate. Stand for your rights but always remember, that here in the United States there are ways a plenty by which you can get your rights without starving to get them or fighting and dying to get them.

## GOVERNMENT PROGRAM FOR AGRICULTURE

The program for American Agriculture, initiated and planned by the officials of the present federal administration, is, in most of its essentials, the best ever devised for the benefit of the American farmer, and especially, the Negro farmer. A vast majority of our farmers wish to see this program continued, not because they are Democrats or Republicans, but because they have good hard horsesense. They know what is good when they see it, and certainly, when they feel it.

Those who are knoeking this program, who are advising farmers to oppose it, are ehiefly those who are getting their living and their wealth off the farmer, not off the farm. Agriculture would be made by many a source of cheap food, raw materials and profit to everyone but the farmer who farms. Distributors want their percentages, processors and handlers want their commissions, but many of these do not want the farmer to want anything—not even a deeent wage or a deeent price for his products. So they object to the program beeause it restricts produetion. They want big erops and still bigger erops. But if American farmers, and especially farmers of the South who produee eotton, have not learned by now that big erops mean eheap erops, and cheap erops bring poverty, then it is impossible for us to learn anything.

Relative to eotton, I would like to see a eontrol plan in effect for the next three years that would absolutely prevent any cotton surplus at all. If eleven million bales of American eotton is all the world will eonsume annually, then let's produee that mueh and no more. Warehonses stuffed with surplus eotton, waiting for some one to eome along and buy it, will, on the very face of its existenee, keep priees down. This farm program is for our own benefit and we shonld support and follow it for our own benefit.

But some of us have funny ideas about restrieted produetion. Last year in southeast Missouri, I stood with a farmer of my group facing an aere of cotton he had plowed up in May. There had been plenty of good rain and sun in that seetion, and though the aere of eotton had been plowed up, it hadn't died. The stalks were standing half-upright, and on them were about as many bursting bolls as there were on the cotton on his other two aeres which he had not plowed up. The farmer looked at the plowed-up aere sadly and exclaimed, "I'm sure sorry I plowed up that aere. I know I sinned and the good Lord didn't like it. He wouldn't let the cotton die at all." And I said to him, "Brother, when you plowed up that aere you should have sown peas. I believe a erop of peas there whieh would help feed your family and your stock would look a lot better to the Lord than those bolls of cotton."

O yes, many of us can say truthfully, that since the beginning of this present government program, we and our families have eaten better than ever before in our lives. And our children haven't had to go barefooted the year round either. Thanks to a sensible farm program, a progressive farm program, a stable farm program, at least, a farm program that benefits the farmer more than anyone else.

I am urging you to support this program. The government is spending mneh money to help you to understand it. You ean receive information and advice if you request it. Get

(Continued on page 15)

## YES, IT'S GOOD TO BE IN U. S.!

### LaGuardia, Son of an Immigrant, Contrasts Conditions Here and "Over There"; Warning Dictators

LaGuardia has a gift for saying things worth remembering. A few days ago the "Little Flower" brought an impassioned political speech to a conclusion with these words:

"Compare the conditions we enjoy with what is happening across the Atlantic. Look at the things we are doing and consider what they are doing in Europe. Here we can take candidates for governor and put them on a political dissecting table and take them apart and see what's inside of them, before we consent to give them our support.

"Think of the strength and encouragement we must give to the oppressed people of the world, as they look across the ocean to our happy country.

**"The dictators are burning the books of the sages and the philosophers, but they must know that we are writing the history of their miserable deeds.**

"They are taking the youth from their mothers' arms and putting a gun and a bayonet in their hands and teaching them to kill, while we are appropriating millions of dollars for new schools, colleges and universities.

"They are deciding the fate of people by cutting up nations and marching on their territory, and we are striving to give the Philippines their freedom.

"Oh, yes, the dictators are now in the limelight, but they are in the light of a setting sun; they are in a light that cannot endure.

"The working people of America are awaiting the dawn of a new day—the day of a rising sun—when working men and women will demonstrate that along with political and religious freedom, it is possible to have economic security."

—From "Labor."

## CHINA'S LOSS FLORIDA'S GAIN

**Pensacola,** Fla.—The war in China has brought a new and profitable industry to Florida, and one that promises rich returns in the years to come.

It is the growing of tung nuts from which tung oil is made. The oil is used in the manufacture of paints and dyes, and also as a lubricant for motors.

The industry started in the vicinity of Gainesville a few years ago, and has spread rapidly to the north and west, as far as Green Cove Springs and Pensacola.

Today several hundred acres of tung trees are growing in Escambia county alone, and a large acreage in adjoining Santa Rosa county. For several seasons shipments have moved out of Gainesville in carlots.

### Imports Cut Off

Until recent years America's supply of tung oil was imported from China, but when the Japanese entered China the tung industry became more or less disrupted, so Americans began to look elsewhere for their supply.

They found Florida could produce it, quickly on a profitable basis. The growth of the industry has been phenomenal during the last year or so.

A New Deal farm relief investigator was recently traveling through the West, and one night stopped at a little farm in the dust bowl region. At the supper table, he ventured the question:

Relief Investigator—How in the world do you make a go of it at all?

Host (indicating the hired man who was eating at the far end of the table—See that fellow there? He works for me and I can't pay him. In two years he gets the farm. Then I work for him till I get it back.

---

If God made the world beautiful so that men and women might feed their beauty hunger, then October is the Altar Month of the year. A fire maple touched into red and gold by the frost, is one of the most beautiful objects on earth. I never see one of them without a plucking at my heart, as if invisible fingers were trying to open it wider to the beauty of God's world.—Dr. John W. Holland.

---

"Make big plans; aim high in hope and work, remembering that a noble, logical plan never dies but long after we are gone it will be a living thing."—Lita Bane.

---

"The child's first school is the family."—Froebel.

Never let the hot sun shine on newly made concrete. Evaporation causes the surface to dust off and hair crack. Concrete hardens best when the surface is kept damp by covering the work with straw, earth, sand or old burlap, and keeping this cover wet down for three or four days.

---

Well dented corn in your ever normal granary is better business than a well dented pocketbook. Ratproof your corn crib with a good concrete foundation and floor and a ½-inch heavy wire mesh up to at least two feet above the ground. Put an 8-inch band of galvanized sheet metal just above the wire.

## RAZE RESIDENCE ONCE BASE FOR AIDING SLAVES

Polo, Illinois (Special)—Workmen engaged in tearing down a home built in the 1850s by Samuel and Elizabeth Waterbury found handmade iron nails and iron supports. The attractive old residence once served as a station of the underground railway system through which runaway slaves escaped to Canada.

A tunnel about three feet wide led from a narrow passageway in the cellar to the barn. Runaway Negro slaves who found temporary refuge in the Waterbury home were loaded at night in wagons in the barn, covered with hay or straw, and then taken to another underground railway station at Mount Morris.

Mrs. Daniel Waterbury, widow of a son of the builders of the home, who is now 92 years old, resides here.

## CREDIT UNIONS

Enrollment in Federal Credit Unions has passed the half-million mark. Over 2,700 charters have been issued since the federal act was passed in 1934. From the enactment of the federal law through 1937 more than $50,000,000 has been loaned by federal credit unions, the average amount of each loan being about $78, borrowed to pay off pressing debts, meet doctors' bills, and serve other individual or family needs.

# The Annual Address

(Continued from Page 13)

all the good out of it you can get and I am telling you to get while the getting is good. These many props, against which many of us are now leaning will not always be there. The day may come, sooner than we expect it, when we will have to wear our own shoes, stand on our own legs and plow our own row. We will even have to provide the shoes, the strength for our legs and the row to plow. So let us do some hard thinking for ourselves. Let us encourage and support our friends. When necessary, let us fight our enemies. Let us become interested in our business and be more proud of our business. And let us courageously inform the nation that we will be satisfied with nothing less than our full share of the privileges and opportunities all American farmers should have.

POLICIES

I now mention some elements of policies that will assure the progress and welfare of colored farmers and likewise their contribution to the progress and welfare of our nation.

The doors of the rural church must remain open as well as the doors of the rural school. Right now we should be as keenly interested in education of the heart as in education of the head and hand. Such an education will make us respect each other and our neighbors of any racial group. Such an education will help us understand each other—will teach us the art of being agreeable and kind—will teach us the value of honesty and integrity, and will banish all fear we may have of each other.

I am interested in a rural social program that will make farm life so attractive that at least a proportion of the best brain and brawn of the rural community will desire to remain in the rural community and not migrate to the urban industrial centers. One of the biggest problems facing us is that of keeping the sons and daughters of farmers on the farm. During the past thirty years, farm ownership would have increased greatly had fewer of our children heeded the call of the city.

The farm owner of our group who has children who do not love the farm, is foolish to die and leave his farm to those children. Better for the group were he to leave it to a cousin or to a perfect stranger who loves to farm, than to leave it to children who will destroy their heritage, the life-work of those who nurtured them.

The poverty of the average Negro farmer is still something that has an evil effect upon the life of the community. Our farmers must have bigger and better opportunity to till and to own good soil. They must not be restricted to all the marginal and sub-marginal land in the nation. Farmers are supposed to be producing to live as well as living to produce.

There is need for new thought and new thinking about rural education. Some, who pose as our educational leaders are so highly educated themselves they think the voice of the Negro dirt farmer is just a voice crying in the widlerness of want and need. Such leaders should change beds every once in a while. They should sleep now and then close to a bale of cotton or a bulk of tobacco. Then they would realize that the voice is not a cry of despair but a cry of desire—desire for the knowledge that makes life worth living.

The papers told the other day of a prominent southern educator of the white race who said that the government—all the people—should pay for the Negro's education. should have been paying for it since Emancipation, and that the whole burden should have not been thrown upon the South.

I agree with this educator, but probably it is too late to make such a suggestion now. But I will make this suggestion. Let the government provide. Let that farm be a model farm—well supplied and well-managed. Let it be there to show the sons and daughters of poverty-stricken farmers that a farm need not be a source of miserable living but that it can be a source of happy living. Let it be there that master-farmers may be reared, trained and educated in our rural communities. Let it be there, the beacon-light of rural education and rural training. Let it be there and let us take steps immediately to put it there.

Farmers, you are not on your farms just to make a living. You are there on those farms to give to your Race virility and vitality, energy and efficiency. You are there to keep sacred in the heart of your Race a love for the soil—,this American soil—sodden with the sweat and tears of your slave fathers and mothers. You are out there to give hope to your Race, yes, to keep alive for your Race a rural civilization, which will stand as the real power and light of this nation when our great cities and industrial centers have fallen into decay.

## OUR AGRICULTURAL PROBLEMS AND THE AGRICULTURAL OUTLOOK

(Continued from Page 11)

ards to have this farm purchasing power restored and an economic system by which it could be distributed. I vision almost a Utopia here on earth. The aim of this program and the fundamentals of the New Deal is to help do that.

It has been said that sickness or the lack of health is costing our people fifteen billion dollars annually, to say nothing of the suffering and when you compare this great economic loss with our tax bill, taxes pale into insignificance in comparison. A large part of this loss will be eliminated when you remedy the economic evils of the farmer. It has been said that crime costs the country from ten to twelve billion dollars annually. We all know that the lack of economic opportunity lies at the root of a great portion of the crime. A large portion of this loss will be eliminated when agriculture in this country is restored to parity, as is the aim of our farm program. We know what a great loss this country is suffering because of the lack of proper training and development of the rising generation. Many a brilliant young man and young woman is going through life hitting on one cylinder, so to speak, when by a little training they might be a power for good in their community and in the State. A large part of this has its roots deep in the economic ills of the farmer.

If this thing be true then in place of howling so much about taxes and other minor ills, let us drive ahead toward the remedying of the real ills by going forward under the leadership of this Administration in a constructive farm program.

We don't as I stated before, claim that the farm program is perfect, but we do believe the facts will justify us in taking the position that this is the best farm program that has been brought forth up to now. In other words, this Act is founded on four cardinal principles which we believe to be sound, first, the conserving and building of the soil and in this bringing about sounder and better farming practices; second, the ever normal granary principle which will bring about a better balance between production and consumption in order that we may always have adequate supplies of farm commodities for home use, exports and storage against future shortage; third, farmer controlled and administered; fourth, parity payments.

It is my thought in connection with these principles farmers today should go out from here with the resolve to protect your farm bill and give it an opportunity to be tried out through maintaining orderly marketing by voting for marketing quotas and help spread the education that will give the people a grasp of the philosophy and background of national agricultural legislation and farm programs.

One assurance this great program is the best, is the fact that each year in its administration by farmers, the weaknesses they find in the program are given consideration for changes and modifications, and paraphrasing what my friend Andy Miller says, when in the light of experience and development better farm legislation and programs are possible this Administration will recommend them. In this fight each of you has a part and up to now you have done a magnificent job, but to achieve the goal that Secretary Wallace has in mind and I have tried to present to you here today will be a constant battle. It can not be done in a day and then rest under the shade of the trees, as it were. We must continuously move forward.

You have probably heard the story of the news which came to the Roman Senate in the early days that a Roman Army had been defeated in battle. This appalling news threw the Senate into turmoil until one noble Senator rose and said, "It is indeed a tragedy for a Roman army to be defeated in battle, but I want to call your attention to the fact that Rome does not go out to battle, but Rome goes out to war!"

## THE FARMER'S HYMN

**Official Hymn: N. F. C. F.**
**(Tune: "My Faith Looks Up To Thee"**

God bless us, we who toil
Upon the goodly soil
Which Thou hast made:
Uphold us by Thy might
Help us to know the right.
And ever, day and night,
Be Thou our aid.

Send plenteous sun and rain
On mountain, hill and plain,
And valley wide:
Grant us prosperity,
Increase our faith in Thee,
O may we happy be
Whate're betide.

Unite us heart and hand
In one fraternal band
Unto the end:
That we may praise Thy name;
Of all men, lord, the same;
Our God, whom we proclaim
"The Farmer's Friend."

## HARVIELL UNIT CLOSED SUCCESSFUL MEETING

**Mr. M. J. Jones, President and Representative, Thos. Gillespie Report Good Accomplished.**

Poplar Bluff, Mo.—The Harviell Farm Unit held its annual session Oct. 31 through Nov. 1st, with the president, Mr. M. J. Jones, presiding. The annual address was delivered by Representative Thomas M. Gillespie of the National Federation of Colored Farmers. Mr Gillespie also brought a fine report from the recent Annual Convention of Colored Farmers which met this year at Forsyth, Georgia. The Harviell Unit has started a campaign for 100 members, and this drive will extend throughout Butler county. Eighteen of these 100 members were enrolled at this session. One of the very fine pieces of work accomplished at this meeting was the setting aside of 1,000 acres of land for the Re-settlement Project for Colored tenants by the General Land Company, of which Mr. Gillespie is the salesman. There were 22 present who took advantage of this fine offer in the western district of Southeast Missouri, seven miles south of Poplar Bluff and in the future these 22 tenants will become land owners. There were groups at the meeting from Blytheville, Luxora and Wilson, Arkansas. We are very proud to say that we are getting new members from all sections of the country. We are asking the Farm Security Administration to give every assistance to the colored farmer so that they may be able in the future to rank with other citizens of America. This Unit is pulling together for the six-way road plan. 640 Acres were purchased by the Unit members from Arkansas at Harviell Mo. We extend our heartiest greetings to members of the National Federation of Colored Farmers everywhere. We hope to entertain the 1939 session of this great body.

## A WEE BIT TOO LONG

Mistress—I've asked Mr. and Mrs. Smith to dinner at seven, Mary; but I think we'll give them a quarter of an hour's grace.

Mary—Well, ma'am, I'm religious myself, but I think that's rather overdoin' it!"

## Get Joyful Relief From BACKACHE

### Caused By Sluggish Kidneys

### Stop Getting Up Nights And Feel Younger

Here's one good way to flush excess harmful waste from the kidneys and relieve bladder irritation that often causes scanty, burning and smarting passage.

Ask your druggist for a 35 cent box of Gold Medal Haarlem Oil Capsules—a splendid safe and harmless diuretic and stimulant for weak kidneys and irritated bladder.

Besides getting up nights, some symptoms of kidney trouble may be backaches, puffy eyes, leg cramps, and moist palms. But be sure to get GOLD MEDAL—it's a genuine medicine for weak kidneys—right from Haarlem in Holland.

## FARMERS PAY FOR PRIVILEGE OF FEEDING FRIEND'S TURKEYS

Torrington, Wyo.—Orville H. Thrasher last year fattened his turkeys on grasshoppers in neighbors fields. The demand was so great this year that Thrasher has been charging for the extermination service. He has 3,000 turkeys and his fee is $2 a day for a flock of 500. To fields three miles or less away, the turkeys travel under their own power, but they go as far as 21 miles in trucks, accompanied by a shack for the herder and portable roosts. Next year Thrasher hopes to have 10,000 birds to farm out.

## STRIP CROPPING

"Habit," says an editorial on Strip Cropping in Farm and Dairy (September 2) "is the worst drawback to this new method of farming. For many of us it's hard to imagine some of those hill fences gone and the crops running around the hill, in strips. Yet it is a sound practice; it keeps on the hillside the plant-food and moisture that on too many farms goes down to benefit the valley farmer. If you farm some fairly steep land, be open-minded enough to go and talk to someone who has been 'farming around the hill.' It is to your own interest to investigate."

## CROPS AID RAILROADS

A report in the Wall Street Journal (September 12) says that Florida railroads are preparing for an exceptionally heavy loading of fruit and vegetables, the backbone of their earnings, in the coming crop season. Private estimates of equipment which will be needed to handle traffic are based on the promise that total rail loadings in Florida in the 1938-39 season will be equal to record of 105,576 cars moved in the 1930-31 season. Barring unfavorable weather the citrus crop will be the largest on record by a substantial margin and, if unfavorable selling prices do not interfere with its marketing, will assure the leading citrus roads of a good winter business.

Farmers may work their own children, but not other children under 14 years of age, in beet fields, if they want to qualify for benefit payments under the 1937 sugar act.

## Committee's Full

(Continued from Page 1.)

membership of such groups to accept our standing invitation to unite with us and help us carry out our aims and purposes.

4. We desire the cooperation and friendship of all institutions serving the farming industry, the Extension service, home demonstration service, Land Grant Colleges, and all other such institutions.

5. Cooperative purchasing, production and marketing has benefited all Units that have engaged in such efforts. We should enlarge our cooperative activities in every state and section where we are organized.

6. Our Units should investigate the possibilities of Federal Credit Unions.

7. The goal of every organized farmer should be to own the land he tills and to till the land he owns. Tenants and sharecroppers are urged to make every effort and accept every opportunity offered to become farm owners.

8. We commend the efforts the Farm Security Administration and other agencies are making to halt the growth of farm tenancy and assure these agencies they will receive our support.

9. We believe that a way can be found to provide tenants with free, or very low cost medical service. Our officials are instructed to study this problem and submit recommendations.

10. We suggest that landlords take advantage of long-time government loans, now available, to provide better housing for tenants and sharecroppers.

11. We condemn the activities of radical organizations seeking to mislead tenants and sharecroppers of our group.

12. We commend the program for American Agriculture initiated and planned by the officials of the present Federal Administration. In most of its essentials we believe it is the best ever devised for the American farmer and especially for the farmer of the South. Colored farmers are urged to continue in their support of the program and the friends of the program.

13. The cotton and other crop-control plans should remain in effect until markets can be found for our large surplus. We recommend that members of our organization and all farmers of our group engaged in cotton production support by their ballots a continuation of crop-control programs.

14. The present method of distribution of Soil Conservation payment checks has caused dissatisfaction and misunderstanding and a better method should be found. We recommend that checks be mailed direct and paid direct to producers.

15. The Assignment Clause in SRB-201, 1938 Agricultural Conservation Program has been more injurious than beneficial to Negro farmers. We recommend that this clause be radically revised so as to guarantee more protection to the rights of the assignee or else eliminated from the program.

16. We express our gratitude to all authorities and agencies who have made it possible to increase the force of Negro Farm Extension Agents and Home Demonstration Agents in the Southern states.

17. We regret that in spite of the need and desire of Colored farmers in the states of Missouri and Illinois of the services of Farm and Home Extension workers of their Group, none have been appointed in these states. We instruct our officials to use every power at their command to obtain the services of these agents in Missouri and Illinois.

18. We recommend that a Retirement Fund be established by the Federal government, and under the direct supervision of the Federal government, for the benefit of Farm Extension Agents and Home Demonstration Agents.

19. We owe a debt of gratitude to the farmers of Georgia and to her upright and patriotic citizens who constantly, earnestly and patiently strive to give to their state, loyal service, that Georgia may continue to progress and prosper. Respect and honor due their home state for her noble history, and her contributions to the welfare of the Nation, should be given. We urge her citizens of our racial group to stand for law and order, condemn crime, and merit respect for all rights and privileges their state promises to law-abiding citizens.

20. We urge our members to support the rural church and the rural school and keep ever, bright and shining, these beacon lights of rural education.

21. We endorse the idea that a school farm be established and maintained as a necessary adjunct to every rural school. We instruct our officials to investigate the possibilities of securing appropriations from the Federal government to purchase rural school farms.

22. We express our thanks and gratitude to all who have contributed to the success of this Convention, —to our host, the President, faculty and student body of State Teachers & Agricultural College,—to exhibitors of farm and farm home products,—to donors of prizes,—to the citizens of Georgia,—her noble Governor,—to all our friends who have made us welcome,—may we ever merit your interest and support.

L. B. Boler, Missouri, Chm.
Henry Land, Georgia
H. M. Trapp, Florida
Walter Riley, Mississippi
A. G. Thompson, North Car.
Maj. H. C. McCormick, Okla.
W. M. Freeman, Arkansas

## HIS EXCELLENCY

(Continued from Page 1.)

I am deeply interested in your Conference and the great cause which has brought you good people to Georgia, our noble State, and I want you to know that I am happy in having you come to our State and to our State Teachers and Agricultural College, and I want you to feel and to know that you are welcomed and desired visitors. I claim you to be representative of the soil, yes the salt of the earth.

As races we must live and act together in a way that will bring the greatest joys, peace and happiness. To do this we must be true and honest to each other as has been said, the rights of each other must be preserved and respected, our services must be beneficial to one another; therefore we must encourage and lift life to its highest possibilities, a better life, a useful life, a safer life, a glorious and dependable life.

I call your attention to Jesus' words: "Let your light so shine before men that they may see your good works and honor Him,' and I add: "To bless your fellowman." I do not want you to forget that the good farmer is a partner with God through nature; therefore, my fellows, do not be ashamed of your high calling as farmers because you are clothed with honor and respect as partners of the blessed God through nature. Don't forget that ye are the salt of the earth and see to it that you have savor, so much so until you are always preserving the very best for the safety and welfare of others, whether they be black people, yellow or white people. I would advise you to put forth every honest effort to make friends, for any race or people is much better and safer with friends than they would be without friends. We all should be proud of our country and government, because it is doing so much for its people regardless of race. We are all proud of our President, Mr. Roosevelt, because he is a Humanitarian. I am glad to invite you, my colored friends, remember I said friends, to Georgia, a State whose governor, legislature and officials are trying to give every honest person, regardless of race, a square deal.

We are trying to educate the youth of our people of all races. We are proud of our educational system, both public schools and colleges. Our public school system is under a humane State Board of Education, and our colleges under the University System controlled by a Chancellor and a Board of Regents. Both systems, the Negroes share liberally. In each, the Negro and the White share the benefits of the same rules and regulations. Our University System has three Negro State Colleges. One of these is State Teachers and Agricultural College, Forsyth, Georgia, of which the Governor, Chancellor, Board of Regents, and President Hubbard are all glad to bid you welcome and God speed in the noble work you are doing.

Again, under the New Deal, we are trying to take care of our aged people by pension, also the feebleminded, the blind, the deaf and dumb, the unfortunate tubercular people among us, and other physical sufferers, and I state to you frankly with pride that the good white people of Georgia join heartily and willingly with me in efforts to see that the members of your race are taken care of.

Please allow me to congratulate you people on the progress you are making, and let me advise you to keep level headed, work and stick to agriculture as you are doing; don't scorn honest labor, take care of the practical side, the occupations and professions in which you are needed and can make an honest living. Be obedient to law and order and you will make a desired place for yourselves right here in Georgia, the South, East, West, and our blessed America, that not only you will be proud of but we will be proud of.

You came to us last year and brought joys and satisfaction. We are proud to have you again this year to continue the good work you began so nobly last year. Come back next year and fortify the beautiful and valuable structure you are so nobly building. Our State T. & A. College, Forsyth, doors are wide open to you, and Georgia says come, come. My plea to you is to continue your Agricultural program for our physical life must be sustained. We must eat and command other real necessities, character must be built and the blessings of God encouraged."

Yours truly,
E. D. Rivers,
Governor of Georgia.

## SOME FACTS REGARDING THE COTTON SITUATION

(Continued from Page 1)

da and should make every effort to acquaint themselves with the situation and not allow themselves to be swayed by a temporary price reductions which in no ways affects the larger aspects and more permanent benefits which the Farm Bill provides.

The referendum on December 10 is a direct effort to avoid further enlargement of the surpluses and that is assured by the marketing quotas which, when in effect by the farmers' vote, will impose a penalty on those farmers who exceed the quotas. Cotton quotas are in terms of acres and tobacco quotas in terms of pounds.

Tobacco prices are good and tobacco growers are very likely to vote overwhelmingly for quotas in 1939. With cotton it is different because of the breakdown in price. However, it is well to observe what will happen if the farmers vote against the quotas.

In the first place, farmers will be unable to get loans on their cotton grown in 1939 for the Act specifically prohibits loans if marketing quotas are rejected. A rejection of marketing quotas undoubtedly would result in an increase in cotton acreage next year. In turn, the increase in cotton acreage would mean an increase in the amount of cotton on hand, and a further decrease in prices. It is apparent that some of the tremendous surplus on hand must be gotten rid of before cotton farmers can expect a decent price and income. If quotas were rejected, more acres would be available to cultivate but more acres to cultivate mean nothing, or less than nothing, if they do not mean more money for the cotton farmer.

The sharp reduction in cotton acreage during the past few years has worked a hardship on some colored farmers. At the same time, it has given other colored farmers an opportunity to grow more food and feed for home use; an opportunity to grow crops that conserve the soil and an opportunity to keep their wives and children out of the fields. School terms in the South have lengthened during the past few years and these programs have given colored children an opportunity to take advantage of that fact.

All in all, the position of the colored cotton farmer is better because of the program and the rejection of the program may cause a bad situation to be much worse. But other factors also enter into this general situation.

We have heard a lot in the past few years about the share-cropper. Few of us realize that the AAA programs have been responsible in large measure for the attention given this problem. The share-cropper problem, as any one familiar with the South knows, has existed for years. The attempts to help the Southern farmer through Federal programs drew attention to its existence. Their abandonment would mean, to a large extent, the abandonment of interest in the plight of the South's tenants and sharecroppers.

The AAA programs, have for the first time, given the colored farmers a voice, someone to complain to about inequities and injustices. The importance of this cannot be overestimated. By law and by regulations, the Government has attempted to protect tenants and some of this protection affects injustices that were taken as a matter of course before the AAA programs were enacted by Congress. In other words, the tenant, if he was cheated, could do little or nothing about the injustice. Much inequity and injustice remains but there would be much more of it without the program and nothing would be heard about it.

The fact that colored farmers have voted freely in the referenda is another significant development. If they have the right to vote upon matters affecting their economic destiny, they have—and may in the future be freely allowed to exercise—the right to vote on matters affecting their political destiny. In the last analysis, economic destiny and political destiny are closely akin.

Provisions in the Farm Bill have increased the Soil Conservation payments to small farmers; have made possible, through Cotton Price Adjustments, a supplementary payment above the market price of cotton; have assured more food, feed and home gardens for farm families and have set up a new division of payments as between landlords, tenants and sharecroppers.

These provisions are vitally important to Negro farmers and no doubt will be uppermost in their minds when they vote on December 10th.

## PRESIDENT HUBBARD

(Continued from Page 1.)

way in which the Georgia Agricultural State Teachers College, with its president, faculty and entire student body sought to and succeeded in making one forget that they were away attending a convention.

## FARMERS OF ILLINOIS TO GET 175 MILLIONS FOR 1938 CORN CROP.

Springfield, Ill.—Director J. H. Lloyd of the state agriculture department has estimated that Illinois farmers would collect $175,000,000 for this year's corn crop.

Lloyd based the figure on a yield of 361,700,000 bushels, half of which, he said, would bring 30 cents a bushel to farmers who did not participate in the AAA corn loan program. He said the return for half of the corn he estimated was grown under the AAA would be 67 cents a bushel.

He said there were prospects for an increase in the current price of corn through the federal government's' proposal to buy up large quantities of carried-over 1937 crop through the Commodity Credit corporation. The corn would be processed and distributed to persons on relief.

## HELP!

A gallant young husband was trying to teach his new and nervous wife how to drive a car.

They were on a narrow country road and the wife had been driving for only a short time when she exclaimed:

"Take the wheel quickly, darling here comes a tree."

## SECURITY FOR FARMERS

### Facts and Figures From the Farm Security Administration

Washington, D. C.—ALL TENANT FARMERS AND CROPPERS SHOULD KNOW that while deadlines for tenant purchase loans for 1938-1939 have already gone into effect in most states, this does not mean that applications cannot be duly filed for the next fiscal year. Applications may be filed at any time. Here is the necessary information:

If you live in a county where loans are to be made this year, get an application blank from the county rehabilitation supervisor. If you do not know his address, you can obtain it from your county agent. If you do not know whether your county is eligible

(Continued on Page 13)

## FIRE DESTROYS OLD LANDMARK ON INDIANA FARM

Rochester, Ind.—The large colonial type dwelling on the Edwin Landis farm, ten miles southeast of this city, a landmark in Fulton county, was destroyed by fire today.

The home was built in 1850 by the late Alexander Curtis. Older residents say it was a station on the underground railway from the south prior to the civil war where Negroes who had escaped from plantations were secreted during daylight and then moved by wagon to the next station at night on their way to Canada and freedom. Curtis and several of his sons served during entire civil war, enlisting the first day Abraham Lincoln called for volunteers.

The fire started from an overheated chimney and proved hard for firemen to control because the home was built of hewn timber, many of them black walnut.

The farm is now owned by George Baymond. Mr. and Mrs. Carl Slabaugh, who live on it, lost nearly all their household goods and personal belongings.

## CONTOUR FARMING HELPS

### 11 Bushels More Corn Per Acre is Yield by Soil Conservation

Contour or around the hill farming, which is being used more and more by Illinois farmers to conserve soil and moisture, has improved corn yields as much as an average of eleven bushels an acre in experiment station tests conducted in the upper Mississippi valley, according to B. B. Clark, acting state coordinator, U. S. Soil Conservation Service.

Contour farming is one of the soil-saving practices fostered throughout the state by the extension service of the college of agriculture, University of Illinois, and later by the soil conservation service.

In showing the value of contour farming, Clark cited experiments

## P. S. Bowles, Director Of Placement Bureau, Tells of Work Being Accomplished

PRESIDENT

**PROF. WM. H. BELL, President of Alcorn A. and M. College, Alcorn, Mississippi**

Because of the balmy air, the salubrious climate, and the matchlessness of the fertility of the soil of what is now the State of Mississippi; the lands within her borders early became the coveted prize of the early seekers after wealth through the agricultural avenue. Accordingly Mississippi became the State whose farming program in the main took the pattern fashioned and formulated by the great land barons, and became characterized by the large plantation type of farm with a "big house" and "Negro quarters" for the slaves.

(Continued on Page 16)

## BABY CHICKS-THEIR CARE

### Proper Brooding is First Step in Poultry Profits —Five Reasons for Losses

Elimination of mistakes in brooding chickens is one method of insuring profitable production. Five common practices are often responsible for losses in brooding baby chicks.

Maintaining too much heat in the brooder house is the first mistake listed. Room temperature is best if kept below 75 degres Fahrenheit. High temperatures and extreme dryness in a brooder house will help to cause poor growth, may result in ragged feathering and may aggravate cannibalism. A pan of water kept on the brooder stove will add humidity to the air within the house.

Not enough feeder space is the second mistake listed. For each 100 chickens it is well to have eight feet of feeder space. A third cause of loss is changing feed in the hope that what has been said about the new feed may be true.

Furthermore it is a mistake to doctor water with a pill or powder to keep away disease. About the only result from such a practice is that the person who put the stuff in the water may feel better for having done so.

Allowing dirt to accumulate in and around the brooder house and water dishes is the fifth mal-practice listed. Wire-screened platforms for drinking dishes and feeders will pay for themselves as a safeguard against feed and water contamination.

## HOW ONE MAN GOT AHEAD

Chester Pilch of Springfield, Mass., doesn't happen to be of old New England stock. In fact he is the son of a Polish immigrant, and when he sought for a job and couldn't find one he might have been expected, in these days of "gimme," to lie down and scream for federal aid. The story of how this son of an immigrant exercised good old American ingenuity and at last came to occupy an important place in a major industry is interesting.

Turned away from doors day after day while seeking work, Pilch became discouraged in that aspect of trying to make a living. He decided to make his own job. Somewhere he had heard that in China and Japan there is a well-guarded secret by which anyone "in the know" can tell merely by looking at a day-old chick whether it is going to grow up to crow or to cackle. Pilch called upon a professor who had been to the orient and was supposed to know the secret, and after conferring with the professor, and after studying chicks for three years, he mastered the art. Now Pilch commands a salary of $12 an

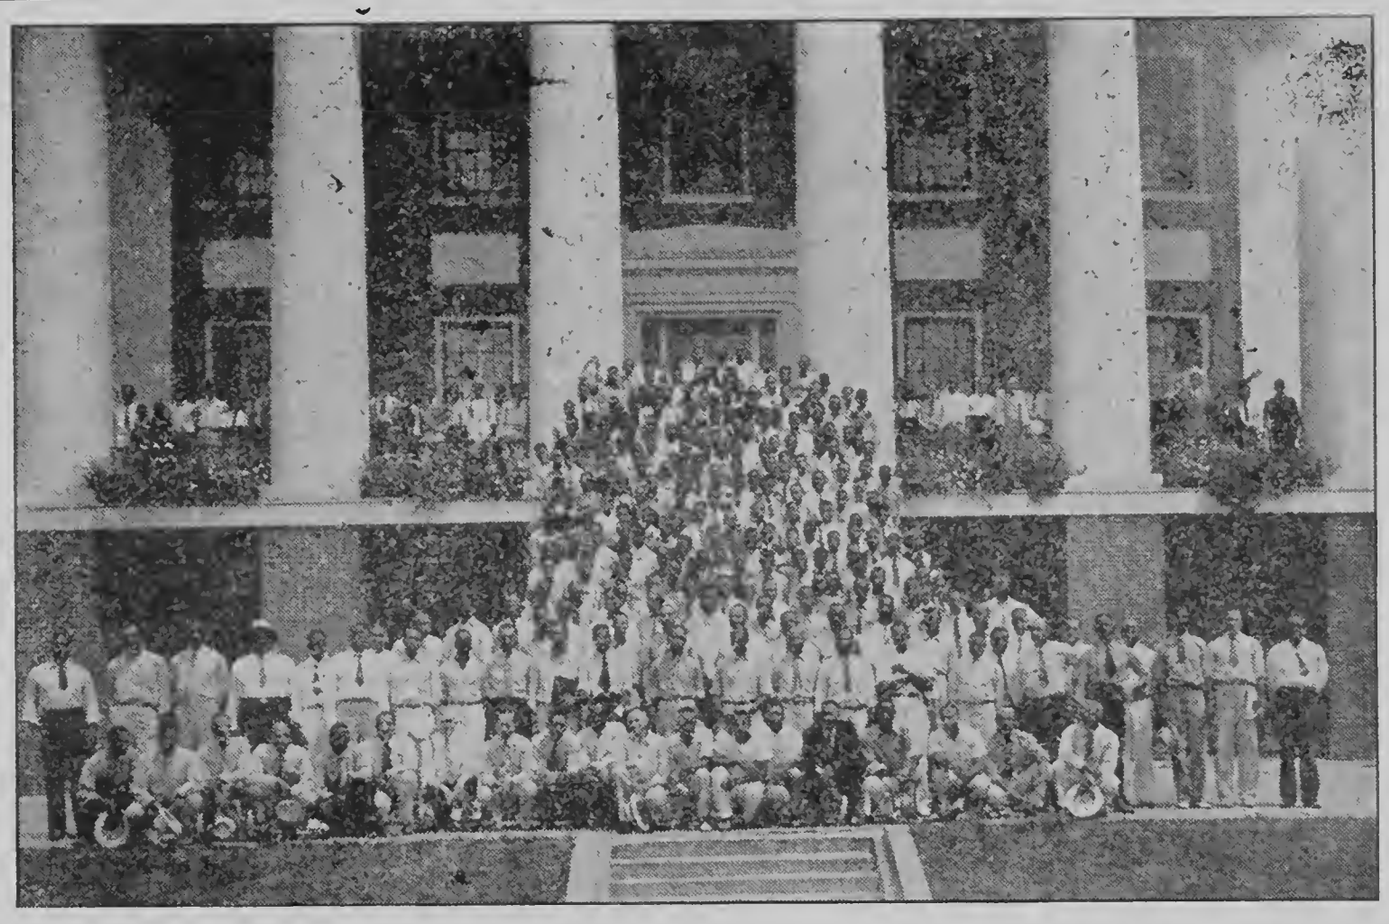
## FUTURE FARMERS AND INSTRUCTORS



**New Farmers of Mississippi and Teachers of Vocat ional Agriculture in Annual Meeting held at Alcorn A. and M. College, August 25-28, 1938.**

## Arkansas Churchmen Boosts Dr. John H. Clayborn For Bishopric

Little Rock—(ANP) —Arkansas A. M. E. church leaders, including presiding elders, ministers and laymen, this week gave enthusiastic endorsement of the candidacy of Dr. John H. Clayborn for the Bishopric at the forthcoming 1940 general conference of the church, to be held in Detroit.

Dr. Clayborn, a native Arkansan, is at present general officer of the church and editor of the Southern Christian Recorder. He has served the connection for 34 years, and with his sons operates in Little Rock the Wonder State Publishing Company, publishers of a chain of newspapers. The nation-wide appeal for support of Dr. Clayborn's candidacy was addressed "to the bishops, general officers, presiding elders, pastors, lay members, college president, deans of seminaries, army chaplains, delegates elected and to be elected to the forthcoming general conference."

Those signing the endorsement were Arkansas Presiding Elders O. Sherman, G. E. Ashford, J. W. Nelson, L. S. Overalls, P. L. Johnson, G. Wayman Blakely, H. Andrews, S. P. Perry, J. W. Stinson, D. A. Russell, G. W. Blackman, J. M. Turner, V. M. Townsend, Wm. Wingfield, J. J. Howard, J. R. White, W. T. Eskridge and B. J. Johnson of Oklahoma; H. Thomas, principal; Dr. P. H. Johnson, Dean L. C. Fisher, Jackson Theological Seminary; Dr. G. A. Gregg, president Shorter and Dr. E. E. King, dean and Revs. Thomas Ray, J. T. Criswell, D. D. Nelson and E. F. Davis.

Bishop H. Y. Tookes is presiding prelate of the 12th Episcopal district which embraces Arkansas and Oklahoma and has just concluded the annual conferences of his district.

Of Dr Clayborn, the churchmen's endorsement states , in part: "We are not only for Dr. Clayborn because he is Arkansas' son, but because he possesses the qualities for the bishopric....He is sound in mind and body, ruggedly built and able to stand the rigors of travel. He has given 34 years of faithful service to his church, serving all the way from the smallest missions; he was presiding elder for 31 of his 34 years in the ministry, and is now serving honorably as general offieer. He bought an $18,000 publishing plant for the Southern Recorder and gave it to the church free of debt, without one dime's cost to the church. This gift was made in New York and with it $100 in cash which was unheard of in the annals of the church."

### NATURE OF THE AGRICULTURAL PROBLEM

In the United States, where farm-production power greatly exceeds the purchasing power and with some crops the needs of the domestic population, the objectives of the national agricultural policy differ profoundly from those of deficit-agricultural countries, whose first necessity is a adequate food supply. Here the problem is economic more than technical; In other words, from the national stand point it is essentially a problem of marketing rather than of deficient production. As we saw recently, it takes several years of crop failure to cause even small domestic shortages. Normally, our task is to prevent surpluses from beating down prices and to maintain a satisfactory balance between production on the farm and production in the factories.

—From Annual Report of Sec'y Henry A. Wallace.

Some of the happiest people in the world are performing the plainest tasks and living in the plainest way.

## PYTHIAN TEMPLE IN LOUISIANA IS SAVED BY RFC LOAN

New Orleans, La., Grand Chancellor, S. W. Green of the Knights of Pythians of Louisiana announces that the Mortgage Company of the Reconstruction Finance Corporation has approved of the $56,324 loan on the Pythian Temple located in the heart of the commercial district in New Orleans, La., Corner Gravier and Saratoga Sts. Because of this loan the receivership will be dismissed and the property turned over in the hands of the officers and members of the Grand Lodge. This building was constructed at a cost of more than $300,000. The bulk of the claims against this property are those members entitled to endowment benefits.

Grand Chancellor Green says the loan is enough to give these creditors 50 per cent of their claims and to cover receivership and other cost. He adds that this will enable the Grand Lodge to carry on with a good prospect of eoming out of debt and an improvement in general conditions, thus giving the creditors a chanee of eollecting the rest of their claims on a second mortgage. The building is at present leased to the Charity Hospital for the housing of patients during the construetion of the Hospital's new building. It is expected that the hospital will have the lease for another year. The officers and members of the Order are enthusiastic at the turn of affairs and expeets to rebuild the organization through reinstating of old members and addition of new members. Suffieient applieations have been received for rental of office and store space when the building is returned to the Order. It was through agreement of Negro professional men and other business enterprises to take space in the building that secured to the Order the loan through the Reconstruction Finance Company as it gave to them assurance that the loan eould be repaid. The Attorneys that secured the loan for the Pythians are A. T. Walden, Grand Attorney of the Grand Lodge of Knights of Pythias for the State of Georgia, Hon. A. B. Hammond of New Orleans (white) and through the assistance of Mr. Marshall Ballard, Sr., Editor of a white daily, The Item Tribune.

Sir S. W. Green became a member of the organization July 17, 1883 when the Order was in its infancy. He was a charter member of Pride of Tensas Lodge No. 21, St. Joseph, La. In 1886 he was sent as Grand Representative from his lodge and immediately upon entering the Grand Lodge his ability to handle finances commence to show itself and in May 1884 he was elected to a position of Grand Master of Finance. He was elected to the position of Grand Chancellor of Louisiana in May 1892, served until 1897 and declined reelection. In April 1899 he was again elected to the position of Grand Chancellor and since the date of his first election he has been unanimously elected to the position each year. In the year 1906 the surplus in the endowment fund had reached such a large sum and was growing all the time until the Lodge decided to invest it. Accordingly in 1906 at the Grand Lodge session in Alexandria, La., Grand Chancellor Green recommended that the Grand Lodge State of Louisiana erect a Pythian Temple, hence an appropriation of $12.000 was made by the Grand Lodge for the purehase of this site upon whieh the Pythian Temple now stands.

## African Miners

**Johannesburg.** S. Afriea (ANP)—It was reported here this week that miners of Lupa, Tanganvika, have protested against that territory being ceded baek to Germany, that they desire at all eosts, to remain within the British Empire. Settlers at Dares-Salaam, declare that if Germany regains the country, they (the settles), will lose everything.

## DELEGATIONS FROM 18 STATES TO SEEK PAY BOOST FOR WPA WORKERS

WASHINGTON, Dec. 10.—In an effort to prove that wages on Works Progress Administration projects are too low and that gross inequities exist among the workers in various states, more than fifty representative workers and their wives will be assembled here December 15 to 17 to present their case to Aubrey Williams, Deputy Administrator of W. P. A.

Reports show that workers will appear from eighteen states, including New York, New Jersey, Pennsylvania, Ohio, Michigan, Wisconsin, Minnesota, Kansas, Missouri, Montana, California, Arizona, Georgia, Alabama, North Carolina, Maryland, Virginia and Oklahoma.

In two days of hearing, sponsored and financed by the Workers Alliance, the witnesses will be expected to present to W. P. A. officials "a picture of manner in which they live on W. P. A. wages which today average $50 a month for a family and are as low as $26 a month." On the third day a committee of alliance officers will confer with Mr. Williams to sum up the material presented and to offer a program. Alliance officials said they were confident that the hearings would prove that:

"W. P. A. wages for unskilled workers are so low that they do not provide even a minimum subsistence.

"The wage differentials as between small and large towns or counties are not justified by the cost of living or any other equitable standards.

"The wage differentials as between north, south and 'border states' in the three wage regions are not justified by the eost of living.

"An increase and better equalization of wages would mean more purchasing power and would promote the standards of workers generally.

"The present W. P. A. program is far too inadequate. With nearly one million certified workers unable to get assignments the result is that relief rolls are clogged and relief standards lowered. If the present pland for lay-offs is carried through disastrous consequences will result.

"The present system of labor relations is unfair and unjust, and promotes discrimination and favoritism. A decent system of labor relations must be established.

"The politics on W. P.A. are the politics of reactionary Democratic and Republican Congressmen who insist on appointing their henchmen as administrators, regardless of merit or of their lack of sympathy with the objectives and regulations of the program.

"The layoff orders recently issued by W. P. A. officials should be rescinded immediately if further suffering is to be averted.

"That W. P. A. officials are violating the 1938 relief act by refusing to establish immediately a 25-cent hourly minimum, as the present minimum W. P. A. wage is 18 cents an hour, in the South."

## Prejudice Follows Conference Held In Birmingham

Birmingham, Dec. 22—(By Walter Murdock for ANP)—The first case of racial prejudice and hatred resulting from the reeent Southern Conferenee of Human Welfare that was in session here last month was revealed last Saturday involving an outstanding eolored minister and the eity auditor of Standard Oil Company.

The minister, the Rev. J. R. Matthews, pastor of Maeedonia Baptist ehurch, said he drove his automobile into a serviee station and was greeted by the company official who was talking to the operator of the station. When the minister drove in the official left the operator, and greeted the minister and extended his hand.

The operator of the serviee station walked up and said to the official, "The deal is off; I won't buy any tires from any white man who shakes hands with a nigger."

The oil eompany official, who had been trying to sell the operator some tires said: "I'm sorry you feel that way about it," and continued his conversation with the minister

When the prominent minister drove away the surprised and astonished official was heard saying words to the effect that the conference had brought the race question into every meeting and to the city hall, and headlined the press of the South and nation for its liberal laws on equal educational opportunities and permitting all citizens to vote.

## BAPTISTS OF S. C. GIVE $2,920 TO MORRIS COLLEGE

Sumter, S. C., (C)— In a spirit typical of a group of progressive people with race pride, hundreds of Baptist ministers and laymen from all parts of the "Iodine State," gathered in the spacious auditorium of Morris College last Friday for the purpose of making reports in behalf of Negro education. Said to be one of the most outstanding evidences of particular interest by a religious group in behalf of colored youth seeking higher learning, the trustees of the institution's board, headed by the Rev. Dr. H. H. Butler, president of the State Baptist Convention, reported the receipt of $2,-920.16. This amount represented sums received from numerous organizations throughout the church, and worthy of particular mention was a donation of $100 from the college's Little Theatre group."

Ideally located in a center of South Carolina that is known for its healthy environs and industrial units, Morris College, founded in 1909 by the Baptist Educational and Missionary Convention of the State for the purpose of giving youth a Christian education, affords numerous advantages to persons seeking higher knowledge. Since its incipiency, the college has made rapid strides, and notably among a few of its policies is the broad attitude of the administrators toward students of other faith.

Through the years of the depression its doors have remained open primarily for the purpose of giving the American Negro youth of today an opportunity to become an outstanding citizen of tomorrow.

During the able administration of the nationally known Dr. I. D. Pinson, who succeeded the Rev. J. J. Starks as president in 1929, Morris College has made such remarkable progress that today as the only eollege in the state supported entirely by funds from members of a most loyal race always ready to render support in spite of adverse eircumstances. There are three state bodies of the Baptist denomination interested in the maintainence of this well known institution that is filling a definite need in an area that is abundant with ambitious youth.

Dr. Pinson, a graduate of Benedict College, Colgate and Yale universities, is surrounded by a very versatile faculty. Eaeh member of the instructional staff either holds a graduate degree or has eompleted further graduate studies. A standard four-year eurrieulum is maintained at Morris and upon completion of the studies leading to aeademic degrees, sueeessful eandidates are awarded a Bachelor's degree in Liberal Arts or Seienee. In addition, a department of theology is eonducted and serves a definite need for the individual interested in the ministry.

What we do today has a definite effeet on those near at hand.

### ECONOMIC PLANNING AND DEMOCRACY

Economic planning is wholly compatible with democracy, and widens the scope of it. There is no need to dread it as a cause of dictatorship. It may or may not accompany dictotarship. There is no cause-and-effect relationship. Numerous dictatorships in the past have done little economic planning while many democratic nations have done much. Quite other things are the real essence of dictatorship. Among them are the censorship of speech and of the press, the subjection of science and learning to the Government, the destruction of parliaments and of independent political parties and trade unions, and the concentration of authority in a single individual or in a small group. Often there is another sinister development—the mobilization of men and of industry for aggression. Nations thus controlled inevitably do considerable economic planning, but this is not their vital characteristic. What is vital in them is the substitution of a concentrated for a diffused political power.

This concerntration of political power, with the consequent destruction of individual liberty, is quite different from the purely administrative centralization of various governmental tasks. It is important to keep the distinction well in mind. Concentration of political power means the total extinction of the voter's rights, whereas mere administrative centralization leaves the rights of the voter unimpaired. It is the concentration of law making rather than of law administration, and of policy rather than of procedure, that distinguishes the totalitarian from the democratic governments. Efficiency obliges all governments to centralize many administrative operations, such as defense, diplomacy, customs collections, mail distribution, and the regulation of transport and communications. As long as the deciding voice with regard to policy in these matters rests with the voter, the administrative function remains the servant of the legislative power, which in turn is the reflection of the national will. In a democracy political power belongs to the voters, and the popular sovereignty can delegate administrative jobs to central agencies without the slightest danger to itself. * * *

In times like these economic planning ls the savior rather than the destroyer of democracy. It subsititutes order for choas, and appeasement for disaffection. In this way it averts dictatorship, which indeed cannot arise until orderly government has broken down and the masses are n revolt. Ancient and modern history testify to that. With unemployment unrelieved, and with agriculture in ruins, we should be in real danger of dicatorship. There would be bread riots in the cities and mortgage strikes in the country; it would be impossible to maintain order without the use of force. From that point to dictatorship the descent would be swift. Instead, we have domestic peace, increasing economic justice, and firm reliance on government by discussion. All this has come about through employment relief, agricultural adjustment, and enlightened social legislation—in short through precisely the instrumentalities that some people take to be the germs of totalitarianism.

—From Annual Report of Sec'y Henry A. Wallace.

# Genius Misdirected

(Interracial Review)

The September 18 issue of Collier's contains an account of the late Charlie Bellinger, Negro politician of San Antonio, Texas. At fourteen it is stated Mr. Bellinger decided to pick no more cotton and seek his fortune in more fertile fields. For the next thirteen years he was porter in a white man's saloon, which paved the way for his subsequent career of gambler, banker to Negroes, real estate operator, politician and suzerain of San Antonio and Bexar County, Texas. In his heyday, Mr. Bellinger's Cash Premium Investment company, a lottery business grossed as much as seven hundred thousand dollars a year. Moreover, when he was fined $30,000 and sentenced to eighteen months in Leavenworth for income tax fraud, none other than the newly elected white mayor of San Antonio, traveled all the way to Washington to request of Mr. Roosevelt a presidential pardon for Charlie, who at that time was already out on parole. The secret of Mr. Billinger's power appears to have been his control of some five to eight thousand Negro voters in San Antonio.

The detailed history of Mr. Bellinger's activities reveals true genius shamefully squandered. The better housing, educational and reereational facilities that he obtained for his Negro brethren, appear to be merely moves on a cheekerboard studded with vicious and illegal enterprises. However, the amazing note in the whole story is, that it involved widespread and intimate interracial cooperation in a Southern city with a population of a quarter of a million. The alliance was largely an unholy one, but it operated for fifteen years or more, during which time traditional prejudices and discriminations were overlooked or forgotten. Would to God that Negro genius of the Mr. Bellinger's type, were never wasted upon unworthy causes! And would to God that such genius worthily applied were to meet with the same ready white cooperation that Mr. Bellinger met with in his unwholesome undertakings.

FARM PROBLEM A NATIONAL RESPONSIBILITY

There is no way for the farmers individualy to deal effectively with the partial loss of [illegible] market, the rapid approach of stationary populations, and the increasing rural congestion in many areas that results from industrial depression and unemployment. Nor is there any individual remedy for the fact that technology increases farm production per agricultural worker while other forces contract the market. Some people believe agriculture should decommercialize itself and become more self-sufficient. That would be a backward step. Moreover, the resulting reduced purchasing power of farmers would force some urban people into subsistence farming. Agriculture needs to get back on a business footing, and well-conceived national programs must help it to do so.

There is no escaping the neeessity to adjust the farm output through measures that will not drive farmers from their farms. There is no escaping the further necessity of finding new outlets or of providing marketing controls to deal with surpluses when they accumulate unavoidably. Also, we must arrest the increase of tenancy and increase the equities of owner operators. Left uncontrolled, the prevailing trends will tremendously increase these evils. With farm youth backed upon farms and with the urban unemployed flocking to the country in periods of depression, land hunger is likely to produce absentee landlordism. These problems constitute an obvious national responsibility.

—From Annual Report of Sec'y Henry A. Wallace.

CREDIT POLICIES

Continued easy mortgage credit will bring advantages and drawbacks. It will favor an increase in net farm incomes and in farm valuations, and therefore in the equities of farm owners. On the other hand, ample funds at low interest will mean more frequent land transfers and expanded mortgage indebtedness, and some probability that farmers who should reduce their debts will contract additional obligations. Moreover, the resulting increased farm buying may handicap tenants who wish to become owners. Larger initial payments and higher mortgage debt may mean trouble in the next depression. The advantage of rising land valuations to farmers who obtained farms during the low-value period should be weighted against the disadvantage to new buyers. Appraisal of credit policy must take account of the different needs of different group of farmers, and reach conclusions based on the probable net results to the whole of agrieulture. It is well that the older generation of farm owners, whose equities often represent their entire savings, should have land values above the present level. But it is not well that farm valuations should rise too high. There is the new as well as the older generation of farm buyers to consider, and high valuations mean a harder climb to farm ownership.

—From Annual Report of Sec'y Henry A. Wallaee.

## Story For Boys' Life Week

BOY SCOUTS OF AMERICA, National Council Office, 2 Park Avenue, New York, N. Y.—"Boys are quick to appreciate a good story and loud in their applause," is the judgment of Irving Crump, managing editor of Boys' Life, who as author and editor for the Boy Scouts magazine, has seen his opinion confirmed as the "good reading" program of the Boy Scouts of America has broadened its range and influence. "Early in my career as a writer," continues Mr. Crump "I chose Boys' Life as the vehicle for my efforts in the boy field because the ideals of the magazine and of the Scout Movement behind the magazine squared with the thoughts I had as to the proper type of literature that should be put into the hands of young Americans.'

Mr. Crump's observations were made in connection with an announcement of plans for Boys' Life Week—December 9 to 16—designed to focus nation-wide attention upon the year-around reading program of the Boy Scouts of America.

Each year at this time the Boy Scouts publish a list of fifty outstanding new books recommended for Scouts and their friends and in addition keep in print a permanent list of books for recreational reading which any boy may obtain by writing the Boys' Life at 2 Park Avenue, New York, N. Y., a list of books that will give pleasure and have value in revealing character and achievement.

The Scout Movement not only promotes the use of all good literature but has created in its Handbooks, hobby publications and outdoor guidebooks, as well as in Boys' Life, books that pack adventure and constructive idealism within their covers.

Local Scout leaders will make a special point of asking members of civic and service clubs to provide Boys' Life subscriptions for boys who could not otherwise afford them as part of their many-sided effort from December 9 to 16 to make the magazine available to more Scouts and other boys.

## Golden Rule Week

**From The Golden Rule Foundation, 60 East 42nd Street, New York City James M. Ross, Director of Publicity**

The Golden Rule Foundation, which annually sponsors International Golden Rule Week, announces that the dates for observance this year are Dec. 11-18, designated as "a period of plain living, high thinking and Golden Rule sharing with people in adversity."

The observance of Golden Rule Week is regarded as unique among benevolent endeavors, as it offers an opportunity for anyone to subscribe without diverting money trom other worthy enterprises or reducing his bank balance.

The Foundation and its collaborating groups are asking all citizens who believe in the Golden Rule to eat at least one Golden Rule Dinner. This is a frugal meal of such food as is used by field kitchens of relief agencies to feed stricken multitudes.

Having thus experienced to a slight degree the privations which millions are now being forced to endure, those who wish to practice the Golden Rule are urged to do for the unfortunate as they would wish them to do were the conditions reversed, and to contribute at least the difference in the cost of Golden Rule menus and their usual more expensive meals.

"A million or more war orphans, widowed mothers and other innocent non-eombatants in the Far East will be cold, homeless and starving, and many will be dying on Christmas Day unless we practice the teachings of the Christ whose birth we celebrate by sharing our abundance with those who are in great tribulation," it was declared by Charles V. Vickrey, president of The Golden Rule Foundation at headquarters, 60 East Forty-second street, New York.

"Three hundred thousand infants in Spain are suffering for lack of milk at this Christmas season," he continued.

"Exiles from Germany are to be found huddled under improvised shelters on the border lines of countries surrounding their homeland, without Christmas trees, dolls, dinners, homes or country.

"In our own land, there are great numbers in isolated and neglected sections of the Southern mountains, in city slums, among migrants in the West, sharecroppers in other regions, who now are suffering every privation and are beyond the scope of relief agencies. Their tragic needs must increase unless help is provided immediately."

Funds for any of these suffering multitudes can be remitted by check or money order to The Golden Rule Foundation at New York headquarters; to the Middle Western office at 1 North LaSalle Street, Chicago, or to Pacific Coast headquarters at 129 West Second street, Los Angeles, with assurance that every cent will be devoted to the cause for which it is intended. If the donor does not care to designate use of his contribution, it will be disbursed where investigation reveals the most urgent needs, combined with constructive administration, Mr. Vickrey emphasized.

More than one hundred investigated and improved relief agencies, representing all religions and nationalities, shared in Golden Rule Funds last year.

The Foundation, which is nonprofitmaking and non-sectarian, has issued a booklet containing 84 suggested "economy" menus from which choice may be made during International Golden Rule Week. A copy of this booklet, which includes recipes and other valuable information, will be sent free on receipt of a postal card request to The Golden Rule Foundation, 60 East Forty-second street, New York.

## "She Made Fun Of My Hat; I Fought And She Did, Too."

Gulfport, Miss., (ANP)—Caustic criticisms by one woman of a hat worn by another resulted in a hair pulling and choking contest in the midst of the Sunday night serviees at Ebenezer Baptist church.

Testimony next day in Mayor Joseph W. Milner's court indicated that Mrs. Lula Belle Watts was the aggressor in the battle. Her opponent was Mrs. Esther Anderson who essayed the role of critic. Mayor Milner fined Mrs. Watts $7.50 and gave her a 30 day suspended sentence

## Find Relatives

Boston, Mass. (ANP)—Seven relatives of the late A. A. Carroll, wealthy Boston caterer, who died here recently, have been located. Among them are the mother of Juanita Jackson-Mitchell, former youth director of the NAACP. Carroll's estate was said to include nearly $50,000 in cash, stocks and bonds.

## Gives Cabbie $100 And He Seeks To Return Her $99.00

New York (ANP)—A cabbie, Philip Hilton, Brooklyn, may be $100 richer in the next six months, according to the police, if the woman who gave him a $100 bill instead of $1 last week in payment for a 35 cents fare does not appear to claim her property.

Hilton did not discover the mistake until the woman disappeared. At West Forty-Seventh Street police station he told his story. A teletype alarm was sent out in the hope of finding the owner. The money must be held for six months before Hilton can claim it, declared the poliee property clerk.

Love cannot help me very much unless I use it.

By sweeping hatrey, jealousy, envy and malice out of our minds we then prepare ourselves to enjoy a happy life.

# PRESS-SCIMITAR OF MEMPHIS CONDEMNS WIGGINS LYNCHING

## Paper Points Out Nazis Have Cause to Tell U. S. to "Pipe Down" on Horror Over Jews

Memphis,, Dec. 8 (ANP)—The Memphis Press-Scimitar, a Scripps-Howard newspaper, of which Edward J. Meeman is editor, last Wednesday delivered editorial rebuke to the lynch mob at Wiggins, Miss., and told how Hitler's Nazi press will focus attention on America's lynch evil when citizens here protest Nazi persecution of Jews. Referring to the Wiggins' lynching of 24-year old Wilder McGowan, the editorial declared:

"They (the Germans) will know it because Hitler will make it his business to see that they know it. 'They point a finger at us,' he will imply 'and see what they do themselves.'

"The mob at Wiggins did more than lynch a Negro. It lynched the law. It lynched civilization. And it lessen our influence wherever and whenever we speak out against brutality, against race hatred, against disregard for the laws of the land, the laws of humanity and the laws of God.

"Let us hang our heads in shame, not only for a the crime itselt, but for the fact that so many of us who are so brave to speak out against the crimes of Nazism, wilt and cringe when faced with responsibility of denouncing a crime so close to home—

"If our courts at times are too slow and uncertain, if they sometimes favor the criminal rather than the law, let us reform them—not turn to the desperate remedy of mob violence. Let us make America known everywhere as a land where citizens are free and are made safe by fair laws vigorously upheld."

## Oregon State Has First Colored Paper In 5 Years

Portland, Ore., Dec. 22—(By Rual W. Bell for ANP)—Saturday, the Negro populace of Portland was presented with a new Negro weekly newspaper, "The Portland Observer." This is the first Negro paper to be published in the state of Oregon for approximately five years.

The Portland Observer is owned, published and edited by William H. McClendon, Sr. Mr. McClendon is well known in the Southeast. He is the son of the Mr. and Mrs. A. McClendon of Atlanta. While attending Morehouse College in 1934, William H. McClendon won the J. E. Spingarn prize in an essay contest conducted by the N. A. A. C. P. He is a 1938 graduate of West Virginia State College.

HER SYSTEM

He—"Honey, we've been married 56 days now. For 42 days we had nothing but soup and now for 14 days we've had nothing but pies."

She—"Well, dear, it's because I'm trying to be systematic about my cooking. I started at the beginning and am going right through the cook book."

## HARVESTERS SET RECORD

**Melbourne**—A crew of three men, operating an autoheader, which strips wheat grains and bags them in one operation, has established a world record near here by harvesting 3,000 bushels in one day. The wheat tract covered 700 acres with a yield of forty-three and one-half bushels to the acre.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

# EDITORIALS

*From the Bible:*

*And the Word was made flesh, and dwelt among us, (and we beheld his glory, the glory as of the only begotten of the Father), full of grace and truth. John* 1:14.

O holy child of Bethlehem!
Descend to us, we pray;
Cast out our sin, and enter in,
Be born in us today.
We hear the Christmas angels
The great glad tidings tell;
O come to us, abide with us,
Our Lord, Immanuel.
—Phillips Brooks.

The Committee on Resolutions of the Ninth annual Convention of the National Federation of Colored Farmers gave to the membership, the world and the Nation in their report much to think about and much to strive for during the coming year.

The report commends the work of the national officers and Board of Directors in endeavoring to carry out the original aims and purposes of the organization. It is well that these should never be forgotten. Sixteen years ago the founders of the N. F. C. F. agreed that cooperative efforts, home ownership and a full community life should be the goal of every organized Negro farmer. Local Units have worked unceasingly toward this goal. Many have made good progress. Some have failed. But, for the members of the N. F. C. F., the goal is there. It is still the light that is leading them. And every step has been a step worth taking.

In requesting the members to work hard to increase the strength of their organization they simply ask the members to help themselves. There is still strength in unity, plenty of it, and colored farmers who are organized are beginning to feel their power and importance, and also, their responsibility.

The N. F. C. F. has never been a selfish organization. No Negro farmer, whether a member or not, has ever requested a service and been denied. The Federation appreciates its friends and wants more friends. As the resolution says, it wants the "cooperation of all institutions serving the farming industry. The Extension Service, the land grant colleges, all such institutions will find the NFCF willing to do all possible to help them help colored farmers.

The Committee endorsed several ideas discussed during the Convention. Two of these, a Retirement Fund for Extension and Home Demonstration Agents, and a school farm as a necessary adjunct to every rural school, are of prime importance.

The Committee deserves the thanks of Race farmers everywhere for the report for their work was done wisely and well.

## ABIDING IN THE FIELDS

A great blessing came to those poor shepherds who were abiding in the fields that first Christmas night. They were not expecting the special favor from Heaven. They were there at their work, doing their duty,—earning a livelihood for themselves and their families.

We miss many blessings because we are where we should not be when the blessings come. A little carelessness, a little laziness, a little selfishness,—sometimes, a little meddling with the business of others instead of looking after our own—often causes us to miss the choicest blessings of life. Only those who diligently remain at their posts on their jobs hear the angels sing. Rewards come to those who deserve them.

Where is your field? What is your job? No matter how rough the field or how tough the job, if it is all you have, stick to it. Heaven and earth are always ready to glorify the man who faithfully and courageously abides in the field he should be in.

## BIG CROP, SMALL PRICE

Large receipts of hogs at the Chicago stockyards the other day caused the price to decline ten cents per hundred pounds. The same day cattle prices declined and for the same reason,—many cattle were sent to market. The bigger the crop, the cheaper the price.

Realizing that this is always the case, we are at a loss to understand why so many criticise the present administration and cotton farmers especially for adopting a crop control program. Colored farmers were wise in voting this month FOR a marketing quota for cotton and they should continue to favor crop control just as long as warehouses remain full of cotton no one wants to pay a decent price for. Why spend time and money and effort growing a big supply of something that does not pay for its growing?

Let us continue raising big supplies of something good to eat,—something we need and need badly,—something our children need. Let us continue to live at home and keep out of debt for good food we can easily grow on the farm. Let us wake up and live and continue to use our brains. Conditions are constantly getting better for us but we are going to have to do some good thinking and plugging ourselves to keep things getting better.

## BACK TO OWNED FARMS

**(Editorial from Afro-American)**

*We are glad to reprint this editorial from the Baltimore Afro-American, which was inspired by a resolution passed by the recent National Convention of the NFCF.*

"The goal of every organized farmer should be to own the land he tills and till the land he owns."

The above statement, among resolutions adopted by the National Federation of Colored Farmers at its convention in Forsyth, Ga., emphasized the suggestion made recently by the AFRO that the Federal government provide forty-acre tracts and initial equipment for farm families on relief under a long-time payment plan.

Owned farms still provide the most substantial and independent means of livelihood for the average family, and many families struggling to eke out an existence in cities would find salvation on a Government-supervised farm.

There is the case of the farmer on the Eastern Shore of Maryland who farmed 10 acres, and made a good living. He owned three automobiles. Some time ago this farmer brought his family to the city. They are now on relief and have neither home nor automobile.

If the Federal Government is ever going to get out of the bog of financial trouble it is wading into by the present relief expenditures, it will have to put both farm and relief programs on a productive work basis.

## YES, "WEDDING PICTURE"

The Charlotte News is published in the largest city in a progressive southern state. In an editorial, "Wedding Picture," which we reprint here, this good paper tells us why such things as child marriages happen in this land of ours. Poverty is the cause of so many evils. If poverty causes child marriages among white people who are suppose to have special power and privileges in this land of ours, poverty also causes many of the evils that exist among people of our group. This abject poverty is a shame and a disgrace in the United States. We can destroy it when we destroy the selfishness and greed that produces it.

**Wedding Picture**

There'll probably be a lot of moral indigination loosed about the marriage near Prestonburg, Ky., of Rosie Columbus, aged ten, to Fleming Tackett, 34-year-old miner. The husband will be denounced and the blacksmith person who married them will be denounced, and, above all, the parents will be denounced—all as being nothing less than inhuman monsters. And in all the denunciation, probably not much attention will be paid to the rest of the story, which, according to the Associated Press goes like this:

**The two room cabin (owned by Tackett) is three miles north of Prestonburg in an isolated section. In it, with Rosie and her "Flem", will live the girl's mother and father, Jim, the two younger brothers, an older sister and some in-laws.**

**But it means luxury to Rosie. A dozen miners said Rosie and her family had lived under a rock cliff near the cabin for two Winters."**

But there's no use in getting steamed up about the marriage unless you get steamed up about this, too. For such child marriages in America are invariably the issue of the animal ignorance and degradation bred by just such animal poverty and want. As long as there are people who have to live under cliffs two Winters, as long as there are people who have to live crowded by the dozen into two-room cabins, there will go right on people who do not see anything wrong in the marriage of ten-year-old children.

# Interesting News And Notes

Twenty-three families of colored farmers, whose grandfathers came as slaves into each Texas, have moved into good homes on fertile farms which they will own. The farms average 130 acres each. This is a Farm Security Administration project.

A survey recently completed by the Mortgage Bankers Assn., says that American agriculture needs new capital. Farmers will still borrow from private investors if interest rates are reasonable.

Cotton production in the U. S. this year was 12,137,999 bales. This was slightly less than the first forecast. The yield this year per acre was smaller than last year's crop. This year's yield was larger than the average over the last ten year period.

Sim Webb, Casey Jones' fireman, who jumped when the crack Illinois Central cannonball express was wrecked many years ago at Vaugh, Miss., was present recently at the unveiling of a monument to Casey Jones at his birthplace, Cayce, Ky. The fireman told the story again to many listeners.

A Christmas turkey cooked himself in McLeod county, Minn., recently. The turkey alighted on a rural electric wire and interrupted the power for more than an hour. He was cooked too done for serving.

It is reported that the U. S. may be forced to increase cash subsidies to cotton farmers if it would keep its share of the world cotton market which the present administration is determined to do.

WPA's division of education is considering establishing a correspondence section to reach illiterates in isolated sections of the country.

The average price of farms bought by tenants and sharecroppers with government loans was highest in Illinois and lowest in Florida. Average cost of thirty-four Illinois farms was $2,234. The average size of the Illinois farms was 140 acres against 103 acres in Florida.

In one Illinois county, Henry, 900 sheep, hogs, cattle, chickens and turkeys were killed by dogs in 1937. The claims for payments to farmers for this loss totaled $4,946.

During 5 1-2 years of the New Deal, $19 billion were spent or average of less than $3 1-2 billion loaned for relief and recovery—an average of less than 3 1-2 billion per year. Almost $11 billion already have been, or are being paid back. National income has risen from $39 1-2 billion in 1932 to $70 billion in 1937.

Soil Conservation is already protecting and enriching 10 1-2 million acres of land in 35 states and soil-building practices are in effect on 53 million additional acres under the New Deal agricultural program.

A 10 to 15 per cent reduction in acreage seeded to winter wheat for harvest in 1939 and a lower than normal per acre production is the current outlook, according to a survey by the Atchison and Santa Fe Railroad.

Last season Japan improted 2,147,000 bales of cotton and consumed 3,500,000 bales.

The Department of Agriculture weekly market review states that up to Oct. 26 only about 2,500,000 bu. of corn out of the 48,000,000 bu. on the 1937 loan, had been resealed at the increased rate of 57c. According to Thompson and McKinnon, this suggests that the government may acquire a much larger quantity on defaults than had heretofore been expected.

According to foreign advices, India is reported to have purchased 275,000 bu. of Australian wheat.

## A Married Man's 23rd Psalm

**By Rev. Huell J. Jackson**
**On Atlanta Daily World**

My wife is my BOSS I dare to deny
She maketh me to lie down in the
Back room, when swell company comes.
She leadeth me down town, every Payday.
She restoreth my pocketbook,
After spending the roll.
She leadeth me in the aisles of
J. M. High, all for her sake.
Yes, though I walk through town
And my arms runneth over with bundles.
She preparest a table before me,
In the presence of my mother-in-law.
She anointest my head with the
Rolling pin.
And my heart runneth over.
She does everything but comfort me
It seems to me that the dress makers
And milliners bills will follow me
All the days of my life;
And I will dwell in the poor HOUSE
For ever AMEN.

# Household Operation Large Item For Southern City Families

Washington, D. C.—Household operation costs are higher in small southeastern cities than in similar cities in other parts of the United States, on the basis of a study just completed by the Bureau of Home Economics. The data cover a 12-month period in 1935-36.

In each income bracket from $250 to $5,000, the 1,106 white nonrelief families whose expenditures were analyzed in four southeastern cities —Albany and Griffin, Georgia; Gastonia, North Carolina; and Sumter, South Carolina—averaged spending more for household operations than did, for example 1,488 families in four northwestern cities similiarly studied — Astoria, Eugene and Klamath Falls, Oregon and Olympia, Washington.

Here's how the household operation costs went up in the Georgia and Carolina cities as income rose from $250-$499 to $4,000-$4,999; $67, $101, $131, $168, $190, $224, $260, $285, $326, $378, $471, $505, $584. For similar income groups, the household operation expenses in the Washington and Oregon cities ran: $61, $94, $100, $107, $122, $148, $159, $177, $198, $214, $270, $356, $432.

Included in "household operation' were fuel, light and refrigeration; paid household help; laundry suppiles and laundry sent out; telephone, postage, stationery and pencils; express, drayage, and moving of household goods; water rent; and such incidential items as paper napkins and towels, cut flowers, lawn seeds and plants.

In all but one of the income brackets ($2,250-$2,499), the northwestern families averaged spending more on automobiles than the southeastern.

The auto outlay in the southeastern cities ranged from an average of $10 per family per year in the lowest income braeket to $342 in the highest; in the northwestern cities from an average of $40 per family per year in one of the lower brackets to $505 in the $4,000-$4,999 bracket.

Food, biggest item facing the man or woman who has to make the family living, showed an average expense ranging from $218 per family per year at the lowest income level to $828 at the highest, in the southeast cities. Clothes, found to be a consistently sizeable item in all the studies of southeastern families—city, village, and farm—ranged from an average of $34 per family per year at the lowest income level to $437 at the highest. The southeastern families had higher average expenditures for clothes than for cars: the northwestern, higher expenditures for cars than for clothes.

For housing, which included all expense during the year on all homes occupied by the family (vacation homes as well as the year-around dwelling) and lodging of family members while away from home, the Georgia and Carolina families spent an average of $70 at the lowest income level and $394 at the highest. On furnishings and equipment—items such as refrigerators, washing machines, pots, pans, mops, washtubs, glass, china, silver, floor coverings, bedding, curtains, furniture, luggage, lamps, and furniture repairs —the outlay ranged from an average of $16 per family per year in the lowest income bracket to $184 at the highest.

Medical care expenditure in these southeastern cities went up as the income level rose, and ranged from an average of $17 per family yearly at the lowest income level to $320 at the highest. For the services of the barber, the beauty shop, and toilet preparations, the families spent an average of $11 per family per year at the lowest income level and $79 at the highest. On recreation, which included paid admissions, fees and supplies for games and sports, radios and musical instruments, toys and pets and dues to social organizations, the families spent from an average of $5 each per year at the lowest income level to $217 at the highest.

The remaining columns of the family expense book, when average for the various income classes, showed the following range from low to high income levels Tobacco, from an average of $13 per family to $53; reading, from $1 to $31; education, from $2 to 82; gifts and community welfare, from $7 to $220; travel other than by car, from $2 to $8; other items, from $3 to $51.

At each income level, averages were based on all families, whether or not they spent any money on the item indicated. For instance, a few families that had no medieal care whatever during the year were ineluded in computing the medical care averages.

The 138 families whose incomes fell in the elass $1,750-$1,999 (the first income class in which the average income exceeded the average outlay) spent their money as follows: An average of $1,760 spent, of which $513 went to food; $189 to elothing, $220 to housing; $260 to household operation; $85 to furnishings and equipment; $170 to automobile; $5 to other travel and transportation; $41 to personal eare; $81 to medical care, $54 to recreation; $38 to tobacco; $17 to reading; $11 to education; $67 to gifts and community welfare; and $9 to other items.

### Special Negro Study

In these same four Georgia and Carolina eities a similar family expenditure study was made of 475 nonrelief Negro families, whose yearly incomes fell into eight brackets starting at zero and ranging to $2,000 a year.

The range of Negro family expenditures, from low to high income levels, ran as follows: Food, from an average of $93 per family yearly to $450; elothing, from $17 to $272; housing, from $56 to $215; household operation, from $32 to $193; furnishings and equipment, from $4 to $74; automobile, from $1 to $348! other travel, from less than fifty cents to $28; medical care, from $7 to $142; personal care, from $5 to $39; recreation, from $1 to $29; tobaceo, from $5 to $51; reading from $1 to $20; education from $1 to $71; gifts and community welfare, from $4 to $93; and other items from less than fifty eents to $31.

Only families having both husband and wife, born in this country, were included in this Study of Consumer Purehase, a Works Progress Administration Project in cooperation with the Bureau of Labor Statistics of the U. S. Department of Labor, the National Resources Committee, and the Central Statistical Board.

I should never allow myself to feel humiliated by any honest work, however humble it may seem to be.

# Jacksonville Thinks Social Work Too Good For Negroes

Jacksonville, Fla.—(ANP)—From a high of 100 Negroes employed in the social service setup under the Federal Emergeney Relief administration, the total has dropped to none sinee the work has been taken over by the state welfare board, investigations diselosed last week.

This drastic ehange in employment of colored social workers was brought about through the attitude of those in charge that social work is a field "for whites only." Negroes who previously served, some of them with records of 10 years as social workers, have been assigned to WPA projects at greatly reduced salaries of $45 monthly, where they are sent to do menial work in homes during illness. Often they go into white homes as servants.

The state welfare board, which gets its funds from both the Florida and federal governments, which means Negroes are paying their portion of its cost of operation, was established December 1, 1935. Almost immediately mass firing of the 100 employes of the colored division began, with the result that by January 26, 1936, less than two months afterwards only 17 remained on the staff, and in a year's time, the total was reduced to eight.

By last June 17, there were only five on the colored division staff. They were Mrs. May L. Kennedy, Mrs. Ruth D. Bolton, Miss Luther W. Wilson, Miss Marguerite McCleary and Mrs. Beaulah Joyner. Four of these were social workers and the fifth was a stenographer. Despite its size the division presented more cases to the welfare board than did any other. These four social workers actually did as much as the 30 whites so employed.

But on June 17, the entire unit was abolished. Members were told that because of so much unemployment, the Negro division was being dispensed with. However, the discharged workers were replaced with whites. There are approximately 45 Negroes here having taken and passed the merit examination and therefore qualifying themselves for social work. From this group come the one who have been sent to WPA projects where they now do what actually amounts to servant work.

Sinee discarding the Negro unit, the work is reported to be far in arrears with some eases a year and more older still awaiting attention.

## URGES WALLACE BACK 140 MILLION OUTLAY TO BOOST FARM OUTLETS

Washington, D. C.—Representative Bertrand W. Gearhart (R., Cal.) urged Secretary Henry Wallace today to support his proposal for federal expenditures up to $140,000,000 to develop new uses for farm products.

In a letter made publie through the Republiean national committee, Gearhart told Wallace he believed the farmer's only hope for prosperity lay in discovery of such new uses and of new farm products to supply old demands.

Gearhart introduced his bill in February, 1937.

## COULDN'T BUY LEGS

Oklahoma City, Okla—Unable to buy a pair of artificial limbs after he lost both of his legs in a train accident. Henry Falls, Negro youth, whittled some from an old cottonwood log.

Representatives of artificial limb manufaeters who later saw the pair of wooden ones Falls made, said they were a "remarkable piece of workmanship." Falls was guided by the illustrations in a catalogue of artificial limbs he obtained. His only tools were pocket knife, rusty saw and hammer.

# Can We Solve The Farm Problem?

Labor has so often said that this country cannot achieve enduring prosperity until agriculture is prosperous—until we can devise some method by which the farmer may secure cost of production, plus a profit—that it is unneeessary to repeat the sentiment. The entire American labor movement has always taken that position. Unfortunately, many farmers don't know that, but the statement is true.

No unprejudieed observer can doubt that President Roosevelt and Secretary of Agriculture Wallace have made a sincere effort to attain the goal we have suggested. In fact, this administration has done more for the farmer than any other administration in the history of this country.

It has been forced to do a good deal of experimenting but, in the main, has aeted with commendable eourage and intelligence. It has encountered a lot of difficulties—devastating droughts, bumper crops and, in some instances, lack of cooperation from those it sought to aid.

As evidence of its good faith right now, with the prices of farm products sagging, the administration is pouring out hundreds of millions to sustain the farmers' buying power. This is all to the good, as far as it goes, but it must be apparent we have not aehieved a permanent remedy for the ills of agriculture.

The chief difficulty is to find a way to handle erops like eotton, wheat and eorn. We produce ordinarily more of these staples than we can consume under existing conditions.

The obvious remedy, of course, is to increase the purchasing power of the industrial workers to the point where they can eonsume what our farms produce. Pending that good day, however, Labor feels the administration has a right to ask the farmers to assist in curtailing the crops which eause most of the trouble.

Why wouldn't it be a good idea for the administration to ask the next Congress to authorize it to take these definite steps?

1. To buy directly from the farmer the wheat, corn and cotton needed for the domestic market at an adequate price, giving each farmer his proportion, based on what he has been producing in reeent years.

2. Close the grain and cotton exchanges and forbid all speculation in the necessaries of life.

3. Require millers, cotton manufaeturers and other proeessors to buy what they need from the government.

4. Permit the farmer who desires to produce more than his quota to sell his surplus in any market outside the United States. The government might even assist in forming cooperatives to facilitate such marketing, but it should not assume responsibility for the price received.

Labor realizes there is nothing startling new about this suggestion. Every feature has been debated by those interested in the farm problem, and some are now part of the administration's program.

What Labor has in mind is that the farmer has a right to demand from the rest of us a fair reward for producing those things which we must have if we are to live. He should get that price and no chiseling middle-man or speculator should be permitted to deprive him of any part of it. The only way to assure that result is for Unele Sam to do the entire job, from start to finish.

But if the farmer insists on raising more than is needed in this country, he should be willing to take his chanees in the world market.

From "Labzor, Washington, D. C.

# VIRGINIA STATE COLLEGE SHOWS STEADY PROGRESS

Petersburg, Va. (By James H. Boykin for ANP) The Virginia State College for Negroes is progressing under wise leadership. For ten years, President J. M. Gandy said in a recent interview the college has witnessed a steady growth in enrollment, support and confidence of the people. The fact that the school has grown in the confidenee ot the public is manifested in its increased enrollment and the increase in state and Federal appropriation for its support. A further manifestation of public confidence in the school is shown by the numerous conference and extension groups that seek to hold their meetings on its eampus.

**Has Large Endowment:** It has an endowment of $175,000 which is secured by the sale of bonds secured from the sale of public lands which are allotted to each state under the Morrill-Nelson aet, $30,000 of other federal funds alloeated to the several states to inerease the endowment of state sehools and a heavy appropriation from the state of Virginia. The $205,000 annual endowment of federal funds plus an ever increasing appropriation by the state of Virginia greatly increases the support of the college.

**Enrollment Increases:** During the past ten years, the enrollment has increased steadily from 50 to 100 over the previous year. This year, President Gandy reports a thousand collegians from 25 states. The students are distributed in elass assignments in the Arts and Sciences, Education, Home Economics, Agriculture, and Mechanical Arts. The college is constantly growing in usefulness in serviee to the people by increasing its number of eurricula and by extention service for making better the preparation of teachers in service.

## NOT SO DIFFICULT

Little Elsie objected to going to bed. Finally, her father offered to lie down with her until she went to sleep. In a few minutes, pit-a-pat was heard on the floor and Elsie came out holding up a small finger.

"Sh-sh," mamma, I've got daddy asleep at last," she whispered.

---

Do not worry; eat three square meals a day; say your prapers; be courteous to your creditors; keep your digestion good; exercise; go slow and easy. Maybe there are other things that your speeial case requires to make you happy, but my friend these I reckon will give you a good lift—Abraham Lincoln.

---

If the average farm family would study their housing problem as carefully as they studied the expenditure of $1,000 for a new ear truck or tractor and spent the money as earefully in remodeling and utilities, the farm housing problem would easily be solved." says W. A. Foster, professor of rural architecture.

# ARE YOU GONNA MOVE TO KANSAS CITY?

## Well, There's "Hants" in That Town, They Say, and You Better Watch Your Step!

Kansas City, Mo., (ANP)—Those persons who scoff at the idea of "hants" and tell the world there are no such things are warned to stay away from Kansas City under threat of assault and battery if they air their beliefs before the wrong people.

At the present time, this city is in the midst of the greatest spook scare of this career, with thousands of citizens relating in awed tones the story of a ghost girl who has scared two taxi drivers almost out of their wits, as well as talked at church to the minister who preached her funeral.

The first driver, so the story goes, was at the bar of a popular night spot when he met up with a most charming young woman. After drinking and dancing together, he became highly interested and asked to take her home.. She consented. So they went out and got into his cab.

"Where do you live?" the driver asked.

"Highland cemetery,"_ answered his companion.

Maybe it was the drinks, or the blindness of budding love, but anyway the address did not strike him as peculiar. Even when she told him the gates were wide open, he thought nothing of it.

On the way there she talked about herself. She was the daughter of a woman living on Woodlawn avenue, the girl said, but hadn't lived with her mother for three years.

Arriving at the gateway to Highland cemetery, the driver got out of the car and opened the door with a Sir Walter Raleigh bow to his companion.

The car was empty.

Becoming instantly sober and realizing where he was, the cabbie leaped back into his car and drove as fast as the machine could take him to the mother's address. Awakening her he told his story—and was informed the girl was the woman's daughter, all right, but had been dead three years and buried in Highland.

It took a doctor to revive the man.

The other cab driver, blissfully unaware of what had happened to a fellow member of his vocation, was cruising along Vine street a couple of days later when he picked up a feminine fare who was sensationally attractive.

She directed the cabbie to take her to Highland cemetery. Since carrying people anywhere was his business, he did. When the taxi stopped at the gate, the young woman alighted and told him she was sorry she had no money to pay her bill. She instructed him to collect from her mother on Woodlawn, then went inside the gates. Since she appeared prosperous, the driver did not argue, but drove to the address.

There he told what had happened, and asked if she had such a daughter. The woman told him she did, but the girl had died three years before.. Then the woman fainted. However, nobody seems to know whether she was joined by the cabbie.

Still another story has it that this same girl was at church Sunday night talking at length to the minister who preached her funeral in 1935. Although her face looked familiar, the minister did not realize who his conversationalist had been until after the young woman had left the church.

# LISTEN TO THIS

By Hobert T. Mitchell

In 1729. Perier, governor of Louisiana said with reference to a group of Negroes who had fought against the Indians:

"Fifteen Negroes in whose hands we had put weapons, performed prodigies of valor. If the blacks did not cost so much, and if their labors were not necessary to the colony, it would be better to turn them into soldiers, and to dismiss those we have, who are so bad and cowardly that they seem to have been manufactured purposely for this colony.

In 1652 it was enacted in Rhode Island that all slaves brought into the colony should be set free after 10 years of service.

John Cassor, one of the first Negroes brought to this country by the Dutch in 1619 became an owner of slaves in Virginia.

Edward G. Walker and Charles L. Mitchell who were elected in 1866 to the Massachusetts House of Representatives from Boston were the first Negroes in the history of the race to sit in the legislature of any state.

Frederick Douglass was the first Negroe to dine at the White House as guest of a President of the United States (1864).

First normal school for colored teachers established in New York by John Peterson (1853).

The enlistment of white men in colored regiments is prohibited by implication by Section 253 and Section 282 of the Code of the Laws of the United States-Title 10-Army.

Mrs. E. Howard Harper was appointed by the governor of West Virginia to succeed her husband who died on Dec. 21, 1927, as a member of the legislature of that state. This was the first time a Negro woman was a member of any legislature in this country.

At Valley Forge, Washington was induced by Gen. Varnum to enlist a battalion of Negroes to fill his depleted ranks.

Peddro Alonso Nino, a Negro, was a pilot of one of the famous three vessels of Columbus.

Thomas Jefferson spoke of slavery: I tremble for my country when I reflect that God is just; that his justice can not sleep forever.

A slave ship captain always counted on losing on the voyage one-fourth of his cargo of slaves. (Sick and dead thrown overboard).

Liberia about the size of Kansas lies on the west coast of Africa. It has a population of about 2,500,000 people and there are only about sixteen doctors in the whole country according to Mr. Joseph N. Togba of Wichita, Kansas. Mr. Togba has been in this country about a year attending school. He is a native of Liberia of the tribe of Krv

Ham, the father of the black man, located in Africa. Africa was his homestead. (105th Psalm 23rd and 27th verses. and also in the 105th Psalm 22nd verse). Cush, Mizriam, Phut, and Canaan were the first sons of Ham, and these four sons including Nimrod, the grandson of Ham, were the first to start work on the problem of civilization—they were the pioneers and the very pillars of civilized governments.

Moses received what education he had in the schools of the black people of Egypt.

Solomon's dark skin should cause no surprise, because his mother, Hittito, was also the widow of Uriah. The Hittites are the descendants of Heth and Heth was the second son of Canaan.

# DOOR-TO-DOOR CO-OP SURVEY

"Twenty-one years ago this fall the old Office of Markets and Rural Organization in the Department of Agriculture published the first official survey of farmers' cooperatives," says F. F. Hill, Deputy Governor, Farm Credit Administration, in News for Farmer Cooperatives (September). "The 1917 report showed 5,424 cooperative marketing and purchasing associations in the United States, with an estimated annual business of $625,940,000. At that time about 1 in every 10 farmers was a member of a cooperative. As this article goes to press a new Nation-wide survey—the first actual door-to-door canvass of farmer co-op to be made in this country—is being completed by the Farm Credit Administration and the 13 banks for cooperatives and about 30 of the State agricultural colleges and universities. They report 15,573 farmers' co-ops and mutual companies. Gross business of the marketing and purchasing association, including both wholesale and retail sales, aggregates $2,750,000,000 annually. Nearly half of all American farmers are now marketing farm products or purchasing farm supplies, insurance, or farm business services through cooperative farmer-owned organizations. Farmer cooperatives are found in every State in the Union, the District of Columbia, and Puerto Rico, Heaviest concentration is in the North Central States, but associations in Eastern, Southern, and Pacific States have also forged ahead since the depression. Minnesota has the largest number of farmer cooperatives—over 1,300—but California, thanks to the cooperative marketing of citrus fruit, has the largest volume of business. There are 10,752 associations engaged in marketing farm products and purchasing farm supplies; 2,500 mutual irrigation companies, about 1,900 mutual fire insurance companies, and several hundred others in the mis cellaneous group. The actual value of farm products sold and supplies purchased cooperatively by farmers increased $750,000,000 since 1932 to approximately $2,100,000,000 in 1936, the final year covered by the survey. Over 7,400 cooperatives sell farm products as their main business and about 2,600 are primarily purchasing cooperatives. In 1936 farmers received $1,762,000,000 or about one in every four of their cash-income dollars, from cooperative marketing organizations; and bought over $337,000,000 worth of farm supplies cooperatively."

# POULTRY FREEZING

A new way to quick-freeze poultry, from the inside out, has been recently announced. This new process consists of first drawing the fowl. A paraffined tube is then thrust longitudinally through the bird and the edible giblets are replaced in the internal cavity, together with a small quantity of water. Both openings are then closed and a brine is passed through the tube. By this new process a four pound chicken can be frozen in 30 to 35 minutes at temperatures slightly below zero and turkeys in a proportional amount of time. (Turkey World, September.)

# FIGHT LOW PRICES WITH WHEAT SUBSIDY

**Uncle Sam to Buy 100,000,000 Bushels of Grain and Pocket Loss.**

In order to aid American wheat farmers, Uncle Sam is preparing to purchase 100,000,000 bushels of wheat in the open market. Then he will offer it to the rest of the world for what it will bring. He will pocket the loss, which may exceed $25,000,000.

Canada has an even more serious problem. It has a surplus of 200,000,000 bushels of wheat and has guaranteed producers 81 cents a bushel.

Secretary of Agriculture Wallace suggested that Canada and the United States cooperate in marketing these huge surpluses. Canada declined, preferring to handle the matter in its own way.

However, each country will endeavor to avoid "dumping" wheat because both fear such a course would force foreign prices to record lows.

## IOWA'S COOPERATIVES

Iowa farmers are operating, 1,952 marketing, purchasing and service cooperatives, according to the preliminary report of an Iowa State College marketing specialist who is taking the first complete census of the state's co-op organizations. The trend is definitely toward larger cooperatives, he says.

# NOTES ON AGRICULTURAL PROGRESS

**Compiled From Reports of Negro Extension Workers**

Eddie Johnston, Negro tenant of Seminole County, Okla., has served as a demonstration farmer for soil conservation. From one acre of cantaloupes grown last summer he cleared $65.00.

N. H. Bennett, Negro County Agent at Jasper, Fla., reports the shipment of a car-load of sugar cane shipped by Negro farmers to Negro retail grocers of Detroit, Mich.

G. W. Daniels, Negro County Agent for Orangeburg County, S. C., reports the establishment of a local packing plant has provided a ready market for hogs and greatly increased the interest among Negro farmers in hog-raising.

Following a health campaign conducted jointly by A. W. Roper, County Agent and Miss M. L. Young, Home Demonstration Agent, Negro farmers near Calhoun, Ala., have made many home improvements such as building and remodeling.

A prize offered by Pythian Grand Chancellor S. A. Jones of Georgia, was awarded to Jonnie Belle Culler, who is the champion canner of the state. Miss Culler is a member of the Myrtle 4-H Club of Peach County.

'The Progressive Farmer' for October contained an article by H. S. Estelle, District Agent, Negro Extension work in Texas. The article was based upon the leather work which is being done by Texas Negro farmers under the direction of Negro Extension Agents.

Sidney Newman, buyer for a New York Commission House recently visited Negro farms in Alachua County, Florida, for the purpose of inspecting their crops of egg plants, beans, cucumbers and squash. Frank E. Pinder, County Agent reports that these farmers are making regular shipments direct to Eastern markets.

In a recent letter to Bibb County (Georgia) farmers, Mrs. M. L. Wesley, Home Demonstration Agent, urged the men to provide a more convenient water supply for the home. She states that it is "unfair to the wives and children to carry water from a spring sometimes half a mile from the house."

Negro 4-H Club boys of Georgia have been alotted 76 beef calves for raising. This is part of a state-wide contest sponsored by one of Georgia's banking institutions. In the Spring of 1939, prizes will be awarded for the calves showing best care, feeding and development. Last year Isaac George of Bibb County won the grand prize.

T. H. Black, Jr., Negro County Agent for Lincoln County, Oklahoma reports that 90 farmers in his County are participating in the Agricultural Conservation Program. He says that through the program, "many new methods and farm practices have been made available to the farmers."

In speaking of the work of Miss Alma O. Huff, Home Demonstration Agent, the Terrel (Texas) Tribune says: "She has brought about a better understanding of food budget, more economical methods of canning fruit, vegetables and meats, and is preparing even greater savings for the Negro farm women of this Country."

Elliot Robbins, Negro County Agent, recently transferred from Hillsborough County, Florida, to Butler County, Alabama, reports that in cooperation with Miss R. P. Austin, Home Demonstration Agent, ten demonstrations in mattress-making were attended by 215 Negro farm men and women.

Under the leadership of Mrs. I. W. Rowan, Supervising Home Demonstration Agent for Texas, sixteen Home Demonstration Agents recently conferred with Miss Peggie Morris, Associate Editor of 'Farm and Ranch' to discuss scoring points for clothing, canned goods and home improvement.

Negro Extension Agents of Louisiana are arranging demonstrations in constructing chicken houses from pine logs. Such a demonstration was recently held on the farm of Porter Hayes near Clinton, with William E. Reed, Parish Agent and Clyde Ingram, Poultry Specialist of Louisiana State University cooperating.

Miss Camilla Weems, State Home Demonstration Agent for Negro work, recently completed a tour of the Georgia counties where Home Demonstration Agents are located. Miss Weems reports that 4-H Club work among Negro farm girls is a "definite factor in improving the home life of rural families." Miss Weems also reports many rural homes with inside running water and other conveniences.

# In The Market For Health

Along with life, liberty and the pursuit of happiness, Americans are asking the right to health.

"Nothing is more important to a nation than the health of its peop'e," said the President in his message to the recent National Health Conference.

The commonest greeting of person to person, "How are you?" reminds us how close the health concern is to everyone.

"Though the issues have been overcomplicated and the difficulties overmagnified," said the Surgeon-General of the U. S. Public Health Service, America's Number One health officer, "common, ordinarily folks are beginning to get the idea that we know how to do a great deal more than is done to keep them well and cure them when they are sick."

Representatives of common, ordinary folks sat down with representatives of Government and health experts last July to size up the Nation's health job and to take an inventory of the Nation's tools for tackling that job. At this historic National Health Conference—called by the interdepartmental Committee to Coordinate Health and Welfare Activities, of which the Under Secretary of Agriculture is a member—spokesmen for the consumers and would-be-consumers polled their facts with those from Government health authorities, from doctors, dentists, nurses, and pharmacists, hospital spokesmen, public health authorities, and social workers.

In public health work, the Surgeon-General has remarked, we stand today just about where we were in public education in the middle of the last century.

The Logical First Step in the attack on disease is prevention. Public health service gets verbal recognition. But less than a third of the counties in the United States, and an even smaller proportion of the cities, have full-time professional health officers. There are still over 1,000 counties without a single public health nurse to serve rural areas.

Seventy thousand people die of T. B. each year. In the prime of life, between the ages of 15 and 45, it kills more people than any other disease. It is especially destructive among Negroes, among workers in occupations exposed to dust; and generally among the poor. Physicians and public health workers know what to do—find cases early, provide treatment, including hospitalization for those who need it, isolate open cases, follow up on arrested cases, examine well persons exposed to the disease—it is largely a matter of putting our knowledge to work.

Veneral disease has recently come into the spotlight of public health. The Nation has embarked on a campaign which should soon significantly cut down the million and a half new cases of early syphilis and gonorrhea who seek treatment each year; the 50,000 deaths which result not directly from the disease, but from syphilitic diseases of the heart, blood vessels and nervous system; the one in 10 new insanity cases which are due to syphilis; the one in 7 cases of blindness which syphilis causes; the 25,000 deaths of babies before birth each year because of syphilis.

Pneumonia takes 150,000 lives a year. Effective serums are now available, for some common types of the disease, which could save the life of at least one out of each 4 who now die. Not one out of 20 whom serum can save now gets that serum.

Against cancer, an active organized fight is being waged in only 7 States in the entire Nation. Most of the clinics are in large cities. By wider use of known methods of surgery and radiation cancer specialists assure us that 30,000 lives might be spared each year.

Each day 15 million people face the health risks—greater or lesser, immediate or cumulative—of work in factories, mills, and mines. Health supervision provided for industrial workers is inadequate in most of the plants where 500 workers or less are employed—and these include 62 percent of the industrial population. State programs for industrial health are just beginning.

For mothers and children, we say "the best is none too good." What are the facts?

Among civilized countries, the United States has one of the highest percentages of mothers dying as a result of childbirth. Each year we lose at least 14,000 mothers that way. Half or two-thirds of these deaths, physicians estimate, can be prevented. Two-fifths of the 75,000 stillbirths each year need not happen. Of nearly 70,000 infants who die every year in the first month of life, a third, and perhaps a half, could be saved.

Each year nearly a quarter of a million women bring children into the world without the aid of a doctor. Even for most of the million births each year which are attended by physiicans, there is no qualified nurse to help care for the mother and child.

Need, however, is not uniform through the whole country, or among all sections of our people. In 1936, the death rate for mothers in childbirth for the United States was 57 for each 10,000 live births. But in New Jersey and Rhode Island only 40 mothers lost their lives to each 91 in Arizona, and 90 in South Carolina.

Babies have a better chance to live if they are not born poor. Checking on infant deaths in Denver, researchers discovered that out of each 1,000 infants born to families with incomes of $3,000 a year or more, only 30 died. But among the families earning less than $500 a year, 5 1-2 times as many died—168 out of each 1,000.

Sometimes preventive medical care is made available to children in the schools—diphtheria immunization, for example. But diphtheria claims its victims most fiercely before they are old enough to go to school. Immunization against diphtheria in the pre-school age is 3 times as frequent among youngsters from families with incomes of $5,000 a year and up as among children whose families have less than $1,200 a year. Vaccinations against smallpox among pre-school children show just about the same ratio.

Hospitals are more and more important in medical care. As medical science has advanced and facilities for diagnosis and treatment have become more complicated and more expansive, the hospital has become central to the care of the sick.

The country may be proud of the hospitals it has. But they are far from enough.

Over 40 percent of the counties of the United States contain not a single registered general hospital. In these largely rural areas live 17 million citizens.

Hospitals are found chiefly in the centers of population. Much has been written about free clinics. But only 17 percent of all general hospitals operate out-patient departments (for those who are not confined to bed in the hospital). Half of this clinic service is in the country's 5 largest cities.

Forty-three States fall below the public health experts' standard of hospital beds for consumptives. We have progressed beyond treating the mentally ill as criminals. But only a dozen States meet a reasonable standard in providing institutional facilities for mental cases.

In the large cities the poor get about the same amount of hospital care as the well-to-do, because there are many hospital beds supported by public funds. In the smaller cities, the well-to-do are able to get hospital care in about the same proportion as in the metropolitan centers. But among the poor, the smaller the city, the smaller the proportion of hospitalized illnesses.

Medical care is a professional service of priceless value. But it is also an economic commodity, which must be bought for money by the person who needs it, or asked as charity.

Even the well-to-do are not receiving all the medical care they require. People in the $5,000-$10,000 a year class, a recent study showed, were getting only two-thirds as many physicians' services, three-fifths as many days of general hospitalization, and less than half as much dental care, as professional authorities felt they required.

Fullest Survey of the state of the people's health was that made during 1935 and 1936 by the United States Public Health Service, using a Works Progress Administration grant. Medical societies cooperated. By a house-to-house canvass in 84 cities and 23 rural areas in 19 States, information was obtained from 2,800,000 people in 800,000 families. It is a monumental inventory of the country's health—and the lack of it. Not all of its results are pleasant reading for a nation which boasts the world's highest standard of living.

As income goes down, the figures show, sickness goes up. Poor people are sick more often, and for more days at a time, than people who are moderately or comfortably situated. But though their sickness is greater they get less medical care. Doctors' care is more common as income goes up. And doctors make more visits for each illness in the higher income groups, though the illnesses are shorter.

People on relief averaged 16 days lost from work or usual activities in a year because of illness which lasted a week or longer; those in the marginal income group just above the relief level (earning $1,000 a year or less) 12 days a year; while those in the highest income group ($3,000 and over) averaged only about 7 days.

Old people are hardest hit by disabling illness. The aged in relief families were disabled, on the average, over 8 weeks a year; those in the $3,000 and-up income class only 3 1-2 weeks.

Two people on relief were found disabled by chronic sickness for each one person in the middle and highest income group. Relief families are hit by 47 percent more acute illnesses, and 87 percent more chronic illnesses, than families with $3,000 and more a year.

Despite their greater need, the poor have much less medical care than the well-to-do. Thirty out of every 100 cases of disabling illness in the relief group, and 28 out of each 100 in the self-supporting group just above the relief level, received no medical care. Among the highest income group, 17 percent did without professional care.

Physicians' calls, in 8 large cities, averaged 5.7 calls to each case of illness in the high income group, where illnesses were much shorter, as compared with 3.9 calls for the relief cases, and 4.6 calls for self-supporting families in the low income group.

One reason for inadequate medical care, then, is the fact that at least a third of the population are too poor to pay for it out of their own resources. Another reason is that the costs of sickness, like sickness itself, are irregular and unpredictable.

Families spend on the average, 4 to 5 percent of their incomes for medical care. Averages mean nothing, because no particular family knows whether next year or next month it will be lucky enough to have no serious illness, or will be hit by one or several illnesses. Sickness costs cannot be budgeted by the individual family.

Each year a small proportion of all families have to bear a fearfully high share of all sickness costs. Upon the backs of 5 percent of the families fall 32 percent of all the costs. Another 26 percent of the families bear 44 percent of the costs. A fortunate 69 percent escape with only 24 percent of the total financial burdens.

## ILLINOIS LEADS IN USE OF LIMESTONE

Urbana,—After setting a new all-time record and leading other states in the amount of limestone spread in 1937 to sweeten sour soil for the growing of better legumes, Illinois farmers are well on their way to another record this year. They will spread 1,500,000 tons of limestone in 1938, estimates C. M. Linsley, soil extension specialist of the University of Illinois.

It is estimated that the use of limestone by Illinois farmers last year amounted to more than 1,250,000 tons, which is far in excess of that spread by farmers in any other state. In fact, Illinois' tonnage is greater than the 1,036,000 combined tonnage reported for the six mid-Atlantic states of New York, New Jersey, Pennsylvania, Delaware, Maryland and West Virginia. Kentucky with 819,000 tons reported is next to Illinois in the use of limestone.

The word with tells us how Christmas is to be kept—with someone. An ideal Christmas cannot be spent alone.

# HILL "TAKES OVER" AND NEW DEALERS LOSE CHOICE JOBS

## "Al" Smith Gets Cut in Salary Under New Arrangements

Washington, Dec. 3 (CNS)—It is the consensus of opinion here that the recent so-called "shake up" in the Negro Division Federal Work's Progress Administration proved a veritable "shake down" for several when T. A. Hill, of the Urban League, showed up as the Negro consultant."

The reported changes in the status and classification of the personnel of the division first attracted attention when Aubery Williams, acting WPA Administrator, announced that T. Arnold Hill would serve as "consultant" in all "Negro affairs" that arise in or reach the department.

It will be recalled that Forrester B. Washington, head of the Atlanta (Ga.) School of Social Work, originally appointed as "Negro Advisor" in the department resigned after a few weeks' service with the New Dealers, and Alfred Edgar Smith was announced as "acting advisor," three years ago.

At headquarters no satisfactory statement was made as to the changes. Truman Felt, white, director of publicity, admitted that the new "consultant" was in full charge of the Negro set up, and that Smith was under Hill.

Smith it is reported has been reduced in salary and classification and transferred to the employment division to answer letters of complaints that reach his desk.

It is also reported that John Whitten, who has been assisting Smith, has been transferred to the D. C. Works Progress Administration, and that Dutton Ferguson who has been handling publicity intended for the Negro press "will have his work handled entirely through Felt's office," thus crippling 'Dutton's' initiative.

## PROFITABLE DAIRY SIRES

Hoard's Dairymen (September 25) in an editorial on the Bureau of Dairy Industry proved sire list, says in part: "Too much attention cannot be paid by breeders in selecting a bull to head a herd, whether it be grade or registered. It is essential that careful attention be paid to records and especially the way they are made, for it is possible through records to convey faulty and imperfect information. The proved sire list contains reports on 992 sires. Of this number 476 increased production and 516 decreased production. These figures clearly indicate the necessity of proving bulls before they are extensively used if we expect to make improvement in the production of the dairy cow. It was found that one sire where the dams produced from 200 to 225 pounds fat, decreased the production, indicating that even though a bull may be rather carefully selected, he may not have the inheritance to transmit even reasonably good production. With cows averaging from 450 to 474 pounds fat, only seven of the bulls increased production and 33 decreased production. This emphasizes also that when a herd gets above 400 pounds fat, extra care must be taken in the selection of a bull. If this is not done, chances are three to one the daughters will not produce as much as their dams."

We have no right to ask God's universe to give to us unless we ourselves give.

# Howard President Warns Against All Jew-Baiting Talk

Washington, D. C.—(ANP)—Addressing a mass meeting here last Sunday at Mount Carmel Baptist Church under auspices of the Interdenominational Ministers' Alliance, Dr. Mordecai W. Johnson, president of Howard University, warned members of his race against anti-Jew demonstrations.

He said, "There seems to be a great temptation among the conservative powers in the United States to thwart the rise of the people. They will be offered anti-Judaism, anti-Negro policies, anti-Christianity, as a means of breaking up popular solidarity. The Negro minority must have no part in anti-Semitism or anti-Christianity, even though he finds Jews and Christians in certain instances working against him."

Referring to the motive underlying Hitler's purge directed against German Jews, Dr. Johnson explained, "Hitler knew that emotionalism was necessary for purpose outlined by him in Mein Kampf. Unable to attack the French because of their victorious position (at the close of the World War), unable to attack the Negro because of his geographical position he found the small Jewish minority at hand with the German people disposed, historically, to blame these people for many of their ills."

## WATER SNAIL KILLS SNAKE BUT IS FATALLY WOUNDED

Lebanon, Pa.—A small water snail killed a struggling 15-inch water snake today and then died. Found near Colebrook by a fisherman, the pair of battlers, still alive, was brought here. The snake's head was gripped by the snail's shell and the reptile threshed wildly trying to free itself.

## TECHNOLOGY IN AGRICULTURE

It is necessary in agricultural planning tto consider the implications of technical progress. Technological improvement tends to provide more goods, to furnish goods more easily or cheaply, or to produce new types of goods. In agriculture, besides making two blades of grass grow where one grew before, it produces one or more blades where none grew before. Agricultural efficiency is the combined result of many things—mechanization and engineering plant and animals breeding, soil building and erosion control, disease and insect control, marketing, and finance. It depends also to be sure, on social, political, and legal institutions. As a matter of fact, the social frame-work or setting is as important as the technology itself. Such improvements as the general-purpose tractor, refrigerated motor-truck, hybird seed corn, and synthetic fertilizer would be unusable in a backward or disorganized society. * * *

The situation we are in indicates great social waste. Technology in agriculture awaits the "green light" of industrial recovery, so that the release of agricultural labor will not mean human suffering. Under the prevailing conditions, the labor released from agriculture moves either toward the congested cities and relief agencies, or toward non-commercial, low-pressure types of farming. That is saving labor merely for the scrap heap. The problem is a standing challenge. Labor should not be sacrificed ruthlessly to the technological process, but saved for new and better uses. Agriculture's contribution to this end is to divert agricultural energy from the production of surpluses to the defense and upbuilding of the soil, to the conservation of forests and wildlife, and generally to the maintenance of the productivity along with the actual current production of the farms.

—From Annual Report of Sec'y Henry A. Wallace.

## NYA Trains Girls In Homemaking In Gilbert Academy Project

New Orleans—(By Leon Lewis for ANP) Serving a dual purpose in the training of young girls, the homemaking project at Gilbert academy under the personal direction of Mrs. L. E. Burbridge, has become one of the outstanding ventures of the NYA. Girls from teen age to early twenties are given a practical course in culinary art, service, table decoration and etiquette, sanitation and food caloric values.

This project besides developing the girls into capable employes in this field, prepares them for home supervision. They are given the fundamentals of budgeting and meal planing as well as how to prepare foods properly, to bring out the finer dietric qualities. It was through the efforts of Herbert Mack, director of Negro activity for the NYA, and Mrs. Burbridge, with the cooperation of Mrs. Marguerite Bowen, principal of Gilbert academy, that the project was established in connection with the school.

From the purchasing of foodstuffs to the storage of leftover foods and cleaning of the dining room and kitchen, is the range of practical training given in every detail daily. The girls plan the meals and prepare the foods after foodstuff have been purchased by them. They serve and suggest menu combinations that will produce the greatest food value. They are trained also in dining room decoration. Color scheming is a part of the training. Hundreds of girls from this project have been placed in many of the most aristocratic homes of New Orleans as employees; and in practically every case their services have met with satisfactory comment from the employer.

Mr. Mack has been one of the outstanding characters in the state set up of the NYA in that he has utilized all possible resources in getting the Negro in practically every avenue of the youth movement. This has not only restored a lost confidence in the fruits and possibilities of life but it has developed an inert recognition of values and their application to making life worthwhile and profitable for one's self through personal initiative.

These girls, who are getting the benefits of this essential training in homemaking, are given a new insight and purpose in the field of education. It has elevated the impression of domestic service and placed it on a higher scale in the minds of those who may have to work in this field. The NYA through this and other like projects has become the regular source of employment for those families seeking first class employes and it is found that they measure up practically to the required standard.

## Commuted

Montgomery, Ala., (ANP)—On Dec. 5, four days before he was to have been executed for the murder of a gas-station attendant, Jim Orr's death sentence was commuted by Governor Bibb Graves and the State Board of Pardons. Affidavits were presented by Orr's counsel, purporting to show he was miles away when crime was committed. An eyewitness also testified that the condemned man was not the murderer. A new trial for Orr will be sought, it was stated.

## $100,000 Fire

Chicago (ANP)—A fire of undetermined origin and which did $100,000 damage, swept through the old building at Colman School, 47th and Dearborn sts., early last Wednesday morning. The new building: of fireproof construction, was damaged mostly by water and smoke, and one fireman, overcome by smoke, was treated at a nearby hospital. The fire bronght a pre-holiday vacation to about 1,500 pupils.

# UNITED CHRISTIAN FRONT MUST TAKE EVERY RACE ALONG

## So Says Federal Council of Churches At Great Interracial Meeting In Buffalo

Buffalo, N. Y., (ANP)—In a call for a "new unity of the Christian church made Thursday at the Biennial Meeting and 30th anniversary of the Federal Council of the Churches of Christ in America, leaders in attendance gave voice to the conviction that interracial justice and goodwill are essential if a world torn by hatred is to find its way back to God. Included in the features of the four-day sessions were special interracial seminar discussions promoted by its Department of Race Relations of which Dr. George E. Haynes is executive secretary and Miss Katherine Gardner associate.

Under the themes, Religious Education and Social Action in Race Realtions, and Hindrances and Helps in International Cooperation in Local Churches—the sectional discussions carried the leadership of experts and reports from communities where local interracial work is in progress. Dr. F. Ernest Johnson, director of research in the federal council and a professor at Teachers College, Columbia university, in opening the discussion on Religious Education and Social Action in Race Relations, expressed the feeling that action through the church or any other organized force can be considered effective only when a social change is brought about; that declarations can mean something only when they are implemented by specific action for change. "The Oxford slogan, 'let the church be the church' in race relations would become a mockery unless some way is found progressively to make the doctrines of the church applicable in the life and practice of the church," he said.

Dr. James W. Eichelberger, religious education director of the A. M. E. Zion church, co-leader of this discussion, led the thtinking along the line of what race prejudice is doing to white overprivileged groups as well as to Negroes and Indians. "The souls of white churchmen are marred," said Dr. Channing H. Tobias of the C. M. E. church, "by the failure of their practices in these matters of race."

In presenting the 17th annual report of the Department of Race Relations, Dr. Haynes gave concrete example of the effectiveness of the church when it actually practices Christianity in community situations affecting racial minorities. "Through a slow process of education through action, realizing that the church represents a cross-section of the community, these social changes can be made," he said. "The church has a vast responsibility in the economic, civic, educational as well as religious life of every race in America. The world looks to the church to resolve the friction and tension between races and to bring into life of every human being those Christian elements which create harmony and understanding and thus make for interracial and international peace."

In a largely attended interracial dinner, Dr. William H. Jernagin of the National Baptist convention who is also chairman of the department, presided and expressed sympathy for the Jews of Europe and called on America to "stand up and be counted for goodwill and justice." The Rev. Emory Ross, recently returned from a tour of the African continent in the interest of the American Mission to Lepers and the African committees of both the Federal Council and the Foreign Missions council, asserted "the American church can do much to solve Africa's problem by leading in a constructive way in the rebuilding of the interracial life in America."

## S. C. COTTON BAGGING

Director W. W. Watkins of the Clemson College Extension Service recently announced cotton mills representing 7,600,000 spindles, or almost 28 per cent of the total in the United States, had agreed to make proper allowance for lighter weight of tare in purchasing cotton wrapped in cotton. "We cannot hope to do more this year than make a start in the use of cotton bagging in South Carolina," Director Watkins said. "However, if the program proves practicable, South Carolina farmers should welcome this self-help opportunity to cover their cotton bales with cotton bagging." (New York Journal of Commerce, September 22).

### ALLERGY TO FOODS

The Northwestern Miller (September 22) contains an address, "When What You Eat Doesn't Agree With You," by Dr. Walter C. Alvarez, of the Mayo Clinic. He says in the concluding paragraph: "A large field for research which now awaits cultivation is that of so treating foods that they will lose much or all of their harmfulness to sensitive men and women. That something might be done along this line has been suggested to me by intelligent persons who said that they found that, so far as they were concerned, the paring of certain fruits or the soaking of them in water or vinegar or the cooking of them in a certain way would render them harmless. All of us know that apples which so commonly cause distress when raw are usually harmless when cooked, and we know that cabbage which is so commonly hurtful when cooked is usually harmless when raw. A few persons sensitive to milk can drink some of this fluid if it is first fermented or evaporated or dried, and some wheat-sensitive persons can eat thin toast which is largely dextrinized. Doubtless some day someone will write a most useful monograph on this important but as yet unexplored subject."

### LIGHTS FOR POULTRY

"Recent experiments at the Alabama Polytechnic Institute show that all-night lighting in the laying pens of hens has done a great deal to increase the production," says A. O. Braeger, in American Poultry Journal (October). "In working with force molting hens and all-night lighting, these investigators found that one group of hens that had been force molted and under all-night lights averaged 90 eggs in 8 months, while the other group, which had not received light and were allowed to molt normally, only averaged 66 eggs in the same period. During this time, the latter group had a mortality of 18.3 per cent while the mortality was 15 per cent in the group that was force molted and lighted. Figures showed that the returns over feed cost during the 8 months of the test were 72 cents per bird for the group which molted normally but with those birds which were force molted and lighted, it ran $1.25 over the cost of feed. These investigators expressed the opinion that poultry raisers who do not have the facilities, but are trying to produce young pullets, may be able to maintain their winter egg supply by using hens properly molted and in good condition placed under all-night lights. The all-night light system consists in keeping dim lights on all night long. A 15 watt bulb is usually placed directly over a feed hooper. Regardless of which system is used, all lights should be discontinued by April first."

## JAPANESE DISCIPLE OF BRYAN PAYS HOMAGE.

Washington—A little, old Japanese in a cutaway coat and a young girl dressed in a kimono stood in silent prayer here before the grave of William Jennings Bryan in Arlington Cemetery.

The old man drew a handkerchief from the cuff of his coat, wiped the tears from his eyes and backed reverently away. He and the solemn-faced girl, his daughter Fusa, stepped into a taxicab and drove away.

In his hotel suite, the elderly man identified himself as the Hon. Y. Bryan Yamashita, of Tokyo, former government aide, and related the reason for his visit to the cemetery.

"It is an old Buddhist custom," he said, "to visit the grave of a loved one thirteen years after death."

He paused and tears came to his eyes.

"Excuse my sentimentality—but Mr. Bryan was like a father to me," he said. "Just after I was graduated from high school in Japan, I read a translation of Mr. Bryan's famous 'Cross of Gold' speech. I grasped from it that here was a man seeking to help the common people.

"I was of the common people, Mr. Bryan's speech struck a sympathetic note. I wrote him a letter. I asked him whether his speech was just another political device or whether it was truly Bryan the man."

But Bryan didn't reply. Yamashita wrote again and again, but still there was no answer. So the youth wrote that he was coming to America to visit him. His father sold a part of his scant land holdings to help finance his passage to America.

"I left Japan in the latter part of 1897 and went to the Bryan home in Lincoln, Neb., where Mrs. Bryan told me that their home was to be my home so long as I wanted to stay."

Bryan arranged for his college preparatory education and eventually he was graduated from the University of Nebraska. After six years with the Bryans, he returned to Japan and served as secretary to cabinet ministers and later in the diplomatic service.

Yamashita retired five years ago. From that day, he said, he planned to visit the Commoner's grave in the hirteenth year of his death.

## Opportunity Editor Now A Happy Papa

**New York** (ANP)—A baby girl weighing six pounds four ounces was born to Mr. and Mrs. Edward Lawson, Jr. of this city, on Sunday at Sydenham hospital. Both mother and child are reported to be doing well. Mrs. Lawson is the former Suzanne Payne of Washington, D. C. She is a graduate of Dunbar High School Washington, and of Brown university. Simmons college, and the Smith College School of Social Work. Until last summer he served as a case worker with the Family Service association of Washington.

Mr. Lawson, former special assistant to the WPA administrator, is now managing editor of Opportunity magazine.

# FLUSH KIDNEYS OF POISONS AND STOP GETTING UP NIGHTS

### Live a Healthier, Happier, Longer Life

Thousands of men and women wonder why backache bothers them—why they have to visit the bathroom often at night—why flow is scanty and sometimes smarts and burns.

Any one of these symptoms may mean that your kidneys and bladder need attention now before these minor symptoms may develop into serious trouble.

To flush out excess waste poisons and acid from kidneys, sooth your irritated bladder and put more healthy activity into them, get a 35-cent package of GOLD MEDAL Haarlem Capsules and take as directed.

This harmless, tried and true medicine gives results—you should feel better in a few days, as this effective diuretic and kidney stimulant drives excess uric acid from the body which is often the aggravation of joint agony, sciatica and neuritis.

Don't be an EASY MARK and accept a substitute—Ask for Gold Medal Haarlem Oil Capsules—right from Haarlem in Holland. GET GOLD MEDAL—the original—the genuine. Look for the Gold Medal on the box—35 cents.

### BREEDING VITALITY

Weak vitality in chicks is often the cause of a great many losses, particularly during the first stages of brooding. It is possible for weak vitality to be caused by poor vitality in the parent stock, poor care of the eggs before they are set, or by improper incubation. The vitality of chicks may also be impaired by poor care and handling after they are hatched.

Probably the biggest cause of weak vitality in chicks, and the one that is often not blamed for the trouble is weakness of vitality in the parent stock. Hatchery operators are proving to their own satisfaction that there is a large amount of difference in the liveability of chicks produced from different flocks. When they have trouble with chicks hatched from a particular flock, they quickly discontinue using eggs from that flock for hatching purposes. This means that the better hatcheries are constantly improving the vitality and liveability of chicks produced.

Recent experiments are also helping improve vitality. They prove that sunshine is helpful in promoting health in both the parent stock and chicks. The use of cod liver oil is also helping improve vitality. However, all of these points will not make up for the lack of inherited vitality which comes from constantly selecting birds that are strong and vigorous. Too much attention can not be paid to the proper breeding as well as care and feeding of stock which is used for breeding purposes.

### THE RETORT DIRECT

A thrifty Scottish clergyman owned a farm. He paid his hired man sixpence an hour. When he saw the man sitting on the handle of his plow while the horses rested, he said, gently:

"John, wouldn't it be a good plan for you to have a pair of shears and trimming these bushes along the fence while the horses are resting?"

And John replied: "And might I suggest that you take a bowl of potatoes into the pulpit and peel them during the anthem?"

## Read and Write

**New Orleans,** (ANP)—Praising the good work being done throughout the state by WPA education program, Educational Director M. S. Robertson recently declared he believed the percentage of those who can neither read nor write, will be reduced to 5 percent before the 1940 census. Dr. Robertson also said the eagerness with which Negroes flock to learn, is astonishing. On the other hand, the unwillingness of many of the whites, is sometimes pathetic.

## SAYS RACE'S STATUS MARS SOUTH'S AVERAGE

Birmingham, Ala.—(SNS)—Terming the South "the No. 1 Economic Hope", Fitzgerald Hall, president of the Southern States Industrial Council, said in effect in an article in the News-Age Herald Sunday that the Negro is at the bottom of much of the economic disturbance in this region.

He attacked the "Report on the Economic Conditions of the South for its "generalities, ambiguous and misleading statements."

Said Mr. Hall in part:

"1. For example, the study is replete with illustrations placing the South in the lower brackets in practically all measures of economic condition, but nowhere is there specific mention made of the depression influence, in dealing in averages, of the fact that 29 per cent of its population is colored. The report does not point out that the standard of living and the income of Negroes everywhere in the United States, in general, is lower than that of the white population; nor does it say that with such a large concentration of Negroes in the South average figures for that section are obviously greatly affected thereby.

Why were not the facts brought out which were made available in recent studies of consumer purchases by the United States Department of Agriculture, giving a comparison of family income by occupations in 140 villages in the United States? In these studies it was found that the median annual income of non-relief white familes was more in the Southwest than in most other sections of the country. In 15 Georgia and South Carolina villages the annual income was $1.309, in 18 North Carolina and Mississippi villages it was $1,764 as compared with $1,477 for 14 Vermont and Massachusetts villages; $1,075 for 19 Illinois and Iowa villages, $1,167 for 13 villages in Pennsylvania and Ohio, and $1,208 for 14 villages in Michigan and Wisconsin.

"However, if Negro familes were included, the average for Southern villages would be greatly depressed, as compared with the average income in villages that have little or no Negro population. The question might be asked, Why does not the South do something about raising the standards for the Negroes? That problem is nation-wide, for the relative economic position of the race is the same in every section of the country, but is simply more noticeable in the South, because of its predominance here. That all should cooperate to alleviate the situation is obvious."

## SECURITY FOR

(Continued from Page 1.)

this year, ask your agent.

County committees consisting of three farmers, determine which applicants will be eligible to receive loans. Character, ability and experience are considered in selecting applicants.

A farm which can be operated by family labor is the type usually approved.

Loans will include money needed to repair present buildings, build fences and improve the land, so that the family occupying the farm can have comfortable and healthful surroundings.

Loans are made for a 40-year period at 3 percent interest, but payment in full may be made at any time after 5 years.

Talk over your plans with your county supervisor and county committee before selecting your farm. They will help you.

FIGURES ON TENANT PURCHASE APPLICATIONS BY RACE,

RECENTLY RECEIVED FROM THE FIELD, show that Negro tenants applied for 1938-1939 loans in fairly good numbers. For instance:

IN TENNESSEE, where 21 percent of the tenants are Negroes, 20.6 percent of the applicants for TP loans were Negroes.

IN VIRGINIA, which has 26 percent of the tenants Negroes, 23.5 percent of the applicants were Negroes.

NORTH CAROLINA, with 34.5 percent Negro tenants, had 29.9 percent Negro applicants.

ALABAMA, with 42.9 percent Negro tenants, had 34 percent Negro applicants in 1937-1938—a smaller percentage—20.8—but four times the number of actual applications for 1938-1939.

ARKANSAS' Negro applicants jumped from 17.5 percent of the total for 1937-1938 loans, to 37 percent for 1938-1939. In actual applications 12 1-2 times last year's figures.

MISSISSIPPI has 67.9 percent Negro tenants, but only 19 percent of the applicants for loans in 1937-1938 were Negro. This number increased to 31.5 percent for 1938-1939.

NOT SO GOOD:

FLORIDA, with 29 percent Negro tenants, had, last year, 17.8 percent of her applicants, Negro, none of whom received loans. This year Negro applicants are dropped to 6.8 percent of the total. White applications rose proportionately.

IN LOUISIANA, 54.9 percent of the tenants are Negro. For 1937-1938, 30 percent of the applicants were Negro. They received 8.5 percent of the loans. This year, 43.5 percent of Louisiana's applicants are Negro.

FIGURES ON TENANT PURCHASE LOANS FOR 1938-1939 have not yet been compiled.

INCREASE IN EMPLOYMENT AT THE NEWPORT NEWS SHIPYARDS is expected to stimulate purchase of the Farm Security Homes at Aberdeen Garden. Prices on these homes have been recently scaled down to meet the needs of the industrial workers for whom they were erected. Plans were be-

be in one piece. The engine is of

ing made through which Aberdeen Gardens residents will be enabled to obtain rehabilitation loans for the purchase of poultry, or for garden equipment. Prices on Aberdeen homes now start at $1800, and rents begin at $11.25.

The Farm Security Administration has built a fine school house at Aberdeen, which will be staffed and operated by the county, as soon as the number of pupils on the project warrants this. In the meantime the building is being used as a community and recreation center. Project folk have raised money for volley ball and table tennis equipment, and a real community spirit is developing. A co-operative store will soon be set up.

Mrs. Stevens, home management supervisor at the project, has a model house for her demonstrations.

The last of the drainage work is now going on.

November 1 will mark the first anniversary of the opening of the project.

THE LIVE-AT-HOME PROGRAM IS MAKING PROGRESS AT ROANOKE FARMS, NORTH CAROLINA, where 137 colored families canned 22,000 jars of fruits and vegetables, which included 30 varieties. The colored home economist made 87 farm visits during the month of September. The farm management supervisor made 75 visits.

---

FAMILY SELECTION IS NOW GOING ON AT WOLF PIT FARMS, NORTH CAROLINA. As planned at present, two-thirds of the homesteaders on this project will be white, and one-third Negro Houses will soon be erected.

---

THE FIRST TENANT PURCHASE LOAN MADE IN TIPTON COUNTY, TENNESSEE, UNDER THE BANKHEAD-JONES ACT, was that granted on August 31, to Roosevelt Green, 31-year-old Negro farm tenant. With the loan Green bought a 55-acre farm near Solo, Tennessee. He will take over the farm in January, having 40 years in which to pay for it. M. S. Taylor, supervisor of loans for Tipton County, has not announced the purchase price. Like all FSA clients, Green will have the assistance of government supervisors in operating his farm.

## REAR ENGINED AUTO PATENTED BY GEN. MOTORS

Washington, D. C., Aug. 30—(Special).—A system providing for the rear engine operation of automobiles was patented here today by the General Motors corporation. The inventor is Eric O. Schjolin, Pontiac, Mich.

The General Motors patent is not expected to be followed by the early introduction of rear engine automobiles. Alfred P. Sloan, president of General Motors, on his return from Europe yesterday indicated that there would not be any radical changes in automobiles this year. The Ford Motor company also recently patented a rear engine drive and it is expected that the major companies want to be prepared for such an innovation.

In the General Motors device metal ribbons connect a conventional clutch pedal and gear shifting lever with the engine at the rear. The device provides that the engine block and the housing of the rear axle would

# FSA Will Help Pa. Transylvania Plantation Families

Washington, D. C., (Special)—Farm Security Administration families now residing in Transylvania Plantations, near Lake Providence, La., will receive aid after January 1, 1939, either as clients on the homestead project at Thomastown, La., or as rehabilitation clients on Government-rented land nearby, according to information released, this week, by the Farm Security office at Washington.

At Transylvania, clients were advised of the new arrangements in a circular letter issued December 3, 1938, by B. A. Brady, project manager, which said in part:

"We regret that any shifting of families is necessary, but it is unavoidable—It is the intention of this office to continue to give every assistance to the families who reside on Transylvania in 1938."

In conclusion the manager's letter stated:

"The Farm Security Administration is anxious to help you. Unless you have something better, we expect you to stay on our program in 1939. We have some land rented on a long-time basis. If you are not settled for 1939 please communicate with us at once."

Building activity on the Thomastown Project, formerly scheduled to begin about July 1, 1939, will be initiated as rapidly as possible. Plans for the development of the project include school and community buildings as well as modern farm homes. Dr. Will W. Alexander, Farm Security Administrator, stated that work on the project would be rushed in order that families continuing with the FSA as project clients may be fully established under the new arrangements with the least possible inconvenience.

Of the families now at Transylvania, 148 will be accepted at Thomastown. Others who have not made their own arrangements, will remain as rehabilitation clients under Government landlordship on adjacent land, if they care to do so. Negro home and farm management supervisors will assist both project and rehabilitation clients, beginning January 1, 1939.

## Meharry Approved As Class "A" College By A. M. Association

### Institution Is Removed From "Probation" List After Inspection

The Council on Medical Education of the American Medical Association announced today its approval of the residencies in surgery, obstetrics-gynecology, pediatrics and medicine. The college was inspected on Nov. 9th and 10th by Dr. W. D. Cutter and Dr. H. H. Anderson and reevaluated for the Council. They were so impressed with the caliber of the work being done that upon their recommendations the Council approved the residencies at their December meeting. In announcing its approval the Council stated that the great improvement in these departments were due to the excellent work of Dr. E. L. Turner during the past two years, who first as chairman of the Hospital Committee and later as president reorganized the whole clinical division.

In a separate communication the Council also announced the removal of probation from Meharry which has been in existence for nearly two years. The criticisms made by the Council when the probation was instituted have all been met, and Meharry now stands approved as a A-class school without reservations.

Officials of Meharry were quite gratified over the removal of the "disability" put on the college some time ago and state that it undoubtedly will be good news to Meharry Alumni and the general public as well, to learn that the college is, under its advanced standing, "a center of medical education, freely available to Negroes and prepared to meet the requirements of the greatest inspection agency."

Meharry has now reached its first objective, officials state, of a long range program designed by the present administration to make the college second to none in the country. A program of financial stabilization and plant expansion is already under way, it is pointed out.

—Nashville Globe.

## 1937 HIGHWAY USER TAXES

Thirteen and one-half cents out of every dollar of State taxes paid by highway users in 1937 was assigned to uses other than highways, according to statistics collected by the Bureau of Public Roads. This is two and one-half cents less than the non-highway use in 1936. Highway user revenues distributed by the States amounted to $1,195,132,000. These revenues included registration and license fees amounting to $410,401,000, gasoline taxes of $768,010,000, and special taxes on motor carriers of $16,721,000. Highway user taxes have been justified on the grounds that they are needed for improvements of roads over which the vehicles must travel. The Bureau reports that there is no prospect that sufficient funds to correct all dangerous highway conditions can be provided in the immediate future and urges that all highway user revenues be devoted to highways.

---

Boonville, Calif—A $20 gold piece was dug up here in what has been pasture land for the last fifty years. In the gold rush that followed, surrounding ground for a goodly distance was dug up by gold seekers but no more $20 gold pieces were found.

## GRAVES ON SOUTHERN PROBLEMS

In New York Times Magazine (September 11), John Temple Graves, 2d discusses: "This is the South of Today: 'Economic Problem No 1'." He says in part: "How can the economic status be improved? The favorite answer of Southern industrialists is industry, the processing in the South of more of the raw materials produced there, the developing of factories and plants that will absorb the excess products and populations of the farm, keep profits at home, save consumers transportation costs. The favorite answer of Southern agriculturists, on the other hand, is agriculture (oddly enough), the development of new uses and lower costs for cotton, the substitution of many crops for one, the development of credit and social aids to improve both men and land. But neither industrialists nor agriculturalists can say what they propose to do for the rest of the country from which they would thus take away factory or farm production. A certain amount of building up of the South at the expense of the North, East or West may be justifiable in view of its inferior economic position and greater need and promise, but from the national point of view it would seem that improvement must come essentially not through a mere redistribution among regions but from an increase in the sum total of each."

## PORK AND LARD EXPORTS HIGHER THAN YEAR AGO

July exports of both pork and lard gained over those of the same month last year, the Institute of American Meat Packers reported yesterday. Imports of pork declined substantially for the same period.

The total amount of pork exported in July was 9,305,000 pounds. It was 8,456,000 pounds in June, and 5,398,000 pounds in July of last year. Imports of pork in July were 4,743,000 pounds compared with 4,823,000 pounds in June and 7,645,000 in July, last year

Lard exports decreased from 17,179,000 pounds in June to 12,881,000 in July, but were still well ahead o July, 1937, when 7,824,000 pound were shipped abroad.

Total pork exports in the first seven months of this year were 56,057,000 pounds, compared with 35,640,000 in the similar period a year ago. Lard exports for the seven month period totaled 118,692,000 pounds, against 60,313,000 in the corresponding period last year.

## Meharry's School Of Dental Hygiene Recognized By New York Board

Dr. E. L. Turner, President of Meharry Medical College, was notified by the New York Board of Dental Examiners that the department of Dental Hygiene was registered by the board. This action was taken following the visit of Dr. Minor J. Terry, secretary of the board, who inspected the department last month. The registration of this department makes it possible for graduates to sit for the examination in the State of New York. Dr. D. H. Turpin is dean of the School of Dentistry and Miss E. M. Madison is director of the department of Dental Hygiene.

—Nashville, Globe.

## "Whose Outdoors?"

Jay N. Darling, former chief of the Bureau of Biological Survey, contributes a short article, "Whose Outdoors?" to National Parent-Teacher, (Aug.-Sept.) He concludes: "Today's children must absorb the truth about this land of theirs and acquire a jealous love for it. The process of safeguarding outdoor resources must become automatic, so that frantic appeals and preachments will no longer be necessary. There must come a time when conflicts over the rights of the public to these natural resources will be impossible and when no argument can be raised in favor of spoilation and waste. It is well begun, this absorption of truth by youth, but it is only begun. We know what is needed for their teaching, and now we seek the means. To fail is unthinkable. We must be ashamed as it is of what we are handling on to them. To let their heritage be further diminished would be bad enough, and not to show them how it can be preserved would be a crime."

# Some Facts Regarding The Cotton Situation

Early in December, cotton and tobacco farmers will vote on marketing quotas for the 1939 crop year. This is a matter of important concern to Southern Negro farmers, the majority of whom grow either cotton or tobacco.

In the case of cotton prices have been lower this year than was anticipated. While the low price has been almost wholly due to the 1937 surplus of 13,000,000 bales, certain agitators have sought to use the price situation as a means to make farmers dissatisfied with the Farm Bill.

Negro farmers have a direct interest in the result of these referenda and should make every effort to acquaint themselves with the situation and not allow themselves to be swayed by a temporary price reduction which in no ways affects the larger aspects and more permanent benefits which the Farm Bill provides.

The referendum on December 19 is a direct effort to avoid further enlargement of the surpluses and that is assured by the marketing quotas which, when in effect by the farmers' vote, will impose a penalty on those farmers who exceed the quotas. Cotton quotas are in terms of acres and tobacco quotas in terms of pounds.

Tobacco prices are good and tobacco growers are very likely to vote overwhelmingly for quotas in 1939. With cotton it is different because of the breakdown in price. However, it is well to observe what will happen if the farmers vote against quotas.

In the first place, farmers will be unable to get loans on their cotton grown in 1939 for the Act specifically prohibits loans if marketing quotas are rejected. A rejection of marketing quotas undoubtedly would result in an increase in cotton acreage next year. In turn, the increase in cotton acreage would mean an increase in the amount of cotton on hand, and a further decrease in prices. It is apparent that some of the tremendous surplus on hand must be gotten rid of before cotton farmers can expect a decent price and income. If quotas were rejected, more acres would be available to cultivate but more acres to cultivate mean nothing, or less than nothing, if they do not mean more money for the cotton farmer.

The sharp reduction in cotton acreage during the past few years has worked a hardship on some colored farmers. At the same time, it has given other colored farmers an opportunity to grow more food and feed for home use; an opportunity to grow crops that conserve the soil and an opportunity to keep their wives and children out of the fields. School terms in the South have lengthened during the past few years and these programs have given colored children an opportunity to take advantage of that fact.

All in all, the position of the colored cotton farmer is better because of the program and the rejection of the program may cause a bad situation to be much worse. But other factors also enter into this general situation.

We have heard a lot on the past years about the share-cropper. Few of us realize that the AAA programs have been responsible in large measure for the attention given this problem. The sharecropper problem, as any one familiar with the South knows, has existed for years. The attempts to help the Southern farmer through Federal programs drew attention to its existence. Their abandonment would mean, to a large extent, the abandonment of interest in the plight of the South's tenants and sharecroppers.

The AAA programs, have for the first time, given the colored farmers a voice, someone to complain to about iniquities and injustices. The importance of this cannot be overestimated. By law and regulations, the Government has attempted to protect tenants and some of this protection affects injustices that were taken as a matter of course before the AAA programs were enacted by Congress. In other words, the tenant, if he was cheated, could do little or nothing about the injustice. Much iniquity and injustice remains but there would be much more of it without the program and nothing would be heard about it.

The fact that colored farmers have voted freely in the referenda is another significant development. If they have the right to vote upon matters affecting their economic destiny, they have—and may in the future be freely allowed to exercise—the right to vote on matters affecting their political destiny. In the last analysis, economic destiny and political destiny are closely akin.

Provisions in the Farm Bill have increased the Soil Conservation payments to small farmers; have made possible, through Cotton Price Adjustments, a supplementary payment above the market price of cotton; have assured more food, feed and home gardens for farm families and have set up a new division of payments as between landlords, tenants and share-croppers.

These provisions are vitally important to Negro farmers and no doubt will be uppermost in their minds when they vote on December 10th.

## A PROGRAM FOR BALANCED PRODUCTION

Our present many-sided agricultural program provides a rational approach to conservation and good farming. Acreages of the major depleting and conservation and desirable soil-building and con-serving practices, can be distributed geographically so as to combine conservation with efficient farming and bring about balanced production. With acreages of the major crops kept within individual, county, State, and national allotments and goals, farmers have an assurance in years of ordinary weather of production in line with market requirements. If yields are above the average, they can take a second step under the act. They can store their crops and get a commodity loan on them from the Government. If, in spite of these measures, the granary overflows, they can take a third step and vote marketing quotas on themselves and bring supplies in line with normal requirements. Conversely, the act through its ever-normal-granary feature avoids scarcity in years of drought.

—From Annual Report of Sec'y Henry A. Wallace.

# COLORED DEMOCRAT SNUBS CONGRESSMAN ARTHUR W. MITCHELL

Los Angeles, (ANP)—"We need to get rid of leaders who have to be bowed to" said Congressman Arthur W. Mitchell from the rostrum of Elks Auditorium last Sunday during his short visit to the coast. The above remark made during his address before an honorary mass meeting held for him, was part of a scatching denunciation of Augusta Hawkins, young Assemblyman from the 62nd district who was reelected for his second term in the recent state-wide elections.

Although the famous Congressman was met upon his arrival by a large delegation of leading citizens, and a near capacity crowd acclaimed him in the auditorium, Hawkins did not appear. The outspoken representative from Illinois said that men who get into office on a program of mass appeal, and then forget the constituents have no business holding public office. His reference was to the Democratic Land slide that swept out Fred Roberts, Republican after serving as the only Negro Assemblyman in the state for over 12 years. Hawkins, a Democratic candidate, had also secured the support of other liberal groups.

The congressman's topic was "Making friends with enemies." He recounted his experiences, many of which were unpleasant, during his service in Congress, admitting that most of these were with the Southern element. But he explained his technique for cultivating their friendship and how he later utilized it to further legislation favorable to the Negro.

Among the committee who gave him a royal welcome were Robert Lindsay, Titus Alexanler, John Hill, Atty Hugh McBeth, Clarence Muse and Emory Crani.

# EMMETT J. SCOTT CHANGES NATURE OF HIS LAWSUIT

Washington, Dec. 3 (CNS)—In the District Court of the U. S. for the District of Columbia Monday last, counsel for Dr. Emmett J. Scott submitted a motion for voluntary dismissal of the suit filed by him June 22 of this year for a preliminary injunction against Howard University and Mordecai Johnson, President, restraining them from interfering with his continuance as Secretary of Howard University until he has reached the age of 68 years.

He contended that he could not be deprived lawfully of the right to hold the office of Secretary of Howard University and to exercise and to enjoy the rights, the privileges, and the emoluments of the office of Secretary of Howard University except in accordance with the terms and conditions of the rules and regulations adopted and promulgated in the retirement legislation of the university until retirement after attaining the age of 68 years, or except for cause sufficient in law deemed sufficient for his removal and an opportunity to be heard before the Board of Trustees of the university.

Counsel for the university and Mordecai Johnson, President, objected on the ground that dismissal of the case **without prejudice** would leave the plaintiff free to bring another suit.

Counsel for the plaintiff insisted that Dr. Scott should be granted leave to dismiss his case **without prejudice** to his right to bring such further action as he might be advised to bring.

Let us be more thankful for every inner and outer thing that promotes happiness and freedom.

## PURCHASES OF SURPLUS FARM CROPS

Farm surpluses and factory shutdowns necessitate surplus-removal operations as a supplement to other rural and urban programs. Urban unemployment means low urban buying power. It is a direct cause of surplus accumulation on the farm. Needless to say, we do not touch the root of the trouble through surplus-removal operations. Yet surplus relief buying keeps farm prices from falling as low as they would fall otherwise and at the same time relieves want. The Federal Surplus Commodities Corporation does not try to fix farm prices or to raise and hold them much above the natural market level. It enters the market only in emergencies. True, surplus buying may raise consumer prices at times, but the farm price of many products is only a small fraction of the consumer price, and a substantial increase to the farmer may involve only a small increase to the farmer may involve only a small increase to the consumer. Moreover, surplus removal may keep producers from being forced out of production and may head off extremely high prices later on.

—From Annual Report of Sec'y Henry A. Wallace.

## Readers "Fight" For Copies of TOPS

From coast to coast, thousands are talking about TOPS, the popular new magazine which tells the dramatic true-stories behind the rise of America's most celebrated colored men and women.

From the fields of sport, science, religion, the stage, literature, music, entertainment—from every walk of life—this sensational magazine presents the little known true stories of the best known colored personalities. The result is a unique magazine that glows with human interest, drama and fascinating facts—the first magnificent all-colored publication of its kind.

Of the many letters already received from racial leaders the country over, the opinion is unanimous that TOPs is a wonderful personal tonic. In it, every colored man and woman, however humble will find living proof that the chances for success are open to whoever has the character to work for it.

"I am much pleased with this magazine," says a noted colored educator, "and believe it will be a great inspiration to thousands fortunate enough to receive copies of the magazine." From a famous racial novelist comes the news that "people are fighting over copies out this way." A colored poet, beloved by millions of Americans, writes to say that "there is a great need for just such a publication." From a movie actor who took Hollywood by storm, comes the sincere compliment, "I want to be the first to congratulate you." Every mail brings the same kind of tribute.

Illustrated with many intimate photographs never before published, TOPS records the "fame-and-fortune" stories of such personalities as: Dr. G. W. Carver, Father Divine, Duke Ellington, Joe Louis, Maxine Sullivan, Countee Cullen, Walter White, Marian Anderson, Paul Robeson, Bill Robinson, Ethel Waters, Arna Bontemps, E. Simms Campbell and many others. From beginning to end, TOPS is crammed with the heroic tales of modern colored celebrities who made good with all the odds against them. How they wrung fame and wealth out of their struggles, the disappointments they conquered, the triumphs they won, their secrets of success, their personal lives—all these unfold before you in word and picture as you read htrough TOPS. It is a magazine that will fascinate and inspire your whole family. Copies can be had at your newsstand now.

# GRADE A

Uncle Sam realized recently that the thirty million families who spend 60 percent of the national income over retail counters very often do not know what they are buying, especially in the matter of foods. The main reason for this is that standard and grades have not been universally adopted.

For example, in 1928 there were about 300 brands of canned pineapple, 1000 brands of canned peaches, 1000 brands of canned salmon and 4500 brands of canned corn. How can the housewife ever hope to learn the merits of the many brands of canned goods found in even one store? Many canned goods labels carry misleading or meaningless statements that confuse the buyer and make it impossible for her to distinguish between a fine grade and a poor grade.

The only solution is for the government to divide foods into certain grades or standards and require the labelling according to standard. For instance, if the housewife wanted a particularly fine kind of canned peaches for "company dessert" all she would have to do would be to ask her grocer for a can of Grade A peaches, instead of trying bewilderedly to choose from seventeen different brands all claiming to be fine.

The Consumer's Counsel of the Department of Agriculture is now working on this problem, and housewives all over the country ought to give them three rousing cheers and a great deal of intelligent support. One way that women may keep posted on this subject and other important phases of the buying question is to write to the Consumer's Counsel at Washington and ask them to send you the Consumer's Guide. "a bi-weekly bulletin to aid consumers in making wise, economical purchases." This bulletin, which is free, is packed with valuable suggestions that should be of great help to every housewife.

## JAPAN PURCHASES MANY U. S. HIDES

New York City—Japan has become an important factor in the hide market here. Purchase of from 10,000 to 12,000 light native cowhides in the Chicago packer hide market by Japanese interests in recent weeks have totaled about 40,000 hides and traders here said that Japan has become the foremost market for American hides since the beginning of this year.

The buying here was attributed to military needs, and traders here said Japan has embarked upon a regular program of purchasing steer hides in the Argentine market and cowhides here.

## CCC Wants Boys

Washington, D. C., (ANP)—Robert Fechner, Civilian Conservation Corps director, announced this week that in January, 1939, replacements will bring total enrollment to about 310,000. This figure will include close to 300,000 young men living in barrack camps in continental United States; about 6,600 Indians working on CCC projects on Indian reservations and 4,000 territorials working in Alaska, Hawaii, the Virgin Islands and Puerto Rico.

We are all travelers in the wilderness of this world, traveling to find a few honest friends.

## 4-H GIRLS AND BOYS

4-H Club girls and boys with Extension Agents in Annual Short Course, July 11-15, 1938, assembling for morning devotions at Alcorn College, Alcorn, Mississippi.

# Alcorn A. & M. College Prepares

(Continued from Page 1)

Because of the unprecedented profits accruing from the production of cotton through the use of cheap slave labor particularly during the years when American enterprise and inventive genius had given her the bulge on the rest of the world in the production and processing of cotton and cotton products, and before the world had reached its saturation point in the use of cotton, and America had substantially no rivals in these fields, Mississippi became the land to which the slave traders of Europe and of the northern section of the United States always made a "bee line" with the assurance of being able to unload their cargoes of African slaves with handsome profits.

With unlimited acres still unsettled, and with such rich rewards the slave holder kept calling for more slaves to settle more land, to raise more cotton, to buy more slaves to raise yet more cotton and thus to repeat the ceaseless round. Consequently when the Union came to be disrupted because of the conflicting economic interests of the slave-holding, relatively sparcely-settled South, (so far as the whites were concerned, since a Negro was counted on the scale of assets only sixty percent of a white man and that only for purposes of representation: while on the scale of liabilities with his ignorance and lack of training in all things of consequences, he counted one hundred percent), with the more numerically populous, and the more man-for-man enterprising North, the South, in due course of time came to find itself woefully overmatched.

We might as well get the record straight. The question that disrupted the Union was, fundamentally, an economic question. But the great God of worlds and of nations and of peoples never made two laws that were in conflict. The maker and establisher of the laws of economics was the maker and establisher of laws of morals and whatever is economically sound in the long run is also morally sound.

It was an American poet, who, above the noise of the opposing forces of petty strife, and beyond the blinding and misasmic fog of selfish interests, was heard to exclaim:

"The changeless laws of Justice
Bind Oppressor with oppressed
And sure as sin's with suffering joined
We march to Fate abreast."

When the fratricidal strife was over, when the Union was reconstructed and Mississippi recovered her place in the sisterhood of States and her slaves declared free, it was found that one of the practices that had contributed to her wealth under the slave regime was now like a mill stone around her neck under a regime of freedom. More than half of her population was of the but recently slave class. The war had swept away the wealth of the master class, and master and slave started practically together; the one to rebuild his fortune upon the ruins of a forever dead and discredited system, the other to play a new role of filling a man's place in a competitive world and doing for himself, without training, what he had always had others to for him.

**Mistaken Interpretation of Values:**

Having been introduced to farm life and the practice of consistent labor under forced conditions the Mississippi Negro, like the common herd of his brothers in black, quite naturally associated labor and particularly farm labor as inexorably linked with his slave status, and mistakingly concluded that the distance that he could put between himself and farm labor would constitute an exact measure of his distance from the slave status, and into the realm of freedom. Before his freedom he had seen the master class living in the best home, eating the best, wearing the best, and using the best, and did not appear to labor for it; while he, as he saw it, was doing all the work, but living in the shabbiest homes, and eating the worst, and wearing the worst, and in every way, faring the worst. And after freedom he had seen that the few educated that there were among his own race members went cleaner, dressed better, worked less laboriously, and on the whole seemed to fare better than those who, because nothing else opened up, were foreed to seek their livelihood on the farm. This fired his ambition to secure an education, not for more effective service, but to attain unto the status enjoyed by the so-called "educated." And, to make matters worse, those to whom it was given to plan his educational program after freedom were not careful to discern that the type of training needed by a horde of people just loosed from the bonds of slavery would necessarily be different from that which was appropriate for a people who were the makers and masters of a civilization the equal of which the world as we know it had no record. Consequently our would-be-educators themselves wandered around for many years in the wilderness of mistaken ideals seeking to realize the impossible of attaining unto the top of racial excellence without paying the price of laying the foundation deep and strong on the three only enduring rocks: discipline, sacrifice, service.

**A Ray of Light Breaks In**

But our great leader and exemplar, Dr. Booker T. Washington, turned on the light and gave the cue to the whole situation when he said "we shall prosper in proportion as we learn to glorify and dignify labor, and put brain and skill into the common occupations of life." This now trite statement expresses a truth that is now so patent that it is as plain as the nose upon one's face; and yet it was at the time when uttered the absolute negation of our erstwhile entire educational philosophy.

Alcorn College accepts at full value the implications of this truth as a sound basis upon which to rest the springs of motivation that keep in action the forces which carry forward its daily educational program. Alcorn College recognizes the fact that the State for whose services she is responsible is predominantly a rural State; and that therefore any educational program designed to serve Mississippi in any large way must be cut to fit the rural masses, and to contact them where they are. She recognizes the fact that the greatest service that she can render the rural masses is to prepare and furnish them with a socially intelligent, well trained, conscientious leadership; and to the fulfillment of that responsibility and the performance of that task that the institution is definitely committed to engage the major forces at its command.

Through the passage of the Smith-Lever Act and the Smith-Hughes Act the institution has been armed with two important devices for maintaining contact with the rural masses: namely the Extension forces, (county and home demonstration agents), and the vocational teachers, (agricultural, Home Economics, and Trade and Industrial). Through these agencies the institution is able to touch the adult farmers, the farmers' wives, and the sons and daughters of these farm families, and thus keep up a virtual crusade for better health, better living conditions, and a more nearly adequate farm income to justify a higher living standard.

**Example by Doing.**

The institution seeks to guage its life, its farming program, its standard of living not as high as it might be geared, but rather on a glance such as would be within the realm of attainability by any reasonably sober, thrifty, intelligent, industrious farmer. Each year the college serves as host for the coming together of the Extension Agents and their 4-H Club boys and girls for short course instruction and judging and farm skill contests; and for the Smith-Hughes Agriculture teachers and their New Farmers of America organization of the boys in vocational agriculture.

Through its program of training for the extension agents and vocational teachers of agriculture and home economics, and the placement of these agencies out among the people, and with a reasonable follow-up upon their activities, while bringing in the farmers themselves, their wives, sons and daughters betimes for conferences, short courses, etc., it is believed that the institution is, while far from 100 percent efficient, meeting its responsibility reasonably well in the job of preparing material for inspiring leadership for the rural masses of Mississippi, and is therefore entitled to the loyal support of the group which it serves.

## CONTOUR FARMING

(Continued from Page 1.)

conducted at Clarinda, Ia. In a 5-year period contour farming boosted average annual corn yields 11.65 bushels an acre above those obtained on straight-row fields of similar slope.

During the past five years corn planted in straight rows on a sloping field on the station averaged 16.44 bushels an acre, as compared with 28.09 bushels an acre from corn planted on the contour on a similar slope.

Improved moisture conditions resulting from contour operations, combined with reduction in soil washing, were responsible for the marked yield increases, Clark said. He pointed out that drouth conditions have prevailed most seasons during the five years, making moisture conservation doubly important in determining crop yields.

Soil moisture content was 2 to 3 percent higher each year in the contoured field than in the straight-row field. It varied from 20.67 to 24.13 in the straight-row field as compared with a variation of 23.13 to 26.96 percent on the contoured field.

The first year, 1933, corn in the straight rows yielded slightly more than 33 bushels an acre in the straight rows as compared with a shade more than 56 bushels in the contoured rows. The respective yields for the straight and contoured rows for the next four years were: 1934, (drouth year) 1.8 bushels and 6.09 bushels; 1935, 13.24 bushels and 20 bushels; 1936, 3.76 bushels and 10.33 bushels, and 1937, 30.33 bushels and 47.93 bushels.

Contour farming saves soil and moisture by running rows across the line of flow of run-off water, Clark explains. Each row thus becomes a miniature dam, checking the run-off and causing more of it to soak into the ground.

## MRS. ANNIE WHEELER'S

(Continued from Page 1.)

ment. The few widows who can not get old age help, do not get any help.

This is to remind all who have trees to put out transplant your trees and put out some strawberries for home use.

If the dry season cut off your collards and winter cabbage, put in one or two rows of turnips now, and mustard for greens.

Clean up the yard and spade up the flower beds. Select some of the best looking chrysanthemums, scarlet sage and put them in pots to have winter blooms.

Now just a little work in the December sunshine, clean out the chicken house, see that the wind is not coming in on the chickens. Let in fresh air two or three feet above their heads.

Clean all nests put in fresh straw. Burn old straw. Give hens plenty clean water. If the water in the drinking pan freezes, turn out the ice and put in warm water. By doing this all the chickens will get water before it freezes again. To save time why not turn out all the drinking water at night?

Set three or four hens in December so you will have baby chicks in January. You get a good price for the fryers.

Don't keep two many chickens in one house. Better put up a new one for those young hens. They do better.

Now how about that cow? Give her a warm dry place to stay in, and plenty of feed when it is too cold to let her out, give plenty water. Don't let her give you all. Do your part.

## HOW ONE MAN GOT AHEAD

(Continued from Page 1)

hour, and if he cares to work ten hours a day he gets $120 for a day's work.

The ability to foresee whether a chick eventually will lay eggs or merely grace the table as a capon is important to poultry men because now it is possible for men who specialize in egg production to write the hatcheries and specify a shipment of future hens. Poultrymen who cater to those who wish to eat fried chicken rather than fried eggs, may specify a shipment of future back-fence alarm clocks.

Under the old system it was not possible to tell hens from roosters until the chicks were fairly large. Anyone ordering a shipment before that time simply took what he received, and was unable to specialize in broilers or laying hens.

Editorial Moline Dispatch.

# THE MODERN FARMER

Vol XI. NASHVILLE, TENN., JANUARY, 15, 1939 No. 12.

## MRS. ANNIE WHEELER'S COLUMN

### Clarks Hill, S. C., Member Sends Another Contribution

Clark Hill, S. C. (Special to the Modern-Farmer)—We had a Merry Christmas and a Happy New Year. There were not any accidents. The Poplar Spring Baptist Church had an old time meeting the first Sunday in January, 1939. All seemed to say it is good to be here.

Deacon Robert Williams (Senior) one of the old farmers of this section and Deacon of Poplar Spring Baptist Church died January 6th. He was loved by all who knew him.

The New Year is here, let us turn to our work on the farm. Now is the time to plan for the garden. Get your seed and soon as the land can be plowed turn your land and have it ready to put in your garden peas for home and early market.

If you rent your farm or work for part of the crop put in a garden. Have all you need and some to sell and to can. Do not live on a farm and buy canned goods. If any thing have some to sell. Put in some Lima (butter) beans for market. The early and the late is the ones that you get a good price for.

If you did not have any turkeys or chickens to sell in 1938 begin now to try to have one or both for market this fall. It helps so much to have something to sell.

If you live where you can keep two or three cows, four would do better. However keep all you can and sell all the butter you can spare. With a little planning two cows will give milk the year round, turn one dry when the other comes in.

Get a booklet that tells how to make good butter. You can get more out of your butter or skimmed milk by feeding it to the hogs than you can if you sell it. I say let the dairyman sell milk. Milk has to be put on market every day. Keep the butter until the last of the week, and sell once a week.

Keep as many hogs as you can feed. By so doing you are on the first step to live at home. Cows, hogs, turkeys and chickens are a good purchase. Try it this year. But please remember it takes the same care to raise scrub cows, hogs, chickens, etc., as it does good high class.

## UNCLE AB FINDS A STRANGE VARMINT IN HIS CORNCRIB

Bonifay, Fla.,—"Uncle Ab" Boswell was prepared to see almost any kind of varmint when he went to investigate a noise in his corncrib. But he was flabbergasted to find an elephant helping himself to the corn. With the aid of neighbors Boswell corraled the elephant. It had escaped from a circus.

The all-important thing is the God we choose for ourselves, and in whom we will trust.

## START NEW YEAR BETTER

### Wilkes County Farmer Owns 175 Acres of Land

**Washington,** Georgia—This is a real new year for Sydney Willis and his wife, tenant-farmers near here for twenty-four years, who started 1939 as owners of a 175-acre farm in Wilkes County, financed by a Farm Security Administration farm-tenant loan, made possible by the provision of the Bankhead-Jones Act.

Second-generation tenants, the Willises were married when the husband was seventeen and his wife fifteen, and started housekeeping in the usual fashion, seeing no further ahead than one year at a time. Neither had much education—four or five years in the typical one-room school prevailing in the rural South.

Then the children began to arrive and the young couple who had known nothing but tenancy all their lives, wanted a place of their own for their children.

The Willises worked hard to get ahead, but in 1938, twenty-three years after they started out, ownership seemed as far away as ever, and there were eight children to feed and clothe and educate. Through papers which found their way to the Willis home, the family learned about the Farm Security Administration's farm-tenant loans and applied for one.

Thousands of tenant-farmers applied for these "ownership" loans, last year. In Georgia, 763 Negro tenants applied for them (five times as many applied this year) and the Willises were among the 47 fortunate

(Continued on Page 16)

## VINDICATION OF FARM ACT

### Cotton Growers Give More Than Two-Thirds Vote

"A clear-cut example of economic democracy in action"—that's the way Secretary of Agriculture Henry A. Wallace referred to a referendum among cotton, tobacco and rice growers of the South to determine their attitude towards further crop restrictions next year.

Under the Farm Act of 1936 two methods of regulating production are provided. One is voluntary, under which farmers agree to restriet production in return for certain government benefits. The other is compulsory, under which farmers are permitted to market only a specified quantity of their crops. It cannot be enforeed unless two-thirds of the farmers give their consent at the ballot box.

The voluntary feature was in force this year, but did not work out well, production having increased despite a substantial slash in acreage.

**Cotton Growers Vote "Yes"**

The election was to determine whether the growers of cotton, tobacco and rice desired the marketing arrangement to be put into effect. More than two-thirds of the cotton farmers voted for the restrictions and they will be applied to next year's crop. Tobacco and rice farmers, whose output has been relatively stable and who have been receiving above parity prices, decided to stick to the voluntary scheme for another year.

This is how the cotton-marketing

(Continued on Page 16)

## PROBLEMS OF THE NEGRO WOMAN

### U. S. Bureau Says Public Pays Heavily at Times

The public pays heavily for the substandard working and living conditions of many thousands of Negro women workers, according to a report issued today by the Women's Bureau of the U. S. Department of Labor. When people have no jobs or their wages are too low for adequate support they still must be supplied with food, shelter, and clothing. In other significant ways low economic standards for one group are found costly to the community.

Though very limited information exists on Negro women workers, the new bulletin points out, the report brings together what seem to be the most important facts available on their occupational status, and on their wages and other characteristics of employment in the major fields of work where they are employed. It also shows clearly the difficulties Negro women encounter in their search for work. Though women in general have been discriminated against and exploited through limitation of their opportunities for employment, through long hours, low wages, and harmful working conditions, such hardships have fallen upon Negro women with double harshness.

There are many Negro women at work in the United States, according to the report. One in every six women workers in the country is a Negro and in all nearly 2,000,000 Negro women were classed as gainful workers in 1930, the time of the

(Continued on Page 16)

## BRITISH TO OPEN COLLEGE SOON

### Higher Education for East African Natives Promised

**New York City**—Under the caption of "Light For Africa," Time Magazine says:

This week the Duke of Gloucester breaks sod on a hill outside of Kampda, capital of Buganda, principal kingdom of Uganda, for the stone buildings of Maekerere College for Higher Education, first all-Negro university in East Africa. Recommended by a Royal Commission on Higher Education, the university will speak English, will teach the arts, science, agriculture, medicine, education, veterinary science and engineering to bright young blacks of Uganda, Kenya, Tanganyika and Zanzibar.

While in Africa, the Commission collected fine specimens of big game and some damaging facts about Britain's "trusteeship" of backward peoples. Example: Government provision of primary schools is so inadequate that of the 720,000 children between the ages of five and 15 in Uganda, only one-third attend school, and of this number more than five-sixth attend mission schools. The sun may never set on Britain's empire, but it has disgracefully few native minds to which the light of education penetrates.

While Hitler and Mussolini trumpet their sympathy for the native, native dissatisfaction with British rule steams and bubbles from India through Palestine to Africa. In East Africa more sanitation, medicine, education and agricultural improvements might reconcile villagers to their Colonial status. Such a program requires trained experts. Since Negro civil servants are cheaper than white, in fact cost only one-fifth as much to hire and maintain, the $1,000,000 Maekerere College is expected to be a good investment for England.

Commissioners were concerned, however, with the present shortage of women fit to be mates of prospective Maekerere alumni.

(Continued on Page 16)

## ILL WINDS FROM MISSOURI

## WHALEBONE NOT BONE; IT GROWS ON ROOF OF MOUTH

Whalebone is not bone and it has none of the properties of bone. The term is a popular name for an elastic, fibrous substance that grows on the roof of the mouth of right and certain other species of whales.

Whalebone, more properly called baleen, consists of a series of thin parallel plates on the palate and is a horny exaggeration of the ridges found on the roof of the mouth of most mammals. Baleen plates have been known to reach a length of 15 feet, although they seldom exceed 12 feet, even in the largest whalebone whales, states a writer in the Indianapolis News. They take the place of teeth and their function is to strain the water that the creature takes up in large mouthfuls. Because of its lightness, flexibility and toughness, whalebone is used in corsets, stays and other articles for stiffening women's dresses.

Whalers prepare the product for the market by boiling it until it is

## Facts and Comments About the Sharecroppers "Strike"

**By Leon R. Harris, President National Federation of Colored Farmers**

Sharecroppers, farm-hands and day laborers of southeast Missouri, are not now, and have never been any worse off than the same class of people in other sections of the cotton producing areas of the South. The reason why they act differently,—the reason why they show their dissatisfaction with conditions generally,—is, mainly, simply because they are in Missouri. They know they have crossed the "Line." They know they are across the "Line." Most of them are not native Missourians.

Most of them have expected more from Missouri than Missouri has felt inclined to give them. Missouri landlords are not as fatherly,—not as benevolent as are the landlords in the deep South. They are harder-headed business men. They expect a

(Continued on Page 16)

## TEXTILE IS HAILED AS NEW TRIUMPH FOR CHEMISTRY

TOKYO—It is hard to believe that a synthetic fabric which combines the qualities of silk and wool can be produced out of the extensive soya-bean supply of Manchukuo through a chemical process. Nevertheless, this is exactly what is being done by the Showa Sangyo Kabushiki Kaisha or the Showa Industrial Co., Ltd.

The Showa Industrial Co., was established as a result of the amalgamation of four companies, namely, the Showa Industrial, the Showa Flour Milling, the Nihon Kali Industrial and the Nihon Artificial Fertilizer Cos, under the leadership of Hideo Ito.

The Company is capitalized at 16,200,000 yen, of which 8,100,000 yen is paid up. At the general meeting of the shareholders held last March, Mr. Ito was elected president of the new company and Mitsuo Adachi managing director.

(Continued on Page 2)

## DEERHOUND WAS KNOWN AS 'ROYAL DOG OF SCOTLAND'

The Scottish deerhound once was known as the "Royal Dog of Scotland." One of the biggest of the long, or coursing hounds, and one of the oldest of breeds, this shaggy son of the heather in olden times decorated the halls and firesides of the Highland chieftains, and was their companion in the hunting fields, writes K. (Continued on Page 16)

### TEXTILE IS HAILED AS NEW TRIUMPH FOR CHEMISTRY

(Continued from Page 1)

MANY LINES OF BUSINESS

The Showa Industrial Co. operates ten factories. They are engaged in an extensive variety of manufacturing, as the company's division of work indicates. The company is made up of nine departments, which are:—

Departments of fertilizer flour milling, oil, artificial silk-wool, woolen weaving, fodder, wheat-gluten, chemicals and drugs, and commerce.

Of the foregoing departments, that concerned with artificial silk-wool is now attracting close attention.

The artificial silk-wool, called "silkool," is produced from the albumen of soya beans through a special chemical process perfected by this company.

CHEAPER THAN RAYON

Much has been said about the wonderful qualities of rayon, but it is a fiber which has nothing in common with wool, whereas silkool is just as good as regards heat preservation, durability, color, lustre, etc. Yet the product is sold at about 40 sen a pound, while rayon is sold at 65 sen a pound.

IT WAS ALSO MADE KNOWN THAT President Ito of the company wears clothes made of silkool, by way of an object lesson in what modern industrial chemistry can turn out.

Convincing proof that the silkool industry is not at all fantastic is seen in the fact that the company has received from Kyoto Imperial University the Fujii prize—an academic honor of the highest degree in Japan. And to President Ito goes the credit for having accomplished this great chemical invention.

# CRIPPLED COLORED CHILDREN TO GET "ANNUAL BALL" AID

## Part of Fund Promised For Doctor Training at Tuskegee Institute

Washington, D. C., Dec. 27 (ANP)—Nation-wide support this year is being given the President Roosevelt Annual Ball by Negroes, due to the fact that the Infantile Paralysis Association, beneficiary of this annual event had decided to turn its attention to making the benefits available to colored children.

Each year these dancing parties are promoted in various cities and communities throughout the nation, proceeds of which go to support the work of the Warm Springs foundation, pet philanthropy of President Roosevelt. Part of the money thus raised is used to defray expenses at the sanitarium but the major part is set aside for research and experimental work in combating the dread disease.

The Infantile Paralysis Association has promised to establish a unit at Tuskegee Institute, where all of the research made possible at Warm Springs, will be made available for the training of Negro orthopedic surgeons and treatment of crippled colored babies and children.

Already the Tuskegee health service is doing great work under Dr. John Chenault, trained under auspices of Provident Hospital, Chicago, but the promise for the future particularly bright. Crippled children from all over Alabama and nearby states are now being treated and it is hoped the Warm Springs Foundation will make possible the installation of therapeutic pools at Tuskegee.

Colored people who heretofore have been reluctant about contributing to the President's Balls are going ahead with renewed vigor on account of the aid to Negro invalids promised by the Foundation.

# Colored Detective Captures Desperate Woman Bank Robber

## Chris Covington May Get Hero's Award For Exploit In Chicago

Chicago, Dec. 28 (ANP)—Although he had no reason to doubt that the white woman who had just robbed the Drexel State bank of $5,000 at noon Wednesday, would blow up the place with nitroglycerine as she had threatened, City Detective Chris Covington, who happened to be present at the time, risked his life to seize the robber and save the money. For his bravery, he may receive a hero's award.

The woman, Mrs. Mary Cheek McCollum Schuch, went to the president's office and after a short conversation presented him with a printed note stating she was "Bess Carney, boss of the Carney Mob," and demanding $5,000. In her coat pocket was what seemed a gun. Then she produced tw osmall vials containing a clear liquid she declared was nitroglycerine. Outside the bank, she said, were four members of her gang, two wearing cab drivers' caps, and all heavily armed. The bank president looked through the window. Peering in was a man with a cabbie's cap. So the official made out a draft, went to the teller's window, and got it cashed. He gave her the money and she started out, saying, "It's a good thing you did this."

Detective Covington, who drops in the bank every noon in plain clothes, heard the remark and was suspicious. As the woman was leaving, Neal managed to whisper he had been held up and told the detective of the woman's possession of the powerful explosive.

Covington followed her outside the door. so as not to endanger anyone inside the bank. Then he pinioned her arms, took her back in the bank, and searched her.

The explosive was found to be water and the "gun" in her pocket was a curling iron. She was broke and needed money for Christmas and to pay her eight year old daughter's school expenses, she said. Mrs. Schuch has been estranged from her husband for sometime, she declared, and conceived the robbery idea in the belief its very boldness would bring success.

The man peering in the window with a cab driver's cap? He really was a cab driver who had brought the woman to the bank thinking she was an ordinary fare and was keeping an eye on her so that she wouldn't get away without paying her bill.

## Native Woman Is Named Councillor In West Africa

Freetown, Sierra Leone, W. Africa, Jan. 11 (ANP)—A feature of the recent Municipal elections held here was the success at the polls of Mrs. Constance Cummings-John, brilliant candidate of the Youth league, who, representing the Central Ward in the Town Council thus becomes "the first woman Councillor in British West Africa."

Mrs. Cummings-John, new leader of the native women here, was Miss Elsie Horton before her marriage to Mr. Ethan Cummings-John. who for many years served creditable here as Barrister-at-law. The new Councillor was educated in America and took advanced training in England.

# KAPPAS EXTENDED MANY COURTISIES FOR '38 CONCLAVE

## Detroit To Welcome 28th Grand Chapter Meeting Next Week; Gives Police Detail

Detroit, Dec. 22—(ANP)—Traffic courtesies and a detail of policemen to help untangle any problems have been extended by the city of Detroit to the coming 28th grand chapter meeting of the Kappa Alpha Psi fraternity which convenes here next week.

Every public function of the fraternity will be watched against any pick-pockets who might have followed the visiting Kappas and A. K. A.'s into the city. and officers will be at the beck and call during the business sessions of the organization. The police detail will be under orders of Lieutenant of Detectives Wallace S. Williams, brother of Fred Hart Williams, general chairman of the Kappa conclave committee.

One of the first people to arrive for the meeting will be Attorney Theophilus M. Mann, grand polemarch of the Kappas, who last week completed about 1,000 miles in visits to chapters in different parts of the country.

Using the air exclusively, Attorney Mann has visited chapters in cities as far apart as Washington. D. C.; Institute, W. Va.; Kansas City, Kansas, Cincinnati. He has also made several trips to Detroit. Attorney Mann is completing his third year as the national head of the Kappas. He will be heard on the morning of December 27 in a radio address here. and that evening at the beautiful Detroit Art center. when the joint AKA-Kappa public meeting is held.

The rest of the conclave will be filled with business sessions and social affairs aglore. Honors for outstanding achievement, both to undergraduates and graduate members will also be voted.

# EDITOR YOUNG HAS GRIEVANCE AGAINST JIM CROW PAGES

Bluefield, W. Va., Jan. 11 (ANP)—Last week, addressing members of the Colored Intercollegiate Athletic association here, on the subject of "Newspaper Cooperation with College Athletics," P. B. Young, Sr, editor of the Norfolk Journal and Guide, let out a verbal blast against the Jim Crow pages now being featured by several Southern white papers.

Editor Young spoke in direct reply to a previous speaker, Milton L. Randolph, editor of the "colored page" of the Richmond, Va., News-Ledger, in which Randolph asked for greater support for the white paper from the various members of the CIAA. Editor Young pointed out that the white papers run a page of news items about Negroes as a circulation builder and to increase the paper's revenue, but they show no interest in the economic, social and educational problems of the Negro.

He declared, "When one considers that these papers, employing only one or two colored people, may by their invasion of the colored newspaper throw out of employment hundreds of reporters, stenographers. bookkeepers and mechanics. he can appreciate just how serious the problem may be."

## MULE SENSE

By Rev. Huell J. Jackson,
Pastor McDaniel Street
Baptist Church
In Atlanta World

When I used to work with mules
In the State of Alabama,
Some would lean into their collars
With a vengeance at the start,
And I'd have to hold the critters,
They would be so wild to go—
Lest they'd tangle up the others,
That were steadier an' slow,
But I wasn't long in learnin'
That the mules worth th' while
Were the ones that God had gifted
With a steady pullin' style.

Though I'm far from being Solon,
As I here and now admit,
In the ways I have meandered
I have used my eyes a bit,
And my humble observations
Of the way they play the game
Make me think that men and mules
Are built pretty much the same;
For I find the flashy starters,
Like the mules, with wilt and shirk,
While their steady-pulling fellows
Are the lads who do the work.

## JAPAN TAKES LEAD IN MENTHOL OUTPUT

TOKYO--Peppermint distillation in Japan, which is undertaken as one of the side pursuits of agricultural farms from the southern islands to the northern tip of the Empire, produces more than half of the total annual output of the world.

The bulk of its production, including menthol and mint-oil, has been exported to foreign countries, notably to the United States Germany, British India and France.

## Rev. W. L. Imes Urges Support of "Peace" Society

New York, Dec. 22—(ANP)—Prominent leaders are urging participation in the American Congress for Peace and Democracy, to be held in Washington on January 6, 7, and 8, by all minority groups for whom "America must be a safe and happy place for every man" if this nation is to strengthen its democracy and maintain peace.

The Rev. William Lloyd Imes, of St. James Presbyterian Church in New York City, said in urging suport for the congress.

"As a member of the largest minority group in American life I am glad to commend the service which the American Congress for Peace and Democracy is endeavoring to offer.

"It is not easy to be fair with our fellowman. Even the best of us must plead guilty to prejudice and discrimination against those who differ from us. But until America is a safe and happy place for every man, Negro, Jew, Mexican, Oriental and all the rest. it will never be either peaceful or democratic."

The congress has been endorsed by leaders of the National Negro Congress including John P. Davis, secretary; Thyra Edwards and Dr. Max Yeargan, vice presidents, and Edward E. Strong, secretary of the Southern Negro congress.

The Elks endorsed the congress at their convention in Baltimore late last summer.

Walter White, N. A. A. C. P. secreary, spoke at a congress dinner in New York on December 14 when Harry F. Ward, national chairman of the American League for Peace and Democracy, presided.

## EGYPTIAN TRIBUTE TO THE DOG

"Dog days" are the result of an Egyptian tribute to the dog. Centuries ago the Nile flooded at a certain season of the year. The flood was signalized by the appearance of a star. For years the Egyptians depended upon the ascendancy of the star to flee their homes for the highlands. Year after year the star was the signal until, finally, the Egyptians named the star after the most faithful animal they could think of—the dog. In Egyptian Sirius meant dog, and the star was named Sirius. The star was a warning sign to the homesteaders, along the Nile, and the term "dog days" has been handed down for generations.

# ZETAS STAGE BOULE IN ATLANTA; GOING TO BALTIMORE NEXT

Atlanta, Jan. 11 (ANP)—Climaxing one of the most successful boules in the history of Greek letter organizations, members of the Zeta Phi Beta sorority, in their three-day meeting at the Y. M. C. A. accepted the invitation to hold the 20th annual boule in Baltimore. Ruth Willis, regional director, expressed the keenest desire to welcome the larger number of sorors from all sections of the country in December, 1939.

The meeting, beginning with a board session on Tuesday, was interesting throughout. "The Sorority: A Dynamic Factor in the Building of Finer Womanhood," the general theme of the meeting, was emphasized in each session.

Delegates, from possibly the widest range of sections ever assembled, were given a cordial welcome at the opening meeting on Wednesday evening at Congregational church. The meeting, presided over by Lillian P. Carter, general chairman of the boule committee, featured greetings from organizations, represented by Mrs. O. P. Williams, director of the business department of Morris Brown college and regional director of the Iota Phi Lambda sorority; Miss Laura Duffy, secretary of the Atlanta School of Social Work and president of the Delta Sigma Theta sorority; J. R. Henderson, president of the Pan Hellenic council represented the group of Greeks; J. W. Dobbs, who represented Atlanta citizens, and Jesse O. Thomas, Urban League official.

Prominent among the worthwhile things accomplished at the boule was the awarding of several hundred dollars in scholarships to various regions. Consideration was given such militant organizations as the N. A. A. C. P. Civic League and the International Peace Group.

Elected officers for 1939 were: Beatrice Cattlet, Washington, D. C., chairman of executive board; Lou Swarz, St. Louis, epistoleus; Fannie Clay, Knoxville, parliamentarian; Juanita Bates, Fort Worth, 2nd anti basileus; Goldie Guy Martin, Chicago, tamoiouchos; Nellie B. Rogers, Indianapolis, grand basileus; Velma L. Coppage, Norfolk, Va., grammateus; and Blanche Thompson, first anti basileus.

### JUST THE WIFE WOULD BE ENOUGH

The happiest man in the world is said to reside in one of the Ozark counties in Missouri. He has six fiddles, 10 children, 13 hounds, a deaf and dumb wife and a "moonshine still" that has never been spotted by the government.

## PROFIT IS UNEARNED

ONE of the best statements ever written on the nature of profit came from the pen of L. S. Herron, editor of The Nebraska Union Farmer, Omaha. It follows in full:

"An attorney who heard a cooperative speech was rather disturbed by the idea of preventing profit. It seemed to him that this would remove incentive. The belief that profit is needed as an incentive to industriousness is quite common. But assuredly it can be based only on a misconception of the nature of profit.

"The nature of profit is shown clearly in the operation of a cooperative. Out of its gross income, a cooperative pays expenses, wages to employes, wages—in the form of interest—on capital, and sets something aside for replacement. What is left is the thing called profit.

"Now, it will be seen this thing called profit is not due to any necessary factor in the business Since all the necessary factors in the business have been compensated before profit accrues, profit is clearly unearned. It is really an accumulation of overcharges. Cooperators recognize it as such and return it to the patrons.

"Profit in profit-seeking business is of exactly the same nature. True economic profit is what is left after expenses, wages, wages of capital, and replacements have been met. It is not needed as an incentive, or in wages and interest there is incentive enough to keep the business going.

"Whoever gets profit gets something he has not earned. This means that somebody else, somewhere, earns something he does not get. Because profit is unearned, it follows that everybody cannot have a profit. It would be impossible for everything to take out of the stream of production more than they put into it. Profit can only be reaped by the few at the expense of the many.

"Cooperators are on perfectly sound ethical ground, therefore, in seeking to stop the garnering of profit—by returning it to the patrons to the extent that business is done cooperatively, and, through competition, by checkmating profit-taking by profit-seeking concerns."

## Witness Gangsters Didn't Kill Points Out Bombing Suspect

St. Louis, Dec. (ANP)—His head covered with bandages, Louis Lee Baker, was carried under heavy guard from the county hospital to circuit court Thursday where he pointed out Isadore Londe, white, former Michigan convict, as the man he saw bomb a cleaner's shop here early in the morning of June 2.

Baker is the witness who was abducted several weeks ago in gangster fashion, taken to a deserted clubhouse, shot and left for dead. He made his way to a road and was brought to a hospital where he has since remained under heavy guard. One of the wounds forced removal of his right eye. Baker has been unable to identify his kidnapers.

When brought to court, Baker unhesitantly identified Londe as the man he saw get out of an automobile in front of a cleaner's shop at 5:30 a. m., light something and throw it into the shop before getting back into his car and speeding away. The explosion followed immediately. The bombing was the result of labor trouble.

# MRS. ANNA DILLON IS MARRIED BUT RUNS DAIRY FARM HERSELF, MAKES IT PAY, KEEPS THE CASH

### Mississippi Former School Teacher, Now 45, Has Fine Record as "Rugged Individualist"

Chatawa, Miss., Jan. 5—(ANP)—Demonstrating that femininity is no handicap to a successful career on a farm, Mrs. Anna Dillon operates here a paying truck and dairy farm. Although she is married, Mrs. Dillon who appears to be about 45 years old, manages every detail of the business.

Peas, beans, corn, vetch and clover are the principal items grown on the place. She specializes in Black Valentine beans, planting two acres each season. Pike county is a truck section. She packs and ships herself to the nearest market which quotes the best prices.

Mrs. Dillon's dairy herd consists of 26 jerseys. In her immaculate milking shed are installed self milkers which operate by air pressure. Bottles are washed automatically by motor and inspections by the state department of health are frequent. Her daily production is 50 gallons. She ships to a creamery at Cleveland and in addition sells all the butter and dairy products she can manufacture to a Catholic girl's seminary locate dhere. Her sales from milk and dairy products net her $100 to $150 per month.

"My 60 chickens average about 30 eggs a day," said Mrs. Dillon. "Eggs and chickens are in demand here and I seldom have enough. I live pretty much at home. This year I raised four excellent hogs. I can meat and chickens also as well as vegetables, salads and fruits, using the pressure cooker. This year I have 175 cans of beef meat, pork and chicken. The broilers are thus taken off the yard, and I keep chiefly the laying hens. I fry the chicken before canning it. If you have never eaten canned chicken you don't know what's good."

Mrs. Dillon was a teacher when she married some 20 years ago. Her husband Austin Dillon, who has been employed all of his life at the white Catholic seminary, objected to her continuance in the school room, so she plunged into farming, partly as an avocation.

One of the most interesting phases of Mrs. Dillon's home is her collection of antiques. She has four canopied four-poster beds, relics of early ante-bellum days, numerous marble topped and carved tables and similar early furniture, much of it bought when plantation owners were selling out or modernizing. Her eventual plan is to sell it. In the meantime she says she is enjoying it herself.

"I cooperate closely with G. W. Bryant and Mrs. Eva L. Gordon, our extension and home demonstration agents," said Mrs. Dillon "and I do not feel that what I have done is exceptional. All that is needed to succeed in the country is willingness to work and the use of your head just as you would in the school room or the city."

## "No Entangling Alliance" Team Wins KSC Debate

Frankfort, Ky.—In the annual intramural debate at Kentucky State College the negative team won the contest. The subject for debate was "Resolved: That the United States should enter into an alliance with Great Britain." The winners who defended the principle that the United States should avoid entangling alliances with foreign powers, were Misses Mina Hughes and Anita Wilson of Louisville and Elwood Saunders of Danville.

The affirmative team was composed of Misses Ann Clark of Lawrenceburg, Susie Wilson of Louisville and Benjamin Shobe of Middlesboro. The Misses Wilson, one on each team, are sisters and daughters of Principal Atwood Wilson of Central High school, Louisville.

At the close of the debate president R. B. Atwood presented the "Atwood Trophy to the winning team.

We may pray at any time, anywhere and under any and all circumstances.

## N. Y. Governor Asks Anti-Bias Laws

Albany, N. Y., Jan. 10—(CNA)—In his address to the new 1939 New York State legislature, Governor Herbert H. Lehman urged extension of the State law which prohibits racial discrimination in employment by public utilities, to all businesses affected with the public interest and to all companies bidding on State contracts.

The law for which the governor seeks new teeth was enacted as a result of public sentiment developed by revelations of job discrimination during the public hearings on the causes of the March 19, 1935 outbreaw in Harlem. That sentiment has been strengthened recently by the investigations of the State Commission on the conditions of urban Negroes.

Governor Lehman congratulated President Roosevelt and the New Deal as he began his fourth term as New York's chief executive. He urged the legislature, which is controlled by the Republicans to preserve New York's broad social and labor laws and to strengthen their application to prevent evasions.

When growth ceases, decay and death soon follow.

## Crisis In Ethiopia Seen As Italy Rushes War Material To Addis

Jibuti, French Somaliland, Jan. 10—(CNA)—Indication that the Italian army of occupation in Ethiopia is facing a critical situation was seen here in frantic efforts by Italian transport agents here to speed up the transportation of war material and food over the Jibuti-Addis Ababa railroad.

News of extentive guerilla activities and of growing discontent among both native and Italian units of the fascist army of occupation reached this port recently with the arrival of scores of deserters from the Italian forces. They also reported that the natives were protesting growing economic hardships and fascist race decrees.

Guerilla leaders were said to be watching with close interest the events in Spain, feeling that any set-back to the Italian invasion of that country would react favorably for the Ethiopian cause. These leaders feel that the Spanish resistance has already helped their cause materially through its strain on Italian finances and arms, thereby preventing full concentration of Mussolini in consolidating the fascist conquests in Ethiopia.

Advertising rates and sworn circulation figures presented upon application.

**"OUR SLOGAN"**

**STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.**

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## EDITORIAL

FROM THE BIBLE:—

*"The earth is the Lord's, and the fulness thereof; the world, and they that dwell therein."—Psalm* 24:1.

"Happy the man, in busy schemes unskilled
Who, living simply, like our sires of old,
Tills the few acres which our fathers tilled,
Vexed by no thoughts of usury or gold."

### HAPPY NEW YEAR

The New Year is sure to bring you happiness if you will make one simple little resolution and stick to it. RESOLVE THAT YOU WILL STRIVE THIS YEAR TO DO ALL YOU CAN TO BRING HAPPINESS TO OTHERS.

The great preacher says: "No man liveth unto himself." So often we forget this great truth. We are living in troublesome times. This is the snatch-and-grab age. It is hard for many of us to keep body and soul together and we consume nearly all of our time looking after our own personal interests. As a Group, we have always been too hard-headed and now we are becoming hard-hearted. We are inclined to let the other fellow and his problems go hang.

But this attitude will not bring us happiness, this year or the next. We are still our brother's keeper. If we would be happy we must be kind, considerate, willing to do all we can to help the other fellow out of the hole. We must be active in the affairs of the community, school, the community, church, in the affairs of the county, state and nation. We must think at least as much about GIVING as we think about GETTING.

Just try your best to bring happiness to others this year and you will be surprised just how happy and comfortable you will feel yourself.

### A GREETING SINCERELY APPRECIATED

A telegram to the annual convention of the National Federation of Colored Farmers from William Green, President of the American Federation of Labor, reads as follows:

"The American Federation of Labor feels its welfare is interrelated with the welfare of the farmers. Your ability to produce adequately and market profitably measurably conditions our standards of living just as our ability to buy conditions your incomes. As we welcome colored industrial workers within our membership we are appreciative of the difficulties which Negro farmers must meet, so we congratulate you on your wisdom in organizing to meet them. Economic organization is the first step in advancing your welfare along all lines."

Under the leadership of two great industrial statesmen, Samuel Gompers and William Green, the American Federation of Labor has become one of the most useful organizations the nation has ever known. The A. F. of L. was built on faith, courage, persistence and high ideals. It didn't jump up or just happen,—it was built up by patience and hard work. It suffered set-backs,—its leaders have often been persecuted,—enemies from within its ranks and without have attacked it. But, in spite of this, it has triumphed. It has become one of the strongest organizations in the world.

This greeting from Mr. Green, in behalf of his organization, should encourage every member of the National Federation of Colored Farmers. It should make us want to stick closer to each other. Realizing that we are on the right road,—that "ECONOMIC ORGANIZATION" is indeed "THE FIRST STEP IN ADVANCING OUR WELFARE ALONG ALL LINES," we should endeavor to work harder for success.

We may rest assured that Negro farmers are going to continue to be the BACKBONE OF OUR RACIAL GROUP IN THIS NATION. The N. F. C. F. is our organization. It can be made to serve well, we, who are the members and the builders of it, and the entire Group. From now on, all of us who are farmers, tenant farmers, sharecroppers and farm hands,—all of us who are county and home demonstration agents,—rural teachers, preachers and leaders,—all of us engaged in agriculture, from the biggest of us down to the smallest of us,—should stop dilly-dallying and monkeying with other farm organizations not controlled by the Group, and get into our own and be of service to it. THESE OTHER FARM ORGANIZATIONS MAY WANT TO HELP US BUT THEY DON'T WANT TO HAVE US. It is time we were realizing this,—time to show some real manhood and independence,—and get into OUR OWN ORGANIZATION,—the NFCF, and work hard for its success and welfare.

### WHAT ABOUT SOME TRAINING FARMS

The WPA has opened a retail store in Brooklyn, N. Y., which is said to be the first free training store for retail employes in the country. This store is furnished with all modern equipment and is ready to do business in any number of lines but it will not sell anything. It is only for the purpose of training clerks.

A resolution passed by the last convention of the N. F. C. F. suggested that model farms be established beside rural schools that students might be trained to become successful farmers. If the WPA has some money to spend training clerks for retail establishments, we wonder if some could not be found for these model farms. They would be a blessing to young Negro students, a blessing to the entire group,—and too, they would eventually become self-sustaining,—something the retail training stores could never be Probably it might be worthwhile for some of us to look into this.

### "THE AFRICAN," A GOOD MAGAZINE

We wish to call the attention of Modern Farmer readers to a unique and quite different magazine, appearing monthly, which will be appreciated and enjoyed by all who read it. This magazine is the "AFRICAN," a journal of African affairs, published at 10 West 117th St., New York City.

The African carries interesting news articles relative to the affairs of our Group. Its contributors are good writers and progressive thinkers. Students of our high schools and colleges, members of study clubs, all who desire to know more about the progress and welfare of our Race in all sections of the world, will be encouraged and benefitted by reading the columns of "The African."

## Radio Chief Backs Ban On Coughlin's Race Hatred Talks

Washington, Dec. 27 (CNA)—The broadcasting of attacks upon racial and religious groups is an "abuse of the privilege of free speech" and should not be tolerated, President Neville Miller of the National Association of Broadcasters charged this week.

In a formal statement, which he issued in response to protests from Father Coughlin's followers against the barring of the radio priest by Station WMCA in New York, Miller said that no radio station is obliged to broadcast speeches that play "on religious bigotry—religious or racial prejudice, or hatred."

Miller emphasized the social responsibilities of radio, and said that "no obligation of free speech or of public service could justify broadcasters in allowing this great new social force to strike at the harmony of the nation."

# Interesting News And Notes

The manufacture of starch from southern sweet potatoes may in the not distant future put a few extra million dollars into the pockets of southern farmers. The U. S. imports nearly half a billion tons of starch each year. If, eventually, sweet potato starch can be manufactured at a cost of less than three cents per pound, it is certain to become a prosperous industry. It is believed this can be achieved. The Negro farmer, the best sweet potato grower in the world, will welcome this prospect, as it will mean for him greater stability and security.

**Nylon May Finish Nippon**

Perhaps it is not the boycott of American consumers but a discovery of the du Pont interests which may finish the Japanese silk industry, while other du Pont discoveries are being used by Nippon to blow up the Chinese.

The du Ponts plan to build a $7,000,000 plant to manufacture a new synthetic fiber called "nylon." The new materials, which as the mysterious "Fiber 66" has been the basis for much rumor, is made from coal, air, and water, and can be derived from other substances. It is the only artificial fiber that is made without any vegetable or animal raw material.

Washington apple growers are up against a tough proposition. Something is wrong somewhere. They complain they are getting a rate of two and one-twelfth cents a dozen for their apples which are shipped only ninety miles away, to San Francisco, where the consumers there are forced to pay 25 cents per dozen for the same apples. "How can the apple grower continue to produce under these conditions," they ask.

In Pern, the country which entertained the Pan-American conference recently, the humble rooster is almost considered the national bird. In Lima, the capital, they are penned on top of downtown buildings and sometimes are used as mascots on air planes. In the back country they are turned loose and crow night and day. Some land for roosters.

A Chinese graduate student of the Michigan State College has succeeded in developing the first seedless watermelon. The student is 27 years old.

## Oscar Polk to Have Role of Servant in "Gone With the Wind"

Culver City, Calif.,—Oscar Polk considered the outstanding colored actor of the Broadway stage, was signed by David O. Selznick yesterday to portray Pork, the O'Hara's family servant, in "Gone with the Wind."

Pork is the faithful butler who remains at Tara, the O'Hara plantation home, throughout the Civil War.

Osear Polk will join the east which, to date, is headed by Clark Gable as Rhett Butler. The role of Scarlett O'Hara is expected to be announced by Selznick within the next few weeks. Actual production of "Gone with the Wind" is scheduled to start early in January under the direction of George Cuker. Sidney Howard, Pulitzer-prize play-wright, has completed the shooting script of Margaret Mitchell's record-breaking novel which has sold more than 2,000,000 copies.

On the stage, Polk has appeared in three Pulitzer-prize plays: "The Green Pastures" by Marc Connelly, "Both Your Houses" by Maxwell Anderson, and "You Can't Take It With You" by George S. Kaufman and Moss Hart. Other hit plays in which he has acted are "The Trial of Mary Dugan" and "Once in a Lifetime."

Polk was born in Marianna, Arkansas, but went to New York, to pursue his ambition to be an actor on the stage and radio. Now in New York, Polk will report to Selznick International studios immediately after the first of the year.

### AFRICAN WOMAN GIVES BIRTH TO BABY WITH THREE LEGS

Lagos, W. Africa—(ANP)—Great excitement prevailed recently in the village of Ohio, Nigeria, when a woman gave birth to a handsome baby with three legs. Villagers declare that when the father beheld the strange freak of nature for the first time, he ran screaming from the hut and alarmed the entire community. He was later quieted, but neighbors say both he and his wife have shown a marked dislike for the phenomenal baby.

## Philadelphia Spends $20,000 Fighting TB In Colored Sections

Philadelphia, Jan. 11 (ANP)—The Philadelphia Health Council's bureau for the control of tuberculosis among Negroes spent $20,000 the past fiscal year in carrying out this project, it was learned this week. The bureau employs 9 colored medics, 9 nurses (8 of them colored), one stenographer and one messenger.

Figures show that the Health Council supervises the treatment of approximately 56 per cent of all Negro TB sufferers in Philadelphia. Clinics are maintained at the Henry Phipps institute and at 2315 Oxford St., the latter clinic serving the entire population of North Philadelphia.

Plans for the coming year call for new and larger quarters, an additional physician, another fluroscope, a nurse and additional help. The project is maintanied by funds raised through sale of Christmas seals, and $125,000 was the goal set for this year's drive by the Health Council.

### USED ANIMAL SKIN BOTTLES

The first bottles were of animal skins which were sewed up. One leg was left open as the bottle's neck. This was closed with a plug or tied with string. Such containers are used for wine in southern Europe, for water in China. Thousands of years ago, says the Washington Post, the Egyptians made glass bottles. They also had them of stone, ivory, bone, porcelain, bronze, gold and pottery. Bottles are made by blowing glass into molds of the desired shapes. Bottoms and necks are finished last. Done chiefly by machinery in the United States, this is an honored hand art in Europe, the secrets of which are guarded jealously by families of craftsmen.

Love should be ever-increasing with me.

# News From and For Members of The N. F.C.F.

### PRIZE PIGS CHOICE OF COUNTRY

Bro. R. D. Davenport, Lexington, Miss., winner of the 1938 "Amos 'N Andy" prize of two registered Hampshire pigs, awarded to him for the best exhibit of cotton at the annual convention of the N. F. C. F. at Forsyth, Georgia, writes that the pigs were received by him in good shape and that they are the choice of the country. He says he is indeed proud of them.

Bro. Davenport has been a staunch member of the N. F. C. F. for many years and his Unit is one of the oldest in the organization. Although afflicted with ill-health the past few months, Bro. Davenport manages to take care of his secretarial duties, which are heavy, for his is a very busy Unit. Cooperative efforts carried on by his Unit in the purchasing of farm and home supplies and selling of farm products keep all officers and members busy. An article telling about the wonderful work and progress of his Unit will appear soon on this page.

### HARVIELL, MISSOURI UNIT CONTRACTS TO PURCHASE FARMS

Thomas A. Gillespie, Market Agent and active leader of the Harviell, Mo., Unit, N. F. C. F., reports that members of his Unit have contracted to purchase 2,000 acres of land near Poplar Bluff, Mo., which will be subdivided into farms ranging from 40 to 160 acres. More than forty tenant farmers will take possession of these farms this spring.

Members of this Unit are taking advantage of their opportunities in this section and have decided that they will own the land they till and till the land they own. No members of this Unit are camping along the hard roads listening to the palaver of agitators. They are doing what hundreds of other sharecroppers and tenant farmers should do,—saving enough to make down payments on farms which they will some day own if they are industrious and heed the advice of leaders who have an interest in their welfare, and can give them assistance worthwhile.

Bro. Gillespie is to be commended for his activity in behalf of his fellow-members. All are bound to succeed if they will continue to cooperate, work in harmony and unity, and look out for each others interests.

### "WE WANT TO GO BACK," SAY OHIO EX-FARMERS

A group of ex-farmers living in Cambridge, Ohio, have requested the national office of the N. F. C. F. to send information and advice concerning farms in that locality. They want to go back to farming.

These farmers, most of them from the South, went north expecting to strike it rich or better, working in the steel mills. The mills have been running little during the past several years and now their future prospects are dim for it is reported that some of the mills will be abandoned. Unable to make a living off the land they want to go back to the land.

Officers of the NFCF will do all in their power to assist these ex-farmers and to help them find the farms they want. There are many opportunities for colored farmers in Ohio.

### HALCYONDALE, GEORGIA UNIT PROGRESSING

Progressive Unit, NFCF, Halcyondale, Georgia, is striving to live up to its name. Good progress is reported.

This Unit is under the leadership of Bro. B. F. Pierce, president and Bro. J. S. Wilson, secretary. Both are prominent farmers of their community.

Other communities in Georgia are reported by Vice President Brown to be interested in the NFCF and several new Units will be organized in the near future.

### NEW UNITS FOR NORTH CAROLINA

Bro. A. Gordon Thompson, First Vice President, NFCF, North Carolina, reports that three new Units will be set up in his state within the next thirty days. Bro. Thompson, master-farmer and seed corn expert of Lumberton is interesting his brother-farmers in the work and policies of our organization and when N. C. farmers become interested sure enough, things always hum.

Old Units in Guilford and Halifax counties of this state are also taking on new life.

### BULLETIN BY FEBRUARY 15TH

The first official NFCF Bulletin of the New Year has been delayed due to the absence of the President from the office on account of illness. It is expected that this important message will reach all Units of the Federation by Feb. 15th.

## MAYME OSBY BROWN PLACES COLORED ARTISTS WITH WPA

### Louisiana Weekly Editor Helps Dillard and Xavier Students Win Fame

New Orleans, Dec. 22 (ANP)—Due to persistent efforts of Mrs. Mayme Osby Brown, editor of The Louisiana Weekly, to have qualified Negro artists placed on the WPA Arts project in New Orleans, three Negroes received positions on the project, according to Myron Lechey, WPA art instructor.

The three recently placed are Harold Pierce, former student-instructor at Xavier university; Lawrence Jones, former student-instructor at Dillard university, and Frank Wylie. The latter student has some paintings at the art exhibit of the New Orleans Branch of American Artists congress, which is being held at the People's Book store. His painting of a woman sewing at night has won much favorable criticism for him and definitely stamps the young artist as a "potential great," according to those who have seen the painting. Incidentally Mr. Wylie's paintings are the only ones by Negroes.

There is quite a number of Negro subjects in the exhibit, but among the more realistic and intriguing is the showing of a slumberous Negro tipped back in his chair with discarded newspapers lying by his side. This painting was done by Gonzzles, nationally known artist.

## SUPREME COURT'S RULE ON SCHOOLS IS FAR REACHING

### How To Raise Funds To Provide Equality In Education Becomes Puzzle For States

CHICAGO, Dec. 22—(By Frank Marshall Davis for ANP)—Leading educators and officials of those states making separate schools mandatory were casting about this week for ways and means of shifting their entire educational plans following the U. S. supreme court decision last Monday in the case of Lloyd Gaines of St. Louis against the University of Missouri making it mandatory for a state to provide graduate instruction for Negro students within its borders.

This decision is expected to have a more far reaching effect than the supreme court decision in the Scottsbore case making it illegal for Negroes to be barred from trial and grand jury panels on the basis of color or race. The South's chief objection to changing this discriminatory custom was based mainly on the issue of race prejudice; readjusting present educational policies will be felt in the pocketbook where the effect will be more concrete.

#### MORE MONEY NEEDED

The South, called the nation's No. 1 economic problem by President Roosevelt, is recognized as financially the poorest section of the nation. Dixie lacks tax income making possible per capita expenditures for education comparable with that of Northern states. Since the segregated education system exists, it means that what money is available must be spent to provide some sort of facilities for both races.

As a result, money is "wasted" according to Northern standards for where a building and teaching staff in the wealthier North would accomodate students of both races, two buildings must be used in the poorer South thus calling for double expenditures for unkeep, etc. While it is true that comparatively little money is spent on Negro education in rural areas, this overlapping expense runs into big money in the larger urban centers.

#### ONE SOLUTION

The sensible solution would be the admission of Negroes into the South's state supported "white" colleges and universities. In fact, President John Hugh Reynolds, white, of Hendrix college in Conway, Ark., last week suggested that very thing.

"There probably would be trouble at first—some hot headed Southern boy might bash a Negro's nose—but in a year or two we would get used to it," he said.

It is a matter of record that a suit a year or two ago similar to that filed by Gaines in Missouri resulted in the admission of a Negro to the University of Maryland law school which he attended and finished without untoward incident. This fall a Negro attended classes at the University of Texas for some time and encountered little trouble with his white fellow students. It is no longer a novelty for colored leaders to address student bodies in white southern colleges or for students to engage in interracial seminars with Negro students. Last year at an interracial conference on Southern education held at the University of North Carolina, certain of the South's most distinguished educators advocated the throwing open of graduate schools in white universities to colored students. It is believed that when the time is considered ripe to break current traditions and open university doors to Negroes, the first institution to do so will be North Carolina.

#### WON'T HAPPEN SOON

However, such a drastic change is not likely to occur for some years. Dixie states have laws prohibiting educating both races together. They would have to be revised—and probably will after Southern taxpayers see the folly of wasting money supporting two universities purely because of race prejudice when one might do. And each Southern state will have to make a serious attempt at establishing a genuine Negro university or admitting colored students to white institutions if the supreme court mandate is to be obeyed.

Many states thought they had solved the problem when they established scholarship funds for education of Negroes outside the state. Maryland did it after a colored student got into the law school; Tennessee followed suit after William Redmond sued unsuccessfully to enter the state university; Kentucky has established a similar policy; Virgina did so in 1936, and both Missouri and North Carolina, among others, have had scholarship funds for many years. But most of the states have made no attempt to provide for Negro graduate training. Unless colored students in Mississippi, Georgia, Alabama, Florida and several sister states have the funds to personally pay for such instruction in private

#### EVEN ONE STUDENT

schools or Northern state universities they are out of luck.

Since there is no disposition to admit colored students to state universities, the supreme court decision simply means that if one Negro in any southern state wants to take medicine, then the state is obligated to establish an entire school of medicine, at its Negro college. The same goes for any other course offered at the state university. This will naturally be expensive, but the South has only itself to blame for upholding the policy of race separation.

In one way this should help Negroes, for it will therefore be convenient for a larger number to take graduate study and benefit accordingly while at the same time make more jobs for instructors and educators. It will also be a handicap to a smaller minority, for those planning to use state scholarships for study in the well equipped institutions of the North will no longer have this financial help. If the future is judged by the past, it is unlikely that a school of medicine, law, dentistry, engineering, etc., put in by a Southern state at a Negro college will measure up to the standards of similar schools at the University of Illinois, Kansas, Pennsylvania, etc., where some of the students might have gone under the old scholarship system.

Just what effort Southern states will make to follow out the ruling as set down by the supreme court will bear watching and should at least be interesting. Some might even go to the extreme of ignoring the mandate entirely, thus forcing now unknown federal action, or they might take out courses in state universities to reduce them to the level of colored colleges.

## Visits Tropics

Chicago, (ANP)—Presley S. Winfield, prominent realtor of Berkeley, Calif., and Mrs. Winfield, the former Mae Tancil of Chicago. were visitors here this week. The couple are on the first lap of a tour of the West Indies. After spending the Yule season in Forrest City, Ark., Tuskegee Institute and Miami, Fla, they sail for Havana, and inland to Santiago, Cuba, where they board the S. S. Florida for Kingston Jamaica. They retrace their route on the S. S. Azizabo and go to Vera Cruz, thence to Mexico City before returning to California. The couple have been extensively entertained in Chicago. In Forrest City, they will be the guest of the Dr. John Burke's and the Theodore Bonds. In Miami they will stop with Kelsey Pharr and at Tuskegee with the Dr. Lionel Mahones of the government hospital.

## HAMPTON GRADUATE IS FINALIST FOR FAMED SCHOLARSHIP

### Charles T. Davis May Win Honor of Studying at Oxford and get $2,000

Hampton Institute, Va., Dec. 16.—Charles T. Davis, first Negro to receive a Senior Fellowship at Dartmouth College, is up again in a contest for one of the highest scholastic honors open to any undergraduate in America.

He has just been named as one of the two representatives of the State of New Hampshire, who will appear before a district committee, December 19, to compete for a Rhodes scholarship at Oxford University, England.

The method of the competition is as follows:

Thirty-two yearly Rhodes scholarships are allotted to the United States. To elect the scholars, the whole country is divided into eight districts of six states each. The "Committee of Selection" of each state chooses, from the candidates applying for the scholarships, two men to appear before the "District Committee." This Committee then selects, from the candidates who have been nominated by a given state committee, four men to represent their states as Rhodes Scholars at Oxford.

There are no written examinations in the test. A candidate is rated on his record in school and college. That covers his qualities of manhood, force of character and leadership; literary and scholastic ability; and physical vigor.

The Rhodes Scholarships are for two years and have a value of approximately $2,000.

Young Davis is the son of Don A. Davis, chief accountant and cashier of Hampton Institute. He is a ranking graduate of the Institute's Phenix School; received a scholarship to the college department of Hampton Institute; and after a year's study there, went to Dartmouth where he won the scholarship honor already referred to in March of this year.

## GEORGIA TOWN HAS COLORED EXPERT AS CITY ELECTRICIAN

### Willis Cain Runs Power Department in Blakely Well With Little Culture

Blakely, Ga., Jan. 11 (By C. Parham Johnson for ANP)—Here in Early county, once termed one of the meanest in Dixie, in the town of Blakely the city's electrician, who has complete charge of the water and light department, is a Negro, Willis Cain.

Mr. Cain is not a highly cultured man, but he is so efficient in his profession that the white population has given him a responsibility probably handed no other Negro in America. Blakely thinks so much of him that when extra help is called in, the work must pass Cain's inspection before it is okayed.

Working with Cain is another Negro, John H. Slaton, Jr., a graduate of the state normal and agricultural college at Albany who worked several years in Texas before returning home as Cain's assistant.

## MISSOURI CROPPERS STILL FORM PROBLEM

New Madrid, Mo. (ANP)—Last Wednesday after a fortnight of trials and tribulations, the problem of the encamped sharecroppers in Southeast Missouri still baffled solution and there was no indication as to what would be done with the five hundred Negroes who, on Monday were put into a camp six miles east oi Highway 61—in a swamp area inundated during the 1937 floods.

The colored sharecroppers who constituted more than one-third of the group which had previously pitched camp along highway of the district, were evidently prepared for a long stay. Sheriff A. S. Stanley of New Madrid county and Sgt. R. R. Reed of the State Highway patrol reported, however, that the camp was peaceful.

The officers said the sharecroppers had sufficient food, received from surplus commodity warehouses and from private sources, and Sheriff Stanley said, "I don't know what to do.

"They apparently want to stay up there and wait for some guardian angel to come and take care of them. If they don't want to go to any farms, you can't make the landowners take them." Sgt. Reed said there was a probability the sharecroppers would be moved to farms soon, but Sheriff Stanley said no procedure had as yet been worked out.

---

More than 200,000 flowers will be used in fashioning a Treasure Island float for the Tournament of Roses parade in Pasadena to invite everyone to the 1939 Golden Gate International Exposition.

---

In Virginia, free Negroes were required to pay a poll tax of $1.50 in 1813 and $2.50 in 1915. In 1814, 5,547 free Negroes paid $8.322 in taxes and in 1863 they paid $13,-0o5.22 in poll taxes.

---

October 16, 1859, John Brown with nineteen assistants, five of whom were Negroes, captured the arsenal at Harper's Ferry.

Religion Requires STRENGTH: Be strong and quit yourselves like men.—1 Sam. 4:9.

## FEATHER BEDS

(Christian Science Monitor)

Blown from the dim past into modern ken were two "feather beds" sold in a New York auction room a few days ago? They came from storage was all the auctioneer knew. Was their original habitat a New England or Long Island farmhouse? For what tousled haired children may they have been warm, downy nests in winter nights of yesteryear? Or did they spend most of their lives in the neat idleness of the "spare room," closed in winter—and most other seasons—and nearly as cold as Antartica from December till spring?

Of course, a "feather bed" wasn't really a feather bed at all—or even a bed. It was a tick filled with feathers and was superimposed on another one stuffed with straw or corn husks in many a farmhouse that boys of earlier—and even the last— generation knew. Nothing safter or warmer can be recalled, especially on nights when the winds of winter whined around the house. It kept a boy snug and warm all night in his upstairs chamber even if the fire in the sitting room stove downstairs wentout in spite of all the birch and maple chunks crammed into it at bedtime.

In the morning he was likely to be awakened by the clatter downstairs when father got up at daybreak to build the fire again. It wasn't long before the heat began to rise in the stovepipe that ran through your room into the chimney, but until it did you burrowed deeper down into the feathers and pulled the patchwork quilts and comfortables up under your chin. It took courage even when mother rapped on the pipe downstairs and called, "Breakfast—your room must be warmed up by now," to throw off the comforting covers and bounce out on the cold floor. But the aroma of bacon or sage-seasoned sausage wafted from the kitchen expedited dressing and in a jiffy you were ready to thump down the stairs, carrying the kerosene lamp that had lighted you to bed.

Modern mattresses didn't come till later, but none will ever lull a tired boy or grownup to sleep quicker.

## PITY THE PEDESTRIAN

"You are charged," said the magistrate, "with throwing your mother-in-law out of the window. Have you anything to say."

"Yes, yer worship. I did it without thinking."

"I quite realize that, my good man. But don't you see how dangerous it was for any one who might have been passing at the time?'—Montreal Star.

---

Wife (trying on new fur coat)—"Really, one cannot help feeling sorry for the poor thing that was skinned for this."

Husband (feelingly)—"Thanks!"

## SURELY, A MISUNDERSTANDING

Two ladies were sitting at an open window.

One was listening to a church choir practicing across the way.

The other was listening to the noise of the crickets.

The first one said, "How loudly they sing tonight!"

And the other one said, "Yes, and they tell me they do it with their hind legs."

---

There is no reward for worry; there is much reward for rest.

---

"How many ears has a cat?"

"Two," responded January.

"How many eyes?"

"Two of course."

"How many legs?"

"T—. Say, mister, didn't you ever see a cat?"

# KINDEY TROUBLE

### Stop Getting Up Nights

To harmlessly flush poisons and acid from kidneys and relieve irritations of bladder so that you can stop "getting up nights" get a 35 cent package of Gold Medal Haarlem Oil Capsules and take as directed. Other symptoms of kidney and bladder weaknesses may be scant, burning or smarting passage—backache—leg cramps—puffy eyes. Get the original **GOLD MEDAL.**

## LILACS IN BLOOM AS SPRING PAYS VISIT TO EAST

Nyack, N. Y.—It may be the January thaw elsewhere, but there are definite signs of spring in Rockland county. Pussywillow in bloom and budding lilacs, green grass, and robbins were reported today. Theodore Kronke, postmaster and proprietor of the only store in Bardonia, said that while balmy weather has resulted in a record demand for seed catalogs, he still hopes to sell a number of snow shovels, rubbers, and cough drops.

---

The first Negro to be granted a patent was Henry Blair, of Maryland, who received official protection for a corn harvester, 1834.

# POLITICAL FEUD BETWEEN COLORED LEADERS IMPERILS WILBERFORCE U.

### G. O. P. Solon Would Cut School's Funds in Order To "Get" Prexy Walker

Cleveland, Jan 19 (By Clarence L. Simmons for ANP)—Claiming that he would endeavor to "get" Dr. D. Ormonde Walker, president of Wilberforce university, shortly after the November election, Representative Chester K. Gillespie introduced the feud which began in early November to the House of Representatives Finance committee at Columbus, recently.

Gillespie demanded that the general assembly force the retirement of Dr. Walker by slashing the appropriation for the school. He suggested that the $30,000 set up in the partial appropriation bill be cut to $10,000 and that the $7,000 student fee estimated be raised to $10,000—a move that will virtually force the closing of the school.

Gillespie, who during the heat of the November campaign averred that he "would drive Dr. Walker out of Wilberforce" after the two had almost come to blows on the street, charged before the finance committee that enrollment at the university is dropping because of Dr. Walker's political activities.

Dr. Walker, in a statement several weeks ago, denied that the enrollment had decreased at the university since his appointment as president by former Gov. Martin L. Davey. The 'Force president gave enrollment figures since his appointment as: 1934—920; '35—986; '37—147; '38—1102, and for the first quarter of 1938-39 season 1022. He cited the 1938 decrease as a trend that had affected all schools during the year, but contended that the reduction at Wilberforce had been smaller than at most other schools.

The state representative's crusade against Dr. Walker began after the president is reported to have urged the election of the entire Democratic slate in a speech made before a Negro audience during a Democratic mass meeting in Cleveland. Gillespie charged Dr. Walker with telling his audience to disregard the candidacy of the two Negroes on the Republican ticket.

Until the latest move by Gillespie, citizens of the state had regarded the feud as a verbal battle between two individuals, not without its comic aspects. No sharp lines had been drawn by Negro citizens in support of or against the Walker administration, except that in Cleveland the Wilberforce Alumni association went on record as admonishing Dr. Walker's political activities without asking for his removal.

An interesting sidelight on the situation is the fact that a mother-in-law of the representative is a matron at the university that faces closure or at least a suspension of vital activities if the finance committee acceeds to Gillespie's demand for the drastic reduction.

## COTTON CHOKES WAREHOUSES, MILLIONS WITHOUT MATTRESSES

**30,000,000 Poor Families Lack Means to Buy; One Reason Why Ruinous Surplus Has Piled up, Says Editor**

Uncle Sam is burdened with a terrific cotton problem. He has in warehouses nearly 11,000,000 bales in which he has invested a staggering sum and another surplus-producing crop is coming up. Foreign demand is falling off and cotton farmers are shouting for more assistance.

All kinds of suggestions as to what should be done are floating into Washington. Of course, the main idea, supported by the administration, is a sharp reduction in cotton acregae. In addition, many of those who have been close to the problem are convinced that if the American people had the money to buy bare necessities the cotton surplus would rapidly melt away.

**Millions Without Mattresses**

For example, Alexander Nunn of Birmingham, editor of the "Progressive Farmer," probably the most important agricultural publication in the South, contends that if low-income families in that region were provided with decent mattresses, a market could be provided for 500,000 bales of cotton.

"Every one of the tenant families —and there are 2.000,000 of them, approximately 1,200,000 white and 700,00 Negro—could use from one to four mattresses today," he said. "The manufacturers' market for that group is practically nothing. **They simply don't have the money to buy even low-grade mattresses."**

It is Nunn's thought that the government should provide poor families with the ticking and the cotton, and permit them to "make a mattress for themselves and turn over one to the government."

**30,000,000 Potential Buyers**

If the same idea were extended throughout the country, he contends, 30,000,000 poor families would be found which need mattresses but can't get them. If they were supplied, 3,000,000 bales would be used.

Mattress manufacturers do not enthuse over Nunn's proposal. They agree a demand exists and that the people can't pay the usual prices, but nevertheless, they believe they should be given a "rake-off."

Sometime ago in discussing Editor Nunn's views on this subject, LABOR erroneously suggested that he contended nothing must be done to injure the manufacturers. As a matter of fact, he argues the manufacturers have nothing to fear, because the poor families which would secure mattresses under his scheme can't get them if they are forced to buy in the regular way.

**The cotton situation in itself is a grave problem, but much more appauling is the fact that in America, with all its immense resources, are 30,000,000 families which cannot afford to buy mattresses fit for human use.—From "Labor."**

---

Again we approach the Eve of Christmas. Let us invite the Christ of Christmas to enter the very throneroom of the soul, not as a transient guest, to be ours at this glad season only, but to become our permanent and abiding Guest.

---

This should be the busiest generation. It has more problems to solve and has solved fewer of them than any before it.

## SOUTH CAROLINIAN SAYS, "JUST BEGUN" TO FIGHT OVERSEAS

New York, Jan. 4 (ANP)—At 60, Council Gibson Carter said, using the words of John Paul Jones, he had "only begun to fight."

Returning on the S. S. Ausonia late in December from 17 months service as an ambulance driver in Loyalist Spain, this former miner from Utah plans to go next to Chine and drive the wounded there. Mr. Carter was furloughed from Spain to recover from injuries he received during a bombardment. Leaders in Harlem turned out to honor him at a dinner given recently for him and William Pickens, N. A. A. C. P, director of branches.

Mr. Carter told of driving his ambulance through a terrible bombardment which finally struck his car. He said, "The force of the explosion picked me up and handled me as though I were a piece of paper."

Before going to China, Mr. Carter is writing a book on his experiences in Spain. He will go on a brief lecture tour appealing for aid for Spain's children.

Born in Hattiesville, S. C., in 1885, Mr. Carter came North as a boy trying to earn money enough to complete his education. He worked as a bus boy in New York hotels while he studied typing and shorthand at night. He finally became secretary-valet to an aged mining engineer, Wyzinzki, with whom he traveled through the United States and Mexico. His constant dream was to go to Africa where he would be free from restraints and discriminations. When Wyzinski died in Utah in 1921, Mr. Carter went to work in the mines. There he first heard Marcus Garvey and his dream of returning to Africa. For several years he worked as organizer for Garvey's Usiversal Negro Improvement association.

In telling his story, Mr. Carter said, "The Italian invasion of Ethiopia awakened me to the realization that Africa was not freed and that Negroes suffered discrimination and lived as subject people under British, French, Italian colonization. So when war broke out in Spain and it became apparent that the Italians were again warring on a peaceful people. I decided to go to work for freedom and democracy by way of Spain.

"I feel that the Chinese people are fighting the same cause as the people in Republican Spain. This is the same fight that the Negro people are making for liberty. I want to help. I have only begun to fight."

The Negro People's Committee to Aid Spanish Democracy, with the Medical Bureau and North American Committee to Aid Spanish Democracy, 381 4th avenue, New York City, is presenting Mr. Carter and another famous Negro returning December 31 from Spain, Dr. Arnold B. Donowa, oral surgeon, at a mass meeting in Harlem early in Feb. The dinner for Mr. Pickens and Mr. Carter was sponsored by the Negro People's Committee to Aid Spanish Democracy.

### STRONG WIVES WANTED

Colonists in Manchuria and Korea are clamoring for wives. They must be strong. Mrs. Kotaka Otsuma, a prominent social worker who recently toured those countries, told girls in Kobe, Japan, that beauty was secondary with the colonists and daintiness was no virtue at all. Strong women who could work in the fields beside their husbands from sunrise to dark were the kind desired.

## 87 Chapters Send Delegates to Sigma Fraternity Meet

**Atty. George W. Lawrence Is Re-elected President**

Winston Salem, N. C., Jan. 11 (ANP)—With delegates from 87 chapters in attendance, the 24th annual conclave of Phi Beta Sigma fraternity was held here from Dec. 26-30 Atty George W. Lawrence of Chicago, who launched the meeting as main speaker on a radio program broadcast over WAIR, was reelected president.

Initiating the business features of the conclave was the meeting of the general board held Tuesday in Carolina Hall, Winston-Salem Teachers college. Following this the general body took up its regular business. W. T. Wilson, mayor of Winston-Salem, greeted the delegates and visitors on behalf of the city at the public mass meeting Tuesday evening.

Memorial services were held Wednesday at Atkins high school auditorium for the late James Weldon Johnson, J. S. Fitts, local attorney and Prof. E. P. Davis offered eulogies. A session was devoted to a business symposium which is in line with the national program of the fraternity with the speaker James A. Jackson, Sigma's commercial counselor and special agent for Standard Oil company. The presiding officer was Russel S. Gideon, national director of Bigger and Better Business. The records disclose the fact that 118 bigger and better business meetings were held in 87 cities and 32 states during the year. In 27 cities the Fraternity has either organized trade associations or associated with an organized Negro Chamber of Commerce. In addition, 12 trade associations are in the process of formation.

A conclave committee during the business session waited upon President F. L. Atkins, Winston-Salem Teachers college, and interceded in recognition for all fraternities and the interest of procuring official sororities on the campus. A special resolution was passed praising local organizations; business and individuals for courtesies received.

Sigma's next conclave which will celebrate its 25th anniversary will be held in Washington in December. An invitation has been extended to Zeta Phi Beta sorority to meet simultaneously with Sigma in the celebration of its 20th boule.

National officers elected for the year 1939 include: Atty. George W. Lawrence, national president, Chicago; Atty. Hosea V. Price, national vice president, Winston-Salem; B. Franklin Vaughn, national secretary-treasurer, New York City; Dean E. C. Mitchell, editor of the Crescent, Morris Brown college, Atlanta; Russel S. Gideon, director of bigger and better business, Boston; Dean Geo A. Parker, director of education, Robert H. Terrell School of Law, Washington; James A. Jackson, commercial counselor, New York; Dr. Felix J. Brown, vice president central district, Richmond, Va.; Dr. Robert J. Hill, vice president eastern district, Baltimore; A. Leon Bailey, vice president northern district, Chicago; Thomas H. McCormick, vice president southern district, Tuskegee; Thomas Holley, vice president southwestern district, Prairie View, Tex.; and James Croaker, director of social and civil welfare, Orangeburg, S. C.

# MRS. FRANKLIN D. ROOSEVELT IS LEADING FIGURE AT NYA MEETING

**Answers Many Questions on Social and Political Problems to Delegates**

**Washington, Jan 19 (By Albert G. Barnett for ANP)—Mrs. Eleanor Roosevelt, gracious and popular First Lady of the Land, literally 'stole the show" at the first day's session of the Second National Conference on Problems of the Negro and Negro Youth here Thursday when, after being introduced by Mrs. Mary McLeod Bethune, conference chairman, she told the 1,000 delegates and visitors present: "You ask me any question you like, and. I'll answer."**

Mrs. Roosevelt's invitaton, voiced at the afternoon session held in the auditorium of the Department of Labor, elicited a barrage of questions on the variety of subjects and before the hour forum period had ended, the opinion was freely expressed by delegates that this condesention by the wife of the nation's president was without parallel in history.

Referring to last fall's meeting of the Birmingham, Ala., Conference on Human Welfare, when delegates, by resolution, denounced that city's jim crow law, Mrs. Roosevelt said she was deeply chagrined and shocked when she saw the huge auditorium divided into two sections—one for whites, the other for Negroes. She said she had a compensating thought, however, when she realized that Negroes, in such large numbers, had been awakened to the need for social and economic reform as was indicated by their presence at the meeting.

**She told her NYA listeners: "As an individual, I will answer the question about anti-lynch legislation, I believe such a measure should be passed by the present congress, though I seriously doubt it would solve the problem of lynching. I believe it should be passed, but framed to apply to all parts of the nation." This, she said, would not make it sectional and would be a step in the right direction.**

Mrs. Roosevelt said she would like to see educational facilities extended, as every child, regardless of race, is entitled to a thorough education. In response to a question on civil service, she said that as the civil service develops, Negro youth will benefit and that in larger cities job representation should be increased with group population. "I think an effort will be made in this direction in the, future," she said.

She then answered questions relating to social security, child labor laws, the wage and the hours laws, labor union affiliation and U. S. military service. Concerning the last named, she said: "Negroes should have the same opportunities in the military service as whites."

A statement of procedure for the conference was made at the morning session by Mrs. Bethune, director, Division of Negro Affairs, National Youth Administration, and conference chiarman. She said:

"Two years ago, on Jan. 6-8, 1937, there met in this building under auspices of the NYA, the first National Conference on the Problems of the Negro and Negro Youth. More than 100 representative Negro citizens from all parts of the nation considered the fundamental problems facing the Negro and Negro youth in America.

"After careful deliberation, a set of recommendations was drawn up and presented to the president of the United States, members of his cabinet, the heads of various administrative departments of the federal government and to the members of the 75th congress . . . We are calling you together speecifically to do two things: First, to note our progress since the last conference, and second, to consider new developements and devise new approaches to the solution of our basic problems . . . Through the channel of this conference, we, as a group of loyal American citizens, are offered the unusual opportunity not only to contribute to the development of our own racial group, but also to insure a united democracy.

Main speaker at the opening morning session was Aubrey Williams, NYA administrator, who said, "This is a conference to discuss the problems of Negroes and especially Negro youth. This conference is in itself a part of the very life blood of the democratic process, for here we have leaders of a certain section of the population coming together to discuss among themselves and with public officials the problems close to their own people.

"All of us, Negro and white, have today an opportunity by which we shall either gain or lose the world. We have the opportunity to find our own salvation in the fight for democracy, for the right of all people to have a voice in shaping their own fate."

Evaluation reports were submitted by the following committee chairmen: Civic Liberties, by Thyra Edwards and Walter White; Public Employment, Civil and non-Civil Service, Charles Hounton; Education and Recreation, John W. Davis; Social and Economic Security, Lester Granger; Health and Housing, Dr. M. O. Bousfield; Youth and Its Problems, Mrs. Juanita Mitchell, and Farm Tenacy, Charles S. Johnson.

---

## PRESIDENT LEE HONORED ON HIS BIRTHDAY

Tallahassee, Fla. (SNS)— A dual event in the life of President J. R. E. Lee was commemorated here Thursday, January 26, when several independent groups of the faculty made presentations and paid tribute to President Lee on his birthday and the completion of fifteen years of service at Florida A. and M. College.

The most significant contribution to this dual event was the presentation, at the noon-day chapel by the Publication Committee of the college of a bound volume of anniversary and congratulatory letters from friends, associates and relatives of President Lee from all parts of the nation.

Approximately one hundred letters were contained in this volume from educational, civic, religious social and political figures in the nation.

A program featured this presentation with "The Occasion" expressed by Prof. J. L. Langhorne, who is credited with the sponsorship of this affair.

The student Publications Committee in operation with the faculty Publications Committee also devoted the entire issue of the student paper, "The Famecan," to an exposition of the life workings and philosophy of this educational leader.

---

The late James Weldon Johnson was the first colored man to pass the state bar examination of the state of Florida. United States Senator Fletcher made the motion for him to practice law in the above state.

## LINDEMAN SEES DANGER AHEAD IN UNITED STATES

**Millions Without Work Are Threat To Stability of Any Nation**

The same predicament will overtake America that Central Europe faces today, unless we can make democracy function to provide the normal basic needs of human beings. Dr. Eduard C. Lindeman, New York social philosopher and writer, told about 450 persons at the Grand Avenue Temple, Kansas City, in a recent lecture.

Characterizing himself as a "discouraged optimist," Dr. Lindeman took, on the whole, a gloomy view of the prospects for this country.

**Resources Are Wasted**

"Democracy can't function," Dr. Lindeman asserted, "unless this form of government can find a way of preventing the gross concentration of wealth on one hand and the expansion of poverty on the other. Our social, cultural and economic life has not kept pace with our political democracy. Unemployment is so great as to make the stability of our country a tender balance. No state with 12 million to 15 million unemployed is safe. We have lost our foreign markets and we are not going to get them back.

"We are in the same position as Rome at the end of the fourth century with but one exception, Rome did not have science and technology."

Dr. Lindeman saw little chance of salvation through science unless American scientists could somehow be imbued with a social sense. The great majority of them he said, are badly trained along social lines. They are not interested in politics, are content to be left alone to work as they will, without responsibility for the consequences of any of their acts.

**Must Alter Attitude**

Men are not alike in their capacities but are alike in their needs, Dr. Lindeman asserted. Science could feed these needs and so make democracy concrete if our scientists could be shaken out of the attitude of "science for science's sake" as pernicious a doctrine as that of "art for art's sake" and "business is business."

## Luther King Heard At Tuskegee Institute

Tuskegee Institute, December 22—Luther King, distinguished American tenor, of Cleveland, Ohio, appeared in Logan Hall, here in recital, Friday evening as one of the featured attractions of the Tuskegee Institute Entertainment Course for the winter quarter. The noted tenor had a varied program of American, French, German and Italian numbers, a group of Negro Spirituals, and several popular arrangements.

Outstanding in the first group were Handel's "Love Sounds the Alarm" and the prison song, "Water Boy." "I Hear You Calling Me" was sung with much feeling and expression. "Mah Lindy Lou" was vociferously applauded and the young artist pleased his delightful audience with an encore.

A group of the Negro Spirituals was arranged by Jean Houston, talented wife of Luther King, who accompanied the artist at the piano. "Talk About a Child That Do Love Jesus," arranged by William L. Dawson, was warmly received.

## FREEZING OUT THE ICE MAN

The electric refrigerator has taken first place as a revenue producer among electric appliances for the home, supplanting the electric flat-iron which has led for years. At the end of 1930, there were 2,625,000 refrigerators clicking in the 20,400,000 wired homes of the U. S. However, ironing, real ironing, has become a lost art since the ironclad shirt went out.

**THE FARMER'S CHALLENGE**

"Instead of howling so much about what we have to pay for what we buy, let us turn our attention to raising more of the things we use," rang from one of the speakers at the recent farm conclave at Forsyth, Ga. That is exactly the solution of many of the problems facing the farmers of today. It is true that many things we are called on to buy are out of proportion to their cost of production and manufacture. It is also true that when cotton goods are factoried they are sold back to the farmer at a far advanced price.

For many years there have been contentions around the costs of living. Seldom, if at any time, these have affected the scale of prices. It would seem that those who have charge of the manufacture and distribution of the finished products are so fortified that they cannot be reached for remedy. The only effective way the farmer can fight back is to produce more of the things he is compelled to use. One of the speakers referred to a pair of shoes which cost him thirteen dollars, while a whole cowhide at the farmer's barnyard would not bring over two dollars. Long time ago the farmers tanned their own hides and had neighborhood shoe makers to make them into shoes. Some of the finest boots and shoes the country has ever known were made from old rural benches where the local shoemaker catered to the styles and wishes of the settlement.

It may be that we will come to the manufacture of our shoes, harness, and much of the woodware tools, such as plow stocks, axe and hoe handles and many of the things about the farm for which high prices are paid.

The farmer cannot come into the realization of his opportunities and possibilities whining. He has the weapon in his hand and has only to look about him for its effective use.

The federal government, the extension bureaus, the soil conservation and experiment stations throughout the land are working hand in hand with the farmer. He has but to furnish a little of the gray matter required for the making of his status an independent one.

In Georgia it was found that many of the farm demonstration agents and home economic teachers are doing fine jobs. They are educating the farmers and housewives up to their opportunities and doing more to bring about the solution of the perplexing marketing system than any other agency.

While little is being said about these people they are nevertheless doing a fine job, not only in line with the farms and schools and homes, but in every line of civic and racial endeavor that come to their notice.—Editorial, Atlanta Daily World.

## The Supreme Court Lights The Highway For ICC To See Straight

By Kelly Miller

**Washington, D. C.—The recent decision of the Supreme Court requires a state to provide equal education facilities for both races or admit Negro students to all levels of state educational institutions, hitherto maintained exclusively for white students. It is based squarely upon the provision of the Fourteenth Amendment which forbids a state to deny any citizen the equal protection ot the law. In its wider implication, it accords the Negro equal facilities in hospitals, playgrounds, parks, and in every type of public institutions where the policy of the state insists upon separation of the races. This decision like a double edged sword cuts both ways. It upholds distinction but not discrimination on account of race. It violates the dictum of Charles Sumner that equality of rights cannot exist without identity of rights. On the other hand it sustains the dictum of President Harding, "both races should have the same rights but they need not enjoy these in each others company." The higher ground of Sumner yields to the lower plain of Harding.**

**When the Honorable Archibald H. Grimke and myself declined the offer of Senator Joseph B. Foraker to introduce a Bill for separate but equal Pullman accommodations for the races, we were actuated by principle rather than practical expediency. We declined the possible in quest of the unattainable.**

**It may well be that insistance upon abstract principle is no longer feasible in face of the decision of the Supreme Court and the evident cast of public opinion.**

**Congressman Mitchell has declared his intention of pushing his case to final adjudication of the Supreme Court. That the opinion of the Interstate Commerce Commission will be overruled now seems inevitable. For the judgment of the highest tribunal cuts from under this opinion the Doctrine of race discrimination and its justification on account of the exrense involved.**

**It is particular interesting to note that this decision was delivered through the mouth piece of Chief Justice Hughes and was concurred in by Justice Black of Alabama, and that the two die-hard Anti-New Deal Judges McReynolds and Butler, contributed the minority opinion.**

**By this decision the Negro race has won a practical though not idealistic victory.**

## EX-SLAVE, 100 FRIDAY, CARRIES HEAVY LOAD

**Annapolis,** Md., Jan. (ANP)—Lavin H. Nash, born a slave, celebrated his 100th birthday, Friday, by carrying a 100 pound coal sack on his back to see if he is "getting weak."

The aged man can neither read nor write, but he remembers clearly events before the Civil war in which he was drafted. Richmond fell soon after, and he never saw service.

"That suited me," he told friends, Friday. "I didn't want no war; I was scared to death."

**FARMERS READING NEGRO PRESS, SAYS HOLSEY**

**Tuskegee Institute,** Ala. (C)—A. L. Holsey, field officer of the U. S. Department of Agriculture, AAA division, in his annual summary just made public, says: "More Negro farmers are reading Negro newspapers than ever before which is convincing evidence that the Negro press is rendering a real service in helping to improve conditions in rural areas."

# AMERICAN LEGION IN ALABAMA IS NAMED TO DO "DUTIES" OF KLAN

**Birmingham,** Dec. 28 (By Walter C. Murdock for ANP)—Both the colored and white daily and weekly newspapers have protested against the statement made by Jefferson County's Sheriff-Elect Harry E. Smith. He is credited with saying "The old klan is dead but we have the American Legion and you sheriffs can and should get in touch with them at anytime." The statement was made at the Alabama Peace Officers Convention.

"The American Legion has been and is still one of the patriotic organizations of the U. S. A. People do not believe or degenerate the American Legion to mean a substitute for the repudiated Ku Klux Klan," said the Birmingham World, colored weekly, "nor would anyone like to interpret Sheriff Smith's words to encourage the American Legion to take on the anti-American program of the infernal hooded floggers."

The powerful Birmingham News, white daily, spoke bitterly in an editorial on the Sheriff's plans for secret-order law enforcements and his plans for vigilante committee, in white neighborhoods. Arresting Negroes found walking through them after dark.

"Jefferson county citizens do not want the American Legion, as such used in this county as a special adjunct to the sheriff's office. No organization should be so retarded. Vigilantes are not wanted in this county. Jefferson County residents want the sheriff to feel free to deputize citizens in time of real emergency as sheriffs have always done, but they do not want any private organization, no matter how fine its motives and how respectable its reputation, to have special obligations toward enforcement of law,' said the News.

"If ever the American Legion permits itself to be used in any way reminiscent of the klan, it would blacken its own name and hurt its own usefulness. No course was ever more un-American than the practice of mobs under cover of the night, disguised and robed, going out to flog or otherwise punish a suspect without giving him the trial and hearing guaranteed to every inhabitant of this country.

"Once before Sheriff Smith in suggesting the creation of vigilance groups, indicated an unwise tendency toward placing too much dependence upon secret groups or individuals working secretly. Now his implications toward the American Legion can be looked upon to take over the old flying-by-night activities of the Klu Klux Klan. We fear that he has done an injustice to the American Legion, and revealed anew what might be mildly termed as his lack of faith in the ability to enforce the law. It is extremely regrettable that a sheriff-elect should face his office with such attitudes."

## BLIND MAN, ONCE ON RELIEF, WINS BREAD FOR 13

Roxboro, N. C. (ANP)—The case of blind Percy Warmack, head of a family of 13 and a former relief client, is being cited here to show that a good man may be down, but is never out and that we get out of life just as much as we put into it. Living in Person County, Warmack in 1933 while working on a relief project was blinded when struck by a flying stone from a dynamite blast.

Realizing the $11 a month paid him by the relief agency was not enough to support his large family, he determined to do something about it. In 1935, aided by his family, he had saved $150 which he applied as a first payment on a 100-acre tract of land, being aided in his plan by Charles J. Forde, colored farm agent of the State College extension service.

During the following months by working hard and "cutting corners wherever possible," Warmack and his family have paid $500 on their farm, hope to pay off the remaining $150 through the sale of timber. The blind man's wife is an expert canner, has put up nearly 1,000 containers of fruits and vegetables for the family larder this coming winter. Nine of Warmack's children are in school and he says he proposes to give them as good an education as possible.

## NAME ELIZA WAS BORNE BY TWO WIVES OF PRESIDENTS

The name Eliza, a short form of the Hebrew Elizabeth (meaning "consecrated to God") has not retained the place in popular favor it once held, as has the longer form. Still, there are many women who bear it, especially in cases where it is a family name according to Florence A. Cowles in the Cleveland Plain Dealer.

Two wives of Presidents have borne this name, Eliza Kortwright Monroe and Eliza McArdle Johnson. Napoleon had a sister Eliza whom he made Grand Duchess of Tuscany. The true name of the French tragedienne, Rachel (d. 1852) was Elisa Rachel Felix, Elise and Elisa are French forms.

Eliza Lucas Pinckney, in colonial days, capably managed her father's farm while he was away on government business. Later she married Chief Justice Pinckney and became the mother of that C. C. Pinckney who said to France: "Millions for defense but not one cent for tribute. Elza Haywood (d 1756), English novelist and dramatist, acted in the plays she wrote.

Eliza Ware Farrar (d. 1870) wrote "The Children's Robinson Crusoe," etc. Eliza O'Neill, later Lady Becher (d. 1872), Irish tragedienne, was the most popular actress of her time in Great Britain. Eliza M. Gillespie (d. 1887) became Mother Mary of St. Angela, founded some 30 academies in the United States and organized a corps of nurses who did good service during the Civil War.

**OUR BIG HOTEL BILL**

This country's hotel bill is $1,039,363,000 a year, the Census informs us, distributed among 13,328 year-around hotels and 2,249 resort hotels, clubs and boarding houses. Hotels of 25 rooms or less are not included. It is interesting to learn that 1,097 of the year-around hotels, and 1,537 of the resort hotels, are operating on the American plan. The hotels have more than 1,000,000 guest rooms and employ 300,000 persons. You can see they do much work.

## ETERNAL VIGILANCE

(From "FAX", Moline, Ill.)

THE world stands shocked and aghast at the barbaric treatment being meted out to fellow human beings in Nazi Germany. Such expressions of brutality and barbarism is not the real honest to goodness feeling of the German people. The civilized world knows and understands the Germany of Martin Luther, Goethe and Bach and the Germany of useful arts science and industry, but can not understand the lust and plunder of the persent Reich.

It may seem like a far cry from the mobs that storm into the ghettoes of Berlin and Vienna and a howling blood thirsty mob in the remote section of the deep South, but the same motive inspires both mobs; a blind unreasoning hate based upon no other cause than misunderstanding and a lack of appreciation for each other. Here the similarity in the two mobs ceases. A mob in Georgia or Mississippi acts without approval of law enforcing agencies. Whereas, under present existing conditions in Germany, the government actually aids and abets such lawlessness. Mob violence can be averted in this great land and men of color can help in more ways than one. One way is by "minding his own business"—every Negro knows what that means. Another is by participation in the civic affairs of his community, another is by strict adherence to law and order: and lastly: an eternal vigilance to remove the sore spots of conflict.

# GEORGIA MAY DROP TEACHERS COLLEGE NOW AT FORSYTH

### State Plans to Take Over Ft. Valley Normal, Episcopal School

Atlanta, Jan. 11 (ANP)—The state of Georgia may discontinue the Teachers and Agricultural college for Negroes at Forsythe and take over the Ft. Valley Normal and Industrial school, it was indicated Wednesday by the State Board of Regents.

The Forsythe college is one of the three Negro institutions operated by the state of Georgia, the other two being Georgia State college at Savannah, a four-year institution, and Georgia Normal and Industrial college at Albany, which, like the Forsythe college, is a two-year institution.

No action has been taken toward effecting the change, but the matter is being given serious consideration Recommendation for the change was made by Dean W. D. Coeking of the University of Georgia, who recently directed for the regents a survey of higher education among Negroes in Georgia.

Ft. Valley school, under Episcopal auspices, was described by the dean as being "ideally situated" to handle Negro educational needs in central Georgia. A million dollars would be a conservative estimate of the funds needed to develop the Forsythe school plant, Dean Cocking said, and advised against further expansion there.

"If the state could secure the plant at Ft. Valley," he continued, "and at the same time find some means of disposing of the institution at Forsythe, then it would appear that the needs of central Georgia for higher institutions of learning for Negroes would be met adequately for years to come.

"Knowing of the interest of the General Education Board and the Julius Rosenwald Fund in Negro education in Georgia, it seems entirely probable that the Board of Regents might interest one or both of these boards in providing the necessary funds to secure the institution at Ft. Valley without any financial outlay on the part of the state."

# ACCIDENTAL SHOT BY ARKANSAN GETS HIM DEATH VERDICT

### Sharecropper Missed Overseer but Bulleet Kills Latter's Wife

Little Rock, Dec. 28 (ANP)—Because a white woman was killed in a fight between two brothers and an overseer on a plantation, Rome Bone was given the death penalty and his brother, Mose, was sentenced to serve 21 years in prison by a lily white jury Tuesday. Sentence will be appealed.

The dead woman was Mrs. John A. Deaver. On Sept. 8 her husband, manager of a plantation near Rose City, instructed her to dock the brothers three pounds of cotton per sack for picking "dirty" cotton. An argument developed, aecording to Rome, and the white man drew a gun with which he threatened to shoot the two workers and harm their small sister, Ernestine.

Mose struggled with Deaver in an attempt to take the pistol and in the scuffle the gun went off, killing Mrs. Deaver, Rome said. His testimony was corroborated by Mose.

The overseer, however, told the court that Mose jumped off a truck after hearing the docking order and knocked him down. He then took "deliberate aim" with a gun and shot his wife. His story was substantiated by two small white boys who claimed they saw the incident. The jury deliberated only 15 minutes before reaching a verdict.

The brothers were represented by Scipio Jones, prominent lawyer, and F. W. A. Eirmann, white, who said they would appeal.

# SAINT LOUIS NAACP PLEDGES ITS AID TO LAW STUDENT

**St. Louis,** Jan. 19 (ANP)—In a meeting held last week by the St. Louis NAACP branch, the local organization voted to help defray the expenses of Lloyd L. Gaines when he enters the state-supported law school in Missouri next fall.

Gaines, principal in the case in which the United States supreme court decided that the state of Missouri must either admit Negroes to the University of Missouri Law School or establish a law course at Lincoln university, appeared before the organization to give the first of a series of talks he is scheduled to make. He said that he was anxions to begin his legal studies next fall at Missouri or Lincoln university, if a law course is instituted at that school, but that he was not financially able to do so.

In his talk, Gaines said that Negroes had been kept out of the university because "some groups' feared the competition of the educated Negro. "Japanese, Chinese and Mexicans were allowed in the school," he said, "because they would go home after graduation and not enter into competition with natives here."

Henry D. Espy, attorney and chairman of the executive committee of the NAACP branch, proposed the resolution to aid Gaines, calling attention to "his sacrifice in waiting three years for that which others get without waiting."

## Youth Panel Discussion Highlights NYA Confab In Capital City

**Juanita Jackson Mitchell Conducts Interesting Forum**

Washington, D. C. Jan. 27 (ANP)—One of the highlights of last week's second National Conference on Problems of the Negro and Negro Youth, held here in the conference rooms of the U. S. Department of Labor Building under chairmanship of Mrs. Mary McLeod Bethune, was the youth panel held on Thursday afternoon and conducted by Mrs. Juanita Jackson Mitchell of St. Paul, former youth director of the NAACP. The interesting discussion preceded the spirited address by Mrs. Eleanor Roosevelt, wife of the President.

Panel members were: Miss Pauline Redmond, director of Youth Activities, Chicago Urban League; Miss Frances Granton, recreation director, Southeast Settlement House, Washington; Edward Strong organizer for the Southern Negro Youth Conference; William Bell, graduate student, Howard University; Phillip S. Dines and George Bruce, Jr., NYA of Washington.

Members of the panel emphasized the lack of apprentice-training opportunities for Negro youth because of racial restrictions in private industry and in many labor unions. They declared that the federal government should open up opportunities for this type of training in established departments of the government.

They pointed out that Negro youth are not being integrated into private employment after finishing NYA training courses, because of color barriers. They urged that there be integration of Negro personnel in junior placement bureaus of the U. S. Employment Service. They protested discriminations in Civil Service, pointed out that the government was missing a fine opportunity to get superior, trained workers, since many Negro applicants for Civil Service jobs were better trained than whites; this was because opportunities in private employment are limited for Negroes. They urged that colored representatives be placed on the Board of Appeals of the Civil Service Commission.

The speakers condemned Jif Crow cars as a denial of citizenship rights and urged that the Interstate Commerce Act be amended to prohibit segregation of passengers on interstate carriers, because of race, color or creed. They urged passage of federel anti-ylnch legislation and suggested inclusion in the Harrison Thomas-Fletcher Education Bill of clauses which would insure equitable sharing by Negro youth, in funds to be provided by the bill for extension of education in Southern states.

The panel members reiterated that they do not want relief, that they want jobs in private employment and the right to train for, and be secure in those jobs. They demanded the right to be included in the current federal aeronautics training program, now being fostered through NYA and various colleges. They declared that denial to Negroes of the right to enter the Army, Navy, Aviation and Marine Corps was a denial of rights guaranteed them by the 14th Amendment to the U. S. Constitution.

## "GRANDDAUGHTER"

New York (C)—Little Miss Shirley Turner, seven months old, of Jamacia, N. Y., has the honor of being the "granddaughter" of the National Association for the Advascement of Colored People, it is announced in the current Crisis magazine. Little Miss Turner is the daughter of Mr. and Mrs. Frank M. Turner, Jr., and the granddaughter of Frank M. Turner, Sr., who has been chief accountant in the national office of the N. A. A. C. P., 69 Fifth avenue for 26 years.

## PLENTY OF KICK IN THIS

The following reputedly by a colored schoolboy in Georgia, won a prize as a complete story in the fewest words:

A mule in a barnyard, lazy and slick,
A boy with a pin on the end of a stick
Slips in behind him as still as a mouse—
Crepe on the door of the little boy's house.

## Tuskegee Post Office Employee Dies

Tuskegee Institute, Ala—Funeral services of Traey T. Brannum, who passed away Friday morning, Jan 13, at the Institute Hospital after a brief illness was held Sunday afternoon at 2 o'clock from the Mt. Olive Baptist chureh, Tuskegee, Ala.

The news of the sudden passing of Mr. Brannum, popular post office employee and former secretary of the local chapter of the Tuskegee Alumni Association, shocked the Institute and community as it was not generally known that his illness was of such a serious nature and it was hard to realize that he had died.

As soon as the news of his death was received by numerous friends throughout the country, messages of condolence began to reach the residence of the bereaved widow and mother of the popular postal worker, and friends called to offer sympathy and expressed willingness to be of service in the hour of sorrow.

The funeral serviees were conducted by the Rev. Charles W. Kelly pastor of the Greenwood Baptist church, and the Rev. Harry V. Richardson, chaplain, Tuskegee Institute.

## Church Worker Gets 5 Years; Has No Regret

Syracuse, N. Y., Dec. 28 (ANP)—Andrew Jackson Madison, active worker in a local Baptist church was sentenced to serve from 5 to 10 years in Attica state prison here Friday by County Judge Frank Malpass after Madison had pleaded guilty to 109 petty burglaries running over a period of two years.

Madison showed no signs of regret at either his apprehension or conviction but appeared to take pride in his ability to evade the law over such a long period of time.

# DISCREPANCIES ARE FOUND IN ACCOUNTS OF TUSKEGEE P. O.

### Disclosure Believed Cause Of Tracy Brannum's Suicide, January 13

**Tuskegee,** Jan. 26 (ANP)—Postal authorities cheeking over the accounts of Tracy Brannum, veteran and popular postal clerk who died by his own hand here two weeks ago, are said to have found a considerable shortage. Mr. Brannum for years had been in charge of the money order and postal savings accounts at the institute post office. J. B. Washington, postmaster at Tuskegee for 40 years, died last October.

Conjeeture among Mr. Brannum's many friends points to the presumption that, knowing the advent of a new postmaster meant auditing of office accounts, and seeing no immediate way out of the situation, which it is reported covered a period of years, Brannum chose death rather than face exposure. Brannum died from a self-inflicted revolver wound Friday, Jan. 13.

## McKELLAR SEEKS AID FOR 'CROPPERS'

Legislation calling for an appropriation of $75,000.000 a year, "to alleviate the distress of tenant farmers and sharecroppers," was offered in the Senate this week by Senator Kenneth McKellar (Dem., Tenn.)

His proposal directs the Secretary of Agriculture to rehabilitate each year not to exceed to farm workers in each county in the country. Those chosen would be given loans up to $2,000 with which to buy land and homes, to be repaid in 25 years, and up to $400 a year to put in and harvest crops.

Senator McKellar visions a permanent program which eventually will make unnecessary such incidents as have just occurred in Missouri, where a furlorn army of ragged, shivering sharecroppers and their wives and children were reported to be camped along the highways until routed by state police. Snow, rain and near-freezing temperatures added to the misery.

The sharecroppers claimed they had been evicted from their shacks by landowners who desired to 'chisel on government crop control benefits."

After four days of frightful privation and suffering among the campers, state police moved in on orders from state health officials, who contended the roadside camps were a menace to health.

Part of the refugees returned to their hovels, while hundreds were forced on to swampy, river-bottom spots near New Madrid, Mo.

Appeals for relief to state officials were said to have gone unanswered. "Our only interest," Captain A. D. Sheppard of the Missouri state police patrol was quoted as saying, "is to get these people off the highways."

Four men who brought the refugees a truck load of food and clothing from St. Louis were arrested and, after questioning, ordered to return to St. Louis.

## Chicagoans Give Benefit For Binga

**Chicago,** Dec. 28 (ANP)—In an effort to raise funds to purchase the South Parkway home now occupied by Jesse Binga and present it to the former affluent president of Binga State Bank, a group of Chicagoans, headed by Attorney George L. Griffin of the Chicago Surface Lines (white), arranged a "Jesse Binga Testimonial" party and entertainment for Xmas Eve, at Savoy Ballroom.

Irony of the contemplated purchase is that the home must be bought from the receivers for Binga State Bank, the institution founded by Binga and which, several years ago led to his downfall as a convicted embezzler of the bank's funds. Now impoverished, the man whose wealth at one time was estimated at a million and whose Xmas parties were considered the 'ne plus ultra' of the Holiday Season appeared at the annual soiree, not in the role of host, but as recipient of a testimonial by kind-hearted friends who would preserve a roof over his head in his declining years.

## FARM WORKERS DECLINE

In 1870, over one-half of all gainful workers in the United States were engaged in agriculture. In 1930, only 21.4 percent were employed in this basic industry, accbureau.

# WALLACE TO URGE NEW TAXES TO PAY FARMER BENEFITS

**Processing Levy Held Soundest Plan to Raise $750,000,000 in 1940 Crop Year**

If Congress heeds the advice of Secretary of Agriculture Wallace, it will adopt processing taxes on five major farm crops—cotton, corn, wheat, tobacco and rice—to raise funds with which to pay benefits to farmers who coopcrate in soil conservation under the 1938 farm act.

In his annual report, Wallace declared that the method he proposed is the soundest plan that can be adopted. He declared that unless there is substantial improvement in agricultural prices in the next few months, the new Congress may be asked to appropriate $750,000,000 for benefit payments to farmers for the 1940 crop year.

Subsidies voted for the 1939 season totaled $762,000,000 the largest amount ever made available for a single year.

**Treasury Can't Stand Drain**

Wallace defends the appropriation as essential to national prosperity, but insists that it would be dangerous to continue to dip into the Treasury for such large grants without providing taxes to cover the expenditure. No other levy he can think of meets the bill quite as well as a tax on manufacturers of farm products, he said.

Notwithstanding the U. S. Supreme Court held processing taxes illegal when it invalidated the 1933 farm act, Wallace is confident that the excise would get a different reception if again presented to that tribunal.

The administration this week gained an important ally in its determination to continue 1938 legislation as the basis of farm relief.

**Union Standing Pat**

M. W. Thatcher, national representative of the Farmers' Union said after a conference with the President that the "union is standing pat on existing regulations," but would suggest strengthening amendments and more generous appropriations.

The American Farm Bureau Federation has already lined up on the side of the administration, leaving the National Grange the only important organization out of the fold. The Grange is demanding the domestic allotment plan, with guaranteed prices on all farm products consumed at home.

Thatcher served notice that any attempt to balance the budget by slashing appropriations for farm relief and other recovery efforts would be sternly resisted by his group.

# WEALTH OF U. S. TIGHTLY HELD IN HANDS OF A FEW

**Thorp Cites Concentration of Economic Power in Recent Testimony**

That the wealth-creating machinery of this country is tightly held in a few hands was indicated statistically by Dr. Willard Thorp, Dun and Bradstreet economist who gave testimony December 2 before the monopoly committee now holding hearings in Washington. He made the following assertions:

Two-tenths of 1 per cent of the corporations hold 52 per cent of corporate assets.

One one-hundredeth of 1 per cent of the corporations employ 12.3 per cent of all corporate employes.

He gave the following figures on concentration within specific industries:

Aluminum, one company, 100 per cent.

Automobiles, three companies, 86 per cent.

Beef products, two companies, 47 per cent.

Bread and bakery products, three companies, 20 per cent.

Cans, three companies, 90 per cent.

Cement, five companies, 40 per cent.

Cigarettes, three companies, 80 per cent.

Bituminous coal, four companies, 10 per cent.

Copper, four companies, 78 per cent.

Corn binders, four companies 100 per cent.

Corn planters, six companies 91 per cent.

Plate glass, two companies 95 per cent.

Safety glass, two companies, 60 per cent.

Iron ore, four companies, 64 per cent.

Lead, four companies, 60 per cent.

Oil wells, four companies, 20 per cent.

Steel, three companies, 60.5 per cent.

Whisky, four companies, 58 per cent.

Women's clothes, four companies, 2 per cent.

Wood pulp, four companies, 35 per cent.

Zinc, four companies, 46 per cent.

## HELPS FOR HOUSEWIVES

Jelly makes a delicious topping for drop or sheet cakes; it's sort of old-fashioned too. Beat the jelly with a fork and then spread it generously on the cake. Any kind of jelly is good, but currant, plum and grape are favorites with white or yellow cakes.

Pep up regular boiled dressing with horseradish, chili sauce and catsup and serve with baked or broiled fish. They go well together and are especially appetizing in cold weather.

To clean marble, cover it with a paste made by mixing two tablespoons of soda, one tablespoon each of salt and powdered pumice and some cold water. When the spread paste has dried rub it off with a cloth and wash the marble well with soap and water. Repeat if stains are hard to remove.

To make silver and glassware shine, dry them directly out of hot sudsy water. This treatment also helps to retard tarnishing of silver, which takes place more quickly in winter time when the furnace is on.

Use this test for deep-fat frying of onions: When a piece of bread browns in one minute, add the onions and cook them about one and one-half minutes.

# MITCHELL WILL CONTINUE FIGHT ON ICC RULING

## Rehearing Sought In "Jim Crow" Car Case And Appeal To Supreme Court May Follow

Chicago, Dec. 22—(ANP)—Suiting the action to the word, Congressman Arthur W. Mitchell of Chicago's First District, this week made another, well-planned move in his Jim Crow suit against the Rock Island railroad, decisions in which have twice been adverse to the Illinois solon.

The congressman filed notice with the Interstate Commerce Commission that he will have his attorney, Richard E. Westbrooks of Chicago, file a petition for rehearing and reargument of the recent report of the commission, which held that the Rock Island did not discriminate unjustly when Rep. Mitchell was compelled to accept second-class accomodations, although he had paid for a first class ticket.

The notice that this petition is being filed before the matter will be taken into the federal courts. Congressman Mitchell has instructed Attorney Westbrooks to fight this case, if necessary, to the United States Supreme Court

Should the ICC deny the applications for a rehearing, next move will be to take the famous case before the U. S. district court at Chicago (home office of the Rock Island railroad) on a petition for rehearing of the suit. Adjudication in federal district court will be in the hands of three federal district judges sitting en banc.

Should the district court deny the petition thereby upholding the Interstate Commerce Commission ruling, Attorney Westbrooks can take the Mitchell case, on direct appeal, to the United States Supreme Court.

Basis of the discrimination case is an incident which happened in April, 1937, when Representative Mitchell, sole colored member of the United States law-making body, was travelling over the Rock Island en route from Chicago to Hot Springs, Ark. Although a representative of the U. S. Government and carrying a first-class ticket, Mitchell was forced to leave the Pullman car at Memphis and ride in the Jim Crow coach labelled "For Negro Passengers Only."

## Legislative Program Lays Emphasis On Anti-Lynching Bill And Better Schools

New York, Dec. 17.—Insistence upon equitable distribution of federal funds for education and continued demand for the passage of a federal anti-lynching bill will be the major legislative activities of the National Association for the Advancement of Colored People in the 76th Congress opening in January.

The board of directors at its December meeting approved a legislative program which includes, also, support of amendments to the social security act so it will include domestics and agricultural workers and others who are now excluded from its benefits; and support of any amendment to the wages and hours bill designed to benefit agricultural workers and casual labor not now included.

The anti-lynching bill will be identical, except for minor changes, with the Gavagan-Wagner-Van Nuys bill which passed the House in 1937 and was filibustered to death in the Senate in January-February, 1938.

In the matter of federal education funds, the N. A. A. C. P. will insist on the inclusion of clauses in the proposed federal bill which will insure equal per capita expenditure. At the present time, although Negro children of school age in each state are counted along with the whites in order to determine the amount of money to be allotted the states, there is no safeguard against all the money being spent for white children and none for Negroes. Under this system, it is possible for states where Negro children form 50 per cent of the school population to spend 90 per cent of the federal money on whites and 10 per cent on Negroes. The N. A. A. C. P. campaign in Congress will attempt to have clauses inserted in the bill which will prevent this discrimination.

The N. A. A. C. P. believes that the National Labor Relations Act could be improved by an amendment prohibiting any union from becoming recognized as the bargaining agency for workers if that union restricts or forbids membership on grounds of race, creed or color.

## Walter White Hails Supreme Court Decision As Opening Wide Field of Labor

New York, December 17.—An appeal to the country to give financial support so as to press forward the drive against inequalities in public education was made here today by Walter White, N. A. A. C. P. secretary.

Mr. White hailed the U. S. supreme court decision in the Gaines case which directed the University of Missouri to admit Gaines to its law school.

"This decision," he said, "is sweeping in its language and opens up vast possibilities for the improvement of Negro education all down the line to the smallest rural school.

"The N. A. A. C. P. does not intend to confine itself to college cases, but we expect to use this victory to help us secure better elementary schools, more and better high schools, better salaries for teachers, and improved bus transportation for little colored children in rural areas.

"This fight for better education is not as spectacular or emotional as an anti-lynching fight, but as the years go by, it may prove to be more important even than anti-lynching work.

"We have conducted the campaign thus far, as equal, on a shoestring. The N. A. A. C. P. operates on the slenderest of budgets and has to spread this over scores of different activities.

"If we are to receive the full benefit of the board decision of the U. S. supreme court, there must be funds to press other test cases, to make surveys, to draft legislation and mobilize public opinion in support of it. The amount of good the race receives from this University of Missouri case will depend largely on the amount of financial support it is willing to give to the organization, which for thirty years has fought continuously for full citizenship rights, and which in that length of time has won eleven victories before the supreme court affecting the fundamental rights of Negro Americans."

Contributions should be sent to the National Association for the Advancement of Colored People, 69 Fifth avenue, New York, N. Y. Checks may be made payable to Mary White Ovington, Treasurer.

## WE MUST HAVE GRASSES

All early civilizations were based on special grasses. The whites based their lives on wheat; Orientals on rice; American Indians on maize, and Africans on sorghum. These are grasses, as are rye, barley, oats, sugarcane, bamboo and other valuable crops. Grasses contribute to the food of almost every human in the world, asserts a writer in the Washington Post. In the form of hay and pasture they are also the basis of the stock industry, from which comes most of our animal food.

# MISSISSIPPI GETS REPORT ON POOR SCHOOL FACILITIES

Alcorn, Miss., Dec. 22—(By Leon Lewis for ANP)—According to a report of State Superintendent of Education, L. S. Rogers, Negro education has suffered from lack of proper facilities and absence of a realization that Negroes constitute half of the population of the state and any hold back of them seriously effects the general progress of the state.

An extensive program for Negro public education was motivated after a survey showed that in 15 counties there are no high school facilities for 49,697 Negro educable children; in 53 counties 184,651 Negro children have no high school facilities outside of towns and cities. Although since this report some improvements have been made in the efforts to provide better educational facilities for Negroes, that is, high school education, it is found that out of more than 117,000 Negroes in the state of high school age, schools and facilities are available for only a little over 8,000.

In referring to a school in the state that was his ideal for Negroes, State Agent P. H. Easom addressed Superintendent Rogers: "As a result of this type of school the tenant farmers of the community are growing more gardens, more chickens, more flowers and shrubbery. They are living better and they are more contented. They are moving around less in the community and less out of the community. They are healthier and they are more interested in the school. As a result of this enterprise the white people are more interested in the colored people and the school. They are doing more for the school."

This is indicative of how better school facilities for Negroes affect the entire community, its general attitude towards Negroes and conditions.

A few years back this situation was supplemented with the fact that few Negroes of the state or who wanted to come into the state qualified to teach, owing to the fact that the annual salary for Negro rural teachers was only $125 and for city teachers $280, as compared with $246, and $642 respectively, for Georgia, the next southern state in rank of paying teachers' salaries, and $586.06 and $771.16 respectively, for Kentucky the highest of the southern states.

The state cast eyes towards Alcorn, its only state supported accredited college for preparation of Negro teachers. After the passing of Dr. L. J. Rowan in mid-1934, under whose administration a $300,000 building program went forward, Dr. William H. Bell was placed at the head of the college. Dr. Bell has not only made headway in acquiring through state aid better facilities but has set out to develop a renewed insight on the purposes of education and to produce or turn out the type of finished educational product that can cope with the entire state situation.

At Alcorn is established an environment complex that is built on disciplinary measures of the voluntary type, and purposeful education preparatory for the right type of leadership. This program is catching on with the state authorities, and as a result Alcorn graduates are being scattered throughout the state in new schools being established and in old schools to help elevate the standards.

It is interesting to note that the average monthly salary for teachers in Mississippi is practically the same today as it was 47 years ago. In the produciton of a higher type teacher the demand and necessity for a higher salary scale will grow. In the last few years some cities have recognized this and a survey shows that in these communities most of the instructors are Alcorn graduates within the last five years. Alcorn and the state department of education are working hand in hand to develop better education among Negroes and thereby lead into better living standards and conditions.

# COOPERATION

ONCE every 2 years consumer cooperative leaders of the United States gather to take stock of the cooperative movement's standing, thrash out some of its problems, and lay down broad politics for the next 2 years. Almost 200 delegates and some 400 visitors met in mid-October of this year, in the Kansas City, Missouri, municipal auditorium for the 11th Congress of the Cooperative League of the U. S. A.

League members are 1,770 retail cooperative, claiming 965,000 members on farms and in cities. Last year these societies distributed over 100 million dollars' worth of goods—chiefly groceries gasoline and oil, farm supplies—and services such as insurance, housing, medical care. At its last Congress, two years ago, the League represented 704,000 members.

Not all societies are affiliated with the League, but the League is generally recognized as the national voice of consumer cooperation in this country. It is, in turn, affiliated with the International Cooperative Alliance, whose members are farm and city cooperative federations of 40 nations.

Emphasis was laid by the Congress on the role of education and publicity in the cooperative movement; the need of developing friendly relations with labor; the importance of eliminating competition among cooperative; the requirement of cooperatives for financial resources of their own; and the relation of the growth of cooperatives to the preservation of democracy in the United States.

The publicity program of the League revealed a widening use of newspapers and magazines, posters, films, speakers, platform, radio, leaflets, and efforts to enlist the "support of leaders of all organized democratic groups."

Educational programs of cooperatives seek to reach people who do not know about cooperation, and "those who do know something about it" and "need greatly to know more." With the subject of cooperation recognized as a part of the curriculum in schools and colleges in some States, the Congress called upon other communities to begin the teaching of cooperation. This proposal was supported by a recent recommendation of the National Education Association.

EXPANSION of the cooperative movement has made it a considerable employer of labor. At the same time, the cooperatives, whose greatest strength is among farm groups, have been concerned with enrolling more wage earners in consumer co-ops. A resolution adopted by the Congress places the cooperatives on record in favor of good labor standards. Says the resolution:

"WHEREAS: (1) The Cooperative Movement believes in maintaining proper labor standards, (2) upholds the right of labor to collective bargaining, (3) recognizes the values to be obtained through a harmonious and effective promotion of Consumers' Cooperation in the ranks of organized workers as consumers;

"BE IT THEREFORE RESOLVED:

That the delegates of the convention of the Cooperative League of the U. S. A. recognize the principle of organization and collective bargaining for their employees, and call on organized labor to recognize the unique function of the Cooperative Movement in building an economic structure controlled by consumers in their own interest; and further recognize its responsibility to maintain relations with cooperative associations which will not place them at a disadvantage with their private competitors or prevent their performing effectively in the interest of workers who are all consumers."

COOPERATORS want more facts about their own businesses To obtain accurate data on the operations of cooperative enterprise, the U. S. Bureau of the Census was urged to collect statistics in the 1910 census on cooperatives.

Some frank words were heard on the subject of competition between cooperatives. Differences between farm groups, between religious groups, and between farmers and workers have unfortunately been built up, felt one speaker, so that "many of our organizations who claim a monopoly on the word 'cooperation' refuse to cooperate with each other and war upon one another in the most deadly fashion."

Most useful sessions of conventions are often those in which the delegates frankly evaluate their own work, and turn the spotlight on its weaknesses. Listing some weaknesses of the movement as it is today one speaker stated: "Let us admit immediately that as yet the movement is very loosely bound together on a Nation-wide basis. Let us admit that to a certain degree this weakness is largely brought about by the weakness of the leadership, by the weakness of ourselves who are here assembled. Let us admit that up to the present we have largely failed to accumulate adequate reserves in a centralized body which would make possible the financing of a powerful economic unit. Let us admit that even our strong regionals and locals in many instances have honeycombed the business structure by adopting unsound policies such as credit trading."

Cooperatives need financial institutions of their own. The development of cooperative insurance companies, along with credit unions and cooperative banks, was seen as the cornerstone of the cooperative structure. Pointing to the growth of the Farm Bureau Mutual Auto Insurance Company, with assets of 5 1-2 million dollars, another cooperative leader declared: "By investing their funds in cooperative purchasing, marketing, housing, trade, industry, and in mortgage loans to consumers, cooperative insurance companies can play a prominent part in furthering the development of the whole cooperative movement and thus render further service to members and policy-holders."

FRESH FRUIT Record supplies of winter and spring oranges, as well as grapefruit, are in prospect for the 1938-39 season. Citrus season is now fully underway and marketings are expected to increase during the remainder of the year. Usually citrus prices are lowest in the winter months, and higher in the summer and fall. Upward trend in production, however, has tended to lengthen the period of relatively large supplies and to smooth out seasonal price fluctuations. During the season which ended in October when supplies were very large, there was very little price increase between the winter and summer periods. Citrus prices have been relatively low all year. In October the U. S. average retail price of oranges was 28 cents a dozen, about less than in 1937, and the lowest October price on record.

Apple supplies, however, are expected to be smaller than in the past season, until the new crop matures in the summer. Apple prices generally are lowest in October and highest in June. During years when supplies are small, such as the current year, the price increase during this period usually is relatively large. Retail apple prices went up slightly from September to October and were about half a cent a pound higher than a year earlier.

NUTS Nut supplies in 1938-39 probably will be much smaller than a year ago. Last year nut production reached relatively high levels because of record crop of walnuts, almonds and filberts, and close to record size pecan crop. Current crops of almonds and pecans are expected to be about 40 percent smaller than in 1937 while a 25 percent drop is in prospect for walnuts. Filbert production probably will be about the same as a year ago.

POULTRY Fall and winter broilers, chickens weighing from 2 1-2 to 3 1-2 pounds start moving to market at this time of the year and are available through March. Supplies considerably larger than a year ago are in prospect. Bulk of poultry marketings during the last 2 months of the year, however, consists of roasting chickens. Supplies of these chickens during this period are expected to continue larger than a year ago, During 1939 supplies of poultry are expected to be even still larger than during the current year.

Retail poultry prices declined further from September to October to reach their lowest level for this period of the year since 1934. Prices are about 6 cents a pound less than in 1937.

CANNED VEGETABLES Large supplies have caused further price reductions and pushed down plus current pack) in the 1938 While total supplies (carryover plus current pack) in the 1938 39 season probably won't differ much from the season just ended marked increases and record supplies are in prospect for green peas and string beans. Canned corn supplies probably will be the same as a year ago, but smaller amounts of canned tomatoes and tomato products are expected. In October the retail price of canned green peas was the lowest since the end of 1933 while canned corn was retailing at its low est level since early 1936.

To entirely forget an injury done to me by others is truly beautiful.

## Opposing Camps In Texas Weigh Negro Graduate Education

Austin, Texas, Jan. 10—(By Elaine Ellis for CNA)—Negro graduate students in Texas may have their educational facilities provided for them in the future by legislative enactment, but support for such a measure runs in two different channels. On one hand is the growing sentiment on the part of both Negro and white citizens who are desirous of seeing Negro students have the better opportunity to which they are justly entitled. On the other hand are leading officials who are compelled to support a measure for state aid because they fear, particularly since the U. S. Supreme Court decision on the Missouri case, that Negro students will try to enter the University of Texas. George Allen, a Negro graduate student who enrolled in a Texas University salesmanship class by invitation, was forced by authorities to withdraw when his race became known.

Governor James V. Allred has announced that while Negro students are entitled to higher educational opportunities, he considers that state aid should be provided for individual Negro students for facilities outside of the state. At present, Negro teachers and others with degrees are prevented from going even at their own expense because their miserably low wages will not cover the cost. Therefore, the only difference, under a state provision, would be an appropriation which, although it would cover the cost, might also provide for only a limited number of students.

However, this method, in the estimation of Governor Allred, would be "more satisfactory" than the expansion of facilities within the state. His reason for this choice is obvious in his assurance to the taxpayers that "appropriate safeguards" will be incorporated in the legislative bill to "properly protect their interests," and that "It will not require the outlay of any tremendous sum."

He declared that his suggestion, which was made before the decision on the Missouri case, would not be altered in any way.

Dr. Ira P. Hildebrand, dean of the University of Texas Law School, is not pacified by the governor's suggestion. Fearing that Negro graduate students might eventually get past the portals of this Jim Crow university, particularly in the case of his own department, he has advocated the establishment of a law school at the Prarie View State College for Negroes.

# DOCK WORKERS IN CUBA SNUB CADETS OF HERR HITLER

Santiage, Cuba., Dec. 28 (ANP)—Last Monday as the ancient cannon at Morro Fortress boomed out a customary salute, the 500 officers and men aboard the German school ship Schleswig-Holstein were in festive mood, anticipating a great reception when they docked.

The smiles quickly disappeared from their faces when they came ashore, however, as 30,000 workmen lined the docks and downtown streets, each man wearing a black ribbon in his lapel and unmistakable frown on his face. It was an official "demonstration of displeasure" against Germany's Nazi rule and ordered by the Santiage Federation of Labor. Police arrested several demonstrators during the day.

Visit of the German training ship was arranged by Hans Herman Voelckers, German Minister in Havana, and was intended as a tropical "fiesta" with accent on German-West Indian good-will.

True Christians are like stars that shine brightest in the darkest night.

# PREJUDICE RISING AGAINST HIRING JEWS IN AMERICA

New York, Jan. 11 (By Pienzi B. Lemus for ANP)—Discrimination against the employment of Jews in the United States is increasing, and has steadily increased following Adolph Hitler's rise to supreme power in Germany. The foregoing statement is not in a release by the U. S. Census bureau nor from the federal labor department. The facts have been uncovered in a survey made by the chairman of the commission on economic problems of the American Jewish congress.

The survey covered the past twelve-months' period, and was conducted under the direction of J. X. Cohen, the congress economic commission's chairman. Mr. Cohen said he found evidence of the increases of anti-Jewish prejudice in the classified advertising columns of newspapers, and confirmed it by an investigation of the leading employment agencies of New York City and of the personnel record of various industries, including public utilities, quasi-governmental agencies, banks, insurance companies, hotels and department stores.

## 22,000 Families To Be Added To Housing Projects

Washington, D. C.—More than 22,000 Negro families will be added to the 7,000 already residing in Government financed low-rent housing projects, according to a summary report submitted last week to Nathan Straus, Administrator of the United States Housing Authority, by Dr. Robert C. Weaver, Special Assistant. Additional thousands will participate in this program in cities for which ear-markings have been made.

Provisions for these 22,000 low-income families are contained in loan contracts approved by President Roosevelt upon recommendation of Mr. Straus and agreed upon during 1938 by the USHA and the local housing authorities. Meanwhile, Negro families are residing in 29 o fthe 49 projects initiated by the Housing Division of the Public Works Administration and now administered or leased to local authorities by the USHA.

Cities in which provisions are being made for Negro participation in the Government's $800,000,000 public housing program are located in 21 States and the District of Columbia. They include such distantly removed points as Boston, Mass.; Oakland, Calif.; New Orleans, La. and Detroit, Mich. Small cities such as Orlando, Fla., are on the list as well as such large cities as Baltimore, Pittsburgh, Washington, Philadelphia, Chicago and Memphis.

The USHA has approved loan contracts amounting to $320,986,000 to defray 90 per cent of the development costs of the 140 projects. In addition to these contracts, the USHA has earmarked $328,803,000 for projects in other cities. These loans and earmarkings total $649,789,000 and exhaust the present funds available for the Government's slum clearance and low-rent housing program.

Commenting upon the program, Mr. Straus said:

"It is important to note that the majority of all sites selected so far for new projects actually are in very bad slums or blighted areas.

"The United States Housing Act requires the elimination by effective closing or repair to one slum dwelling unit for every new family unit built with a USHA loan. Every one of our contracts for a loan has been predicated upon firm arrangements between USHA, the local housing authorities and the municipalities to carry out the "equivalent elimination' provisions of the law. We must do this whether we build directly in the slum areas or on vacant sites."

## VIRGIN ISLANDERS SWAYED BY GHOST OF BLACKBEARD

In the Islands once inhabited by privateers and buccaneers live myths and tales vastly more entertaining than the stories that were left in the wake of the European conquerors. In our American Virgin Islands group the Isle of St. Thomas was the home of two such pirates: Blackbeard and Bluebeard (not to be confused with the Bluebeard of the French legend) Standing are the relics of their "reigns"—two silolike castles, eerie and interesting, relates Anson Brown in the Chicago Tribune.

Each castle is a perfect cylinder about 50 feet high and 20 feet in diameter. They stand atop separate hills that help make up the city of Charlotte Amalie, and the gayly colored roof tops of the homes straggle down the hills from their foundations. Picturesque in the warm sunlight of the day, but when the full moon picks itself up out of the ocean at night and casts shadows among the loose bricks of the castles, the Negroes shudder in their homes.

They are almost morbidly superstitious, these black people. They board up their windows at night to keep out the jumby ghost, and sleep without a breath of air filtering through their rooms. On the night when the moon is full Edward Teach, the Blackbeard, is said to come down from his castle and roam the water front. Black children of the Virgin Islands fear his ghost more than American children fear the bogie man, for they actually can see where he lives.

Of the two pirates, Blackbeard is reputed to have been the fiercer. He was born of good parents in Jamaica about 1670 and was soon proud of the fact that people referred to him as the black sheep. Bitterly heartless and cruel, he gradually altered his appearance by growing a long black beard which he braided in strands and decorated with pink and blue ribbons.

He set out to sea with other free-booters and, by sheer force of his fearless personality, was soon ruling the Caribbean waters. He plundered ruthlessly any merchant vessel that crossed his path. He locked up an astounding fortune somewhere within the confines of his castle on St. Thomas.

## Mitchell Urges Tuskegee For Pilot-Training Unit

Washington, D. C., Jan. 19 (ANP)—Representative Arthur W. Mitchell Illinois Democrat and only Negro congressman, last week asked Secretary of War Woodring to designate Tuskegee institute as one of the schools for training pilots and air-craft mechanics.

Secretary Woodring promised consideration of this proposal, according to Congressman Mitchell. President Roosevelt has recommended that 20,000 pilots be trained, and Mitchell said that on a population basis, one-tenth of them should be Negroes.

It may be a long time before the race will be able to see good only, but as it improves its ability to see some good, more good will be ready to be seen.

# NYA YOUTH LEADERS OUTLINE PROBLEMS AND ASK FOR RELIEF

### Conference Urges Federal Government to Keep Control of Funds For States

Washington, D. C., Jan. 19 (ANP)—A remarkable report detailing the many social and economic impediments that beset youth and retard his physical, mental and cultural development, was presented at last Saturday's closing session of the Second National Conference on Problems of the Negro and Negro Youth, meeting in the Department of Labor building and presided over by Mrs. Mary McLeod Bethune as general chairman.

The report, with recommendations for alleviation of the ills mentioned, was submitted by Mrs. Juanita Jackson Mitchell, St. Paul, Minn., chairman of the Conference's Special Youth Problems committee, of which Miss Pauline Redmon, Chicago, and J. Percy Bond, Durham, N. C., were the associate chairmen.

Highlights of the committee's report were: "Rapid social and technological advances and changing economic conditions have resulted in an ever-widening period between the time young persons leave school or college to the day they find employment. While the problems of the lack of opportunity to complete an education, inadequate vocational guidance and vocational training, job-seeking handicapped by lack of work experience and increased leisure unmet by a proportionate increase of recreational opportunities are common to all youth, they are a thousand times more complex and difficult for Negro youth.

"For approximately two and a half millions of Negro youth between 16 and 25 years of age these specific youth problems are intensified by inequality of opportunity occasioned by racial discrimination. We, therefore, commend this conference for its recognition of these special problems of Negro youth and for its inclusion this year of a committee to evaluate them and to make recommendations for their alleviation.

"REACHING YOUTH IN NEED: We recommend that the NYA be converted into a permanent Federal youth service agency and that the laws of eligibility governing it be modified to include youth of non-relief status on the basis of needs.

"INTEGRATION ON NEGRO YOUTH IN NYA: We reaffirm the vital necessity of a thorough integration of Negro youth into the program of the National Youth administration. We urge the continuance of the effort to provide for the appointment of Negro administrative assistants in all states where there is an appreciable Negro population, to assure this integration.

"GUIDANCE AND PLACEMENT: 1. We recommend the Negro youth be given opportunity to fully participate in the existing vocational guidance and junior placement service of the NYA. We further recommend that this program be extended to adequately provide for the vocational guidance and placement needs of youth in those localities where they do not now exist.

2. We urge that the Federal Government control the NYA and the Junior Placement Service of the U. S. Employment Service, to the extent that the equal benefits of this service bill will be received by Negro youth throughout the country. We recommend that at nationally representative committee be appointed by the Division of Negro Affairs of the NYA to investigate occupational trends and employment opportunities.

"EXPANDED PROGRAMS OF NYA: We recommend that the national office of NYA give particular consideration to the inclusion of Negro youth in development of the expanded program now operating on a regional and national basis. There is today an increased interest in national defense. We wish to make the following recommendations regarding them:

"1. That provisions be made for the full participation of Negro youth in NYA regional training projects for metal arts and crafts, auto mechanics and aeronautical mechanics at Charleston, W. Va., and Algiers, La.

"2. That while Negro youth are included in the resident training project at Quoddy, Maine, a larger Negro youth participation should be secured.

"3. That upon the satisfactory completion of training courses in metal arts and crafts, auto mechanics and aeronautical mechanics. Negro youth be given equal opportunity to secure work in public and private enterprises requiring such skills.

"4. That Negro representation be included on the President's advisory committee on aviation.

"APPRENTICE TRAINING: Since very little authentic data are available on Negro participation in the Federal apprentice training program operating in and with the cooperation of local communities, we recommend that the various federal advisors on Negro affairs in Washington give care and study to this problem.

"CIVILIAN CONSERVATION CORPS: We recommend that the Civilian Conservation Corps be a permanent agency of the Federal government and that there be an increase in the appropriation for its continued development.

"EDUCATION IN COOPERATIVES: We recommend that the NYA extend its program of giving education in cooperatives. Inasmuch as cooperatives already in existence at the various resident training centers have generally proved successful, we therefore recommend establishment of additional cooperative projects along other lines.

"HEALTH EDUCATION: We recommend that the U. S. Public Health Service in its present and expanding program for urban and rural youth be administered without racial discrimination and based solely on health needs.

"In view of the fact that sex education plays an important part in the transition from immaturity to maturity, and in the preparation of individuals for marriage, we recommend that the federal government take steps to insure adequate sex education for youth through the provision of trained health education workers to be loaned to the states much in the same way as are the consultants in the veneral disease control program of the U. S. Public Health Service.

"Follow-Up: We urge that a continuation committee on Special Youth Problems be appointed to help follow through on the recommendations made at this conference. We further recommend that there be adequate youth representation on this committee."

## KILLS RED FOX WITH MILKING STOOL

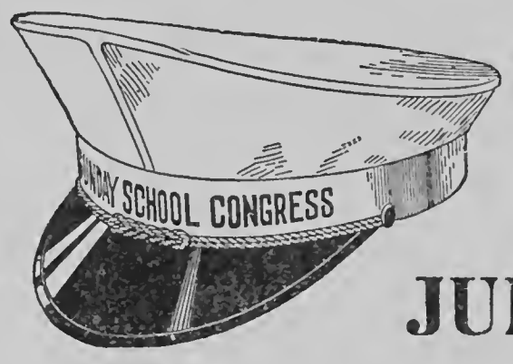
Orion.—Slaying a fox with firearms has become a rather common occurrence in western Illinois the last few years, but Darrell Erdman is probably the first person to have killed a red fox with a milking stool.

Yesterday morning about 6:30, the youth had just finished milking at the home of his parents, Mr. and Mrs. Ernest Erdman, northeast of Orion near the Rex coal mine, when he saw the fox. He grasped his milking stool and swung. The fox struck in the head, was killed.

Apparently the animal had been sleeping with the cows and calves in the stable. A number of fox tracks were seen about the house and barnyard.

Soil Conservation is already protecting and enriching 10 1-2 million acres of land in 35 states and soil-building practices are in effect on 53 million additional acres under the New Deal agricultural program.

Religious Forces of the Nation Will Gather IN



Indianapolis, Indiana

JUNE 7-11, 1939

The 39th Annual Session OF THE SUNDAY SCHOOL CONGRESS

invites you to meet with them in a five day Summer School of Methods where you can demonstrate what you have achieved, illustrate what you can do, help in the Front Line Sunday School building, contribute to the advancement of those who do not know and lend your influence, your knowledge, your experience and your training to every phase of Denominational work, as there will be representatives there from the schools who will be eager to listen, learn and imbibe these teachings. The following are some of the departments in this great School of Methods. Come on to Indianapolis, Indiana and see for yourself what you can do with the material you have to work with in your Sunday school.

The Metoka and Galeda Department
The Advanced Teachers Department
The Intermediate Department
The Primary Department
The Music Department
The Superintendents Department
The Missionary Department
The Junior Department
The B. Y. P. U. Department
The Cradle Roll Department
The Home Department
The Ministerial Department
The Daily Vacation Bible School Department

# SONG BOOKS

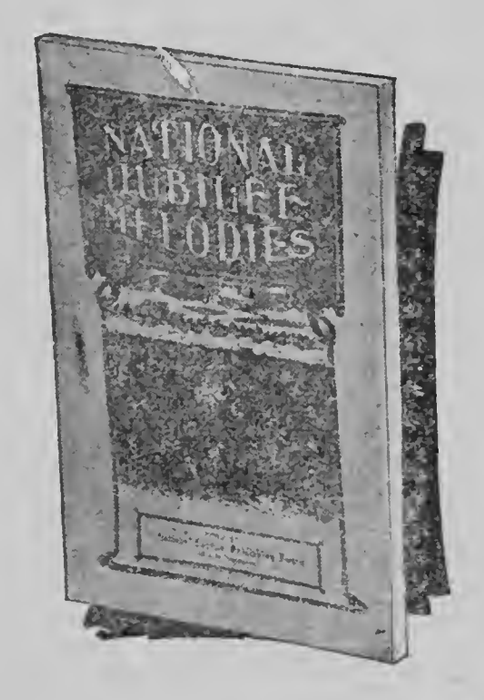
## For Sunday Schools, B. Y. P. U. and Church Worship

## NATIONAL JUBILEE MELODY SONG BOOK

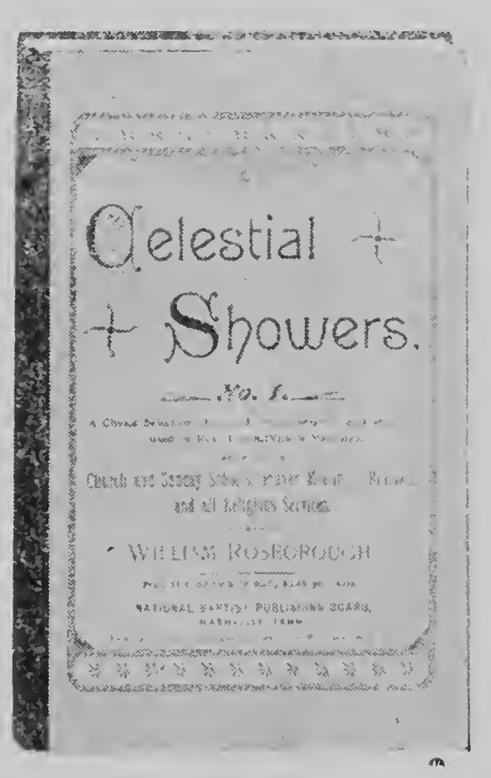
Order today and try these songs in your eleven o'clock service. You'll not regret it.

**PRICE 50c**

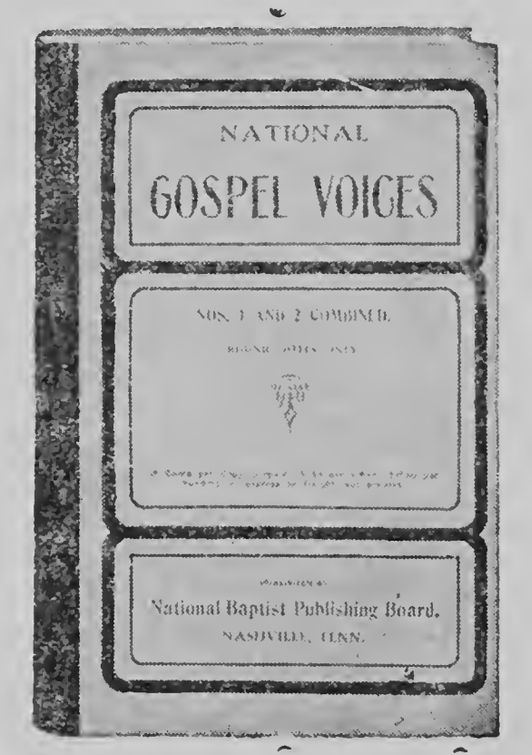
America's original music. Songs from the Plantation and Slave Days. More than two hundred thousand sold in the year of 1935 More now going. Send your order.



**Other Popular and Inspiring Songs Are to be found in these**



**Celestial Showers 40c each; $4.80 per dozen.**



**National Gospel Voices Nos. 1 and 2 combined 45c each; $5.40 per doz.**

**Write for a Song Book List**

## OUR LATEST PRODUCTION—THE CRAZE OF CHOIRS AND CHORUSES IS OUR . . .

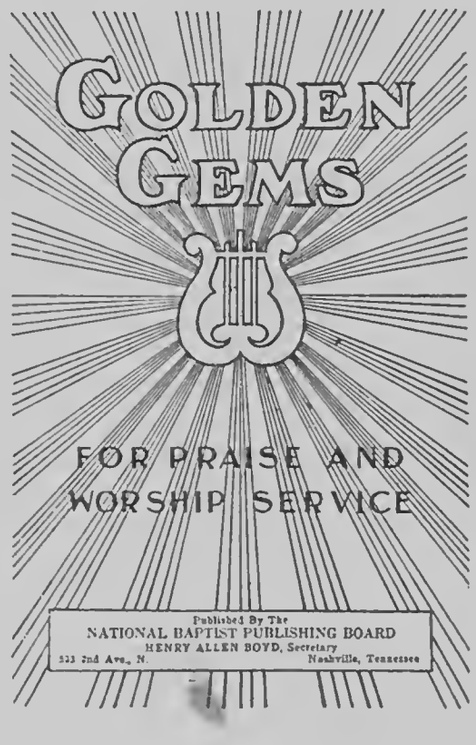
### THIS BOOK

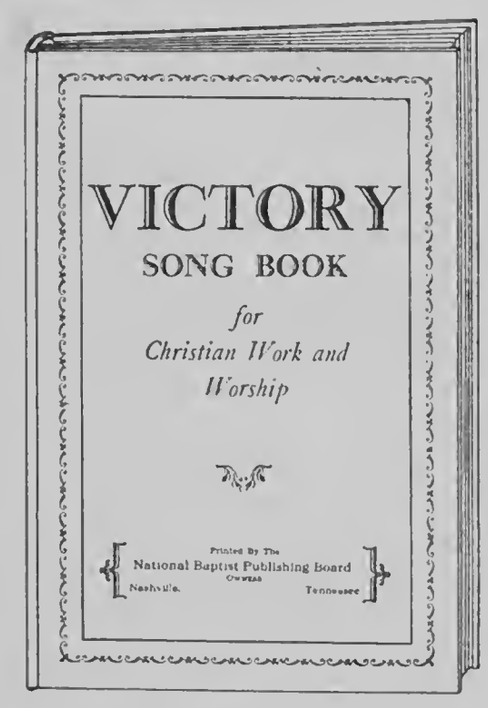
**Contains such Popular Songs as:**

He is Coming Soon
Singing as We Go
He's My Everything
He Understands
He'll Say Well Done
Gospel Waves
Is He Yours
Only Give Me Jesus
Over in the Glory Land
The Unseen King
I'm Out on the Battle-field

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

**Price Only 25c**





## THE VICTORY
### Song Book

*For Christian Work and Worship*

contains spicy, tuneful, popular songs that can be used for solo work, chorus or congregational singing.

**Price 40c per Copy**

# ILL WINDS FROM MISSOURI

(Continued from Page 1)

harder day's work from their tenants and farm-hands. They are willing to pay them the promised wages, but no more. The average Missouri landlord has little respect or sympathy for the "gimme" type of colored brother, who comes to him, hat in hand, resquesting assistance.

Missouri sharecroppers and farmhands have not been able to become familiar with the ways of the Missouri landlords. Neither have they been able to adjust themselves to their condition and situation. To a large extent they have kept on trying to do the impossible,—in Missouri,—depending entirely on the one crop,—cotton,—for their subsistenee,—depending on the landlords to get them out of their troubles,—depending on promised relief,—depending on something to happen or turn up,—depending on everything but themselves and each other.

For several years the National Federation of Colored Farmers has attempted to do everything possible for the welfare of our farming group in this state of Missouri. Our organization has been successful in bringing about friendlier and better relations between landlords and tenants. We have encouraged sharecroppers and tenant farmers to purchase farm homes and have found opportunities for them which enabled them to purchase on very reasonable terms. We have assisted in obtaining for them federal farm loans and have advised and assisted them in their cooperative efforts. We have tried our best to help them beeome self-sustaining, independent farmers and citizens.

We believe we have done a good job although our success has been nothing to brag about. But we ean brag about this fact—not a single member of the N. F. C. F. was found among the groups camping along the highways.

Most of these "campers" and strikers have their own selves to blame for their troubles and suffering. A large percentage of them were not sharecroppers or tenant farmers, who, until the turn of the year, had been living on nearby plantations. Many of them, probably a majority of them, were transient cotton pickers from Arkansas, Tennessee and Kentucky. They were acting under the influence of agitators and trouble-makers, who, as usual, were promising them forty aeres free and a mule, and other "gracious gifts" if they would follow their advice and aceept their leadership. These agitators and "would-be farm organization leaders," know about as much about the Negro farmer and his problems as a hog knows about a holiday.

We hope however, that this experienee has taught these deluded people, and all the rest of us, a good lesson. Had these families settled down last spring,—right there in southeast Missouri, where the soil is as rich as the soil in the land of Goshen,—had they settled down and raised some pigs for meat and some vegetables for winter use,—had they settled down and worked hard during the long growing season and managed well, and accepted sound advice instead of fool advice,—they would have been well fixed for the winter and able to take care of themselves. Missouri landlords cannot be blamed for their difficulties. The good land was there,—the opportunity to raise plenty to eat was there,—the strong backs were there too,—but the willing mind was wandering. And no man, black or white, farmer or anything else, can get along in this world nowadays unless he has a will to work and think for himself. The Lord won't help us unless we help ourselves some and in this case he has proved it.

Reduction in cotton acreage has deprived very few of us of a chance to earn a living. We can't blame the government's farm program for our troubles. Thousands of tenants and shareeroppers who have remained on plantations all over the South are eating better and living better today than ever before in their lives. Much eotton was responsible for their misery. Less cotton is making them healthier and happier. And just as soon as more of us get the big-one-crop-foolishness out of our heads, more of us will have more in our stomachs, more on our backs and more in our pockets. We should stop begging landlords to let us raise as big a erop of cotton as possible. We should beg them to let us raise a double size garden and lots of grain and hay for our hogs, chickens and the cow.

The N. F. C. F. is going to continue working in Southeast Missouri and we need and deserve the support of all citizens who are interested in the welfare of our farmers there and want to help them. The state and Federal governments should give us at least a round dozen efficient, unselfish, industrious, county extension and home demonstration agents of our own racial group to work with our farmers and their wives in this section and we are going to keep on doing some agitating ourselves until we get them. We also need in this section more rural teachers and preachers who are willing to live with and work with the people,—not the kind who make their living off the people then do all their living in the nearby big towns and cities.

We must also do our best to encourage and assist our farmers to become farm owners. There are too many big farms in this section,—too much good land going to waste. There are fine opportunities there for our farmers to purchase farms on reasonable terms. More of them must be persuaded and helped to take advantage of these good opportunities.

And last of all,—it might be a good idea to use the big stick on the numerous agitators and "nuts" who take advantage of "northern privilege" here "aeross the line" and strive to lead the farmers the way they shouldn't go in.

# BRITISH TO OPEN COLLEGE SOON

(Continued from Page 1)

Afraid that tribal wenches may undo the effects of higher education, the Commission suggested that facilities for giving a sound secondary school education to a limited number of young females be immediately provided. When this provision has been made, students are maekerere will be advised to marry during their college careers. Reason: "To preserve their morals."

# PROBLEMS OF THE NEGRO WOMAN

(Continued from Page 1)

last Census. It is further true that practically 2 in 5 Negro women in contrast to 1 in 5 white women work for a living.

Occupational progress for Negro women generally has been slow. In pre-Civil War days their employment was almost completely restricted to two fields where work is largely unskilled and heavy—agrieulture and domestic service. In 1930 about 9 in every 10 Negro women were still engaged in farm work or in domestic and personal service. What occupational progress Negro women have made has been for the most part in connection with their entrance into the somewhat better paid and better standardized occupations in domestic and personal service, for example, in power laundries, beauty shops, public housekeeping, and as elevator operators and charwomen. In addition, increases have been shown in the last 20 years in the professions and in elerical work. Even here, however, it must be pointed out that while 56 percent of all native-born white women workers were in the white collar oceupations in 1930, only 5 percent of the gainfully employed Negro women were in these occupations.

Among the measures for improving the economic status of the Negro woman worker briefly considered in the bulletin are social and labor legislation, improvement in educational and training facilities, and trade-union organization. A group of selected references on Negro women workers is included as an appendix.

The publication which is "popular' rather than statistical in form should be found useful by workers' education and club groups interested in labor problems. The title is "The Negro Woman Worker," and the report is the work of Jean Collier Brown of the Women's Bureau staff.

# START NEW YEAR

(Continued from Page 1)

families who were granted loans.

When Willis was accepted on the Farm Security Administration program for 1938, he needed money to carry him through the crop year, and some equipment to improve his farming. He was granted a rehabilitation loan large enough to cover these needs—which he has already repaid, in spite of the drought. Farm Security Administration farm and home specialists helped the family plan their work for the year.

With this help the Willises went to work with renewed courage. Last year they raised 400 bushels of corn—much of which will be ground into meal for family use—105 bushels of wheat, 75 bushels of sweet potatoes, 20 bushels of peas, and plenty of garden produce. Mrs. Willis canned 191 quarts of fruits and vegetables, more, she said, than she had ever canned before in her life, and th's was canned in a bad season.

To round out the Willis family's food budget, there were more than 1,000 pounds of pork—home-produced, six milk cows, three of them milked at a time, which gave 20 gallons of milk a week for the family's milk and butter needs.

In addition they have 65 hens that lay about four dozen eggs a week, 21 baby chicks and 14 turkeys, (nine have recently been sold).

Assured of appetizing and nourishing food the year-round, the family is cutting corners on clothing by skilful use of fertilizer sacks for clothing and table linen. A pressure cooker will soon be added to the family equipment, to increase the canned food supply, although Mrs. Willis is already skilled in the use of the time-honored ham-boiler method—a little slower, but still in good standing.

The cash crop, cotton, provides money for the replacement of Farm Security Administration funds and for carrying expenses for the coming year. This year, Willis raised seven bales on eleven and a half acres.

The farmhouse on the new farm has been remodeled and repaired in accordanee with the needs and wishes of the new occupants, who celebrated their first year as owners with a raised-at-home Christmas dinner. The Willis family, with Government partnership, has safely made the step from tenancy to hard-won ownership.

# VINDICATION OF FARM ACT

(Continued from Page 1)

program will work out:

The Department of Agriculture will decide how many bales should be produced to meet domestic needs and the estimated export demand. Each farmer will be told how much he can market.

**How Program Works**

For example, if Farmer A's allotment is 10 bales and he produces 15 bales, he is going to find himself in trouble. He can market the 10 bales in the regular way, but on the five bales excess he must pay a tax of 3 cents a pound, which is prohibitive, and is intended to be so.

Secretary Wallace contends that farmers, knowing in advance the amount of cotton they can profitably market, will go to considerable pains to keep within their limit. If nature is in a bounteous mood, Wallace said, farmers simply will pick their allotment and leave the surplus on the field.

**Sees Law Vindicated**

Wallace predicted that the decision of cotton growers means continuation of existing farm control machinery, with little or no modification. While there has been considerable talk of changing the act at the next session of Congress, Department of Agriculture officials are confident the movement will not make progress.

Wallaee and his aides contend that advocates of the domestie allotment plan waged a vigorous campaign against the control program, telling farmers that its defeat in the referendum would be considered a mandate to Congress to revise the farm legislation.

In face of the emphatie rejection of this advice by cotton growers, the officials insist, lawmakers will probably be disposed to let matters drift until they see how the marketing arrangement works out.

**Backed by Federation**

In resisting amendments, the administration will have the support of the American Farm Bureau Federation.

At its annual eonvention in New Orleans this week, President Edward A. O'Neal declared that President Roosevelt has "given us the best all-around farm program we have ever had."

O'Neal said eriticism that the aet has not held up cotton and wheat prices unfair, because "everybody knows" that the law was passed too late to enable growers of these erops to put the machinery into effeet this year. Next year it would be different.

# DEERHOUND WAS KNOWN AS 'ROYAL DOG OF SCOTLAND'

(Continued from Page 1)

They were used for deer and stag hunting, in twos and threes, and were followed on horseback. One of them alone could bring down a 250-pound deer, but usually they held the game at bay until the hunters arrived. They are built like a greyhound, but heavier, and have almost a greyhound's speed. They have the keen scenting powers and general hunting ability of the entire hound family.

The Scottish deerhound does the same work on the Canadian plains, and is popular in Australia. He is used down under for hunting the "dingo" (wild dog), and in pursuit of the kangaroo.

The Scottish deerhound is a little smaller and lighter than the Irish wolfhound, which he resembles elosely. The wolfhound averages 35 inches in height; the deerhound from 30 to 32. The Scottish dog is altogether more racily built, with a narrower head, and less spring of ribs. The coat is harsh and wiry, the kind that turns water; shaggy, sometimes with a silky strain. This mixed coat is not unusual in the United States where the climate is gentler than that of Scotland.

In color the dark blue-gray is preferred, but it runs through brindle, yellow and sandy, to red or red-fawn, with black points, points being ears and muzzle. The oldest known strains, the McNeil and Chesthill Menzies, were of the yellow to red variety.

# THE LOST MONEY-PACKAGE

A DISTRICT MANAGER of A. and P. stores in Georgia, entered a store to make his daily eollections of reeeipts. Absent-mindedly he laid a package containing $3,000 on the eounter. Presently a customer absently-mindedly pieked up the package and walked out. Forgetting the money, the manager left the store with what he had just collected, about $300. As he was driving away, four bandits erowded him to the curb, robbed him of the $300, and left. Later the absent-minded customer who had taken the $3,000 paekage brought it back and apologized for his mistake. The eompany aceepted his apology with great pleasure—also the $3,000.

# WHALEBONE NOT BONE; IT GROWS ON ROOF OF MOUTH

(Continued from Page 1)

quite soft and then eutting it into strips of the required size. Formerly the whale was often confused with the walrus and other sea animals and the expression "white as whale's bone" originally meant white as walrus ivory.

Others have burdens that they alone can bear is certain. But it is equally certain that they have burdens that we can help them bear.

# THE MODERN FARMER

Vol. XII. NASHVILLE, TENN., FEBRUARY 15, 1939 No. 1.

## The Inspiration Of Negro History In America

## RADIO ADDRESS BY LEON R. HARRIS

### National Federation of Colored Farmers' President Discusses Problems

Moline, Ill.—This address was delivered by Leon R. Harris, president of the National Federation of Colored Farmers, over Radio Station WOC, Davenport, Iowa, February 11th, during Negro History Week. Much favorable comment concerning the address has been received from individuals and organizations of both racial groups.

FRIENDS:

To Dr. Carter G. Woodson, that careful and persevering historian, who has given to the world so many undeniable facts relative to the life and activities of Negro people throughout the ages,—to him are we indebted for the origin of Negro History Week. We are indeed sincerely grateful to Station WOC for this opportunity we have,—here in Iowa,—so far away from the Africa of our forefathers,—to join with others of our group throughout the world,—in paying due homage to those stalwart black folk who have lived before us,—and who,—while living, gave to their fellowmen degrees of service essential to the progress of our civilization.

There are some facts of Negro history which should be known by every enlightened individual. As the traits, characteristics and expressed thoughts and activities of the individual, depict to us the heart and soul of that individual,—so do the traits, characteristics and expressions of a group or race of people, depict to us the heart and soul of the group or race. The psychologist, the preacher and the doctor advise:—"Know Thyself." Know thyself, that thou mightest know the better how to take care of thyself. The historian advises,—"Know thy fellowman,—that thou mightest know the better how to live with thy fellowman."

History is a record of the strivings of a group,—a record of what was done,—of what has been done. History is no flatterer. Unless twisted and contorted by the recorder,—history speaks the truth always. She tells of failures and successes,—of vices as well as of virtues. The student of history,—and all of us should be students of history,—is warned as well as inspired.

Pick up most any encyclopedia,—old or young,—large or small,—and turn to the word "Negro," and you will read three assertions, in particular. The first is, "that the Race has a remarkable aptness for music."

Our Race has given to the world the sweetest music in existence and the only music that will last forever.

(Continued on Page 3)

## WAITER OPERATES CANNING FACTORY

### FSA Made $6,000 Loan To Negro Farmers

Washington, D. C.—R. H. Cauthorne, a waiter on a dining car running between Washington and Chicago, is also the president of a successful canning factory.

Closing of the canneries in 1936 caused distressing conditions among a group of colored farmers residing in Essex, Middlesex and King and Queen counties of Virginia. Many of these farmers depended almost entirely upon truck crops and especially upon tomatoes. Low prices for canned products made it impossible for canneries in that area to continue operation. These farmers appealed to E. V. Breeden, Community Service Specialist for the Farm Security Administration in Virginia.

Under the leadership of R. H. Cauthorne, a plan was worked out by which this group formed the Tri-County Canning Association, Inc. This Association is made up entirely of Negro members, each pledged to pay $5.00 for a membership and to grow a certain acreage of tomatoes annually.

The Farm Security Administration loaned the Association $6,000. The Association leased and began operating a canning factory at Montague, Va., during 1936, 1937 and 1938. Under the guiding hand of Mr. Cauthorne they have made favorable progress as a new and growing enterprise. They have safeguarded their capital and are in good financial condition.

(CONTINUED ON PAGE 14)

## AN IOWA FARM BOY IN RHODESIA

### Foundation Magazine Article Attracts Attention

Thirty-five years ago a farm lad from Marathon wanted to learn how to grow corn a little better and raise steers a little heavier. So he left the Marathon High School and his father's farm and entered Iowa State College, at Ames, to study agriculture scientifically ----And the years since his graduation at Ames in 1906 have been filled with almost incredible adventure and service—not in Marathon, but in the heart of Africa!

For George A. Roberts was the farm lad. He early decided to invest his life as an agricultural missionary. There were few of them in the world in those days, and he was truly a pioneer. The Board of Foreign Missions of the Methodist Episcopal Church accepted him as a missionary and sent him to Rhodesia, Africa—Methodism's first trained agriculturalist in that land. He was assigned to begin his work at Old Umtali where the church had a boys' industrial training school, now developed into Hartzell Training School. Of those early pioneering days, Mr. Roberts writes:

"When I had been a short time at Old Umtali, I was given some classes. I prepared some very elegant lectures. I delivered them before classes of African lads in our school. But they did not work. The truth was there, but it did not get hold of the people.

"The next time I lectured, I brought some ears of corn and lectured about this corn along with the rest of the written material. The third time I found they had not learned much about what I said, but they had remembered the corn.

## A Summary Of The 4-H Club Work Given

## ANNUAL RURAL LIFE CONFERENCE CLOSES

### Alcorn A. & M. College Reports Great Meeting

High tribute was paid to rural life and all of its advantages at the Annual Rural Life Conference held here on Feb. 3. The session was in the main auditorium of the Alcorn A. & M. College. The Conference Theme was "Increasing The Farm Income." No more important nor representative group of citizens ever filled the Oakland Chapel or Bowles Hall, the two celebrated assembly places here, than was present on this occasion.

While the meeting was sponsored by Alcorn A. & M. College, Prof. W. M. Bell, president, it became the meeting of the people, as was evidenced on the opening day, with Prof. P. S. Bowles presiding. Music was furnished by the college band. A masterly, straightforward address was given by President Bell. The college quarter rendered many selections of Jubilee music coming from the Jubilee Melody Song Book.

The original address was delivered by Mrs. R. R. Moton. The program for the day, with its themes and the principals taking part consisted of:

**Morning Session**

9:00—Assembly, Oakland Chapel.

9:30 - 12:00 — Demonstrations, Bowles Hall.

12:00—Chapel Period, Oakland Chapel.

(Continued on Page 2)

## WHAT THE NEGROES IN GA. DID IN 1938

### Industrial State College Sets High Record For Achievement

Savannah, Ga.—At the end of 1938 Club work with Negro club members had advanced further ahead in many respects than ever before. The enrollment was larger and a greater number completed their demonstrations. Negro club members found themselves enthused over the beef cattle projects. According to reports about over the South great advancement has been made in the field of feeding beef calves among Georgia Negro club members.

The percent of completion of club members under the supervision of Farm Demonstration Agents was seventy-five. Eighteen thousand, three hundred and sixty-six projects were carried and thirteen thousand seven hundred and twenty-six of these projects were completed. Twelve thousand six hundred and twenty different club members were enrolled under the supervision of Farm Demonstration Agents.

During 1938 there were 1,618 boys and 13,625 girls making a total of 15,240 club members enrolled under the supervision of Home Demonstration Agents. Under the Farm Demonstration Agents there were enrolled 8,929 boys and 3,619 girls making a total of 12,620 club members. The age range of these club members was from ten years to twenty years or over. One thousand three hundred and sixty-five boys were twelve years of age; 1,342 were thirteen years of age and the scale graduated downward to where there were 311 that were twenty or above.

Organized club work began in a large way in Georgia with Negro club members back in 1923. Since 1923 the enrollment has increased under Farm Demonstration Agents to the point where it was 12,620 in 1938. In 1930 there were 2,766, but since 1930 the enrollment has steadily advanced each year to where it is now.

**Accomplishments**

The following accomplishments were achieved during 1938 after following a much needed program of work for 4-H clubs. County Officials and civic leaders have become orientated to club work and are willing to help in any way possible for the purpose of a good program.

In addition to this group, we are gradually educating 4-H club boys to a point where it is becoming easier to obtain records. With a large number of boys in the lower grades through the State, this will continue to be a constant problem

(Continued on Page 16)

## MARENGO COUNTY FARMERS CONFERENCE

## GRANDFATHER WAS RIGHT

Portland Oregonian: In an official disclosure from Washington the weather bureau said that for twenty years our North American winters have been getting warmer. Generally and consistently speaking we do not have such blizzards as we used to have, and we are thawing out the pump a lot less frequently. If another Whittier had it in mind to write another Snow Bound, he might be discouraged before enough snow fell to make the poetic project practicable.

The real reason for commenting on the weather bureaus announcement is that tardy justice be done to

(Continued on Page 16)

### Training School Held at Thomaston, Alabama, Largely Attended

Thomaston, Ala., (Special)—Tillers of the soil, dirt farmers, poultry raisers, fruit growers from every section of this country known far and wide as Marengo, closed their annual conference of farmers here on Feb. 17. It was held in the main auditorium of the training school and attracted visitors as well as farmers from every walk of life.

The display of farm products and the women's industrial work were the special features. This was arranged by Prof. L. L. Brewer, W. B. Hill, Misses A. M. Motley and M. Simpson. Prizes were donated by the white citizens of Marengo County, and were awarded to the

(Continued on Page 2)

## FOR THE BATTLE AGAINST BUGS

BED BUGS

The bed bug infests furniture, clothing, baggage, walls, laundry. It is not known to be a disease carrier, but its bite frequently results in inflammation and welts.

The most efficient method of eliminating bed bugs is to employ a professional fumigator working under a license issued by the local health department.

Where this cannot be done bed bugs can be attacked by heating the room or entire building to a temperature of 120 to 125 degrees. This temperature should be maintained for several hours. If this too is im-

(Continued on Page 13)

# GETTING THE BETTER OF BUGS AND BACTERIA

### Economic Poison Acts Set Snares for Products that Fail To Perform or Prove injurious In Producers' and Consumers' Fight Against Farm And Household Pests

As rugged an individualist as ever went picknicking on a damp kitchen floor in the middle of the night, the humble cockroach must regard certain laws as poison. And rightly so, for that is what the economic entomologist calls them—the Economic Poison Acts. Other people call these laws the Insecticide and Fungicide Acts. Under either name they are ammunition for the battle on cockroaches, fungi, boll weevils, flies, termites, ants, mosquitoes, silverfish, moths, centipedes, and many of the similar varieties of indoor and outdoor pests.

Not only is there a Federal Insecticide and Fungicide Act but some 25 States have passed laws which mark for extermination these household annoyances.

Farm producers concerned less with pests in the home than those which threaten their family source of income were loudest in advocating these laws. They wanted laws to help in the fight against insects and fungus scourges which threaten year after year to devastate their fields and orchards. Peach scales boll weevils and mildew were other culprits aimed at by the Economic Poison Acts. The laws were passed primarily to protect farmers against the adulteration and misbranding of insecticides and fungicides. But they happen, also, to protect household consumers who purchase these products for home use for Insecticide and Fungicide Laws look with unperturable impartiality upon pests whether they prey inside or outside the home.

NOT ALL PEST-KILLERS it should be noted, come under the law. Rodenticides, that is rat-killers, do not come under the provisions of the Insecticide and Fungicide law, nor do any of the substances used to kill animal pests other than insects. The importance of this omission may be estimated by the fact that the nearest thing to a rat census has revealed that there are two rats in the United States for every human being.

State laws which are necessary in the field of economic poisons for effective policing against misbranding and adulteration just as they are in the food, drug, cosmetic field, in at least two cases remedy this omission. California't Economic Poison Law, for example, applies to all economic poisons whether they are for use against fungi, animal pests, insect pests, or weeds.

Registration is the device which the California law uses as the central enforcement technique. Manufacturers intending to sell their products in the State must register the brand of their product with the State Director of Agriculture. Along with the brand name they must also submit an analysis of their products or samples. After testing in the State laboratories, the Director of Agriculture may refuse to register a product if it does not meet with State specifications.

CONSUMERS have more than passing interest in the Insecticide and Fungicide laws as they are enforced today.

Moths get into consumers' furs, and rugs; they destroy fabrics, and generally are a nuisance. Seeking relief from this kind of thing consumers last year might have gone out and bought a moth remedy which the Federal Food and Drug Administration inspectors picked up in Wisconsin.

"For upholstered furniture," its label read, "they are wonderful. One tablet will keep moths out for 2 months." The same company also had another preparation, about which it was equally ecstatic: "These wonderful vaporizing crystals purify the air, combating obnoxious odors. To protect clothing, woolens, furs, etc., place a liberal amount of the crystals in a chest or trunk" and so on. In the more sober words of the Food and Drug Administration these labels claims boiled down to three words, false and misleading." The remedies would not be "effective for the said purpose when used as directed," said the Food and Drug Administration.

Pretending to combine the properties of a disinfectant with that of odor killer, another remedy recently fell afoul of the Insecticide Act. This preparation claimed to be a nonpoisonous preparation which would "kill any odor caused from organic matter." Again the Food and Drug Administration found this preparation did none of the things it claimed and was poisonous to boot.

Roach-killers, fly sprays, disinfectants, dog soaps, flea remedies, moth proofing preparations all pass in review through the test tubes of chemical and testing laboratories.

Year after year the field officers of the Food and Drug Administration have reported cases of a fatal mistaken identity of arsenical insecticides. Householders would go to their pantries looking for flour, or baking soda, or baking powder, and then because the arsenical pest-killer on the shelf was white, they would carelessly take it down and mix it into their bread, pies, or puddings. Meals with arsenic as a course are fatal and following numerous accidents of this character manufacturers, with the decided approval of the Food and Drug Administration, determined to color these preparations pink. Where these poisons are colored pink there is no chance of mistaking them for flour.

Even this has not stopped this type of accidental poisoning. To make sure that no lethal doses of poisonous condiments enter their foods, householders should not store poisons of any kind in the house, if they can help it. They should be kept in the garage or in the shed. If there is no garage or shed they should be put away in the cellar out of the reach of children.—Consumer's Guide.

---

Heaven lies at the end of a well-spent life.

---

No matter how we spend either money or time foolishly there will be an accounting.

---

He who can not be trusted with a little can never expect to be given much.

# RADIO ADDRESS BY

(Continued from Page 1)

This music is distinctly our own. We have made music out of every sound in Nature,—the thunder of the storm,—the sighing of the winds,—the scream of the animal in the jungle,—the hiss of the reptile,—the beating of the ocean waves. We have harnessed these sounds,—these rancous noises,—if you please,—and have made of them music that soothes the tired body and the troubled soul,—music that carries us away from our tempestuous lives,—into the placid realms of peace and happiness,—and,—what we so often call "Heaven." Our music has the charm to soothe the "savage" in every and any breast.

We should be inspired to perfect the music of our people and perpetuate it. We should ever seek to encourage the boy or girl who has any special talent for music. There will be other Coleridge-Taylors, Nathaniei Detts, Roland Hayes, Black Pattis, Marian Andersons.

The music of the future is sure to be predominantly African or Negro. And, as music is the chief goddess of all arts,—so will our Race be recognized as the perfect interpreter of all real and living art. Negro musicians will be most perfect musicians,—and Negro actors and actresses,—artists and sculptors, orators and poets,—will be imitated by all. And ever, on the highest pinnacle of fame,—will dwell Pushkin,—the Russian Negro,—father of Russian literature,—and the Dumases,—French Negroes,—and Dunbar, Douglas, James Weldon Johnson and Richard B. Harrison,—American Negroes,—and scores of others of our group whose works will never die. For real worth and perfection cannot die. It lives on,—in the heart and soul of the Race that produces it and in the hearts and souls of all who are influenced by it.

The second assertion you will read in the encyclopedia is: "The Negro has distinctive ingenuity in forming mechanical devices."

Well, we don't often hear that Negroes built the Egyptian Pyramids,—but they did. Negro artisans and mechanics built some of the noblest cities of antiquity,—some of the temples, the very ruins of which are admired today. And American industry has been largely benefitted by the Negro's mechanical ingenuity. Take for instance, our own farm implement industry here. A Negro worked all along with Cyrus H. McCormick on his patented reaper and binder. The first perfected pressure lubrication system was invented by a Negro. Every piece of machinery,—from the railroad locomotive to the tiniest drill-press,—is equipped with this system devised by a Negro. And the **telephone.** Every time you pick it up and talk—your words are made audible by an invention by a Negro. Don't you know Friends,—I was proud of my Race and of myself a few years ago, while visiting a large shoe manufacturing plant in the city of Portsmouth, Ohio, when our guide stopped before the most important machine in the great factory and said,—"This machine was invented by a colored man. It completely revolutionized the industry of shoe manufacturing. It bears his name,—"Matzeliger." And American industry will gain when more Negro youth have the opportunity to serve apprenticeships in American factories.

And the encyclopaedists say,—"We possess a peaceful disposition." A remarkable virtue,—for Peace some day will rule this old world. Then will our Race enter into its own.

I am proud of the "blood of this friendly Race,—that swarths my skin—crinkles my hair,—and puts sweet music into my soul." I am not ashamed of Negro slavery,—for every Race during some period of time has been enslaved by another. I am proud too, that here in the United States—all Negro blood belongs to the Negro,—and I, for one,—do not care if custom or segregation will always keep it so. I am proud of the Race,—no member of which has ever stricken down the chief magistrate of a nation,—or held aloof the red flag of anarchy. I am proud of the Race that still trusts in God and loves its fellowmen.

# ANNUAL RURAL LIFE

(Continued from Page 1)

1:00-1:30—Lunch.

**Afternoon Session**

1:30-2:30—Demonstrations Bowles Hall.

2:30—Assembly, Oakland Chapel

Program: Prof. P. S. Bowles, presiding.

Spiritual, by the assembly

Prayer.

Music, College Band.

Welcome Address, Pres. Wm. H. Bell.

Quartet.

Address

Music, College Band.

Summary.

Announcements, adjournment.

---

DEMONSTRATIONS

**I. Agriculture:**

Messrs A. T. Busby, R. S. Byrd, W. A. Flowers and O. W. Sanders.

Inoculation of Cove Crop Seed.

Culling and Wing Clipping of Poultry.

Rope Making out of Hemp.

Care and Management of Live Stock.

1. Fitting Animals for Sale or Show.

(a) Proper method of throwing animals.

(b) Proper Training of Colts.

2. Judging Good Milk Cows.

Drawing up Farmers' program of work for 1939-40.

**II. Home Economics:**

Miss Josie Turner, Mrs. Oliver Mrs. Powell, and Miss Bailey.

Mattress Making.

Home Improvement.

Drawing up Home Improvement program of work for 1939-40.

**III. Minister Section** (Discussions)

Miss L. Wright and Mr. W. A. Flowers.

1. Present Rural Economic Conditions which confront the church.

(a) Responsibility of the Church.

(b) Responsibility of the School.

(c) Responsibility of the Home.

2. Remedial measures for solution of problems.

3. Coordination of agencies for promoting and maintaining better economic status in rural sections.

(a) Available agencies in rural communities; duties of each.

4. Drawing up Minister's program of work for 1939-40.

**IV. Rural Teachers Section**

Mr. C. M. Greene.

Problems of the Rural Teacher.

Drawing up Rural Teacher's program of work for 1939-40.

V. Compiling, summarizing, and adopting rural programs of work for 1939-40.

# MARENGO COUNTY FARMERS CONFERENCE

(Continued from Page 1)

winners who were selected by the judges.

Special encouragement was given to those producing the best farm produce, fruits and industrial work. A sweeping invitation had already been extended to the landlords, business men and other citizens.

The theme for this year's exhibit was "Agriculture Today," while the subject, as was seen by all, was "Back To The Soil."

The program for the meeting consisted of:

9:00—Devotion, Rev. J. D. Dupree.

9:30—Group Meetings for men, Remarks, Prin. E. W. Phillips. conducted by Profs. W. B. Hill, Negro County Agent, L. L. Brewer, Vocational Teacher.

(a) Planning the Farm Program.

(b) Home Sanitation.

(c) Home Gardening.

(d) Bedding Sweet Potatoes

(e) Supplementing the farm income with live stock.

(f) Pruning fruit trees.

Group Meetings for women conducted by Misses M. Simpson, Home Economics Teacher, A. M. Motley, Home Agent.

(a) Preparation of Foods and Table Setting.

(b) Soap Making.

11:00—County Health Unit, Dr. E. T. Norman.

11:45—Lunch.

12:30—Remarks, Prin. E. W. Phillips.

12:45—Remarks, Mr. C. C. Pritchett, Pres. Planters Bank & Trust Co.

1:00—Remarks, Mr. G. M. Watson, Supt. of Education, Linden.

1:15—Address, Mr. A. Floyd, Teacher Trainer, Tuskegee Inst.

2:00—Remarks, Mr. F. M. Jones, County Agent.

2:30 — Announcements, adjournment.

7:00—Special program, awarding of prizes.

### PLENTY LOUD

Chief—I am glad that you have been punctual lately, Mr. Brown.

Clerk—Yes, sir, I have bought myself a parrot.

Chief—A parrot? I recommended you to get yourself an alarm clock.

Clerk—I had an alarm clock but soon got used to it. Now I set the clock beside the parrot and when the clock goes off, what the parrot says is enough to rouse the house.—Lustige Koelner Zeitung, Cologne.

### PRETTY TOUGH

The tourist had stopped to change tires. "I suppose," he remarked to a native onlooker, "that in these isolated parts the necessities of life come pretty high."

"Y'er right, stranger," replied the native, gloomily, "an it ain't worth drinkin' when ye get it!"—Telephone Topics.

# DYEING MAY GIVE NEW LIFE TO OLD FADED GARMENTS

Urbana, Jan. 28—Many garments which have seen considerable service but are still in first-rate condition except for faded color may take a new lease on life if correctly dyed. Miss Edna Gray, clothing specialist, college of agriculture, University of Illinois, reminds thrift-minded homemakers of the state.

Making available to homemakers a thrift circular on Dyeing Used Fabrics, Miss Gray gives information on the equipment for home dyeing, the kinds of dyes, the preparation of the material before dyeing and the preparation of the dye for use.

Wool and pure-dye silk dye readily, she states. Dyes prepared for silk or wool or "all fabric" dyes may be used. Weighted silk and wool may shrink in dyeing. The shrinkage in wool can be minimized by avoiding any sudden change in temperature. This can be done by rinsing in hot water and drying in a warm room. Silk pongee resists the dye to some exent, owing to the natural gum present in the fabric, but trouble may be prevented by washing the fabric thoroughly prior to dyeing.

Some rayons will dye like cotton, Miss Gray says. Others are difficult to dye. Homemakers can determine whether the fabric will dye easily by burning a small sample of the fabric. The type rayon which dyes readily burns quickly and gives off an odor of burning leaves. Cellulose acetate, the rayon which is difficult to dye, melts as it burns, forming a very hard shiny black ball. If it is necessary to dye an acetate or a fabric containing some acetate, the specialist suggests that a dye prepared especially for acetate be purchased.

Also included in the circular is considerable color information designed to help the homemaker in replacing successfully the old color of the fabric with a new one. For example, yellow or orange may be successfully turned into bright or dark red, light or dark green, light or dark brown or black.

The circular, Dyeing Used Fabrics, is available from the extension service college of agriculture, University of Illinois, Urbana.

# GEORGIA FARM BOY SHOWS SUCCESS WITH PURE BRED CALVES

Savannah, Ga., Feb. 23 (ANP)—One of the most progressive agricultural programs being developed in any of the Southern states is the Beef Calf project which is being sponsored as part of the 4-H club work in Georgia under the supervision of Alexander Hurse, 4-H club agent, and P. H. Stone, Negro State Extension agent for Georgia.

One hundred and six farm boys are raising a pure-bred white faced Hereford calf each. The Citizens and Southern National bank, a chain banking organization with headquarters in Savannah, is financing the boys in their venture which is now in its third year. Each boy negotiates a loan with the bank, giving his note for sufficient money to purchase the calf. The boy feeds and cares for his stock, and when he is fattened for market, sells him, pays the bank for the purchase money and pockets the difference The result is a marked improvement in livestock breeding among colored farmers in the counties where the project is operating. There are usually two boys selected from a county to enter the plan.

Last year 64 calves were purchased. They cost $2,424.19. When they were fattened and sold, they brought $3,277.83. In addition, the boys received $240 as prize money for showing the calves at the Fat Stock shows held in Augusta, Columbus, Savannah, Macon and Greenville.

Two of the calves died, but were protected by insurance. Five boys did not succeed in putting enough fat on their calves to break even, but the others prospered. A bank official said that one of the fine aspects of the effort was that not a single colored boy had defaulted on his note or failed to live up to every phase of the agreement. The bank is so pleased with the showing made that the project will be continued next year.

## BIG HOG BUTCHERED BY LAWRENCE COUNTY MAN

As showing how hogs can be made to thrive in Arkansas, the Imboden Journal tells of one butchered by Oscar Davis.

The weight was not learned, says the Journal, but "from the following one would readily conclude that the animal was some hog.

"The head weighed 18 pounds and one of the shoulders 87 pounds. Twenty-five gallons of lard were rendered from the fat.

"The animal was of the Duroc breed."

# WM. PICKENS RATES EMANCIPATION AS EPOCHAL DOCUMENT

Johnstown, Pa., Feb. 23 (ANP)—In a stirring Lincoln birthday address and speaking before a large audience attending the fourth of a series of 10 special programs at Westmont Presbyterian church, Dean William Pickens, director of branches, NAACP, declared, "As long as human hearts love freedom, the name of Abraham Lincoln shall remain on the tongues of men."

Dean Pickens listed the Emancipation Proclamation, freeing 4,000,000 slaves, as one of the three great documents in American history. The other two: the Declaration of Independence and the Constitution. He was introduced by Rev. John Hubert Stanton, pastor of the church, and his appearance was sponsored by the Johnstown branch NAACP.

# GOV. ALLRED OF TEXAS PROVES TO BE SHIFTY POLITICIAN ON EVE OF FACING SENATE PROBE OF HIS IDEAS

## New Dealer Who Opposed Negroes Voting in Democratic Primary Now Saying Many Kind Things About Race

**Austin, Tex., Jan. 11 (ANP) Gov. James V. Allred of Texas, whose appointment by President Roosevet last summer to a federal judgeship in this state will be up for action at this term of congress, is something of a puzzle to many of the state's Negro citizens.**

**Although he has gone out of the way is recent years to praise Walter White of the N. A. A. C. P., address colored meetings and fight for a more equitable diversion of state funds to Negro needs which has established him as a leader of the increasing group of Southern liberals, there are many who recall that it was mainly through his efforts that colored citizens have been excluded from voting in the Democratic Primary which in this section is tantamount to election.**

The voting issue arose when Allred was attorney general. To prevent Negroes from voting in the Democratic primary, he fought the case to the U. S. supreme court and won on the ground that his party was a private club and therefore could restrict its membership to whomever it wished. That ruling still governs Dixie and is the greatest barrier to Negroes voting in the South except the "interpretation of the constitution" clauses and the blunt refusal of registrars to register them.

However, many observers do not blame Allred for his bitter fight. They contend it was a case of self-preservation. As the story goes, Allred was in favor of Negroes voting and during his campaign for election, turned over a large sum of money to a Houston political leader who was to head his campaign among colored Texans. But the Negro leader, after collecting, immediately began working for Allred's opponent. When Allred learned of this double-cross he turned sour on the race and fought for a white primary so that none of his money could help elect an opponent.

While admitting that a man who would deny an yqualified citizens the right to vote purely on the grounds of race should not be a federal judge, his defenders say that like many other Southern politicians, whatever Allred did was done only because it was politically expedient and not because it represented his true feelings.

They point to last summer's annual session of the National Negro Business league. At that time Gov. Allred got up out of a sick bed and took an airplane to be on hand and address one of the meetings. Met near Prairie View college, he rode the rest of the distance by auto. When the car turned off the highway for the three-quarter mile drive to the campus, the governor was so aroused over the bumpy condition of the road that he immediately had it paved by the state.

At the meeting which he addressed, Gov. Allred lauded the Negro and praised Walter White as a "brave man." Delegates said it was the most amazing public speech they had heard by a Southerner in his position. In his address prepared for delivery to the new state legislature this month, Allred devoted a large portion to the Negro and recommended establishment of a state home for delinquent girls, a state institution for the feeble minded and eppileptic and state aid for students desiring courses not offered at Prairie View but obtainable at the state university.

Some see in his interest in Negroes a realization of the part played by the N. A. A. C. P., in preventing confirmations of Judge Parker's appointment and declare he wants to halt any attack from this quarter by establishing a record of friendliness.

However, no fight is anticipated on Allred's appointmest to the federal judgeship. Many Texans who have looked upon him as something of a puzzle are willing to give him the benefit of any doubt and take the position that his recent utterances are what he really feels and believes on the interracial question.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## EDITORIAL

From The Bible:—

*"Mark the perfect man and behold the upright; for the end of that man is peace."* Psalm 37:37.

"Lives of great men all remind us,
We can make our lives sublime;
And departing, leave behind us
Footprints on the sands of time."
—Henry W. Longfellow.

### "SMALLEST" FARMER—"BIGGEST" MAN

Buster Wright, of Leesburg community, is just about the "smallest" farmer in Georgia. He rents the land he tills and he doesn't even own a good mule. He owns a good ox and this animal is all he has to depend on to help him do his plowing and cultivating. He is less than a "one-horse" farmer. He is a "one-ox" farmer. So when you hear of this poor farmer and his poor way of farming, we know you will wonder why he is worth thinking about, mueh less writing about.

Buster Wright may be the "smallest" farmer in Georgia but there are not many men in that state "bigger" than he is. This proves it. With that one ox to help him on his rented land, last year he harvested a bale of cotton, four tons of peanuts, 60 bushels of corn, and raised enough hogs to provide himself and his family with meat this year. He paid every penny of his rent and the production loan he got in advance, and had some eash left over.

During last summer he produced and sold nearly $80 worth of watermelons; he and his good wife have a big flock of chickens and other fowls; they gathered plenty of vegetables from their small garden, and they put by enough sweet potatoes and Irish potatoes to last them through the winter. Then just before frost he cut his pateh of sugar cane and made his yearly supply of syrup.

These "small" farmers and BIG MEN like Buster Wright are doing a world of good for our Race. They are the fellows who are proving to all what we can do if we go on the farms, roll up our sleeves, go to work and work intelligently. There are a good many of these big men seattered about the country. Every once in a while they are discovered and someone writes about them. And they deserve all the praise we can give them.

Buster Wright is living better and he feels a lot better than thousands of our Group who are living in city and rural slums. He is a "renter," and has a certain degree of independence. He doesn't owe any man anything and he can hold up his head and look anybody in the eye. He doesn't have to take off his hat and kneel, and grovel, and beg someone or the government for "relief." He and that old ox may be a humble pair, but they are not camping on the hard-road, whining because nobody would give them a chanee to make a living, and expecting manna, or meal and fatback to fall down from Heaven.

Here is a fine example, Brother Farmer. You don't have to stay hungry and poor and depressed in the United States. Stop moving around. Settle down. Look for your opportunity, find it, and, like Buster Wright, make the most of it.

### OUR "SLOGAN."

For ten years the slogan of the Modern Farmer has been: "STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!" We still believe this to be a good slogan for our paper and for a majority of our racial group.

We hope this slogan will appeal especially to the youth of our Race. In agrieulture there is more opportunity for Negro youth than in any other vocation. The fact that white youth of the South are leaving the farms and flocking to the cities and industrial centers is no proof that it would be best for Negro youth to do likewise. The white boy has a chance to succeed in the city. His group owns the mills, the factories, the stores, the transportation systems, the banks. Our group owns little.

But as long as city folks have to eat and love to eat well, there will be opportunity for the Negro farmer to make a living and live a happy, comfortable life. We have too much sense nowadays to be one-crop farmers. We do not have to farm as did our forefathers. We can get more out of good farming and right farm living than ever before. An acre of corn or sweet potatoes, a fat hog or a pure bred milk cow, should look much better to a Negro farm boy than a broom or a coal shovel in some white man's mill or factory.

### COOPERATIVE BUYING

More Units of the National Federation of Colored Farmers are purchasing fertilizer and other farm supplies this year than ever before. This is a good thing for all of us. The saving in money is substantial and the lessons we learn about eooperation is of supreme value.

The Unit that practiees cooperation stays "put." The members never get tired or disgusted with the organization. They have a great big something to keep organized for, and they march on to success.

### A WAR MEASURE THAT SETTLED A GREAT MORAL ISSUE

The Emancipation Proclamation was strictly a "war measure." It was not issued by the immortal Lineoln to settle the question in Ameriea of chattel slavery, but instead, it was issued to help settle an unfortunate and bloody war. Had the South laid down their arms, today perhaps we would not be enslaved, but the Proclamation would have not been written. But it was written, and, although it did not have much effect on the winning of the war by the northern forces, it did settle for all time a great moral issue. That is something few war measures accomplish.

Beeause this was so, we are compelled to recognize that this act of the martyred President was strictly an act of Providence. It was intended. America eould not grow and prosper with slavery. The eountry was established as a haven for the oppressed and it could not become, for all time, a country that oppressed members of a race simply because they possessed a difference of skin and features. So this war measure, issued by a thoughtful man, who himself hated slavery, freed in one day and with one stroke of a pen, four million Negroes from bondage and the entire country from a false idea.

One thing remarkable about the Emancipation Proclamation is the fact that it was so soon aecepted by both the North and the South as an act of justice and as one that would bring to the Nation peace and and prosperity. When this Proclamation was written the question of slavery in Ameriea was settled forever. None desired to bring it baek. None debated or argued for it in Congress or on the public platform. It was vastly different with the Prohibition Amendment. This was also mainly a war measure. But it settled nothing and the question is now before the public again.

The Negro owes more to Lincoln than to any other white man this country has produced. He did not have to write the Proclamation. Neither Congress nor the courts ordered him to do so. Using his prerogative as Commander-in-Chief of the Nation's armies, he wrote it out of the bigness and kindness of his own heart. American Negroes should always remember this and should respect his memory.

According to foreign adviees, India is reported to have purchased 275,000 bu. of Australian wheat.

# BI-PARTISAN LOBBY SEEKS BROADENING OF "SECURITY" LAW

## Group Tells Congress of Big Discrimination Shown Colored Workers

**Washington, Feb. 23 (ANP)—Declaring that in its present form it discriminates against a large percentage of Negro workers and is not at all satisfactory to workers in general, the Non-Partisan Lobby for Economic and Democratic Rights, sponsored by the Alpha Kappa Alpha sorority, last week filed with the Ways and Means committee of the house a brief detailing proposed revisions in the Social Security act.**

At the same time William P. Robinson, lobby representative, called upon every Negro to write letters to the Ways and Means committee asking that these revisions be made. It was pointed out that enough communieations of this nature will be bound to have an effect and may result in the passage of legislation benefitting thousands of workers now exeluded under provisions of the act.

According to the brief, the present law discriminates against young and women workers, since benefits are based on earnings and these classes are generally paid lower wages. It makes no provision for additional compensation for each dependent. It does not provide compensation for loss of income suffered, does not guarantee an income equal to a minimum standard of living, does not provide for changes in the cost of living, and does not provide that the present benefits are to be made available immediately.

"It does not include farmers, domestic, the self-employed, casual workers, employes of charitable, religious and educational organizations; does not insure those at present unemployed or who suffer other disability, but only some of those who may become unemployed or suffer disability in the future," the brief sets forth. "It provides no safeguards to prevent administrations against workers' interests, is not nationwide in scope, and its costs are placed directly on payroll taxes and indirectly by sales taxes upon workers and consumers, therefore tending to undermine the standard of living of the workers which thereby makes it contrary to the very interests whieh social security is intended to protect."

The brief pointed to a survey of 22 states made by the American Association for Social Security and he finding that unemployment insurance paid less in 1938 than "the totally inadequate home relief." At present benefits are being paid in 28 states and all but Virginia have either unemployment insurance, old-age assistance and aid to the blind and dependent children.

The lobby recommends specifically:

"That the present law be altered so as to apply the policy embodied in the following statement, namely that the costs of soeial insurance must be a primary eharge on the national wealth and be recognized as a part of the federal government's budget, hereafter to be provided for out of the national treasury. Any additional costs resulting from the plan should be derived by suitable tax legislation, from high income brackets, corporate surpluses and other accumulated wealth.

"That unemployment insurance, including full compensation for the whole period of unemployment be provided. That unemployment compensation be made equal to the average weekly wage payable in the occupation or profession in the area. That a weekly minimum compensation of $10 plus $3 for each dependent and a maximum of $20 a week plus $5 for each dependent be provided. That provision be made to adjust compensation rates, aecording to the changes in the cost of living. That those having incomes below the maximum be made eligible for social insurance.

"That persons 60 years of age or over be made eligible to receive compensation equal to average wages, if they were employed up to 60 or over; and if they were receiving unemployment compensation at the age of 60, that they be made eligible for old age compensation equal to the unemployment compensation whieh they were receiving. That all other persons 60 years of age and over be provided for by a minimum compensation of $10 a week, plus $3 for each dependent.

"That domestics, farmers, partially employed, employes of educational, charitable, and religious organizations be made eligible to receive benefits and proteetion.

"That young people, new workers, 18 years of age and over, available for work be made eligible for unemployment eompensation.

"That some provision be written into the bill to prevent discrimination on account of race, color or creed in administration by states reeeiving federal funds.

"We feel that the initial steps to provide this most essential of social services was made to embrace those seetions of labor which have strong and capable organization. But, the elements of this great democracy most in need of this protection have not as yet become so vocal as they undoubtedly will, should their condition continue to be overlooked. It is no answer to the most needy, the farm laborer, the poverty stricken domestie, when you tell them that they will be eared for later. Now is the time to extend the benefit and protection of the law to these most in need of it."

## DEATH PENALTY FOR MOST CRIMES IN AZTECS' LAND

The following facts, relative to the inhabitants of southwestern America before the arrival of the white man, are from a book by F. Martin Brown, and retold by a writer in Everybody's Digest.

A large part of the Aztec's time was occupied with religion. Even gambling had a sort of religious significance for him. A game like dice was played with beans painted blaek on one side and white on the other, and the players pleaded with their dice to fali right.

The Aztec dances were very closely tied up with religion, and generally men danced with men and women with women.

The Aztec laws were extremely strict and death was the penalty for nearly every crime, whether major or petty.

The Aztec had slaves, but the slaves could own property. Frequently a man would sell himself into slavery to pay his debts, and it was possible for him to buy his way out of the hands of his owner.

The poorer Aztecs used the barter method in trading; that is, they swapped one thing for another. The wealthier Aztecs used eocoa beans for "pin" money. Sometimes sacks containing 400 to 8,000 of the beans were used in paying large bills. Tiny nuggets or flakes of gold packed in transparent duck quills were used for money where extremely expensive purchases were concerned. Small irregular pieces of tin were also used as money.

The all-important thing is the God we choose for ourselves, and in whom we will trust.

True Christians are like stars that shine brightest in the darkest night.

## ARTICLE ON ALCORN COLLEGE CREATES INTEREST

### Mississippi College Has Many Good Friends

### PRESIDENT BELL'S WORK PRAISED

The Modern Farmer and the National Federation of Colored Farmers have received numerous letters from many sections of the nation, complimenting the article written by Prof. P. S. Bowles, Director of Placement Bureau, Alcorn A. & M. College, of Mississippi, and lauding the work and the vision of Prof. William H. Bell, president of the college. Prof. Bowles' article and illustrations depicting the type of service the college is performing for the sons and daughters of the Negroes of Mississippi, for the farmers of that state and other states, appeared in the December (1938) issue of the **Modern Farmer.**

Excerpts from some of the many letters received follow:

"The December issue of the Modern Farmer is received and I am more than delighted with the volume of interesting and helpful information it contains. The article on Alcorn College was particularly of interest to me and the many friends and students of Alcorn in our community."

A. D. Fobbs, Instructor of Agriculture, Hopewell Vocational School, Collins, Miss.

---

"I am glad to see that Alcorn, under the able leadership of President Bell, is making such wonderful progress. I want to congratulate Pres. Bell and his co-workers for the success they are having."

F. D. Bluford, Pres. Agr. & Tech. College of North Carolina.

---

"The Modern Farmer and the article on Alcorn College are very interesting and I hope all success."

Fred McCuistion, Executive Agent, Association of Colleges and Secondary Schools of the Southern States, Nashville, Tenn.

---

"I read the article about Alcorn and must say it was very interesting. I feel that the article gave the college justice and I am glad to admit that I am a friend to Alcorn."

E. W. Hayes, Starkville, Miss.

---

"On every page of the December Modern Farmer there was an article that interested me, but the two that will be of the most benefit to me in my program of work are "Baby Chicks—Their Care," and the Quilt Patterns. The article by Prof. Bowles, of Alcorn, is splendid. I was very glad to have the opportunity to clip the 4-H group made at Alcorn the past summer."

Willie Mae Carroll, Home Demonstration Agent, Aberdeen, Miss.

---

"I read the Modern Farmer with much interest and congratulate you upon the publication. I am glad to endorse any movement which has as its definite aim, the improvement of conditions among farmers and their families."

J. F. Drake, President, State Agricultural & Mechanical Inst., Normal, Ala.

"We thank you for the Modern Farmer and wish you success."

J. S. Vandiver, State Supt. of Education, Jackson, Miss.

---

"Thank you for the December issue of Modern Farmer. The publication is undoubtedly a real service to our many Negro farmers."

John M. Gandy, Pres. Virginia State College for Negroes, Petersburg, Va.

---

"I read the December Modern Farmer and found plenty of news that would interest any person interested in progress. I have watched the progress Alcorn College has made the past four years under Pres. Bell's administration. He is certainly doing a good job trying to encourage appreciation for farm life in Mississippi. He does more each minute than some of our leaders do in a year. The conditions are certainly being improved in and around the college area. The Modern Farmer is a stimulating factor in promoting interest in agriculture among Negroes."

J. C. Dunbar, Larman, Miss.

---

Tallahasee, Fla.

I want to thank you for allowing me to see the December issue of the Modern Farmer. If I can be of any service in extending the advantages which this position offered, I shall be glad to do so.

Yours very truly,

J. R. E. Lee, President Florida Agricultural & Mechanical College.

---

Moorhead, Miss.

May I thank you for the copy of the Modern Farmer which gave much information in regards to Alcorn College.

Yours truly,

I. H. Montgomery, Demonstration Agent.

### COTTON SURPLUS

Senators representing the cotton-producing states, assisted by experts from the Department of Agriculture, were searching yesterday for a solution to an acute problem facing the nation's major exportable farm commodity, says a report in the New York Times. These legislators turned from the relief appropriation to their sectional problem to find that their part of the farm situation already has reached an emergency phase. Back of it was the continually piling up of loan cotton, already amounting to nearly 11,000,000 bales, calling for further acreage reduction or other drastic steps either to remove the drag of this surplus from the market, or to recapture the country's shrinking foreign market for the staple. The group of southerners was called together by Senator Smith of South Carolina to discuss his new bill providing a plan to reduce the present heavy surplus.

## BISHOP FLIPPER DISCOURSES ON "LOVE" AS VIRTUE

**No Greater Moral Force in the World Than Love, Declares Bishop J. S. Flipper**

Columbia, S. C., Feb. 16 (ANP)—Concluding a series of successful conferences in South Carolina recently, Bishop J. S. Flipper who presides over the "Iodine State" said, "there is no greater moral force in the world than love." With this theme as the basis of an oration delivered by the senior prelate of the A. M. E. Church, presiding elders, ministers and numerous lay people gathered in spacious Trinity church in Manning were happily informed of the great increase in conference claims over the previous year.

As chancellor of Allen university, the renowned religionist spoke briefly of the progress of the Columbia institution that has made rapid progress. With many more students enrolled at Allen this year, and the splendid spirit of cooperation that is existent between presiding elders, ministers and others interested in the educational progress of youth, Bishop Flipper sees ahead "a bright future for Allen." He acknowledges gratefully the gift of a $25,000 organ from an outstanding South Carolina citizen, whose contribution is said to be unequalled in recent months.

## COLORED ARTISTS EXHIBIT WORK AT BALTIMORE MUSEUM

Baltimore, Feb. 16 (ANP)—An exhibit attracting considerable attention and eliciting favorable comment in the Baltimore Museum of Art is the showing of Negro contemporary art which will remain in view until Feb. 19.

Exhibits include oils. water colors, sculpture tempera and black and whites, the latter including lithographs, wood engraving, etchings, steel engravings and drawings. While the artists used Negro models the subject matter is varied.

Among the canvasses are "Three Trees," by Robert Neal; "Chicken Shack," by Archibald Motley, Jr.; "The Janitor Paints," by Palmer C. Hayden; "Abstraction III," by Samuel Joseph Brown and many others.

## LARGE CROWD AT BRAWLEY FUNERAL IN WASHINGTON

Washington, Feb. 16 (ANP)—The 19th Street Baptist church was crowded to overflowing on Monday when funeral services for Dr. Benjamin G. Brawley were held. Dr. Brawley was 56 years old.

Prominent citizens, including ministers and educators, spoke in praise of the scholarly attainments of the deceased, who was professor of English at Howard university, His wife, two sisters and three brothers survive him. nlterment was in Lincoln cemetery.

Dr. Brawley was president of the Association of Colleges for Negro Youth and was an ordained Baptist clergyman. He was the author of many books, publications an darticles his books including "A Short History of the American Negro," "A Social History of the American Negro," and "The Negro in Literature and Art," and others on English and Literature.

## CONSERVATION EDUCATION

The Scientific Monthly (February) contains an item on conservation teaching by Carroll L. Fenton. Reviewing papers at the recent meeting of the American Nature Study Society, it says in part: "Conservation education which takes exhibits and demonstrations into the village and country schools was described by John C. Caldwell, of Tennessee. Mr. Caldwell has a car, a trailer and a tent; he can hold a meeting in a town or stop to work with children by the roadside. Tennessee's trailer educational service has visited 350 schools and held 600 meetings. Each visit is intended to begin a conservation project in which teachers and children cooperate. Once such a project is begun, there is no need for a law to force the teaching of conservation."

## ELECTRIFIED FARM SURVEY

American farms now are being electrified at the rate of about 200,000 a year, a far more rapid acceleration than was recorded in all the years prior to the depression, a survey by the magazine Steel reveals. In 1924 only 204-780 farms, as classified by the Census Bureau, were using electricity supplied by a central or commercial source. By 1929 the number had more than doubled to 576,168. The depression slowed the movement so that in 1933 there were only 4,100 new installations. But the number has increased year by year, until at least 1,460,000 farms now have electricity supplied by commercial or government-sponsored companies. (Press.)

## SUGAR CANE FOR SIRUP

"Two new disease-resistant varieties of sugar cane, known so far as CP 29-116 and Co. 290, seem likely to lead to a restoration of sugar-cane growing for sirup for home and farm use in the coastal plains areas of South Atlantic states," says the Country Gentleman (February). "Formerly an important source of sirup in the South, the sugar-cane crop was invaded some years ago by mosaic disease. In the spring of 1937 the Extension Service of South Carolina co-operated with plant breeders of the United States Department of Agriculture in introducing these two new sugar-cane varieties which combine disease resistance with desirable sirup-making qualities. It is probable that these new varieties will largely replace other disease-tolerant varieties now grown."

## FARM PRICE INDEX DOWN

The Bureau of Agricultural Economics said yesterday the government index of farm prices dropped to 94 precent of the prewar level in mid-January, compared with 96 on December 15 and with 102 on January 15 a year ago. The bureau attributed the decline principally to a sharp break in egg prices and a greater than seasonal decline in prices of dairy products. (A. P.)

## "PATH TO PLENTY"

Henry A. Wallace, Secretary of Agriculture, in his book "Paths to Plenty," published last week, assails totalitarian charges that democracy is doomed, and urges all clergymen to redefine religion in terms of general welfare. "Democracy is on trial today," the Secretary writes. "It has been challenged in this country and the whole world. Organized violence, disregarding legal rights, moral rights and individual rights threatens to destroy the democratic ideal. Those who advocate the rule or force ridicule democracy. They say democracy does not work. They ay that only through discipline imposed from above can there be any security for the common people. Even in this country, where we have never known anything but democracy, this dangerous doctrine is beginning to be heard----We Americans must not and will not let the rule of force replace the rule of law. But if we are going to succed, our democracy must be efficient and it must have purpose. It is vital that the wills and hearts of all the peopl of the United States be captured by the doctrine of the general welfare in the capitalistic-democratic sense of the term. We should seek it more enthusiastically, more efficiently, and more righteously under our set-up than do the Nazis and Communists under theirs." (Washington Post, Jan. 28.)

## PLASTICS FROM COFFEE

Business Week (January 28) reorts that interests in South America have developed "coffee plastic" as the first fruit of a program for the development of non-beverage uses for the annual 4,000,000-bag coffee surplus. The item says in part: "Most remarkable feature of coffee plastic is the fact that it is wholly the product of unroasted coffee beans. Additives are substantially zero, because the bean itself furnishes bulk material, plasticizers, and dyes in a full range of colors. Since the beans are not roasted in the production process, the plastic has no odor. Most comforting feature, from the point of view of the domestic plastics industry, is the fact that there will be no effort whatever to introduce coffee plastic to the North American market----Coffee plastics will be manufactured into South American products for South Americans. Contemplated products include a flooring to be produced in tile-like squares about one foot or so on a side, an insulating and acoustical wallboard, a roofing material, and all the wide range of molded products to which synthetic plastics have been adapted. Since coffee plastic has good dielectric strength for all electric currents except those beyond the usual radio frequencies, it is expected to find a large field in electric fixtures, radio parts, and radio cabinets. During the synthesizing of plastics from the beans, it is anticipated that valuable byproducts will be recovered—among them a "drying oil" similar to linseed, a fertilizer which also acts as a growth agency for desirable soil bacteria, vitamin D for both human and animal consumption, a colorful series of vegetable dyes, and, of course, caffeine."

# "THE OLD GIVES WAY TO THE NEW"

Your Arcadian Farm Reporter presents two contrasting scenes which typify the pains of progress—the cradling of grain, and harvest by the combine.

In its day, cradling of grain was a noble art. It took all that a man could give—skill, strength, stamina. The ring of whetstone on scythe was music in the harvest field; and the grain harvest itself was a social event of the countryside.

But those days have gone forever. The rising generation knows little of this oldtime skill. First came the harvester, and now the combine, and cradling is of the past . . . because these newer methods give a greater return **per hour of human time** spent in productive work.

**So Time Is Saved!**

Sometimes your reported speculates on what is being done with all of these extra hours which the harvester and combine, and other "better ways" of doing things save for somebody. And your Reporter would like to meet the somebodies who are using these extra hours. He would like to know who has these "saved" hours, and what is being done with them.

The answer, of course, is to be seen everywhere in the South—and all over the country. Better roads, and safer roads—bigger and better educational institutions—more time given to the training of men and women in all walks of life—better homes and better equipped homes—all of those things which make life in this generation at least more comfortable than it was in the past. For all of these improvements became possible only as our farming industry became more efficient, and could **save time** which could be used in other work, or in doing other things.

**More "Power" for the Soil**

Now comes Arcadian Nitrate, in further contrast with the grain cradle and the combine. "Hopewell" digs down for coal, reaches up into the air for nitrogen, and with the power derived from coal, fixes the nitrogen of the air in usable form. "Baton Rouge" bores far down into the ground and brings up sodium deposited there by Nature, nobody knows how many years ago. This sodium drawn from the depths of the earth, and the nitrogen from the inexhaustible supplies of the air are brought together and we have Arcadian Nitrate. The American Soda.

Arcadian used on the land, in proper balance with other necessary plant foods, does what the harvester and the combine are doing—it makes the time spent in the basic industry of farming more efficient. It means the saving of countless hours of sweat and toil where crops are produced under conditions of nitrogen shortage, for under this handicap it is necessary to plow, plant, and till much more land to produce the desired number of bales, bushels, or pounds of crop. Thus Arcadian means a larger "yield per hour" . . . **more for your time!**—Arcadian Grower.

## ANCIENT DRUMS OF INDIA

The drum is something more, in India, than a musical instrument—it occupies an important place in Indian myth and legend. The most ancient of these drums is the mrdanga, the two heads of which are made of parchment and tuned by braces. A mixture of flour and water is frequently applied to the head to increase the volume, and the drum is played with the fingers. Among primitive peoples the drum is used as a medium for transmitting signals, news and other types of messages. Some of them can be heard for a distance of six miles, and one small instrument, not two feet high, has been known to send its sound for 10 miles.

## CUSTOMERS HE HELPED RECUSE HIS BUSINESS, BUT JOE HESS IS DEAD

Danville, Ind.,—When he was 10 years old Joe Hess came to Indiana from Germany, and began working in stores at Ligonier and Fort Wayne. In 1902 he started his own store here. The depression threatened to swamp his neighbors a few years ago, but Joe stuck by his slogan: "Credit to all who deserve it." His own creditors, however, closed in on Joe last autumn. Fellow merchants arranged a sale for him in December, and folks from miles around came in and bought cotton socks for $15, a handkerchief for $10, and so on. That sale pulled Danville's biggest department store out of bankruptcy, and Joe was deeply grateful. But the strain had been too much. Today Joe Hess, merchant, died at the age of 67 years

# TOPEKA HAS CHURCH LEADERS IN COUNCIL

Topeka, Kans., (ANP)—Topeka drew distinguished churchmen, ministers and laymen to the recent two-day session of the Winter Council of Ministers and Lay Workers of the C. M. E. Church, whose sessions were presided over by Bishop J. Arthur Hamlett, resident bishop of Kansas City, Kan., and presiding bishop of the Fourth Episcopal district. Sessions were held in Lane Chapel C. M. E. church, the Rev. E. L. Hollis, pastor.

The general theme was "The Type of Church Needed in the Present Baffling Crisis." Bishop Hamlett gave the keynote address Thursday morning at the opening session and outlined the variety and scope of the discussions. In the group of delegates and visitors in addition to Bishop and Mrs. J. A. Hamlett were three general officers of the C. M. E. Church: Drs. J. B. Boyd, general secretary and superannuated preachers, widows and orphans, Memphis; B. Julian Smith general secretary of the department of religious education, Chicago, and C. E. Chapman, general secretary of the department of public relations, Kansas City, Mo.

Dr. R. O. Langford, a recent transfer to the Kansas-Missouri conference who is now stationed at Jamison temple, Kansas City, Mo., was presented to the council by Bishop Hamlett. Dr. Langford expressed supreme delight at being a member of the conference and pledged wholehearted support to the Forward Movement program now under way in the conference.

The financial reports made by the two presiding elders districts were far in advance of reports made at the previous winter council in January, 1937. The two presiding elders Revs. L. E. B. Rosser of the Missouri district and C. E. Chapman of the Kansas district, engaged in keen rivalry for financial leadership in the conference. The Kansas district, though considerably smaller numerically, outdistanced the big Missouri district in the amount of money raised for annual conference and general church purposes. The Kansas district reported one-half of its entire annual budget assessment, though the conference year was only four months old.

## NECTAR, NOT HONEY, THAT ATTRACTS BEE TO BLOOMS

It is nectar, not honey, that attracts the bees to the flowers. This nectar is usually found in a little gland at the base of the petal. This is what the bee, and various flies and ants steal from the flower, asserts a writer in the Montreal Herald. When the bee has sucked up the nectar, it turns it into honey in a portion of its stomach called the honeycrop. Therefore the only place where honey exists is in the crop of the bee, and later where it deposits it in the cells of the hive.

The flower's nectar is almost pure sacchrose, whilst honey manufactured in the bee's honey-crop is dextrose and levulose. Thus the bee performs the wonderful feat of changing cane-sugar into grape-sugar. Of course the flowering plant does not offer the nectar free. It is a bribe to attract the hairy-bodied bees, who in search for it, rub their bodies against the pollen-covered anthers, and visiting another plant, fertilize it with this pollen and thus carry out the reproduction of the plant. To avoid being robbed of honey by useless insects, flowers often have hairy stems so that ants cannot climb up, and deep-throated flowers so that only the long-tongued bees can reach the nectar. On the petals of the primrose you will see definite lines which botanists call "honey-guides" for as on other flowers, they are thought to be there to guide the bees to the nectar—not the honey!

## YEAST PLANT IS CLASSED NEXT IN VALUE TO WHEAT

If tea, coffee, cocoa and tobacco plants all ceased to exist tomorrow life would go on much as usual. But if grass disappeared, so would man, and with him, all the other warm-blooded creatures, writes T. C. Bridges in London Answers magazine.

The banana gives more food to the acre than any other plant, and is grown in the whole belt of the tropics for 25 degrees on either side of the Equator. All it asks is heat and moisture. It does not need replanting, but keeps on throwing up shoots from the same root, and each shoot blooms and bears fruit in 18 months.

The yam does require cultivation, but not much. Slips of the vine stuck in moist ground grow at once, and produce tubers weighing up to 10 or 12 pounds each. They are even more nourishing than the ordinary potato of the temperate zone, and form a large part of the food of about one-third of the world's population.

Peanuts, rape, poppy, the oil palm, the sunflower, and the cotton plant all produce valuable oils. On these oils we depend for soap, margarine, paints and varnishes, stock feed and many other necessities.

Last, but certainly not least, comes a plant so humble that few have ever seen it, yet everyone eats its product every day. We refer to the yeast plant, the minute fungus which causes our bread to rise. Except baking powder,

# BACKACHE?

Try Flushing Excess Poisons and Acid Thru Kidneys And Stop Getting Up Nights

35 CENTS PROVES IT

When your kidneys are overtaxed and your bladder is irritated and passage scanty and often smarts and burns, you may need Gold Medal Haarlem Oil Capsules, a fine harmless stimulant and diuretic that starts to work at once and costs but 35 cents at any modern drugstore.

It's one good safe way to put more healthy activity into kidneys and bladder—you should sleep more soundly the whole night through. But be sure to get GOLD MEDAL—it's a genuine medicine for weak kidneys—right from Haarlem in Holland.

# BLAMES UNEQUAL INDUSTRIAL, FARM PRICES FOR SLUMP

The No. 1 problem confronting America is the continued disparity between industrial prices and wages and agricultural prices. Earl C. Smith, president of the Illinois Agricultural association, so declared yesterday before more than 3,000 farmers attending the organization's annual meeting in the Stevens hotel. He said he believed that this disparity is the major cause of continued unemployment.

"I fear we are facing a serious decline in price levels," Smith said, "unless there is a much greater participation in the feed grain adjustment program in 1939 and a tight control is maintained over grain surpluses."

**Urges Cooperation with AAA**

Smith, one of the chief sponsors of the New Deal's crop control legislation, urged farmers to continue to cooperate with the government's agricultural program. He termed the agricultural adjustment act of 1938 the best law ever passed by congress for the stabilization of American agriculture. It may be necessary, he said, to seek some amendments or modifications. He acknowledged that delays, inequitable farm acreage allotments, and other injustices, combined to limit participation in the 1938 AAA program in the cotton and corn belts, as well as in other sections.

Smith's organization lost some members last year because of the government crop control plan. He said yesterday that some farmers were dissatisfied with the position of their county farm bureaus and the association in supporting the AAA of 1938. Other losses were encountered he said, because of local conditions.

**Holds Criticism Unjust**

He said that there possibly had been too much direction from Washington. But, he added, regardless of the errors or mistakes of judgment that have been made, he feels that there can be little just criticism of the present AAA law.

Although he was critical of the administration's spending policy, which has nearly tripled the national debt, Smith said he believed that subsidies to farmers under the crop control program should be continued. However, the huge expenditures of government have not removed the causes of the depression, he added, but "have done little more than mitigate its hardships."

Smith said that efforts are being made to amend, if not repeal, the 1938 farm law. He referred specifically to the advocacy of a so-called domestic allotment plan whereby farm production would not be limited, a fixed price being paid for products sold at home, and the surplus being dumped abroad. Of this, he said: "We should not support any program that would have the effect of selling America's soils to foreign consumers at far below their value."

# THE STORY OF A YEAR 'ROUND FARM

Your Arcadian Farm Reporter was reading recently that a typical wheat farmer in the Middle-West is occupied only about 80 days a year in producing his crop. The article also stated that producing cotton under the old "one crop" system requires an average of only about 130 days of work a year.

It was pointed out that one of the main advantages of "balanced farming" is the fact that it means more days per year for income-producing work . . . less "unemployment" for the labor, equipment and investment in the farm.

This, of course, is easier said than done! Nevertheless, many a farmer has succeeded in finding profitable use for "out-of-season" time. Let us tell you about one He is a mighty capable young farmer who started several years ago on a plan to furnish year 'round work on his farm.

**Crops Coupled With Livestock**

His cropping system is cotton, corn, hay, and winter legumes—all grown in a rotation system. The cotton receives 400 pounds per acre of a 4-8-4 fertilizer, plus a side-dressing of 100 pounds of Arcadian Nitrate per acre, while his corn gets 150 pounds of Arcadian.

With plenty of organic matter in the soil from winter green manure crops, the soil holds its moisture well, and the fertilizers are able to do their work to best advantage, so that yields on his farm are considerably above average. The corn is fed to the brood sows and a fine bunch of pigs which are finished for the late spring and early fall markets.

During the months between producing and harvesting crops this farmer and his help keep busy repairing old buildings and putting up new ones with lumber which he cuts and saws from the woodland on the farm. Fencing, terracing and many other improvement jobs are done during this period—and, of course, the livestock must be tended. Your Reporter saw **seventeen miles** of terraces which this farmer has built in the past three years with a tractor and small terracing machine on his 628 acres of cultivated land!—Arcadian Grower.

## Joseph H. Dean Is Named To FSA Post

Washington (ANP)—Joseph H. Dean of Alcorn, Miss., has been added to the regional staff of the Tenant Purchase section of the Farm Security administration at Little Rock, it has been announced by FSA regional officials.

Mr. Dean, who will have the title of regional field assistant, will assist the FSA in carrying out policies in connection with the Tenant Purchase program, in Arkansas, Louisiana and Mississippi. He will contact Negro extension workers, Negro Smith-Hughes teachers and mation concerning the program being other Negro leaders, giving inforconducted under the Bankhead-Jones Tenant Purchase act, and will solicit aid in securing qualified Negro applicants.

Mr. Dean, a native of Alabama, is a graduate of Tuskegee Institute, holding a bachelor of science degree in agriculture. He also studied at the American Poultry school at Kansas City and at Iowa State college.

After completing his education, he served as principal and teacher of vocational agriculture in high schools at Sumrall and Columbia, Miss., and from 1930 to 1935 was attached to the staff of the Mississippi State Department of Education as Assistant State Supervisor of Vocational Agriculture.

From 1935 until he resigned to accept his present position, he occupied the post of resident teacher trainer at Alcorn college.

## Homeless Missouri Sharecropers Are Serious Problem

New Madrid, Mo.—(ANP)—Last Wednesday, after a fortnight of trials and tribulations, the problem of the encamped sharecroppers in Southeast Missouri still baffled solution and there was no indication as to what would be done with the 500 Negroes who, on Monday, were put into a camp six miles east of Highway 61—in a swamp area inundated during the 1937 floods.

The colored sharecroppers who constituted more than one-third of the group which had previously pitched camp along highways of the district, were evidently prepared for a long stay. Sheriff A. S. Stanley of New Madrid county and Sgt. R. R. Reed of the State Highway patrol reported, however, that the camp was peaceful.

The officers said the sharecroppers had sufficient food, received from surplus commodity warehouses and from private sources, and Sheriff Stanley said, "I don't know what to do. They apparently want to stay up there and wait for some guardian angel to come and take care of them. If they don't want to go to any farms, you can't make the landowners take them. Sgt. Reed said there was a probability the sharecroppers would be moved to farms soon, but Sheriff Stanley said no procedure had as yet been worked out.

# S. C. STATE COLLEGE LAUNCHES FIVE YEAR EXPANSION PROGRAM

Orangeburg, S. C.—(ANP) South Carolina State Agricultural and Mechanical College has entered a five-year expansion program that will provide many additional physical facilities and improved academic training for more than 70 students of college level enrolled at the beginning of the fall and winter session 1938-39.

The new five-year program calls for an expenditure in physical improvements of more than one-half million dollars. Physical improvements which have recently been completed or are underway are (1) a boys' dormitory, erected at a cost of 60.000, (2) a modern three-story, well-lighted library, erected and equipped at a cost of more than $80.000, (3) a new stadium and athletic field, built and graded at a cost of more than $20.000, and (4) a $120,000 Trades building, the center unit now nearing completion.

Other physical improvement yet to be constructed and a part of the five-year program are (1) a boys' dormitory at $65,000. (2) a laundry to cost $25.000, (3) a Home Economics building to cost $65,000; all three of these projects to get under way within another year. Also an administration building, a power plant and a group of faculty homes will make up the third stage of improvements in the five-year plan.

Besides these numerous physical improvements, the new five-year program calls for administrative and academic changes to meet the needs of an increasingly large enrollment of college students. These academic changes involve each of four divisions of the college, namely: the Division of Agriculture, Home Economics, Mechanic Industries and Liberal Arts and Sciences.

Agricultural training for Negroes in South Carolina has made encouraging progress through the division of agriculture at South Carolina State. Funds for expansion of the work in the four departments of the Division of Agriculture have been requested for 1939 to care for several new projects proposed in the 1939 program. According to W. M. Buchanan, dean of the division, "Agriculture at State College is in process of change, so that it can analyze and solve the problems of agriculture that now confront the farmer and rural situations."

Adjustments in the program are designated to make scientific agriculture point the way to building, enriching and conserving the soil. Attention is directed to the fact anew that the forests and farmers' wood lot are valuable economic crops. The paper industry that is coming South demands more attention be given to trees of the forest as sources of wealth.

The growing of farm animals for milk and meat receives more emphasis. Replenishing the table from field and garden is the fertile field by which substitutions are emphasized for the diminishing cash crops, cotton and tobacco.

The program for milk and meat production and the production of vegetables and fruits or the table is not pushed at the expense of other phases of agriculture. There is now under construction a building to house farm machinery so it can be used in teaching its use and its economic productive value to the students who in turn will take its use to the farm and fields.

Mrs. Geraldine Jones Hurd, dean of the Home Economics Division, says that the department is striving to offer courses in keeping with the problems of these confusing times when values and standards are so important and yet so hard to set up and maintain.

Funds for expansion of the program in the division here have been requested for 1939 to develop new projects and new trends in homemaking. A long time plan is being formulated which represents the best thinking of experts in home economics and courses are being re-evaluated to suit future needs. A building dedicated exclusively to home economics is being planned with a children's building in close connection to meet the needs of future expansion and growth of the program.

The training of Negroes for gainful employment in skilled work is the primary function of the Division of Mechanical Industries. At the present time a new building is being constructed through WPA aid. The central portion of the building is rapidly approaching completion and work on the two wings is expected to be released promptly. When completed, the building will constitute a typical industrial layout

**WRONG TWO WAYS**

Grocer—What was the matter with those eggs I sent you?

Housewife—Too small for their age.

**SOLELESS SOUL**

A Backwoods Woman, the soles of whose feet had been toughened by a lifetime of shoelessness, was standing in front of her cabin fireplace one day, when her husband addressed her:

"You'd better move your foot a mite, maw, you're standin' on a live coal."

Said she, nonchalantly—"Which foot paw?"

**BROTHERS IN LAW KILL EACH OTHER; DOUBLE FUNERAL**

Whitesburg, Ky.,—More than 1,000 mountaineers attended the double funeral at Long Fork of Tom Burke, 40 years old, and Richard Johnson, 36, brothers-in-law who fought a duel early Sunday morning—killing each other over a few bushels of corn. The men met on the roadside, after previous heated quarrels. Both drew revolvers and began firing. Burke fell first, but after he fell he fired another shot which struck and killed Johnson. Burke had married Johnson's sister, and rented from Johnson. Burke has nine children. Three ministers officiated in the services at the graveside.

# TALLADEGA COLLEGE VICTIM OF MEANNESS OF ALABAMA NATIVES

## Unrest in Student Body Follows Acts of Police Brutality; Barn Burned

Talladega, Ala., Feb. 9 (ANP)—Race relations in this peaceful little Alabama area where Talladega college is located have been a bit strained in recent weeks, but school and city officials are hoping for an early return to normalcy.

The current unrest began some months ago when a white man endeavored to rob the comptroller's office. The school's night watchman caught him after shooting the intruder in the leg. White people about the town, a small village near the school, were a bit indignant about the shooting, even though the police department backed the watchman. There was some talking about blowing up one of the buildings. A little later the barn belonging to the college did burn down rather mysteriously, causing some thousands of dollars worth of damage. There was no evidence pointing to the origin of the fire.

**Then two weeks ago, there was a bit of disturbance at the local theatre, which has a section for its colored patrons. Because of the tension, the girls were not allowed to attend this particular show because it was a midnight performance, but a few college boys went. A little fracas arose between the colored and white crowds, composed almost entirely of townsfolk. A college boy was struck by the police and the boy fell back on a white woman knocking her nearly under a car.**

The student body talked the situation over and at present is refraining from attending the theatre. Any disturbance in the economic relationships between the school and the town, which gets a good deal of its patronage from the institution normally, merely accentuates whatever feeling exists. The mayor and chief of police have been out to talk with President Gallagher. For a time a few students were apprehensive. The situation seems to be quieting down, however, and it is hoped will soon blow over.

## "Salute The Flag"

**(By William Pickens for ANP)**

The court of appeals of New York has ruled that it is not an unreasonable or unjust requirement that school children, public school children salute the flag of their country. I have mostly listened and read for years about these cases where some children refuse to salute the flag and claim that it is like bowing to Baal or worshiping idols, or some other false religion, and that their mother or father has forbidden them to offer the salute.

It never has seemed to me quite a sensible argument that a flag-salute was to be put on a religious basis. But I felt rather sympathetic with the flag when some nut had to be compelled to salute it. Except in time of war and of military discipline, it seems that the great flag could afford to ignore the rationalizers who were opposed to saluting it. But I have never thought that the requirement violated a public school room, that he refuse to throw than does the requirement that he take off his hat when he enters the schol room, that he refuse to throw waste paper in the aisles, or that he "be polite to teacher." It seemed to me that those who raised the religious angle were trying to inject religion into a purely secular matter.

Let the flag represent democratic spirit, love and cooperation of people in maintaining freedom and liberty; let it represent the sentiment that builds up the school funds to pay for youngster's education; let it represent the sacrifices of his parents and of other parents, and, if he does not want to take off his hat an dsalute it, somebody ought to take a switch to his hide!

## THE WORKS PROGRAM

Works Progress Administration

New York, N. Y.—An exhibition of Negro Cultural Work on the Federal Arts Project of New York City is now taking place at the Harlem Community Art Center, 290 Lenox Avenue. The hours of the exhibition are from 10 a. m., to 10 p. m., daily.

The Writers Project is represented not only by manuscripts and published books but by rare source material from the famous Spingarn and Peterson collections. In addition there is a display of photographic reproductions of the Arthur Schomburg collection.

The Art Project exhibition includes not only sculpture, paintings, prints, weaving, and photographs by Negro writers, but also much material by white artists on subjects relating to the Negro people.

Art classes for Negro children are shown in illustration, and also paintings by Negro child students of the Federal art schools.

The Theatre Project is represented by many plays and manuscripts of plays produced and in production, as well as original sketches for costumes, models of stage sets, and other material from "Haiti," "Bassa Moona," "The Trial of Dr. Beck," "Macbeth," and "The Conjur Man Dies."

Among the exhibits of the Music Project are transcripts of original Negro spirituals discovered in research by project workers, as well as many protographs of Negro musicians at work and Negro students in Federal music classes.

The exhibition will continue until February 17th.

## LISTEN TO THIS

By Hobart T. Mitchell

copyright

George Washington Carver, Director of Agricultural Research and professor of Chemistry at Tuskegee, 1922 recipient of the Spingarn Medal, Fellow of the Royal Society of Arts of Great Britain, was born a slave in 1864 in a one-room cabin at Diamond Grove, Missouri. It took him 18 years to graduate from the Iowa State University, and two more to get his master's degree.

Ceaser, a South Carolina slave, became famed for a cure for poison which was a compound of plantain, hoarhound, gold rod roots, rum and lye, and in 1750 the legislature of the colony ordered it published for the use and benefit of the people.

A Negro boy, Henry Johnson, sixteen years of age, was held aboard ship at sea for a period of five months, during which time he was not permitted to inform his mother of his whereabouts.

The boy was a resident of Washington. On Sept. 26, 1879, he and several of his fellows were induced by a colored man to accompany him to Baltimore where the boys were signed aboard an oyster schooner bound to sea, on representation that they were 21 years of age. Each was advanced seven dollars from his pay, which the colored man took.

The schooner, the Thomas W. Moore, Captain Lewis in command, was one of the three vessels operating as a fleet, and every two weeks one of the three returned to port bringing the combined oyster haul. A different ship alternated each trip but the boy was always put to work on one of the other vessels when it was the Thomas W. Moore's turn to return to port.

During the entire five months period, the boy's mother had no knowledge of her son's whereabouts, and her anxiety may be imagined. When he did return, he was so frost bitten and sick that it required months of nursing to restore him to health. When discharged, the boy had been given $3.75 as the balance of his earnings. He was supposed to receive a salary of $7.00 per month.

Atlanta, Ga., Aug 28, 1936—The National Association of Teachers went on record as favoring Negro history in white schools, in its recent annual meeting, as follows: We are convinced that one item in this program should be the inclusion of Negro history in the curricula of both Negro and white schools at all levels, for the development of justifiable pride on the part of the Negroes, and of understanding and cooperation on the part of both races.

There is no proof that the fluid used by Christ in instituting the sacred communion was alcoholic, it is nowhere called wine, but simply the "fruit of the vine."

Negroes held altogether about seventy-five commissions during the Civil War.

(What the white Doctor of Medicine believed about the Negro child in 1757) Meckel in 1757 stated as a fact that the color of the Negro child when first born is yellow, which becomes a shiny black in manhood, and this statement was practically repeated in 1852 by Dr. Cartwright of New Orleans, who claimed as a fact that "Negro children and white children are alike at birth in one particular—they are both born white and so much alike, as far as color is concerned, as scarcely to be distinguished from each other.

Federal District Court of Maryland, Nov. 8, 1880, Judge Morris stated that a large sum of money given to a colored woman would probably be ruinous to her.

The Roman Catholic Church, in 1888, appointed its first Negro priest in the United States.

Through this day, O Lord,
Let me touch as many lives as possible for Thee
And every life I touch wilt Thou,
By Thy Spirit quicken
Whether through the thoughts I think,
The words I speak, the prayers I breathe,
The column I write, or the life I live.

## NEBRASKA BABY'S MOTHER ONLY THIRTEEN, FATHER IS FOURTEEN

Grand Island, Neb.,—According to County Attorney Louis Holmes, a girl only 13 years old gave birth to a son at a hospital here last week. Both are doing well. The father is 14 years old. Hospital attaches confirmed the birth, but declined to reveal the girl's identity.

# MRS. LUCY HUGHES, WOMAN MISSIONARY GOES 10,000 MILES

## Gives Graphic Account Of British Exploitation in Many Parts of Africa

Capetown, South Africa (Delayed ANP Correspondence) Mrs. Lucy M. Hughes of Cameron, Texas, president of the Home and Foreign Missionary society of the A.M.E. church returned to Capetown recently after completing a tour of 10,000 miles through Africa. Mrs. Hughes was making a trip of inspection so that she might see the work which has been accomplished over the years by the funds sent to Africa by the missionary group of which she is the head. The work being done by this missionary group is said to be the most extensive carried on by any colored denomination.

"I am grateful for this opportunity to visit wonderful Africa," said Mrs. Hughes. "It as a great continent, rich in gold, diamonds and ore; beautiful with flowers, trees, birds and the most beautiful skies to be seen anywhere. Its mountains many of them snow capped with the clouds resting on their peaks, tree and flower bedecked, are too beautiful for a poor human like me to attempt description.

"I have made many contacts here for our work. In Bellawayo I was entertained in the Colored Township hall. The mayor of the city was master of ceremonies and half the audience was European.

"I traveled through Southern and Northern Rhodesia as far as the Belgian Congo, I spent a week at Johannesburg, visiting the mines, "The Compound," where 8,000 native men working in the mines every day live. Most of these men work for one shilling sixpence, the highest paid receiving two shillings six pence, which as about 31; and 56c in American money. I visited the quarters of the 'witch doctors,' and while at Johannesburg had tea with Mrs. Bridgeman, a white missionary who with her husband, deceased, came here 26 years ago to work among the natives. She has established the Bridgeman Maternity hospital for Native women. The day I spent with her, 25 babies were born. She has also established a home for delinquent native girls and a 'Helping Hand' institution, and as I inspected it, I could not help but feel that some one does care for those farthest down.

"While in Rhodesia I surveyed some 10 native kraals. There is where you find real primitive life with a chief and his many wives holding control. Poverty, filth, sickness and many deaths confront you. The government in these sections seems very hard and unfair to the natives. I visited the offices of the native commissioners and also the commissioner of education, but my impression is that they have little genuine interest in the natives.

"The schools are taught by inferior teachers and go only to the second or third grade. The teachers have the appearance of our 'bottom' farmers and in many cases had themselves only gone to the 3rd or 4th grades.

"Fortunately these conditions do not exist everywhere. In beautiful Swaziland where there is native control, you find an altogether different feeling and atmosphere. Here we had dinner with Dr. and Mrs. Hynd, white, who maintain a large hospital for natives. In Basutoland where the Paramount and lesser chiefs have their abodes, I rode a dashing pony for 24 miles to inspect one of our schools (the Emily Vernon) and did I enjoy it?

"I was invited along with Bishop and Mrs. R. R. Wright to speak to the Missionary Conference of the Transvaal, all white. This organization is composed of representatives of all the missionary boards.

I have attended four of Bishop Wright's annual conferences and many missionary conventions of the women. Bishop Wright is giving the A.M.E. church a full day. His building program is astounding. Thirty-three good churches and 18 mission houses were built in 90 days. He is kind and straight-forward in his dealings with the people and is respected by the best business men and loved by his followers. His wife, cultured and refined, is by his side in every movement. He is building a wonderful institution at Eauton. We laid the corner stone of the first and only clinic, built by Negroes for natives in all of South Africa on Jan. 17.

"I have been the house guest of Prof. A. J. White and his very capable wife at Wilberforce and have had the pleasure of seeing Dr. J. R. Coan, the latest American arrival over here. You cannot over-estimate the services of these fine people who are standing hard by Bishop Wright and his Wilberforce program.

"I am sailing from Capetown on Jan. 27. The people here are giving me a bon voyage on Jan. 25. I expect to arrive in New York on Feb. 22 in time to go to Dallas for the Bishop's council.

"I have never been more certain of the value of the work which is being accomplished in Africa by the missionary forces of the church of Richard Allen. It is high time that we put even more vigor into it and I plan to be a candidate for the post of secretary of missions to succeed the Rev. L. L. Berry at our General conference to be held in Detroit in 1940. Greetings to all our workers in America and missionary workers everywhere."

## Cuba Hails AME Church Leaders

Havana, Cuba (ANP)—The Republic of Cuba last week extended a royal welcome to a group of distinguished American A. M. E. church bishops and lay leaders, members of the Connection's Commission of Visitation to Cuba, whose purpose is to cement U. S.-Cuban church relations and extend the A. M. E Church here under the new "Open Door" policy.

Their visit marked the first time so large a number of colored American church leaders had come to Cuba, and residents throughout the provinces vied with each other in extending courtesies to the visitors.

The commission, composed of Bishops R. C. Ransom, D. H. Sims, H. Y. Tookes, E. J. Howard, J. A. Gregg, W. A. Fountain, M. H. Davis and N. W. Williams; Drs. L. L. Berry, John R. Hawkins, G. W Baber and W. P. Stevenson, accompanied by Mrs. Esther Hawkins-Wilson and Dr. and Mrs. Frank Jones, left New York, Jan. 16, and arrived at Havana three days later.

They were met at the pier by the personal adjutant of Colonel Batista, who welcomed them on behalf of the military forces of the republic of Cuba. There was a great throng of Cubans, headed by John A. Deveaux, composed of leading professional, business and trade men and women of Havana and the republic, who formed a reception committee on the wharf.

After being domeciled at their respective hotels, the visitors led by a local committee proceeded in a body to lay floral wreaths at the statues of Marti, Gomez, Mariana Maceo and Antonio Maceo who made great contributions to the Republic of Cuba. A wreath was also laid at the memorial which commemorates the sinking of the Battle Ship Maine.

The commission made a tour of the six provinces of Cuba, where they were received by governors, mayors and military commandants with great cordiality and given an open door. At each place visited, the commission was literally thronged by thousands of eager and enthusiastic Cubans from every walk of life.

Programs of welcome by the respectible communities were given at each place visited, following which the commission presented the A. M. E. church, which was received with great acclaim and enthusiasm. Sermons were preached and lectures given by various members of the commission.

Notable among the incidents of the visit was the stirring patriotic spirit of the Cubans, evoked by the presentation of Bishop John A. Gregg and Noah W. Williams who served in the Spanish-American war for the liberation of Cuba, and especially at Santiago where they visited their old camp ground. A happy surprise to all was the intelligence received that Bishop Ransom had recruited, financed and pressented to the 8th Illinois Regiment company 1, commanded by Captain Roots, during the same war.

Returning to Havana, the final meeting of the series was held in the Methodist Episcopal church under the pastorate of Dr. O. K. Hopkins, following a sermon by Bishop Williams, Bishop Ransom, chairman of the commission, presented the open door, a large number responded and were read into the membership of the A. M. E. church by Bishop Fountain.

This was but a type of all the former meetings on the island, where thousands were eager to join the church and give hearty welcome to African Methodism. Dr. L. L. Berry secretary of missions, and Dr. John R. Hawkins, secretary of finance, proved to be towers of strength at every turn. Bishop D. H. Sims, the vice chairman, gave outstanding service by presiding at the meetings through the provinces Bishop Gregg was secretary of the commission.

## Texas Decides To Skip Rape Charge To Skip Negro Juror

AUSTIN, Tex., Feb. 23 (ANP)—J. D. Johnson, sentenced to die for raping a white woman on April 9, 1938, was ordered freed last week by the state court of criminal appeals because, among other reasons, no Negro had served on a grand jury in the county where the trial was held for more than 30 years although a number were qualified.

In their appeal, Johnson's attorneys pointed to the supreme court decision in the Scottsboro case and said no Negro served on the jury which convicted him. The appeals court, highest tribunal in the state in criminal cases, also found other trial procedure errors in the case.

## FALLS; BREAKS ONE WRIST; FALLS AGAIN; BREAKS OTHER

Holley got two breaks for which she is not grateful. She fell on the ice, broke one wrist. Getting up and starting home, she fell again. This time the other wrist was broken.

## AFRICAN ARRIVES

New York.—Asare Kisseado of Akaulpim, Gold Coast, West Africa, is in America for the purpose of establishing a market for West African products such as cocoa, kola-nuts, hides, mahogany, skins, etc. West Africa produces more than half the world's supply of cocoa and as the producers have a limited market for their products they do not get proper market value for them. America consumes the greatest part of such raw products, but unfortunately, with the exception of one or two firms, such products do not reach the American manufacturer or consumer direct. It is to remedy this that Mr. Kisseadoo has come to America.

He has established New York headquarters in room 112 at 217 West 125th Street. Hours from 10 a. m., to 5 p. m., and from 7 p. m., to 9 p. m.—The Eye.

## REVOLUTIONIZES TEXTILES

The company claims that its achievement not only has added to Japan's academic and industrial prestige, but also has brought about a revolution in world textile circles.

The outstanding feature of the silkool industry is that its raw material is abundant. Since the outbreak of the present conflict with the Kuomintang regime of China, restriction has been placed on the domestic consumption of cotton and woolen goods because their raw materials have to be imported and Japan is in need of things other than cotton and wool.

The use of rayon and staple as substitutes for cotton and woolen goods is being encouraged It so happens, however, that Japan is not yet self-sufficing in pulp, a large proportion of the domestic requirement being imported.

TREE CUTTING HEAVY

Meanwhile, the available trees are being felled to excess under the present program of increasing the pulp production at home with the accompanying hot contentions as to the evils of deforestation.

Silkool, in contrast, involves no inexhaustible. There is no pos- problems as regards raw materials Manchukou's soya-bean supply is sibility of the silkool industry s suffering from a shortage of raw material. On the contrary, the more Japan consumes soya beans, the more she contributes to the co-existence and mutual prosperity policy of Japan and Munchukuo.

The silkool industry is being carried on at Ichinomiya, Samukawamura, Koza-gun, Kanagawa prefecture. The company purchased a little more than eight acres there as a site for its factory.

PRODUCTION STARTED

The construction of this factory was begun toward the end of November, 1937, with a solemn ceremony. Operation has been started.

In addition, in order to conduct the weaving and dyeing of silkool textiles on the basis of a continuous process, the company also has built a large factory at Kamiomachi, Saitama prefecture. This factory was opened for business last summer.

Th daily production at the Ichinomiya silkool factory amounts to five tons, but it is planned to extend the capacity to 50 tons a day.

## U. OF W. PROFESSOR URGES MORE ABUNDANT AND LONGER LIFE FOR COW

Madison, Wis.—Dr. E. E. Heiser, new chairman of the University of Wisconsin dairy husbandry department, told visitors to the annual farm and home week on the campus today that the state's major dairying problem is to increase production and lengthen the productive life of individual cows.

Dr. Heiser, who came here from Ohio last September, outlined a campaign, under leadership of the university college of agriculture, designed to boost production through herd testing and improvement activities.

## *Honored*

DR. M. O. BOUSFIELD, prominent Physician and former president of the National Medical Association. who is helping the Mayor of Chicago choose the Board of Education of that city.

## DR. M. O. BOUSFIELD NAMED MEMBER OF SCHOOL COMMITTEE

### Popular Chicagoan Will Help Recommend Men For City School Board To Mayor

Chicago, Feb. 23 (ANP)—Dr. Midian O. Bousfield, president Chicago Urban league, vice president Supreme Liberty Life Ins. Co., and member of the executive board the Rosenwald Fund, last Thursday was named by Mayor Edward J. Kelly as one of a committee of seven prominent Chicagoans who will supervise future nominations to the school board and exercise advisory control over general educational functions.

Official title of the group is the Citizens' Advisory Committee on Chicago's Schools and concerning their activities Mayor Kelly said: "I am confident that the personnel of this non-partisan group will have ready public approval. Those who will serve are truly representative Chicagoans and I feel positive that their contributions of thought and action will make the Chicago school system a model of educational opportunity for the whole country. That has always been my desire, and I think it is needless to say the advisory committee will have my whole hearted cooperation."

---

The new policy is in line with the idea advocated yesterday by another college of agriculture professor, I. F. Hall, who urged Wisconsin farmers to adopt a permanent policy of improved production and not depend upon congress and the AAA to solve their ills.

If we are going to depend on congress we're going to be in trouble," Hall asserted. "If we sit back and wait for outside help, we're going to be licked. As far as the AAA payments are concerned, they are a help, but they aren't doing much to promote better agriculture. Benefit payment checks from the AAA are not farm trouble cure-alls."

---

"You bust 'em; we fix 'em," advertises an enterprising auto mechanic.

Girl Customer—"Does this lipstick come off easily?"

Clerk—"Not if you put up a fight."

# CHURCH MUST TAKE LEAD IN WORK OF SOLVING ECONOMIC ILLS, SAYS

Jacksonville, Fla., Feb. 23 (ANP)—At a crowded meeting held at Mt. Zion A.M.E. church several days after the funeral of the late Bishop R. A. Grant, presiding prelate of the Florida district, Rev. C. A. Gibbs presiding elder North Jacksonville district and business manager-treasurer Edward Waters College, strongly condemned the apathy of some churchmen for the civil and economic problems faced by members of the race.

Sounding the warning that the church should lead all movements aimed at bettering the conditions of Negroes, improving educational facilities and relieving economic distress and unemployment, Dr. Gibbs pointed out that the influence and prosperity of the church depended in all section of the nation.

Dr. Gibbs has been prominently mentioned as a candidate for the A. M.E. bishopric at the General conference to be held in 1940 at Detroit, Mich. He is president of the A.M.E. Ministerial alliance here, and a former president of Edward Waters college. He is now working with Bishop Henry Young Tookes, who has been assigned to fill out the unexpired term of the late Bishop Grant. As presiding prelate of the 11th district, Bishop Tookes is president of the trustee board,, Edward Waters college, of which Dr. C. S. Long, Jr., is president, and Dr. Gibbs the treasurer and business manager.

# CABINET MEMBER BLASTS FASCIST RACE THEORIES

### Sec. Henry Wallace Points To Genius Of Dr. Carver To Refute 'Aryan' Myth

NEW YORK, Feb. 23 (CNA)—Secretary of Agriculture Henry A. Wallace paid a glowing tribute to the scientific achievements of Professor George Carver of Tuskegee Institute in a Lincoln Day speech in which he ridiculed Nazi theories of "Aryan" superiority as "pure scientific faking." The Cabinet member's speech was delivered at a meeting of scientists and educators at the Waldorf Astoria Hotel, under the auspices of the "Lincoln's Birthday Committee for Democracy and Intellectual Freedom."

Composed of 28 eminent scientists, the committee under the chairmanship of Professor Franz Boas, sponsored a series of meetings all over the nation in defense of democracy and in opposition to fascism.

Wallace, figuratively taking his gloves off, smashed with bare knuckles at the racial doctrines of the Nazis and of fascist-minded circles in this country.

"Superior ability is not the exclusive possession of any one race or any one class," he declared.

From studies in live stock breeding it is known that complex characteristics are apart from such superficial characteristics as skin, hair or eye color, the Secretary pointed out.

HITS "SUPERIORITY"

"The color of a cow's hair for example, has nothing to do with her ability to produce milk, and therefore there is no reason to think that the color of a man's hair has anything to do with his ability to produce ideas."

Mr. Wallace took the occasion to blast at "racial" theorists in this country as well as those abroad, when he said:

"It is the fashion in certain quarters to sneer at those so-called 'poor whites,' who suffer from poor education and bad diet, and who live in tumbledown cabins without mattresses. And yet I wonder if any scientist would care to claim that 100,000 children taken at birth from these families would rank any lower in inborn ability than 100,000 children taken at birth from the wealthiest one per cent of the parents of the United States.

"If both groups were given the same food, housing, education and cultural traditions, would they not turn out to have about equal mental and moral traits on the average?

"If 100,000 German babies were raised under the same conditions as 100,000 Hindu babies or 100,000 Jewish babies, would there be any particular difference? No such experiments have been made or are likely to be made and so no absolutely scientific answer can be given. But when I raise such a question, I mean to imply that every race, every nation and people from every economic group of society are a great genetic mixture. There is far greater variability between the heredity of individuals within the groups than between the groups."

PRAISES SCIENTIST

"When I was a small boy," he said, "George Carver, a Negro who is now a chemist at Tuskegee Institute, was a good friend of my father's at the Iowa State College. Carver at that time was specializing in botany, and he would take me along on some of his botanizing trips. It was he who first introduced me to the mysteries of botany and plant fertilization. Later on I was to have an intimate acquaintance with plants myself, because I spent a good many years breeding corn. Perhaps that was partly because this scientist, who belonged to another race, had deepened my appreciation of plants in a way I could never forget.

"Carver was born in slavery, and to this day he does not definitely know his own age. In his work as a chemist in the South, he correctly sensed the coming interest in the industrial use of the products of the farm—a field of research which our government is now pushing.

"I mention Carver simply because he is one example of a truth o. which we who meet here today are deeply convinced. Superior ability is not the exclusive possession of any one race or any one class. It may arise anywhere, provided men are given the right opportunities."

The government official warned that democracy's chief danger lies in selfish economic practices which produce vast wealth for the few on one hand and abysmal poverty for large sections of the population. Deeds alone, he asserted, are what democracy will be judged by:

"Democracy—and that term includes free science," he said, "must apply itself to meeting the material need of men for work, for income, for goods, for health, for security, and to meeting their spiritual need for dignity, for knowledge, for self-expression, for adventure, and for reverence. And it must succeed.

"The danger that it will be overthrown in favor of some other system is in direct proportion to its failure to meet these needs. We may talk all we like about the beauties of democracy, the ideals of democracy, the rightness of democracy. In the long run, democracy or any other political system will be measured by its deeds, not its words."

## INDIA

(By Martin L. Harvey, Jr., for ANP)

Nowhere have we found such intense interest on the part of students in national affairs as here in India. Cries for home rule boycotts and civil disobedience can be noted on every hand. The example of democracy in the west has apparently been a dominating force in the reaction against British rule. The costliness of British rule, pride in the national history of Indian, the lack of progress in literacy, and the destruction of India's finest native art and industries because of cheap foreign, machine-made goods have all been factors in the rise of Indian nationalism. A reaction against mis-rule in native states is also a great concern of many student groups.

We visited one native province in which the students staged a sit-down strike in front of the ruler's palace in protest against certain ordinances. When the guard officer ordered the trucks to run over the students in an effort to clear the road for the ruler's automobile, the students lay flat on the ground and the trucks stopped six inches from the bodies of the first group. The officer didn't have the nerve to order his trucks to crush the bodies of these students and arrested some of them. As a carload of prisoners moved toward the town jail, several of the students ran after it, and my friend told me that they were asking to be arrested with their comrades. Later one of the students told me that they were proud to have gone to jail for the cause.

Not all of the activity of the student groups is as spectacular as the incident just mentioned. During their Christmas vacation, many of them go out to small villages, and spend their time cleaning up the village, sweeping the streets, and ditches. The girls clean the houses and teach the village women various health habits. This activity is all the more amazing when one realizes that some of these students belong to high castes, and such work would be considered most degrading in ordinary circumstances.

The nationalism of India is directed not only toward home rule, but the return of native customs and habits. Under the influence of Ghandi ,the boycott of British made goods is very prevalent. There is no unanimity of opinion about the development of a highly industrialized society, there being strong schools of thought about this. But the idea that these things ought to be for the benefit of India is central in the thought of all.

A visitor of this land of ferment, quickly gets the idea that this country is like a volcano. The resentment against outside rule dominates the thinking of the people of all classes. In one group where I asked the members to list the conditions which constituted the greatest concern, one member summarized the following points: "However fairminded the British governors and rulers may be, they seem to feel that we are inferior as a race, and consider our customs wrong because they are different. We are absolutely necessary to the economic future of the British Empire, yet our taxes work to her advantages instead of ours. The highest posts in the government are given to Englishmen, whose salaries are spent in England rather than in India, and the pageantry of the government places a heavy burden in taxes on our already poverty-stricken people. Many Englishmen still think Indians ought not to sit in a railwa vcompartment with them, and the finest clubs will admit no Indian, regardless of his education, although the salaries of these Englishmen come from our taxes."

---

The tired looking man stood facing the solicitor.

"So you want a divorce from your wife. Aren't your relations pleasant?"

"Mine are, but hers are simply terrible.

## 54 PUPILS OUT OF 207 KNOW WHEAT STALK; ONE CALLS IT CORNCOB

Chicago, Illinois—The word wheat is commonplace. Every one knows what wheat is used for. Bread is made from wheat.

But when 207 sixth, seventh, and eighth grade pupils at the Mozart elementary school, 2200 North Hamlin avenue, were shown a stalk of wheat, only fifty-four named it correctly. Charles P. Saunders, principal of the school, said the test was made at the suggestion of Miss Nellie F. Rayan, a district school superintendent.

Out of the 207 pupils, 109 admitted they didn't know; twenty-seven said oats, eight thought the stalk was rye, five barley, one corn, and one bearded wheat. One youngster looked at the stalk and told Mr. Saunders he thought it was a corncob.

## "SATISFYING GRAIN'S URGE TO GROW"

Grain, lying dormant all winter long, seems to be gifted with a mysterious "intelligence"—a knowledge that springtime is rapidly approaching. Perhaps it is the lengthening of the days, or the more intense warmth of the sunshine as the sun climbs higher in the skies. In any event, the soil itself is still quite cold—yet unfailingly the plant responds to the springtime "urge to grow"!

Farmers growing grain are, of course, intensely interested in this awakened growth, for the crop is largely made or lost at this most critical time.

The supply of available nitrogen very early in the spring made the difference between sickly, sluggish development of the plant and vigorous early-season growth; how, also, nitrogen made a tremendous difference in the amount and vigor of stooling.

The striking effect of Arcadian Nitrate on color, vigor, and growth of winter grains is in itself an indication of the great need for nitrogen at this time—a need which is due both to the growth requirements of the crop, and to the fact that the supply of available nitrogen in the soil is at its lowest in the late winter and very early spring. Unless this deficiency is remedied, results cannot be other than disappointing.

The timely application of Arcadian produces almost immediate results. A rich deep green replaces the sickly yellowish color of the leaves. The tops straighten out, grow and expand. The plant begins to stool out. New shoots develop, thickening the stand and producing double and treble the number of seed-bearing stalks. Thus, vigorous stooling has much to do with the yield at harvest time, for a single stalk never bears more than one head of grain.

Rather surprisingly, however, there is only a brief space of time—a few weeks at most in the very early season—when this stooling or tillering can take place. Once this stooling period has passed, the number of seed-bearing stalks is fixed—there can never be any more. This emphasizes the importance of timeliness in feeding winter grains with available nitrogen.

—Arcadian Grower

## Dr. L. K. Williams Is Guest Speaker In New Orleans

New Orleans, (ANP)—Addressing several Baptist Fellowship meetings in New Orleans last week, Dr. L. K. Williams, Chicago clergyman, and president of the National Baptist Convention, Inc., emphasized the "rejuvenation of the general church program to develop race leadership endowed with a broader scope of initiative." He stated that "the church must contend for the solution of race problems" and that "its activity must not be narrowed into only getting people ready for heaven," but must include "a stimulative program to better living conditions here on earth."

He heralded the church as the "only organization through which political, economic and civil rights may be gotten." He explained that strict political and civic organizations had been stumped in their attempts to absolutely relegate the Negro from the throes of injustice and discrimination.

"The church," he said, "has the leadership, in which the public has spiritual confidence and which holds the respect of the capitalist, the professional and the laborer. Why can't it utilize this power to bring about an economic reincarnation, a social readjustment, absolute political participation for the Negroes in all America as it has used it to instill the principles of Christianity?

"To be right with God," he continued, "and unable to make a living is a travesty upon sound development; to accept the teachings of Christianity and be denied the freedom of democracy and social development is against the grain of the church program; and to develop leadership for soul stimulation without applying it to material uplift is a job less than half done."

Dr. Williams told in brief detail what the Baptists had done to make a place for themselves in the history and progress of America. He appeared under joint auspices of committees from the First district, Ideal and Westside Baptist associations.

## Harlem Woman Is Named On Council Or World-Wide YWCA

New York, Feb. 16 (ANP)—Mrs. E. P. Roberts, prominent Y. W. C. A. leader in New York, was selected by the national board of the Y. W. C. A. at its first meeting of the year on Jan. 4, to fill an unexpired term in the group of American members on the World's Council of the Y. W. C. A. in Geneva, Switzerland, it was announced last week in New York.

Mrs. Roberts will serve until 1940. She will be one of twelve members of the National Board who officially represent the associations of this country in the international group, now comprising representatives from 52 counties. She has been a member of the National Board since 1939 and active in the Committee of Management in the 137th Street branch of the New York City association.

Mrs. Roberts' interest in the social welfare is extended to outstanding civic groups, including the Harlem committee of the New York Tuberculosis and Health association and the Citizens' Committee affiliate dwith Local Graduate Nurses. She is chairman of both groups.

She is a member of a prominent family. Her father, Warren Logan, for many years treasurer of Tuskegee institute, is now retired but still a member of the board of trustees. One of the outstanding pieces of work which she will be doing this year for the Y. W. C. A. will be as chairman of the Wilberforce conference for delegates from branch associations which will be held June 20-27.

## NEW RECORD SET IN SPEEDY TRIAL OF MEMPHIS MAN

### 'Twas Only a Day's Work, With Everybody White but Prisoner at The Bar

Memphis, (ANP)—A new record was set Wednesday in Judge Harsh's criminal court when Charlie Atkins, 27, was tried, convicted and sentenced for the murder Sept. 3 of L. A. (Jack) Gereard, white, all in one day.

Atkins was sentenced by the all-white jury to life imprisonment. This is a summary of Wednesday's hasty schedule in which seleeting of the jury took 20 minutes; the first 12 men who sat in the box were chosen; presenting of the state's case three hours; presenting the defendant's case, two hours; arguments of attorneys and charge to the jury, two hours; deliberation by the jury, one hour and 30 minutes.

The verdict was delivered to Judge T. W. Harsh at 8:30 Wednesday night. Immediately after it was read, Grover McCormick, public defender, representing Atkins, entered a motion for a new trial which will be heard next Thursday. Atkins was charged with killing Gerard in the driveway of the latter's home after an argument. Testifying in his own behalf, Atkins repudiated his police confession and denied he had been in the vicinity of the Gerard home on the night of the murder.

## ATLANTA SCHOOL IS PIONEER IN NEGRO HISTORY

Atlanta, (By James H. Boykin for ANP)—Under the direction of Prof. R. E. Cureton, the Booker T. Washington high school is a pioneer in the teaching of Negro history. Offering work in almost every conceivable phase of Negro history, the Atlanta school has a sufficient number of classes for a full-time instructor in the courses. The textbooks are furnished by the city.

The work of Prof. Cureton has been proclaimed by outstanding authorities and teachers all over the country. A unique feature of the work was the recent writing of his Negro History Work Book which brought to him many letters from teachers all over the country asking for teacher plans and methods.

Dr. Carter G. Woodson once said that Mr. Cureton has taught Negro history to more students than any teacher in the country. Negro history has been a required subject at Washington high school since 1927. This year the school will graduate 400 students, all of whom will have completed varied work in Negro history.

One of the very few high schools that requires of its seniors a course in American government, the local institution cooperates in every movement for the promotion of the interests of Negro people.

Mr. Cureton's success is backed by several years of teaching experience and travel all over the United States and in Austria, England, France, Germany, Italy and Switzerland. Having traveled in 41 of the nation's 48 states and abroad, he has had an opportunity to observe Negroes everywhere and study their problems.

He is a graduate of Clark university and of Atlanta university with the degree of Master of Arts. At present he is preparing a pamphlet on Negro musicians, the theme for National Negro History week, which will be used in the program of Washington high school.

## FINDS SON IN CREEK; FATHER'S EFFORT TO REVIVE CHILD FAILS

Harrisburg, Ill.,—Kenneth Cousert 6 years old, went to school for the first time yesterday in the new neighborhood south of here, to which his parents recently moved. After a happy day in the rural school, he started home over a route he expected would soon become familiar.

When he had not arrived some time after he was due, his father, Artie Cousert, an unemployed coal miner, set out to look for him. Cousert found the boy in a flooded creek where he had slipped from a small bridge.

The father carried the boy to the creek bank and applied artificial respiration. For a long time he worked alone in the cold, with no one to help or witness the tragic scene. Finally he gave up—his son was dead. Wrapping the boy in his coat, the father carried him home.

## Allison Davis Leaves For Yale To Prepare Book

New Orleans, (ANP)—Allison Davis, professor of social anthropology, whose half-year leave from Dillard university was announced several weeks ago, left New Orleans last week for New Haven, Conn., where he will take up residence in the Yale University Institute of Human Relations for the purpose of assembling in book form the results of the American Youth Commission Study of Negro adolescents, which he has supervised for the past year. With him went his wife, Mrs. Elizabeth Stubbs Davis, and his secretary, Miss Dorothy Anderson.

Mr. Davis is widely known for his research in the field of social anthropology and his writings have appeared in the leading journals of sociology. In Political Arithmetic, a symposium on populations problems, edited by Launcelot Hogben, Regius professor of social biology at the university of Aberdeen, and released this fall, Mr. Davis has contributed a chapter entitled "The Concept of Race." He is now collaborating with Prof. W. Lloyd Warner, of the University of Chicago, on an article dealing with the caste system of the South, which is to be published by Duke university in a symposium on race during the spring. Mr. Davis has also been asked to contribute the introductory chapter of the 1939 yearbook of the Journal of Negro Education. Dr. John Dollard of Yale will collaborate with Mr. Davis in the preparation of his book.

## BENJAMIN BRAWLEY, HOWARD PROFESSOR OF ENGLISH DIES

Washington, D. C., Feb. 9 (ANP)—The inevitable Hand of Death invaded the Howard University campus here last Wednesday and removed from the faculty one of its most distinguished members, Dr. Benjamin G. Brawley, scholar, minister, author and lecturer who, at the time of his demise, was professor of English at the university.

Dr. Brawley is survived by the widow, Mrs. Hilda Prowd Brawley, and a sister, Mrs. Jeanette Brawley Stewart who is hostess at the Morehouse dormitories, Atlanta.

A graduate of Morehouse in 1901 with the bachelor of arts degree, Dr. Brawley was awarded a similar degree by the University of Chicago in 1906. In 1908 he received his master of arts degree from Howard university, and later from Shaw university the honorary degree of Litt. D. From 1912 to 1920 he served Morehouse as professor of Englisn and dean of the college.

In 1921, after a trip to the West Coast of Africa, he assumed the pastorate of Messiah Baptist church, Brockton, Mass., and in 1921-22 served as president of the Association of Colleges for Negro Youth.

An authority on the history of the Negro, he was the author of many standard textbooks, some of which are used widely in colored and white institutions. These include "A Short History of the American Negro," "A New Survey of English Liteurature," "The Negro in iLterature and Art," "Women of Achievement," and many others.

### 10 GEESE FROZEN TO DEATH; FOUND UPRIGHT IN TRACKS

Edgewood, Ia.,—Ten geese were frozen to death standing up in a sleet storm on the farm occupied by Mrs. Leonard Funk, near here. The sleet froze to the ground as it fell and the geese were unable to make the distance to their quarters.

## CHICAGOANS SEEK LIGHT ON VARIOUS TAX PROBLEMS

Chicago—(ANP)— With Attorney George A. Blakey presiding, a meeting designed to discuss and consider all phases of the vexatious tax problem was held last Wednesday at the Peters Business school on East 47th street. Principal speakers were James E. Stamps, special assistant, U. S. Social Security Board, and G. Stevens Marchman, certified public accountant.

A large number of business men and women listened with interest as tax problems of every description—sales, liquor, income, processing, Federal, State and City—were discussed by the speakers, following which the meeting was declared an open forum and an invitation extended the audience to ask any tax question that interested them.

Importance of the subjects was immediately apparent, and the opinion was freely voiced that similar meetings should be arranged for the future, to acquaint business people and the average citizen with the various methods used to raise funds for government and municipal operation.

Cortez W. Peters, business executive runner-up for the world speed record in typing and president of the chain of Peters Business schools (operating in Washington, D. C. and Baltimore), was present at the meeting and assured those present that other business seminars would be held in the future. Dean A. A. Jones is in charge of the local Peters school.

Peters also said that with the opening of the Spring semester early in February a course in business administration would be included in the school's curricula. While in the Chicago area, Typing Champion Peters gave demonstrations of his skill at a white business school in Gary, Ind., a Gary high school and several high schools in Chicago. While here, he also found time to give two radio demonstrations—one Thursday, over Station WHFC, the other Friday over Station WAAF.

### ONE OZARK TOWN SHIPS 113 TONS OF RABBITS TO MARKET

Mansfield, Mo.,—An all-time record for rabbit shipments was established at this little Ozark town this winter when 113 tons of cottontails were shipped to the Chicago and New Orleans markets. The 113 tons represented 113,000 rabbits, averaging 2 pounds each.

### FOR THE BATTLE AGAINST BUGS

(Continued from Page 1)

possible, bed bugs may be attacked by a solution of pyrethrum in kerosene. This should be sprayed so that it comes in contact with the bed bugs. The best way to do this is to use a power sprayer. Filling the room with spray will not work.

An effective but tedious method is the application of kerosene, turpentine, benzene, or gasoline to cracks in bedsteads or to other places of the bugs. When doing this the windows should be kept open and all fire kept away. The infestation of furniture may be overcome either by fumigation or by liberal application of clear gasoline to the furniture in the open air.

### COCKROACH

Cockroaches destroy food, book bindings, fabrics, but even more important they are disease carriers and pollute food over which they run.

To eliminate cockroaches trade at roach-free stores and watch all boxes or baskets of food and laundry brought into the house.

Fumigation by a professional fumigator is the most effiective way of ridding the house of roaches. This method, however, is expensive and in infested areas is apt to give only shortlived relief.

Amateur exterminators should first fill up the eracks which lead to roaches' hiding places with putty, plastie wood, or plaster of Paris. Then sodium flouride powder should be sprinkled along the baek of shelfing and drainboards.

If possible blow the powder with a duster, bellows, or an electric power duster into the inseets' hiding places. Sodium fluoride is poisonous, however, and should be kept out of food and away from ehildren and pets.

Pyrethrum powder is a nonpoisonous roaeh-killer and may be used in the same way. On exposure to air, however, it loses its effectiveness after a time.

Phosphorous pastes are useful. Spread the paste on a piece of eardboard and roll into a cylinder. Wrap around with a rubber band and then place it wherever the roaches have been destructive.

Spray of kerosene oil and pyrethrum extract may be used also but it must be remembered that these kill only by contact.

### FLEA

A dog or eat may be rid of fleas by the application of a level teaspoonful of derris powder to the skin along the baek, neck and the head.

Derris powder, whose effective agent is rotenone, may be diluted with talcum powder to reduce the rotenone content to 1 per cent.

Pyhethum powder may be used where derris powder is not at hand.

Infested areas in houses and barnes should be spread with ereosote oil. Because of its ordor and because it burns plants and animals, creosote oil, however, cannot be used in every case. Where fleas oecur in living quarters, scatter flaked naphthalene over the floor of the infested rooms at the rate of 5 pounds per room. The room should be kept closed from 24 to 48 hours.

Sticktight fleas whieh are troublesome in the South can be controlled by spraying with creosote oil infested chicken houses and areas beneath buildings frequented by poultry or pet animals. The masses of fleas attached to poultry or pet animals may be treated with derris powder or carbolated vaseline.

### HOUSE ANTS

Ant control must center on the destruction of the queen and the young in the nest itself. Where the ant colony can be located it may easily be destroyed with a tablespoon or so of earbon disulphide. When the worker ants appear from under the stones or between the bricks of a walk, their colonies may also be destroyed by pouring a tablespoon of carbon disulphide down the erack.

Where the nests are in woodwork, by means of a small syringe inject a tablespoon of carbon disulphide and then elose the opening with plastic wood or putty. Where the ant galleries are widely separated it is desirable to make injections at intervals in the wood.

For unlocated ant colonies the use of baits, powder, sprays, or chemical barriers is recommended. No one preparation will do for all kinds of ants. Some ants eat one kind of poison but not another. Some eat only sweets, others eat only meats and grease.

Dusting sodium fluoride powder about window sills, drainboards, foundations, and other places where ants crawl sometimes drives them away.

Pyrethrum sprays can be used but they kill only the ants actually hit by the spray.

The use of poison baits is also recommended but since the type of bait used depends upon the variety of th ant, householders are advised to write to the Superintendent of Documents, Washington, D. C., for the Bureau of Entomology's leaflet No. 147 (5 cents in cash), for further information about baits.

### HOUSE CENTIPEDE

The house centipede, whose name indicates that it has 100 legs, but which has only 30 legs is a harmless creature and a very effieient enemy of most household pests. It destroys no household goods or woolens and bites human beings only on provocation. Because of its terrifying appearance, however, most house authorities eonsider it an unwelcome visitor.

It can be best controlled by destroying all the individuals whieh make their appearance and by sprinkling fresh pyrethrum powder near water pipes or in store rooms where it usually secrets itself.

## Postal Employes Plan Convention

Chicago, Jan 11 (ANP)—Plans for entertaining the tenth biennial convention of the National Alliance of Postal Employes, to be held here August 15 to 19, were launehed Saturday by the Chieago braneh of the organization. President Norvel E Perkins of the local body announeed the appointment of William A. Little as general chairman of convention plans.

The Wabash Avenue Braneh Y. M. C. A. has been selected as headquarters for the meeting. Members of the National Exeeutive Committee serving in this eonnection are Geo W. Golden, Jackson, Tenn.; Jesse J. Anderson, Detroit; and E. R. Bryson, St. Louis. Delegates and visitors from more than 100 eities in all parts of the United States are expeeted to attend the convention, aceording to President Perkins of the Chieago Branch.

# RUSSIAN CORRESPONDENT SEES DANGER FACING MILLION IN AFRICA IF ITALY AND GERMANY ARE GIVEN NEW COLONIES

Moscow, US. S. R., Jan. 11 (ANP) —The prologue to the next act in the drama of aggression and expansion being staged by the two leading fascist power of Europe fast draws to its close, it is clear to all honest observers here in Europe. When the curtain fully rises, the center of the stage can be expected to reveal a scene with a eolonial setting.

With each passing day, the main characters, Hitler and Mussolini, make clear the enouement; redivision of African colonies. The fascist dictators, having been encouraged and abetted at the last tragic spectacle. "The Munich Bargain," are not speaking in asides or in muted tones. In full-volumed tones and blackmail manner Mussolini demands from France her Afriean possessions of Tunis and Djibouti.

Hitler demands, with the usual threats, nothing less than the Cameroons and Togoland. Only recently two of Hitler's mouthpieces, Schaeht and Funk, declared in Berlin that Hitler will not leave any part of Togoland and the Cameroons in the hands of France.

Both of the fascist dictators' demands are shot through with threats that if their demands are not met "peacefully," then there remains for them nothing but the use of foree. Thus has "peace been saved" by the kow-towing to fascism of British and French ruling eireles.

The Italian fascists are resorting to crocodile tears over their countrymen of Italian descent in Tunis, as one means of justifying their claim to this colony of French imperialism. However, Italians in Tunis number, according to the 1936 census. 94,289, as compared with 108,068 persons of French descent.

In "championing" this Italian minority, Italian fascism does not see fit to take into account at all the wishes oi the first claim on their native country of the great majority population of natives—the 2,335,623 Arab population of Tunis. In fascist estimation, these native people, like the Abyssinians, are "inferior" and in need of civilization, fascist style.

Djibouti would, of course, be merely another Abyssinia under Italian fascist rule.

Simultaneously with publication of Mussolini's colonial demands, a dispatch from Rome discloses that in Turin (Italy) notices have just been posted in many cafes prohibiting the entrance of Jews. The Milan opera has ceased to sell tickets to Jews, and in all Italian cities an intensive campaign has begun to exclude Jews from clubs, sports societies and scientific organizations.

This uncivilized and barbaric treatment of Jews within the same country which now demands to be given rule over Djibouti and Tunis should serve as a warning signal and as handwriting on the wall to the native peoples of those fascist-threatened colonies.

That the danger of their falling under fascist rule is real may be seen in the fact that fascist Italy has massed on the Tunis-Libyan border an army of almost 100,000 men. And the governor-general of Libya, Balbo, former axeman of Mussolini in Abyssinia, recently declared in the fascist newspaper "Gazeta del Popolo," that "all of the eentral basin of the Mediterranean sea will be Italian, not only formally, but in reality. It is easy to forsee to what after effects this will lead!"

The attitude of the French people, as distinguished from that of the reactionary French ruling cireles, eoneerning the handing over to the tender mereies of Hitler Germany of the Negro peoples of Togoland and the Cameroons, was expressed in a reeent Paris speeeh of the well-known Freneh working-elass and People's Front leader and member of the French Parliament, Maurice Thorez, who declared:

"The monstrous outrages committed against the Jews in Germany does not in the least show that Hitler has abandoned his race theories as set forth by him in his book, 'Mein Kampf.' It would not be bad to acquaint the African Negroes with Hitler's opinion of them and to tell them at the same time that people of the same color as they, are members of the French parliament and observing the prineiples of 1789 which the fascist dietators so mock.

"It could even be added that Hitler stupidly and impudently affirms that the French people are 'a people whose blood has been eontaminated by the black race____a people who have arison from Negroes and who are polluted by the Jewish race."

The roots of the tree which is bearing such bitter fruit for mankind lead to fascist Berlin and Mun ich, Rome and Tokio, and to the camp of French and British reaetionary circles. And the policy of the latter in double-dealing, betraying and aiding and abeting fascist aggression by retreat in the face of blackmail is leading with seven-leaguestrides to the grave danger of millions of black colonial peoples falling under the rule of fascism and its brutal "racialism," pogroms and lynch law.

## Alpha Kappa Alpha Sorority Plans to Keep Health Unit

### Boule Held in Detroit Also Votes to Hold $500 Membership in N. A. A. C. P.

Detroit, Jan. 11 (ANP)—Continuation of the Mississippi Health Project, enlargement of the Non-Partisian Lobby Program, the purchase of Gamma sorority house and completion of the $500 N. A. A. C. P. life membership were some of the high points decided on by Alpha Kappa Alpha sorority during its 21st Boule which closed here last Friday.

The Mississippi Health Project which was started in Bolivar county, Miss., in 1934, initiates its fifth year under the guidance of Dr Dorothy Boulding Ferebee, medical director of the project for the past four years. The project which has as its goal improved health conditions at the economically and socially handicapped Negroes of the Mississippi Delta regions, brings medical aid to those rural districts where medical facilities are limited The project has a clinic on wheels which travels throughout the districts giving general medical assistance and immunization against disease. Dr. Ferebee's assistants on this project are Ida L. Jackson, Oakland, Calif., the founder, Dr. Mary C. Wright and Dr. Mary E. Williams of Tuskegee.

On the matter of the Non-Partisan lobby, the Boule voted unanimously to enlarge this program for economie and Democratie rights begun at the 20th Boule last year. The lobby initiated by Xi Omega chapter of Washington, D. C., was established to aid in meeting the problems of the Negro and all underprivileged groups on unemployment, educational and diseriminatory fronts.

The program, which sponsors lobbying for speeifie legislative measures eonsidered important to the welfare of the Negro, has been a sueeess since its innovation and the sorority favored its adoption as a national rather than a chapter projeet. $1,000 was contributed for this purpose.

Some of the important steps taken by the lobby this year have been as follows:

Securing procedural justice in the Keys police brutality case; working for the expansion of the Public Works program so as to include more Negroes; establishment of two propositions in the fight for minimum wages for women in the laundry industry in the District of Columbia; and assisting the fight for Negro suffrage in the District of Columbia.

Alpha Kappa Alpha Sorority feels that the Non-Partisan Lobby is a progressive move in the fight for politico-social-economic justice for the Negro and plans this larger program to better serve the cause.

It is believed that the Non-Partisan lobby functioning in this wider scale, will serve as a clearing house to determine what is happening to the Negro under present legislative policies, and as a direct agency for aetion upon the problems whieh are revealed after interpreting the facts and effects of present legislative policies.

Other important accomplishments of the Boule were: the awarding of the $1,000 foreign fellowship to Ellie Alma Walls of Houston, Texas; the awarding of the $100 Etta Moten music scholarship to Florence Brasley of Dillard university at New Orleans; the coast to coast broadcast over radio station CKLW on which Margaret Davis Bowen, Supreme Basileus and Dr. Dorothy Boulding Ferebee were the speakers; and recognition awards for meritorious service which were given to the leaders of the health project and to L. Pearl Mitchell of Cleveland who has attended every Boule for twenty-one years.

L. Pearl Mitchell sponsored the N. A. A. C. P. life membership movement in the Sorority.

The national body's purchase of Gamma Sorority House at the University of Illinois was a long awaited move by members of the Central Region. This action by the sorority assures comfortable living quarters for colored girls on the University of Illinois campus where housing facilities for Negroes are very inadequate. Arlene Jackson Washington of Chicago, Central regional director, sponsored the move.

Officers elected for 1939 are: Margaret Davis Bowen, New Orleans, Supreme Basileus; Beulah T. Whitby, Detroit, First Anti-Basileus; Viola Chaplain, Second Anti-Basileus; Irma F. Clark, Chicago, Epistoleus; Ethel Hedgeman Lyle, Philadelphia, Tamiochous; Edna Over Gray, Baltimore, Grammateus; Elizabeth Munday, Louisville, Ivy Leaf Editor; and Verona Beckett, Parliamentarion.

The Boule adjourned to meet at Boston durin December, 1939.

## Sorority Leader Urges Girls To Take "Business"

Chicago, Jan. 11 (ANP)—Writing in the current issue of the Apex News, beauty culture publication, Mrs. Lola M. Parker, national president Iota Phi Lambda sorority declared that "there are opportunities for Negro girls who take courses in higher business training."

She showed the many opportunities for employment open to women, qualified through commercial training, pointed out the fields in which women may seek higher positions. Urging young women to seek training in business administration, she said that while the other professions remain essential to our welfare, their waiting lists are erowded with qualified women.

On the other hand, Mrs. Parker said, the fields of journalism and business administration are less crowded and are open to women who seek the better positions. Iota Phi Lambda, sorority headed by the writer, has as its main objeetive the encouragement of young women to enter the field of specialized business.

### SORROWS OF SATAN

Sterling Gazzett: A poll of 50,000 New York youngsters on the most hated man in the world gives Hitler first place. Mussolini second, Satan third. Doesn't that beat the devil?

## AN IOWA FARM

(Continued on Page 16)

"Later I brought up pots of al. kinds of soil—black soil, red soil, yellow soil, sandy soil, clean washed river sand. I took three pots of these, in one we put barnyard manure; in the second, fertilizer; and in the third, plain soil as it was. I planted these and when the people say the stuff grow better in the pots with the fertilizer, that settled agriculture in that country.

"We bought pure-bred large, black Suffolk pigs and native pigs. Once in two weeks the pupils weighed those pigs. They could read the scales and see for themselves the gain. They found out that the old, poor pig gained for a little while and the young one a little more, and that the pure-bred pigs gained nearly 1 1-2 lbs. a day. Then we figured how much those pigs increased in value. That was news!

"We study the diseases that have to do with the decrease in the value of the live stock. One is the tapeworm. I took up the question of the tapeworm and gave lectures in class. I had a tapeworm in a bottle, which I showed it to the people. The native people came to understand that they got tapeworm by eating pork or beef that was not cooked. At present the disease is nearly extinct in our section of Rhodesia.

"Then we kept a dairy of cows, mostly to help the children. This is necessary because people are so poor and thousands of babies die because of malnutrition. Very few people use any milk at all. The people are poor and hungry, because they do not have the right kind of food. Instead of feeding mother's milk to year-old babies, the mother takes her finger and pushes porridge down the baby's throat. She is always weeping because the baby is sick, and when it cries, also gives it more porridge, which makes it cry still more with the stomachache.

"We keep a little dairy of cows that I think are suitable for the conditions and for teaching the people. There are three or four native cows and five or six that are one-fourth or one-half breed Jersey or Holstein and two registered Holstein cows. We take those cows, both native and registered, and feed them well and have the boys milk them and keep them clean. The native cows give only about three bottles of milk a day at the best."

Missionary Roberts used a harrow and a plow, drawn by oxen, at Old Umtali. The natives had only heart-shaped hand hoes. Finally, an old chief bought a plow—and found he did not need so many wives to raise his food supply. It has helped solve the polygamy problem, because there are now more than 3,000 plows owned by natives in this region. The plow truly began a revolution in native life in all this section of Rhodesia. The use of fertilizer, the irrigation of crops, the making of bricks for buildings, the use of sewing machines in the homes, the increased use of milk, the bettering of animals and of grain, the building of better homes, and the use of new tools; all these followed the introduction of the plow, and are helping create a new African civilization.

For years George Roberts has been teaching these things to likely young native men—many of them sons of chiefs—who are in training to become Christian pastor-teachers. As they go out into the villages and move among the tribes, they not only teach the three r's and preach the Gospel—they are "missionary-farmers," builders of a Christian civilization as well. The hard common sense and ingenuity of the Marathon farmer boy, plus the scientific knowledge gained at Ames, are blossoming forth in the good earth and among the good folks of Rhodesia.

But Missionary Roberts is also an ordained minister of the Gospel, a member of the Rhodesia Annual Conference which also has in its membership twenty-six native African ministers. It was impossible for him to be content to teach farming and even to teach Christ by everyday Christ-like living—he was compelled by the people's superstitious plight to tell the story of Jesus, the Cross, the Resurrection, and the Hope." The Conference ordained him in 1921. Since then he has been pastor as well as teacher, and was superintendent of the Mutambara District—supervising and encouraging the pastors, settling disputes of the people, preaching among new tribes, helping the people build new churches and schools.

Mr. and Mrs. Roberts are the proud parents of fine twin sons, born in Rhodesia in 1915. Ascording to old African superstitions, twins should be killed by the older people. But the Roberts' boys were permitted to live and they grew healthy and strong, the pride of black and white alike at Old Umtali. Today there are a large number of twins in this section of Rhodesia, and none are put to death—thanks to the Christian example of these parents. One Roberts boy is now a student of agriculture at Iowa State College.

—The Foundation

## Emancipation Day

The first day of January every year, marks the anniversary of the Negroes' Emancipation from chattel slavery. January the first marks the day when black slaves were converted from personal property to free men and women, by President Lincoln's Proclamation declaring four million human beings, fettered in chains of bondage, within the jurisdiction of the United States of America; free and equal with their former masters in the eye of the law. The President's proclamation was dated September 22nd, 1862, at Washington, D. C.; effective January 1st, 1863.

He freed the Negro with the stern admonition to him, to be peaceable, make good citizens and to work for an honest living. Next to the death of the Son of God on the Roman cross for the remission of the sins of man; the freedom of the Negro from slavery by President Lincoln ought to be the most important event in history of the American Negroes' life. He should honor and remember that day with a heart full of gratitude and patriotism to his country.

It is a fine time for the American Negro to take stock; to find out how he stands with God; country and himself. The Bible says, in all your getting, get understanding: which means get right with God. Next, as a man and citizen find out your status as an American citizen; and if you are not satisfied with what your status is, get satisfaction by removing the conditions that prevent you from having every right and privilege, any other American citizen is enjoying. Our form of Government is a democracy in which every man and citizen stand equal before the law, and ought to share and participate equally, in benefits and protection of the law.

If you know what the law gives you, and you are not getting it, and see others situated under the law just as you are, and getting what is denied you; then it is up to you to do something about it. If you see another man or group of men stealing your property or rights, and you make no move to stop the thieves; you do not deserve either property or rights. A man who would be free must strike the first blow for liberty. If you would have a home, you must work and save the money with which to pay for it. Know your duty to God and perform it in spirit and in truth. Know your duty to your country and qualify to discharge it, like a man and citizen. Don't expect to take more out of church, state or the social order, than you make an honest effort to put into the melting pot. Know your duty to yourself; find out what is the matter with yourself; there may be something wrong about your personality; your courage, intelligence, or you may be a truckling coward, or have an inferior complex that handicaps you. Whatever it is find it, and get rid of it, strut your stuff if you have anything in you worthwhile. Don't promise God nor man that you are going to do something that you are not big enough to do. Know your capacity, have faith in God and confidence in yourself; these are the forces that always win in the struggle of human existence.

Let us see the New Year through a telescope of success and not failure; remembering always that we cannot get any more out of life than we put into it. Use the same commonsense you use when dealing with your bank. You do not expect to check out of the bank any more money than you deposit to your credit. So if you want to be happy during the New Year and all the years to come put everything into life for the other fellow, and the common good of all that you expect to take out for yourself. The more we put into life for the happiness of others the more we get out of life for our own personal happiness and satisfaction. There is no real happiness in doing for ourselves, but all the happiness comes to the soul by doing good for others, and making the world a better place for every body to live in. This is the hope and greeting that the National Baptist Union-Review sends out to the world.

—Union Review.

### THE UNDERSTANDING HEART

(Cash Year)

The new Swedish cook, who had come into the household during the holidays, asked of her mistress: "Where bane your son? I not seeing hem 'round no more."

"My son?" replied the mistress, pridefully. "Oh, he has gone back to Yale. I miss him dreadfully though."

"Yes, I know yoost how you feel. My brother, he bane in yail saix times since Thanksgiving."

### DEFENDANT

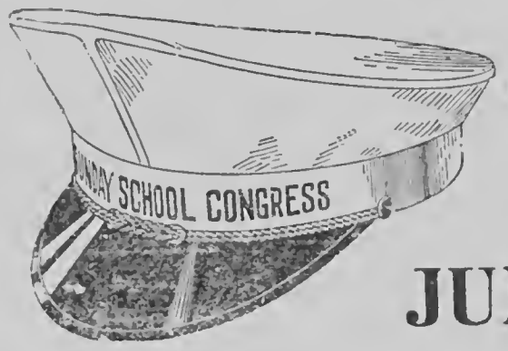
(Christian Science Monitor)

The justice of the peace was performing his first wedding ceremony, and he found it difficult to disassociate from it several police cases he had heard earlier in the day.

"Do you take this man to be your lawfully wedded husband?" he asked. And the bride demurely said she did.

Turning to the groom the justice asked: "What do you have to say in your own defense?"

# Religious Forces of the Nation Will Gather IN Indianapolis, Indiana JUNE 7-11, 1939

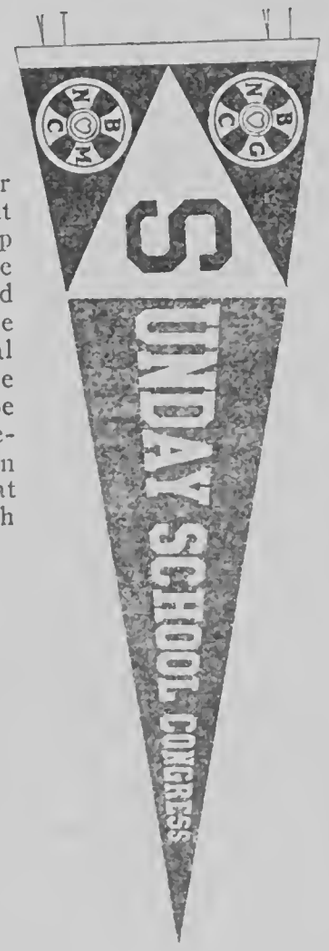


**The 39th Annual Session**

OF THE

**SUNDAY SCHOOL CONGRESS**

invites you to meet with them in a five day Summer School of Methods where you can demonstrate what you have achieved, illustrate what you can do, help in the Front Line Sunday School building, contribute to the advancement of those who do not know and lend your influence, your knowledge, your experience and your training to every phase of Denominational work, as there will be representatives there from the schools who will be eager to listen, learn and imbibe these teachings. The following are some of the departments in this great School of Methods. Come on to Indianapolis, Indiana and see for yourself what you can do with the material you have to work with in your Sunday school.



The Metoka and Galeda Department
The Advanced Teachers Department
The Intermediate Department
The Primary Department
The Music Department
The Superintendents Department
The Missionary Department
The Junior Department
The B. Y. P. U. Department
The Cradle Roll Department
The Home Department
The Ministerial Department
The Daily Vacation Bible School Department
The Bible Study Conference Department

## WHAT THE NEGROES

(Continued from Page 1)

until they have all become trained a little more than they are.

Each Agent in the State with the exception of one, who was busy building a 4-H Club Camp, attended the State Short Course with his representative group of boys. In a large number of instances county officials assumed the expense of transporting club members to and from the State Short Course.

A great deal of interest was manifested during the year in beef calf projects. Down in Sumter County three Aberdeen Angus Bulls were placed two years ago. The progeny of these bulls has asserted itself in their respective communities.

In each county in the State where 4-H club work is conducted, the county agent has organized his work along the following lines: (1) the community 4-H clubs are made up of officers, adult leaders and enterprise leaders in addition to project members. (2) The County Council is composed of all of the officers of the community clubs and enterprise leaders. In addition to these officers any member of a 4-H club in that county who is interested in the activities of the council may also become a member. (3) Adult leaders or sponsors assume the responsibility of guiding the junior club members in their club activities under the supervision of their county agent. (4) Some of the activities of a 4-H club are: (a) Conduct projects or demonstrations and keep records on same for the purpose of determining the labor income. (b) It prepares them to do an efficient job back on the farms with the demonstrations they are carrying.

### Beef Calf Work—1938

For the second year Negro Club boys and girls fed out feeder calves. In October, fifty-one calves were placed with club members and on November 13th, thirteen more were placed, making a total of sixty-four feeder calves. These calves were distributed in the following counties: Baldwin, ten; Washington, seven; Burke, seven; Bullock, two; Sumter, seventeen; Meriwether, six; Chatham, one; Toombs, two; Appling, four; Hancock, six; and Bibb, two.

The total cost of these sixty-four calves including one dollar for insurance and hauling expenses in October and November, the months they were placed with club boys, amounted to $2,424.19. The total weight when purchased was 30,534 lbs. The total weight when sold was 39,159 lbs; and the total amount received for the calves, including sales and prizes, was $3,277.83. The difference left after paying for the calves, insurance, and the hauling from Macon and Atlanta to the club members' homes in October and November was $853.64. Two hundred and forty dollars were received as prizes by the club members showing calves at the following Fat Stock Shows: Augusta, Columbus, Savannah, Atlanta, Macon, and Greenville.

Of the sixty-four calves placed two of them died. The one dollar insurance that was charged to each club member's note was sufficient to cover the cost of these two calves with the exception of seven cents.

In addition to the total amount of money left for feed and labor the greater profit was that of education on the part of the club members to feed out properly a fat calf. This information alone is worth sponsoring this type of project as we all know there is a definite trend towards beef cattle production in Georgia and Negro club members and farmers will be left behind if they don't learn the game.

The first County Fat Stock Show was held by the Meriwether County Negro club boys. Twenty-five dollars were given as prizes by the Citizens of Greenville and Meriwether County. Therefore, the honor goes to Agent F. R. Spencer for holding the fisrt county show with Negro club members in the State.

Five club members did not make enough out of their calves to pay their notes at the Citizens & Southern National Bank. The shortage amounted to eighteen dollars and ninety-five cents.

The total amount for feed and labor amounted to approximately twenty-five percent of what these calves sold for plus prize money.

### Annual State 4-H Club Short Course—1938

Once a year during the month of August, all of the Extension Agents bring a designated number of 4-H club leaders to the State 4-H Club Short Course, which is held at Georgia State College. For the most part these leaders are presidents of junior groups and enterprise leaders who have made outstanding records.

The State Short Course is held for the purpose of training 4-H group leaders so that they will be able to render a more efficient type of service in the promotion of 4-H club activities back in their respective communities. In addition to this training phase, a series of contests are held each year for the purpose of determining the State Champions. These contests are as follows: Livestock judging; farm crop identification; horse shoe pitching; relays, and achievement boys. The outstanding 4-H club boys are selected by nomination with records by each county agent.

The county short courses are held throughout the state before the State short course. The program that is carried out back in the county short courses dovetails into the state program. Those who are to attend the State Short Course are selected at the county short course.

There is a growing interest year by year in 4-H club activities by the local officials in the county where this work is conducted. A large number of the Boards of Education and road commissioners sent the Negro 4-H club members to the State Short Course in buses and sixty-five per cent of them contribute money each year to the Agents for the purpose of conveying their club members to and from the State Short Course. In a large number of cases they also help them with their county short courses—such as buying materials.

All of the Specialists' help that was requested from the State College of Agriculture was given. The following specialists have in the past rendered very efficient service: G. V. Cunningham, State 4-H club leader; Miss Emmie Nelson, Assistant State 4-H club leader; J. C. Oglesbee, Jr., Extension Agricultural Engineer, and R. E. Davis, Beef Cattle Specialist.

### Wild Life Activities In 1938

This was the second year that Wild Life activities with Negro 4-H club members have been included in the club program. In 1937, the first Wild Life Camp was held at the Log Cabin Community in Hancock County. At this camp, there were approximately sixty wild life club leaders and extension workers present.

This year, 1938, there were 112 present. The entire program included the study of trees, insects, target practice, state resources, birds, swimming, and other phases of wild life that are common to Georgia.

In 1938, there were seventy-four 4-H clubs in the State that included wild life aetivities in their programs. These seventy four clubs had a total enrollment of 2,709. One thousand three hundred and eighty-two selected game birds for special study; one thousand and eight selected native plants; four hundred and seventy-nine studied fish; one thousand one hundred and ninety-two studied native trees; one thousand and eighty-five gave more attention to fire prevention; one hundred and ten did some work in star gazing, and seven hundred and sixty-two studied insects.

In checking over the different phases of wild life studies that these club members engaged in, it will be noted that they studied in more than one activity.

Three wild life clubs were organized in the following counties: Bibb, Burke, Camden, Chatham, Grady, Hancock, Jenkins, Jones, Laurens, Liberty, Meriwether, Montgomery, Newton, Peach, Randolph, Sumter, and Washington. Taliaferro, Dougherty, and Brooks organized only two clubs this year. Five clubs were organized in Glynn and McIntosh Counties, and four clubs in the counties worked by Assistant Club Agent Z. T. Hubert.

All of the clubs in a county took as a special project, one acre to be set to Pine Seedlings. These seedlings were ordered in the spring of the year and delivered during the winter.

### Beef Calves For 1939 Fat Stock Shows

Seventy-four Hereford calves, ages ranging from one to one and a half years, shipped in from Texas, were distributed at Jones-Neuhoff stockyard, Monday morning, September 26, 1938, to Negro 4-H club members.

Alexander Hurse, Negro State Club Agent, had charge of the distribution. Several Farm Agents and two Home Demonstration Agents, Mrs. M. L. Wesley, Bibb County; Mrs. M. L. Toomer, Peach County, who are to supervise 4-H club girls in the growing of calves, were present at the stockyard.

R. E. Davis, Beef Cattle Specialist of Athens, who bought the calves, was present and made the final inspection before they left the yard. The Agents, many of whom had their boys with them, were present and took calves as follows: S. H. Lee, Bibb, Monroe, and Twiggs, twenty-two; K. C. Childers, Burke, seven; C. O. Brown, Baldwin and Jones, sixteen; M. L. Toomer, Peach, one, O. S. O'Neal, Peach and Houston, one; M. L. Wesley, Bibb, two; E. Stallworth, Sumter, four; F. R. Spencer, Meriwether and Coweta, eight; Walter Myles, Grady, seven; R. C. Brown, Appling and Toombs, five; B. S. Adams, Chatham, two; L. H. Strickland, Evans, two.

Money for purchasing the calves was furnished by the Citizens and Southern National Bank, headquarters at Savannah. Each club boy or girl is required to pay one dollar insurance on his or her calf. These calves are to be grown and fattened for the fat stock shows to be held sometime in the spring of 1939.

The Negro 4-H club workers participated in their first fat stoek show at Savannah in 1936, with only seventeen calves. In April, 1938, the 4-H club sponsors of calves participated in five shows in the State, displaying sixty-four calves.

In addition to these seventy-four calves, there were twenty-six calves placed in Screven, Jenkins, Burke, Hancock, Greene, Taliaferro, and Bullock counties, making a total of 100 calves to be shown at the Fat Stock Shows in 1939.

The prospect for the 1939 shows looks very favorable, because of the abundance of feed in the hands of the present group of club members.

### Outlook for 1939

The Outlook for Negro boys for 1939 seems very bright. The following conditions seem to point to greater opportunities for the improvement in 4-H club work: (1) The beef calf project is attracting the attention of boys in 4-H club work, especially the older boys. (2) The local banks as well as the Citizens and Southern National Bank are anxious to finance this type of project.

(3) The parents are becoming more and more anxious for the children to be identified with 4-H club work. (4) With increase enrollment, it will be necessary to develop an effective organization, including leaders and sponsors in order to do the best type of work.

(5) The County Council still needs improvement in most of the counties of the State. (6) The county officials and business men of local communities and counties have become interested in 4-H club activities and are willing, in most cases, to assist in the fostering of such programs in their respective counties.

(7) The older youths seem to be interested in the type of projects that will bring in value in the form of monies. This is due largely to the fact that they have need for money more so than the younger members of the 4-H club group. Therefore, it seems wise to sponsor this type of project or demonstration that will bring most on the market.

(8) We are making improvements in the build-something project, still there is a great deal of work that can be done with a very large number of 4-H club boys. (9) The wild life program has made progress during the past year. Because of the interest in this type of 4-H club work, a little more time should be given to its development during 1939.

## GRANDFATHER WAS RIGHT

(Continued from Page 1)

grandfather. The old gentleman always insisted that the winters were getting milder, and that the rising generation didn't really know what winter weather is. People humored him about it, though they thought it was only a whim, and laughed indulgently. But the fact of the matter was that grandfather was right—he was as right as rain, if a simile so inept may be allowed. Yes sir.

They smiled at grandfather—and all the while he was twenty years ahead of the weather bureau.

## WAITER OPERATES

(Continued from Page 1.)

Local merchants, growers and others have given their co-operation and moral support to this Association. Mr. W. J. Abrahms, from whom the colored farmers rented their cannery, said that the co-operative had been of value to the whole community.

The Co-operative has paid $2,747-.31 for labor during three years of operation. This income has meant mueh to the modest existence of the low income Negro laborers. Most of this money was paid to families of members of the Association.

For tomatoes grown on their small farms, $6,610.97 has been paid to member growers during the three seasons. In 1936 the Cannery made a net profit of $777.81; in 1937 after paying all expenses a loss of $502.77 was sustained. If the inventory were liquidated at present market prices, a profit of approximately $1,000 would be shown for 1938. The Negro growers have received a price for their tomatoes which will compare favorably with the best prices paid in any section. There are now 87 members of the Association.

With the excellent leadership of Mr. Cauthorne who secures leave from his dining car during canning season, the cannery has been of great value not only as a money maker but in establishing confidence among the Assoeiation members in their ability to successfully operate a cannery. His knowledge and understanding is largely responsible for the fine spirit of co-operation among the members.

## LISTEN TO THIS

**By Hobart T. Mitchell**

A prominent physician of Mobile, in 1844, stated that the brain of the Negro is one-tenth smaller than a white man's and that the Negro could not live in the north because the cold climate would freeze his brain and make him insane.

Booker T. Washington reached Tuskegee in June, 1881, July 4th was the date set for the opening of the school in the little shanty which had been secured for its accommodation. On the above morning 30 students reported. Olivia A. Davidson was one of the teachers—later becoming Mrs. Booker T. Washington.

1935-36 average yearly net cash incomes for the families of white sharecroppers ranged from $203 for Georgia to $643 for North Carolina. Some what lower on the scale, the families of Negro sharecroppers had net cash incomes that varied from a low of $175 in Georgia to a high of $523 in North Carolina.

A Negro fired the first shot at Manila Bay, from the Olympia, flag ship of Admiral Dewey, commanding the American forces on the Asiatic station, during the Spanish-American War. He was John Jordan, chief gunner's mate United States Navy.

## ONE THING SETTLED

(The Cocklebur)

The Irishman and his friend were discussing some political question. The friend asked: "Which side are you on, Pat?"

"I haven't made up my mind yet," said Pat, "but I can tell you right now that when I have made up my mind I'm going to be bitter."

# THE MODERN FARMER

Vol. XII. NASHVILLE, TENN., MARCH 15, 1939 No. 2.

# Finds Surplus Youth, Lack of Good Farms, Schools Add to Rural Plight

## ANOTHER CHALLENGE TO PRESENT DAY GENERATION ON BACK TO THE SOIL

**Washington**—A growing surplus of young persons in rural areas during recent years has lessened their chances to acquire their own property and widen their outlook towards independence, according to conclusions of Works Progress administration research workers in a report issued under the title of "Rural Youth, Their Situations and Prospects."

The migration of the Race from farms in the south during the 1920-30 exodus included many young people. This movement, however was not sufficient to reduce the proportion of the total rural youth below the figure for the proportion of the total rural population, the report indicates.

Because of this, together with inadequate economic opportunities and poorer schooling, it is revealed that the situation of the Race youth in rural regions is graver than that of his white neighbor.

Increase in farm tenancy, the decreased demand for farm laborers and the trends toward large-scale and absentee land ownership, and mechanization of agriculture have reduced a number of good farms available.

Meanwhile, the number of young men desiring their own farms is in excess of both land and opportuni-

# Will "Hybrid" Hogs Be Next Step In Improvement of Livestock

## FARMERS VARY METHODS

To help the soil accumulate enough nitrogen to feed a crop of wheat, many farmers in the Pacific Northwest follow a cropping system that is almost exactly the opposite of the best method in the Southeast. In the dry-farming area of eastern Washington and Oregon and in Idaho and Montana, it is good farming to leave a field fallow for a year and to keep down weeds by cultivation.

This system was adopted originally to accumulate most of the rainfall from 2 years to supply the crop of 1 year. But scientists of the Department of Agriculture and State experiment stations have found that the method also favors accumulation of nitrogen in the readily usable nitrate form. This greater supply of nitrates improves the yield and quality of the grain as a topdressing of nitrate fertilizer would, they report.

In the Southeast, good farmers also try to accumulate nitrates, but instead of keeping the land bare they try to keep a plant cover on the field the year round, either a cover crop—a legume for first choice or a crop of weeds.

This contrast reflects the difference in moisture supply. In the Northwest the nitrates become available as the more complex nitro-

## STUDY GROUP AMONG NEGROES

St. Louis Leaders Outline Way to Extend Self-Help Movement

By James E. Daugherty

For months past an advisory committee of cooperative leaders in St. Louis, Mo., and representatives of the Urban League, organization for the economic betterment of Negroes, have been working on what they believe is a unique plan for presenting the cooperative message to St. Louis Negroes.

The plan calls for a series of 240 small group meetings, five in each of the 48 blocks of the powerful Block Unit Federation, formed in an almost exclusively Negro area and designed to protect their interests. Following these study club meetings a mass meeting will take place, at which the study group participants, well-grounded in cooperative fundamentals, will organize permanently for further educational and business activity.

Each block unit is a complete organization within itself, with membership of 20 to 40 or more Negro families, officers, and a regular monthly meeting.

The Block Unit Federation has approved the use of the regular meeting as the entering wedge for cooperative education. Speakers from the speakers' bureau of Co-operative Consumers of St. Louis will outline the plan at the monthly meetings of each of these 48 units, and will follow up with a series of four study group meetings.

The initial cooperative talk will outline the birth, growth and significance of the cooperative movement and list the Rochdale principles. The study group for the following four meetings will also be formed.

Tentative themes for the four study group meetings which will follow in each block unit are as

(Continued on Page 2 Col., 1)

## ANGLING $200,000,000 GIFT

A new scheme to help cotton planters is being worked out by Southern members of Congress, and it is a pippin. It originated with large growers who met in Washington a week ago and is said to have the approval of some officials of the Department of Agriculture.

Senator John H. Bankhead (Dem., Ala.) says legislation is being drafted for early presentation and predicts its enactment.

The plan is for the government to give plantation owners—"free, gratis and for nothing"—upwards of 4,000,000 bales of cotton which the government holds as security for loans to growers.

The only strings to be attached to the deal are that the cotton cannot be held for speculation, but must be sold at once, and that the farmers who are benefited shall reduce their planting this year by an equal amount.

The program, its sponsors contend, is to correct an unsatisfactory market situation. The government holds so much cotton, it is claimed, that desirable grades are unobtainable. This, it is said, is responsible for loss of much of our export markets.

The government has in warehouses between 10,000,000 and 11,000,000 bales of cotton, on which it has made loans aggregating something more than $500,000,000.

(Continued on Page 2, Col. 1)

## IOWA STATE COLLEGE FIRST TO UNDERTAKE EXPERIMENTS; PROGRESS NOTED

Hybrid corn has been described as the most important development of recent years in the middle western farming belt. Can it be that the principles demonstrated in the developing of hybrid corn will be applied to produce a new kind of hog, chicken or beef animal? Many of the country's foremost animal husbandry experts believe that it is possible.

A few days ago it was revealed that Iowa State College's animal husbandry department began experiments with swine herds more than nine years ago. Since then the Iowa State organization has become associated with twelve corn belt experiment stations operated by the federal department of agriculture. Federal laboratory headquarters and the largest experiment station is located on the Iowa State college campus. Dr. J. L. Lush is head of the Ames project. Concerning it he explains:

"In the present swine breeding systems animal husbandmen breed their best boars with the best sows, expecting to raise pigs from these matings that are as good or a little better, perhaps, than their parents.

"Results vary. Progress is slow.

(Continued on Page 2 Col., 2)

## USE OF WORD "AMERICAN" BEGAN EARLY IN HISTORY

There are several reasons why the inhabitants of the United States have practically appropriated the name "American" to the exclusion of other nations on the North and South American continents. The process of appropriation was unconscious and began early in our history, notes a writer in the Indianapolis News. Even before the Revolution when Europeans used the term "American" they generally referred to the English colonists. Patrick Henry said in the Continental congress:

"I am not a Virginian but an American." We were the first independent nation in the Western hemisphere and there was no other nation to protest. Our size and commercial importance made it easy to appropriate the name to ourselves, and usage in nearly all parts of the world has confirmed it, although in a few countries, notably Spain, it is still customary when speaking of Americans to designate whether the term applies to North or South Americans. There is also another consideration.

The official name of this country is "The United States of America," and it is the only name of a country in the New World containing the word "America." The first part of the name does not lend itself readily to a modified form as a name for the inhabitants corresponding to Canadian, Mexican, Peruvian, Italian, Spaniard of German. Any such noun based on or formed from "United States" would be awkward. It was natural, therefore, for the people of the United States to apply to themselves a name al-

(Continued on Page 16)

## FANCIER HOPES TO BREED RED-WHITE BLUE CANARY

**Kalama**, Wash.—A red, white, and blue real American canary is the goal of Armistead Carter, internationally known ornithologist. He has long experimented with changes in markings and color in breeding canaries.

## ORIGIN OF ROCKING CHAIRS

The origin of rocking chairs is not known, but it is definitely believed to be American. They are known to have been in use in the United States since 1774 and are referred to in a hand-written bill from William Savery, cabinet maker of Philadelphia, February 11, 1774. However, they were not known in Europe until much later. Tradition ascribes the first rocking chair to Benjamin Franklin, but the invention is not mentioned in any of his writings. He possessed a very remarkable one which was described by a visitor in 1787.

## 604 COLORED PUBLIC NURSES IN U. S.

**Washington** (ANP)—There are 604 Negro public health nurses in the United States, according to statistics just released by the United States Public Health service. This is an increase of 55 over 1931.

The nation is divided into five districts, with the largest number of nurses found in the first district which includes New York, Pennsylvania and North Atlantic states. There are 206 nurses employed, 164 of them in New York, as contrasted with a total of 170 eight years ago. The smallest number in any district is found in the fifth, including Pacific Coast states along with Alaska and Hawaii. Here only one nurse is listed, and that for California. There was none in 1931.

Although the second district, running from Delaware to Florida, and the fourth going South from Kentucky and bounded by Alabama and Texas, have Negro populations of 4,421,387 and 5,230,373 respectively, they have comparatively few public health nurses. The second has 179 compared with 146 in 1931, and the fourth has 157 as contrasted with the previous figure of 137. The first district has only 1,146,949 colored residents.

The only district to show a decline in the number of nurses was the third, composed of Midwestern states. The figure dropped from 91 in 1931 to 61, with the biggest loss sustained in Illinois which now has only 10 but in 1931 had 51.

## WATCH FOR THE WHITE CANE

The latest sensible idea is to have blind men carry white canes. White is easily seen in the daylight. A motor car's headlights make it even more conspicuous at night. If you see a man with a white cane crossing the street or highway, in front of your car, give him every chance to get across. . . . Strange somebody hadn't thought of this sooner.

## FORMING CO-OP STUDY GROUP AMONG NEGROES

(Continued from Page 1)

follows: "Detailed Study of Rochdale Principles;" "The Various Types of Cooperation;" "Development of Cooperation in the United States and in St. Louis," and "Cooperation and the Negroes' Problems.' Discussion leaders will remain in the background, encouraging Negro leadership. The mass meeting will not take place until all study groups have finished their scheduled meetings.

## COTTON GROWERS ARE ANGLING FOR $200,000,000 GIFT

(Continued from Page 1.)

If the gift plan goes through, Uncle Sam will wipe $200,000,000 off his loan account, and the farmers will add that much to their bank balances.

But, critics assert, that will be just the beginning. They insist that the plan is a Treasury raid disguised as farm relief, and contend that after the cotton planters have digested the first bite of government generosity they will be back for a full meal costing every penny of the half billion invested in cotton loans.

If cotton farmers get away with it, the critics say, other groups which have borrowed from the govmentment will, with every reason, demand similar treatment.

Already legislation has been introduced in Congress practically canceling more than $2,000,000,000 of loans made by the Home Owners' Loan Corporation to distressed home owners. The cotton scheme, it is feared, may open the Treasury door and permit the syphoning off of that huge sum.

The $200,000,000 which it is proposed to hand over to Southern land owners, it is pointed out, will be clear "velvet." They will be relieved of the cost of producing a crop, while tens of thousands of share croppers and farm workers will be turned adrift, to starve unless supported by the government.

Incidentally, it is signmcant that those who are pushing the gift scheme were most active in the fight to slash $150,000,000 from the relief appropriation, insisting that it was necessary to "economize" in order that the budget may be balanced.

From Labor.

## "DUST BOWL" SNOWFALL

A blizzard-borne snowfall ranging in depth from 6 to 17 inches anchored down yesterday the topsoil of the southwestern "dust bowl", home of the "black blizzards" of the drought years, says a Lamar (Colo.) report by the Associated Press. Lamar, subjected to two dust storms since an early January rain, received 17 inches of snow. Grateful farmers who had watched fall wheat grow spotty during recent dry weeks confidently planned to begin spring planting as soon as the ground soaks up the inch or more of new moisture. "This is the most snow I have seen in this country since the winter of 1918-19," said Hackett Smartt, vice president of the Colorado Farm Bureau. "It ought to settle the dust for the next month or six weeks."

**When the rain stops, the river will clear.**

## WILL 'HYBRID" HOGS BE

(Continued from Page 1)

"After genetic research in the early 20's cracked open the inbreeding problem, laying its principles bare, we began to see that the fastest progress, theoretically at least, might be made by intensive inbreeding, alternating with only occational outcrosses.

### CORN METHOD

"The success of hybrid corn demonstrated one way to apply those breeding principles. Obviously we could not copy them exactly when we deal with swine," he asserts.

In swine breeding selfing is impossible; there are insuperable economic (and perhaps biological) barriers in the way of continuing brother and sister matings indefinitely; there's a longer time between generations; lower reproductive rates exist; individual pigs are more valuable and can not be culled as freely as were corn ears.

Thus applications of the genetic principles concerning inbreeding probably will be vastly different in swine and poultry from their application to corn, even though the principles themselves are the same

### Thirty Sows

A multitude of problems confronted the scientists at Iowa State college when in 1930 they began exploring the field in a small way with a 4-sire herd of Poland Chinas.

Only four boars and about thirty sows, all registered purebreds, were used to start the herd. No new blood has been introduced into that herd since then.

This was a bold step.

"As anticipated," says Dr. Lush, "we found the pigs showed faint tendency for more weakness and degeneration than less closely inbred hogs, but individuals varied widely. Enough apparently healthy and to continue the line even though the normal individuals were produced average inbreeding gradually rose."

Results were promising since the average individual merit of the 4-sire herd seemed to be holding its own or even improving a little after seven years of inbreeding.

### 2-Sire Herds.

But inbreeding with a 4-sire herd was too slow, agreed Dr. Lush and Dr. W. A. Craft, the latter representing the federal department of agriculture as director of the swine breeding laboratory. More intensive inbreeding seemed desirable to save time. More lines were needed also.

When the project at Ames was made a unit of the regional laboratory and support from the federal government was given the project, the men here decided to step up their inbreeding by building three new 2-sire and seven 1-sire herds.

Work on the old 4-sire herd was continued both to see if it lived up to its early record and to use it as a yardstick to compare results from the 2-sire and 1-sire closed herds.

Three of the 1-sire herds and one of the 2-sire herds were budded off from the original 4-sire herd and therefore have had no new blood added since 1930. The other new herds are being built on foundation stock assembled in 1938.

No new breeding stock will be brought into the herds until the desired traits in the animals (as litter size or rapid growth) have been fixed, provided that the animals do not degenerate so much that some herds seem not worth continuing.

### Want Good 225-Pounders.

In the 1-sire herds the prevailing type of mating will be half-brother to half-sister, but there will be few full brother-sister matings, parent-offspring matings and other irregular types.

In the 2-sire herds the typical mating will be equivalent to that of first cousins, although there will be many irregular types—some closer and some less intense.

Blood relationships in the 4-sire herd between mated pairs will be more remote, comparable to that between second cousins at the start but becoming more intense as the network of common ancestry between mates becomes more intricately tangled and close with each passing generation.

Only young pigs that make cheap, fast gains and would suit packers at 225 pounds weight are kept for breeding stock. Four representative pigs from each litter will be picked for testing their economy of gain—so far as physical facilities permit.

### Won't Sell Much Stock.

As a general rule about half of the sows will be discarded after their first litters and about half of the remainder will be sold after their second litters.

The young boars will be saved from sows which have successfully passed these first two rigid tests of performances.

If these breeding methods prove successful the stations themselves will not be able to sell much breeding stock direct to pork producers, as the hybrid corn producers have done. Instead, they will probably release their best lines on some fair basis to breeders who may multiply them and sell boars directly to commercial producers. The commercial producers will probably follow a policy of using each year a closely bred boar from a different line than those from which their last two boars came. But that is far in the future.

In Iowa only Poland Chinas and Danish Landrace breeds are being used in the tests. Nebraska and Oklahoma are working with Duroc Jerseys. Missouri, Illinois and Minnesota stations are using Poland Chinas. Minnesota is also working with Tamworths and Landrace breeds.

## WHEN THE STARS FELL

By Kelly Miller

My father remembered when "the stars fell" in 1833. Often have I heard him tell how the slaves and poor white folks were paralyzed with dread of Judgment Day and the end of the world. The incident has become historical, how they fell on their knees and prayed for deliverance at that awful hour.

The dramatization of H. G. Wells' "War of the Worlds" excited the American people with similar frenzy. For the following week this phantom play and its aftermath all but monopolized the press and radio notwithstand the approach of the national election. The jitters which suddenly seized upon the nation illustrates the relative place and importance of instinct and reason in the control of human conduct. Instinct is instantaneous while reason is slow and deliberate. The instinct of fear leads to precipitous action before reason has had a chance to assert itself. The jitters aroused by the phantom broadcast Sunday, Oct. 20. was not unlike hysteria, which suddenly stampedes a herd of cattle. It reminds us of Uncle Ramuss' Brer Rabbit, who hearing a tree fall in the forest stampeded all the animals with allurim—"The sky is falling—run, run, run." The hysteria is independent of intellectual or cultural advance. Instinct reduces all grades and degrees of culture back to the lower level of primitivity.

The meteoric shower of 1833 frightened the plantation Negroes with the dread of Judgment Day and all fell on their knees at the approach of the end of the world. We have a reminder of the effect of this phenomenon in the spiritual still heard over the radio, "Oh Lord What a Morning, When the Stars Begin to Fall."

The dread of fire is a terrifying instinct which religions fanatics seize upon to frighten sinners from their evil ways. The picturization of hell fire is relied upon as a deterrant by the revivalist. Revivals always flourish among peoples of low intellectual culture where appeal to instinct is more quickly effected than appeal to reason. At such intellectual levels revivals have been of great service to the call of morality and religion. But its influence wanes with increasing appreciation of intellectual and moral values.

There is no difference between the races in this regard. The appeal to the unconverted was calculated to frighten them from the awful punishment of a burning hell.

As a boy on the farm in South Carolina, I recall the revivalistic effect of the terrifying appeal when the stars in the elements are falling, and the moon drips away into blood. When the seas begin to roll and the rocks begin to melt, "Oh! sinner where will you stand."

Science and invention have served to spread more rapidly hysteria among the people. The radio phantom caught the American people unaware. For the moment the intellectual margin between the Amerisan public Sunday, Oct. 30. and the plantation Negro in 1833 was not very great.

## LEE BAKER AND CARNEGIE HERO FUND

(St. Louis Post Dispatch)

One of the most appealing benefactions of the late Andrew Carnegie was the establishment in 1904 of the Carnegie Hero Fund, with an endowment of $5,000,000. Yesterday at Pittsburgh 17 persons or their surviving kin received from the Carnegie Hero Fund Commission medals or financial reward, or both, for heroic deeds.

St. Louis has a man worthy of an award for heroism in the person of Lee Baker, Negro witness in the Isadore Lunde bombing case. Baker, spirited by two gangsters from the farm where he was awaiting the trial, was shot twice and left for dead in an abandoned house. One of the shots was fired through his neck. Another cost him an eye.

Baker crawled out of the old house just in time to escape his attackers, who had evidently come back to bury him. Summoning his reserves of physical strength, he walked several miles for help and was taken to the hospital. Some weeks later, when the Londe trial took place, Baker took his place on the witness stand and boldly identified the dangerous criminal Londe as the man he saw bombing a cleaning shop. His testimony played a vital part in Londe's conviction.

Throughout his ordeal, Baker displayed superlative mental and moral courgae. Never did he flinch from the duty at hand, though he had been cruelly maimed and had reason to fear for his very life. The people of St. Louis, as a token of admiration and gratitude, raised a fund for Baker and the mayor offered him a job when he is able to take one.

It appears however, that under the terms of the Carnegie awards, limiting them to "heroic effort to save human life," Baker would not be eligible. The commission, if it has the discretion, would be wise to broaden the narrow provision, for this case and others. High courage for the public welfare may involve even greater risks than life-saving, and Andrew Carnegie doubtless would agree in endorsing such heroes for reward.

## CUCUMBER PICKLES IN SOUTH

Southern Agriculturist (March) contains "Pickling Cucumbers" by I. O. Schaub, Acting Director, North Carolina Experiment Station, and Dr. Henry G. Knight, Chief, Bureau of Chemistry and Soils. They say in part: "Until a few years ago, practically all the pickling cucumbers were produced around the Great Lakes because it was thought that this was the ideal cucumber-producing region due to the hot humid days and cool nights..... The North Carolina Agricultural College, in cooperation with the U. S. Department of Agriculture, set out to find through scientific research why cucumber pickles could not be manufactured as successfully in the South.....As a result of experience by the packers and the cooperative scientific investigations directed by M. E. Gardner, at the college, and Dr. Harry E. Goresline, of the Bureau of Chemistry and Soils some of the problems have been solved and others are being investigated and the whole work is expanding. Research has helped the work so much that two men attached to the North Carolina Experiment Station, Dr. Ivan D. Jones and Dr. Otto Veerhoff, and two in the Bureau of Chemistry and Soils, Dr. M. K. Veldhuis and J. L. Etchells, are now giving their full time to research in this rapidly expanding farm enterprise....The production of cucumbers for pickling purposes has not reached the large commercial farm scale in North Carolina and other Southern States that it has in the northern cucumber belt.. ..but the $40 or $50 net often derived from the production of an acre of cucumbers not only comes during midsummer season when cash is short, but it is also another source of cash income to aid in diversified farming."

## LOOKED LIKE HIS MOTHER

Walking down a street in Pittsburg, Kans., Victor Dawson saw a girl he thought looked like his mother. He asked to be introduced. She proved to be his sister Mary. He had not seen her for 12 years. Was it just coincidence that brought them together again?

**A wise man does not need advice, and a fool will not take it.**

# U. S. DEFENSE BILL TO PROVIDE FOR TRAINING COLORED AIRPLANE PILOTS

Washington, March 16 (ANP)—By amending the mighty Defense Appropriations bill to provide civilian aviation training for at least one colored college. the United States senate, cognizant of the need for trained Negro aviators, set a precedent and opened the way for a new era in military training for Negro youth of America.

The bill, which has caused considerable debate and discussion pro and con, increased the number of planes to be constructed to 6,000, a figure hitherto undreamed of, and provides for the addition of 2,000 officers and 35,000 enlisted personnel to man these expansions in the air force. The bill also provides for the use of civilian flying schools for the preliminary training of youths interested in aviation.

No school has been selected for the training of colored civilians, but there is a strong possibility that a well known colored school in the South, close by one of the existing military training camps, will be selected.

At present no definite provision other than that outlined above have been made for the training of colored youths. However, the bill was sent back to the house, where it is understood passage is a mere matter of routine. This is in direct contrast to former actions of the military affairs committee, which in the past has made no provisions for the specialized training of colored youth.

However, it is believed that such flyers as will be trained will be available only for the army and will not be assigned to either the navy or the marine corps which latter is administered by the Navy department.

—Nashville Globe.

## WHEELBARROW RADIO

A radio-equipped wheelbarrow is reported from Hooksett, N. H., by Farm Journal. Everettt Hardy the 13-year-old owner, trundles an auto-radio to school on the wheelbarrow, so the class can hear a music-appreciation hour. On his way to school he tunes in local stations to the delight of school chums who accompany him.

## FINDS LIME INCREASES HIS HAY 50 PER CENT

J. W. McAlphin, Bone county, Ark., has found that lime adds about 50 per cent to the production of red clover and alfalfa on available lime crushers, he has built an old-time lime kiln, said O. L. McMurray, county agent.

"The kiln is the type in which you place a layer of logs and a layer of limerock, and with it Mr. McAlpin can obtain lime for 40 cents per ton," the county agent related, "If it cost him 20 cents per ton for applying the acre to increase his clover one lime, it would cost only $1.20 per ton per acre."

## SWEET POTATO STARCH NOT A STEP-CHILD

In the United States most root starches have been handled as a by-product— small installations to salvage something from the tragedy of low crop prices, and operating only when crops may be purchased at very low values. So operated, these plants have rendered a necessary service, but the users of the product have never been satisfied. Industries depending on, or utilizing, these root starches require a certainty of supply.

Because of the unsatisfactory habit of depending for supplies on an industry which is itself a step-child, it is refreshing to find that the sweet potato starch development at Laurel, Miss., initiated some four years ago by the E. R. A., has developed on a sounder basis. The economic reasoning back of the venture seems clear. It recognizes the need of a crop which can in part replace cotton—one which may be marketed locally and on a cash basis. Sweet potatoes sold and used for manufacture into starch are attractive from the viewpoint.

The Laurel factory draws, for its supplies, on farms within a hauling radius of about twenty miles. It draws for labor from the same area, and gives as a by-product a valuable pulp which may be used as a cattle feed.

A report on the sweet potato starch undertaking was recently published in the December issue of "Industrial and Engineering Chemistry" under the title "Manufacturing of Sweet Potato Starch In the United States." The author suggests that if the industry is to develop average yields of 300 bus. per acre of a high-starch variety of sweet potato must be secured; that production costs must be kept down; that as fertilizer from 600 to 1,000 lbs. per acre of a 6-8-6 or a 6-8-8 should be used. This puts the development in the class of a primary, rather than a by-product (step-child) industry. The "Grower" wishes the new adventure all success!

## Former Chicago Waiter Manufactures Chicken Sausage

Chicago, March 16 (ANP)—A new food article making a recent appearance in the local market and finding marked favor with housewives is a chicken sausage manufactured by Emmett J. Marshall who has had wide experience as dining car waiter and butler in private families. He is also organizer of the South Side Poultry Association, and has his sausage factory at 67 E. 43rd Street.

Marshall's chicken sausage comes in pound packages, retails at 40 cents and is said to be very tasty His recipe is a closely guarded secret and one of the spices used he discovered in Paris in 1928, while acting as butler for the secretaries of U. S. Ambassador Myron T. Herrick. Marshall received his bachelor of arts degree at the University of Minnesota in 1932, his master's in 1933, at Atlanta universit.y

## GOOD PASTURE ESTABLISHED ON DELTA LAND

Contrary to the opinion of a large percentage of delta plantation operators in eastern Arkansas, good permanent pastures can be established on heavy clay land. H. P. Green, plantation foreman over part of the 20,000 acre plantation of Twist Brothers in the northeastern part of Cross county, told John Stephens county agent.

"I have had good success establishing a pasture on heavy clay land by using a mixture of orchard grass, lespedeza, timothy, white clover, hop clover, herds grass and alfalfa," he said.

"This pasture mixture furnishes grazing from early spring until late summer.

"It is commonly believed that the sticky nature of this land prevents it from being grazed except during dry weather. The first year my pasture was established I kept the stock off during wet periods, but the second and succeeding years, after the grasses had become firmly sodded, the stock grazed during rainy periods without the soil sticking to their feet."

## NEW DIABETES REMEDY

Diabetes is one of the baffling diseases with which medical science has been grappling for years. It caused by the failure of the pancreas gland to secret insulin, needed by the body to digest sugar. But why this gland should cease to function has remained a mystery. In 30 per cent of the cases the pancreas gland has shown no abnormalities whatever, yet it has refused to work. Some time ago insulin was discovered and also a successful method for extracting it from the glands of animals. But while this substance relieves the patient, it does not cure the disease and has to be taken continuously throughout life. It simply has the effect of supplying what the inactive gland fails to supply.

A newly discovered extract, however, has now aroused new hope. It is called duodenum extract and is taken from the intestines of animals. When given to diabetics it stimulates the inactive gland and causes it to give off insulin. In 66 per cent of the patients to whom it was given it has brought about marked improvement and has eliminated the necessity of insulin entirely. In one case its affects lasted for a whole year making treatment of any kind unnecessary. Besides bringing relief to patients this new extract suggests that its lack in the human body is the cause of the inactivity of the apparently normal pancreas glands. It also serves as a check on the pancreas and prevents it from secreting too much insulin.—The Pathfinder.

## SPORES TRAVEL IN UPPER AIR

Spores of plant diseases are found 10,000 feet in the upper air by experts in airplanes. Which explains such widespread grain diseases as the black stem rust. Spores of white pine blister-rust reach the earth from the height of 1 mile in 55 hours if the air is still, but inevitably they land. The seed of plant diseases may be blown long distances. Someday it may be possible to destroy them in midair before they alight.

## MEANING OF NAME HAZEL

One of the two origins ascribed to the name Hazel by authorities is Teutonic and the meaning is "commander," evidently because a wand of the hazel tree was the symbol of authority with shepherd chiefs of ancient times. Another authority gives the Teutonic Hazel the meaning of "a star" but does not explain this interpretation. The other and older origin of Hazel is Hebrew, the meaning being "protected by God." This form is an abbreviation of Hazelelponi (1 Chron. 4:3), the meaning of which is given as "Give shade (protection) O thou that turnest thyself toward me." A faint connection might be traced between the Hebrew meaning and the first Teutonic one.

## NEGRO WOMAN'S APPEAL TO PRESIDENT BRINGS NEW SET OF TEETH

"Mr. President: Give me a set of teeth."

This appeal was made a few days ago in a letter, written in poetry, to President Roosevelt and resulted in providing a brand new set of molars for one of Little Rock's residents, Callie Fancy, 3026 Louisiana street, Negro preacher, who finds contributions from her congregation insufficient to keep her off the relief rolls.

A secretary of the president sent a very courteous letter, badly worn from frequent exhibition to Callie and referred her case to the Washington office of the Emergency Relief Administration, which in turn called the attention of the local administrator to her plight

She was sent to the Service Exchange of the Emergency Relief organization, which found employment for her in the home of a Negro dentist, where she is happily "working out" her new set of teeth

## STRYCHNINE IS OBTAINED FROM POISON-NUT SEEDS

Strychnine is one of the oldest poisons known to man, and is none other than the Kuruchilla of the ancient Hindus, according to a writer in London Tit-Bits Magazine. In Europe it was described as having no medicinal value as late as A. D. 1640, but in India it was used centuries before in the treatment of dysentery, fevers and dyspepsia.

The drug is obtained from the seeds of the Strychnos Nux Vomica, or poison-nut tree, which grows in the East Indies. They are broad, flat, about an inch in diameter, covered with tiny, downy hairs, and very bitter when tasted.

The seeds are also commonly known in various parts as "dog buttons," "Quaker buttons" and "rat's bane," and are contained in a fruit which closely resembles an orange in shape and color.

Strychnine is a cruelly violent poison, causing agonizing convulsions.

## LIKE OUR HORSE MEAT

A single horse-packing plant in California's bay area turns out 10,000 to 20,000 pounds of either fresh, pickled or frozen horse meat daily, in addition to fresh cut. The European demand is active for this product. Usually there is much competition. But since the drouth limited the supply of horses, some horse-packing plants have been forced to shut down.

## NAACP Attorneys Prevent Return Of Evanston Youth To N. C. Chain Gang

Chicago, March 9 (ANP)—Prelow Johnson, Evanston, escaped being returned to the chain-gang in North Carolina through the efforts of Atty Irvin C. Mollison, president of the Illinois NAACP, and Atty. James G. Lemon Jr., of the Legal Redress committee of the Chicago NAACP.

Johnson, who escaped from the chain-gang in December, 1935, had become a fine citizen and was married and had one child. When he applied for a driver's license the routine check-up in Washington showed that the fingerprints were the same as those of the man who escaped from the Raleigh prison, and he was apprehended and held for North Carolina authorities. North Carolina had failed to issue a governor's warrant. Johnson had been sentenced to 18 months on a liquor charge.

## PAYING RESULTS FROM DOUBLE CROPPING PLAN

J. T. Dunn, Calhoun county, did not have enough land in 1938 on which to carry out his balanced farm program of cash crops and food and feed crops, but double cropping allowed him to realize the most from the limited area, said W. H. Ballard, county agent.

"For instance, Mr. Dunn planted one quarter of an acre in certified Irish potatoes, applying 200 pounds of fertilizer," the county agent related. "About three weeks before the potatoes were ready to harvest, he planted corn in the middles.

"The potatoes yielded 100 bushels from two bushels planted. The corn yielded at the rate of 25 bushels per acre, almost twice the average for that section of the county."

## WORD 'RAISIN' FROM LATIN

The word "raisin" is of ancient origin, derived from the Latin word for "cluster of grapes," "racemus." The name was at one time restricted to the small yellow grape grown in limestone soil near Smyrna, in Asia. The average time of drying and curing a tray of raisins is about three weeks, all depending on the weather. The earliest picked grapes dry in 10 days and the later ones often take four weeks or more. The bunches are cut from the vines and placed on shallow trays two feet wide, three feet long, and one inch high, on which the grapes are allowed to sun-dry, being turned from time to time by simply placing an empty tray top side down on the full one, then turning both over and taking off the top tray. After the raisins are dried they are stored away in the sweat boxes until they are packed and prepared for shipment.

## HE WAS A COLLEGE SENIOR

One college senior examined by the Carnegie Foundation for Advancement of Teaching, knew only 23 out of 100 words in common use. He was ignorant of the meaning of "inert," "lenient," "baffle" and "immerse," and thought 'culpable" meant "tender," "declivity" meant "climate," "demure" meant "abject," benighted" meant "weary" and "spurious" meant "foamy." Yet he was a college senior!

A Chinese graduate student of the Michigan State College has succeeded in developing the first seedless watermelon. The student is 27 years old.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer. 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

# *EDITORIALS*

FROM THE BIBLE:

"For he that will love life, and see good days, let him refrain his tongue from evil, and his lips that they speak no guile: Let him eschew evil, and do good; let him seek peace, and ensue it." 1 Peter 3: 10, 11.

### Rain.

*It is no myth. I know that you will find*
*In heaven every cloud is silver lined.*
*Today I saw a careless angel drop*
*A spool of silver thread from heaven's shop.*
*So fragile was the texture of the skein*
*That people looking upward called it rain.*

—Grace Elizabeth Churchill.

### HEALTH PROGRAM FOR FARM FAMILIES

A resolution passed by the last annual convention of the National Federation of Colored Farmers declared that a way should be found to provide better and cheaper medical care for our farming group. The health program suggested by the national administration should be of special interest to all.

Whether the rates charged by physicians and hospitals for medical treatment and care are exorbitant or not, the fact remains that a vast majority of colored rural families are unable to pay for this care. There is no hope in sight that they will be able to pay in the near future. Yet for lack of scientific and modern treatment thousands die every year.

Tuberculosis is the scourge of our Race and hundreds of hospitals are turning victims away because there is no room. Many are too poor to obtain treatment. Hundreds of counties have no sanitariums and in many counties where there are such institutions, Negroes are not wanted or admitted. Yet everyone knows this plague cannot be cured at home. Treatment requires rest and good care and attention.

The poor and afflicted of our Group are sorely in need of help. It is both right and just that the federal and state governments provide a way and the means to save the lives of citizens who cannot save themselves.

### THE FARM FAMILY AND THE RURAL CHURCH

Our rural churches must remain alive for the welfare of our farm families. Right now many of them are sick unto death. What are we going to do about it?

First of all, our great church leaders must become country-church-minded. They must be able to see God in the little church in the sticks as well as in the big church on the city avenue. They must work out a program for the country church, that new life may be developed. And a workable system must be planned for relationships by the rural churches with other organizations.

We have suggested before that large city churches form contacts with small rural churches and seek ways to help them. Many ways can be found. The larger churches can provide rural churches with much good literature and reading matter. They can visit together once or twice a year at least. They can be friendly instead of "distant."

The rural church provides all that is best for the spiritual and moral welfare of the farm family. Without it, the farm family will become agnostic, criminal, hopeless. It is the beacon-light of rural civilization. Do something leaders, teachers, favored ones, and keep that little country church alive.

### PATIENCE, BROTHER

A good farm-brother in Georgia writes:

"It looks like to me that you all would see to the farmers getting what they are due because we are the backbone of the world, and we are living by the sweat of our brows as the good Lord commanded every man to do."

In reply, we told the good brother that none of us could do much good as farmers or get our just dues, unless we get together in organization, and stay that way. We also told him that the Lord does not help anyone who is too lazy or too careless or too indifferent to help himself and do his part of the work. And we told him that the National Federation of Colored Farmers is an organization of colored farmers, and all of us work together in every way for our best interests.

It will probably be many years before the average colored farmer learns that all the people in the world are not Santa Clauses who spend most of their time planning on what they can do for HIS welfare. Too many of us have only learned one word and that is "GIMME." We expect everyone to give us something. We cannot realize that all gifts cost something. Somebody pays for what is handed out to the man in need,—whether the gift is given by the government, by an organization, or by any agency.

We do not blame this farmer for wanting his just dues. He says his landlord cheated him. Probably so. If he will get into his organization and help support it,—do his part,—his organization will become more powerful, and will be able to help him, protect him, and all his brother-farmers. But as long as he stays on the outside,—demanding help, yet doing nothing for himself or anyone else,—he is not worth helping.

But we know we must be patient. We must fight for the fellow who does not know UNTIL HE DOES KNOW. Then he may be able to fight for himself.

### SPRING IS HERE

Spring is here, and with Spring comes opportunity. Brother Farmer, are you going to take it or sleep on, and let it go by?

The tenant farmer or sharecropper should realize that OPPORTUNITY is the biggest thing he has. The only difference between his situation and the situation of his slave grandfather is THAT HE HAS OPPORTUNITY AND HIS GRANDFATHER DID NOT HAVE IT.

If you want to get out of your present difficulties,—if you want a farm and home of your own,—if you want money in the bank,—if you want your children educated,—remember this is Spring, and its time for you to go to work. Grab your plow and hoe,—tear up the ground, grub out stumps, mend your fences, whack your mule and go to it. Plant a big garden, set some hens and get hold of some pigs. Fight the flies and bugs and mosquitoes.

And in addition to this,—remember you have a head on your shoulders and it wasn't made just for your wife and children to look at. Use it too. Make it work overtime. Think and read. Learn how to do your work better and easier than you did it last year. Torment your county agent, like your troubles and the devil torments you, and get all the advice and assistance from him you can get.

And don't blame all your troubles and your poverty on your landlord. He is looking out for himself too, like you are doing, or should be doing. He may be as hard up as you are. He is running a big risk. Many of them have to supply their tenants and croppers with credit and household goods and even clothing,—as well as with seed, implements, a mule, and maybe with a cow, chickens and pigs. If crops are poor or if you get sick he stands to lose as well as you. So be fair. Do your work. Don't make any more debts than you have to make. Treat your wife and children right. Do more singing and praying. Do less cussing and whining. Keep your head up, remember you have an OPPORTUNITY,—it is SPRING,—and determine to get that farm and home of your own

### LAND OWNERS "HOG" COTTON BENEFITS

The following editorial from "LABOR," published in Washington, D. C., we believe somewhat exaggerates conditions which have resulted from the government's farm program relative to cotton. However, it emphasizes the fact that more must be done for the tenant farmer and sharecropper. With this assertion we heartily agree. The editorial follows:

"During the six years of the Roosevelt administration, Uncle Sam has poured hundreds of millions of dollars into the South to aid the cotton "farmers," and the net result has been to throw 500,000 sharecroppers and their families on government relief rolls, or reduce them to the status of farm laborers.

That's the shocking fact emphasized by Geoffrey Parsons, Jr., a writer on the New York 'Herald Tribune,' who has just completed a survey of the situation.

The landowners have "hogged" the benefits of the 'New Deal' farm relief program, but, nevertheless, at this moment, like Oliver Twist, they are clamoring for more.

"If the A. A. A. is distributing a lot of bonus money to promote its cotton program the landowner is going to figure how he can get the largest amount of that money," the owner of a 1,000-acre Missouri plantation told Mr. Parsons, explaining why hand labor had been displaced by machinery.

"If the landowner finds that the government relief agencies are willing to relieve him of the burden of takin care of his cotton workers in the winter time, then he is going to drop his tenants and croppers on the broad bosom of the government. Cotton growing, as I said, is a business engaged in for profit, and anything goes."

**If that's the point of view of the landowner, why not permit him to paddle his own canoe without assistance from the Public Treasury?**

It is time we approached the cotton problem in realistic fashion. Instead of subsidizing cotton to the point where, year after year, the crop greatly exceeds the needs of this country, the government should use its money to purchase plantations at reasonable prices and subdivide them into small holdings, each capable of supporting a farmer and his family in decent comfort.

The impoverished sharecroppers should be given a chance to purchase these tracts, on easy terms after they have been equipped with proper housing and other facilities.

Vigorously pressed, such a policy would eventually transform the South. Instead of being exploited by a comparatively few plantation owners, it would become a land of small holdings, tilled by the men who own them.

Cotton growing would give way to diversified farming. Thousands of contented farm families would grow enough for their own sustenance and have a sufficient surplus to enable them to purchase the products of industry. Uncle Sam would get his money back with interest.

* *

This is not a new or revolutionary proposal. In France, Denmark, Ireland and many other European countries it has produced the most gratifying results. Already some experiments along this line have been made in this country under the Resettlement Administration. It is vitally necessary that the scheme be pushed on a very much larger scale.

### EXPERIMENT STATIONS

"....The experiment stations are not so well known as bigger farm agencies which deal more directly with the public," says an editorial in the Great Falls Tribune (February 16). "Yet their work is basic and cannot well be dispensed with....We do not know what will be considered best land use of our prairie soils 20 years from now. The testing period is not over. But if there are changes to be made in our cultural practices in the meantime, they will be based to a predominant degree on the continuing studies now under way in crops, grasses, cultural methods, livestock practice by the scientists in the several stations. These men do not have administrative functions. They do not supervise the farmers' activities, or promote policies, or organize movements. They carry on, year after year, tests and studies on various farming problems in the honest search for the truth. Their results are demonstrated and applied by Extension Service, Soil Conservation, farmers and stockmen afterwards. But in the plots of the stations the facts are first determined. These comparatively inexpensive but little known institutions are of fundamental importance to Montana agriculture."

### PORTABLE POULTRY HOUSES

"Portable laying houses—houses built in sections, to be bolted together on the farm—represent a progressive step in the advancement of the poultry industry," says M. C. Small, associate editor of Poultry Tribune, in the March issue..... "Readymade sectional houses eliminate the necessity of the farmer spending a great amount of time planning and supervising the building of a laying house. Houses can be obtained in practically any building material and in any size and style desired.....When bolted together, these houses are as rigid strong and durable as the so-called permanent type structures. Dropping boards, perches, dropping pits and nests can be made easily in section which hinge to the walls...." The article is accompanied by illustrations of readymade portable poultry houses and also working drawings of a 20 x 40 foot house to be built in sections and erected on the farm.

### CARS BAD FOR STUDENTS

Safety, economy and the maintenance of scholastic standards make it inadvisable for a student at college to have a motor car. The Kansas State board of regents so notifies parents and guardians. Every student in a State college in Kansas must have a permit signed by parent or guardian, and filed with the institution, if he maintains a car at school. Sensible requirement.

Wouldn't it be nice if only nice people were allowed to break the laws?

# News From and For Members of The N. F. C. F.

## TYLERTOWN, MISS., UNIT NEWS

Under the leadership of Bro. C. L. Bates, Tylertown Unit, NFCF, is forging ahead. This Unit has added more new members to its roll this year than any other in Miss. Farmers who have joined recently include Bros. George Brister, John Beardon, H. B. Lee and Isaac Brumfield.

Inquiries were lately made by Tylertown Unit for the purchase of 80 tons of fertilizer. This will be purchased cooperatively.

### LOUISIANA FARMERS WANT NFCF

Word comes from Mansfield, La., that farmers of that section of the state are now ready to join up with the national organization, the NFCF, and get out from under the thumb of organizations in which they have no vote or voice.

Louisiana farmers have been misled and misinformed regarding the activities of the N. F. C. F. Because of this misinformation, many have united with the Farm Bureau Federation, which accepts their dues but gives them no voice or vote in the organization. Since realizing how valuable the N. F. C. F. has been to farmer-members in Georgia, Missouri and Mississippi, the farmer-members in Georgia, Missouri and Mississippi, the farmers of Louisiana have decided to get into their own organization, where they will be free to express their views, and where they can work for their own progress and welfare.

### BETHEL UNIT, DOING WELL

Late news from Bethel Unit, Tchula, Miss., informs the national office that members are meeting regularly and interest is being manifested in all matters pertaining to the welfare of the community. This Unit is one of the oldest in the organization and at one time had a membership of four hundred.

Mrs. F. D. Smith, president, and her efficient co-workers, are working hard to get Bethel back to her former glory.

### EARLE, ARK, WILL REORGANIZE

Word comes from Rev. R. C. Darity, stalwart leader of eastern Arkansas, that farmers of his community have found no better organization that the N. F. C. F. and are anxious to reorganize and get back under the banner of the national organization.

Farmers of this community have had difficulties to meet that were almost insurmountable. They deserve sympathy and assistance and the N. F. C. F. will do all possible to help them make a new start this year.

### PROFITABLE VIRGINIA CANNERY HELPED B. N. F. C. F.

The profitable canning factory, owned by a group of colored farmers of the Montague, Virginia community, the story of which was told in last month's MODERN FARMER, owes its beginning to the efforts of the national officers of the National Federation of Colored Farmers.

Mr. R. H. Cauthorne, president of the company, sought the advice and assistance of the N. F. C. F. when efforts were about to be made to undertake the organization of the farmers of the community. As is always the case, officers of the national farm organization, rallied to his support, the farmers were organized, and the profitable business, now in its fourth year, was the result.

Virginia colored farmers, most of whom are small farm owners, have manifested little interest in farm organization in the past. They are now waking up, beginning to realize how much they can gain through organization, and it is believed that in the near future many N. F. C. F. Units will be organized in that state.

### FARMER REESE WILL BUILD MODEL HOME

A. R. Reese, Master Farmer of Prentiss, Miss., is the owner of a fine farm, free of all debts. He owns this fine farm and has paid for it because he is one of the best farmers in the state. He attributes his success to his ability to have something growing and ready for the market every month in the year. During the drouth, when almost all farmers in his community were crying "hard times," Farmer Reese was supplying the town and his neighbors with fresh vegetables.

This progressive farmer is now preparing to erect a new home on his farm. It will be a model home, a credit to its owner and to his Race. He will also improve his barn and other farm buildings.

In a recent letter to Mr. Reese, President Harris, of the N. F. C. F. said: "I am glad you have the reputation you have for good farming and good management and, most of all, good character. I am also glad you are ambitious to improve your farm and home and to have the best farm in your community. I wish many more thousands of our race farmers had a like ambition. Then the Negro farmer would really come into his own and take his rightful place here in our country. Most of us lose out because we are forever wanting some one or some thing to do for us, instead of going to work and thinking and planning and experimenting and doing for ourselves. I hope you all success and you will certainly have it if you keep on as you are going."

## MISS HANNA ENTERTAINED AT TUSKEGEE

TUSKEGEE INSTITUTE, Ala.—(S. N. S)—In appreciation of her 10 years of service as State Home Demonstration Agent in Alabama, Miss L. C. Hanna was tendered a surprise reception last week by her corps of twenty-three County Home Agents.

When Miss Hanna was ushered into the front parlor of the residence of Mr. and Mrs. J. C. Williams she was greeted by applause and songs by the assembled group. Following an expression of greetings on behalf of the Agents by Mrs. L. R. Daly, Macon County Home Agent, the honored guest was presented a gold brooch as a token of appreciation for her faithful and efficient work as State leader.

After music and games, the party repaired to the dining room where a beautiful cake with a candle for each year of service centered the well appointed table.

Among those present besides the 23 Home Demonstration Agents of Alabama were Mrs. N. Hollock, Mrs. Robert Thurston and Mrs. T. M. Campbell.

## GEORGIA FARM BOYS RAISING 106 PURE BRED CALVES

### Bank Finances Youthful Breeders

SAVANNAH, Georgia (ANP)—One of the most progressive agricultural programs being developed in any of the Southern states in the Beef Calf project which is being sponsored as part of the 4-H club work in Georgia under the supervision of Alexander Hurse, 4-H club agent, and P. H. Stone Negro State Extension agent for Georgia.

One hundred and six farm boys are raising a pure-bred white faced Hereford calf each. The Citizens and Southern National bank, a chain banking organization with headquarters in Savannah, is financing the boys in their venture which is now in its third year. Each boy negotiates a loan with the bank, giving his note for sufficient money to purchase the calf. The boy feeds and cares for his stock, and when he is fattened for market, sells him, pays the bank for the purchase money and pockets the difference. The result is a marked improvement in livestock breeding among colored farmers in the counties where the project is operating. There are usually two boys selected from a county to enter the plan.

Last year 64 calves were purchased. They cost $2,424.19. When they were fattened and sold, they brought $3,277.83. In addition, the boys received $240 as prize money for showing the calves at the Fat Stock shows held in Augusta, Columbus, Savannah, Macon and Greenville.

Two of the calves died, but were protected by insurance. Five boys did not succeed in putting enough fat on their calves to break even, but the others prospered. A bank official said that one of the finest aspects of the effort was that not a single colored boy had defaulted on his note or failed to live up to every phase of the agreement. The bank is so pleased with the showing that the project will be continued next year.

## N. J. FARMERS MEET SLATED FOR MARCH

BORDENTOWN, New Jersey—The eighth annual New Jersey Farmers' Conference to be held Thursday, March 2, at the Manual training school here, promises to be the most successful yet held, from the point of view of attendance and interest.

Harrison D. Jacobs, head of the department of agriculture at the school and conference director, has announced a list of speakers which includes some of New Jersey's outstanding authorities in scientific agriculture as well as authorities from other states.

At the morning session attention will be devoted to the particular

(Continued on Page 2)

## FARM GROUPS PREP FOR TRI-STATE TILT

MEMPHIS, TENNESSEE. — A tabulation of entries showed Sunday, Feb. 12, that 902 Race Farm families in Tennessee, Arkansas and Mississippi had begun competition for cash awards totaling $850.

Seeking the enrollment trophy, Mississippi extension agents last week, the first week of the second annual enrollment campaign, entered 401 families in the competition, which has brought increased profits and more security to farm families in the Mid-South.

Arkansas, with 289 entries, is second, and Tennessee is third with 219 farm families enrolled.

### U. S. SURVEY SHOWS A GREAT INCREASE IN VOCATIONALLY-TRAINED WORKERS

Washington.—The office of education, U. S. Department of Interior, has just reported to Secretary of Interior Harold L. Ickes on the first national survey ever made of vocational education and guidance opportunities for the Race in the United States.

Five hundred "white collar" workers on the relief rolls participated in the survey in addition to approximately 40 professional workers.

John W. Studebaker, commissioner of education, this week reported some of the significant facts revealed by this survey, which was conducted in 200 communities of 38 states and the District of Columbia.

**Few Trained in Skills**

The survey report indicates that "approximately 55 per cent of the total number of young people, 10 years old and over gainfully employed are engaged in occupations requiring little or no skill."

It points out, however, that "it is well for Negro students, teachers, and counselors to know that Negroes are engaged in many highly skilled occupations, generally with success."

**Vocational Agriculture**

More than half of the Race in the United States live in rural areas. The study of vocational education in agriculture shows decided enrollment increases. In evening classes in agriculture, there was an increase in the number of men enrolled of from 5,200 to 15,000 over a six-year period. The enrollment of women in these classes increased from 500 to 3,100.

It is recommended, as a temporary measure, that vocational guidance and preparation be introduced in the upper grades of elementary schools in order to benefit over-age pupils who drop out of school early, and in order to provide vocational preparation for pupils who otherwise would not receive it.

**Home Economics**

There was an increase over a six-year period of more than 300 per cent in the number of vocational education classes in home economics. This is significant, the office of education study concludes, "because the training that Negroes received in these classes can be put to immediate use in their homes."

Comparatively few however, study child care, nursing, hygiene and parent education. Few boys are enrolled in home economics courses, although large numbers of men are engaged in occupations related to home making. More than 62 per cent of all gainfully employed women are in domestic and personal service, as are 12 per cent of the gainfully employed men.

"Since so large a percentage of Negro workers are employed in these occupations, and since the demands in personal service occupations are increasing in number and complexity, the school, through home economics instruction or some other agency, should definitely address itself to the task of preparing persons for effective adjustments in these occupations," it is suggested.

**Trades and Industries**

The number of federally aided courses in trades and industries offered in high schools is limited in comparison with the total number of courses offered and in many of those offered relatively few are enrolled.

Among the courses attracting the largest number of students in trade and industrial pursuits are auto mechanics, carpentry and woodwork, masonry, mining, shoemaking and repairing, tailoring, industrial arts and mechanical drawing.

The possibility of increasing the opportunities to receive vocational education in trades and industries should be explored.

The survey disclosed that many of the teachers of vocational education are inadequately prepared and that the handicaps which their inadequate preparation places upon pupils may result in serious consequences for the individuals concerned.

Salaries of Race teachers of vocational education range from $1,060 to $1,871 per year, the lowest salaries being received by teachers of agriculture in rural areas.

**Guidance**

The survey points out that the kind of home and its upkeep, the opportunities for study and healthful sleep and recreation, quality and number of books, mgazines and newspapers available have a bearing on the pupils ability to profit by the educational program provided.

Some significant recommendations made as the result of survey findings are as follows:

1. That Negro land-grant colleges take a more active leadership in promoting the occupational adjustment of Negroes.

2. That citizens in each community inform themselves concerning the vocational education needs of Negroes, acquaint themselves with the provisions of all federal aid programs for education, and take the necessary steps to insure that Negroes receive equitable benefits from such programs.

3. That schools for Negroes institute programs of guidance for youth, and extension programs for the re-education of adults;

4. "That individuals and groups interested in the improvement of educational facilities for Negroes continue and increase their efforts to promote equality of educational opportunity and equitable distribution of funds without regard to race or color, especially with respect to federal and state funds allotted to education."

A California man has constructed a trailer in which he can sleep and which is light enough to be towed by his bicycle.

## FIRST ANNUAL SHORT COURSE FOR FARMERS ENDS AT GA. STATE

SAVANNAH, GA.— (SNS)—The first annual farmers' short course which was in session, February 13, 14, 15 at Georgia State College, was considered by the farmers in attendance of much benefit to them in the preparation for a life on the soil of Georgia.

Twenty practical key farmers coming from the principal agricultural centers of Georgia were selected by the extension agricultural agents and brought to the college for instruction. The major objective of the adult farmers' school was to prepare them for a wholesome and satisfying life on the soil of Georgia.

Under the supervision of F. Marcellus Staley, the staff of the agricultural department presented subject matter, conducted field trips, performed demonstrations, directed discussions that would enable farmers attending to establish and maintain a satisfactory farm home, manage a farm business effectively and participate in the activities of life common to the various vocations.

Persons participating as instructors and leaders of group discussions were: President B. F. Hubert, Dean. C. Curtright, J. P. Davis, head field officer, A. A. A.; Little Rock, Arkansas; Jennie V. Moten, field agent, A. A. A.; Washington, D. C.; A. L. Hosley, field agent, A. A. A., Tuskegee Institute; J. H. Gadson, head, business, department, Georgia State College; A. B. Dixon, director, home economics department, Georgia State College; E. A. Miller, assistant to director Southern Division, A. A. A., Washington, D. C.; B. H. Crutcher, animal husbandryman, Georgia State College; R. A. Thomas, agronomist, Georgia State College; Frank Tharpe, instructor, farm shop Georgia State College and W. M. King, horticulturist and poultry husbandryman, Georgia State College.

A committee of the practical key farmers recommended that the short course be made an annual affair at Georgia State College, and that it will be held at the same time that the farm and home agents' meeting is in session. The farmers went on record as fostering the following. (a) Producing more and better live stock (b) practicing soil conservation; (c) Cooperating with the A. A. A. program: (d) Cooperating with Federation of Colored Farmers of Georgia; (e) Cooperating with extension and vocational agricultural agencies; (f) Cooperating with all agencies in raising the standards of living, lowering the cost of production, reducing illiteracy and increasing more efficient farm management.

In addition to class room activities, the farmers, under the guidance of A. Orsot, were taken on a sight seeing tour, and were guests at an entertainment which was given in the college gymnasium by the members of the faculty of the college.

### N. J. FARMERS MEET

(Continued from Page 1.)

problems of individuals and groups in the audience.

In the afternoon session W. H. Allen, secretary of the New Jersey state department of agriculture, will speak on the outlook in agriculture for 1939. T. B. Patterson, district agent of Virginia's extension service, will discuss outlook for the farmers in agriculture for 1939.

## Writers Revive "Anvil" Magazine

Chicago, Mar. 16—(ANP)—Most famous of the little magazines published throughout the nation several years ago, the Anvil was revived last week as "the New Anvil," a monthly publication consisting mainly of realistic and anti-fascist prose and poetry by members of both races, appeared at bookstores in many parts of the country.

Listed as sponsor of the New Anvil are Erskine Caldwell, author of "Tobacco Road;" George Dillon, editor of "Poetry: A Magazine of Verse;" Mary Gordon of the Medical Bureau to Aid Spanish Democracy; Richard Wright, author of "Uncle Tom's Children;" Murray Gitlin, Carl Haessler and Frank Marshall Davis, poet and feature editor of the Associated Negro Press. All of the sponsors are white except Wright and Davis.

The magazine is being edited by Jack Conroy, novelist, who also edited the original Anvil until it was sold three years ago to another magazine which later failed. Social-conscious prose and poetry by colored as well as white writers is being solicited, it was announced. The business and editorial offices are at 160 North LaSalle street, Room 505, Chicago. The New Anvil sells for 15 cents per copy.

### FINDS KEROSENE HOT STUFF AS RADIATOR ANTI-FREEZE

Dan Smith, colored, of Gary, dumped kerosene in his truck radiator to keep it from freezing. It worked all right as an anti-freeze solution, but Smith didn't figure on what might happen. Yesterday at 20th and Grant Sts., Gary, his truck caught fire. The kerosene had leaked. Firemen extinguished the blaze.

## Florida Citrus Grower Develops "Unknown Fruit'

Seffner, Fla., March 16 (ANP)—Joseph Smalley, veteran citrus fruit farmer here, has developed a new product. Unnamed as yet, Mr. Smalley calls his discovery "The Unknown Fruit," and while he has not revealed the blendings and graftings which made it possible, he has a number of trees producing. Resembling a grape fruit, it has all of the grape fruit's acidity and meat yet tastes as sweet as an orange.

Mr. Smalley, a veteran of 93 years but as spry as a man of 50, grows upon his farm the following varieties: Temple oranges (said to be the best fruit Florida produces), Satsuma, Large Naval, Small Naval, the Smalley Lemon (weighs about two pounds), Salista, Dancy Tangerine, Mangerines, Kumquats. Mock Orange, Pineapple, Orange, Japan Plums, Pink Grape Fruit and several other types.

Asked why more young colored men did not take to citrus growing, he said, "The citrus industry is a long-time investment and requires large outlays of cash to get a grove started. However, the industry is very profitable except during lean years such as we have just passed over. Young men usually are desirous of getting immediate returns for money invested in citrus groves, and are therefore impatient with the length of time it takes a citrus orchard to develop. In my opinion, this is why we do not have more young colored men in the citrus business."

There are more than 200 colored growers in Florida. Near Seffner, which is close to Tampa, is Plant City, where strawberries are grown, about 75 colored growers being located near there. The height of the strawberry season in Florida is at Christmas time.

# MISSOURI PASSES EDUCATIONAL BILL TO COMPLY WITH SUPREME COURT

Jefferson City, Mo., March 16—(ANP)—Missouri Democrats triumphed over GOP opposition in the State legislature last Monday when the house of representatives ordered perfected a bill by John D. Taylor, Charlton County Democrat, to expand facilities of Lincoln university, state school for Negroes, to equal standards at the University of Missouri.

The bill was passed after a rallying plea to Democrats and lukewarm Republicans, but only after a brilliant appeal had been made by Rep. O. B. Whittaker, Hickory County GOP stalwart, that qualified Negro students be admitted to the University of Missouri.

Declared Stalwart Whitaker: "Why exclude the children of Negro citizens of the state when the school is open to Japanese I would rather have children of mine association with those who have made good citizens of Missouri than with Japanese who are being trained to slaughter persons on the battlefield.

"I do not know of any good reason for this bill. We should answer the United States Supreme Court's demands by admitting Negroes to our state university. The intrepid solon argued that the expansion program at Lincoln University would be costly, that the expenditure would not be economical because of the relatively small number who would apply there for advanced education. However, when a voice vote was taken, only three or four representatives were head in support of Whitaker.

Stem of the Taylor bill was the decision last December 8 of the U. S. Supreme Court in the University of Missouri-Lloyd Gaines case, which ruled that the state must either admit Gaines at the University of Missouri as a law student, or "provide equal facilities within the state' for Negro students. Rep. Taylor, the bill's author, said he would ask for an adequate appropriation for Lincoln to enable the state to comply the high court ruling. The bill was given stiff opposition fortnight ago by a delegation of Kansas City colored leaders.

A Monday's hearing, Reps. Claude Arnold and Guy Abney, Democrats, declared was "making an appeal for votes," said the attempt of Negroes to matriculate at the University of Missouri was a "step toward racial equality." R. J. Murray, Morgan County Republican, voiced his belief that Negro children had a right to receive instruction from Negro teachers, and declared "I favor equality in education, but believe it should be furnished at Lincoln university."

Asserting that the bill should not be made a political issue, Author Taylor said that most "native born Negroes" favored expansion of Lincoln. Explaining this he declared, "Less than one-half of 1 per cent of the native-born Negroes want members of their race admitted to the university at Columbia. Those who are attempting to gain eqaul rights on the campus have entered the state or have been sent here for the purpose of upsetting the established order of educational activities in Missouri."

### U. S. TO BUILD FOUR FARM LABORATORIES EXPERIMENTAL PLANT FOR MIDWEST GOES TO PEORIA, ILL.

The location of four government laboratories to find wider industrial uses for agricultural products and farm waste was announced recently by Secretary Wallace, initiating a new program to deal with the surplus problem.

The laboratory for the northern region, including Kansas and Missouri and states bounded on the west by Colorado, will be erected at Peoria, Ill. At this place research will be conducted into new uses for corn, wheat and agricultural wastes. The other three regional laboratories will be at New Orleans, the San Francisco bay area and Philadelphia.

The laboratories, on which construction will be started before next June 30, will cost about $1.-000,000 each, and will employ about 200 chemists, scientists of different kinds and technicians to carry on the experimental work The present plan is to turn over the results of the government experiments to private industry for commercial use. Appropriation for the laboratories was made by the last Congress.

### WALLACE PLEADS FOR TOLERANCE

A plea for tolerance in this country and the urgency of maintaining democracy was expressed by Secretary of Agriculture Henry Wallace in a speech delivered recently to the Citizens' Rally in New York City.

Wallace lambasted the fascist dictatorships and declared that the search for security here should not be at the price of liberty.

"The years of the great depression have caused most of us to place greater value than ever before on security," he said "When people are struggling to get enough to eat and keep a roof over their heads, freedom of any kind seems almost a mockery.

Security we all want and must have. But we do not want security at the price of liberty.

"And so, for many families a deep concern for the preservation of freedom has been added to their deep concern for the attainment of security. They see their freedom threatened from abroad, as country after country in the Old World, gives up whatever measure of freedom it may have had and permits the persecution of racial and religious minority groups.

"And as they hear and read similar expressions of intolerance in this country, they wonder if their freedom may not be threatened there at home.

"As we look abroad, we see that freedom of speech, freedom of press and freedom of religion have been denied in order to exalt most completely one man, one group, one race or one nation. Through the instrumentality of warfare—both physical and economic—attempts are being made to impose on an unwilling world the assumed superiority of a particular language, a particular race."

"We may be sure," Wallace said, "that any anti-semitic drive in the United States is but the first move in a drive to substitute dictatorship for democracy.

"Whether we are advocates or opponents of the New Deal," Wallace continued, "we in the United States ought to practice tolerance and self-restraint.

"We ought to try to understand what the other fellow's problems are, why he thinks the way he does and find if we can some common ground on which we all can meet. If we will all do that, then totalitarianism, coming from within, can never gain a foothold in our land."

## Flush Kidneys of Acids and Poisons

### Gain in Health And Stop Getting Up Nights

When kidneys are continually overburdened they often become weak—the bladder is irritated—often passage is scanty and smarts and burns—sleep is restless and nightly visits to the bathroom are frequent.

A safe, harmless and inexpensive way to relieve this trouble and help restore more healthy action to kidneys and bladder is to get from any druggist a 35 cent box of GOLD MEDAL Haarlem Oil Capsules and take as directed—don't be disappointed.

**Don't be an EASY MARK and accept a substitute—Ask for Gold Medal Haarlem Oil Capsules—right from Haarlem in Holland. GET GOLD MEDAL—the original—the genuine. Look for the Gold Medal on the box—35 cents.**

Remember—other symptoms of kidney and bladder trouble may be backache, puffy eyes, nervousness and leg cramps.

## Vashon Wins St. Louis Basket Title

St. Louis, March 16 (ANP)—Vashon High school won the basketball championship of St. Louis Wednesday night when it defeated Sumner High at the Pine Street YMCA by a score of 33 to 17.

## White S. Africans Seek To Prevent Mixed Marriages

CAPETOWN, S. Africa, Mar. 16 (ANP)—It was learned here this week that an effort is to be made by the Nationalist party to induce the Union government to introduce legislation to prohibit mixed marriages between Europeans and non-Europeans (natives) in South Africa, and to segregate colored people.

At the recent National party's union congress, a petition for this purpose was planned, to be signed only by Europeans over 21, throughout the union. Petition states that the whites regard themselves as guardians of the natives, that retaining this status is of importance to the future of South Africa. The following legislation is sought:

To prohibit all mixed marriages between Europeans and non-Europeans. To make punishable as an offense all miscegenation between Europeans and non-Europeans. To put a stop to Europeans and non-Europeans' living together in the same residential areas. To carry out economic and political segregation between Europeans and non-Europeans.

### 4 WPA WORKERS FIND POT OF GOLD AT END OF PICKS

Quincy, Ill.,—Four WPA workers digging on an alley project yesterday uncovered a broken clay pot and seven $20 gold pieces were scattered by their picks. The coins bore mint dates ranging from 1852 to 1860.

### SPRINGLIKE WEATHER FOOLS GRASSHOPPERS NEAR EDWARDSVILLE

Edwardsville, Ill.,—Grasshoppers, thousands of them, have appeared on the farm of G. G. Pape, president of the Madison county farm bureau. The hoppers have hatched several weeks earlier than usual. Pape said eggs laid under hay stacks and other protected places have responded to the warm weather of the last few days.

LOOK ELSEWHERE FOR RECOVERY

Step right up and call it defense. If you run a corrupt machine any where, if you have an idea for a new racket, if you run a water-logged, bankrupt utility or railroad—if every other gag has failed and you still need a shot at the old pork barrel, step right up and call it defense.

The fact is that rearmament in this country is not going to create any employment worth talking about. So far, the principal program announced are for aircraft and ships. The difficulty with aircraft production is that it consumes little in the way of materials and is not a mass employer of labor—not even when we are producing up to 10,000 planes as a standing force.

No one can deny that adequate measures of defense are necessary. And it is true that such measures must be concentrated upon shipbuilding and aircraft efforts. But this country is simply too big, and its productive needs too great for this kind of program to bring recovery as a byproduct.....

If we first make up our minds that defense is a liability we cannot avoid, instead of an asset which we want more of, we can see that it should be bought by the people only to the extent that it is needed. For recovery, we must look elsewhere— Eliot Janeway, Federated Press Financial Writer.

SEVERS LOG IN 21 SECONDS, WINS WOODCHOPPER TITLE

Garden Prairie. Ill.,—Whacking his ax through a 6 inch white oak log in 21 2-5 seconds, F. D. Cordray of Garden Prairie became the 1939 Boone county champion woodchopper at a contest held today on the A. H. McMaster farm. Cordray will represent the county in the state championship contest.

BELOVED AMERICAN ELM—DOOMED TO DESTRUCTION?

If the United States had a national tree it would be the American elm, and unless persistent scientific warfare against an imported disease succeed, within a few years there will be elms in this country.

"Dutch elm disease" was first recorded in Holland, in 1919. It is believed to have come from Asia. It swept over the continent and into England where, after eighteen years of struggle, science has abandoned all elm trees to their doom. In a few more years, the magnificent rows of elms lining many a highway, including the approach to Windsor castle, and making beautiful for centuries the grounds of great states and public parks will be no more.

IMPORTED VENEER BLAMED

The elm disease entered this country in logs from buried elm trees, used in making veneer. It is a fungus, carried by bark-boring beetles. Once a tree is infected, there is no cure. The beetle chiefly responsible for spreading the disease was begun in the United States.

The elm disease is thus far very largely concentrated in the neighborhood of New York City, with heavy losses in New Jersey and Connecticut. It has also hit trees in Cleveland, Cincinnati, and Athens, O.; Baltimore, Cumberland, Cincinnati, and Athens, O.; Baltimore, Cumberland and Brunswick, Md.; Portsmouth and Norfolk, Va.; Wileys Ford, W. Va., and in Indianapolis.

The visible effects of the disease in a growing tree are described by the American Forestry association: ,

"Wilting leaves on one or more elm ranches, followed by discoloration, shriveling and general falling of all but a few of the end leaves is usually good evidence of the Dutch elm disease. The ends of the infected twigs may also curl in a characteristic manner, like a shepherd's crook. During the fall and winter, after leaves have dropped, the curled twig ends and numerous trunk-suckers at the base of the larger limbs are the chief means of identifying the presence of the disease."

PROMPT ACTION NEEDED.

When the disease is suspected, a packet of twigs no larger than lead pencils, from the wilting branches should be sent to the Dutch Elm Disease laboratory at Morristown, N. J.

This laboratory is the headquarters from which the United States department of agriculture is carrying on, with the states, the determined campaign to save the American elm.

Complete eradication of infected trees is carried on by poisoning of the diseased trees. An infected elm is girdled and the peeled trunk encircled with a pack containing copper sulphate, which kills the tree and the fungus, prevents sprouting from the stump, repels the disease-carrying beetles and makes it possible to save the wood for fuel. Before this method was developed each tree had to be cut down and promptly burned, the stump being treated with chemicals to stop reproduction from the roots. The copper sulphate production from the roots. The copper sulphate process is one-tenth as costly.

ALL ELMS MENACED

The American elm is one of six species of elms native to the United States east of the Great Plains. All will be wiped ont unless the disease is conquered.

The American elm won the love of the early colonist, who built their homes in its shade and brought young trees from the forests to line the streets of their towns. In New England are miles of elms in rows that were planted in the early days of the republic.

The popularity of the American elm was carried westward by settlement. It is the chief shade tree of this country, and is now common in all the states, from the southernmost tip of Texas to the shores of Lake Superior.

The elm census in a few inland cities shows 600,000 of the trees in Minneapolis, ;400,000 in Detroit 400,000 in Cincinnati, 300,000 in Dallas; 200,000 in Chicago; 150,000 in Oklahoma City, 105,000 in Denver.

30TH BLOOD TRANSFUSION GIVEN TO IOWA BOY 5

Mount Vernon, Ia.—The fiftieth blood transfusion in a year was given to Junior Simpson, 5 year old son of Mr. and Mrs. Earl Simpson here in his fight against nephrosis. He has been given more than five gallons of blood, two of which have been supplied by his father. Over 500 cubic centimeters of lyphol serum also have been administered. The boy sleeps fourteen hours a day.

# CAPITAL DIVIDED ON PLAN ADOPTED FOF BIG CONCERT

## Many See Reason To Refuse "Concession" Board Made For Miss Marian Anderson

WASHINGTON BUREAU
Associated Negro Press

March 16—In this city of strange contrasts, where the most magnificent government buildings frown down on the cheapest hovels; where, in a population of cultured, well-paid people, there exists a group of people of the same race, just as far removed from the first group as the North Pole is from the South Pole—opinion on the Marain Anderson case has created several schools of widely diversified thought.

There are those who believe that the existence in the nation's capital of open and avowed segregation in governmental offices, should prove that the colored people of the city accept this segregation as their part. These same people believe that Washingtonians have no kick in the Anderson matter, largely because the very school systems of the city are operated on a "jim-crow" basis, camouflaged under the title of "a dual system." That means nothing more than white schools and colored schools.

And that Negroes should expect to throw open the doors of a white school just for this one occasion—and accept the open insults at all other times, seems to be the very opposite of what they are striving to accomplish.

Which is more important, ask these people: the breaking down of segregation in governmental offices where they are employed, or the veneer of the acceptance of the school for the Anderson concert as a palliative?

In a recent meeting, indignant citizens said they would accept the use of the Central High school auditorium, provided the school board would lift the restrictions imposed. Other citizens, just as indignant, declared they would not accept the use of the auditorium under any circumstances. Which leaves the matter hanging in the air as far as the committee is concerned. But, what has the committee of citizens got to do with the proposition when the final decision rests with the music department at Howard university?

Port Huron, Mich., Claims the largest geranium plant. It is eighteen years old, 12 feet tall has 2,225 blossoms and is still growing.

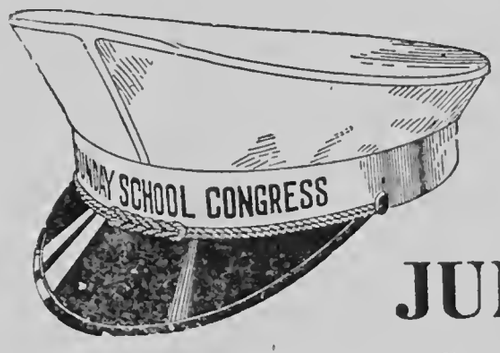
MAYOR COMPELS 250 POUNDS COPS TO RIDE DRAY HORSES

Woburn, Mass,—The sight of Woburn's mounted traffic squad had residents of the town chuckling today. Two hundred fifty pound policemen were put astride dray horses obtained from the city poor farm. Mayor William E. Kane is wrathful because the police force has sued for back pay. Putting the men on draft horses was his way of getting even, and anyway, he said, both men and horses needed reducing.

A STORY ABOUT A BULL WHO IS NOT NAMED FERDINAND

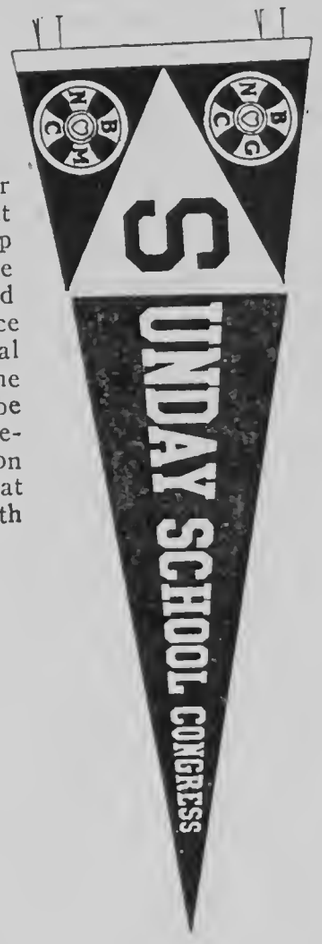
Jersey City, N. J.,—A bull—whose name was not Ferdinand—after escaping from a packing house here startled employes of the Koven boiler works six blocks away by suddenly appearing in their midst and kicking over a pile of metal boilers. The animal then began dashing around, sending thirty employes scurrying to safety. The packing company sent twelve cows to the boiler factory in an effort to divert the bull, but by the time they arrived he had been captured.

Religious Forces of the Nation Will Gather IN Indianapolis, Indiana JUNE 7-11, 1939



The 39th Annual Session OF THE SUNDAY SCHOOL CONGRESS

invites you to meet with them in a five day Summer School of Methods where you can demonstrate what you have achieved, illustrate what you can do, help in the Front Line Sunday School building, contribute to the advancement of those who do not know and lend your influence, your knowledge, your experience and your training to every phase of Denominational work, as there will be representatives there from the schools who will be eager to listen, learn and imbibe these teachings. The following are some of the departments in this great School of Methods. Come on to Indianapolis, Indiana and see for yourself what you can do with the material you have to work with in your Sunday school.



The Metoka and Galeda Department
The Advanced Teachers Department
The Intermediate Department
The Primary Department
The Music Department
The Superintendents Department
The Missionary Department
The Junior Department
The B. Y. P. U. Department
The Cradle Roll Department
The Home Department
The Ministerial Department
The Daily Vacation Bible School Department
The Bible Study Conference Department

ALBON L. HOLSEY, Field Officer,
Tuskegee Institute, Alabama
(U.S.D.A. Photo by Lee)

In the recent cotton marketing quota referendum conducted by the Agricultural Adjustment Administration, thousands of Negro farmers in the South voted "yes" or "no."

NEGRO FARMERS VOTING IN ARKANSAS

The picture above was taken in a voting place near Helena in Phillips County, Arkansas.

Tabulations of the cotton quota show that in those counties in all the Southern states where the Negro farm population is heaviest, the vote for crop control was in excess of 90 per cent.

Some sample tabulations show that in Bolivar County, Mississippi, where there are 10,309 Negro farmers and 1959 white farmers the vote was 8,179 in favor of quotas and 17 against. In Macon County, Alabama, there are 3262 Negro and 738 white farmers. The vote showed 2764 in favor and 57 against the quotas.

The referendum on flue cured tobacco was lost. The percentage of Negro tobacco growers is very small compard to the percentage of Negro cotton producers.

## HELP THE NEGRO

(The Daily Jewish Courier)

At the dinner last week in New York, former Governor Al Smith made a strong plea for educational opportunities adequate for the Negroes. He said, "Our Negro problem, so-called is no longer sectional but ational,"

Introduced at a gathering of faculty, alumni and trustees of the Lincoln university of Chester, Pa., by Rev. W. H. Brooks, for many years a Baptist minister and an exslave, Mr. Smith said: "The number of Negroes has trebled since freedom came to the race," and there has been 'talk about the Negro problem' ever since that time.

"In the first place, part of what we call the Negro problem is a white problem. The white part of the population hasn't always done all it could to help the Negroes on their long upward climb. Today we are trying to make our institution serve them better and give them more opportunities. Opportunity is all they ask. They can and are solving their own destiny. But they need some help."

Pointing out that the Negroes represented "one-tenth of the population only three-quarters of a century out of slavery, and only a few hundred years out of savagery," he added:

"It strikes me that the remarkable thing is not that we have a Negro problem but that the Negro is so little of a problem and has come so far in such a short time.

"We can help them work out their economic and educational future if we provide more adequate educational opportunities for them. We should stop crowding them into slums, both country slums and city slums. The Negro problem would be much more quickly solved, too. If better heath and medical service were available to the Race, and that is one of the things we must give attention to along with education, housing, jobs and better working conditions in the future.

"There isn't any bigger job ahead of us in this country than to help give the opportunity to this Race that they are entitled to as citizens of the nation. To give them their opportunity will not only help them, but will help the entire nation. It will make this a better and more harmonious country. This problem of race relationships will take care of itself largely when the colored race is given educational advantages, health and medical care, better living conditions, and more of the good jobs and not all of the poor ones."

We can sympathize with the efforts that the colored man is making to better himself. We can enthusiastically and sincerely approve the sentiments expressed by Mr Smith. Our struggles for education in environments too often hostile to us, and our age-long traditions of learning, both move us to lend a hand in cooperation with his own efforts to help the Negro educate himself.

The aid given to Negro education by our own Julius Rosenwald should set the example and create the desire to render as much help as we can to our colored fellow citizens.

## "Jitterbugs" Turn Out For Goodman

Detroit, Mich., March 16 (By Crump for ANP)—The "jitterbug" colony turned out in great numbers and staged an impromptu jitterbug contest nightly when Benny Goodman and his orchestra, with the inimitable Teddy Wilson at the piano played a week's engagement at one of the big downtown theatres, last week.

The aisles on the main floor, the mezanine and the gallerics being jammed with dancers who could not resist the irresistable swing of Teddy Wilson and Lionel Hampton, no color line was drawn and no holds barred, and the "jitterbugs went to town with the spot lights playing on them."

# CHICK RATION VITAL MATTER

### Vigorous Stock, Sanitary Quarters Also Stressed as Essential

Success in raising baby chicks depends largely on feeding proper rations, advises H. L. Kempster of the Missouri college of agriculture. Chicks must get a good start if they are to develop into vigorous growing stock and good layers, the specialist said. Strong, healthy chicks are necessary, but they also require sanitary quarters, freedom from dampness, and a comfortable temperature.

"Of equal importance, however, is a properly selected diet," the specialist observed.

"Rations for baby chicks should contain nutrients necessary to furnish both heat and energy, and to manufacture tissue, bone, muscle and feathers. It is of vital importance that they also contain what are known as accessories for growth.

"The ration should be made up of clean, wholesome feeds properly mixed, and having a limited but adequate amount of crude fiber or roughage.

**Feeding Methods Changed**

"Prior to 1930 the common practice was to feed chicks on a chick grain-chick mash combination. About that time the 'all-mash' system of feeding was adopted. This greatly simplified the feeding of chicks because outine was eliminated. Growth apparently is not dependent upon the form in which the ration is fed.

"It is especially important in successful chick feeding to provide adequate hopper feeding space. At least two inches of space per chick is recommended for the first week, and more as the chicks increase in size.

"Earlier recommendations did not suggest the use of small grains as a supplement to the mash until the chicks were eight weeks old. There is a strong tendency at present, however, to start feeding grains at a younger age, especially pullets which are to be retained as layers.

## NEW TENANT FARM BILL IS PROPOSED

WASHINGTON,—A new bill was offered in Congress last Tuesday that would affect tenant farmers. Representative Pace of Georgia asked that Congress provide $1,600,000,000 over a period of five years for loans to farm tenants.

Another bill offered by Senator Bankhead of Alabama week before last was similar to the one proposed by Pace in that both would haise the tenant farmer provision from millions of dollars to a cool billion.

Pace is reported to have declared that more money was needed for farm tenant loans because: "We are not even scratching the surface the way we are going now."

## DUBOIS TRACES RISE OF WORLD CO-OP SYSTEM

### DISCUSSES MOVEMENT IN MONDAY TALK AT GOOD SHEPHERD CHURCH

Consumers cooperatives as the solution of the economic ills of the Race were discussed from three viewpoints on the platform of the church of the Good Shepherd, Monday night, by Dr. W. E. B. DuBois, head of the sociology department of Atlanta University, William Patterson, associate editor of the Daily Record, and Joseph Semper, who substituted for Harry H. Pace, president of the Supreme Liberty Life Insurance company.

Dr. DuBois speaking on "The Value of Consumers' Cooperatives to Negroes," approached the subject from a scholarly and historical view, while Mr. Patterson gave "A Marxian interpretation of Negro -Consumers' Cooperatives." Mr. Semper who is a member of the research staff for a sociological study being conducted by the University of Chicago, spoke from the "Point of View of the Negro Business Man."

OUTLINES MOVEMENT

Dr. DuBois gave a scholarly outline of the history of the cooperative movement—tracing the rise of the movement from a group of 24 visionaries in 1844 to one which now encircles the globe.

The historical effects of the slave trade; the development of an industrial economy and the recent world-wide depression were used by Dr. DuBois to show that of all the movements aimed to help reduce the Race's difficult position, the Consumers' Cooperative was undoubtedly the best.

Atty Patterson contended in his discussion that although he had no opposition to Race cooperatives themselves, he felt that the whole movement was one which could serve the Race only as a cushion rather than a cure.

He mentioned the totaletarian states in Europe—Germany, Austria and Italy—how the fine coops and credit unions of the Jews have been wiped out. The Race's position, he claimed, should be one which dedicated itself to the preservation of democracy and attempt to keep fascism from invading these shores.

Mr. Semper spoke on the growth of the myth of the salvation of the Race through business. He outlined the historical develpomentt of this myth; its relation to economic crises periods and the attitude of Race consumers, and business men of today.

"Because the Negro business man is so interested and wrapped up in his own business he is unquestionably opposed to Consumers' Cooperatives. He will look upon them as just another form of competition."

He ended by urging the audience to join the movement and to give full support to the Cooperative stores in the city.

The question period was extremely lively with pointed questions being directed to all the speakers. The meeting was sponsored by the Lecture and Lyceum committee of which David McGowan is chairman.

—Chicago Defender.

## Name Cast of Hot Mikado

New York, March 16 (ANP)—The "Hot Mikado" which is to open March 23 at the Broadhurst theatre, in competition with the federal theatre version already playing here, has announced the chief members of its cast.

Bill Robinson will play the Mikado; Robert Parrish, Nanki-Poo; Eddie Green, as Ko-Ko· Maurice Ellis as Poo Bar; Rose Brown as Katisha and Gwendolyn Lee as Yum Yum. The show will open in New York without the preliminary road tour as first planned.

Soil experts estimate that approximately 7,000,000 acres, or 18 percent, of the land in cultivation

## THE STORY OF JULIUS ROSENWALD

By Leon R. Harris

While memorializing other great characters the month of February has given to the world, it is but fitting that we pay respect and honor to a man who has contributed more to the progress and welfare of the American Negro than any white man who has lived since Lincoln. The name of Julius Rosenwald is known and cherished in every nook and corner of colored America. The black plow-boy of the Mississippi delta loves his Rosenwald School. Negro college students in practically every Race college that bears the name, owes something to Rosenwald. A dozen large American cities have Negro Y. M. C. A. Buildings established through the generosity of Julius Rosenwald. Eight cities have Negro hospitals established by him and dozens of other cities have clinics supported by the Rosenwald Fund. He gave away half a million dollars to fight adult illiteracy in four southern states alone, through the medium of the night schools. He gave away another million to social studies relative to Negro life.

It was the character of Julius Rosenwald that caused him to be interested, not only in the Negro, but in all down-trodden people the world over. He had absolutely no use for wealth except for the use he might make of it to relieve distressed humanity. Born in Springfield, Ill., the son of a merchant of moderate means, he was compelled to be frugal in his youth. He had an uncanny ability to get others to become interested in working with him and this, in a large measure accounts for his success. Although he had more than forty thousand employees working directly under him, he never spoke to them as being employees. He said, "They don't work for me. They work with me."

The first Rosenwald School was built near Tuskegee in 1913. It cost $942.50. Of this amount, Mr. Rosenwald gave $300. The five thousandth Rosenwald school was built shortly before his death. It was erected near Hampton, Va., and cost $20,000.00 and houses three hundred pupils and six teachers. Altogether, Mr. Rosenwald gave away to colored schools in southern rural districts about 25 and one half million dollars.

In this short story little can be told of his generosity to our racial group. It will suffice to say, as we said at the beginning, that he was the greatest friend the Race has had since the days of Lincoln and the fund he established for our benefit will exist for years to come to bless the Race and add glory and honor to his name and character.

## CITY SLICKERS FEAR FARMERS NOW, IT SEEMS

Chicago—It used to be that the farmers would come to town and be fleeced by the city slickers. The farmers who dispose of their wares at the South Water street market, however, know some tricks themselves. After a number of vigorous protests from the market men, the city council yesterday authorized City Sealer James O'Keefe to establish a branch of his office at 1431 South Aberdeen street to test scales and measures and stop the farmers' allegedly sharp practices.

# PRISON TERMS GIVEN THREE COLORED MEN FOR "NIGHT RIDING"

Little Rock, March 23, (ANP)—A state statute against night riding, aimed originally at such organizations as the Ku Klux Klan, will result in jail sentences of one year each against three Negroes, Henry and Dan Johnson and Henry's daughter-in-law, Mrs. Dollie B. Johnson, in connection with their activities during the cotton pickers' strike last fall called by the Southern Tenant Farmers union, the state supreme court decided Monday.

The three were convicted of putting written notices on plantation gates urging cotton pickers to strike for $1 per 100 pounds instead of the 40 to 85 cents they were then getting. Added was the scribbled wording, "stay out of the fields if you don't want to get into trouble." Authorities said this statement conveyed a threat bringing it within the limits of the night riding statute.

The defense said the statute was illegal since it contravened the federal constitution by abridging freedom of speech, the right of peaceable assembly and a guarantee of equal protection to all under the law. The supreme court held that the strike notices themselves were not a violation of the law, and the Johnsons had a right to strike and urge others to join them, but "did not have the right to intimidate and prevent others from working for the wage offered if the others wished to do so."

## INTERESTING NEWS AND NOTES

The manager of a collective farm and his assistant were sentenced to prison for long terms for causing the deaths of nine old women they made to work in a corn field at harvesting time. The women were forced to work and died from over exertion and exposure.

Santa Barbara, Cal.,—On display at Mission San Miguel is an oak log in which a cross apparently grew from the inside. The log was found in a forest near here by an Indian boy who, amazed at the presence of the cross dragged the log to the mission. Father Tiberius Wand of the mission explained that in the days of the Spanish conquest of California in the late eighteenth century the padres blazed a trail of crosses on oak trees that abounded in the area between the missions. Apparently this oak healed its wounds and bark grew over the cross. Lightning during a recent storm struck the tree and revealed the cross.

A person loose in this world never knows when danger is imminent. A man was walking down a street in Dunkirk, N. Y., the other evening when a wild duck flew into him, the impact knocking him off the sidewalk and leaving him in an unconscious condition for several hours.

The Georgia State Senate Welfare Committee has unanimously approved a bill to pay a thirty dollar monthly pension to every Georgia farmer over 65, who has farmed in Georgia for thirty years. But all said they had no idea where the money to pay the pensions was coming from.

A coal miner in Kentucky gave a hungry Indiana farm boy a meal last summer and persnaded him to return to his home. Recently the miner received a letter from the boy's father offering him a home on the farm for life.

## Civil Rights Not Given To 50 Per Cent Of People

New York City, March 23 (ANP)—No city in the United States achieves more than a 50 per cent observance of the civil rights presumably guaranteed its citizens, it is revealed in a nationwide survey of civil liberties during the last year just made public by the American Civil Liberties Union. Of the 352 cities of over 10,000 population covered in the survey, not even those ranked as "very good"—Cleveland, New York, St. Louis and 39 smaller communities—make a score of over 50 per cent, the findings show. Said the report:

"Nothing in geography, economics or politics yields a yardstick. Regardless of constitutions, charters, legislatures, courts, laws and decisions both federal and state, civil rights in a community stand just about as local forces themselves maintain them."

## AGIN' APPOINTING NEGRO, BY CRACKY!

**New Orleans, La., March 23 (ANP)—The "New Iberia Enterprise," published a letter this week over the signature of C. S. St. Julian, a white farmer, in which he protested the recent appointment of Cornelius King as assistant to the governor of the Farm Credit administration at Washington. It made no difference to St. Julian that Mr. King is a fellow Louisianan.**

**He wrote: "It seems to me and to others who know about this appointment of a Negro, a native of Louisiana, to an important and substantial office in Washington under a Democratic regime, where he will have supervision and authority over white employes and white farmers, is unprecedented and an insult to white supremacy."**

**The Farmers' Educational and Cooperative union, a mixed organization, has attacked St. Julian's position.**

## LABOR UNREST IN WASHINGTON, D. C., PROVES EXCITING

Washington, March 23 (ANP)—The strike on the part of the workers in most of the larger hotels caused considerable unrest in local employment circles. Several workers were imported with the idea of ending the strike, but this did not work. Numbers of colored workers were involved.

One important feature was noted: In several of the picket lines were numbers of colored workers—the line was headed by a white worker, then a colored male worker, then a white woman worker, and so on. No color bar—strange as it may seem—when the white brother desires to score a point, all bars are down.

Two pickets of a High's Ice Cream store were found guilty in police court, charged with disorderly conduct growing out of a disturbance with a helper on a truck making deliveries. John L. Boswell (white) was fined $25 and Henry Matthews (colored) was fined $15. Both are members of the Truck Drivers and Helpers union No. 246, which is conducting a strike against the stores.

## Organize G. O. P. Club In Georgia

Atlanta, March 25 (ANP)—Lending confirmation to their belief that the Republican Party will be winner in the 1940 presidential election and that the American people are fed up with the Democratic New Deal ideology, business and professional leaders of the state recently organized the Young Men's Republican Club of Georgia. Local Atlantans formed the Young Men's Republican Club of Fulton County. Elected president of the State Organization was Benjamin J. Davis, former editor Atlanta Independent, now religious editor, Union-Review, Boyd Baptist publication.

# LIBRARY DEDICATED AT A. AND M. COLLEGE IN SOUTH CAROLINA

Columbia, S. C., March 23 (ANP)—At Orangeburg last Friday, Founders' Day ceremonies were featured by dedication ceremonies marking completion of the new library and boys' dormitory on the campus of the State A. and M. college. After inspection of the buildings and a special program in the afternoon, the alumni banquet and program were held at night.

The boys' dormitory, costing $60,000 and first unit of President Miller F. Whitaker's five-year plan of construction, is named Miller Hall, honoring Dr. Thomas E. Miller, founder and first president of the college.

The new $80,000 library, named Wilkinson Hall, honors Dr. R. S. Wilkinson, second president of the institution. Delivering the dedicatory address for both buildings, President B. F. Hubert of Georgia State Industrial College, Savannah, dedicated them: "To a new and deep appreciation of our opportunities here in the South."

# MARIAN ANDERSON TO SING AT WORLD'S FAIR IN NEW YORK

New York, March 23 (ANP)—The New York World's Fair committee, through its guiding spirit, Grover Whalan, announced this week that Marion Anderson, internationally known contralto, who has been the center of a bitter controversy in Washington musical circles since being refused the use of the DAR Constitution hall, would appear in one of a series of concerts at the fair this summer.

Miss Anderson's concert will be part of the fair's music festival, which will present world-famous soloists and orchestras at the fair's musical center. A definite date has not been set.

## Texan Gets Pen Term; Fur Thief

Houston, March 23 (ANP)—After pleading guilty last week before Judge Langston G. King, a jury convicted Henry Crawford on five felony counts involving the theft of fur coats and other fur pieces. Police reported they had recovered about $4,000 of the loot taken by the prisoner who was sentenced to two years in prison on the five counts, the sentences to run concurrently. Crawford admitted stealing and selling furs in all parts of the country. A teacher at Jack Yates high school bought a fur coat worth $800 from Crawford for $45, turned it over to police and was not prosecuted when he convinced them he did not know it was stolen.

# ALLEN UNIVERSITY PRESIDENT DIES IN BALTIMORE, MD.

Baltimore, Md.—Rev. E. H. McGill, president of Allen University, Columbia, S. C. succumbed here Monday morning of this week. The Educator had been ill only a short time having come to Baltimore with Mrs. McGill a week ago where it was learned he entered John Hopkins hospital for an operation. It is reported that the educator never regained consciousness. Dr. McGill is well known throughout out the Carolinas. Before becoming head of Allen he had pastored some of the leading A. M. E. Churches of the State.

He succeeded A. L. Simpson as President of Allen in 1937.

Dr. McGill is survived by his wife and mother.

## PEANUT RETURNS AHEAD OF COTTON

Ozark, Mo.—As an example of what can be realized from peanuts as a cash crop, the achievement of Dee Hamblin, has been cited.

Mr. Hamblin had been depending mainly on cotton as a cash crop until the spring of last year, when he was allowed only eight acres of cotton under the soil conservation program.

J. O. Kumpe, county agent advised Mr. Hamblin to plant peanuts, and 14 acres of this crop were planted in addition to the eight acres of cotton.

The cotton made a total crop of 650 pounds of seed cotton which was sold for $19.50. The peanut yield was 500 bushels of nuts and 350 bales of hay. The threshed peanuts were sold for $400. The hay was fed to the dairy cattle on the Hamblin farm.

Not counting the returns from feeding the hay, the proceeds per acre averaged $2.44 for cotton and $28.57 for peanuts.

## FLOCK LOSSES SMALL; CREDITS CLEANLINESS

Cleanliness, proper feeding, and adequate housing are the reasons Bill Davis, Benton county farmer living near Cave Springs, has such a low percentage of losses in his chicken flock, he told R. G. Whitmore, assistant county agent.

Mr. Davis raised 1,606 broilers to the age of seven weeks with a loss of only 12 chicks, the county agent said adding:

"He cleans his houses as often as they become dirty, preferring straw for litter, and also cleans all water utensils and feed troughs regularly.

"He feeds commercial feeds and adds semi-solid buttermilk twice a week. Plenty of fresh water is always kept before the chicks.

"No more than 400 birds are ever kept in one house."

A NARROW ESCAPE

A BIG Indian had just ordered a ham sandwich at a drug counter, and was peering between the sliees of bread, when he turned and said to the waiter: "Ugh, you slice 'em ham?

The waiter replied: "Yes, I slieed the ham."

"Ugh," grunted the Indian. "You near miss 'em."

## STFU Head Tells Of Sharecropper's Plight In South

New York City, Mar. (ANP)—As a feature of National Sharecroppers' week whose observance has focused attention of the public on the plight of the Southern farm worker, J. R. Butler, president Southern Tenant Farmers' union (CIO affiliate), this week told of adverse conditions affecting "two million families, enslaved in chains by 'King Cotton,' absolute monarch of America's Southland." Said Pres. Butler:

"During the past five years, more than 500,000 sharecropper families, white and colored, have been displaced from their homes, forced into cities, there to begin futile competition with America's 10,000,000 unemployed. Or else they have accepted the horrible alternative of becoming farm laborers, paid by the day for working from sun-up to dark at a wage between 50c and $1.50_____Their unhappy plight was put on the front pages of our daily newspapers for all America to see when nearly 400 families, comprising more than 1,500 men, women and children, were faced with eviction from their shacks rather than accept jobs as day-laborers at 75c a day_____

"Under the direction of state police, these families were forced into trucks and scattered into the swamps and backroads of the area, away from the public eye—Sharecropping was never an ideal method of making a living; it has been condemned for many years because of the poverty it has imposed and the peonage it has demanded. But our new status as day wage hands is far worse. Under sharecropping we could at least feed our families on fat-back and corn-pone; now we cannot feed them at all___

"The trend toward mechanization supplies landlords with a strong motive for getting rid of their tenants and sharecroppers and hiring back a fraction of them as farm hands___The AAA cash benefits constitute another strong inducement to the landlord to shift from sharecropping to day labor. The government checks go to the landlord who is supposed to pass on part of it to the croppers. To avoid this, landlords have converted their tenants into day laborers and so cheat the sharecroppers out of their rightful share of the cash benefits__Some attempt to solve this intricate puzzle has been made by the Southern Tenant Farmers' union, organized in 1934, it has grown to include today 35,000 members in five states with a strong organization in Eastern Arkansas and Southwestern Missouri. Refusing to accept 'Jim Crowism,' it has organized Negroes, Indians and whites together and, through several strikes, has already made considerable gains in improving conditions."

In New York, the totals are even greater, and the number is growing. Philadelphia shows a huge number—all cities show large numbers of Negroes accepting relief from the government.

Let us look briefly at the good WPA is doing and has done:

The adult education program is about the most productive and beneficial. In September, 1938, the WPA specialist in education reported 4,100 Negro teachers employed in 36 states and the District of Columbia. Six hundred teachers, dieticians, cooks, helpers and custodial workers were employed in nursery school programs. Of course, this is good work and a necessary work. Then it should be taken care of properly—not considered an emergency program.

In the educational and recreational field, 208 Negroes were employed. They did and are doing a marvelous work, greatly needed. They, too, should be taken care of and their program continued, but not as an emergency program.

And so on down the line. There has been plenty to commend the WPA, but again, is WPA the solution to the problem? No, it is an uncertainty—no worker can give his best because of the very uncertainty which pesters him constantly. And because of the high cost of maintaining this phase of work, the government can't absorb it—until a purge has been effected and the whole thing consolidated under one department. This would eliminate many of the over-lapping bureaus and at the same time eliminate many bureaucrats who hamper the progress of the organization.

Many look to WPA as a haven for the unemployed. If this organization is not to become a Frankenstein monster, then drastic changes in it are necessary and expedient. Too much leniency has been exercised in the matter of relief administration, but this has to be because of the peculiar conditions existing in this country.

Were America not the land of promise, the problem would be far simpler. We cannot measure for here we have every conceivable nationality—each clinging to his own national characteristics, customs and language. Each group seeking to gain full benefits of this marvelous land and its largess without relinquishing any ties to his former allegiances. The recent act sweeping out aliens was supposed to take care of this situation. Still there are many groups on the WPA and the relief rolls who cling to their old methods and are encouraged in it.

This is untrue of the Negro, with the exception of the relatively small percentage of foreign born Negroes in and around New York. Negroes are, first, last and always Americans--whether they are so considered or not—and it is high time that America itself realizes this and stops worrying about offending others on account of them. But, when the time comes for cutting of the relief rolls, the Negro will be the first to go when WPA starts lopping off.

It is evident that the Negro must learn sooner or later not to depend too much on WPA as a livelihood. Col. Brehon Somervell of New York City, administrator for that area, has often declared his open opposition to those who seek to make a career of the WPA.

His statements, it is hoped, were not directed at any particular group—for in the New York set-up, there are hundreds of whites, who like Negroes, are enjoying the full benefits of WPA such as they are, and have been doing so for the past five or six years.

However, it is the Negro side that interests us: Weighing the facts, WPA has been beneficial—but it is supposed to be a mere stop-gap, not a permanent fixture. The organization as it now stands is not conducive to a fuller development of a man's possibilities. It has served and still serves an admirable purpose in keeping a loyal citizenry from starvation—but little else can be said of it.

In the opinion of many, WPA tends to stultify and deprive ambitious persons of the spark which drives men on. It is the opiate which closes the eyes to the real problems of life and lets its members live in a blissful paradise—until their rude awakening of a "pink slip."

What economic security is there in a WPA wage?

Many have criticized the relief administration as being a political scheme. Perhaps all social reforms have been so criticised in the past, but WPA has surely had its ups and downs and still has them.

## Carver Exhibit To Feature Harlem Industrial Fair

New York City, Mar. 23 (ANP)—A special exhibit of some of the many products and derivatives developed by Tuskegee institute's famed scientist, Dr. George W. Carver, will be on display at Harlem's Negro Industrial fair, scheduled to open about May 15, under sponsorship of the Consumers' and Craftsmen's guild of Harlem. Ralph O. Gothard, executive director, made the announcement following receipt of a letter from A. W. Curtis, Dr. Carver's assistant, informing him the exhibit was being prepared.

## Executives Of Dentists In New York

Banquet given by North Harlem Dental society for members of the executive board of the National Dental Association and the other visiting national officers at the Y.W.C.A., New York City. Seated around the speakers table reading from left to right: Dr. L. A. Howell, Tampa, board member; Dr. C. W. Dorsey Philadelphia, board member; Dr. E. W. Taggart, Birmingham, chairman executive board; Dr. M. D. Washington, board member; Dr. S. C. Hamilton, Chicago, national president; Dr. C. D. Maxey, president North Harlem Dental society; Dr. E. T. Hanson, chairman entertainment committee, North Harlem Dental society; Dr. J. A. Jackson, Charlottesville, Va., national secretary-treasurer; Dr. S. Davis, secretary North Harlem Dental Society; Dr. D. H. Turpin, Nashville, board member; Dr. J. L. Baxter, N. J., vice president national; Dr. S. J. Lewis, Manassas, Va., chairman Dental Bulletin committee; Dr. J. L. Davis, Washington, board member; Dr. F. S. Upshur, Philadelphia, board member; Dr. F. H. Norris, East Patterson, N. J., chairman National Exhibits committee.

The annual convention will be held August 14-18, at Columbia University College of Dentistry, New York City. (ANP)

## Wants Government To Write Down Its Utility Policies

### Wendell Wilkie Hints Why Two Billion Dollars Distrusts "New Deal"

Washington, D. C. (INR)—By now almost everyone in the country has probably heard the statement that the private utility could profitably spend $2,000,000 for plant expansion in the near future—and not over-expand. And it takes no great imagination to vision the tremendous amount of productive employment this would create.

Then why aren't the utilities spending this money? You can find the answer to that in this quotation from a New York Times article by Henry N. Dorris: "Wendell L Willkie, president of the Commonwealth and Southern and outspoken champion of the private utilities' rights in the last few years, conceded that the President's proposal to limit the TVA's field was 'helpful,' but indicated that he would feel much better about the whole thing if it were put in writing.

"By 'putting it in writing,' Mr. Willkie must have meant, so far as the whole industry is concerned, a congressional enactment___Many in Congress now believe that___a permanent federal power policy upon which all could depend would unloose billions of dollars in the electrical construction industry."

At the present time, the private utility industry, and the investors who must put up their savings for expansion, have no assurance or confidence that the TVA or any of the other federal power projects will not continue to, and be aided by the government in swallowing private properties as fast as they can. A private company might spend ten million dollars for a new generating plant and see it made practically valueless the next year because of subsidized, tax-free federal competition. Until it's "put in writing" no informer investor would risk his capital for private development which might be duplicated and ruined by government bureaus which have often shown the most ruthless disregard for private rights in the drive of the federal government to "socialize" power.

At the present time, federal projects, either completed or under construction, blanket the country. They have been established in Alabama, Tennessee, Montana, Arizona, California, Colorado, Washington, Oregon, Nebraska and elsewhere. Private utilities are only protecting investors when they ask that Congress "put in writing" a definite policy that will show exactly how far the government intends to go with power socialism. Not until that is done can it go ahead with the expansion plans it has been forced to hold in abeyance so long—and create real jobs the country so sorely needs.

## Many CCC Boys To Be Enrolled Soon

Washington, March (ANP)—The regular quarterly enrollment of CCC boys will be held during April, when replacements will be accepted for the group of colored lads leaving the camps. There are at present between 29,000 and 30,000 colord lads in these camps which number 150 scattered throughout the country. It is expected that the number of colored replacements will be small, due to the fact that few leave the camps unless forced to do so because of reaching the age limit or because their enlistment has been used to the fullest. Two years are allotted an enlistee and practically every colored boy in camp takes full advantage of this time.

## Plan Silver Anniversary Of National Negro Health Week

Washington, D. C., March 16 (ANP)—Officials of the National Negro Health Movement, headed by Dr. George W. Bowles, chairman of the advisory committee and Dr. Numa P. G. Adams, secretary, are pushing plans for the 25th anniversary of National Negro Health Week, the observance to last April 1-30, with Health Week Proper April 2-9.

The U. S. Public Health Service, State, County, and City Health departments and various voluntary health and civic organizations will be cooperating agencies. Declaring that: "The future of the race depends on the conservation of its health," Dr. Booker T. Washington, founder of Tuskegee Institute organized National Negro Health Week in 1915.

# "LIFT EVERY VOICE AND SING" IS URGED AS THEME FOR SCULPTURE

**Protest Name Given Famous Sculpture by New York World's Fair Officials.**

New York City, Mar. 10—(ANP)—Those favored with a preview of the imposing sculpture modeled for the New York World's Fair by famed Sculptress Augusta Savage are of the unanimous opinion that title "The Harp", selected for the work by fair officials does not adequately imply its symbolism. They favor substitution of the title "Lift Every Voice and Sing," since the Negro National Athem by the late James Weldon Johnson was the inspiration for Miss Savage's notable work of art.

The heroid piece is 16 feet. 6 inches high, made in the form of a huge harp the strings represented by 12 tall, slender Negro boys and girls, their voices uplifted in song and the draped figures, from shoulders down, taking the form of a harp's strings. Mounted on a large, circular base the back, structural part of the harp is an immense arm and hand with palm uplifted. Kneeling in front of the harp is the imposing figure of a Negro youth, his body bared to the waist, then pantalooned, his arms lowered, palms outward, in supplication for the rights denied his people.

Admirers of the work this week were emphatic in declaring that "The Harp"—title chosen by fair officials—falls far short of conveying the poetic response of the "Lift Every Voice and Sing" theme, responsible for Miss Savage's great work of art. They declared the shorter title inadequate for a work designed to express in material form the contributions of the Negro to the musical culture of America. Mrs James Weldon Johnson is among those urging the change of the name. At week's end it was freely predicted that a delegation of art lovers and race-conscious citizens would request the fair art officials to make the desired change in title.

—Nashville Globe.

## Toy Pistol Bandit Slain In Mishap

CHICAGO, Mar. 10 (ANP)—The age-old bromide, "crime doesn't pay," was brought forcibly home to 30-year-old James Rose last Wednesday. The night before, armed only with a toy pistol, Rose held up Peter Frigo (white) Westside filling station attendant. Quick to notice the harmless "gun," Frigo leaped at Rose, beat him with a jack handle, was soon joined by his wife, Eunice, who belaboured Rose with the heel of her slipper.

Rose finally made his escape with his $8 haul, but police trailed him to a fourth-floor room on West Lake street, fired several shots at him to make him surrender. Cornered, Rose took a running start, dove through the window, four floors above ground. He died Wednesday in Bridewell hospital. Net result of his brief career in crime: $8 that he had no chance to use, a terrific beating and death.

Fourteen white officers sent the following statement to the Massachusetts Legislature on December 5, 1775: "The subscribers beg leave to report to your Honorable House, which we do in justice to the character of so brave a man, that under our own observation we declare that a Negro man named Salem Poor of Col. Frye's regiment in the battle of Charleston, behaved like an experienced officer as well as an excellent soldier. To set forth particulars of his conduct would be tedious. We only beg leave to say, in the person of this said Negro, centers a brave and gallant soldier. The reward due to so great and distinguished a character we submit to congress.

Somerset's case. Somerset vs. Stewart, Lofft, 1772 was the first express adjudication that a slave while in England was free (Lord Mansfield's famous judgment). In Smith vs. Gould Ld. Raym. 1274, which was an action of trover for a Negro, it was held that "the law takes no notice of Negroes being different from other", and that there is no such thing as a slave by law of England.

In 1896, a colored man, Colonel John McKee of Philadelphia, left a million dollars in real estate to the Catholic church for colored and white orphans.

Agreement that property shall not be sold to person of Negro blood does not violate Federal Constitution. 269 Ky. 563.

Jesus was born out of the tribe of Judah. Judah had only five children and they were males (1st Chron. 2nd ch. 3rd and 4th verse), and both of his wives were descendants of Canaan, a black man who was the son of Ham (Gen. 10th ch. 6th verse), Tamar, Judah's second wife, bore him two sons whose names were Phares and Zarah (1st Chron. 2nd ch. and 4th verse), these two names appear in the genealogy of Jesus in the Book of Matthew (1st ch. 3rd verse) St. Paul tells us in (Romans 1-3) that Jesus was of the seed of David according to the flesh. David is the 10th man named from Judah in the genealogy of Jesus. (Matt. 1st ch. 3rd, 4th, 5th, 6th verses).

Every Bible reference proclaims that Jesus was to spring from this tribe of Judah (Gen. 49-10, Heb. 7-14, Rev. 5:5).

At Bristol, in England, for many years about the eleventh century a brick trade was carried on in purchasing Englishmen and exporting them to Ireland for sale.

William of Halmsbury states that it seems to be a natural custom with the people of Northumberland to sell their nearest relations. Queen Elizabeth was the first Englishwoman to share in the profits of slavery.

Henry O. Tanner, Negro, famous painter of Biblical scenes, was born in Pittsburgh, Penn., son of Bishop Tanner of the A. M. E. Church. He first studied in the art school of Philadelphia from which training he went to Paris and studied under Benjamin Constant and Julien.

In 1895 his "Sabot Maker" was shown in Paris. In 1896 he exhibited "Daniel in the Lion's Den" the painting (first) of a line of religious works with which his fame has been since connected. The Chicago Art Institute purchased for $1,600 his "Two Disciples at the Tomb."

When the slave trade was in its heights 50,000 or 100,000 were brought over every year. When we think of how the conscription of 4,000,000 men upset the social, political and economic life of the United States we can readily estimate the effects of the loss to Africa 50,000,000 of its black population.

Negro Problem, by Julia E. Johnson on page 101, says: Negroes do not want to dominate anybody; they merely want representation; they do not want to hate the white people They do not want bolshevism. They do not want anarchy. They want to be American citizens in the greatest democracy of the world. They are not aliens; they were born here. Do you think Negroes want too much?"

The "Leviathan", formerly the German steamship "Vaterland" was unloaded and coaled, in competition with other white and black stevedore regiments, by Company A, 801st. Stevedores, young American Negroes in 56 hours a world record

### THE CAUSE OF NEGRO MIGRATION FROM THE SOUTH—THE EFFECT AND THE REMEDY

**Speech of Hon. Arthur W. Mitchell of Illinois in the House of Representatives, Thursday, February 9, 1939.**

**Correspondence with Dr. Kelly Miller, Former Dean of Howard University.**

Mr. MITCHELL. Mr. Speaker at this time when there is a great deal of unemployment throughout the country and the Negro, who had been the backbone of agriculture in the South, is rapidly leaving the South to the detriment of both the permanent welfare of the Negro and the permanent welfare of the South, I think it is fitting that this Congress should make a special study of conditions in the South and in the country at large, for the purpose of determining why the unrest and, if possible, work out the proper solution.

I am presenting herewith a letter on this subject which I have just received from Dr. Kelly Miller, former dean of Howard University, and my reply. These letters taken together give a rather dramatic picture of the Negro in the South, and might be used somewhat as a basis to begin a study of this problem.

Howard University,
Washington, D. C.
January 25, 1939

THE FARM THE NEGRO'S BEST HOPE

Congress Arthur W. Mitchell,
Room 1215, New House Office Building,
United States Capital,
Washington, D. C.

My Dear Mr. Congressman: I recall with great interest and pleasure our conversation the other day in which you expressed your lively interest and anxious concern about the industrial and economic status of the Negro in the United States. As the only Member of Congress belonging to this group, you by force of circumstances, have a superconstituency of 12,000,000 who represent a racial minority which labors under a heavy industrial and economic handicap. Both the rural and urban contingents of the race face a gloomy prospect; but under all prevailing circumstances and conditions the farm appears to be the most feasible way out.

The Negro was brought into this country over 300 years ago to assist in the rough and heavy work of the farm, which at that time constituted the chief occupation of the entire population. The industrial revolution, through invention and discovery, shifted the burden of production from human hands to machinery. Manufactury trade and transportation soon engaged the chief energies of the white workmen, leaving the bulk of the Negroes on the farm as a 10-fingered worker. His chief energies were engaged in cotton culture.

The invention of the cotton gin in 1792 made the production of cotton exceedingly profitable. As long as cotton remained king, there was an unlimited demand for Negro hand labor. But with the collapse of cotton the Negro's place in the industrial world became seriously affected. We should also bear in mind that the Negro's function in this industry is limited to the culture of cotton in the seed. When he hauls the seed cotton to the gin his function ends. At this point the white workman takes it from his hands and separate the seed from the lint weaves the fiber into fabric, makes the fabric into wearing apparel, and distributes it to the wearer. The Negro's part in the cotton industry, however, is primary and indispensable.

Broadly speaking, the Negro is engaged in agriculture and domestic service, which require a maximum of handwork and a minimum of machinery. The pursuits are less profitable than manufacture and mechanical processes, trade, and transportation, in which machinery chiefly figures. Even where he is engaged in mechanized pursuit which demand shorter hours and higher wages, he constitutes, in the main, a marginal worker demanding less skill and lower pay. Under the pressure of competition, even in agriculture and domestic service the Negro is being pushed down to the bottom or pressed out at the side, and there ore is becoming less and less indispensable. The Pullman service represents the only pursuit in the entire list of occupations in which the Negro, by virtue of his civility, is regarded as all but absolutely indispensable.

Race prejudice as severely restricts the Negro's industrial opportunities in the North as it does his political and civil rights in the South. Booker T. Washington used to say that the Negro could earn a dollar in the South but could not spend it. On the other hand, he could spend a dollar in the North but could not earn it. The problem now is how he can earn a dollar North or South. The white man's lying in wait for his dollar before he earns it.

Notwithstanding the dispersing of the race throughout the North and West, the bulk still clings to the cotton States along the Atlantic coast and the Gulf of Mexico. This stubborn persistency of the Negro population clearly indicates that his future even as his beginning will be bound up in the cotton culture

You, Mr. Congressman, were brought up on a farm in Alabama and sat at the feet of Booker T Washington, the only commanding race statesman which the race has produced after 75 years of freedom. As a race statesman, you do well to perpetuate and carry forward the doctrine of this great teacher, who urged his race to seek their future on the farm rather than to be beguiled by the glitter and glamor of city life. A Negro family rooted and grounded in the agricultural life of Alabama has a much more promising prospect than if transferred to the sidewalks of New York. One shudders to predict the future of a Negro child brought up in a seven-story flat of a Harlem tenement house.

The invasion of the boll weevil and the coming of the World War threatened to shift the Negro population from the farm to the cities, both of the North and of the South. But the hegira was short lived after the boll weevil had ceased to threaten the production of cotton and the soldiers had returned to their places in the mechanized industries of the cities. the Negro looked around, and, like Othello, found his city occupation gone.

The depression for the last 10 years has emphasized the Negro's plight in the industrial and economic world. There seems to be an irreducable minimum of 10,000,000 unemployed. A disproportionate number of these falls within the Negro race. The Negro has been the chief victim of the depression and the chief beneficiary of the New Deal, which has kept him from utter starvation, especially in the cities. But the cities, North and South, have now as many Negroes as they can hold in solution without a dangerous precipitation. He must have a greater faith in the future than I can command, who can foresee any way out for the city contingent of the Negro race. It is unthinkable that they should continue forever, or for long, to live on charity and relief.

After all has been said and done, the farm holds out to the Negro not only his best chance but his only chance in face of prevailing conditions. The rural and urban contingents of the Negro race are now divided in the approximate ratio 2 to 1. Neither of these can be increased at the expense of the other. No one in his senses will advise the city Negro to return to the farm, whose present output is adequate to the demands at home and abroad. The city Negro, with his sophisticated notion and fastidious standards of living and his disdain for downright hard work, would be of no value to the farm should he return. The chief stress of emphasis of the farm program should be to retain those already there and stop the cityward tide of fatuous migration.

The Negro is sufficiently well acquainted with the cotton industry that he can operate it under his proprietorship. Any ordinary Negro family can take 40 acres and a mule and extract a livelihood from the soil. Even the cotton picker, if perfected, cannot dispense with Negro labor. Although the Negro has never been successful in the cultivation of grain, grasses, fruit, cattle, poultry and table vegetables, it now becomes necessary to diversify his crops in face of the collapse of cotton.

Farm ownership has greatly fallen off during the past few decades because of agricultural depression. But farm tenancy has correspondingly increased. The cash tenant and even the sharecropper represent a stage in advance of the farm hand, for it constitutes the first step toward proprietorship. The fact that the Negro and the white farm tenant and sharecropper are partners in distress guarantees the Ne-

## FINDS SURPLUS YOUTH,

(Continued from Page 1)

ties which would make for security among rural youth, it is reported.

Need for employment opportunities for farm youth is more than that of the none-farm group in their respective areas. Thus the situation is found complicated by race, as the WPA report shows that Race youth make up more than 50 per cent of all farm youth in Arkansas, Mississippi and South Carolina. Forty per cent of all farm youth are members of the Race in Georgia and Louisiana.

In eight other states the percentages indicate that the problem of the Race youth in rural areas is more likely to be localized on farms than in the villages.

With the lack of available high schools for the Race in rural sections, some 900,000 members of the Race of high school age are not in school. Arkansas and Mississippi have enrolled only 4.7 per cent of the Race population in secondary schools. Five other states report less than 10 per cent high school enrollment.

In 15 southern states, 230 counties have a population of 159,000 youth between 15 and 19 years of age, but no high school facilities for Race pupils within their boundaries, the report points out.

In these same 15 states there are 195 more counties which have no four-year high schools for the Race, though the total number of members of the Race of high school age is nearly 200,000 persons.

Added to little or no high school facilities for Race youth in the rural south, is the general problem of poor school attendance. In the southeast section of the United States, the school attendance of the 16 and 17-year-old farm group was below the national average of 52 per cent. Florida, Tennessee and Mississippi are reported as the only exceptions. Within these more "favorable states," however, Race youth shows up again as the disadvantaged group.

The WPA research study also reveals that many whites as well as Race youth between the ages of 16 and 17 are still in the grades. The opposite of such retarded learning is to be found in Minnesota and Wisconsin where most of the youth in this age group are in high school.

States with a high percentage of surplus youth, including numbers of Race youth and Mexicans, are found to have a high percentage of illiteracy. In the south Atlantic states over eight per cent of all rural farm youth between the ages of 15 and 24 were illiterate, the report continues.

While the depression has caused large numbers of urban youth to postpone marriage, it appears to have had little effect on marriages among rural youth both by color and residence.

The WPA report shows that more Race than white youth were married in urban, rural farm and rural non-farm groups of the population. More Race young men in rural farm than in rural non-farm regions were married. The reverse is true for young women of the race with exception of those 24 years of age.

## FARMERS VARY

(Continued from page 1)

gen compound breaks down. There is no surplus of moisture to leach the nitrates away. In the Southeast, however, frequent rains cause serious leaching. The best way to save nitrates is to have a cover of plants that will take up the nitrates before they can escape. Then, when the plant cover is ploughed under it quickly decays in the moist soil and the nitrates are again available for the crop that follows.

—New Era-Progressive Banner.

## BIGGEST RACE MINORITY IN AMERICA MARCHES ON

(Bloomington (Ill.) Pantagraph) When so much attention is given to race minorities in Europe some facts about the largest racial minority in the United States may be called to mind.

These are 11,889,143 Negroes in the United States, almost one-tenth of our total population.

As a group they have probably made more progress since the civil war than any other race in the same length of time. Part of this is due to favorable circumstances in the northern states, where individual Negroes have worked up to positions of highest responsibility, including membership in the national congress.

Recent issues of the Crisis, Negro monthly, call attention to the fact that during 1938 there were 55 books written by Negroes which gained some national circulation.

Economically the Negro is of national importance. The purchasing power of the race is estimated at two billion dollars a year. There are 23 chartered Negro banks, 41 insurance companies with policies totaling $288,963,000 in force. There are 42 Negro chambers of commerce and other business organizations.

America has made no governmentally backed effort to suppress this minority in America. On the contrary the Negro minority has been afforded many forms of encouragement to march on in making life better for themselves and their children.

## WINDBREAKS SLOW UP HOT WINDS ON PLAINS

Winds that threaten crops and erode and parch farm land in the Great Plains, this year find more than 7,000 miles of shelterbelts, a part of the Prairie States Forestry Project of the United States Forest Service, practically stop wind erosion. Probably more important they reduce evaporation of moisture from the soil and from growing crops. Farm fields and crops like laundry on the line, dry rapidly in a stiff wind.

These field windbreaks—few of which are over 3 years old—already are increasing yields and stabilizing diversified farming in the six states of Texas, Oklahoma, Kansas, Nebraska, and the Dakotas in which the Prairie States Forestry Project operates.

Because conditions vary, field windbreaks may be different widths and run in different directions. Larger belts of 7 to 10 rows of trees a half mile apart may be supplemented by belts of 2 or 3 rows every quarter-mile. Shrubs or low-growing trees along the edge of the larger shelterbelts retard the wind from the ground up. It is estimated that about 8 acres of shelterbelt strips will protect the average 160 acre farm—about 8 acres of shelterbelt strips will protect the average 100 acre farm—about 20 times the height of the trees on the lee side and several times their height on the windward side.

A prevalent opinion has been that trees use more moisture than they are worth, but by comparison of adjoining fields—one with field windbreaks, one without—the Forest Service has shown that crops on tree-protected land will average higher than on the unprotected field.

## BIG WALNUT CROP PREDICTED IN 1939

A typical Ozarks cash crop—native to the hills as the squirrels and fish on which old-timers count for a livelihood when they don't have crops—is black walnuts, and many a hill family is easier through the winter because of them, says a news story from Springfield, Mo.

Most dealers buy direct from the producer—the farmer or his wife or children who gather the nuts.

E. H. Karstien, chief nut dealer in Springfield, buys $3,000 to $4,000 worth of black walnuts a year from individuals who gather and bring them in. Right now he is paying $1 a hundred pounds for the unshelled nuts; 20 cents a pound for the meats.

He has on hand 25,000 pounds of nuts in the shell; 1,500 pounds of meats.

And this is a bad year. This year he only shelled about 3,000 pounds—last year he shelled 25,000 pounds.

Next year he looks for a bumper crop, because, he explained, "The nut crops go in cycles; every other year is very good, every fourth year is a bumper."

This year was poor. He had to go way down past West Plains and Mountain View, and over into Arkansas, to get enough. Last year was pretty good, and the year before that poor. Next year, being the fourth year, he counts on a huge yield.

Other nut men figure the same way—the cycle is traditional, and they find it works out. Three years ago was one of the biggest black walnuts years in history.

# G. O. P. GOVERNOR OF MICHIGAN APPOINTS COLORED OFFICIALS

## Choice Plums go to C. A. Roxborough and Chas. A. Mahoney

DETROIT, Mich., Mar. 16 (By Crump for ANP) Governor Frank D. Fitzgerald of this state, after having been flooded with letters and telegrams of commendation from leading people in all parts of the country relative to his appointments of Attorneys Charles A. Mahoney and Charles A. Roxborough to high positions in the state government, expressed himself a few days ago as being highly pleased with the favorable reaction and comments of the group.

The governor told an ANP correspondent: "It is my sincere hope that the appointment of Messrs Mahoney and Roxborough will once more reassure the members of your group that they are being given adequate representation in the affairs of our state government. Aside from this desire to be fair to the various racial groups, the appointments are justified by the qualifications of the two gentlemen just mentioned. I know they will live up in every way to the high standards of public service set for this administration."

## CAUSES OF NEGRO

(Contiued from Page 13)

gro better treatment than would befall his lot if he alone filled the quota of this category.

The New Deal is calculated to relate the Negro to the best opportunities of farm life under auspices of the Federal and State Governments. The traditional policy of the South, due to unhappy memories of reconstruction, has tended to divorce the Negro from participation in government function. The government instrument with which the ordinary Negro is best acquainted is the policeman's club. But the public schools constitute the one redeeming exception. But now the New Deal is at great pains to acquaint him with the beneficent aim and purpose of government, national and local, and most especially in agriculture. It sets up a trained staff of county agents and local supervisors to drainage of soil, diversity and rotation of crops, care of livestock, and marketing produce.

As far as practicable, the farm policy of the Government operates without discrimination on account of race or color. Such discrimination as may creep in here and there, by reason of local custom and tradition, are promptly correctable when properly brought to the attention of headquarters in Washington.

The Bankhead Act has made it possible for the tenant farmer to secure a loan on his farm on easy terms of payment. The Rehabilitation Act enables him to borrow money to improve his farm home. A subsistence fund will enable him to purchase the necessary seed and equipment to start and stock his farm.

It is necessary to acquaint the Negro farmer with these provisions intended for his welfare. He has been so accustomed to being left out of all Government consideration that he has become intimidated and dares not ask for provision to which he is fairly entitled.

It does seem to me, Mr. Congressman, that the best advice which can be given to the Negro today is to re-emphasize the advice of Booker T. Washington to plant their feet in the soil and let down their buckets where they are.

KELLY MILLER.

**House of Representatives,**
**Washington, D. C., February 7, 1939**

DR. KELLY MILLER:
Howard University
Washington, D. C.

My Dear Dr. Miller: I have read your letter of January 25, in which you discuss "The Farm: The Negro's Best Hope" with great interest. All that you say on this subject interests me greatly. I have watched with great alarm the large numbers of colored people from the Southern States rushing from the rural district and crowding into the cities, both in the South and in the North. I, having lived in the South the greater portion of my life, and having been directly connected with rural life, know the great evil that attends this migration. And while I know the great problem, the migration of these people from the rural South to the congested city, I have not been unmindful of the cause.

Many of these people have left the South with great reluctance, but there were conditions in the South over which they had no control which made their abode in that section not only uncomfortable but unsafe. Many of them, under the leadership of educators and ministers, sought to follow the instructions of Dr. Booker T. Washington ("let down your buckets where you are") referred to in your letter, but to them the risk of life became so hazardous and so great they, like the oppressed of other nations of the world, sought safety and comfort and the best possible opportunity to live and support themselves and their families by leaving their homes and going to other sections where they thought these things could be had.

You are familiar with the fact that the settlers of New England and other parts of our country crossed the Atlantic Ocean at the peril of their lives and set themselves up in this country in the fifteenth and sixteenth centuries because they wanted to escape injustice in their own lands, and wanted what is so often referred to in our Nation, freedom of speech, and the right to live their lives without being unduly oppressed by those in power and authority. I am convinced that oppression, injustice, and the unsafety of life have always caused the oppressed to take refuge in some other part of the country, or some other country, where they could live a safe, better and fuller life. This, to my mind, is exactly why the Negro has left the South in such large numbers.

The more than 5,000 lynchings which have taken place in the South during the past 50 years, the disfranchisement of Negroes in the Southern States, the injustice suffered by Negroes in the courts of the South, and the unfair and inequitable distribution of educational opportunities, along with the despicable sharecropper system, have tended to drive the Negro from the farm. All of this has been said in no effort to deny or dispute anythink set up in your letter. I merely feel that the cause for this rush by the Negro to the city should not be overlooked.

It is my opinion that the white South is gradually changing its attitude toward the Negro in the rural district. I know that this attitude must change or the Negro will continue to leave that section. His leaving is not solving the problem. It is rather aggravating it. I think if lynching in the South was stopped, if the Negro was given justice in the courts, and if he was permitted to sit on the juries in the South (which the Supreme Court of this country says he has a right to do), if he was given equal educational opportunity with the white children of the South, the almost wholesale migration of the Negro to the city would cease, because the South is developing a good road system, rural electrification is being extended to the South, thus making it possible for those living in the rural sections to have and enjoy many of the comforts and necessities afforded those living in the city and in other parts of the country.

I have recently made a rather careful survey of conditions in the South for my own information and satisfaction. I spent 7 weeks motoring leisurely through Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Texas, and Oklahoma. I saw white and colored people in all of these States. I saw them in all walks of life. I held conferences with governors of States, mayors of cities, editors, of newspapers, college presidents, principals of high schools, teachers of rural schools, bishops, pastors of large city churches, and pastors of small rural churches. I talked with workers on the farm, workers in the cotton mills, workers on the turpentine plantations, men in the sugarcane and cotton fields, and with people in all walks of life. It is my opinion now, as always, that the South, with its temperate seasons and agricultural possibilities offers the Negro his greatest opportunity, but, he in order to enjoy the opportunity offered, must have the protection and the recognition already referred to.

From my careful observations made during this trip through the South, and observations that I have made over a period of years, I am confident that there is a growing tendency among the whites of the South to be more considerate of the Negro's rights in that section of the country. But there is still a tremendous amount of work to be done in the way of securing for the Negro those rights, the protection of life, liberty, and property, and the pursuit of happiness, guaranteed by the Constitution of the United States to citizens of the United States.

I agree with you, Dr. Miller, that the Negro's destiny in this country could be far more easily worked out in the South if those in charge of government in the South once made up their minds and determined to be fair and just to the Negro citizens. It is my opinion and observation that nowhere in the United States of America has the Negro been given equality before the law and equality in the economic affairs of the Nation. There is entirely too much stress (wrongly and foolishly so) put upon the statement that this is a white man's country. The first permanent white settlement in America was made at Jamestown, Va., in 1607, under the leadership of Captain John Smith. Twelve years later the first permanent Negro settlement was made a Jamestown, Va., when a Dutch trading vessel came to that shore brought and sold 20 Negro slaves. The white man preceded the Negro, insofar as the settlement of this country is concerned, by only 12 years. There is grave question in my mind now as to whether or not the white settlement at Jamestown would have been permanen had it not been reinforced and strongly backed up by the first permanent Negro settlement at the same place.

There are still designing and ill-informed white men here and there who argue that the Negro should be driven from America and transplanted elsewhere. I doubt if there are 50 Negroes in America who came from Africa. The descendants of the Negro, who settled at Jamestown, Va., in 1619 are as much American citizens as are the descendants of white men who preceded him by 12 years. The Negro has done his part to make this country what it is. He has shed his blood in common with white men to make this country free. He marched and fought with George Washington, Andrew Jackson, and practically all other great military generals, for the protection and welfare of this country. The soil has been enriched with his blood wherever American blood has been shed, whether in this country or in foreign lands.

All the Negro has asked in the past and all he asks now, is to be treated like other American citizens and to be given the same right and privilege to make an honest living in the only country he knows and loves as a home. I believe that this administration is making serious and commendable effort to secure for the Negro his economic and citizenship rights in this country. I am conscious of the fact it will be a long, hard struggle. There is much to overcome. It requires patience, courage, and genuine statesmanship to handle the problem of the Negro in this country, and particularly in the South, with fairness and justice to all; but this must be done before the problem can be settled.

During my visit through the South I was much impressed by the resettlement projects I visited; one particularly in the State of Texas, where scores of families of Negroes are being aided by the Government in securing farm land, comfortable houses to live in, and proper stock, etc., with which to farm. This is being done under the supervision of trained agriculturists. Those engaged on these resettlement projects were the happiest and most contented people I met during my entire visit through the South. I believe that the Government should make a careful study of what has already been accomplished and that special effort should be put forth to work out the problem of the Negro in the South through this movement.

I believe that once the Negro feels that his life is safe in the South, that he will be given the same consideration in the courts as is given all people, that he will be given the same economic opportunity to work and make an honest living, the same chance to exercise his citizenship rights at the polls, in the selection of those who govern the Southern States and the Nation, the same opportunity in the schools of the South to prepare himself for the duties and responsibilities of citizenship, the problem will in a large measure be solved, and the country will begin to prosper. On the other hand, I believe until this is done the South will continue to lag behind all the other sections of the country, and justly so.

You, of course, know the high regard in which I hold the late Dr. Booker T. Washington. I knew him most intimately, having served as office boy for him and having kept in close touch with him until he passed away. I believe that he made the largest single contribution toward the real solution of this problem. I believe now the work which he carried on so heroically and successfully must be carried on through the years to come, if the problem is to be solved. What I have set forth in this letter is exactly what Dr. Washington worked for during his day. I am working now, along with many others, trying to carry out the program which he worked out.

I think we should feel encouraged by what has been accomplished, but we should double our effort in this day when the economic affairs of the Nation are being reshaped. Not only must we urge upon the white man to be fair and just to the Negro, we must urge upon the Negro to be thoughtful, patient, industrious, and determined to make the largest possible contribution toward his own advancement, regardless of the handicaps which he is called upon to face.

I have noted, particularly in my contact with men in Congress, and with the large number of people I met on my recent trip through the South, that much of the bitterness between the races is passing away, and there is at present rather determined effort on the part of the younger generation, particularly white, to deal with the problem of the race in the South with more fairness and justice than that of the earlier days of the Negro's freedom in the country. I believe that with this broader understanding and tolerant approach on the part of the young of both races, we will get somewhere in our effort to change the South and make of it the New South that Henry W. Grady so eloquently spoke and wrote about.

The program of Booker T. Washington is undoubtedly the program which should be followed. You can depend upon me to do all in my power to help in this struggle for human rights and proper race adjustment.

Arthur W. Mitchell.

It is my purpose to bring before the House and the various committees of this House, in the form of bills and speeches, such facts I thing this body should know, with the hope of bringing about some further action on the part of this Government to render the proper aid, and to give the proper recognition to a group of its citizens who have always been loyal in every sense of the word.

**Congressional Record.**

## CO-OPS AIDING KANSAN S

Kansas farmers are receiving cash dividends of almost one-half million dollars annually on the business they do through their cooperative marketing and purchasing associations.

Statisticians from the Wichita Bank for Cooperatives, which recently participated in the first actual door-to-door count of farmers' cooperatives made in the United States, found that farmers of that state actually had returned to them $458,000 in patronage dividends in 1936, when their 434 associations handled $58,000,000 in sales.

Approximately one-third of Kansas' 174,000 farmers are either selling all or part of their produce through cooperative associations or are purchasing farm supplies cooperatively, according to the survey. Over 35,000 farmers were members of grain marketing associations alone.

Grain marketing associations accounted for $28,000,000 of the products sold.

## USE OF WORD "AMERICAN"

(Continued from page 1)

ready familiar, one formed from the last word in the name of their country. In like manner the citizens of the United States of Brazil call themselves Brazilians, and the citizens of the United States of Venezuela call themselves Venezuelans.

On February 25th, 1870, the Rev. Hiram Revels of the soverign state of Mississippi was seated in the United States Senate. This was the first time a Negro was so honored.

## ADVANTAGES OF DAIRYING

### Income Figures Based On Experience Cited

The advantages of dairy farming over cotton growing in providing a better and more dependable income while also building up soil fertility, are stressed by Abe Collins, president of the First National Bank, DeQueen, in the DeQueen Bee.

Mr. Collins, who has taken a leading part in developing dairy farming in his section with chickens and hogs as sidelines, cited figures taken from the experience of a number of farmers in that section, says the Bee.

According to the figures he presented, 10 gallons of milk per day from a farm would total 595 pounds per week. If the milk tested 4.5 per cent butterfat, a reasonable test, it would produce 26.77 pounds of butterfat per week.

The DeQueen cheese plant was paying 27 cents per pound for butterfat during the week, which would make the 10 gallons of milk bring $7.22 per week to the producer. Deducting the cost of the daily truck haul to the cheese factory, which would be $1.80 per week, the net return to the producer would be $5.42 per week, or a total of $281.84 for the 52 weeks in the year.

It was pointed out that not more than seven ordinary grade cows would be needed to produce the 10 gallons daily, in fact three or four better grade cows would produce that much. But if seven cows were kept, they would each produce a calf each year, worth at least $25,

## HOME DEMONSTRATION WORK

### Miss Camilla Weems, Assistant State Agent Hopeful

Savannah, Ga.—Women members of home demonstration clubs and girl members of 4-H Clubs in Georgia are very happy because of the very excellent results accomplished in club work by them in 1938, and the 1939 outlook for extension club work for women and girls in Georgia appears very bright and encouraging.

The summary of the 1938 annual reports of home demonstration agents in Georgia has just been completed, and shows large gains in the extension work. During the year the number of home demonstration agents increased from 21 to 25, all of whom are now receiving some local appropriation from the counties in which they work. The work for men and boys has grown also.

New home demonstration agents were placed in Baker, Columbia, and Hancock Counties and each of these new home demonstration agents, along with the others, has done excellent work in her respective county. The annual reports show that there are 9,352 women enrolled in 401 home demonstration clubs. This was an increase of 1,226 club women and an increase of 35 new home demonstration clubs.

In 1938 home demonstration agents visited 14,739 homes of which 7,004 were homes they had not visited before; they conducted 976 training meetings for 12,817 local leaders who attended; they held 6,185 method demonstration meetings which were attended by 86,388 people; held 1,044 meetings at result demonstrations at which 15,115 people were present; held 149 achievement day meetings for adults and women and girls which were attended by 18,312 adults and juniors; 3 camps were held for 143 women who attended them and 11 camps were held for 523 club girls who attended them from 3 to 5 days. The home demonstration agents held 330 other meetings that had a total attendance of 28,883

## NATIONAL FARMERS' SUNDAY—APRIL 30, 1939

### Authorized by the Board of Directors of the National Federation of Colored Farmers, Inc.

#### THE PRESIDENT'S PROCLAMATION

Pursuant to the authority vested in me by the Board of Directors of the National Federation of Colored Farmers, Inc., I, Leon R. Harris, president of said organization, do designate Sunday, April 30, 1939, as annual "FARMERS' SUNDAY." All Units of our Federation are hereby ordered to have appropriate religious services on that day.

* * * * *

We are privileged again to assemble together and give thanksgiving and praise to the God of our fathers and mothers, who has bestowed His blessings upon us, who has guided and helped us, who is the Farmers' Best Friend.

Today let us be thankful for this new season, for this new springtime, for the opportunities we enjoy here, now and today. Let us forget the dark past, hold up our heads and get a vision of the people and of the Race that is to be if we keep faith with God and with our fellowmen. Let us be grateful that, through our organization, we have a chance and a way to be of service to others.

Let us pray today for knowledge, for patience, for godliness. Let us remember the thousands of our Group and of our vocation who are less fortunate than we are, who are existing in poverty and distress. Let us pray for these and do our part in helping them in every way possible. And let us pray for our native land, for peace and prosperity, for the coming of the day when every citizen may have an equal opportunity to live, prosper and be happy.

Therefore every Unit under the jurisdiction of the National Federation of Colored Farmers, Inc., is instructed to assemble in some church on this day to render thanks to Almighty God for the blessings we enjoy and to pray for Divine guidance and assistance. Every member is hereby instructed to take part in the services.

May the principles of cooperation and of charity fill every mind and heart, and united, may we go forward to advance the work and welfare of our organization.

Given under my hand, this the 30th day of March, 1939.

(Signed) LEON R. HARRIS.
President.

#### OFFICIAL PROGRAM

SONG—"Bringing in the Sheaves."
PRAYER—
RESPONSIVE READING—(From the Psalms)
"Bless the Lord, O my soul."
"Thou visitest the earth and watereth it. Thou settlest the furrows thereof; Thou blessest the springing thereof."
"Thou crownest the year with Thy goodness."
"The pastures are clothed with flocks; the valleys also are covered over with corn."
"He causeth grass to grow for the cattle and herb for the service of man; that he may bring forth food out of the earth."
"O Lord, how manifold are Thy works, in wisdom hast Thou made them all; the earth is full of Thy riches."
SONG—(Selected)
READING OF PRESIDENT'S PROCLAMATION—
WELCOME ADDRESS—
SONG—"The Farmers' Hymn." (Official Hymn, N.F.C.F., Inc., Tune: "My Faith Looks up to Thee.")

God bless us, we who toil
Upon the goodly soil
Which Thou hast made;
Uphold us by Thy might.
Help us to know the right
And ever, day and night,
Be thou our aid.

Send plenteous sun and rain
On mountain, hill and plain,
And valley wide;
Grant us prosperity,
Increase our faith in Thee,
O may we happy be
Whate'er betide.

Unite us heart and hand
In one fraternal band
Until the end;
That we may praise Thy name,
Of all men, Lord, the same;
Our God, whom we proclaim:
"The Farmer's Friend."

INTRODUCTION OF VISITORS, SERMON, OFERING, ANNOUNCEMENTS, BENEDICTION.

* * * * *

#### INSTRUCTIONS

Officers and members should strive to make FARMERS' SUNDAY a great day for farmers throughout the nation. Appoint a special committee. Invite the public. Invite your city friends and relatives. Have special music. An all-day meeting would not be out of place. Let the world know you are proud of your vocation. If for any reason you are unable to hold your services April 30th, be sure and hold them as soon thereafter as possible. FARMERS' SUNDAY must be observed.

## GARDENS PAY BIG PROFITS

### Declaration by J. W. C. Anderson of Missouri College

From a half-acre of land put in garden crops for home use and a cash outlay of a little more than $7 on the garden, farmers of Missouri can get a return of about $139, declares J. W. C. Anderson, of the Missouri College Agriculture.

The figures he gives are averages from records kept by a number of farmers throughout the state, Mr. Anderson explained. He said further:

"One garden which was only one-third acre in size gave a return of $221.23.

"Not only is the family garden of tremendous value in cutting down food costs, but it will provide a variety of tender-flavored and nutritious food throughout the season. With such a resource at hand, the housewife can feed her family appetizing meals that will do much toward maintaining and improving the health and physical well being of the family.

"Realizing the tremendous amount of food that the garden will produce on such a small area, it is obvious that it should be located on the most fertile soil on the farm."

"The best gardeners have realized this, and have changed their garden from the old, odd-shaped, poorly located piece of ground where the garden has always been planted, to a fertile soil where it will have the best chance of producing the highest yields of the highest quality produce."

#### Apple Flour Now.

Scientists in the state of Washington have invented apple flour, and they say it makes delicious bread, says the Country Home. Although a vacuum and dehydration process reduces the moisture in the new product to about 1 per cent, its sponsors claim that the loaves do not dry out like ordinary bread.

## SHEEP ADD TO HIS INCOME, CHECK WEEDS

An average net profit of $275 a year as extra cash income is what J. T. Davis, Monroe county farmer, receivers from his flock of 75 Hampshire sheep, he told Wyatt Sims, county agent.

Mr. Davis, who has been raising sheep for the past 30 years, is an enthusiastic booster for a farm flock, declaring that sheep will give a greatest profit than any other stock, the county agent related.

About 30 head are sold each year for meat at an average price of $7 a head, and from 12 to 15 are used at home for meat during the year. Although the price of wool varies from year to year, Mr. Davis told the county agent that it also returns a good profit.

Seventy of his present flock are breeding ewes.

The flock is pastured on 100 acres of land. Winter pasture is provided by wheat, barley and oats, while in summer the sheep are grazed on Bermuda and lespedeza.

They are fed lespedeza and soybean hay, which costs 50 cents a head, a total of $37.50 a year for feed other than pasture.

The flock is not only valuable for the cash it brings in, Mr. Davis said, but it keeps his farm clean of briars and weeds as well.

## FARMERS WAR AGAINST POVERTY

### Fight Odds to Regain Lost Security Shown

Washington, D. C.—Wars are being waged today on many fronts.

But the most important battle of the day is being fought and won on the farms of America, where more than 700,000 farm families are fighting to climb the economic ladder from want and poverty to security.

Through the mass of detail and statistics concerning the amount of money loaned and repaid to the number of cows, chickens and pigs on the average farm, shines the courage of the small farmer in his heroic fight to regain his lost independence.

Undaunted by low agricultural prices, high tariffs, prohibitive freight rates, hampered international trade, insect pests and the weather, the low-income farm families aided by the Farm Security Administration are getting back on their feet through their own efforts.

Typical of the daily small battles that are being won by farmers on the Rural Rehabilitation program of the FSA, is the story of the comeback trail of Lincoln Whaley, of Sevierville, Tenn.

But let Lincoln tell you his story.

"I had a little farm in the Smoky Mountains Park and was getting along fine and making money. I had my fruit, my cattle, my hogs and my bees in the mountains. I

(Continued on Page 16)

## PURE SEED OF COTTON DIFFERS

### Comment by C. A. Vines, Assistant Extension Agronomist

Unless cotton producers are familiar with the difference between certified and registered seed, they might buy planting seed no better than the seed they discard, warns C. A. Vines, assistant extension agronomist.

"A great many cotton growers are often confused in the difference between certified and pedigreed or registered seed," said Mr. Vines. "Pedigreed, or breeders," seed is direct from the breeder of the variety.

"Certified cotton seed is reproduced, or multiplied, pedigreed seed grown under regulations set out by the State Plant Board of Ark.

"When state certified seed is offered for sale, it is at least one year removed from the pedigreed or registered seed, and even may be several years removed.

"Each bag of pedigreed or registered seed is sealed, to which is attached a blue tag.

"State certified seed is marked with a red tag, while certified commercial grade seed is sold in bags marked with a yellow tag."

Cotton is a highly bred plant in which such characteristics as gin turnout and staple length "run out" in a relatively short time, Mr. Vines noted. Therefore, it is important that farmers when buying seed investigate the source of production, he continued, adding:

"In the one-variety cotton production program in Arkansas, growers are discarding seed after it has been grown a second year from registered or pedigreed seed. Unless growers know the difference between pedigreed and certified seed, they might buy planting seed no better than the seed they discard."

## DOMESTICS IN DRIVE FOR PROTECTIVE LEGISLATION

By Ernest Calloway

Greatly dissatisfied with the present structure of social and labor legislation, the organized domestic workers of Chicago are seeking ways and means to amend existing legislation with the hope of abolishing the "domestic employment" exclusion clauses found in New Deal legislation affecting workers.

The recent formation of the Committee on Legislation for Household Employment by the Chicago Domestic Works' association is considered the first step in the direction of bringing this situation to the attention of the legislative bodies of the state. The legislative committee is now making a study in this field and a report is being planned for a city wide conference some time this fall.

SEEK CORRECTIVE LAWS

The committee announced recently that a conference had been held with officials of the Women's and Children's department of the Illinois Department of Labor and cooperation had been extended by this agency in the collection of data for a proposed bill before the Illinois State legislature.

Approximately 3,000,000 women are employed as domestic workers throughout the country. In Chicago, it is estimated that 52,000 women domestic workers either find temporary or permanent employment in the various homes throughout the city.

For this work, the average wage obtained is reported to be $8 a week for approximately 72 hours of work. While various state legislatures have occasionally discussed this problem, only a few have passed protective legislation for domestic workers. Wisconsin maintains a minimum wage law and Washington has enacted a maximum hour bill.

## TENN. STATE IS HOST TO NFA CONFAB

MORE THAN 200 BOYS IN ATTENDANCE AT 10th ANNUAL MEET

NASHVILLE, Tenn.,—A stock and soil-judging contest Saturday morning, a basketball tournament Saturday afternoon, and a reception in the A. and I. College recreation hall Saturday night brought to a close the tenth annual convention of the New Farmers of America in session since Thursday.

The quartet singing contest first prize was awarded Thursday night to the Geeter high school of Whitehaven, while second prize was captured by Woodstock training school of Lucy Tenn.

Barrett's Chapel high school of Arlington, Tenn., through its representative, Fred Goodman, won first honors in the public speaking contest while Geeter high school placed second.

The group of more than 200 farm boys from every section of the state enjoyed immensely their visit to A. and I. campus where they were officially entertained by Professors Walter S. Davis and Reuben A. Munday.

The national president of the N. F. A., Albert Lester, of Delray Beach, Fla., the national executive secretary, Prof. A. B. Simmons, of A. and T. College Greensboro, N. C.; Prof. J. R. Thomas, national advisor of Virginia State College, Petersburg, Va., and Prof George W. Owens, founder of the N. F. A., also of Virginia State College were among the distinguished visitors and speakers at the convention.

## CITES $40,000,000 AS WORTH JOBS TO THOSE WHO SPEND IT

DURHAM, N. C., April 13—(ANP)—Calling the payment by Negroes of $40,000,000 as premiums to nine white insurance companies without getting any job in return. "taxation without representation," G. W. Cox, chairman of the National Negro Insurance Week committee, has asked the race to support its companies and thereby provide jobs in keeping with the amount of money paid in.

National Negro Insurance Week will be celebrated from Monday, May 8, to Saturday, May 13. During that time 5,000 industrial agents are being asked to produce a minimum of $5 each of industrial premiums, and 2000 ordinary agents to produce at least $5,000 each in ordinary insurance.

"The payment of over 40 million to white insurance companies that grant no jobs and the payment of only $8,781,000 to nine Negro-managed companies that furnish 5,000 jobs to Negroes is only part of the picture," Mr. Cox pointed out. "The figures could be multiplied many times on both sides of the equation were more of the companies taken into consideration.

"This picture plainly shows the additional economic significance of insurance to Negroes when they share more of their insurance patronage with Negro-managed companies. Suffice it to say that taxation without represention is as unjust today as it was in the days of the struggling colonies in their effort to get from the Crimson Cross of England."

## WILBERFORCE GETS "A" RATING AFTER CAREFUL SURVEY

WILBERFORCE, O., April 13 (ANP)—Wilberforce University, the pride of Afican Methodism and reputedly the oldest institution of learning in the world, owned and operated by Americans of African descent, has been fully accredited and given an "A" rating by the North Central Association of Colleges and Secondary Schools, it was learned this week.

The Associations' rating committee, in session at the Stevens Hotel, Chicago, received the report of the examining committee, which described: "The most phenomenal three years they had known since Wilberforce University was under the administration of President D. O. Walker." Points of objections, it was said, had been reduced from 27 to 2, and they were on educational policy.

Eight years younger than the Christian Recorder, official organ of the A. M. E. Church, Wilberforce is now in its 83rd year of service. Founder and first president was Bishop Daniel Alexander Payne 1811-1893) and the present head of the board of trustees is Bishop Reverdy C. Ransome, a Wilberforce alumnus. Assisting him and President Walker in the struggle for accredition were Bishops John A. Gregg, R. R. Wright, Jr., David H. Sims and others who joined in laying claims of the school for an "A" rating before Governor Bricker and the examining boards of North Central Association.

## Chicago Baptist Institute Trains 3,500 During Year

CHICAGO, (ANP)—According to the annual report of the Chicago Baptist Institute, submitted this week by Dr. H. M. Smith, director, more than 3,500 ministers and other religious leaders attended 38 classes and training conferences during the past year, class registration in some courses being as high as 75 students.

Subjects taught included the community, business, financial, Sunday School, missionary and other phases of church work, and instructors of prominence included: Dean Shailer Matthews; Dean Charles W. Gilkey, Dr. A. G. Baker and Prof. C. T. Tolman, all of University of Chicago; W. Ellis Stewart, Supreme Liberty Life Ins. Co.; Prof. St. Clair Drake, Survey of Negro Churches in Chicago; Dr. W. F. Rice, Northern Baptist Theological Seminary; Dr. LeRoy Mitchell, E. Chicago, Ind., and Robt. Cashman, Chicago Theological Seminary.

The Institute's mid-Winter conference held in February had as its theme: "What Kind of a church Does the City Need?" Fourteen speakers addressed the students, peak attendance being 1596.

## UPA Celebrates

By Sonny Payne

The Nashville District agency force of the Union Protective Assurance Company celebrated the week of April 3rd known as "Barnes'" week in honor of their cashier-clerk whose connection with the company has been four years. With the idea suggested by the manager Mr. W. W. Butler the whole agency force got right behind the movement. For the appreciation of Miss F. E. Barnes who is very popular with the organization and in the insurance realm the most outstanding amount of new business was written and the highest per cent of collection made in the history of the Nashville district.

Miss Barnes came to the Union Protective Assurance Company soon after its office was opened here in Nashville. At that time its office space was one little room. The company has grown to the extent that its business is domiciled in the most beautiful suite of offices, modern and up-to-date.

Mr. T. B. Kittrell wrote the largest amount of new business and Miss Theartris Rucker made the highest per cent of collection as to individual efforts.

Saturday morning at the agency meeting a delicious cake was presented which was enjoyed to the delight of all.

## "Advice" On How To Get $286.33 Costs Her $143

NEW YORK, April (ANP)—Insurance advisers in Harlem are reaping a golden harvest from people who don't know the value of lapsed policies. These companies and men at their heads are in most cases wh te.

In a case brought to light in the District attorney's office she had paid $143 to two white men, Nathan Newman and Abraham Siegal, for merely informing her that her lapsed policy could be cashed.

According to her story, the two men called on her sometime ago and asked if she had any old gold for sale. Mrs. Brown said she had none and the callers then inquired if she possessed any insurance policies which had lapsed.

Informed she had lapsed policies the men are said to have told her to go to their downtown offices and present the policies for appraisal. She was told the policies could be turned into the Metropolitan Insurance company.

She said the men told her she would receive a check from the company and they would cash it, deducting a small fee for the services.

Mrs. Brown subsequently received a check for $286.33 in return for the policies. That same day the men called at her home, took the check and gave her in return a check for $143.

Deciding the fee was too high after they had left, she took her case to the district attorney's office and Newman and Siegal were arrested.

## Editor P. B. Young Is Baccalaureate Speaker for June 4

### Publisher of Journal and Guide To Address State College Graduates

It was announced here in Nashville that Mr. P. B. Young, editor of The Journal And Guide, published at Norfolk, Va., would deliver the baccalaureate address at A. and I. State College on June 4th. Mr. Young is one of the leading editors of Negro journalism in America. This publication issued under the Guide Publishing Company, comes out weekly in the metropolis of the Tide Water section.

Mr. Young is known for his fearless writings and for his brilliancy as he is regarded as having a trenchant pen. He has been prominently connected in public life, a member of the National Negro Business League and a member of the Board of Trustees of one of the biggest universities operated for Negroes in America. It is expected that his coming to the capital city of Tennessee and his appearance at A. and I. State College will be hailed with delight by those in this section who have watched with mingled pride and admiration the rapid strides that The Journal And Guide has made as a national publication.

While here he will be guest of President and Mrs. W. J. Hale in the president's residence on the campus of A. and I.

—Nashville Globe.

## LATE IDA B. WELLS TO BE HONORED IN HOUSING UNIT NAME

CHICAGO, April 20—(ANP)—Swayed by the recommendation of various civic groups and women's organizations, the Chicago Housing Authority, with Robert R. Taylor as the only colored member, this week announced that the WPA low-cost housing project to be built at 37th Street and South Parkway will be named the Ida B. Wells Homes in honor of the colored woman who devoted her life to the betterment of her race.

Born in Hollywood Springs, Miss. Miss Ida B. Wells worked her way through Rust College, later taught in the rural schools of the South, then went to Memph's where she founded and edited the Free Speech. During the fight for the Bill of Rights her fiery utterances roused the ire of certain Memphians and one night a mob destroyed her newspaper office. She fled to New York where she became affiliated with Frederick Douglass and later came to Chicago.

In 1896 Ida B. Wells married Attorney Ferdinand L. Barnett, who the following year was appointed the first Negro assistant state's attorney in Illinois, specializing in habeas corpus and extradition cases. She was active in club and civic work until her death in 1931. Their four children. all of whom survive, are Miss Ida Barnett, Mrs. Benjamin C. Duster and Cked Barnett, of Chicago and Herman K. Barnett, Los Angeles.

## 10 New Cities Get Housing Projects

WASHINGTON (C)—New low-cost housing projects for Negroes in ten cities were assured last week, according to Administrator Nathan Straus of the U. S. Housing Administration. The cities to get new projects are Atlanta, Athens, Macon and Augusta, Ga.; Laurel and McComb. Miss.; Camden, N. J., Cincinnati and El Paso. In two months tenants will begin moving into projects in Austin, Texas, Buffalo, N. Y., and Jacksonville, Fla.

## BREACH IN TENANT FARMERS UNION IS FURTHER WIDENED

MEMPHIS, April 13 (ANP)—With charges and counter-charges filling the air, the convention called last Saturday by the United Cannery, Agricultural, Packing and Allied Workers of America, CIO affiliate, was suddenly climaxed when a delegation of sharecroppers belonging to the Southern Tenant Farmers' Union walked out of the convention hall.

Heading the walkout delegation were J. R. Butler and H. L. Mitchell, president and secretary, respectively, of STFU. Those remaining in the South Fourth Street convention hall were representatives of Arkansas local unions and after an all-day session they voted to affiliate with UCAPAWA.

Stem of the trouble lies in the fact that STFU recently withdrew from the CIO, international union which it joined in 1937. Thus, STFU now becomes an independent labor organization without national affiliation, and UCAPAWA had started a campaign to keep local unions, favoring CIO, within its ranks.

At last week's convention here, both factions attended, with STFU President Butler and Secretary Mitchell standing in back of the hall. On the rostrum was UCAPAWA President Donald Henderson delivering a tirade against the STFU officials, charging they had "hoodwinked and misled" the union and urged the "end of the misrule and Hitler-like leadership of Butler and Mitchell."

Mitchell suddenly shouted: "I would like to answer those charges," to which Henderson replied "I still have the floor." I'll ask the gentlemen to retire peacefuliy from the hall." Waving his arm, Mitchell yelled: "How many more will go with me?"

Many of the delegates, a majority Negroes, rose from their seats and singing, "We shall not be moved," followed their leaders from the room. After the uproar had quieted down, Henderson said that for 10 months after STFU joined the CIO and the international union, Butler and Mitchell had made no report to UCAPAWA headquarters.

E. B. McKinney, colored had presided at an earlier session. Mitchell said that MeKinney was recently expelled from STFU membership "for sponsoring an all-Negro union dual to the STFU."

Secretary Mitchell said, after the fracas: "I had no intention of attending this convention, but some of the members sent for me as I was being viciously attacked and they wanted me to answer. Henderson threatened to have me thrown out of the hall by force if I tried to speak." President Butler's comment:

"This attmpt on the part of Henderson and his Communist clique in the UCAPAWA is furtlher proof of our wisdom in withdrawing from this group whose obvious intention from the time of our affiliation has been to rule or ruin."

The Southern Tenant Farmers' Union in past years has been outstanding in defending the rights of Negro sharecroppers, recently aided several hundred Arkansas share workers who were evicted by farm owners when they refused to accept the day-wage rate forced on them by the owners. The exodus of farm workers and the privation suffered by women and children refugees, attracted nation-wide attention and drew the attention of Federal Farm officials to the pitiable plight of the Negro sharecropper.

## "Guide Right"

TOPEKA, KANS., (C)—Attorney R. J. Reynolds, national director of the "Guide Right" movement of the Kappa Alpha Psi fraternity, announces that 100 cities will observe the 16th annual celebration beginning on April 16. The idea behind the movement is "to help Negro youth approach their future realistically." The campaign is approved by the U. S. Commisioner of Education.

# EFFORTS MADE TO FORCE COLORED MEN FROM RACE

## Campaign For City Offices Develops Many Rumors; Fight For Mayor Gets Warm

Dr. H. H. Walker in the Fourteenth Ward and Dr. Jackson Brown, druggist, in the Eleventh Ward, were the only colored candidates for councilmen up to Wednesday of this week and whether or not both of them would remain in the race to be voted on May 11th was a topic of discussion in many quarters this week, following reports of strenuous efforts to get them to withdraw.

Both Dr. Walker and Dr. Brown informed a representative of The Globe that they were in the race to stay, and would resist the overtures being made by persons interested in other candidates to get them out of the race.

Dr. Brown confirmed the rumor that he had been approached by colored men who pleaded with him to get out of the race in the interest of one of his white opponents. Efforts were made to get Dr. Brown in a conference at the city hall in order to effect a deal for his withdrawal, it was reported. Dr. Brown very vigorously spurned the overtures, it is reported, and let it be known that he did not think highly of political schemes that would cause a colored man to accept pay for himself to get out of a race, as that would be disheartening to the reputable men and women who were supporting him.

In the race for Mayor, the contest has proceeded thus far without any outstanding issue, with all of the candidates pledging the same things to the voters, and with Mayor Cummings having the advantage of actually being on the job doing many of the things he is promising.

There was a strong belief current that one of the opposition candidates would have to withdraw if either of them hoped to make any headway in his efforts of defeating Mayor Cummings. Because of the apparent better organization Mr. A. Roy Greene has gotten together and having a good supply of campaign funds, according to reports, he was being hailed as the strongest opponent of the Mayor and this fact might influence the backers of Hon. Felix Wilson to urge him to withdraw in favor of Mr. Greene.

Mr. Greene's chief support among colored citizens is said to be that of several insurance agents who are reported to be making an organized canvass for the groceryman.

The Hon. Felix Wilson has many old friends among colored citizens who have backed him in former races and continue to remain loyal to him despite any reports that Mr. Wilson's race is hopeless.

While there is considerable division among colored voters, it is generally admitted that Mayor Cummings at present has a larger share of this support than the other candidates as a result of the habit of a majority of voters to "string along with the administration in power."

The usual boasts of different political leaders that they controlled big blocks of voters were being made to candidates and were being pretty generally discounted because of the way these leaders have failed to deliver in the past. The system of getting well known men and women as political workers and sending them on a still hunt for voters and the holding of rallies in all parts of the city is the system that has been found more potent than giving lump sums of money to political bosses who have the reputation of taking the lion's share for themselves and neglecting to give the workers the pay the candidates have made available.

As the campaign comes into the home stretch it is predicted that new issues, charges and counter charges will fill the air and all forms of strategy will be resorted to by candidates and their backers in order to achieve victory on May 11.

## TYLERTOWN UNIT RE-CHARTERED

Officers and members of the Tylertown Unit of the National Federation of Colored Farmers have revived their organization, elected new officers, outlined a year's program, and have addressed themselves to the task of a greater farm organization. Twelve new members were added to the re-organized, revived and rejuvinated local organization.

The charter arrived from the national headquarters more than a month ago, and a special letter from Mr. Leon Harris, the president, was read at the monthly meeting on March 14th. A delegation was selected to go from here to the next national convention which is to be held in Jefferson City, Missouri late in the fall. A farm cooperative organization is being developed out of the Unit and every member has sent in their subscription to The Modern Farmer, the official organ of the organization.

Mr. C. L. Bates, one of the leading members, was authorized to send in regular communications to this monthly journal telling of the work under way and the programs as they are carried out. Tylertown Unit voted also to observe Farmers Sunday with a religious service and a program befitting with the work of the tillers of the soil.

The following is a list of the new members: Millie Moses, Sidney Gray, Lella Brumfield, W. W. Leggett, J. P. Quinn, John Rayford, Rosilean Johnson, Necy Quinn, Bearly Homes, Hattie Gatlin, Author Jefferson.

## Little Hi-De-Ho Is 5 Months Old

NEW YORK (C)—Cabell Calloway III, king of "Hi-de-Ho," said in a radio interview over WNEW Monday at 7:15 p. m., that his five-month-old daughter, Constance, can say "hi de ho." Cab said when he gets in from work in the morning his daughter is getting up and he plays with her, and they have another session in the late afternoon when he awakes.

## FANCIER HOPES TO BREED RED-WHITE BLUE CANARY

**Kalama,** Wash.—A red, white, and blue real American canary is the goal of Armistead Carter, internationally known ornithologist. He has long experimented with changes in markings and color in breeding canaries.

## Rural Self-Help At Work In South

PINE BLUFF, ARK., April 20 (ANP)—City folks are scarcely aware of the many educational processes which are at work in the rural areas. The pioneer worker among Negro farm families was the Extension agent. Beginning in 1906 when T. M. Campbell of Tuskegee was appointed the first Negro county agent, and for nearly 20 years thereafter, the Extension agents labored with increasing numbers almost alone in carrying direct education to the farm home.

Today, more than 450 of these Negro extension workers are employed and paid from federal, state and county funds. However, other agencies have recently joined the extension workers in doing this much-needed work.

Great impetus was given to rural educational work through the establishment of Rosenwald schools, which became centers of rural improvement activities and provided focal points for teachers of vocational agriculture and home economics and the Jeanes supervisors. In more recent years, the Farm Security administration and County Health officers have added to the list of Negro workers among rural people.

A few days ago, I had the privilege of seeing how extension agents actually work in their communities. An engagement took me to Pine Bluff, Ark., and upon arrival I was met by C. D. McKindra, the Negro county agent. Having a free afternoon, I accepted Mr. McKindra's invitation and went with him to attend a regular 4-H club monthly meeting at the Altheimer Colored school, which is located about 15 miles from Pine Bluff.

When we arrived at the school building, the 4-H club boys and girls were holding a joint session and Mrs. Leoda Gammon, the Home Demonstration agent, was at the moment discussing the personal appearance of the boys and girls. She commended the girls because her inspection showed no use of safety pins as a substitute for buttons, and the boys she praised because all of them showed that their hair had been combed and brushed.

Mothers, fathers and a couple of ministers were in the assembly room when we arrived, but after the 4-H club song and motto, the boys retired to another room for special instruction from Mr. McKindra, the parents went to still another room for a P. T. A. meeting, and the girls remained with Mrs. Gammon. I could not attend all three meetings at once, but I was determined to see all that I could.

Mr. McKindra used the blackboard to show the boys how to plan a sweet potato crop, and out of his experience was outlining a planting program suitable to that section of the country, which involved planting dates, methods of cultivation and an early partial harvesting to catch the market when prices are at the peak for the new crop. Then he explained how the final harvest would be stored for home use. He demonstrated how a boy, by careful follow up of the plan, could clear from $50 to $75 from an acre of this crop and have a surplus left for storage on the farm.

Following a demonstration in selecting and buying textiles suitable for making outer garments at economical prices, Mrs. Gammon gave demonstrations in "making something from materials which cost money and making something useful which may be improvised."

Among the articles which may be improvised were bedroom slippers of which the uppers were made from plaited strings, and the soles cut from discarded inner tubes. There were also dust mops made from burlap bagging and rugs made from various materials.

My next visit was to the P. T. A. meeting, and I have never witnessed a group more earnestly devoting their best thought to meeting a problem. And, believe me, they had to meet the serious emergency of extending the school term. The county provides funds for a five-months' school term, and these parents were attempting to raise sufficient funds from private sources to extend the term by two more months.

The A. M. E. minister made a strong appeal for united community sacrifice and cooperation. A white business man in the town of Altheimer had offered to provide the balance of the money necessary to pay the teachers for the additional two months, provided the colored people would raise the first $100, and one of the purposes of the meeting was to hear reports on how the campaign was progressing.

In the course of his remarks, the A. M. E. minister reminded those present that the school was already overcrowded. "Our teachers here in this school," he said, "average as many as 80 pupils each, and are frequently compelled to limit the class period to 15 minutes."

FROM THE BIBLE—

*"Be not among winebibbers; among riotous eaters of flesh: for the drunkard and the glutton shall come to poverty: and drowsiness shall clothe a man with rags"* Proverbs 23:20-21.

"O beautiful and friendly is the earth,
Giving to each and all its precious store;
Our Father made it, and He called it good,
'Tis ours to keep it so forevermore." —Selected.

## TALK FOR YOURSELF

(Reprinted from Modern Former, April, 1938)

The Negro farmer is engaged in the biggest business carried on by his racial group in America. We have three hundred and fifty million dollars invested in this business and it is high time we were doing more talking about it and letting our fellow-citizens know just how important it is.

We should tell the world that the ambitious and industrious Negro farmer is standing on his own feet, hoeing his own row, and is enjoying a standard of living many of his fellow citizens might envy. We should tell them that our vocation provides a contented way of life. We should tell them that we are not ashamed of ourselves or of our jobs, and we should hold up our heads, walk erect, feel our importance and act it.

When we meet FARMERS SUNDAY and observe the day, let there be no whining,—no complaining. Make it a day of rejoicing. Let us be glad and proud we are farmers,—engaged in such an important business,—doing our part well in promoting the civic and social as well as the economic progress of our group.

## NOT FEAR, BUT COMMONSENSE

Because the National Federation of Colored Farmers has never been a rabble-rousing or a noise-making organization, many have accused this body of united colored farmers and its leaders of being slow, backward and lifeless. A letter recently received, written by a very wise and prominent educational leader of our Group, accuses the organization of plain cowardice. Says this writer: "In spite of the fact that your organization claims to have a program for the welfare of the farmers of our Group,, a program that is worthwhile and constructive —you are doing very little for the benefit of your members and of the Race because you seem to be afraid to make any efforts to put your program over."

We wonder who or what our important friend thinks we are afraid of.. The N.F.C.F. is an independent organization, supported wholly by its members and leaders, so it cannot be afraid of any influential friend or group of friends who are helping it financially. There are no such friends. The N.F.C.F. is not affiliated with any political, fraternal, labor or business groups, so it certainly has no fear of politicians, office-holders, or leaders of labor or capital. The N.F.C.F. is not controlled by any educational institutional institution, by any society or "movement," so its activities cannot be limited by advisers, overseers or so-called leaders of the Race or Nation.

We will admit that in attempting to "put its program over," the National Federation of Colored Farmers has not followed the well-beaten paths all Negro organizations are supposed to follow. It has not made itself a nuisance by begging and whining,—neither has it destroyed itself by threatening and fighting. Farmers who have joined the N.F.C.F. and have stayed with it and in it, are the most sensible farmers of the Negro group in the nation. To be a good member of this organization, a farmer must have vision, he must be unselfish, he must be intelligent and thoughtful, he must be industrious and ambitious,—he must be willing to lead and also willing to follow. Above all, he must have faith in himself and in his Race.

These united farmers, under the banner of the N. F. C. F., are progressing,—they are becoming better farmers and better American citizens each day and year. Their common sense dictates the activities of their organization. They do not want their organization to lambast, cuss and fight all the landlords in the South because some landlords are mean and unjust,—they do not want their organization to demand special favors from governmental agencies because so many Negro share-croppers and tenant farmers are in poverty and distress,—they do not want their organization to do everything the American Farm Bureau Federation does or to say everything the Southern Tenant Farmers Union says. They want their organization to be THEIR FEDERATION.—to look after their interests and welfare,—because THEIR organization knows more about THEIR INTERESTS and do more for THEIR WELFARE than any other possibly can do.

The National Federation of Colored Farmers has been in existence seventeen years. It has been too virile to die and too smart to be destroyed. It has been intelligent enough to originate ideas and plans for the welfare of colored farmers and has not been so dumb that it has had to imitate the activities and the actions of other organizations. It has moved along, slowly but surely, in its own way,—which it has found to be a better way,—it will continue to move along. And if its critic who thinks it's afraid of something will get inside it, if he will join up and start working with it instead of staying outside and talking about it,—he will be able to do more for himself and for his racial group than he has ever been able to do.

## THE OTHER FELLOW

It doesn't pay to say too much
when you are mad enough to choke,
For the word that stings the deepest
is the word that's never spoke.
Let the other fellow wrangle till
the storm has blown away,
Then he'll do a heap of thinking
'bout the things you didn't say.
—JAMES WHITCOME RILEY

## BUTTERED PECANS

In answer to the pecan industry's crocodile tears because if had to throw its shellers out of work when the hour-wages law went into effect, the Pecan Workers' Union of San Antonio has prepared a survey showing that while the Mexicans and Negroes who did the work received only two or three dollars a week, one man whose company had a virtual monoply on the shelled pecan industry took out nearly a half million dollars in profit the last few years. His pecans were well buttered—Crop Consumers.

## AAA REPORT SHOWS PROGRESS NEGRO FARMERS HAVE PARTICIPATED

Washington, D. C.,—Accomplishments in conservation of soil fertility and protection or farm income under AAA farm programs are shown in the report of the Agricultural Adjustment Administration issued this week for the year and a half period January 1, 1937 to June 30, 1938. The report, made to Secretary of Agriculture Henry A. Wallace, is signed by H. R. Tolley, Chief of the Bureau of Agricultural Economics, who was AAA Admimstrator during the period of the report.

The summary of results of the 1937 Agricultural Conservation Program shows that the program applied to 282,629,000 acres, or 65 percent of the total cropland in the United States. The number of owner-operators, tenants and landlords who took part in the program totaled 3,743,904 and they diverted 26,362,538 acres from soil-depleting crops to crops which would restore soil fertility.

For participation in the program during 1937, the farmers received $306,744,000 for carrying out soil-building practices and $367,000,000 in soil conservation payments.

Farm cash income for the calendar year 1937, according to the report was $8,600,000,000 as compared with $7,944,000,000 in 1937 and $4,328,000,000 in 1932.

In the 9 cotton states, there are according to Census reports, 654,000 Negro farm operators and estimates are that 90 percent of these farmers have participated in the program. These farmers have voted in AAA referenda and thousands of them have received payments for conserving soil and the diversion of cotton acreage.

## THE HOSPITAL SHORTAGE

THE acute shortage of doctors, hospitals and general medical facilities in many rural areas is brought out in a bulletin on "Hospitals for Rural Communities" published by the United States Department of Agriculture. The study was made by the Bureau staff, is the author.

Nothing that well equipped rural hospitals encourage doctors to enter country practice, the author says that the shortage of doctors in most small rural communities has become a serious problem. In a number of states where most of the people live in the country, there is only one doctor for every 1,000 to 1,500 persons. On the other hand, in other states which have a large percentage of urban population, there is one doctor to as few as 500 to 700 persons. The number of doctors in rural territory has been steadily decreasing. A great many small towns that had one or two doctors a few years ago have none at present.

As in the case of the doctors, the situation as to hospital facilities likewise places the rural communities at a great disadvantage. A survey made in 1934 showed that only about 1,700 of the 3,073 counties in the United States had any general hospital. This means that 1,300 counties had no hospitals. Figuring two hospital beds per thousand population and a distance of 50 miles from hospital centers, the study showed a need for 22,000 new hospital beds for the rural areas.

The hospital need is said to be greatest in the South where more than a million persons living in eight states had less than one hospital bed for every 2,000 persons.—Rural America.

## "IT IS MY FAULT"

Few poems are more searching or stab deeper than the one printed here from the pen of Lawrence Estavan, a member of a WPA writers' project. It appeared in the July issue of Poetry: A Magazine of Verse, which issue was devoted to WPA poets.—Editor's Note.

The impact of pale charity upon
This thin dark face indicts my smooth conceit;
That men for bread are given stones to eat
Is my own fault, I am the guilty one.
For I have been afraid to annoy the great,
And to the tyrant I have bent the knee;
When I protest I spoke low and late
Ten thousand years this fault has been with me.
I lie, I cheat, I go deceiving
To keep my own place in the jealous sun;
All this for the sweet cowardice of living,—
And I am you, and I am everyone.

## FARM LEADERS IN MEET AT SPRING HILL SCHOOL

MEMPHIS, Tenn.,—(SNS)—Farm leaders of Shelby and Fayette Counties held a Farmers' Conference at the Spring Hill County School last Friday morning, one of the first to be held at this growing institution. "Farm Life" was the general theme of the session which was held for the benefit of farm residents in the Spring Hill vicinity.

Prof. A. R. Greene, youthful principal of the school, under whose leadership the institution is showing remarkable progress, served as master of ceremonies. The program included selected musical numbers rendered by members of the department of music and a tasty menu of roast chicken prepared at the school and served in the cafeteria.

Farm conferences and leaders were R. H. Brown, Assistant County Agent of Shelby County. W. A. Sloan, Assistant County Agent of Fayette County; M. Rauscher, Supervisor of Shelby County Farm Program; Mr. Jenkins, Shelby County Supervisor; Prof. Lucky Sharpe, principal of Douglass Junior High School; and Rev. Burke, white minister. The group of patrons of Spring Hill was led by L. A. Cherry. All evinced keen interest in the program.

## TOTALITARIAN TALES

One of the most ghastly stories to cross the ocean in months is the tale of several scores of small children in a remote Soviet town who were arrested, jailed with common thieves, browbeaten, third degreed and forced to "confess" falsely that they were "counter-revolutionaries, Fascists and terrorists.'"

Another shocking tale is that from Austria, where the Nazi apparatus is rapidly absorbing $100,000,000 of property belonging to the Catholic church, turning peaceful monasteries into military barracks, closing religious schools, "taking over" the church's art treasures.

We link these two stories because we think there is a natural connection between them. It is this: Once it becomes socially acceptable to take freedom and its tendant rights and privileges a way from any one group, it becomes easy to take them away from any other group.—New York Post.

## SOUND ADVICE

DON'T be what you ain't
Jes be what you is
If you is not what you am
Then you am not what you is.
If you're just a little tadpole
Don't try to be a frog,
If you're just the tail
Don't try to wag the dog.
You can always pass the plate
If you can't exhort and preach.
If you're just a little pebble
Don't try to be the beach.
Don't be what you ain't
Jes be what you is.

Sink not beneath imaginary sorrow; call to your aid your courage and your wisdom.—Johnson.

## COTTON SURPLUS

A $75,000,000 export subsidy program to move the government's huge surplus cotton stores was reported under AAA study after the President turned thumbs down on the Smith cotton bill to subsidize directly domestic cotton growers, says a report in the Washington Post. The President told reporters the administration is trying to meet the acute surplus cotton situation without bankrupting the Treasury, and said the Treasury has opposed the Smith bill because it would cost too much money. Secretary Wallace and a group of regional directors of the AAA conferred at the White House on what the President called a serious situation presented by the large cotton carryover. They are reported to have discussed a plan under which the government would acquire title to its 11,000,000-bale stock of loan cotton and foster sales through licensed exporters and dealers abroad and at home. The President said the loan cotton would eventually be sold and not dumped or burned.

## BIGOTRY

Emporia Gazette: Next week a biography will appear telling the story of Albert Einstein, whose scientific achievements have been well described as the "greatest synthetic achievement of human intellect." Ten years ago Einstein was honored throughout Germany as its first citizen when he celebrated his 50th anniversary in Berlin. It was a national event. The German chancellor sent him a personal greeting, newspapers eulogized him, gifts from sailboats to cans of tobacco were showered upon him. The city of Berlin voted him a summer home. Messages of congratulation filled four washbaskets.

Today, Einstein is celebrating his 60th birthday anniversary a refugee from his native land, an exile from the Germany that only a few years ago could not honor him enough.

# COLORED MAN'S DISCOVERY AMAZES METALLURGISTS IN CLEVELAND, OHIO

CLEVELAND, Apr. 6 (By Clarence L. Simmons for ANP)—A keen-eyed, middle aged bachelor is being hailed here by Clevelanders as a "second George Washington Carver," by his discovery of magic flux designed to clean metal, brasses and steel. It is considered by Cleveland industrialists who have used it in their foundries as superior to any product of its kind on the American market.

The life story of unlettered Henry Thomas, who claims 40 but who might be any age between 30 and 60, and was born in Chatingham Parish, La., a little town a few miles from New Orleans, reads like fiction. He was the only child of Mary Jones and Henry Thomas, whose proudest boast was that they were the descendants of African chiefs. All of Henry's people had been craftsmen.

It was a white plantation-industrialist who gave the inventor his chance and then denounced him when he demanded a share of the royalties from a formula which hardened wheel tires for locomotives and stopped the "flats" each time the brakes were applied hastily. He left the employ of his white benefactor who had held him as a sort of "glorified flunky" since the age of nine when his parents had died.

He came to Cleveland and found employment at the Cleveland Hardware company, where he labored until 1919. While there, Thomas perfected his flux for bearing metals. So eager was he to patent and manufacture it on a large scale, he lived four years on a light diet and saved more than three-fourths of his $27.50 weekly wage. When he had saved approximately $500, he quit his job and started making fluxes . . . having at the time secured patents on fluxes for brass, bronze, aluminum and stainless steel.

A young man of 34 from Cincinnati, and well-known for promotional ability, is to be credited with Thomas' decision to again make his formula available to the Negro rather than accept offers of between $50,000 and $100,000 for his patent rights, after the first attempt to form a corporation had failed. The new corporation is known as the "Flux Metal Purifier, Inc.," 2159 Clarkwood road, and includes young aggressive, well educated Negro Clevelanders, many of whom are contributing wide experience in business to the development of the firm.

Alfred Green, known in his native Cincinnati as "Al," is the man behind the promotional program for the firm as well as being one of the larger stockholders. His work will call for the promotion of not only the fluxes, but other processes and by-products which include materials for tooth-powder, simonizing, explosives, sheels, match-tips and boxes, a metal cleaner, rubber mats, washing powder and materials for making fancy walks.

Two of the many foundries of Cleveland that have used the flux and found it to be satisfactory in every respect are the National bronze and Aluminum Co., which is using 500 pounds, and the City Brass Foundry Co., using 1,000 pounds. Other heads of large concerns, when approached with the flux by the inventor, laughed in his face as did his own people when he approached them for capital to finance his invention.

# SWEEPSTAKES NETS WOMAN $141,000 BUT UNCLE SAM'S CUT IS $57,588

PHILADELPHIA, Apr. 6 (ANP)—Several months ago, when the ticket salesman visited her home, Mrs. Pearl Mason, on relief for the past six years, took $2.50 from her modest relief check and bought a ticket in the Grand National Sweepstakes, drawing "Workman," the horse which won the big race and deposited $141,000 in the lap of jubilant Mrs Mason.

Mrs. Mason lives with her husband, Benjamin, former garage attendant, who has been out of work for seven years, and their two children. Because her family has been on relief, Mrs. Mason faces certain difficulties before being able to fully enjoy her winnings and she has engaged Atty. Raymond P. Alexander to attend to legal details.

The first deduction from her $141,000 takedown will be the federal tax, said to amount to $57,588. She also faces the possibility of having to repay to local Relief officials the $4,000 her family has received as aid during the past six years. In addition, she may have to pay the cost of treatment received last year at Philadelphia General hospital, and, of course, counsel fees. However, after all deductions have been made, the happy woman can look forward to enjoying a neat bank roll, probably in excess of $75,000.

So great was the jam of the curious around the Mason home after news was announced of their good fortune that a special detail of 30 police was detailed to maintain order and keep the crowd moving. A humorous touch was given the incident when husband Mason—out of work for seven years—and asked what he would do now that the family was rich, reportedly replied, "I'll just take it easy for a while."

Another colored Quaker City resident pulling down "big money" was Samuel Alexander, Jr., riding academy proprietor and cousin of Mrs. Mason's lawyer, Raymond Pace Alexander. Samuel Alexander won $50,000 on "Kilstar," who ran third. A third winner, Henderson Reid, car washer, had to be satisfied with $2,650 on "St. George II," bus solaced himself with the thought, "That's better than nothing."

---

A student entered a hygiene lecture room when the class was half over. The professor did not recognize him, and thinking he was in the wrong room questioned him.

"Hygiene?"

"Howdy, professor," retorted the delinquent one

# DISCRIMINATION IN TVA CHARGED

(Special Dispatch)

Washington, April 6—Discrimination against Negroes in connection with the employment of trained personnel at the Tennessee Valley Authority Dams was charged in a report made to Congress this week by the Republican minority of the Joint Committee to Investigate the T. V. A.

The report was signed by Senator James J. Davis of Pennsylvania, and Representatives Thomas A. Jenkins of Ohio and Charles A. Wolverton of New Jersey, all Republicans. Their charges were confirmed by the majority of the investigating committee.

The Committee reported it had found that contention made before the committee some months ago by Charles H. Houston, counsel for the National Association for the Advancement of Colored People, had been supported adequately by evidence.

In addition to the findings of the Republican Minority on the Committee in regard to treatment of Negroes at T. V. A., Dr. Leonard D. White, former Republican member of the Civil Service Committee and now associate professor of political science at the University of Chicago, made a report to the Committee on this subject.

"The stated policy of no discrimination against the employment of Negroes," asserted Dr. White, "should remain unchanged; further effort should be made by the Personnel Department to secure the appointment of Negroes in skilled labor positions and whenever possible on annual appointments; and the present policy of providing similar or equivalent housing and recreational facilities on construction jobs should be carefully followed out."

The text of the part of the Republican Minority Report dealing with the Negroes at T. V. A. in full follows:

"The National Association for the Advancement of Colored People through its attorney, Charles H. Houston, presented five basic grievances which that association has against the TVA's treatment of colored people. Those grievances are (1) that TVA has no integrated program for the Negro; (2) that TVA regards the Negro as a commodity of labor; (3) that TVA has introduced a new pattern of segregation; (4) that Negroes have been abused in the construction work at Chickamauga Dam; and (5) that TVA policies have closed the doors of opportunity to Negroes in whatever benefits TVA may bring to the valley.

"This testimony is adequately supported in this record. Dr. A. E. Morgan (former chairman) has made the statement that TVA employs Negroes in relation to their population in the area. The fact, however, is that in the few instances where Negroes are employed by TVA in construction work, it is not in proportion to the Negro population. At Hiwassee Dam there are only five Negroes in the employ of the TVA in the construction work and those are employed as hospital oderlies. On the other hand at Chickamauga Dam, 33 per cent of the workers are Negroes because there is an abundant supply of colored labor in Chattanooga. The Negroes are treated like a commodity—no construction camp is prepared for them at that dam.

"Negroes are employed in construction work and none are found in the administration or managing offices. There is not even a Negro file clerk or messenger and only a few Negro janitors and no Negro secretaries. The only Negro in the entire Knoxville force is a supervisor of Negro training. Except on the construction of the colored village at Pickwick Dam, no Negro electricians were ever employed by TVA.

"A startling disclosure is the fact that Mr. Francis Steele applied for a job as assistant engineering draftsman in the department of operations at Chattanooga and he was accepted. His application had been sent in by mail but when Mr. Steele left Harvard, where he was studying and appeared at the Chattanooga engineering office, it was discovered that he was of the colored race. Though TVA stated to him that he could have the position for which he had applied and been accepted, he was told that, because all of the other workers in the Chattanooga office were of the Caucasian race, it would be necessary for them to segregate him from his office associates and that a desk was being prepared for him so segregated. The conditions of employment were so presented to him that he felt he could not take the position.

"TVA has completely barred Negroes from apprenticeship training for the building crafts, for the machinists, for electrical workers and for administration. Negroes have been entirely excluded from the housing project at Norris even though one-quarter of the population there has never had any connection with TVA. Negroes have been excluded from the TVA recreational centers at Norris. The Tennessee Segregation Statute does not apply to property owned by the United States government.

The Majority Report of the Investigating Committee had this to say regarding employment of Negroes at TVA.:

"Negroes make up 10 per cent of the population of the valley area. About 11 per cent of the Tennessee Valley Authority employees are Negroes, but they receive only 7 per cent of the payroll. On June 30, 1938, of the 245 Negroes on annual pay, only 15 received more than $1,260 salary. Only one—the head of the Negro training division—received a salary of more than $2,000. Since whitecollar positions are filled from all over the country, it should not be hard to secure well-qualified Negroes for some of the better-paying jobs."

# NEGRO GROCERS TO AID IN DISTRIBUTION OF SURPLUS AGRICULTURAL PRODUCTS

Washington, Secretary of Agriculture Henry A. Wallace this week announced a plan to distribute—through regular trade channels—additional surplus commodities to WPA workers and others in need.

The plans provide for insurance of food stamps to needy persons receiving or certified for public aid. The stamps would be redeemable by the Government and acceptable in regular retail food stores for designated surplus commodities. They would be used to provide low-income families with food purchasing power in addition to their usual food purchases.

According to present plans, the experiment would be tried in a few representative cities of varing size, from 50,000 up, in widely separated areas.

The surplus food products distributed under the experimental plan would move from the producer to the consumer in the regular wholesale and retail trade channels.

There are three variations of the experimental plan, all of which are based on the same fundamental principles. Each is expected to be given a trial in one or more cities. The chief difference is in the method of getting the stamps into the hands of eligible families. According to present plans the stamps for purchasing surplus products would be blue.

One variation of the plan provides for issuing the blue stamps with orange stamps in the ratio of one blue stamp with two orange stamps. The orange stamps could be exchanged for any food, whether surplus or not. Eligible persons who made application would receive orange stamps, dollar-for dollar, in lieu of a portion of their WPA wage or direct relief payment. They would be given the blue stamps. The purpose of issuing the orange stamps with the blue stamps would be to make sure that the blue stamps were not used to replace customary food purchases.

A second variation of the plan also provides for issuing orange stamps and blue stamps together. But, eligible persons would purchase the orange stamps for cash.

A third variation of the plan provides for issuing blue stamps only. The operation of this method would be studied to determine whether the use of orange stamps was necessary to prevent surplus purchases from replacing regular food purchases.

For the two variations of the plan providing for orange stamps, the stamps would also contain half as many blue stamps as orange stamps. The value of each blue stamp and each orange stamp would be 25 cents.

In order to guard against reduction in present cash expenditures for food, heads of families who elect to purchase orange stamps will be required to purchase at least one dollar's worth of stamps per week per person in the family. Under this system, families receiving stamps would be spending at least $1 per person per week for food and, through use of the blue stamps distributed with the orange stamps, would be getting at least an additional 50 cents worth of surplus commodities for each person.

Department of Agriculture officials said they planned to make an especial effort to acquaint grocery stores owned or operated by Negroes with details of the plan so they would be enabled to participate fully in the program.

## SENATORS SEEK TO AID TENANTS

**Josh Lee's Proposal Would Convert Landless Workers into Farm Owners; Shipstead Fights for Mortgage Relief**

Converting landless tenants into self-supporting farm owners is the ambitious project proposed this week by 52 Senators— more than enough to pass it through their side of Congress.

Their signatures were on legislation introduced by Senator Josh Lee (Dem. Okla.), ealling for government insurance of farm purehases in much the same manner as Uncle Sam now insures home mortgages under the Federal Housing Administration.

The bill authorizes an appropriation of $1,000,000,000 and provides that loans shall be made to tenants for periods up to 40 years, at 3 per cent interest. The Federal government would assume 80 per cent of the risk. Tenants who lacked funds for a down payment of 10 per cent could overcome that obstacle by giving liens on a part of their erops.

**Present Program Deficient**

The Lee bill is proposed as a substitute for the present farm tenancy program, under which the government is spending $25,000,000 a year to purchase farms. The farms are then resold to seleeted tenants.

"This has reached only a few thousand tenants each year," Lee said. "It is just a drop in the bucket, but it has demonstrated that a tenancy program will work."

Meanwhile, Senator Henrik Shipstead, Minnesota Farmer-Laborite, eontinued to press for action on his bill to prevent debt-burdened farm owners from being converted into tenants.

The Shipstead measure provides that debtors who are unable to meet their mortgage payments to Federal lending agencies may obtain a judicial reappraisal of the value of the property and secure a new loan at the lower figure.

**Deficiency Judgments Banned**

Deficiency judgments taken by these agencies are cancelled and this practiee is forbidden in the future.

"Many are laboring under the misapprehension that the farm mortgage problem has been solved," declared the tall Minnesotan. "Since 1934 no less than 60,000 farm mortgages have been foreclosed by Federal lending agencies alone. Not only have these farmers been deprived of their land, but a defieiency judgment has been levied against them which pauperizes them for the rest of their lives."

Shipstead pointed out that an investment of $220,000,000 is involved in the 60,000 farms foreelosed. More than $132,000,000 in farm lands, he said, are now held by Federal lending ageneies.

If his bill gets through, Shipstead emphasized, farmers who lost their land may reclaim it at its real value and Uncle Sam will assist them in financing the undertaking.

### TALE AND TAIL

"NOW, boys," said the sweet school teacher, "the word novelette means 'a short tale.' You may now write a sentence containing the word."

A few minutes later she picked up Johnny Baer's effort, and read aloud: "Yesterday I saw a fox terrier running down our street with a tin can tied to his novelette."

## LOW FARM INTEREST

The farmer is paying a lower average interest rate on his farm mortgage today than at any time on record, and an average rate lower than the long-term interest charge paid by any major industrial group, except the railroads and public utilities. Gov. F. F. Hill of the Farm Credit Administration says the total farm mortgage interest bill has dropped steadily during the past ten years, from 568 million dollars in 1928 to 372 million in 1937 and approximately 365 million last year. "The annual interest bill of 2,250,000-odd farmers who have mortgages on their places now averages about $160 per mortgaged farm," Mr. Hill said. "The number ot dollars the farmer has to pay is not only smaller than for a long, long time, but also the interest bill takes a smaller part of his income." The average interest rate on all farm mortgages dropped from approximately 6 per cent in 1929 to 5.25 per cent in 1937 and available data indicate a further decline during 1938, according to Hill, who said this was the lowest level on reeord. "Getting interest rates for agriculture as low as those available to other industrial groups has been one of the major objeetives of the Farm Credit Administration, and that objective has been realized," Governor Hill said. "The contract rate of 4 per cent on federal land bank loans is the lowest mortgage rate available to any class of individual borrowers in this country; and the competitive effect of this rate has helped to reduce the mortgage interest bill of all farmers irrespective of the source from which they borrow."

## YOUNG THEOLOGIAN IS OUSTED; SPOKE AGAINST "JIM CROW"

SOUTH BEND, IND., April 13 (ANP)—Because of his boldness in speaking against the alleged Jim Crow practices at the Emmanuel Missionary College in Berrien Springs, Mich., John Green, young theological student who has conducted services on several occasions in this city in the Berean S. D. A. church, was suspended from that college last week.

Unusual seerecy seems to surround the incident, but the story gathered is that during the recent spring vacation. Green visited Chicago. While there one of the officials of the Shiloh S. D. A. church asked him to tell the young people in their missionary meeting something of the raeial problems the sixteen Negro young people are facing at E. M. C. On that occasion Green stated that E. M. C. was no place for Negro youth because of the segregation practiced in the college dining hall.

A day or two later it is reported that the Rev. Thomas H. Allison, pastor of the Shiloh S. D. A. church of Chicago, made a trip to E. M. C. to confer with President H. J. Klooster, white. Green's dismissal immediately followed the conference.

Green is reputed to have left the campus for Chicago where he is supposed to seek reinstatement through the intercession of Rev. Allison.

## AAA BENEFIT PAYMENTS

The Agricultural Adjustment Administration reports that expenditures, including benefit payment to farmers, totaled $354,765,757 during the first eight months of the fiscal year. Included in the crop control subsidies were $119,662,714 in eotton adjustment payments on the 1937 crop, $29,503,672 in payments to sugar producers for cooperating with the 1937 produetion program and $154,834,192 in soil conservation payments. (A. P.)

## RURAL NEEDS EMPHASIZED AT GAMMON

Rural Emphasis Week observance began at Gammon Theological Seminary.

Four speakers appeared on Monday, before appreciative groups. They included: Dr. Paul Vogt, white; President L. M. McCoy, of Rust College; Dr. H. E. Nash, Atlanta physician, and J. H. B. Evans of the Farm Security Administration.

Dr. Vogt said that the rurals today are demanding a type of minister who will go into the sections. live there and teach the people to live efficiently and happily by example. He said the rural preacher must teach his flock of government serviees, land problems and how to face the general problems of education, economics, health, public relations etc.

President McCoy told of the work of Rust College in making Mississippians appreciate farm life and to live happily and prosperously.

Dr. Nash showed a health picture and lectured on tubereulosis.

## CONTROL OF WEEDS

"Good news for western grain farmers is the announcement that two major grainfield weed pests, wild mustard and radish, may be almost completely eontrolled by spray-in infested fields with a solution of dilute sulfuric acid, using a specially designed machine to apply the spray," says the Farm Journal (April). "The limiting factor, until the present machine was developed, has been the corrosive effect of sulfuric acid on equipment. As high as 95 per cent kill of weeds has been secured with this method in California. Some western farmers are converting their spray rigs to meet specifications in a recent bulletin written by Ball and French, University of California. Cost of material and application runs about $3 an acre."

## N. C. SOIL CONSERVATION

North Carolina has approximately 31,000,000 acres of land. Of this area, 3,433,000 acres are included in six soil conservation districts organized in the past two years, and another 3,253,760-acre area is in the process of being organized into three additional districts. This statistically shows how farmers of the state have been quick to take advantage of the offer of the U. S. Soil Conservation Service to provide technical assistance, and some labor and materials, for the purpose of erosion control, water conservation and land utilization. The Soil Conservation Service originally set up demonstration projects, eight of which, comprising 2,933 cooperating farmers, are now being operated. Since the 1937 Soil Conservation Districts Act of the Legislature, 319 farmers in the six organized districts have signed five-year cooperative agreements to follow approved practices on 33,700 acres. (Raleigh News and Observer, March 13.)

## COLORED BOXERS TAKE FOUR OUT OF 16 GOLDEN GLOVES CROWNS

**Six Other "Brown Bombers" Get Victories in Inter-City Bouts; Chicago Triumphs Over New York**

CHICAGO, Apr. 6 (ANP)—Four of the eight national Golden Gloves champions are Negroes. They won their titles in the 12th annual intercity matches between Chicago and New York at the Chicago stadium before 20,000 spectators, Wednesday night while six others were whipping their opponents as alternates Altogether, colored amateurs won exactly 10 of the 16 bouts that saw Chicago take the intereity ehampionship, 9 to 7. All bouts were scheduled for three rounds.

The four champions and their victims were:

Buddy Moore, New York, heavyweight, beat Tony Novak (white), Chicago;

Jimmy Reeves, Chicago, light heavyweight, beat Henry Jones, New York;

John Pleasant, Chicago, light-heavyweight, beat John Noce (white), New York;

Ray Robinson, New York, feather weight, beat Tony Ancona (white), Chicago;

Winners among the alternates included:

Willie Moon, Chicago, flyweight, beat Basil Jones, New York;

Homer Williams, Chicago, featherweight, beat Lou Valentine, New York;

Willie Smith, New York, lightweight, knocked out Roy Lewis (White) Chicago, second round;

Vernell Williams, Chicago, welterweight, beat Tami Mauriello (white), New York;

Warren Jones, New York, middleweight, beat Shelton Bell, Chicago;

Altus Allen Chicago, heavyweight, beat Enzo Avondogio (white), New York.

It was Allen's victory that gave Chicago the intercity title, since it was conceded that Moore would whip Novak. Allen, regarded as the most promising boxer developed here in several years, is a light-heavyweight. He was eliminated on a close decision in the recent Tournament of Champions, but so impressed were coaches that he was invited to join the squad and got the alternate heavyweight post although weighing only 172 pounds.

His opponent, a 190 pound Italian who stood four inches taller, was no match for the speed and accuracy of the 18 year old Chicagoan. Allen jabbed him at will with a rapier left, sent him to the canvass for a nine count with a right cross in the first round, then duplicated the performance as the second ended. He had his foe nearly out on his feet at the final bell.

An unexpected loser was Milton Jones, tall but sensational St. Louis youngster who had been fighting only seven months yet in that time had won the Chicago Golden Gloves welterweight diadem. He drew Corky Dulgarian, white, a squat New Yorker. Jones was far ahead on points and had staggered Dulgarian with right hand punches when in the second round the New Yorker suddenly unleashes a terrific right that landed on Milton's chin. The lad went down pulled himself up at nine, but was too groggy to protect himself. The referee stopped the bout with Jones hanging on th ropes.

Altogether, 15 of the 32 fighters were colored. That only one of them lost to a white opponent shows the domination of Negroes as amateurs as well as professional boxers.

## When Poisons Slow KIDNEYS and Irritate Bladder

**Flush Them Out For 35 Cents**

Go to your druggist today and get this safe, swift and harmless diuretic and stimulant—ask for Gold Medal Haarlem Oil Capsules and start at once to flush kidneys of waste matter saturated with acids and poisons.

That's a quick and effective way to help bring about more healthy kidney activity and relieve that bladder irritation with its scanty passage with smarting and burning as well as restless nights.

Remember the kidneys often need flushing as well as the bowels, and some symptoms of kidney weakness may be: getting up often during the night—puffy eyes—backache—shifting pains.

But be sure and get GOLD MEDAL Haarlem Oil Capsules—the original and genuine—right from Haarlem in Holland—the price is small (35 cents), the good results will fulfill your expectations.

## DIXIE DAILY ASKS NORTHERN WHITES TO COME ON DOWN

**Paper Suggests Need of "Yankee Blood" to Improve South's White Population**

CHARLESTON, S. C., April 13 (ANP)—Negroes were urged to leave the South and Northern whites were asked to migrate to Dixie in an editorial published last week in the News and Courier, leading daily paper of this city.

"The South needs white people," said the editorial. "Not only does it need them to work, to develop 'these abundant resources' with efficiency; it needs new blood. The 'homogeneity" of the Southern white masses is an affliction, not a thing to boast. The News and Courier wishes that millions of white families might come into the South, and it would like to see their amalgamation with the white Southerners by intermarriage. Unpopular as the saying might be, it will be resented in some quarters, we dare say that the South needs a large infusion of new blood."

However, this attitude is directly opposite to that taken by leading economists and sociologists who contend the South holds little interest for talented Northerners and that meanwhile, because of low wages and smaller opportunities, the "best brains" of both races constantly migrate to the large urban centers of the East and the North.

## ALPHA PHI ALPHA BEGIN REGIONAL MEET IN OHIO

COLUMBUS, O, April 13—(ANP)—Plans for the Alpha Phi Alpha fraternity regional convention to be held April 14-16 at Shiloh Baptist Church, are rapidly nearing completion, according to Louis Schuster.

Delegates and visitors will not lack for entertainment, as every moment will be taken up with business and social affairs.

Every effort is being put forth to make this the greatest regional convention in the history of the fraternity. The convention committee is preparing for the delegates and members from 35 chapters, composing of the Mid-Western area, including the states of Michigan, Illinois, Ohio, Minnesota, Pennsylvania, Kansas, West Virginia, Iowa, Wisconsin, Missouri, Nebraska and Indiana.

GREAT SCIENTIFIC DISCOVERY

LONDON TIMES FINDS TO ITS AMAZEMENT THAT IF PEOPLE DON'T EAT ENOUGH THEIR HEALTH DECLINES

FROM COOPERATIVE CONSUMER

The following gem of pungent satire was writtten for Reynolds News, London, by a staff member who uses the pen name of "Yaffle." Haven't you seen stuff printed on food and health in your home-town paper just as ponderous and foolish as the excerpts here from The London Times? We have in ours.—Editor's Note.

Turn off the wireless and stop cracking nuts while I tell you of the latest epoch-making scientific discovery.

"The Times" (London) has discovered that if people don't eat enough, their health declines. In a special article headed "More Food From the Farmer. The Demand for Nutrition," it says:—"Scientific and medical opinion is now convinced that an adequate intake of high-class proteins, mineral salts and vitamins is essential for the resistance of disease and the maintenance of sound conditions of health."

This startling discovery that food is necessary to health will have the most revolutionizing effects on modern scientific and economic thought. There has been nothing like it since Professor Schweinpelz discovered that fishmongers cannot breathe under water.

Note, for instance, the word "intake." For many years scientists have known that the common person has a hole in the front part of its head. But they had always assumed that this was merely an outlet for noises, such as the love-call of the male in the mating season, or for the correction of football referees. They never thought it was an intake as well as an outlet.

I gather that one day a young biologist, noted for the boldness of his speculations, said to his colleagues: "I say, you know, that hole in a worker's face? Well, I believe he eats with it!"

He was laughed at, of course, and the joke spread throughout the Royal Society and the School of Economics. But after further research he proved his point with a snapshot of a cotton operative eating bread and cheese.

This created a stir in scientific circles. The idea that workers needed food, though often mentioned in literature, had never been taken seriously by experts.

But now all doubt has been dispelled. They have been making experiments. "Evidence of a startling character," says the "Times," "is available....The provision of additional milk to 10,000 school children in Scotland resulted in....increases in height and weight.....it has also been found that where....higher rents caused decreased expenditure on food, family health has suffered."

This evidence was so startling that two Ministry of Health officials are reported to have died of heart failure.

There have been other experiments. I am told that at one place two blast furnace men were put into cages under scientific supervision. One was fed on steak and the other on water. At the end of three weeks a doctor tested their reactions to a punch on the nose, and the one that had been fed on steak displayed unmistakable signs of superior vitality.

This revolutionary theory that workers can't live without food has thrown many leading politicians and economists into a state the jitters.

of consternation bordering upon

For the economic system was not designed to allow for workers eating. A wage as you know, is carefully estimated so as just to enable the workers to keep the landlords, traffic combines, and insurance companies going. No one thought it was necessary to leave any thing over for food. Rough calculations show that the sum left over per week from the average industrial wage will barely meet the cost of a grasshopper's lunch.

That is why any increase in the food supply is always destroyed. If anyone suggested putting it into the people, some politicians would indignantly rebuke him on the grounds that the free and independent British public are neither dustbins nor incinerators.

You may wonder, therefore, how the "Times" ever came to admit the principle that people ought to eat. One would have thought that any sound economist, faced with the alternatives of giving the people food or letting them die off, would have chosen the latter rather than unbalance the Budget.

The reason, I think, is another great discovery mentioned in the same article. The "Times" says that the policy of restricton as a means of improving trade is now regarded less favourably. "It is being realized that there is much more prospect of solutions along the lines of increased consumption. Improved nutrition would tend towards the solution of agricultural difficulties. The science of nutrition has opened up new vistas—of expanding, rather than contracting, markets."

In other words, the experts have discovered that if the people ate more food the farmers might sell more.

# REGIONAL MEETING OF EDUCATORS HELD IN FRANKFORT, KY.

FRANKFORT, KY., April 6 (ANP)—Having as its theme "Present Day Problems of Negro Youth," the Fourth Region, American Teachers' Association held its third annual meeting Saturday, April 1, at Kentucky State College, the session being arranged and presided over by Regional President Lucy Harth Smith, principal B. T. Washington High school, Lexington.

Dean A. J. Heartwell and J. W. Roberts were in charge of registration and Dr. Rufus B. Atwood, president of Kentucky College arranged the entertainment program for delegates and visitors. A special panel discussion was held in the afternoon, speakers including Dean David A. Lane, Louisville Municipal College; A. S. Wilson, principal Central High school, Louisville; Mrs. Theda Van Lowe, principal Douglass school, Lexington; H. A. Perry, principal Douglass school, Kokomo, Ind.; J. W. Scott, principal Sherman school, Cincinnati; Miss Viola Johnson, guidance teacher, Dunbar school Lexington and D. H. Bradford, head department of history and government, Kentucky State.

## REPORT BIG GAIN IN FARM USE OF CO-OP FACILITIES NOW

A marked increase in the number of farms making cooperative purchases is reported by a special census survey for 1938. This study shows an increase of 146 per cent since 1930 in the number of farms using cooperative purchasing facilities.

While 69 per cent of the farms in the U. S. Made cooperative purchases in 1930, the proportion rose to 17:0 per cent in 1938. Though the number of farms owners using purchasing co-ops more than doubled over this eight-year period, and even great gainer was recorded for the tenant-users whose number more than tripled.

It is futher shown that 15.1 per cent of all farms in the U. S. made sales through co-ops in 1918 —an increase of 34 per cent over 1930. Here, also, the major increase was scored by the farm tenants.

A special musical program was presented by Kentucky State College choir. Others taking part in various phases of the session's program included: Miss Mary L. Williams, president W. Va. State Teacher' Ass'n.; H. C. Russell, assistant State director, Kentucky NYA.; J. C. Evans, W. Va., State College; Miss Georgia Beasley and DeHart Hubbard, Cincinnati and W. W. Saunders, executive secretary American Teachers' Association.

## BURY MOTHER AS SHE ASKED IN SILVER TRIMMED COFFIN

Pana, Ill.,—(Special)—Complying with a request made by their mother more than fifty years ago, the three sons and the daughter today buried their mother, Mrs. Sophia Herebord, 83 years old, in a solid copper coffin with silver trimmings. Mrs. Herebord died last Wednesday. Ten years ago she showed her sons where she had buried $30,000 in silver and gold coins in sealed tin cans. These were dug up and the money deposited in a bank, which closed its doors in February, 1930.

## A PRAYER

By John Drinkwater

GRANT us the will to fashion as we feel.
Grant us the strength to labor as we know;
Grant us the purpose, ribbed and edged with steel,
To strike the blow.

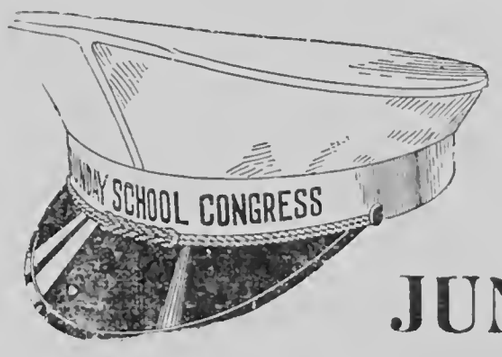
Knowledge we ask not—knowledge Thou hast lent;
But, Lord, the will—there lies our bitter need.
Give us to build above the deep intent
The deed, the deed!

# 14 STUDENTS FROM AFRICA TO STUDY AT LINCOLN UNIV.

OXFORD, Pa., Apr. 6 (ANP)—From the slave coast and Gold coast of western Africa, from which many of their forbears were sold into slavery in America a few centuries ago, 14 native African boys are now numbered among the 340 students of Lincoln university in Chester county, near here. Twelve have entered this year and two came a year ago.

Eleven of the group came from Nigeria, on the slave coast, near the mouth of the Niger river, and three from the town of Accra, capital of the Gold coast. They are mostly members of one of tribe and came here largely through the influence of an earlier Lincoln graduate who returned to work among the tribesmen.

Religious Forces of the Nation Will Gather IN Indianapolis, Indiana JUNE 7-11, 1939



The 39th Annual Session
OF THE
SUNDAY SCHOOL CONGRESS

invites you to meet with them in a five day Summer School of Methods where you can demonstrate what you have achieved, illustrate what you can do, help in the Front Line Sunday School building, contribute to the advancement of those who do not know and lend your influence, your knowledge, your experience and your training to every phase of Denominational work, as there will be representatives there from the schools who will be eager to listen, learn and imbibe these teachings. The following are some of the departments in this great School of Methods. Come on to Indianapolis, Indiana and see for yourself what you can do with the material you have to work with in your Sunday school.

The Metoka and Galeda Department
The Advanced Teachers Department
The Intermediate Department
The Primary Department
The Music Department
The Superintendents Department
The Missionary Department
The Junior Department
The B. Y. P. U. Department
The Cradle Roll Department
The Home Department
The Ministerial Department
The Daily Vacation Bible School Department
The Bible Study Conference Department

523 Second Avenue, North Nashville, Tennessee

RIDE THE RAILROADS AND TRAVEL BY TRAIN TO INDIANAPOLIS, INDIANA

# BELIEVES DR. CARVER'S DISCOVERIES COULD BRING PROPERTY TO SOUTH

## Sees Key to Unlock Dixie's Economic Doors Hidden in Scientific Laboratory

By James C. Dickerson
In Chicago Defender

Ernie Pyle, special writer for the Press-Scimitar of Memphis, Tenn., released an article from Tuskegee Ala., recently after he had an interview with Dr. George W. Carver, noted scientist of the Race, which said in part as follows:

"In this job of roving over the world I have met a few human beings so selfish as to be almost Utopian in spirits. But never have I met a man who towers above Dr. George W. Carver in nobility or intelligent greatness. He is one of the greatest men in the whole south. He is a scientist. He is a Negro.

"Forty-two years ago he came to Tuskegee Institute, the South's famous Negro school. He has been here ever since—a lifetime. He will never leave. He has been a dark prophet—in the dark. He has worked like an inspired man for 42 years to help the South. Not only has he worked for the Negroes, he has worked for the whole South, black and white.

DEALS IN PLANTS

"He has found dozens of uses of almost every plant that grows in the South. His discoveries of practical commodities that can be made from sweet potatoes and peanuts run into the hundreds. It would take two columns just to name them.

"The South is fundamentally rural. Except for a steel city like Birmingham, and a few textile towns, the whole heart and soul of the South springs from its soil. And the soil and its tillers have sunk to a point that is not pretty. Much of the South is "Tobacco Road." And it needn't be so.

"The whole deep South could be relatively, what Mobile's famous Azela trail and Natchez gardens are. Just transfer the luxury of the flowers into the lives of the people. It can be done.

"And I believe that in all the talk and wrinkling of administration brows over what to do, the whole fountain of Southern reconstruction lies right here in the laboratory of this humble Negro scientist—Dr. George W. Carver.

BASIS OF PLANNING

"It seems that to me," writes Mr. Pyle, "that some far-seeing force could take Dr. Carver's discoveries as a basis of planning, and rebuild a new and varied and prosperous South around them.

"It would take money and intelligence. The money might sprout from the federal government, as money has a way of doing. The intelligence can come from the Southerners, if they would form themselves into a great sweeping movement to do better by themselves.

"If farmers would rebuild their soil and open their minds to something besides cotton; if industry would set up factories to manufacture the things that Dr. Carver knows can be made from the varied plants of the South, if it would be done in an organized and forceful way, then, it seems to me that within 20,40,50 years the old, old South could again become the nation's garden spot and no longer either "Tobacco Road" or that number one problem."

# JOHN T. GRAVES III TELLS D. A. R. SOME OVERLOOKED HISTORY

BIRMINGHAM, Ala. (CNA)—The contralto voice of Marian Anderson, banned by the Daughters of the American Revolution from their Constitution Hall in the nation's capital, thrilled a packed audience of Negroes and whites in Birmingham's largest public auditorium.

The concert had the support of Birmingham's white papers from the start.

John Temple Graves III, columnist and editorial writer for the Birmingham Age-Herald, recalled that the Negro Folk Symphony No. 1, written by Music Director Dawson of Tuskegee Institute, had received tremendous acclaim in Birmingham, two years ago.

Rebuking the Washington DAR for the insult to Miss Anderson and the Negro people, Graves reminded them that Crispus Attucks, Boston Negro, was the first American to shed his blood in the American Revolution.

"There is a monument to him (Attucks) on Boston Common," Graves said, "unveiled in 1888. 'Almost a giant in stature,' according to John Adams, he led a band of 50 to 60 men on the evening of March 5, 1770, in protest against British injustices..."

A feeding pan that is opened by an alarm clock at set times to supply meals to dogs has been invented.

## F. B. I. Investigates Peonage

NEW ORLEANS, April 13—(ANP)—Federal Bureau of Investigation men were investigating the report that a 14-year-old boy had been sold into peonage in this state. W. H. Sackett, local G-man, said that they were only investigating the leads given them by the youngster who was turned over to them after relating the incident to police.

Leonard Shields, 14, told Desk Sargeant Ray Gormin and Patrolman Frank Arena of the first precinct that on Thursday of last week while he was playing on the neutral grounds at Claiborne and Villere streets a white man and a Negro persuaded him to get in a truck that they were driving. Three other boys were also persuaded. He said they were driven to Hammond, and transferred to a gray sedan and carried out into the country several miles to a strawberry farm where they were sold for a dollar cash.

The owner of the farm, he said, made them pick strawberries without pay and forced them to sleep on hay in a barn. Shields said that he ran away Sunday and came back to New Orleans.

## SMALL ORCHARD PAYS

The two-acre home orchard on the Jackson Crouch farm west of Hazen Ark., meant $338 to the Crouches last year in addition to the fruit saved for home use, according to H. E. Maxwell, county agent. Most of the peaches were sold at the farm. Mr. Crouch follows recommendations of the Arkansas college of agriculture in caring for his orchard, the county agent said.

## RUBBER-LIKE SUBSTANCE FROM WHEY

A rubber-like substance of transparent character has been produced from lactic acid of whey under a process perfected by the U. S. Bureau of Dairy Industry. Known to chemists as polymethylacrylate, the substance contains unique properties. Its transparency, elasticity, toughness, ease of solubility and stability to sunlight and ultra-violet rays make it valuable in the preparation of lacquers, varnishes, inks, impregnating compounds and cements. Laboratory results produced by Lee T. Smith and H. V. Claborn, of the bureau, indicate the substance can be produced as cheaply from lactic acid by their method as it is now produced from ethylene, or alcohol by the cyanhydrin process. It is believed the cheapness of the bureau's process will lead to increased use of lactic acid. The substance can be combined with organic glass in making a molding superior to original compounds; and for coating paper and other fibrous materials, making them resistant to water, oils and gases. (New York Times.)

## CURE FOR PELLAGRA

"In the new issue of the experiment station director's annual report, Wisconsin citizens will read with pride that the continued studies in the use of nicotinic acid as a prompt and economical cure for human pellagra have been successful," says an editorial in Wisconsin Agriculturist (December 3). "Reports from hospitals all over the country testify to the effectiveness of nicotinic acid) in the relief of sufferers from this malady, which has been found incurable in advanced stages. This is but another honor to the Wisconsin biochemists, whose long list of vitamin discoveries have made our experiment station famous_____ A disease which has claimed nearly half a million persons in the nation as its victims, has yielded to these studies which were begun by curing black tongue of dogs, another form of pellagra. But you won't find the boys who did this important work crowing much about it, for they are just like the late Doc Babcock, the first of a line of notable Wisconsin food scientists—too busy looking for more problems to solve. It is this kind of scientist, who works and plods and digs down to the bottom of hard problems, that gets valuable things done for the farmers of Wisconsin."

## Mrs. L. Fleming Named On G. O. P. Program Body

CLEVELAND, OHIO., April 13 (ANP)—Mrs. Lethia C. Fleming of Cleveland, was notified by Dr. Glenn Frank, chairman of the Republican Program Committee, this week, that she had been elected to membership on that body. Mrs. Fleming, long active in Republican circles in Ohio, has had wide experience, having been connected with the women's division of the Republican National Committee in several national campaigns. Mrs. Fleming is president of the Ohio Federation of Colored Women's Clubs and national director of the new publication, known as "The Women's Voice," published at Washington, D. C., with Jeannette Carter as editor.

Let me be thankful that it does not take money to buy heaven.

# GOP "BOLTERS" PAVE WAY FOR TWO DEMOCRATS TO WIN FOR ALDERMEN IN CHICAGO'S HECTIC ELECTION

## Dawson and "Bob" Jackson Desert Their Party, Enabling Dickerson and Grant to Get Choice Plums

CHICAGO, April 13—(Albert G. Barnett for ANP)—Last Tuesday for the first time in Chicago's history, two colored Democrats were elected aldermen to the city council—Earl B. Dickerson to represent the Second Ward, Benjamin A. Grant, the Third.

Dickerson, an assistant state attorney general, won over GOP Candidate Wm. E. King, a former state senator and Republican committeeman of the potent Second Ward. King's defeat at the Primary of GOP Alderman William Dawson fanned anew the blazing feud between the two, result being that at the election Tuesday Republican Dawson threw his support to Democrat Dickerson a handicap too great for King to overcome.

In the Third Ward, Benjamin A. Grant, deputy coroner and a newcomer in local politics, pulled the cup of victory from GOP Veteran Oscar DePriest, hero of many a political battle and a former representative from the First District in the U. S. Congress. The Second Ward-Dawson-to-Dickerson maneuver was duplicated in the Third, when GOP Alderman Robert R. Jackson, defeated at the Primary by DePriest, threw his support to Democrat Grant, a handicap too great for DePriest to overcome. With a record of 22 years' service as Republican alderman, Jackson's switch to Democratic ranks was called "unforgiveable" by old-time GOP leaders who apparently discountenance the theory that "all's fair in love, war and politics."

Outstanding feature of the city-wide election was the remarkable showing made by GOP Candidate for Mayor Dwight H. Green, who was defeated by Mayor Edward J. Kelley by 183,000 votes—the figures showing: Kelly, 820,517; Green, 637,107, out of a total of 1,478,637 ballots cast. The size of the Green vote was "manna from Heaven" to GOP forces, many leaders declaring it prophetic of a Republican year in 1940 for Illinois and the Nation. At Green's Hotel LaSalle headquarters, leaders said the big vote, largest in the history for a GOP mayoralty candidate—Shows the New Deal machine has definitely hit the taboggan.

Political observers and students of the situation on Chicago's famed Southside, former banner GOP district of the country and always counted in the Republican totals even before the votes were cast, are pointing to the fact that last Tuesday's Democratic sweep shows what effective organization and machine rule can achieve among colored voters.

In the old, GOP halcyon days of Edward H. Wright, astute political leader, chiefly responsible—with former Mayor Wm. Hale Thompson—for development of the Second and Third Ward powerful GOP organizations, a smooth-functioning machine had been built through patronage awards 'to the faithful', voter education and oratorical appeals for support of American principles and constitutional liberty. So potent and air-tight were the Negro GOP districts of that era that Democrats paid little attention to the colored voters, regarded a Negro Democrat as the eighth wonder of the world

At the height of his career Ed Wright was Ward Committeeman, a county comissioner, a member of the GOP County Central Committee, finally a $100-a-day real estate appraiser for the city and the only Negro state commerce commissioner. With his death, factionalism developed within GOP ranks, the breach widening because no fearless, diplomatic colored political leader was available to follow in Wright's footsteps.

With advent of the New Deal, following on the heels of depression I, which brought Chicago's colored citizens to their lowest economic level in history, a new picture unfolded on the local political screen. Controlling city, county and State, the Democrats gave patronage in wholesale lots to Negro adherents. As the opened sluice-gates continued to pour Negro Democratic votes in succeeding elections, the Southside district was reportedly thrown wide open. Bookies, numbers and policy games, brothels and shady taverns were reported as thriving unmolested. Then, in recent months, States Attorney Courtney (defeated in the Primary by Mayor Kelly for the Democratic nomination) began to stage sensational city-wide raids on booking places and other gambling establishments, making several trips to the Southside district.

It remains undisputed that Mayor Kelly has espoused many causes dear to Negro hearts, outstanding among them being appointments to important city positions, his demand that they get their proportionate share of relief funds and his active support of the South Parkway WPA low-cost housing project for Negroes. Result last Tuesday was that while Republicans made significant gains in the rest of the city, in the colored district, Mayor Kelly's colored Democratic candidates emerged victorious.

# PETITION PUSHED FOR RELEASE OF SCOTTSBORO BOYS

NEW YORK, (CNA)—An appeal "to the conscience of the American people to help wipe out a crime against justice which has been justifiably called the 'shame of America,' was issued this week, on the occasion of the eighth anniversary of the Scottsboro Case, by Morris Shapiro, secretary of the National Scottsboro Defense Committee, 112 East 19th Street, this city.

Mr. Shapiro reaffirmed the Committee's belief in the complete innocence of all nine of the original defendants and the determination of the Committee and its affiliated organizations to continue the fight for the freedom of the five boys still held in Alabama prisons.

Mr. Shapiro urged "all friends of justice' to support a new petitions campaign to bring pressure upon Governor Frank Dixon of Alabama to pardon the remaining five boys. Petitions may be obtained by writing to the National Scottsboro Defense Committee, 112 East 19th St., New York City.

## SOME GENTLEMAN!

ONE day there came to a hospital clinic a Negro woman with a fractured jaw. The surgeon asked nmmerous questions, to all of which the patient returned evasive answers. Finally she admitted she had been "hit with an object."

"Was it a large object?" asked the physician.

"Tol'able large."

"Was it a hard object or a soft object?"

"Tol'able hard."

"Was it moving rapidly or slowly?"

"Tol'able fast."

Then, her patience exhausted, she blurted out: "To tell you de troof, doctah, Ah wuz jes' nachelly kick' in de face by a gen'leman friend."

## HAY CRUSHING MACHINE

"Some of the present hazards and losses in haymaking will be overcome if hay-crushing machines, now being developed in the department of agricultural engineering, University of Illinois, come up to expectations," says F. J. Keilholz, extension editor of the University, in Country Gentleman (April). "Sponsoring the work is the manufacturing concern which holds the patent rights on the hay-crushing process. Through funds provided by this company, the department has developed a crusher outfit to be used with a horse-drawn mower. A number of these machines will be built for actual field operation during 1939. A tractor-mower hay crusher also will be designed and built this spring----If field tests on these two types of machines prove satisfactory, it is hoped that within the next year or two a hay-crushing machine may be manufactured and placed on the market at a moderate price---- The principle of the crusher involves merely two large rollers between which the hay is passed as it is cut. These rollers crush the stems of the plants so that the moisture may be more readily evaporated. Experiments at the college show that crushing the hay causes the stems to dry nearly as fast as the leaves and that the drying time for crushed hay is only about one-half that for uncrushed hay. This reduction, of course, greatly lessens the danger of rain falling on the hay after it is cut and increases the chances of producing good hay."

## MONTHLY CHICK HATCHING

"New chicks, every month in the year, is a new plan that is gaining in popularity among poultrymen," says the Poultry Item (December). "The new plan may change the entire poultry program, at least in the production of poultry meat and eggs, says R. C. Ogle of the New York state college of agriculture. It is a trend away from 'putting all your eggs in one basket.' Poultrymen who have adopted the new program say that the use of the equipment throughout the year is efficient and that a more or less constant supply of new pullets, just starting to lay, should prove profitable. Regardless of the method, says Mr. Ogle, early-hatched pullets, late-hatched pullets, or pullets on any other plan, can give results only in proportion to correct breeding, feeding and management practices. "The profitableness of a flock of laying pullets is determined largely by the number of eggs the pullets lay and the length of time over which they lay them. In general, birds of the Mediterranean varieties are best when they lay their first egg at not less than 150 days after hatching, and birds of the American varieties not less than 180 days after hatching."

## CARVER EXHIBITS TO FEATURE FAIR

NEW YORK CITY—(A N P)—A special exhibit of some of the many products and derivatives developed by Tuskegee institute's famed scientist, Dr. George W. Carver, will be on display at Harlem's Negro Industrial fair, scheduled to open about May 15, under sponsorship of the Consumers' and Craftmen's guild of Harlem.

## DOES WELL WITH HIS EIGHT COWS

Russellville, Ark.—Eight Jersey cows are a profitable investment for Sam Turnbow, who lives at Hector, 21 miles north of here, his cream sales running $12 or $15 a week during the spring and summer, according to County Agent C. S. Morrow.

Mr. Turnbow has the distinction of owning the first cream separator brought into this part of the county.

His feed cost for grain other than what he produces is from three to four dollars per week. He produces plenty of good hay to supply his needs and has permanent pastures established for summer grazing. He plants wheat or rye for winter pastures.

His crop plan consists of fifteen acres of lespedeza, twenty acres of permanent pastures, 10 acres of cotton, fifteen acres of corn and six acres of winter wheat and rye, with plenty of vegetables and truck crops for home needs.

Mr. Turnbow saves his best heifers and the male calves are sold for veal. Fifty hens and a brood sow are other helpful items of his diversified system of farming.

# TALK OF GARNER FOR PRESIDENT CAUSES "JITTERS"

### New Dealers In Washington Fear "Cactus Jack" Will Get Nomination

Washington Bureau Associated Negro Press

WASHINGTON, April 13—Is the Garner-for-president boom the real McCoy or is it a drive to gain control of the Democratic convention? No matter which it happens to be, the thing bodes no good for those colored brethren who have pledged allegiance to the Democratic party. Gor with the Pride of Uvalde, Texas, in the saddle, htre promises to be a distinct change in the attitude of the powers that be toward those, who, like Lazarus, have feasted on the crumbs that dropped from the table.

Indications are that Brother Garner is playing a stiff game of poker with the boys.

New Dealers are getting the heebie jeebies—figuring Garner, like Landon,, prior to the Republican convention will pile up such an overwhelming sentiment in his behalf, the convention will have to nominate him.

And one may well imagine the policies that will follow the old Coon Soup Hollow baseball team shortstop.

"Catcus Jack," as the boys familiar ly call the vice president, is regarded as a shrewd politician. The South is for more power, but there are those who prefer some one else. Yet the trend toward the vice president has sounded an alarm which cannot go unheeded.

His supporters are proceeding on the theory that the president will not be a candidate for reelection, and in due time will pronounce the vice president an acceptable candidate. All through the country, clubs boosting Garner are being formed. Many New Dealers are said to be in a quandary over the Garner candidacy, complaining that Mr. Roosevelt has been asleep at the switch.

It will be interesting to see the reaction on the part of Negro Democrats—how they take to the Garner for president boom—and it is bound to inherit from the New Deal administration.

It is not always in the clothes I wear, but my facial expression in the clothes I am wearing.

## HAS $305 WORTH OF LIVESTOCK FROM $70 INVESTMENT IN 1936

Ozark, Ark.—Raymond Miesner, a member of the Charleston Junior-Adult 4-H Club, has achieved what is regarded as marked success in raising and marketing livestock since he began stock-raising as a club project in 1936.

That year he invested $70 in 10 Jersey heifers. They were fed the following winter on oats and grazed on winter pasture sown earlier in the year.

In 1937, about a year after making the original investment, he sold the 10 cattle for $223. This he invested in more cattle and a pair of colts.

During 1938 he bought, sold and traded cattle, keeping a record of each transaction. When he made a check-up on January 1, 1939, he had on hand a pair of mares valued at $160, and 11 head of steers valued at $305, making near 200 per cent on the original investment.

## Release Record By Paul Robeson

Camden, N. J., April 6—(ANP) A new record, made in England and featuring the voice of Paul Robeson internationally famous baritone, has just been released by the Victor record company. The numbers are "Trees" and "Drink to Me Only with Thine Eyes," both displaying the Robeson voice at its best.

# MAKERS OF COSMETICS MUST STOP FALSE ADVERTISING BY JUNE 25TH

WASHINGTON, April 13—(ANP)—Manufacturers of drugs and cosmetics sold almost exclusively among Negroes, are being advised by the department of agriculture that they have until June 25 in which to comply with the federal regulations concerning the labelling of their products to comply with the Federal Food, Drug and Cosmetic act.

Secretary Wallace issued the following statement in response to inquiries concerning the legislative postponement of the effective date of some of the important provisions of the act:

"The department is aware of a sentiment among some manufacturers of foods, drugs and cosmetics for a postponement of the effective date of the act. The general provisions of the act do not become effective until June 25, 1939.

"On numerous occasions the department has expressed gratification at the promptness with which most food, drug and cosmetic manufacturers have brought about label revisions and effected other changes in their practices to meet the terms of the new law.

"In some instances the sentiment for postponement is being fostered by those who opposed the enactment of the law and who appear to be reconciled to compliance with its consumer-protective features. But it is clear that in most instances this sentiment is based upon a general apprehension regarding the fate of substantial investments in stocks of labels now on hand, as well as concern about the congestion in label-manufacturing establishments, which in some cases makes it impossible for orders already placed for new labels to be filled before June 25."

All manufacturers of hair and beauty preparations are effected by this act, and those who have not already complied with the provisions of the act are hurrying to do so.

### NEW PLYWOOD

A new kind of plywood is on the market. The layers of wood are put together with hot-pressed resin glues, making the wood waterproof so it can be used for forms in making concrete foundations, dairy barn walls, etc. (Farm Journal, April.)

O God, help me to be watchful to cultivate a kindlier lovelier, happier and more helpful spirit.

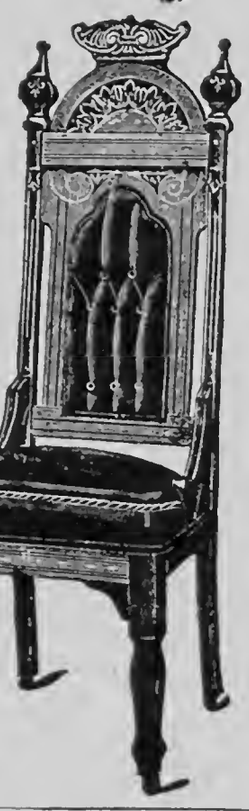
Nashville, Tennessee



## MO. TREE PLANTING

"Spring planting will include a new crop for many Missouri farmers this year—trees," says Missouri Ruralist, (March 18). "Of course, there is nothing new about trees, but we haven't been accustomed to the idea of buying and planting them. Mostly, they just grew, and we've chopped them down. This spring Missouri's forestry program is being extended to the farms. A total of 1,300,000 young trees are available, and orders had been received for more than 700,000 early this month. It is thought the supply will be exhausted before the planting season is over. To help in this program, tree planting demonstrations are being held by extension foresters in about 90 counties—The trees must be used for windbreaks, erosion control, or for wood or post production—The cost of the trees is $2 a thousand, plus transportation charges, except for the pines which are $3 a thousand—Little need be said as to the value of trees. Black locusts are one of our best gully control weapons. Windbreaks not only temper the winds but conserve soil moisture. And much of our less fertile land can be made more profitable by putting it in trees for posts or wood."

## LIBRARY REFUSES "NEGRO VOICES"; PICTURES CAUSE

NEW YORK, Apr. 6 (ANP)—Henry Harrison, New York poetry publisher, has received a letter from the Warren (Ohio) public library which is quoted in part:

"We have received the three copies of Negro Voices, an anthology of contemporary verse, as ordered. The book is attractive in makeup and content and with some exceptions the illustrations are pleasing. But we very much object to the exceptions. I refer to illustrations: Brown Girl, Behold the Bride, Waste, and Moments in Paradies.

"We would not put these books on the open shelves or in the main library. Young people and others who do not look upon them with the right thought cut them out and use them for improper purposes. These pictures do not add anything to the value of the book, and they offend good taste. We would cut out these illustrations, but there is printing on the other side.

"We will keep one copy for the library collection. We are not prudish and realize these illustrations are for the moment considered art, but it is a pity to spoil a good book with questionable taste in the illustrations."

## Harlem Souvenir Program Ready

NEW YORK, Apr. 6 (ANP)—More than 100,000 copies of a Harlem Souvenir program are now being printed by the Ray Lessieu publications, a downtown concern, these copies to be distributed throughout the United States during the coming World's fair.

Crammed with information pertaining to Harlem, the greatest Negro capital in the world, it will stress business, industrial and civic affairs and achievements of the colored people in Harlem. It will also carry a business directory, street map and guide, points of interest and a complete history of Harlem.

To be sold for 50 cents, the Harlem Souvenir program may be obtained through the national distribution agent, John W. Thompson, 129 W. 122nd street, New York City. Copies will be ready for distribution by the end of April.

## SOYBEAN PAINT

Farmers can use soybean paint with confidence and treat themselves to three distinct advantages, advises C. H. Jefferson, agricultural engineer at Michigan State College, after a tour through paint factories and testing laboratories. The three advantage include obtaining a higher quality of paint, making use of the soybean in processing so that the by-product of soybean oil meal becomes lower in cost for livestock feed, and creation of a market for more soybeans. Jefferson finds that manufacturers are agreeing that 20 to 25 percent soy oil makes a better non-fading paint, chalks instead of cracking and checking. The chalking, indicating oxidation throughout instead of just on the surface, is called the test of a good paint. One of the modern paints now includes 60 per cent linseed, 30 percent soy oil and 10 percent thinner and dryer. (Wisconsin Agriculturist, March 11)

## The NYA and The Negro

(Third in a series of articles contributed by H. C. Russell, NYA Supervisor of Negro Activities in Kentucky.)

III. KEEPING YOUTHS IN SCHOOLS AND COLLEGES. In Lexington, Kentucky, I discovered a family of ten children six of whom are in the public schools, and all dependent upon the earnings of a father who is a common laborer. In another family, the ration was nine and five, while a mother was the dependence for support. For both of these families the monthly NYA check of $6.00 which goes to a high school member of the family represents the difference between these children's being in or out of school. At Cadiz, Kentucky a girl who comes from a neighboring community to the little high school, must depend upon her NYA check to pay room rent and help on her board, as the only means of remaining in school. These instances are simply typical. At Kentucky State College it is estimated that forty students could not possibly remain in college but for the assistance of the NYA. In addition to these, there are thirty young men on a college resident project whose sole support is their earning from NYA. Similar projects are now under way at West Kentucky Vocational Training School, Paducah, and at Lincoln Institute. When these projects reach full development a total of 200 Negro boys and girls will be given opportunity for industrial, social and technical development such as they would otherwise never receive. Most of these young people through their "work experience" "will be able to find themselves," choose various lines of occupations and become constructive citizens. A smaller number will be absorbed into college life to continue their formal education. At Wilberforce University a group of eighty young men are given an orientation course in the history and activities of that institution as a part of their "related" training. The National Youth Administration is thus shown to aid not only in helping young people to enter and remain in high school and college; its guidance function points the way to many ambitions youngsters to avail themselves of the service which college offers.

## THE LAND WHERE HATE SHOULD DIE

By Denis McCarthy

This is the land where hate should die—
No feuds of faith, no spleen of race,
No darkly brooding fear should try
Beneath our flag to find a place.
Lo! every people here has sent
Its sons to answer freedom's call;
Their lifeblood is the strong cement
That builds and binds the nation's wall.

This is the land where hate should die—
Though dear to me my faith and shrine,
I serve my country well when I
Respect beliefs that are not mine.
He little loves his land who'd cast
Upon his neighbor's word a doubt,
Or cite the wrongs of ages past
From present rights to bar him out.

This is the land where hate should die—
This is the land where strife should cease.
Where foul, suspicious fear should fly
Before our flag of light and peace.
Then let us purge from poisoned thought
That service to the state we give,
And so be worthy as we ought
Of this great land in which we live!

## ONCE COLORED, LATER WHITE LADY LEAVES $25,000 AND BIG LAWSUIT

CHICAGO, April 13 (ANP)—Wilbur Glenn Voliva, overseer of the Christian Catholic Church and successor to Alexander Dowie, founder of Zion City, filed suit in the Circuit Court of Cook County, last week, contesting the will of Mrs. Carrie Hills, 95 year old colored woman who passed for white for many years. Voliva seeks to have a will of Mrs. Hills which was admitted to probate, April, 1938, set aside. This will left her estate of $25,000 to Mrs. Corrine T. Tennon, her grand niece and a social worker on the south side.

Voliva contends in his bill that on March 7, 1931. Mrs. Hills made a will in which she left her fortune to him and claims that "through undue duress and influence," Mrs. Tennon induced her to make a new testament leaving the estate to her.

An interesting story lies behind the suit. It appears that Mrs. Hills who looked like a white person, came to Chicago, from Iowa, during the first world's fair, around 1903. Originally from Texas, she married a white man but prior to coming to Chicago, all of her friends knew her as a colored woman with colored relatives.

Possesed with rare business ability, she entered the laundry business and made a success of it with the aid of her husband. Her business associates were white and gradually her entire life was laid along white people. She resided at 41st street and Drexel Boulevard. Miss Tennon, her grand niece, visited her frequently and for a part of the time lived with her.

Apparently, some of the moderately circumstanced white people with whom Mrs. Hills associated were adherents of the Zionist faith. They introduced Rev. Voliva to the aged colored woman who lived the life of a recluse, until her niece finding her ill one day removed her to the Southway Hotel where Mrs. Tennon lives. A sharp court battle ensued, the whites insisting that Mrs. Hills was a white woman and that the colored people who sought custody of her were designing interlopers. The court gave Mrs. Hills custody over to Mrs. Tennon and early in 1938, when Mrs. Hills died, a will was probated which named Mrs. Tennon as beneficiary. It is this will which Rev. Voliva seeks to break.

## RUBBER FOOD WRAPPERS

"Newest transparent food wrappers are made of tightly stretched rubber," says Robert D. Potter, in a Science Service copyright report. "The day is not far distant when you may be buying a broiler chicken encased in a skin-tight casing of clear rubber, and sealed in a vacuum inside this rubber covering. The covering is made of special rubber free from sulfur_____The advantages of the new wrapper are many. The elimination of air prevents the development of rancidity in the fat of pork. Chickens can be stored without 'freezer burn' which is the worry of low-temperature preservation of poultry. The prevention of moisture loss maintains original weight. And the use of carbon dioxide inside the rubber covering aids preservation for those products which keep better in such an atmosphere."

## 100 Cities To Observe Guide Right Week

Topeka, Kans., April 6—(ANP) After working for several months in their various communities, members of the Kappa Alpha Psi fraternity will observe the 16th annual Guide Right Concentration week, in approximately 100 cities, beginning Sunday, April 16th.

On Easter Sunday, numerous churches will read the Guide Right proclamation announcing the week, and conferences, radio broadcasts and mass meetings will mark this "major public-service program" of the Kappas, according to announcement of Attorney R. J. Reynolds, national director of the movement.

With the idea of helping youth to approach their futures realistically, to make the most of their studies and to know what the different vocations demand and what they promise in return, the movement is recognized as filling a very definite need by educators, businessmen and U. S. Commissioner of Education.

In one city—Philadelphia—the school superintendent has integrated the observance into the entire school program, and speakers from the fraternity will speak during Guide Right week to junior and senior high school students, regardless of race. In West Virginia, speakers will be sent to some 50 high schools and vocational counsels will hold conferences.

In Columbus, the fraternity men at Ohio State University and alumni in the city will be hosts to high school students individually, in the attempt to build up a "big brother' relationship which will give the younger student a friend and adviser during those days when he is perturbed or when he is not quite sure that he is "getting anywhere" in his studies.

In Denver, although there is not a Kappa chapter there, Leon W. Steward, executive secretary of the Glenarm Y. M. C. A. will sponsor Guide Right Week for the high school students there, as he has done in years past.

Last year, over 5,000 high school seniors alone were touched by the conferences and other programs of the Guide Right week. and 25,000 parents attended the mass meeting. held in 95 centers.

## FSA Leases Land, Averts Trouble

Pointe Coupee, La., April 6—(ANP)—The Farm Security Administration has leased plantations from landlords in Pointe Coupee parish and is renting the land at $6 per acre, coming as a result of agitation by the Louisiana Farmers Union, which found that cotton tenants in the parish were threatened with rent increases or eviction.

Last month families living in this section moved amid great excitement fearing that they would lose their homes entirely or that they would be forced into the public roads, unless they adhered to the demands of the landowners.

A contract calling for a rent increase from one-fourth to one-third started the protest, as many tenants had come out in debt the past year and saw no hope if they were to give up a greater portion of their cotton and corn in 1939. The women inspired the men with their willingness and preparation of old quilts for tents in the event they were needed.

Farmers on nearby plantations watched the situation with great interest, as other landlords were planning to raise their rents in 1940 if the others were successful. The farmers union circulated petitions asking for an investigation by the department of agriculture and demanded that all AAA payments be withheld from landlords who were forcing the rent increases. A sigh of relief and new hope come to the farmers for they see for the first time in their lives a chance to get out of debt.

## MUSCATINE CO. FARMERS FAVOR CROP CONTROLS

**Regulation of Supplies Advocated in County-wide Questionnaire**

Muscatine, Ia.,—Muscatine county farmers agreed almost unanimously in the principle of holding down supplies of agriculture products to obtain better farm prices. That was the consensus of a group of more than 100 polled in questionnaires submitted by the Muscatine county agricultural planning committee. The results have been compiled and will be forwarded to the state committee which is making a state-wide report for the federal department of agriculture as a basis in formulating a long-time farm program.

A majority of the farmers believe that the AAA program, if continued, can maintain satisfactory farm prices, and feel that the Triple-A has been an important factor in increasing soil conservation in this community.

Sentiment also favored an annual payment to farmers to offset tariff protection to industry. The majority also indicated a feeling that farmers have a poorer living than most other people in other walks of life.

## HE HAD A LIMIT

THE customer was busy sawing on the steak he had ordered—and a difficult time he was having.

"Is it tongh?" queried the waiter, solicitously.

The customer was exhausted. He turned to the waiter with defeat in his eyes and said: "When I order beef and get horse, I don't care, but next time take the harness off before you start serving."

* * *

Charity is the best way to plenty, he gets most that gives most.—George Swinnock.

## BICYCLE CONSTRUCTED ENTIRELY OF PAPER ANNOUNCED IN OSAKA

OSAKA—A bicycle with main parts made entirely of fiber and stiff paper materials, recently was announced here as being ready for the market, and it is causing a sensation in bicycle circles.

The bicycle, likely to revolutionize the entire bicycle manufacturing industry, is the first of its kind to be produced in any country and involves a frame of fiber (also saddle and other minor parts) and mud-guards of stiff, hard paper.

# COLORED FARMERS GOOD CREDIT RISKS

## Losses on Loans Less Than Tenth of One Per Cent, Records Show

**Almost All of 8,167 Borrowers In Georgia, North-South Carolina Have Wiped Out Their Debts**

WASHINGTON, D. C.—(ANP)—Almost all of the 8,167 Negro farmers of Georgia, Florida, North and South Carolina who have borrowed $1,798,934 through production credit associations under the supervision of the Farm Credit administration have repaid the loans, it was learned this week. The average loan amounted to $220.27. Loans to Negro borrowers ranged from $50 to $5,000.

Losses on loans to colored farmers in the Columbia district since the organization of production credit associations to September 30, 1938, amounted to the almost negligible figure of one-tenth of one per cent. Cornelius King, special assistant to the governor of the Farm Credit administration, states that directors and secretary-treasurers of these organizations frequently comment on the fine record made by colored borrowers in repaying their loans.

Short-term loans were secured by these borrowers for the purpose of financing farm operations for the past year. Some typical purposes for which loans were made included purchase of seed, fertilizer, farm equipment, livestock, or the hiring of labor and for the repair, improvement and alteration of farm buildings.

King reports that applications comments made by colored member-borrowers of the production credit associations. One farmer in Georgia proudly exhibited his receipt showing final payment on his loans and happily exclaimed, "I borrowed $150 to finance my crop and the interest cost me only $3.55." Another stated, "I saved $37 on interest this year by borrowing through the production credit association." A borrower in Louisiana said, "I've been with the association since they first started, and they have always treated me just fine."

King urges Negro farmers to use credit facilities of production credit associations more extensively. He reports that approximately 6 per cent of the colored farmers in Georgia, Florida, North and South Carolina are securing their short-term production credit loans through these organizations. This is rather low, Mr. King states, when we realize that from 60 to 80 per cent of the farm families use some form of short-term credit each year.

King reports that applications for loans through production credit associations are considered purely on the merits of each individual case and not on a racial basis. He further reports that much information gathered by the late Dr. H. A. Hunt and the present Special Assistant to the governor, from member-borrowers, officials, appraisal reports, county extension agents and vocational teachers show evidence of fair dealing, regardless of race. The colored borrowers, like any others, are members of the association. They own stock and have a voice in the management and control of the unit. They also enjoy the low interest rate of 4 1-2 per cent on loans.

Loans are made to any eligible farmer who can qualify. Eligibility calls for ownership of livestock and farm equipment. In order to qualify, a farmer must be a good moral risk; his farming business must show evidence of being conducted in such a manner that under normal farming conditions it will pay back the loan plus interest and provide a living for the farm family; and above all, the applicant must be making progress toward the improvement of his financial condition.

Farmers desiring to secure loans should make application to the local production credit association. Representatives of this organization are located in the farmers' immediate community and will assist them in making application for loans. Information may also be secured from county extension agents, agricultural teachers, and members and directors of the organization.

Inquiries on further details of Farm Credit Administration services, particularly with respect to production credit associations, will be given prompt and considerate attention.

## Pressure Group Sees Chance To Swing Congress

Washington, March 30 (ANP)—Members of the Workers' Alliance attending the "All-Southern Conference of the WPA Emergency" announced after Tuesday's sessions that reports of the delegates who had interviewed their representatives in congress indicated that a "tidal wave is sweeping congress in favor of at least the president's request for $150,000,000 for the WPA with many who voted against the full appropriation in January indicating their support of this additional amounts."

## INDICT FIVE ON CHARGE OF PEONAGE IN ALABAMA

MOBILE, Ala.,—In what promised to result in another expose of peonage conditions existent in certain sections of the south federal authorities took into custody this week five men charged with unlawfully holding a Race family of farm workers on a large plantation in Perry county.

The prisoners, arrested here by United States Marshal Roulhac Gwwin, include a dupty sheriff, a justice of peace and three plantation operators, all of whom were later released on $1,000 bonds each.

The defendants were indicted on a peonage charge growing out of forced labor practiced on the plantation of J. W. Suttles.

## FASHIONETTE

By Hazel L. Griggs, For ANP

Short skirts and wider has been the important fashion trend to watch for some time now, and with skirts gored, shaped like an umbrella or cut circular and fully seventeen inches from the floor, hosiery has been given a new lease on fashion, for now it is fully one-third of the costume. Because of this, perhaps it will be well to know what the hose mart predictions are for spring and summer. Here are the highlights:

First, hosiery colors are designed to blend with rather than contrast with the costume, and some in three categories....the rose or pink tones, the yellow or golden shades and the neutral beige tones. Of these three categories, particular stress is laid on the rosy shades with a sustained depth of color, not only because they are designed to be worn with the great range of fuschsias, cyclamens violets and purplish blues that are so much a part of spring and summer fashions, but because they are flattering in themselves.

Second, anew note is to maten your hose to your accessories, and the tie-up between stockings and shoes has won high favor. Therefore, among the rose and pink tones, we find shades designed to harmonize with such shoe colors as cherry or Japonica and among the yellow tones, shades to blend with the blonde, brown and caramel leathers.

Third, we find more emphasis than ever on sheer weaves. The concensus of opinion everywhere seems to be that the two-thread stocking is destined to be most popular, simply because the flattering stocking is the important stocking when skirts are short.

Fourth, more attention is given to fit, especially to lengths. Short skirts definitely require a greater demand for well-proportioned stockings in the right length. Also it is important to insist upon action backs, stretch tops, and all the other comfort features which are designed to make stockings fit.

Fifth, toe and heel interest. Not short skirts but the open toes and heels of the newest shoes are responsible for mesh toes and the rib-row heel, a mesh woven with a stripe effect or extra strength as well as pattern interest at the back of the foot. To introduced later in the season is a new stocking with no covering at all over the toes. It is designed to be worn with summer sandals.

## "PIE ON A BREAD INCOME"

This is the headline the Christian Science Monitor gave to the proposal of Secretary Wallace a two-price system of distribution for low income consumers.

Instead of robbing the soil fertility to produce surpluses to be dumped abroad, Secretary Wallace says we should dump the so-called surplus of foodstuffs and cotton goods to the one-third or so of the families who cannot afford an adequate standard of liv-

His is the most effective answer to critics who aecuse the farm program of promoting artificial scarcity. But those same crities of course, now pounce upon his new proposal even before the details are worked out.

Business men generally fear that a consumer-snbsidy program would mean setting up government stores, or at least, elimination of some of the middle-men if existing retail stores are used. And, after all, making profits on sales, is more important than supplying the needs of the underfed and underclothed. Or is it?

—Coop Consumer.

## Named Post Office Foreman At Capital.

WASHINGTON, April 13—(By Percy R. Hines for ANP)—Leon M. Anderson, secretary of the National Alliance of Postal Employes, has been promoted to a position as foreman in the local post office, by Postmaster V. C. Burke. Anderson's advancement came as a result of efforts of the welfare department of the organization which is constantly seeking to bring about more promotions and better assignments for Negroes in the postal service in all parts of the United States. Following his appointment, Anderson submitted his resignation as secretary of the alliance, to President Lafayette F Ford of St. Louis.

Anderson is a native of Mississippi, being a graduate of Alcorn College. During the World War he served overseas as a first lieutenant, having been commissioned at Fort Des Moines, Iowa. At the close of the war, he entered the postal service in Washington, and became connected with the alliance in 1925, serving subsequently in various official capacities in the organization. He was elected secretary three years ago, succeeding Sidney M. Jackson, who was advanced to the position of assistant chief clerk of the railway mail service. The new foreman is married and resides with Mrs. Anderson and their three children here.

The vacancy in the official staff of the alliance, caused by Anderson's promotion to foreman and his subsequent resignation from the secretaryship, will be filled tentatively by the executive committee of the organization. A regular election to fill the office will take place in August, at the tenth biennial convention in Chicago.

# WRITER FINDS FOREIGN WHITES ARE TAKING DOMESTIC JOBS AT CAPITAL AND WARNS WORK THERE IS SCARCE

Washington Bureau Associated Negro Press.

Washington, March 30 (ANP)—What kind of work is there in Washington for Negroes?

The first impression is there is the same type here for Negro girls and women that there is in other cities—only less. There is no industrial work since the laws forbid factories and manufacturing on a large scale. So naturally, the women turn to domestic work.

But the situation here as in plenty of other cities, shows a decided trend away from Negro domestics, with foreign white workers getting a bigger and bigger call every day.

Several reasons are given for this—but many think it is due to the attitude of the domestics themselves—their demands for better pay and better working conditions.

Half day work, or part time work now seems to be the best work Negroes can find. And for this, the pay usually runs to 25c per hour. On other domestic work the pay runs from as low as $4 to as high as $15 weekly—but in most cases, it strikes around $10 per week. On these jobs the worker has room and board thrown in as well. On other words, in the parlance of domestic workers, a real "sleep-in" job.

Newspapers carry numerous ads from colored girls and women seeking work of a domestic nature, in which all kinds of stipulations as to work are set forth.

At the same time, the few employers seeking colored workers set such difficult standards, it is hard for colored workers to comply with them—quoting an ad from a local daily:

"Girl, colored, 18-30 years of age for general housework. small house, 2 adults, 3 children (ages 7 to 14): laundry. plain cooking, must stay nights; comfortable clean, warm maid's room in basement; $8 week. Unless you really want and need a good job, don't apply. If so you will like it here; city references required.

Of the seven want ads appearing in that issue of the paper, one was for white or colored girl; one gave no specification; one was for colored; and four asked point blank for white domestics!

No one seems to know exactly the cause for the change which has come about in recent years, when practically everyone employed colored domestics. Some are inclined to blame it on the workers themselves, declaring they are not reliable—and since many are just in the city from the south, they are not accustomed to the ways of the people in such a big city and hanker for their old homes, leaving the jobs without any notice, going back further South.

As for men—unless a man is fortunate enough to get in as a messenger or laborer for one of the governmental departments; few openings are available for Negroes.

Some manage to get private jobs as chauffeurs and mechanics; others do regular laboring work for construction companies, but there is little opportunity for other than domestic and laboring work for men.

Washington offers little hope for the progressive colored man or woman. Business is out of the question as there are a group of local real estate men and local insurance men who control most of the town's business. There are the usual barber shops, billiard rooms—no bar rooms, but plenty of liquor stores selling bottled goods—most of which are owned by whites. The chance for work in the nation's capital is practically zero!

# TUSKEGEE ALUMNI IN NEW YORK PAYS TRIBUTE TO "B. T."

NEW YORK, April 13 (ANP)—The New York Tuskegee Alumni Association celebrated Founder's Day in memory of the late Booker T. Washington, Founder and first president of Tuskegee Institute, Alabama in the Abysinnian Baptist church, here last Sunday. The guest speaker was the Hon. Myles A. Paige, Magistrate of New York City. His subject was "Booker T. Washington: The Man." Frank P. Chisholm, field secretary of Tuskegee Institute, was master of ceremonies.

The program opened with the spiritual "We are climbing Jacob's Ladder," led by William J. Williams, a Tuskege graduate. Miss Lucy Anderson read an Ode to Booker T. Washington. George Jones, Jr., accompanied by Miss Grace Hunter, gave pleasure with his singing. Marion Jones, a Tuskegee graduate sang in memory of Dr. Washington "Since you went away." E. L. Dimitry, president of the New York Tuskegee club, briefly reviewed the year's work of the club.

The speech by Judge Paige was significant in its emphasis upon the practical wisdom and greatness of Booker T. Washington and in its challenge to the friends and graduates of Tuskegee Institute. Mr. Fred R. Moore, Editor of the New York Age, spoke briefly of his long acquaintance and association with Tuskegee's Founder.

The exercises closed with the singing of the Tuskegee Alma Mater "Tuskegee, Thou Pride of the Swift Growing South." A large and representative group of graduates and friends made the occasion a re-union which was both inspiring and stimulating.

## FDR Hears 'Tuskegee Song' On His Visit

TUSKEGEE INSTITUTE, ALA.—(C)—President Franklin D. Roosevelt, after hearing "The Star Spangled Banner", heard the student body of Tuskegee Institute sing "The Tuskegee Song" on his recent visit to the campus. Words of the song are by Paul Laurence Dunbar, and music is by Major N. Clark Smith. Two groups of spirituals were sung by the Tuskegee Choir, William L. Dawson, directing.

Blessed is the man who expects nothing, for he shall never be disappointed.—Pope.

He who trusts in God will always win in the long run.

## FOOD STAMP PLAN PRAISED

The Administration's food-stamp plan providing for the distribution of surplus commodities to the needy through regular trade channels was said by P. S. Willis, president of the Associated Grocery Manufacturers of America, to "deserve the wholehearted cooperation of the industry." He cited the facts that the plan, if successful, would enable the government to materially reduce the amount of surplus commodities and give the underprivileged a better diet. He also praised the plan in that it provides for the distribution of surplus commodities through regular established trade channels. The commodities that might be placed on a surplus list and thus be made available to the needy under the plan he said, included eggs, butter, oranges grapefruit, dried beans, peas, raisins and fresh vegetables. Mr. Willis said there was little possibility that non-surplus commodities competing with designated surplus commodities would be harmed by such distribution. (New York Herald Tribune, March 16.)

### WHO KNOWS?

A. M. Kenney, who died at his home, in Huron, Kans., July 7, recorded in rhyme some of the many experiences he had as a worker for organized agriculture. The poem here is taken from a slender volume he published in 1935 under the title, "Kansas Prairies And Other Poems."—Editor's Note.

When I have lived out my allotted span
According to the Great Creator's plan,
And, getting by St. Peter's watenful guard
To claim a place in Heaven as my reward,
I wonder if that shining angel band;
Will gather 'round to grasp me by the hand;
Or will they rudely thrust me out the door
Because I farmed upon Earth's distant shore?

Will I receeive my mansion free from debt?
Will I no longer have to fume and fret
About the interest due upon my land?
Will I be taxed to pay a robber band
Of profiteers, a toll for food to eat,
For robes and golden slippers on my feet?
Or when I reach that country bright and fair,
Will speculators corner things up there?

The Bible says, "The meek shall own the Earth."
But it is mortgaged now for all it's worth;
God knows we farmers have been meek enough,
We've turned the other cheek to meet the cuff
Which has been handed to us amidst jeers
As we have struggled blindly through the years.
So when at last it comes my turn to die,
I'll gladly say to mortgaged Earth "Good-bye."

# ROOSEVELT TELLS TUSKEGEE AUDIENCE OF SCHOOL'S WORTH

## President Stresses Greatness of Institution is Shown in Work of its Graduates

Tuskegee Institute, April 6 (ANP)—Franklin Delano Roosevelt, President of the United States, rode into Tuskegee institute, the world's most famous Negro institution, Thursday morning and flashing his familiar smile, told the student body, the faculty and the thousands of visitors massed to greet him that "I have always wanted to come to Tuskegee. Thirty years ago I promised Booker T. Washington that some day I was coming to visit this institution. Then in later years, I promised Dr. Moton frequently that I would be here and more recently I have given the same pledge to President Patterson.

"There are those," the President continued, "who charge me with being both persistent and stubborn. Well, perhaps I am. I am consistent, too, and though I have been a long time coming, here I am.

"I wish that almost every American could come to Tuskegee and see what is being done here. I don't know whether in any individual institution, the faculty and the students realize how much they are being watched by the outside world. The things that they are doing in their institutions count but more than that, the things which their graduates are doing, not only among their immediate neighbors but also throughout the states and the nation, count.

"As a matter of fact, because I travel about the country a good deal, I notice the graduates of Tuskegee more than some of you do who are right here. I hear about a man or a woman, not only in the lower south, but in the middle of the country, in the north; somebody who is making good; somebody who is having an influence for human service in their community. And then I hear that he or she is a graduate of Tuskegee and that is what counts.

"I did not come to make a formal address to you. This is a homey gathering. Tuskegee is a homey place. We think necessarily and rightly in terms of the American home, and you are doing much through your great body of graduates to improve and bring up to higher standards the American home. That home today is not the home of half a century ago because of necessity. With modern inventions it must extend its interest, its contact with a great many more homes in its own community, as well as extending its contacts with people in other communities.

"Just in the same way that no one can become entirely self-contained, no state can be self-contained as a state was 20 or 30 years ago. More and more we are becoming part of a nation, which, because of changing conditions, we find we have to cooperate down to the smallest unit; from the home to national affairs. Alabama can't go its own road different from the other states, neither can my state of Georgia.

'More and more they have got to plan for the future, plan for the present, plan to work for the other fellow. And that is one thing you are teaching here at Tuskegee; that is one thing you are learning. You have got to cooperate with your fellow men and women by cooperating in your own community, in your own state and throughout the country.

"So that is why I have been not only interested in but very proud of all that your graduates are doing; of the fine spirit of human service that the overwhelming majority of them carry with them through their lives.

"Dr. Moton, when he spoke a moment ago, was talking about growing old. There is one thing which he exemplifies and that is, that it is a terrible thing for anybody to say, why should I keep on living? We are realizing more and more that it is a great privilege to be alive, no matter what the number of years we have covered.

"Somebody has said it is grand no matter how old you get, to keep on living because there is still so much to be done—still so much to be done. That is the spirit of you youngsters, the spirit of us in middle life, and it is the spirit increasingly of the older people in our nation.

"So my boy and girl friends, keep the ideals of your youth all through your lives. I am happy to have been here. I want to come back some day in the future and I will, if I can. In the meantime, I give you my affectionate regards. Good luck to you in all the days to come."

The President's special train stopped at Chehaw, the little station on the Western of Alabama railroad, some eight miles from the school and where he was met by President Patterson. In the party were Gov. Frank L. Dixon of Alabama, U. S. Senator Hill from the same state and Congressman Henry B. Steagall of this district.

He drove first to the U. S. Veteran's facility, an off-shoot of Tuskegee in a sense, since the institute gave the government the land on which to establish the hospital. Touring the grounds of the institution which houses nearly 1,500 colored war veterans and has a staff of a score of physicians and 600 employes, all colored, he paused to shake hands with Dr. Eugene H. Dibble, head of the Veterans' hospital and his official staff, and then drove on to adjacent Tuskegee.

At the school, he drove over the 2,000 acres of campus, observed the buildings, and paused at the memorial statue to Booker T. Washington. His tour completed, the president's car was driven up a ramp to a natural platform outdoors, where he looked down upon the upturned faces of the 1,200 uniformed students drawn up in military formation in the impressive and beautiful sunken gardens which lie between Thompkins and White halls, perhaps one of the most striking campus vistas in any American school.

It had rained all night before he came, but three hours before he arrived, the sun came out warm and glorious. The grass was velvety and green, blossoms of flowers were beginning to peep out; the trees were covered with fresh green leaves, half formed. The president saw a scene of rare American Negro beauty, and the sight must have enthralled him.

President Roosevelt spoke after words of welcome by Dr. F. D. Patterson, president of Tuskegee institute, Dr. R. R. Moton, president-emeritus, and Dr. William Jay Schieffelin, chairman of the board of trustees.

With news reels grinding, newspaper photographers vying for shots, and reporters grouped beneath the embankment, the president waved farewell to the assembled crowd and flanked by a squadron of state motorcycle police and secret service men, drove to the town of Tuskegee where he gave a brief greeting to the assembled white school children of the village, thence to Auburn where he made a brief stop at the state agricultural school, white.

## Named Secretary

WASHINGTON, D. C., April 13—(ANP)—Thomas P. Bomar, 136 S Street, N. W., this city, has been named Acting Secretary of the National Alliance of Postal Employees, with headquarters at 1216 You Street, N. W., by President Lafayette F. Ford of St. Louis, Mo., it was announced Thursday. Attorney Bomar succeeds Leon M. Anderson, who was promoted to a Foremanship in the Washington Post Office, March 27th, and who resigned as secretary of the Alliance on April 1st.

Attorney Bomar is a veteran member of the N. A. P. E. and has been in the Railway Mail Service for 20 years.

## The NYA And The Negro

(Fourth in a series of articles contributed by H. C. Russell, NYA State Supervisor of Negro Activities in Kentucky.)

### IV. A Balanced Program of Work and Study

The theory of cooperative education as developed at the University of Cincinnati. Tuskegee Institute, and a few other centers, has demonstrated its practicability and worth to the point of general acceptance. By the cooperative arrangements the learner is required to spend a part of his time at work at some occupation that is closely related to his vocational ambitions. In its wider applications this method implies that one learn to read by reading; to work by working; to be a good citizen by practicing good citizenship. It seeks to narrow the wide gap which traditionally exists between academic study and occupational choice and experience. The working student is to become the studious worker.

The National Youth Administration has undoubtedly rendered a valauble social service by extending some degree of opportunity for cooperative training to thousands of youths not otherwise likely to be reached. The balanced program is insisted upon in both the in-school groups and the out-of-school working groups. The high school or college student on NYA aid is expected first, to be at least a normal student who can profit by the institution's program. In addition, he must be assigned to some practical work outside the curriculum, for which he is held strictly accountable, and for which he is paid by the hour of work. On the other hand the out-of-school worker must first demonstrate his industry and worthiness to do the projects assigned him. In addition, he is required to take some form of academic or technical training as supplementary and contributory to the physical work that he is doing. The worker on a building project may spend off-hours in studying drafting or interior decorating, or, if his general education is meager, he may be simply learning to read and write the English language. A young woman who is learning home-making may be found enlarging her education by making a scrap book on etiquette, studying a course in elementary art, or a laboratory course in the science of food values.

The point is, the youth of the NYA are taught the philosophy and given various degrees of experience in what we have called the balanced type of education. Education through work is not a new concention but the extent of its application is a new phenomenon in our national practices.

### V. The NYA and the Negro Youth In Kentucky

A previous article has told of the two-fold functioning of the NYA program, for students in high school and college, and, for unemployed out-of-school youth. These two groups are served respectively by the Student-Aid program, and the Work Projects program for out-of-school youth. From the very beginning of the Youth Administration in Kentucky, Negro Youth have been part and parcel of the system.

Full quotas of students at Kentucky State College, Louisville Municipal College and the former West Kentucky Industrial College were assigned to the college aid rolls and have continued to enjoy the student prorata of fifteen dollars or less per month. More than 700 Negro students have been assisted to enter and remain in college through the opportunity thus offered. At present there are 78 Negro high and elementary schools in the state in which from one to eighty pupils are aid workers. The number varies with the size and need of the school. All receive amounts up to $6.00 per month. In all cases the student is required to do certain assigned tasks for which he is paid on the hourly basis. The money is not a gift. It is the reward for service rendered by students who must help maintain themselves in school or college. For the out-of-school youth the National Youth Administration sponsors various types of prjects at which young people may work and receive valuable experience and training. All work projects are operated as local activities in cooperation with public agencies, about 50 per cent being sponsored by school systems. Another type, the Resident Project, is a unit located at some central point to which youth come from designated areas more extensive than the local community. At these centers housing is provided, and a scheme of community living is carried out. Resident centers are now maintained in connection with Kentucky State College at Frankfort, and West Kentucky Industrial Training School at Paducah. A modified resident arrangement is being perfected at Lincoln Ridge, in cooperation with Lincoln Institute.

The number of local out-of-school projects necessarily varies from time to time. Such projects for Negroes have been conducted in Louisville, Henderson, Paducah, Bowling Green, Lexington, Covington, Winchester, and few other centers. Most of these projects are operating now.

# SLAP AT NEWSMEN AGAIN TAKEN BY CONG. MITCHELL

ATLANTA, GA., April 13 (ANP)—Stopping off in Atlanta en route to the Capital City from Tuskegee Institute, where he delivered the 56th annual Founder's Day address, Rep. Arthur W. Mitchell of Chicago's famed First District and sole Negro in the Halls of Congress, last Tuesday took another slap at newsmen, angrily charging that "as usual" they had "misinterpreted" his recent farm resettlement proposal.

Plainly irritated, the Illinois solon demanded: "Why can't you fellows ever get anything right? I've never proposed anything like moving those people down there. Such a thing wouldn't work anyway. No matter if they are out of work, they wouldn't be willing now to trade the bright lights of the city for Southern rural life." He denied that his plan called for a wholesale shift of Negroes from Northern cities to Southern farms.

Stem of the congressman's tirade was his recent announcement in Washington that he planned introduction of legislation setting up "A vast program to resettle destitute city dwelling Negroes on farm lands in the South." In spite of all the talk of equality, there's no question that the commercial opportunities for the Negroes in cities, even in the North, are strictly limited."

Explaining his plan which he had talked over with President Roosevelt at last month-end. Mr. Mitchell said his chief interest was not in city residents, but those now suffering economic want in the poor rural sections of the deep South. His plan he said would call for possibly 10,000 farm resettlement units, similar to the one set up by the Government near Montgomery, Ala., which he visited on his Tuskegee trip.

To illustrate his opposition to the city housing program, Mr. Mitchell told of visiting the slum clearance project at Nashville, found it more than half empty after being open for a year. He said: "They may be all right for people who have jobs, but no matter how low the rent is, a man can't move his family in there unless he has the course of income to pay it _____Something must be done to aid our people along these lines and as I see it, the farm offers the best opportunity."

While in Atlanta, Congressman Mitchell last Tuesday addressed a crowd of 4,000 at Booker T. Washington High school. Mrs. Mitchell, who accompanied the congressman, was introduced to the assembly by Principal C. L. Harper, and spoke briefly, addressing her remarks mainly to the girl students.

# SONG BOOKS

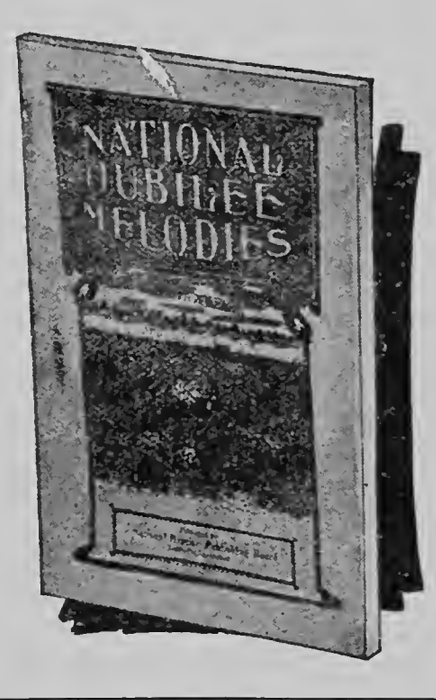
## For Sunday Schools, B. Y. P. U. and Church Worship

## NATIONAL JUBILEE MELODY SONG BOOK

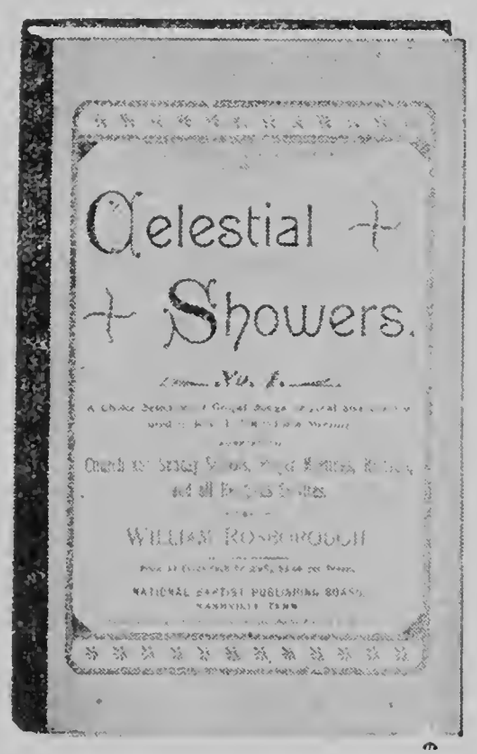
Order today and try these songs in your eleven o'clock service. You'll not regret it.

**PRICE 50c**

America's original music. Songs from the Plantation and Slave Days. More than two hundred thousand sold in the year of 1935 More now going. Send your order.



### Other Popular and Inspiring Songs Are to be found in these



**Celestial Showers 40c each; $4.80 per dozen.**

## COTTON PLANT DEPTH STUDIES

John W. Randolph, U. S. D. A. cooperator at the Alabama Depth Studies Experiment Station in American Cotton Grower (March) writes on "Variable Depth Cotton Planting." He says in part: "In 1931, the Bureau of Agricultural Engineering of the Department of Agriculture conceived the idea that for the best stand, cottonseed should be planted at variable depths. To accomplish this a standard cotton planter was equipped with simple attachments which caused the opening plow to move up and down making a seed furrow varying in depth one and one-half inches within the horizontal distance desired for the spacing of the final stand. In the first season's work this new system of cotton planting showed such merit that the Department obtained a basic patent which was later dedicated as a public service patent. Different spacings of the final stands of cotton are recommended by state experiment stations for various conditions throughout the cotton belt____In planting studies conducted over the past seven years comparisons have been made between the variable depth system and the constant depth system of planting____It has been found that the strongest plants seldom grow from one particular depth of seed placement. Within a short distance often the optimum depth of planting will vary as much as one-half inch. Frequently the first plants appearing above the surface of the soil may turn out to be the poorest. With the variable depth seed placement the seedlings come up over a period of several days. Each succeeding group of plans appearing above the surface encounters different conditions which may materially influence the growth and development of the seedling. Several commercial farm machinery manufacturers sell equipment for variable depth cotton planting. Such equipment can be obtained in a variety of mechanical arrangements. A few farmers have altered their own planters to permit variable depth planting. One difficulty in the past has been the tendency for certain parts to wear rapidly; also it has been difficult to make the planter penetrate hard clay soils to the desired depth. However, many farmers report that their cotton yields are so much improved that the mechanical troubles are of minor importance."

## FLOCK OF SHEEP WILL PROVIDE MEAT VARIETY

Realizing that the family needed some meat other than the pork they kill on their Pulaski county farm, Mrs. L. L. Allison decided to raise lambs to vary the menu, she told G. D. Cowsert, assistant county agent.

Last fall she bought six ewes and a ram. She has several lambs at present and plans to save the ewes to build her flock to 10 or 12. The males will be killed for meat.

The Allisons have plenty of good pasture and raise their own feed, Mr. Cowsert said.

## POLITENESS APPRECIATED

AN Irishman had been thrown over a fence by an enraged bull. He had just recovered when he noticed the bull pawing the ground and furiously tossing his head.

"If it wasn't for your bowing and scraping," said Mike, "I'd think yer threw me over on purpose."

## BOOKLET ON FSA HOUSES

Plans for the five-room houses built by the Farm Security Administration for about $1,100 became available to the public recently in a small booklet published by the Department of Agriculture, says a report in Southern Lumberman (March 15). The booklet, entitled "Small Houses," includes house plans for the $1,100 houses built on the Farm Security Administration's southeast Missouri project, and also for typical homes constructed at eight other FSA projects. Most of the houses described in the booklet are farm houses, without plumbing, but a few are urban or suburban homes. All are small homes that fall within the broad category of "lost-cost" structures. The booklet illustrates the method of construction by prefabrication and precutting, gives the floor plan for one of the typical houses and describes the materials used. The coat of the booklet is 10 cents (Supt. of Documents, G. P. O.).

## SMALLER BERRY CRATES

"The trend in berry marketing is toward smaller crates," says Col. L. Brown, in Country Gentleman (April). "Results of the past few seasons indicate that the 24-pint crate is most suitable for early strawberry sections. After the supplies of strawberries become more plentiful, consumers begin to buy a quart of berries at a time and the 24-quart crate gives best results. For most parts of the country the 24-crate will be found suitable. Raspberries should be packed in pint boxes and preferably 24-pint crates____Blackberries are preferred in quart boxes and 24-quart crates_____High quality cultivated blueberries sell to better advantage in pint boxes when prices are high, although at the height of the season quarts sell quite readily. Wild blueberries and huckleberries are taken readily enough in quart boxes. The 24-quart crate is preferable for this fruit also."

## Advantages of Dairying

(Continued from page 1)

or a total of $175 per year from the increase.

**Feed for Hogs.**

The 10 gallons of milk would return eight gallons of whey to the farm, which if properly fed to two brood sows, would help to raise $200 worth of hogs each year.

Thus, according to Mr. Collins' figures, the potential earnings from the 10 gallons of milk would be $656 annually. In addition, farm experts have calculated that each cow returns $20 worth of fertilizer to the land each year, which would total $140 in intangible returns. By proper and intelligent use of this fertilizer, it could be made worth several times that amount.

The bank of which Mr. Collins is president called attention to the fact that the growing of poultry and side crops of strawberries, peaches, cucumbers, tomatoes and other fruit and vegetable crops, could easily run the total cash income of the farm up to $1,000 annually, observes the Bee.

The figures are based on a plan of using home-grown feed at all times, and it was shown that all the feed needed could be produced on the farms of this territory.

The bank, by way of comparison, states that it would take 20 bales of cotton—60 acres of land on which to produce it—to bring in $1,000 annually. Even when butterfat was only 23 cents per pound—the lowest price the cheese plant has ever paid, the difference in annual income from the milk would be only $55.

## Farmers War Against Poverty

(Continued from Page 1.)

sold out to the Park and came down to this country.

"Well, I rented land but I did not understand how to farm and the big farmers just about figured me wages out of it. I had two good mules, two good cows, five or six hogs and $600 in the Bank of Sevier County. My children were all small, only one of them was large enough to help me.

"My wife got sick and had to have an operation. One of my boys had to have an operation next. One of my boys got hurt clearing new ground and was sick three months. One of my girls sucked a latch pin down her windpipe and it was open. I come down to one cow and all my money gone to the doctors. Oh, how blue I was right in the depression.

"But I would not give up. I had a family of ten. I leased a body of land from Mrs. Mae Laymon to clear. Me and my children cleared about 12 acres that winter. Well, there was nothing to plow.

"I met Mr. F. A. Neubert. I told him I wanted him to help me as he was a Rural Rehabilitation Supervisor for the Farm Security Administration. He helped me get a loan in 1936 and I borrowed $150. Mr. Neubert gave me all the advice he could about how to farm. I was in debt about $200 besides my loan. About two years after this I borrowed $150 more. Mr. E. E. Hunley was the R. R. Supervisor. He gave me all the advice he could and I bought a horse for $135.

"Well, I went to work doing all I could and following the plans of the RR Supervisor. I feel like I was put on my feet by the Rural Rehabilitation program. I certainly am thankful for this.

"During the last three years I have set three of my boys out to housekeeping. I am just about out of debt. I have plenty of corn and hay to do me, two good brood sows, two milk cows, one calf, nine fine pigs, one fine male hog, two three year old fillies worth $300, a good wagon and turning plow. I almost got plumb out of debt last year.

"Mr. James M. Bird, the present RR Supervisor, is helping me all he can. I am doing lots of work this winter. I will have 20 acres of corn, about twenty acres of wheat, one acre of tobacco, one-half acre garden, two acres for the canning of beans and a lot of other vegetables."

"I think this is the best thing that ever happened for the poor people that will work and be honest."

## PINE POLES SUPPLIED CHEAP BROILER HOUSE

Being short of funds didn't stop Mrs. Jack Ratcliff, Nevada county, Ark., home demonstration club member, when she wanted to go into the broiler business, said Miss Mary Dixon, home demonstration agent. A homemade poultry house was her answer.

The house is built of pine poles and has a brooder made of stone and mud. A bran sack covers the opening in the front of the house, and old lumber was used for the door, the door and window frames, and the floor.

The entire cost of the building and equipment was $6.59. Mr. Ratcliff built the house.

### Got Big Returns

Twenty-five dollars spent for 2 per cent Ceresan to treat his cotton seed before planting meant an addition of $250 to $300 to the 1938 cash income of Jack Palmer, Monroe county, he told Wyatt Mims, county agent. Mr. Palmer reported an increased yield of from 50 to 100 pounds per acre.

## Home Demonstration

(Continued from Page 1)

people. Local leaders conducted in the absence of the home demonstration agents 3,882 meetings attended by 47,613 people.

During the year the home demonstration agents assisted club leaders with conducting 86 tours to visit adult club projects and 96 tours to visit projects of 4-H Club members; 1,804 adults and 2,270 4-H Club members took part in these tours. The home demonstration agents reported 1,272 meeting with which they assisted in 1938 and 213,869 people attended these meetings.

A total of 9,502 people made office calls to the home demonstration agents for the purpose of gaining information helpful to the improvement of their farms, homes, schools, churches, and community life in general.

Displays showing the type of work carried out by the extension club members were exhibited at 189 events. In 24 counties there were county-wide home demonstration council organizations for club women and 23 home demonstration agents pertected County 4-H Club Councils for 4-H Club members. Approximately 200 council meetings were held for women and 4-H Club members during the year.

**Home Gardens—**

Club women reported 7,523 home gardens and club girls reported 14,355 club gardens which is a total of 21,878 gardens. This is an increase of 2,882 over the number reported in 1937. These gardens were means not only of furnishing fresh vegetables for the family's daily diet, but served also as means of adding many extra dollars to the family income. One hundred per cent of the club women did some canning and other types of conserving food stuffs. Women conserved a total of 314,299 containers of food and girls reported a total of 120,748 containers of food products. Club girls dried or stored 26,235 pounds of fruit and vegetables. Thus, club women and club girls conserved a total of 435,047 containers of food products, and if these containers were valued at an average of fifteen cents per quart, these home produced products are possibly a total saving to Georgia of $65,257.05. The fresh vegetables consumed in the family daily diet and other vegerables sold, plus the amount dried or fed to livestock, will add many more dollars to the amount saved by Georgia due to having the club members raise vegetables and other products at home which otherwise would have possibly been brought from other states and sold in Georgia.

**Home Poultry—**

Poultry raising on a small scale was profitable to those club women and girls who tried it out. Thousands of pounds more of poultry were used in the family diet than ever before and club women and girls made more money from selling poultry and eggs than from any other extensive project. A total of $11,885.74 was made by women and girls from sales of poultry products.

**Home Dairying—**

There was an increase in the number of cows owned and milked. Scores of families who never owned cows before managed in some way to secure one or more cows—some secured dairy calves and raised them, some bought cows, others borrowed, and still others milked for others on shares. Thus, hundreds of children and adults had an additional supply of milk and butter in the daily diet. A total of $8,540.68 was realized by club women and girls from sales of surplus milk and butter.

**Home Marketing—**

In home marketing women and girls reported a grand total of $33,548.87 made from sales including products from the garden, orchard, field, poultry, dairy, wild berries and fruits, nuts, quilts, rugs, baskets, and other miscellaneous home produced commodities. All of this was a great saving to the State of Georgia as this money might have gone out of the State to purchase these products if the people had not taken the good advice of their extension agents and other leaders, and had not produced these commodities at home.

**Lawns and Home Beautification—**

Club members in 997 homes started or improved lawns by leveling the home grounds, planting trees, shrubbery, grass, vines, and blooming flowers. Native trees and shrubbery were used to a great extent. Farm families erected 303 buildings, remodeled, repaired or painted 763 buildings, three-fourths of which were dwelling houses. The F. H. A., R. E. A., and other Federal sources were of great help to the people in their home improvement work. Electricity was installed on 54 farms and 523 farms secured some additional equipment for the farm and home.

**Clothing—**

The work done by the home demonstration agents in clothing continued to be of great value to the rural women and girls and enabled them to have more useful clothing to go cleaner and to look neater, and much more attractive; 5942 women and 9519 girls followed recommendations offered by their home demonstration agents with reference to clothing problems and as a result there was an estimated saving on the family clothing expense of $24,293.92. Remodeling, laundering, dyeing, and the care of clothing were taught in connection with the clothing problems; club women, in 1938, not only made many garments for themselves and families, but also made a good sum of money sewing for others.

**Home Management—**

An appreciable increase, in the number of families better managing their homes, was reported in the 1938 annual reports. These families also made definite efforts to better manage and train their children; 3,853 families improved the habits of their children; 1,806 families substituted positive methods of discipline in place of negative methods; 341 men and 3,484 women participated in the parent-education program under the guidance of home demonstration agents and other leaders; 10,339 children were involved in the Child Development and Parent-Education work carried out in 1938.

**Health and Sanitation—**

A total of 9,655 individuals reported having received health examinations and 13,969 individuals carried out health improvement practices according to recommendations from physicians, nurses, extension agents and other leaders.

**Extension Organization and Community Activities—**

Extension organization work was carried out in 802 rural communities with the assistance of 3654 club women, 1870 men, and 1268 other 4-H Club girls and boys.

**4-H Club Work for Girls—**

A total of 17,316 girls enrolled in 831 4-H Clubs in Georgia. This is an increase of 3,180 girls over the number enrolled in 1937, and 2,402 more girls completed their work than the number completing in 1937. A total of 27,836 girls and boys enrolled in 4-H Club work and 24,153 club members were in school in 1938. The 4-H Club work was one means of causing a large number of girls and boys who were out of school to return to school in order to take part in some of the 4-H Club activities.

A total of 14,355 girls enrolled in club garden work and 10,683 of those enrolled completed their work; 8,970 girls enrolled in home beautification work, especially in beautifying the home grounds and 6,728 of these girls completed what they set out to do; 1,757 girls took part in the wild life conservation activities and 41 club girls spent one week attending the wild life camp held last August; 142 club girls attended the State Short Course and took part in the State-wide Achievement Day program. During 1938 promotion cards were given to 7,000 club girls who completed their 4-H Club work and as a part of the State-wide Achievement Day exercises, certificates of honor were awarded to 27 club girls who had completed six or more years of 4-H Club work, the certificates being awarded by the State Extension Service cooperating with the United States Department of Agriculture.

# THE MODERN FARMER

Vol. XII. NASHVILLE, TENN., MAY 15, 1939 No. 4.

## MORNING STAR UNIT GIVES PROGRAM

### Rev. Haywood Smith Delivered Sermon

Redwood, Miss.—(Speeial to The Modern Farmer)—The Morning Star Unit of the National Federation of Colored Farmers rendered a very fine program on April 30th, which was National Farmers Day for colored farmers all over the country. The program opened with a song in which the entire membership of the ehapter joined heartily. Prayer was offered by the chaplain, then the president gave a very fine talk on the benefits of the unit in regards to new members. At the elose of this splendid talk, we had one new member added to our ehapter in the person of Rev. Geo. Staley. The welcome address was given by Miss Bessie Richardson, and at the close of this address the choir gave a fine selection. Miss Alma Porter read a very interesting paper entitled "That's What I Call a Friend." Miss Eliza Sylvester gave a very lovely solo. Miss Graee Riehardson read a paper; subjeet, "The Chureh Needs a Cleaning Paper", whieh was very good, and Miss Bessie Riehardson read us a paper, "Three Words to Young People", whieh was also much appreeiated. Rev. Haywood Smith delivered a great sermon from Matthew 18, and an offering of $5.52 was lifted The benediction was pronounced by our new member, Rev. Geo. Staley. We have also made Rev. Staley our Market Agent and we feel that in the future Morning Star Unit will aecomplish much and become a great factor in the lives of its membership.

## DRY WEATHER AFFECTS MUCH OF WHEAT BELTS

### Deterioration Reported in Parts of Kansas

Dry weather prevailed over the larger part of the winter and spring wheat areas in the last week, the weather bureau reported yesterday. Winter wheat deteriorated in parts of Kansas as a result of the dryness said the report. The crop made poor progress in parts of eentral Nebraska, and there was some deterioration in parts of Oklahoma. In most eentral and eastern distriets progress of the erop was mostly good to very good. Some wheat is heading in Texas, and jointing is extending well into Kansas and Missouri.

**Wheat Seeding Progressing.**

Seeding of spring wheat is nearing completion in parts of South Dakota and Montana, but rain is neede over a large part of the northwest. Planting of corn is general in Kansas, fairly general in Missouri, and is beginning in Nebraska, Iowa, Kentueky and the southern parts of Illinois, Indiana and Ohio.

Precipitation in the wheat belt in the last week was largely in the way of showers and in general was too light to be of much benefit to the crops.

## FLORIDA COLORED FARMERS TO EXHIBIT

### Plans for Displaying Various Products Given

Deland, Fla.—The Negro eitizens of Florida will be represented at the New York World's Fair in 1939 and 1940 aceording to E. W. Brown, manager of the Florida State Exhibit, in a reeent letter addressed to A. A. Turner, in charge of Negro Farm Agents, Florida Agricultural and Mechanical College, Tallahassee.

Free exhibit space will be furnished in the Florida building, Mr. Brown said, including exhibit cases with free illumination and placards for the Florida Agrieultural and Meehanieal College and the Negro citizens of the State in which to display samples of manufaetured artieles in miniature sizes, sueh as pine needles, wire grass and corn shuek work. Palmetto fiber and splint work, including hook and rag rug weaving, will also be shown as well as tables and chairs showing chair-bottoming with hiekory or with other splints.

An exhibit of sugar cane is planned, including six speeial varieties to be shipped to New York the last of April to be planted along with other native plants from Florida. "Flako" sugar cane syrup will be exhibited in glass and tin containers and sold in the concession sales department of the Florida exhibit, along with other native quality products from Florida.

This exhibit will be sponsored by the Florida Farmers' Co-operative Assoeiation, headed by G. D. Rogers of Bradenton, president of the Central Life Insurance Company of Tampa. Mr. Rogers urged that the farmers be eneouraged to give speeial attention to their sugar cane crops this year, from the standpoint of fertilization and eultivation, in order to inerease their syrup yields so that they may have on hand greater volumes of syrup for sale this Fall and thus participate in the benefits to be derived through the display to be made at the World's Fair.

## MARAUDING 'POSSUM IS CAUGHT IN KITCHEN

Athens, Ga.—It's a little early for folks to be planning their Thanksgiving Day dinner, but one item on the menu has already been settl d for the family of M. T. Toney. It will be roasted 'possum.

Mr. Toney was awakened in the wee hours by his wife, who insisted something was moving in the kitehen. Mindful of burglars, Mr. Toney investigated, and found his visitor was a 10-pound 'possum. It will be a Thanksgiving Day offering on the Toney Table.

"Love is divine, indifference contemptible, hate a disease."

## SURPLUS COMMODITIES NAMED

### Secretary Wallace States Available Articles Under New Food Stamp Plan

Washington, D. C.—Secretary of Agrieulture Henry A. Wallace has designated as surplus agricultural eommodities eight foods which may be included by the Federal Surplus Commodities Corporation on the list of commodities obtainable with surplus food order stamps under the recently announeed stamp plan.

The foods designated by the Secretary were butter, shell eggs, dry edible beans, dried prunes, oranges, fresh grapefruit, wheat flour and whole wheat (graham) flour, and eorn meal.

The surplus foods are to be formally listed in a bulletin issued by the FSCC and approved by the Secretary of Agrieulture. The Corporation is authorized to determine the speeific areas and the periods of time during whieh these eommodities will be eonsidered surplus. The Corporation also may remove any food from the surplus list if a ehange in marketing conditions warrants it.

"If fresh fruits and vegetables eome into surplus later in the season it is expeeted that they will be added to this list from time to time," said Milo R. Perkins, president of the Federal Surplus Commodities Corporation. "Under the food stamp plan it will be possible to assist farmers by treating surpluses of such erops on an area rather than on a national basis. For example, some of these produets may be deelared surplus for a 6 weeks' period in a given trade area. Because of this flexibility it will be possible to assist truck growers and fruit growers in moving their seasonal surpluses into an area where they can get a greater return beeause of small transportation costs. Fruits and vegetables whieh might otherwise not be marketed ean thus find their way through regular trade channels into the homes where they are most needed."

It is expeeted that the food stamp plan will be put in operation around the middle of May in Roehester, N. Y., the first experimental city seleeted. Subsequently the plan will be put into operation in other experimental eities in widely seattered areas of the United States. Under this plan, WPA workers and people receiving, or certified as eligible to reeeive, public aid may obtain free the blue surplus food stamps under provisions designed to assure that food bought with them will be in addition to the normal food purehase of the family. These blue stamps will be good in any cooperating groeery store for items on the surplus food list.

**Churches don't give half enough time to youth. They are run for the middle-aged and the old.—Burris A. Jenkins.**

## AGRICULTURE AS A WAY OF LIFE

LIBRARY JUN 20 1939 AGRICULTURE

## STATESBORO FARMER WINS PRIZE

### $500.00 Awarded to Eddie Wilson of Georgia

Eddie Wilson, owner of a 268-acre farm just southeast of Statesboro, Saturday was announced first plaee winner in the colored division of the Plan-to-Prosper program for for 1938.

Mr. Wilson won a $500 prize.

The 40-year-old prize winner has 124 acres of his farm under cultivation, the other he has in timber. Cotton is a minor crop with him.

During last year, he earned $950 from live-stoek and sold $735 worth of cotton.

With a family to support baek in 1920 and no job in sight, Wilson turned to farming, taking a job as a share-cropper. In 1920. when the "depression" came, he invested what money he had saved in a farm of his own. Since that time, he has "gone plaees", so to speak.

In diseussing farming, Mr. Wilson said:

"The program has meant an eduеation to me," he said. "It taught me to grow what I need to live on and to feed my stock and to plant what eotton I could grow and make money on.

"If any farmer grows what he needs and changes his crops around using all his waste land and adding a little fertilizers to his erops, he ean make a profit from his farm.

"A good practice is to always carry something to town to exchange for what you need instead of going to town with an empty wagon and eoming baek with a full one. If we praetice going to town with an empty wagon and coming baek with one full all the year, we will come back in the fall with an empty poeketbook and a big debt to start on next year."

## POLICE DOGS GET RADIOS; TRIALS ARE SUCCESSFUL

Sydney, Australia—Radio soon will aid Sydney poliee dogs in erime deteetion work and in searching for persons lost in the bush eountry.

Reeent trials with an Alsatian dog named Zoe, leader of the police troupe, have proved the animal's ability to understand radioed instruetions and the efficaey of the equpiment.

Entirely out of sight of the trainer Zoe sueeessfully followed the broadeast instructions. The dog's reeeiving set, a two tube affair weighing about eights pounds, is built in two seetions, one eontaining the receiver and the other the batteries. It is mounted to a saddle whieh fits over the dog's shoulders. Broadcasts are made on a nine meter wave length.

### Farm Woman Gives Her Point of View

By Elizabeth MacDonald

(In The Christian Rural Fellowship Bulletin)

My home is the farm my father was born and lived on all of his eighty-one years. He had a full happy and interesting life. His love of the land and his knowledge of all that grew from and upon it, was the basis of his philosophy. Second only to that was his interest in mechanics and his ability to utilize water power into labor-saving activities for his farm.

As a homemaker, I am surrounded by the things ehosen and used by my grandmother, my mother, my generation, and the next. One of my theories is that we should hold on to the best of the past and be ready to advance with the present and the future. I hope you will pardon me for introdueing my subjeet with this personal point of view, but perhaps I ean make my points elearer by this method than by any other.

Agriculture as a way of life seems to mean many different things to different people. Within the span of my memory, many different attitudes have been in vogue in regard to life on farms and in partieular, the life of a farm woman. As a matter of fact, life on farms differs as widely as, for instanee, life in a pent-house differs from that in a slum tenement in the city. In the eity, the major extent of life depends upon the earning ability of the breadwinner, while on the farm, this depends a great deal upon the ideals, thrift and skill of the homemaker. I would not like you to think that I do not consider money necessary for well-being in the country. It is increasingly important with each generation and right now the tragedy of deeaying farm buildings and equipment due to small farm means and an almost entire laek of extra farm labor is serious.

Some people emphasize the God-given advantages of living in the country and feel that all farmers should be satisfied with these alone. Many farmers have had to be satisfied with these blessings for some time and they have carried on largely due to the faet that those who have gone before had builded well. The true farmer always appreciates the natural forces and finds contentment in his home and peaee in his community if given half a ehance. We grow to love and revere the earth and the rain and the sun, and we have pleasure and a sense of obligation in the part whieh we ean play in making the land produce.

I am at a loss to know how to express the farmer's attitude clearly. I can do no better perhaps than quote from that great teacher and poet of eountry life, L. H. Bailey: "The outlook to nature is, of eourse, the outlook to optimism, for nature is our governing eondition and is

(Continued on Page 16)

# INCOMES OF FARMERS IN THE EAST SHOW HUGE GAINS UNDER WET LAW

### New York State Agricultural Station Reports on Far-reaching Effect of Repeal—More Milk Consumed, too—Big Decline in Drunkenness

Farmers in the grain producing States have profited immensely as a result of the repeal of the 18th Amendment, but few persons would expect that benefit to extend into the Eastern States to any great extent. However, statistics released by the New York State Agricultural Experiment Station at Geneva, N. Y., show the far-reaching effect of Repeal.

Prior to Repeal, New York State farmers planted only 15 acres to hops. From 1933 to 1937 the hop acreage increased to 234 acres. During 1937 the yield was 140,400 pounds for which the growers were paid between 30 and 38 cents a pound. The average return on an acre was $200. In some cases the product was of such high quality that the yield brought $400 an acre.

The use of grapes for beverage purposes also showed marked gains with an increase from an average of 50 per cent in 1934 to 75 per cent in 1937. For the three years prior to Repeal the average ranged from 13 per cent to 31 per cent.

While recognizing the economic benefits to certain groups of farmers, the New York State Liquor Authority has made a study to ascertain if the farmers had suffered a loss through a decline in the drinking of milk, the prediction of which was one of the economic arguments used against Repeal. The same contention still is being advanced by Prohibitionists. The inquiry in New York, however, proves the argument to be without merit.

Increased milk consumption as reported by the New York State Milk Research Council shows that the figures for the New York Metropolitan area for 1937 are somewhat higher than the figures in the good year of 1929 and just under the all-time totals of 1930.

Other advantages of Repeal in New York are cited in an editorial in a recent issue of the New York Times, which in part says:

"In this State the number of driving licenses suspended or revoked for intoxication during 1938 was nearly 30 per cent less than the corresponding number during 1937; arrests for offenses in which intoxication figured dropped about 12 per cent; and a survey indicated that, in hotels at least, young people were drinking less than they did during Prohibition days.

"The total consumption of alcoholic beverages of all sorts has dropped off a little since last year. Drinking is certainly habitual with large numbers of our citizens, but the liquor is better and the environment more wholesome than under Prohibition."

## COOPERATION

(From Consumers Guide)

**A COLD STORAGE** locker plant built into a cooperative grocery is one "frozen asset" that's proving valuable to a Farmer's Union cooperative in Iowa. The locker plant, according to its manager, has not only tied membership closer to the store, but has also brought city people into the farmer-owned cooperative in growing numbers. Each of the 324 lockers holds from 150 to 250 pounds of meat. The co-op's manager warns against cheap construction, and advises building no fewer than 300 lockers.

The plant cost $8,000, which does not include the cost of a building to house it, since it was made a part of the already going grocery store. Thirty carloads of livestock are expected to run through these lockers in a year. When all the lockers have been rented, a net saving each year of $2,000 is looked for. Revenue comes from renting lockers at $10 a year, and a charge of 1 cent a pound for processing the meat brought in for storage.

A COMMUNITY REFRIGERATION plant of the locker storage type is planned by 300 farm families near Pipua, Ohio. They have secured a $15,000 loan from the Rural Electrification Administration to build the plant. The REA regards the loan as "an experiment likely to lead to widespread use of community plants." The cooperative's lines, among the first in the country to be built with REA funds, will bring power to the refrigerator plant. The 300 lockers, each of 6 cubic feet capacity, will be rented to members. The rental return is calculated as "ample to retire the loan, pay for electricity used from the cooperative lines, and to provide additional funds for payrolls and working capital. Aside from supervisory and engineering tasks, once the plant is in operation, the greater part of the labor will be performed by the farm members."

FIRST RURAL ELECTRIC CO-OP to select a woman for its president is one in Illinois. This association recently received a loan of $403,000 from the Rural Electrification Administration to enable it to build 366 miles of line to serve its 1,271 members. Other REA aided organizations have women on their boards of directors, but this is the first one to have a woman as executive head.

"If REA projects are to be successful, not only on the basis of pay-out, but on the basis of rendering the largest possible service to rural communities," remarks Rural Electrification Administrator John M. Carmody, "more and more farm women must take an active part in the program from the beginning. In many cases the women will derive more benefit from the use of electricity than the men. They are more conscious of its need—many of them will redesign their homes—they will have new kitchens and new kitchen arrangements. They want to know what electricity will do for them. They want to know what it will cost. The best way to find out about all of these things is to participate actively in the program. Every REA board of directors should have women on it as active members."

ONE ANNUAL summer attraction for cooperators is the conference tour of Nova Scotia. For the third successive year, this tour is being sponsored by the Cooperative League of the U. S. A. together with the Extension Department of St. Francis Xavier University of Antigonish, Nova Scotia. In 1937 and 1938 some 300 people from the United States made the trip to see Nova Scotia's cooperative in action. This year's tour is set for August 21—September 2.

IN THE SECOND labor-and-co-operative confab in recent months, co-op leaders sat down with trade unionists from the American Federation of Labor and the Congress of Industrial Organizations in a week-end of discussions on mutual aims and working relationships. The Racine, Wisconsin, Consumers' Co-operative was host to 150 delegates who came from 20 unions and farm and city cooperatives in Wisconsin, Illinois, Minnesota, Indiana, and Ohio. Agreement seemed to prevail on the possibility of having labor and the cooperatives work together to achieve a common goal of a higher American standard of living.

COOPERATION will get a professorship all to itself at Laval University in Quebec. The university's School of Social Sciences declares that it "attaches particular importance to this new Chair which will have as its purpose the spreading, people, the idea of the common effort not only among our intellectual elect, but also among the masses of the basis of the cooperative movement."

LEARNING BY DOING is more and more the rule in consumer education. Latest group of students to try consumer cooperation on their own are the pupils at the Askvo, Minnesota high school. Thirty-six of them are members of their own cooperative. Through it they buy pencils, paper, and other school supplies. Once a month they have an "educational and business meeting," when they take up balance sheets and operating statements.

LABELS that enable consumers to buy groceries by grade and by facts, have been adopted by five regional consumers' cooperative wholesales. Through their national headquarters, the five wholesale associations—whose affiliated retail groceries do a total business of over 5 million dollars a year—are putting a uniform co-op label on their canned foods. Government grades are utilized where they are available. A short statement of cooperative principles also appears on the label, which has been designed by a cooperative design service.

Consumer cooperatives are selling more and more Government-graded canned fruits and vegetables and meat. A cooperative wholesale in Chicago has put out a readable 4-page circular entitled "How is the Consumer Protected by Government Grading?" A few headings of the pamphlet indicate its scope: "Grades A, B, C—what they mean," "How to save by buying graded canned foods," Scientific reliability," "You—the Consumer—last to be informed," "Your co-op buyers—Grade score sheets."

## FINDS 7 LEAF CLOVER GROWING IN BACK YARD

Mrs. Adeline Rutz's luck runs almost double. The unusual clover she found last Monday in her back yard had seven leaves. In the same clump there also were five and six leaf specimens.

And no one can tell Mrs. Rutz that the old tradition is false. She found a five leaf clover two years ago and insists that good fortune showered down. The legend of good fortune attached to the four leaf clover is lost in antiquity. It is said that Eve carried one away with her from the Garden of Eden. Other antiquarians believe that the legend originated with the Druids.

# BUSINESS MAGAZINE WITH A. L. HOLSEY AS EDITOR, ISSUED

CHICAGO, May 18 (ANP)—"Negro Business," the new quarterly magazine published by the National Negro Business league, made its initial bow this week.

The attractive periodical, whose prime purpose is to chronicle examples of Negro achievement in business and to discuss matters of economic interest, has articles in the first issue by C. C. Spaulding, Dr. F. D. Patterson, Atty. A. T. Walden, George W. Cox, Dr. R. R. Moton, Mrs. Fannie B. Peck, Mrs. F. V. Smart and M. S. Stuart. The issue also contains a report of the Houston convention of the league which was held last August.

In an article entitled, "Looking Ahead with Negro Business," President C. C. Spaulding says, "We are led to conclude that the Negro is unquestionably awakening to his opportunities in the field of business. This is evidenced by the fact that in America he is now engaged in some hundred thousand commodity-selling and personal service forms of business.

"I join in the general belief that the beginning of a new prosperous era is at hand. But regardless of the outcome, business within our group is securely entrenched, and firmly believe that the future holds every promise of better and more efficiently managed Negro enterprises as time moves on."

Negro Business is published at Tuskegee institute, with A. L. Holsey as editor, and Robert R. Moton, Jr., as business manager.

## HIGH BIDDING FOR FARM

(St. Louis Post-Dispatch)

Like a snowball rolling down hill farm subsidies gather size and momentum as they go.

The election comes next fall, and the farm vote is a crucial factor. So the senate has tacked an additional $382,000,000 to the already generous farm bill passed by the house. The bill calls for a stupendous total of $1,215,000,000 for agriculture for the next fiscal year.

President Roosevelt has demanded that the proposed increase in the farm subsidies be accompanied by new taxes to raise the necessary revenues. But taxpayers are voters, too, and the senate probably will, as usual, check the bill to posterity.

All but a minor fraction of the more than a billion dollars, which the senate bill appropriates, would go for rental and benefit payments for the landowners. Aside from a small sum to be spent on the farm tenancy program, the bill entirely overlooks the needs and claims of the 2,000,000 workers who, the Farm Security administration finds, have been displaced by the crop control program and farm mechanization. Only a few of these 2,000,000 persons vote.

The house, let us hope, will stand its ground and turn down the senate's increases. If it does not, the President should veto the bill and require congress to rewrite the appropriation at a reasonable figure. Addition of a quarter billion dollars to the national debt in order to provide a special election year gift for the farmers is on an exact par with packing the relief rolls a few weeks before election day.

Customer: "This milk isn't good any more."

Farmer: "I know it, mister. Our cows haven't been contented since they tore down that sign with the handsome bull on it."

## RARE COMBINATION

Old Fruitful is not a beautiful cat, nor a rare one. In fact, in the past nothing about her has been deemed remarkable, neither her vast appetite for rats nor the 19 kittens she has given birth to at the Chicago Zoological park at Brookfield.

But now comes a change in her status. She has adopted Lulu, an orphaned baby raccoon, and that is something cats usually don't do. More important, she tends it with far more devotion than she tends her own newborn kittens, a tiny tortoise shell and a tiny black one.

Lulu came to her Tuesday after she and four other baby raccoons were discovered in a chimney of a farm house near Antioch. The five, their eyes still closed, seemed half-starved when found. All they could do was cling tenaciously to anything that touched them.

Two of the foundlings were placed with a zoo raccoon, who recently had a litter of five herself. Two more went to Otto Holdick, night keeper, to be fed by hand with an eye dropper. The fifth went to Old Faithful, purely as an experiment, and Old Faithful seems to love it.

"It's remarkable," Robert Bean, assistant zoo director said, "that she would accept it at all. Yet it clings to her everywhere she goes."

## SOUND DOCTRINE

(Topeka Daily Capital.)

The Capital has speculated editorially on the newly appointed justice of the Supreme court, William O. Douglas, his lack of judicial experience and whether he will prove to be radical, conservative or moderate as a member of the highest court in the world. It is our opinion that even if he starts out as a radical his tendency will be to become more conservative with years and experience.

Our attention has been called to a comparatively recent expression of the fundamental viewpoint of the new justice which we think is worth repeating. Here it is:

"We are a capitalistic economy and only so long as we remain a capitalistic economy will we remain a democracy. Capitalism and democracy are Siamese twins; they can not live if separated. An effective job requires a leadership of business and alertness of industry to its own responsibilities. Industry has it in its power to take the lead in putting its whole corporate house in order. Every such chore should not be left to the government. Let us not look to government for leadership except where self-help breaks down.

That seems to us to be about as sound and clear a statement of the American idea as we have seen. If the new judge holds to that he will prove to be a great judge.

## Memphis Christian Acts Natural, Then Offers An Apology

KANSAS CITY, MO., May 18 (By Rev. S. H. Sweeney for ANP)—Either forgetting where he was or else not caring, Dr. Lud H. Estes, white Memphis minister and secretary of the Methodist Uniting conference, from the floor of the conference last week used the epithet, "nigger," in refering to a member of the Negro race. He apologized afterward.

Those who are always looking for trouble usually find more than their share of it.

# ALLEN UNIVERSITY STUDENTS DRAW CHALK LINE FOR THEIR NEW PREXY

## Youngsters Set Forth in Seven Demands Big Order For Next "Boss" to Fill

COLUMBIA, S. C., May 18 (By I. M. A. Myers for ANP)—The student council of Allen university has petitioned the alumni, bishop and trustees to elect a man of training and prestige to head Allen, one of the leading colleges of the African Methodist Church. The vacancy at Allen occurred in March on account of the death of Eugene Howard McGill. Dean T. B. O'Daniel is acting president. There are many candidates in the field, but the students ask for a monumental character as their "prexy."

The letter released from the student council sets forth the following requirements:

7. Our president should be a man who has a life expectancy of at least 25 years.

2. He should be a man ambitious only to advance humanity through the agency of education, in the school and this by providing the best by way of educational facilities for those who come under his supervision.

3. He should be a man who through training, character, personality and experience is able to hold his own whenever and wherever leading educators throughout the nation gather. He should always be endowed with the necessary social graces, that attract rather than repel.

4. He should be a man well schooled in the study of individual differences, recognizing that every young man and every young woman is a distinct personality with highly significant potentialities which it is the duty of the school to study and develop.

5. He should be a man of fluent and logical speech. and of trenchant and facile pen; one whose literary life and contributions from time to time may react favorable toward the institution.

6. He should be a man of local, national and international outlook, thoroughly alive to the social and economic conditions at home and abroad; a man of civic learning, believing in the equality of all citizens under the constitution of the United States.

7. He should, it goes without saying, be a member of the African Methodist Episcopal Church.

# OHIO ADOPTS PLAN TO GET JOBS FOR COLORED WORKERS

## G.O.P. Legislator of Cincinnati Credited With Idea Party Will Follow

CLEVELAND, O., May 18 (ANP)—What has been described as the most significant forward step in recent years to get more jobs for Negro workers and rescue them from economic serfdom was revealed here this week when it was learned that the state of Ohio has made up its mind to see what can be done to relieve unemployment among Negroes.

Responsible for starting the ball rolling in the job-getting program is Representative Chester K. Gillespie Cleveland lawyer and civic leader, who finally succeeded in persuading the state Republican administration to do something concrete and effective about the deplorable situation.

Accepting the Gillespie plan, state officials agreed to hire four Negroes in Cleveland; two men and two women; and one man, one woman, both colored, in six other Ohio cities, their duty being to call on leaders of business and industry, important executives and utility officials, and ask them to share their jobs with Negroes.

The six other cities where the job-getting program will be started are Akron, Cincinnati, Dayton, Columbus, Toledo and Youngstown. Negroes employed to do this work will not be primarily politicians, but well-trained college people who can put the job over in a vigorous manner. They will have offices in the Ohio State Employment Service branches now established in the cities mentioned.

Starting salaries of the Negro representatives will be $135 per month for the men and $105 per month for the women, with increases to be granted later on merit. Concerning the new set-up, director of the Ohio State Employment Service division, W. T. Doe, said this week,

"Mr. Gillespie, Republican representative of Cuyahoga county, is to assume responsibility for contacting the proper people in these communities so that the recommendations of properly qualified people may be made as quickly as possible, and appointments made without delay. Complete specifications for these jobs will be mailed to Mr. Gillespie, so that he can proceed at once on the problem."

Interviewed by an ANP reporter soon after his plan had been adopted, Representative Gillespie declared: "This is the most thrilling experience I have ever encountered, and I believe it is the most important thing the administration can do for Negroes to improve their economic standing. Here in Cleveland, 70 per cent of the Negroes are on relief, while only 7 per cent of the white people are on relief, showing clearly that the available work is not being shared with Negroes.

"After we get the system set up in Ohio, we are going to ask the federal government to survey it and then attempt to sell the system to every state in the union. I believe Negroes all over the country will be tremendously interested in this important step taken by the administration here in Ohio to improve the economic status of the Negro. As I see it now, we are virtually economic slaves."

## DR. CARVER'S DISCOVERIES TO BE SHOWN

### Tuskegee Scientist To Have Exhibit At Harlem Fair

New York, A special exhibit of some of the many products discovered by the famed scientist, George W. Carver, in the field of agricultural chemistry was on display at the Negro Industrial Fair in Harlem, May 15, it was announced by Ralph O. Gothard.

A letter from Dr. Carver's assistant, A. W. Curtis, was received last week saying that the exhibit is being prepared especially for the Industrial fair and though in a limited way, will be similar to the Carver museum, now being assembled at Tuskegee institute.

Mr. Curtis has also agreed to become a member of the advisory committee of the fair instead of Dr. Carver who because of ill health will not be able to serve.

Other plans for the fair are going along at a rapid rate. More than 50 manufacturers, artists and other persons have reserved booths for the exhibits and action-picture work spaces.

The Consumers and Craftsmen's guide, sponsor of the fair, gave its second annual dinner at the Y. M. C. A. on Sunday, March 26.

## GREENE COUNTY BOY'S CALF IS NAMED WINNER

Augusta, Ga.,—While hundreds of farmers, club boys, livestock specialists, newspaperman and officials of the Twin-States Livestock Association looked, and a grade Hereford calf weighing 900 lbs. and owned and fed out by Melvin Stephens of the Woodville Community in Green County was judged grand champion of the Negro Division of the Augusta Fat Cattle Show held last week in Augusta.

### Champion Brings

Melvin's Calf as grand champion brought 13.20 per pound. Milton Stephen a twin brother of Melvin took second place in the heavyweight class and was beaten for reserve champion by a club boy from Burke County. These boys after paying for their calves and other expenses had $161.00 left for feed and labor. All of their feed was produced on their farm.

The other five boys feeding calves in Green County also made money on their projects. C. L. Tapley is County Agent there.

## THE D. A. R. AND MISS ANDERSON

(N. Y. Herald-Tribune)

The Daughters of the American Revolution, by definition inherent in their name, are the descendants of those who fought to make this country free and to establish a government which would hold to certain ideals—ideals which seemed high at the time and which, come to think of it, still seem high. The fact makes it all the more astonishing that the D. A. R. should have refused to permit Miss Marian Anderson, the distinguished Negro contralto, to give a recital in Constitution Hall, Washington, on the evening of April 9. It happens that the D. A. R. owns the hall and has the technical right to refuse its use to any one it sees fit. However, there is little wonder that persons of many faiths and many occupations have been delighted to make a vigorous protest. If such a snub to a Negro singer had occurred somewhere in the deep South, it might have been understandable, although just as regrettable. But to see such a thing in the nation's capital, with the Daughters of the American Revolution the chief culprit, is, to use a word of extreme mildness, dismaying. In the past, on occasion the D. A. R. has stepped from the sublime to the ridiculous; in the case of Miss Anderson this distinguished old American organization has outdone itself.

## TIPSY MULE WAGON DRIVER GETS 30 DAY JAIL SENTENCE

Cambridge, Ill., March 9—(Special.)—Eddie Medley of Cambridge was sentenced to thirty days in the country jail by Judge Charles G. Davis on a charge of driving a mule drawn wagon while drunk. Medley and a companion, Ted Johnson, of Cambridge, were arrested by Sheriff Fred Swanson when the mule team ran away. Johnson, charged with vagrancy, was sent to jail for sixty days.

A small boy is a pain in the neck when he is around, and a pain in the heart when he is not.

Friend: "Were you excited when you first asked your husband for money?"

Wife: "Oh, no, I was calm—and collected."

# START FOOD STAMP PLAN TO DISTRIBUTE "SURPLUS" TO NEEDY

## Government Expects to Aid Both Farmers and Relief People With Experiment

ROCHESTER, N. Y., May 18 (ANP)—Arrangements for starting the U. S. Department of Agriculture's new food stamp plan here have been completed, it was learned this week.

According to information from the Washington office of Secretary of Agriculture Henry A. Wallace, the plan was decided on last March 13, and will function through the Federal Surplus Commodities corporation. The plan aims at wider consumption of surplus farm products by increasing purchasing power of low-income families. During the experimental period in Rochester (2 to 4 months), the distribution of surpluses will take place through wholesale and retail grocery outlets.

Rochester grocers have indicated a willingness to push the sale of surplus products to all consumers under the plan, which soon will be extended to five other experimental cities. Families eligible for the local experimental plan include WPA workers, mothers receiving pensions, folks receiving old-age pensions and unemployed who are getting public assistance.

Here's how the plan works: Families certified for public aid will be offered the chance to buy orange-colored stamps—which will serve as purchasing power at any grocery store. Those buying orange stamps, blue stamps will be given free. These blue stamps will buy certain surplus foods at any grocery. Value of the blue stamps (given free) will be 50 per cent. (one half) the value of orange stamps purchases. That is, for every dollar's worth of orange stamps bought by a family, 50c in blue stamps will be given free.

No family will be permitted to buy more than $1.50 of orange stamps for each member of the household, each week, and the minimum purchase of orange stamps will be $1 per person. Secretary Wallace said that should the new plan succeed, it will make three distinct contributions to the public welfare.

"1. It will get more surplus farm products into consumption; that will help agriculture. 2. It will provide more and better food for low-income families; that will improve the public health and benefit the future of our people. 3. It will increase the volume of merchandise moving through the normal channels of trade; that will help all business."

With a population of 330,000, Rochester has several thousand families who are receiving some form of public assistance. Nearly 5,500 heads of families are employed on WPA projects and conditions here are considered ideal for trying out the new food stamp plan.

## Sold Church He Didn't Own; He's In Jail House Now

NEW YORK, May 11—(ANP)—William Corbin, the man who sold a New York pastor a church on time payments, but who could not deliver the church, was convicted of grand larceny this week and sentenced to 2½ to 5 years in Sing Sing.

Corbin and another man who has not been arrested sold a church to the Rev. N. Frazier for a small sum down and the remainder in time payments, which amounted to $630 before the pastor became suspicious when keys given him didn't fit the doors of the church. It was brought out at the trial that the man had also sold Rev. Frazier a large auto on time.

# FORM ORGANIZATION OF BERRY GROWERS

GREENVILLE, ALA., (ANP)—Negro farmers of the Garland community located near here have, under the leadership of Elliott Robbins, Negro County Agent organized the Colored Strawberry Growers Association which is a cooperative marketing and purchasing unit.

Adam Golson, president of the Association reports the recent purchase of a carload of 2,500 strawberry crates at considerable savings in cost for the individual members.

## Fashionette

By Hazel L. Griggs for ANP

FASHIONS FOR THE FAIR!

Most of us, thoroughly World's Fair conscious by now, with two gigantic expositions beckoning to us from either coast, are very likely wondering what to include in our wardrobes in order to best enjoy the exhibits in a fashionable as well as a comfortable manner.

Because the weather will soon be quite warm, and cottons, always perfect for sultry days, are high fashion and extremely eye-filling this year, my suggestion for those who go gadding off to either Fair is a wardrobe dominated by cottons. And cottons are equally good this season for daytime, dressy or evening wear.

Needless to say, rumple-fabrics are most important for travel wear and now that most of the new gingham, piques, calicos and linens are sanforized, they come in this category of wrinkle-resistant materials. We may, therefore, use them as much as we like in assembling our wardrobes.

In the cotton wardrobe, a gingham suit may well be that most important costume, for such a suit is trim and neat, may be worn for many occasions and the jacket may be doffed if the sun beams down too lustily. An attractive outfit of this type is a black and white check affair, consisting of short jacket and skirt all-white pique or batiste blouse. It is brightened by red accessories. Another pert jacket costume combines a red and white plaid gingham blouse with navy linen skirt, topped by a navy linen bolero.

Along with this basic costume, you will want several other washable dresses in calico, linen or swiss; some matching turbans; a playsuit or slacks, several pairs of string and fabric gloves, which can be kept fresh; and a roomy string or linen bag, also toubbable. Several pairs of comfortable walking shoes, of course will be indispensable, and a change of cotton sweaters and blouses will not be amiss. A pretty combination in the sweater and skirt group is a white cotton pull-over worn with a red linen swing skirt.

For dancing, if you're wise, you'll also include cottons, for the dotted swiss, organdy and embroidered batiste dance frocks were never lovelier. Occasionally the cottons tie-up with silk for novel effect. For example, a permanent stripe pique skirt with lots of flare has a bodice of black taffeta. And here is in many instances, we find the black, white and red combination which is so popular.

In view of the fact that you will encounter some cool weather in your Fair visit, especially in San Francisco where nights are extremely chilly, by all means include a wool dress or suit and a medium weight topcoat in your Fair-bound luggage. Add a silk dress or two and one "special date" ensemble to your classic cottons, and you have a wardrobe that will see you through from the Perisphere to the Cotton Club. So, off with you now, and best wishes for a happy holiday at New York's World of Tomorrow or San Francisco's Golden Gate Panaroma.

The fire you kindle for your enemy often burns yourself more than him.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

FROM THE BIBLE

"And now abideth faith, hope, charity, these three; but the greatest of these is charity."

### WINGED MESSENGER

I watched a slender silver bird
Return as God had planned,
And like a plane it circled twice
Before it sought to land.
It flew along a lonely trail
And found its home once more—
And I had seen a miracle
Beyond my kitchen door.
—Hilda Butler Farr.

### TENANTRY—A DYING SYSTEM

The tenant-system of farming in this nation is doomed. Our children will probably live to see the day when farms for rent and farms to sharecrop will be as hard to find as hens' teeth. During the past few years thousands of tenants and sharecroppers of the cotton-belt have been forced to seek other employment for themselves and families in the towns and cities. Illinois, a northern state, in many counties there were not enough farms for rent to meet thet demands ow prospective renters this year. Farms for rent have been gradually growing scarcer.

Power farming has played a big part in pushing tenants off farms and this system of farming is growing rapidly. Tractors are going on some farms twenty-four hours a day during busy seasons. Farms are being consolidated into larger units and fewer men are required to run them. Farm labor is being hired by the hour in many places and farmers generally claim they get better results. They also claim that supervised farming by farm owners is better for the land than tenant farming.

As usual, when farming becomes a big business, the owner of the big farm loves the dollars he piles up from his farming operations much better than he loves the farm itself. The big business man is seldom a good farmer, in the sense that most of us recognize and define a good farmer. The sure-enough good farmers of the future, like the good farmers we have known in the past, will be the owners and lovers of family-sized farms.

And, though we must face the fact that tenantry and the sharecropping system is dying, and, though we realize that a great majority of Negro farmers are tenants and sharecroppers, we are not inclined to worry much about the future of this group. Good tenants of any race or nationality are good farmers and when such tenants make money for themselves and their landlords they usually buy farms of their own. Our good tenants and sharecroppers will become farm owners too if they have the opportunity. The opportunity is present NOW.

Our good tenant farmers and sharecroppers should purchase farms NOW. Now is the time to investigate, to plan and to sacrifice. The race and the nation will be better off when a million colored farmers own and love their family-sized farms.

### THAT PIONEERING SPIRIT

We were conversing recently with an eighty-odd year old colored farmer. He told us about his parents, who left Kentucky shortly after the Civil War and settled in the state of Kansas. They lived in a dugout for five years and slept on the bare ground. One winter they survived by eating parched corn. They were unable to purchase any food. But they toughed it out, reared a large family, and eventually owned the farm this son possesses now, one of the finest farms in his section of the state

We know a young Arkansas colored farmer who has purchased 40 acres of dark, sandy loam at twenty-five dollars an acre. The farm was purchased from a lumber company. They gave him a two year lease and then a sales contract. Gradually he is clearing the land. He has a new log house, with porches, curtains, flowers and trees. He has a truck garden to feed his family. He has some pigs and chickens.

The first year was the hardest. This year he expects to make between 16 and 17 bales of cotton. He has ten years to pay for the place and says he may need a little more time than that, but he will pay for it. He has had to fight great trees which had to come down, underbrush, rattlesnakes, sickness and the lack of cash. But the good soil is with him and his fields of cotton, corn and hay prove that he is not afraid of work.

We believe there are thousands of colored farmers in this country who have that pioneering spirit. These farmers do not want to be set on improved farms, be given model homes and be supervised by the government. They want their freedom. They want to go at it like real pioneers. They want to stand on their own feet. They only want half a chance, and, if given that, they will prove what they can do.

The government should give the pioneers a chance, farmers who are not afraid to chop down trees, and, if necessary, subsist on parched corn. Give the pioneers a chance, farmers who want to build their own homes, who think more of a mule than an auto, who think more of sunlight than of electric light, who are not scared of mud roads, who have more experience than book-learning. Give these farmers a chance. All they want is land to live on, they will get the rest.

Land sharks are buying up thousands of acres of cut-over land each year. They get such land cheap. They advertise and sell it to pioneer farmers at 100 per cent profit. Much of this land could be purchased by the government.

The model farm colonies are all right. They are all right for the fortunate would-be-gentleman-farmers, necessarily few in number, who live on the model farms and are helped out of every difficulty by the friendly hand of the government. But the pioneer farmers are not made out of such stuff. They can't be model men on model farms. They are rough, independent individuals and they want to be on their own.

The government should beat the land-sharks to this land these pioneer farmers need. It is reported that one model farm colony has cost the government one and a half million dollars. There are only 500 farm families in the colony. The same amount of money would buy enough "rough" land to satisfy the desires and needs of five thousand pioneer farmers.

We suggest that the government experiment a little more, buy up some land and re-sell to a few thousand Negro tenants and sharecroppers. Put these pioneers on their own and let's see what will happen We bet in ten years time some of the advocates of the model colonies will be saying, "Who would have thought it?"

### KEEP OUT OF SINK-HOLES

The writer was reared on a rocky and hilly Kentucky farm that had at least one sink-hole to every five acres. On the edge of these sink-holes the grass grew the greenest, and quite often the unwary and hungry calf, colt, or lamb that went too close to the edge of the hole after the tender grass would tumble in. When we missed some animal we would hastily inspect the sink-holes and would usually find it badly injured or dead.

Before it is too late, colored farmers and farm workers should learn that some organizations seeking their support and membership are simply sink-holes, beautiful around the edge but dangerous. Beware of organizations that preach hate and confusion, that advocate strikes, that claim you can gain more by fighting than by reasoning. Membership in such organizations will increase your difficulties. Your burdens will grow heavier. You will lose far more than you will gain. You will make your friends, enemies.

We believe also, it is best for colored farmers to keep out of farm organizations which are not officered, led or supported by farmers of our own race. The Negro farmer is kept at the back door of such organizations, no matter what is promised him. He has very little say, so in such organizations. Negro farmers have their own religious organizations, their churches, and they should have and be members of their own business organization, their local farm organization.

The National Federation of Colored Farmers is not one of the sink-holes. Play safe, join and help build and support the N. F. C. F. It can do as much for you as any other farm organization can, it can do its work for you in a better way, it is a race organization from top to bottom and some old day, colored farmers are going to be mighty proud of it. Get your Unit going and make history, and make yourself a better farmer and a better man.

### WE ARE TOO POOR

The Negro group in this nation is too poor. Poverty is just about the only thing we have concerned and it has added nothing to our welfare or progress. Our forefathers probably could be poor and happy too, but we of today are not like that. Poverty only increases our misery.

Some of us have little individual ability and such will always be poor. Some of us are poor on account of sickness and other things over which we have no control. But most of us are poor on account of carelessness, lack of foresight, lack of nerve, lack of ability to stick together, lack of a strong desire to have something in this world, and lack of will-power to compel us to have, plan and sacrifice until we get what we want.

Farmers should teach their children the value of a dollar. Let the boy or girl earn some money and teach them to spend it wisely. Improve their minds, hearts and bodies. To do away with poverty we must do this one thing. We must make every effort to improve ourselves and our children. When we improve ourselves then we will improve our co ndition.

### DANDELIONS ARE NOW OUT

Yellow tops of dandelions are beginning to show up in sunny spots along south slopes of hillsides. Many families already are picking the tender leaves for greens. Others are preparing for the annual drudgery of digging the plants out of their lawns. Some advocate the use of dandelion greens as good for the stomach and for the lawns.

Dandelion leaves are rich in vitamins and minerals and are said to make appetizing greens, salads, and sandwiches. Here is a recipe for preparing dandelion greens, suggested by Miss Mary Meade, cooking editor of THE TRIBUNE:

"Dandelions, to be tender and succulent, should be gathered before they have blossomed. After blossoming, the flavor becomes too bitter for most palates. Wash the leaves carefully and cut off the root ends. Cook in a large amount of boiling, salted water, uncovered, until just tender. Drain in a colander. Serve with salt, pepper, a little vinegar, and several tablespoons of chopped crisp bacon."

**RECIPE FOR SANDWICHES**

Here is Miss Meade's recipe for dandedlion sandwiches: "Use crisp young leaves and tear them apart. Arrange on slices of buttered bread, sprinkle with salt, pepper, and lemon juice, and cover with another buttered slice. Serve when freshly made." Miss Meade also suggests using dandelions as salads and as wilted greens.

Dandelions often are cultivated for use as spring greens. The cultivated kinds are much larger than the common lawn variety. There is a wide difference of opinion whether dandelion always should be relentlessly destroyed or whether attempts should be made to keep them in check where they are not wanted while cultivating them for their various useful purposes in other places. Many enjoy the early yellow blooms. The roots sometimes are roasted, ground, and mixed with coffee.

Opinions also differ as to the best methods of ridding lawns of dandelions. Many lawnkeepers insist that the most effective way is to dig them out.

**EFFECTIVE SPRAY DESCRIBED**

Frank K. Balthis, horticulturist at Garfield park conservatory, says a spray that is effective when applied at this time of year is made by dissolving 1 to 1½ pounds of iron sulphate in 1 gallon of water.

It should be mixed in a wooden container and may be sprayed or sprinkled on the lawn. He says it kills dandelions and other flat leaved weeds, but does not permanently injure grass, although the grass may appear to be damaged for a few days.

Balthis also recommends spraying with kerosene about the middle of September. He suggests using 2 quarts of kerosene to 100 square feet of lawn space. He says fertilizer should be put on the lawn about one month before it is sprayed with kerosene to stimulate the grass so it will not be injured.

**ABUNDANT CROP ASSURED**

Nature has taken special precautions to insure a continuous crop of dandelions. A single plant, when growing in the open, may produce 20,000 seeds in one summer.

Each seed is equipped with a sort of parachute that enables it to be carried easily by the wind. Fields badly infested with dandelions may produce 300 million seeds to the acre.

Dandelions live 10 or 20 years. The age of the plans may be told by counting the growth rings in the roots. There is one ring for each year's growth. They are similar to growth rings in a tree.

## ASK 500 PLANES FOR RACE AVIATORS

Washington, D. C.—In an open letter to the United States Senate, Edgar G. Brown, president of the United Government Employes, Monday made a plea for 500 combat planes to be earmarked for Race air pilots to be trained "at the direction of the secretary of war at Howard university, Wilberforce university and Tuskegee institute, where there are at present Reserve Offiicers Training corps under the command of the U. S. Army." The plea was in support of the National Defense Act.

### HOW TO ESTABLISH CREDIT

After we take into consideration all the elements of good character, honor and integrity, if we establish credit we must pay our obligations the day they are due. If it is impossible to pay, you should see the person whom you owe, four or five days before maturity of the note. Tell him your conditions, frankly and fairly. Never run from, dodge or duck your obligations.

# Farm Family Makes Resolution To Remain Self-Supporting; Succeeds

When history is written about agricultural recovery in Jefferson County, Kansas, names and everyday accomplishments of such men and women as Mr. and Mrs. William Henry Bell, Jr., will be reckoned with.

These worthy folks rent and operate a 200-acre farm a couple of miles south of Oskaloosa. They have raised a family and have brushed elbows with drouths and depressions. They know from first-hand experience what damage grasshoppers can do.

Experience has taught them the first requisite of security living on their farm is to raise that security themselves. They know that every penny's worth of subsistence living which they can produce themselves cuts just that much from the list of groceries they would otherwise have to buy.

**Bells Determined**

Determination is one of the qualities of the Bells. Not so many years ago, this couple, with their family were on the verge of being forced off their farm to look for work that was mighty hard to get, or to accept direct relief.

Here's where determination came into the picture; for they were determined not to become public charges. They were determined to justify the fine respect they enjoyed from their neighbors, many of whom were more or less in the same boat.

They had read of the rehabilitation program of loans made to farmers for the sole purpose of helping farmers to help themselves. This appealed to them just as it appealed to virtually all worthy farmers who wanted to fight their own way back to security.

After a family conference, Mr. and Mrs. Bell went to see the county rehabilitation supervisor of Farm Security Administration. In 1937 they borrowed an emergency amount of $85 to get them past the spring planting session.

**Plan Farm Enterprise**

In 1938 they were ready for a standard loan. In April—just about a year ago—they went again to the county R. R. supervisor. Together they planned a sound farm enterprise, featuring diversification, intelligent crop rotation, livestock and poultry, and, among other things a good garden.

They obtained a standard loan of $840, bringing the total borrowed up to $925.

They have repaid $83.05 or the amount with production the first year. But the main thing is that they have now the livestock and equipment to make their farm keep on paying them and repaying the loan.

Before they obtained their loan and before they replanned and reorganized their farming set-up, they possessed two old horses, five cows and three hogs. These were mortgaged to a local bank.

They had the willingness to work—but not much hopes of getting ahead. Now they have seven cows, two heifers, three young horses and 13 hogs. They have the same old willingness to work—and in addition they have bright hopes of getting ahead.

**Whipping Depression**

"We're proud to be whipping 'Old Man Depression' this way," said Mr. Bell. "But don't give me all the credit. My wife deserves it, too. without her help, we'd have been sunk. Say I want her to show you a good reason—a lot of good reasons—why we won't be hungry."

Then Mrs. Bell led the way to the farm cellar where shelf after shelf was loaded down with canned vegetables and fruit.

"But didn't you folks have grasshoppers? This looks as though you had a most favorable garden season," was the visitor's comment.

"Sure," replied Bell. "We had grasshoppers. And the garden wouldn't have grown without a lot of hard work and planning by Mrs. Bell. Our boy, Edward helped a lot too, and so did I. But, man it's plenty worth the work."

It is the opinion of Roy Appleton, FSA county supervisor, that the Bells are on their way to actual rehabilitation, and that they will remain valued members of the community.

## TRINITY UNIT SHOWS FINE PROGRESS

Trinity Unit of Lexington, Miss. Vice President of Mississippi Walter Riley, president, and R. D. Davenport, secretary, has reported an increase of six to their membership. The new members are Casper Hayes, Mrs. Louise Patterson, Miss Jewel Davenport, A. Pickens, James Lloyd and Rube Hester.

This Unit engages extensively in cooperative purchasing and marketing, especially of livestock. They will sell approximately three thousand dollars worth of surplus farm products this year.

The Modern Farmer congratulates the progressive members of Trinity Unit.

## RATHER THAN LOAF ALL SUMMER

Let us suggest cooperative vegetable gardens to the youngsters coming out of school rather than the alternative of loafing all summer. An idle brain, they tell us, is the devil's work shop, and idle hands are hardly less so. Cooperative vegetable gardens, properly worked, would go a long way toward taking care of both idle brain and hands.

A cooperative garden would require some thought and supervision and parents would have to take some direct interest in seeing that land, tools, seed, fertilizer, water and work received proper emphasis, particularly if the profits to pocket and morale were to be made reasonably certain.

The time to get work done would be relatively short, and for that reason such vegetables should be selected as would be the most profitable from all points of view, and because of this no temperamental fooling around could be tolerated. One of the things we yet have to get into the heads of most children and a great number of grown-ups is that the struggle for existence grows keener each day, and each individual is or will soon be responsible for his share of the burden. Hence, to start a cooperative garden project means it were better not done at all than attempted by those who do no mean to go on through with it—easy or hard.

If the garden is not started at all before school is over, it should begin with such crops as normally begin at that time. Potatoes, corn, beans, tomatoes, peas and a few other crops can start in early June, while a good fall garden can be planned and grown to great advantage.

—Editorial—Atlanta Daily World.

## WARNING TO POTATO THIEF; SPUDS COATED WITH POISON

Kenosha, Wis. — Sheriff Leo Schend today was trying to get a warning to the person who stole two bags of potatoes from a Wood road farm warehouse during the night. The farmer reported he had just coated the potatoes with a poison powder preparatory to planting them Monday and any one eating them will be very sick.

## CALL THE UNION

A little girl had been to church for the first time. When she returned home her mother asked her what she thought of church.

"I like it very much," she said, "but there was one thing I didn't think was fair."

"What was that, dear?" asked her mother.

"Why, one man did all the work and then another man came around and got all the money."

— Montreal Star.

## PHYSICIAN HONORED BY MEDICAL GROUP IN PHILADELPHIA

PHILADELPHIA, May—(ANP) — Dr. John L. Reeves, widely known physician and specialist in chest ailments, has been elected a fellow of the American College of Chest physicians, first of his race to be so honored. A graduate of Howard Medical School, class of 1923, he has, since completion of his interneship, been a staff member at Mercy hospital.

For the past two years he has also been attached to the Rush hospital for consumptives, and has conducted a chest clinic for the city's TB department. Dr. Reeves, in addition to his other duties, has studied chest diseases and collapse therapy under Frank W. Burge at St. Luke' Children hospital. He is now assistant to Dr. Burge at this hospital, where they conduct one of the largest Collapse Therapy clinics in the city.

## WPA-PWA AND THE REST

We absolutely do believe in aiding the unemployed, the sick, afflicted and aged, but what we stand for is a system, an organization, an opportunity to work—all this without humiliation and uncertainty to anyone. Then men today who are getting these benefits do not know whether said benefits will last 30 years, 30 days, 30 minutes. What we want is a system of perfect work, definite benefits and, at the same time, treat an American citizen as if he were human.

## WHITE OHIO STATE MEDICAL STUDENTS AID CLASSMATE

COLUMBUS, O., May 9 (ANP)—Last Monday, at the same time white Kluxers in Miami, Fla., were parading the streets in autos and trucks with license plates covered, attempting to intimidate colored voters and prevent them from voting in the primary, it was learned that a group of real American white students at Ohio State University had extended financial aid to a colored classman unable to pay his spring quarter fees.

Melvin F. Farris, last year medical student, earning his way through school by doing odd jobs, had saved $77, but had loaned it to his sister who was ill and faced a large hospital bill. Farris, the only Negro in the freshman class of the College of Medicine is popular with the student body, and on learning of his plight, a classmate, Mason S. Jones, determined to do something about it. Enlisting the aid of two other medical students—Don W. Walters and James A. Pollock, Jones and friends started a collection, raised the needed sum and paid Farris' tuition fees.

Declared Solicitor Jones: "Everyone likes Farris, and I know that many students had to borrow the money themselves to help him."

## PREJUDICE SLAPPED DOWN

(By Raymond Clapper)

Out of the narrow-minded mixture of red tape and prejudice which has kept Marian Anderson, the great Negro contralto, from the concert stage in this capital of democracy is growing as if with divine justice was one of the most notable tributes of recognition ever accorded a member of this long-suffering race.

She wasn't allowed to sing in the D. A. R. hall nor in the public school auditorium. But on Easter Sunday she sang at the foot of the noble statue of the emancipator of her race, on the steps of Lincoln Memorial. Her audience numbered millions of high and low. Chief Justice Hughes, and Associate Justice Black, who was charged with membership in the Klan, accepted places of honor on the Lincoln Memorial steps to hear her sing. Vice President Garner was invited to be present but did not, up to this writing, accept the invitation. However, many other officials were present. Thousands of Negroes came from cities throughout the East in pilgrimage for the occasion. The three radio networks broadcasted her voice.

Thus, through the actions which denied America's own Marian Anderson the ordinary concert stages here, available at fancy prizes to a steady procession of foreign artists, her voice will now be heard by millions who otherwise might have lived out their lives without ever having heard of her.

The nice people who found rules to deny her the hearing that Russians, Germans, Italians, Poles, Jews and all othere races of the earth receive on the concert stage in Washington, have unwittingly played into the hands of the professional organizations of Negro. Walter White, secretary of the National Association for the Advancement of Colored People, the chief lobbyist for the Negro cause, who

Our book with prepared church and Sunday school addresses and prayers for all occasions is 60c in stamps, check or money order or C. O. D. plus postgae. Write Public Speakers Society, Box 1114-D, Oakland, Calif.

when in Washington stays at one of the most socially correct hotels, is taking full advantage of this incident to develop race pride. His organization encouraged Negroes to make the Easter Sunday pilgrimage here.

But this affair has become much larger than Walter White and his organization for the advancement of Negro rights. The Administration here has seized upon the affair to demonstrate the tolerance which it is felt properly belongs in a democratic nation.

The idea of having Marian Anderson sing on the steps of the Lincoln Memorial came from a southern-born Administration official, Oscar Chapman, Assistant Secretary of the Interior. He sold the idea to his chief, Secretary Ickes. The White House is sympathetic Mrs. Roosevelt having brought the whole affair to national attention by her resignation of protest from the D. A. R.

Chapman's idea of using the Lincoln Memorial grew out of an incident in his childhood. He was born in Virginia, and as a lad in grade school had a stern lesson in intolerance. His eighth-grade graduating class had a small fund and wished to give a present to the school. He bought a picture of Lincoln. His teacher was tolerant and accepted the gift.

But when the children carried word home to their parents, and the news got around, the school board was in rage. The picture was ordered taken down. Oscar was suspended, but through the intercession of a Methodist Sunday school superintendent who was for that reason allowed on the school board although a Republican, he was restored to class. Bewildered by the angry feelings aroused in the school board, Oscar began to ask questions. From that time he has taken the side of tolerance in every showdown that has come his way.

What does the color of Marian Anderson's skin have to do with her ability as an artist? What is the difference between the Nazis driving opera singers off the stage because they are Jewish, and Americans in Washington closing their concert halls to a recognized artist because she is of the Negro race? The difference is this: We don't expect anything better in Germany now. But in Washington we have a shrine for Abraham Lincoln. In the long run, we can be proud that this shrine was made available for the Easter Sunday gesture of race tolerance. It's the principal of the thing, and it won't even matter much if Marian turns up with larngitis.—The Washington Daily News.

## OHIO COOPERATIVE REPORTS

The Ohio Farm Bureau Cooperative Association, Columbus, reports total purchasing and marketing volume of $6,856,932.33 for 1938. Gross margin was $370,825.58, or 5.41 per cent, while net earnings totaled $120,468,09. At the annual meeting W. E. Stough was named president; J. M. Hodson, vice-president; Murray D. Lincoln, secretary-treasurer and general manager; L. A. Taylor, assistant secretary; and J. E. Keltner, assistant treasurer.

### TIGER A TERROR UNTIL HE HEARS MASTER'S VOICE

NEW YORK,—A full grown tiger, with a full set of teeth and a deep bass voice, roamed at large and terrified Long Island City residents for an hour today. Twenty policemen and thirty circus employes captured the beast.

Police received a telephone call from a truck driver. "Listen," he said, "I'm not drunk. I just saw three men chasing a tiger."

Radio patrols were notified emergency squads sped to Northern boulevard. When police arrived there were thirty men instead of three. Roy Chorister, the tiger's trainer, arrived. He was terribly put out and told the tiger so. Then the cowed animal was loaded into a truck and hauled back to the circus.

## On The Air

(By Sallye Bell for ANP)

Did you ever try shaking hands with an empty glove? Or talking to someone in a dark room, only to learn there's no one there? Then you've experienced the rather baffled, feeling that comes with exerting energy for nothing, and you can sympathize with the writer of this column. Writing for you radio fans is just like broadcasting to an unseen audience and then learning that the mike wasn't on. I never hear a word from you; if you read this column, if you like it or don't like it, if you get anything from it—I never know it.

I was reading in the paper the other day that executives of a large radio network said there was no demand for Negro radio talent simply because Negro radio fans DO NOT SUPPORT THEM. A radio artist's support is his fan mail, and I can sympathize with any artist who is trying to pull Negro response because it just isn't there. But I'm a glutton for punishment, so I guess I'll continue writing these words of wisdom and gems of knowledge for you (as long as I continue to get paid for it) and hope that one or two out of the twelve million Negroes in these United States will read 'em and do somethin.' So much for that.

If you heard "Wings Over Jordan" last Sunday, you heard the Rev. Mr. David Mpkato Buyabuye Mdodana, pastor of First Baptist Church of McDonald, Pa., and eldest son of a tribal chief in Idutywa, South Africa. Tribal religion demanded him as a sacrifice, but American missionaries intervened in time to save him and convert his father to Christianity. He came to the United States when he was 15, and has been here since, after attending public schools and both Negro and white colleges and universities. He is founder of Pender County Training school at Rocky Point, N. C.

The National Urban league's new program, "Negro News and Views," [illegible] over station NYC (810 k), [illegible] York, is going over big. ## FORMER ALABAMAN HOLDS MARSHAL'S JOB IN NEW YORK

### J. Dalmus Steele Makes Fine Record as Official; Handles $75,000 and 10,000 Cases in 2 Years

NEW YORK (C)—With forty vacancies for city marshal in New York, due to the new ruling placing marshals under Civil Service, and with the post of Marshal J. Dalmus Steele being one of those now under consideration by Mayor LaGuardia for refilling, it was revealed on Thursday that Marshal Steele, a popular Harlemite, has made an unusually fine record during his term of office, which began on October 15, 1937. Marshal Steele is now located at 115 W. 116th St., near the Tenth Municipal Court Building, and is one of three Negro city marshals.

The inside story of what a marshal does and how he can conduct his office to serve the best interests of the community is revealed in the story of the way Marshal Steele has conducted his office. He handles cases in all of the five boroughs of the greater city, and in twenty-eight municipal courts, involving judgments of from $1 to $1,000, and in the City Courts, involving $5,000 judgments. Marshal Steele served the remainder of an unexpired six year term. He is now up for appointment to a full six year term.

**Collected $75,000**

During his term Marshal Steele has handled 10,000 cases, and collected $75,000; and, the marshal adds, "the people whose money we collect get the money."

Marshal Steele, a native of Utah, Ala., has lived in Harlem for 25 years. He says a freak of fate caused him to miss a professional career. In 1906 he went to Atlanta, Ga., to enter Clark University on a scholarship, having been picked by Dr. I. Garland Penn as a bright young man who deserved special help. But the Atlanta riots came along and that changed the course of his career. Although born in the deep South, the Marshal says he always had "spunk", even as a child. He left hom looking for a place to live, and when he got to Harlem he knew instantly that "this was the place," so he stuck.

**Varied Career**

Since coming to Harlem the Marshal has had a varied career as fraternal leader and churchman, having risen high in the ranks of the Elks, being founder and first president of the State Association of Elks in 1919, and is now personal representative of the Grand Exalted Ruler in this area, the largest area in Elkdom.

In 1925 the Marshal married the sister of Caterina Jarboro, noted opera singer, of Wilmington, N. C. Last year Mrs. Steele visited the Marshal's old home in Alabama and was royally entertained.

**Marshal's Job**

Coming to the job of marshal, which is of great descretionary powers, the marshal says he has always made it a point not to be assertive in his office, and as a result he has been able to compose the differences of many contending parties to the best interests of both. He looks on his job as one with an undertow of social service, and in entering humble homes, he does so with courtesy and tact, and with the basic desire to make friends. As a result of his policy, many large furniture and other business concerns have left matters of procedure up to the marshal, leaving the way open for him to work out a settlement that is fair and just in the circumstances.

With a deep booming voice, a striking personality, and a fine presence and bearing, James Dalmus Steels has sought to make a record of honesty and efficiency for his race that would stand the closest scrutiny, and at the same time leave an impression of good will in the community in which he lives as a citizen, even though he has the power to destroy and be within his rights.

### FIRE DAMAGES WILDLIFE

Eight species of bird life are facing extinction in Florida as a result of the fire that is devastating a million acres of land in the Everglades, according to a survey conducted by the National Association of Audubon Societies. The damage is not confined to birds it was said. In Dade County at least a thousand raccoons died a a result of the fire. Among the species facing extinction in Florida, it was reported, are the large American egret, the gull-billed tern, the snowy egrea, the Florida crane, the Audubon's cara-cara, the yellow-crowned high heron, the wood ibis and the roseate spoon-bill. (New York Times)

### SIX YOUNG FARMERS JAILED AS THIEVES AT WOODSTOCK

Two young men who confessed stealing chickens for their fathers and one who admitted taking his mother's jewelry were among six farm boys locked up in the county jail at Woodstock yesterday. Authorities said the suspects had also stolen tires, wheels, and batteries from automobiles. The prisoners: Herbert Jacobs, Jr., 18 years old; his brother, Lester, 19: John Smith, 18; Charles Rusboldt, 16; Leo Dewane, 16, and Justus Rasehke 15.

## Essay Contest

DURHAM, N. C.—(C)—Rule 8 of the National Contest is being stressed by G. W. Cox, chairman of the National Negro Insurance Week Committee, which is sponsoring the $175 cash national prize contest, it was announced this week. This rule says: "All essays must be written on one side of regular composition paper or typewritten on one side of 8 1-2 x11 typewriting paper. At the top of the paper must be written plainly: (1) Full name, (2) correct address, (3) male or female (4) age, (5) grade, (6) name and address of school, (7) name of principal of school. Some essays already turned in disregarded this rule, said Mr. Cox.

## Phi Beta Sigmas Honor Vaughn

NEW YORK, May 18 (By Cleveland G. Allen for ANP) In recognition of his work in [illegible] the ideals of college frat[illegible] a testimonial banquet will [illegible] tendered B. F. Vaughan, president [illegible] the Epsilon chapter and nati[illegible] secretary-treasurer of the Phi [illegible] fraternity, at the Imperial hall [illegible] day evening, June 5. [illegible] representatives from oth[illegible] fraternities will join w[illegible] paying tribute to Mr. [illegible] service [illegible] about [illegible] between [illegible] of the [illegible] frat[illegible]

## WHEN KIDNEY TROUBLE CAUSES YOU TO GET UP NIGHTS

When Bladder is Irritated
When Passage is Difficult
When Backache Results

### Flush Poisonous Waste and Acid From Kidneys

### GAIN IN HEALTH

If you aren't feeling just right—are nervous—have dizzy spells and occasional backache—study your kidneys and learn more about yourself.

Through the delicate filters of the kidneys, acid and poisonous waste are drawn from the blood and discharged from the body thru the bladder—sometimes these filters are less active than they should be because of excess poisonous waste and kidneys do not function properly—they need harmless stimulation.

One reliable medicine, highly efficient and inexpensive is GOLD MEDAL Haarlem Oil Capsules. This grand medicine has been helping people for 50 years—to relieve their aches and pains by helping conditions caused or aggravated by excess uric acid or other circulating poisons such as is often the case with sciatica, neuritis, neuralgia, lumbago and rheumatism.

So if you have such symptoms of kidney trouble as backache, nervousness, getting up two or three times during the night—scanty, burning or smarting passage—leg cramps—moist palms or puffy eyes get a 35 cent package of this grand and harmless diuretic at any modern drugstore—it starts the first day on its errand of helpfulness.

Don't be an EASY MARK and accept a substitute—Ask for Gold Medal Haarlem Oil Capsules—right from Haarlem in Holland. GET GOLD MEDAL—the original—the genuine. Look for the Gold Medal on the box —35 cents.

## PHYSICIANS AND DENTISTS REUNITE FOR CONVENTION

### Feud Which Began 15 Years Ago Now Ended, Report Says

NEW YORK, May 18 (ANP)—A truce has been called in the feud which began almost 15 years ago between the National Dental association and the National Medical associaiton. The executive boards of both organizations announced last week that the annual conventions of the two bodies would be held simultaneously in New York next August 14-18.

The dentists broke away from the N. M. A. to form their own organization because there was a feeling that the dental profession was being subordinated to that of medicine. Since then, the N. M. A. has maintained a dental division, but most of the dentists joined the n[illegible] organization.

The scientific and business sessions of the organizations in New [illegible] will be held at separate and distinct places, thereby providing [illegible] dental men with the best dental clinics and the medical men with the best medical clinics, since neither will be encroaching in the other's field. Larger and more powerful branches are expected to arise from this agreement and build up a greater respect for the colored professional practitioner.

In view of the impending national health program, these medical and dental associations should show [illegible] cooperative front and this meeting in New York will be the groundwork of a firmer foundation of understanding and respect between the dentists and physicians, members [of] the executive boards declared.

Among those men prominent [in] these negotiations and agreement were Dr. S. C. Hamilton, Chi[illegible] president, National Dental association; Dr. G. W. Bowles, York, [illegible] president, National Medical association; Dr. E. W. Taggart, Birmingham, chairman, board of directors, N. D. A.; Dr. Waldo Howa[rd], Houston, president-elect, N. D. A.; Dr. J. A. Jackson, Charlotte[illegible] Va., secretary-treasurer, N. D. A.; Dr. Sylvester Smith, Ambler, P[illegible] assistant secre[illegible] and other executive officer[illegible] N. M. A. in the New York area

### FINES TIPSY DRIVING SON; PROMISES JAIL NEXT TIME

## TUSKEGEE DOCTOR HAS NEW TREATMENT FOR NEUROSYPHILIS

### Dr. George C. Branche Explains Discovery to Notables in Chicago

CHICAGO, May (ANP)—For the second time in five years, Dr. George C. Branche, chief of the neuropsychiatric service at the Veterans' Administration facility, Tuskegee, addressed the annual convention of the American Psychiatric association last week at the Palmer House on "Therapeutic Quartan Malaria in the Treatment of Neurosyphilis among Negroes."

Dr. Branche, himself a member of the association, first attracted international attention at the 1934 convention when he told the assembled psychiatrists of his radically new method of treating mental disorders brought about by syphilis. His address last week concerned recent developments in his specialty

The Tuskegee physician's treatment was developed after it was learned that neurosyphilis among Negroes could not be treated with the commonly used tertian malaria. This was because there had been developed a general racial immunity to this form of malaria through generations of living in warm areas where this disease is prevalent.

Dr. Branche reasoned that quartan malaria, a stronger and more virulent form of the disease which was more or less foreign to Negroes, might be substituted. Results were amazing. Of those inoculated with the quartan malaria treatment, 93 per cent. reacted favorably as contrasted with only [illegible] per cent. who reacted to inoculation with chills and fever when the tertian variety was used.

He is still using the [illegible] quartan strain obtained in 193[illegible] from the United States Public [illegible] station at Columbia, S. C. [illegible] ments of the quartan malar[ia] have been furnished other [illegible] for inoculation. This met[hod] [of] treatment is considered on[e of the] greatest contributions ma[de] [to the] control and cure of neu[rosyphilis].

In addition to origin[ating this] method, Dr. Branche h[as con]tributed articles to th[e] medical and scientific [illegible] A native of North [illegible] graduated from Linco[ln] and the Boston unive[rsity] medicine. He has [been] with the Veterans [illegible] 1923.

# FATHER DIVINE GETS ANOTHER "HEAVEN" IN N. Y.

YONKERS, N. Y., May 9 (ANP)—A 160 room frame house in the fashionable Park Hill district of this city has been purchased by Father Divine as another "heaven," much to the consternation of wealthy white residents of the restricted neighborhood who plan to prevent the Harlem cult leader from occupying the premises.

Besides the house, there are three acres of terraced grounds and greenhouses. The property assessed at $25,000 was owned by Alarico Valle. It was purchased outright by Bro. Devout, a white follower.

## Mrs. Bethune Now On Tour

WASHINGTON, (A. N. P.)—Immediately after attending the president's conference on Children in a Democracy, held under the auspices of the Department of Labor Mrs. Mary McLeod Bethune left for a three week's tour, embracing Illinois, Kansas, Missouri and Arkansas, where she will look into the activities of the National Youth administration.

During her stay in the mid-west, Mrs. Bethune will also attend the Kansas City conference of the Methodist Episcopal churches.

# INTERPRET MUSIC OF WM. G. STILL

SALT LAKE CITY, May 9 (ANP)—A group of well known musicians last Tuesday presented a program here interpreting the music of famed Composer William Grant Still who authored the official music theme for the New York World's Fair. The composer was introduced to the big audience attending the program, and the artists were: Verna Arvey, pianist; Mr. and Mrs. Gail Martin, vocal soloists and Mrs. E. W. Hoffer, accompanist.

## Dr. Speigner To Broadcast

TUSCALOOSA, ALA., (ANP)—Dr. Theodore R. Speigner, president of Martin Luther institute, and president of the Alabama Lutheran conference, will be the guest speaker on the "Wings Over Jordan" broadcast Sunday, June 4. Dr. Speigner will speak direct from Cleveland.

Mr. Speigner is an outstanding figure in the American Lutheran Church, He is one of Alabama's leading educators and religious leaders. President Speigner is a product of Talladega college and the University of Iowa. For ten years he has been the chief executive of Martin Luther institute.

# TELLS TEACHERS TO SPREAD TOLERANCE

NEW YORK, May 9 (ANP)—The only woman member of the New York board of education, Mrs. Johanna M. Lindlof, in speaking on "Intolerance" at a panel discussion this week, stated that "upon the teachers rest the responsibility of inculcating tolerance and goodwill among persons of all races and creeds.

It is the teachers who must light the minds of our children with love and tolerance," Mrs. Lindlof said. "They must instill love of our tradition for justice and fairplay. They must teach that these traditions are underlying principles not dead dogmas. They must teach that it is through these principles that all are brought into common language and unity by one goal—the zealous guarding of American democracy."

Other speakers included Roy Wilkins of the N. A. A. C. P., Rev. L. R. Hartley of Presbyterian church, Rabbi J. X. Cohen, secretary, Free Synagogue, Rev. L. Atherton, S. J. of Fordham university.

## COTTON FIGHT GAINS HEADWAY

Memphis, Tenn., May—Launching an unprecedented cotton roads survey and completing selection of permanent department heads, the National Cotton Council this week gathered new momentum in preparation for the formal opening of its headquarters office in Memphis on June 1.

The cotton roads survey, looked upon by cotton men as a likely key to a potential market of a million bales a year, will be directed by Gibb Gilchrist, dean of the school of engineering at Texas A. & M. and former president of the American Association of State Highway Officials.

The project is designed to exhaust the subject of the possibilities of cotton fabrics for use in reinforcing bituminous highways. Spasmodic use of cotton in such construction during the past few years has resulted in a total for the U. S. of approximately 600 miles of cotton roads as against a possible two million miles which the Council hopes to prove adaptable to cotton construction.

In addition to the selection of Mr. Gilchrist as chief of the cotton roads survey. President Oscar Johnston of the National Cotton Council has announced the appointment of Ed Lipscomb, for the past three years director of the Mississippi State Advertising Commission, as director of the Council's advertising department. Mr. Lipscomb has been serving the Council in an advisory capacity since its organization last January.

Frank K. Dunn of Washington, D. C., has been made chief of the Council's field force in charge of organizational work in the nineteen cotton growing states. Active in business and civic affairs of the South for the past twenty years, Mr. Dunn comes to the Council from the Social Security Board in Washington, where he has been serving as special field representative.

Mr. Dunn's staff will serve the Council's state units in the completion of state organizations and county committees on which the five primary raw cotton interests will be represented.

Permanent headquarters of the Council will be opened in the Cotton Exchange building at Memphis on June 1.

# CLOSED BANK WILL PAY DEPOSITORS ALL IT OWED THEM

WASHINGTON, D. C., May 11—Within a short time the Federal Deposit Insurance Corporation is expected to begin payments to depositors of the Ripley Savings Bank and Trust Company, Ripley, Tenn., which closed on April 28, 1939.

The bank held total deposits of approximately $826,000.00 at the time of suspension and practically the entire amount is estimated as being insured. The bank had about 2,314 depositors at the time of its suspension.

This was the seventh closing of an insured bank in the State of Tennessee since the beginning of deposit insurance on Jan. 1, 1934.

## The Deed of A Jew

By William Pickens for ANP

Rendering aid to the "destitute—regardless of race, color or creed"—"IKE SMALLS MEDICAL AID FUND—Inc.—Non-Sectarian."—

A Jew in Des Moines, Ia., doing more for helpless Christians than any Christian there is doing. He has a store, just a business. But with the money he earns he dispenses charity to all who need it and who come within his reach.—He is supervised by state law in Iowa, and licensed under bond. All he does, is to pay the bills and give his energies and time to a unique work of charity and human live,—as unique as anything I have ever met face to face.

He has a "committee' of 14 prominent names, a set of three "legal advisers," 12 good doctors on a "medical advisory board," and six nurses on an "advisory board."

All he does, he the Jew, is to pay out the money, the cash and the costs, for the aid rendered. He makes all the money in his store. It is all his; he could keep it.

From the immeasurable list of those whom he had aided, I have selected 40 cases,—but I will give you only a few of them. Dates are not important, but these are among his most recent cases. Look at them, a few of them:

Sent wheel chair to a woman. 33 years of age, who weighs 60 pounds, and has poison of the body.

Furnished crutches to man of 55, who sprained ankle.

Paid for blood tranfusion to man of 20, with amputated arm.

Pair of crutches to boy of 15, who was hit by car.

Hospital bed and back rest, woman 77,—heart trouble and dropsy.

Blood transfusion, boy of 10, typhoid; man of 30, diabetes; man 42, ruptured appendix; man, 62, pneumonia,—and so on.

Wheel chairs: lady 65, arthritic; man, 62, weak spine, man, 62, infantile paralysis; girl 10, infantile paralysis; boy 12, same. And many others have gotten, and will still get, the same sweet charity,—as long as Smalls lives, and prospers, in his "store."

If I were in Germany, Adolph Hitler would hang me for saying that this Jew is the equal of any Christian I have ever met, and the superior of all the dictators put together. We honor such a man as Smalls, not because he is a Jew but as he says in his charities, "regardless" of that non-relevant or of any other. For the same reason our president appointed a Jew, Felix Frankfurter, to the supreme court. That's why Hitler thinks we are crazy,—and that's why we know Hitler is crazy.

### All Depends

Log: Kind Lady—How would you like a nice chop?

Tramp—Dat all depends, lady. Is it lamb, pork or wood?

# SUPREME LIBERTY LIFE INSURANCE MAKES PROGRESS

CHICAGO, May 11 (ANP)—The Supreme Liberty Life Insurance company ranked 34 in the 1938 list of the leading industrial life insurance companies of the United States, according to a compilation of statistics recently printed in the National Underwirter, white insurance journal.

Supreme Liberty has moved up two places since 1937, six places since 1936 and nine places since 1935. The company has the distinction, according to its officers, of having grown faster in the last five years than any other Negro insurance company in America. It has a total of $39,707,806 worth of insurance in force on the lives of nearly 150,000 people.

## Allen U. Students Make Up Time Lost

COLUMBIA, S. C., May 11—(ANP)—Classes at Allen University began meeting Monday in double sessions daily and will continue to do so for another week in order to make up the time lost by students in their recent strike over their new acting president who has since resigned.

## MELONS FLOWN TO CANADA FOR KING AND QUEEN

NEW YORK—Learning King George VI and Queen Elizabeth of England like southern California cantaloupes, officials of the Chateau Frontenac in Quebec said "Let there be cantaloupes for the kiug aud queen."

Then they found the seasou's first shipment of the fruit was uot due in the east until next Saturday. So New York for the first time received cantaloupes by airplane—300 of them—last night from California. Today they were on their way to Quebec. Freight charges for the 300 will be a little under $2 apiece.

## FARMER KILLED BY TRACTOR OVER-TURNING INTO DITCH

TAYLORVILLE, Ill.,—James Plunkett, 45, World War veteran, was killed today when he was caught beueath his tractor when it turned over in a drainage ditch on his farm near Morrisonville. His body was found by his 14 year old son, Kenneth, who had gone to the field to relieve his father while the latter went for breakfast.

### EGG, POULTRY SITUATION

Prospects contiuue to favor iucreased egg production and increased production and marketings of poultry this year compared with last, the Bureau of Agricultural Economics reports in its poultry and egg situatiou. Favorable to larger production are the plentiful supplies of feed at relatively low prices, and farm poultry flocks that in early March were about 5 percent larger than in March last year. For the past two months, however, the feed-egg ration as held relatively constant—an added factor favoring increased production.

### THE REST OF THE WAY ALONE

It isn't given to any of us
To go all of the way together,
However closely bound the flock
The years must one day sever,
The ties that bind the loving group,
One goes, then another—
And grieving doesn't help too much
Be it husband, wife of brother.

It isn't given to any of us
To be always with those most dear,
We one day reach the fork in the road—
One goes, while one stays here;
In our loneliness for those who are gone
Don't forget the joys we have known;
The memory of them should light up the road
Though the rest of the way is—alone!
—Jazbo of Old Dubuque.
—In Chicago Tribune

God will never give a great spiritual revival to a denomination that inadequately supports its missions. —W. E. Woodbury.

### 2 FREED SLAVES BUY TICKETS FOR WIGWAM FETE

Two slaves freed by Lincolu's emancipation proclamation yesterday bought the first tickets for Chicago's Wigwam celebration next Thursday. It will be held at 333 Lake Street, the site of the building where Lincoln was uomiuated for President in 1860. The purchasers are Maj. John Roy Lynch, 91 years old, 4012 South Parkway and Wyatt David Goldsby, 92, of 3210 South Park way. Maj. Lynch said he served three terms in congress in the '70s from Mississippi.

### USDA RESEARCH LABORATORIES

Dr. Knight, Chief of the Bureau of Chemistry and Soils, in a talk last week to the Farm Chemurgic Conference, discussed for four new regional research laboratories of the Department. Speaking of the search for new and profitable uses for waste and surplus farm products and byproducts, he said in part:

"Only about 9 perceut of our enormous corn crop, usually running from 2 1-2 to 3 billion bushels, is used in the industrial field, aud one-half of this enters the food market and one-fourth goes back to the farm in the form of food.

"Industrial utilization of what outside the food and feed industries, dips almost not all into concentrated raw materials.

"Cotton is our most acute large-scale surplus problem. More than 98 percent of lint cotton that finds a market is spun into yarn.

"The peanut crop of more than one and a quarter billion pounds in spite of the many things that have been made from its kernels, is used almost exclusively for food or feed.

"The citrus industry is going to be much bigger. Orange production has more than doubled in 20 years. Almost half of the nearly 40,000,000 trees are less than 15 years old and a fourth are only from 5 to 10 years old. So during the next 5 years we may expect 75 million boxes in contrast to the 58 million averages of the past 5 years.

"There are 5 times as mauy bearing grapefruit trees now as in 1920 and about 2-3 of these have not reached full beariug. It is quite likely the next 5 years will show an annual average of 35 million boxes compared with the 1937 production of a little less than 31 million. The outlet for citrus is almost entirely for food and most research has been on food uses.

"The number of apple trees in the country has been declining for years but with growing competition from other fruits, falling foreign markets and better yields on the average, surpluses have piled up. With the annual crop about 150 million bushels—a commercial crop of 90 milllion—in several receut years apples not harvested on account of market conditions have reached 4 to 4 1-2 million bushels. In additiou. the culls graded out at packing pants may average 120,000 tons and on top of this thousands of tons of processing wastes at juice, drying and canning plants.

"Diet trends have trebled the acreage of truck crops since 1920. The truck growers were receiving about 250 million dollars 12 years ago and about that same amount for twice the quantity of stuff during the last 5 years. The quick freezing iudustry is opening up new fields and about 70 million pounds of vegetables were put up this way in 1937.

"The Irish potato acreage remains fairly stable and consumption is inelastic, but because of variations in yield per acre crops and prices make sharp shifts. The average crop is about 400 million bushels and usually about 10 percent of the crop is culls. Another 10 percent is taken off by disease, freezing and shrinkage in stored. So there is a definite demand for profitable nonfood use of cull and second grade potatoes aud sometimes for first grade.

"Sweetpotatoes are second only in importance to Irish potates among the vegetable crops—about 70 million bushels a year, most of them used were grown for food and feed. In the South about 20 percent of the crop is culls, mostly wasted. The small cooperative sweetpotato starch plant at Laurel, Miss., processed 165,000 bushels last year, turning out 1,640,000 pounds of starch. But this is hardly out of the experimental stage.

"Nineteen states grow tobacco, an average crop of more than 1,335,000,000 pounds. Foreign production, aided by tariffs and other means, is competing more sharply with our tobacco. Twenty years ago we produced about 27 percent of the world total; now we grow 23 percent of it. There has been a steady decline particularly in the exports of fire-cured and dark air-cured types.

"Alfalfa gets special attention among the forage crops because it is now widely grown and the most important hay, with an annual production of 25 million tons, considerably ahead of clover and timothy.

"The dairy cows of this country produce anuually more than one hundred billion pouuds of milk containing 13 billion pounds of solids in the form of fats, proteins, carbohydrates and salts. This enormous production represents roughly 20 percent of the total farm income and approaches the combined value of cotton and wheat and tobacco. The dairy industry has becoue highly complex and surplus problems are often difficult because the perishable nature of the product causes much of the excess production to disappear. However, the ecouomic effects of seasonal surpluses, which disappear in low-paying uses, make it highly desirable to search for new and more efficient ways of utilization in the industrial field, particularly for casein and milk sugar."

## 23 COWS KILLED BY SHORT CIRCUIT IN MILK MACHINE

HONOLULU—A short circuit in a milking machine electrocuted twenty-three cows in a Diamond Head dairy barn today. Three milkmen escaped harm because they wore rubber boots. Shiutoku Nakata, Japanese dairyman, said metal stanchions holding the cows carried the electricity into their bodies. Describing their death, he said: "One time all shake. All sit down one time Quick, I go outside."

### COUPLE HELD FOR GETTING TWO LOANS ON SAME CATTLE

Mr. aud Mrs. Robert Carlson were held at Woodstock yesterday, accused of mortgaging the same cattle twice. Carlson is a farmer, 26 years old. His wife is 22. They live near Harvard. Authorities said the Carlsons obtained $1,600.00 from the First National Bank of Woodstock and $1,500 from the Second National Bank of Belvidere by mortgaging twenty cattle without mentioning that they were already mortgaged.

# NEGRO EXHIBIT AT WORLD'S FAIR IS FINALLY GRANTED

## New Yorkers Get Whalen's Permit To Display Evidences Of Race Progress Along All Lines

NEW YORK CITY, May 11—(ANP)—Last Sunday as the great New York World's Fair opened in a blaze of glory and in typical Manhattan super-style, it was announced by a committee headed by George E. Wibecan, inspector in the office of Brooklyn Borough President Ingersoll that the World's Fair corporation had consented to a Negro exhibit at the big exposition.

The announcement followed a conference held with Fair President Grover A. Whalen by members of the citizens' committee composed of Wibecan, Mrs. Maria C. Lawton, Rev. George H. Sims and Rev. S. V. Gumbs. The exhibit, it was explained, would depict all phases of Negro life and show racial progress in all lines of endeavor during the past 75 years. Scores of civic, business and religious groups in Harlem and other borough districts have campaigned for months to have a Negro exhibit at the fair.

It was said another meeting will be held on Thursday when Mr. Whalen will discuss details of the exhibit with the committee and select its site at the fair.

It was also learned that a Chicago colored artist will have one of his paintings on display at the big exposition. A canvass by W. E. Scott, nationally-known muralist and former Rosenwald fellow, entitled "Inspiration", which for several years has hung in the lounge room of Harlem branch Y. M. C. A., has been selected for showing in the Y. M. C. A. building at the fair. The painting was chosen by a committee headed by Dwight Baum, architect of the fair's Y. M. C. A. building.

In last Sunday's colorful spectacle which marked the fair's opening, several Negro units occupied positions of prominence. A parade feature was selected marchers from various national guard units of the state, among them Harlem's pride the 369th Infantry, whose provisional battalion in the line of march was commanded by Captain Walter A. Hume and 1st Lt. John Brown of Company E, and 2nd Lt. Fred

Sunday night the Hall Johnson Choir, famous "Green Pastures" choristers, sang in the Ford building on the regular broadcast hour. On Tuesday, at ceremonies marking opening of the Y. M. C. A. building, the Southernaires, famed radio singers, were featured.

### FOUR TINY CHILDREN AT HOME ALONE, BURN TO TO DEATH

Four colored children, all less than 6 years old, were burned to death yesterday when their small frame home at 151st street and 9th avenue, in Phoenix, caught fire. Their bodies were found in one bed after the firemen had extinguished the flames.

Aaron Tolson, father of the children, was at work in a Harvey industrial plant, and their mother was absent from the house. The dead are Margaret Tolson, 5 years old; Randol, 4; Charlene, 2; and Carolyne, 6 months. Aaron Tolson, Jr., 7, brother of the victims, was at school. The fire was attributed to an overheated stove.

### AGRICULTURAL NOTES COMPILED FROM REPORTS OF NEGRO EXTENSION WORKERS

(By Albon L. Holsey, Field Officer, AAA)

Negro 4-H Club boys of Georgia produced during 1938 corn, peanuts, soybeans, vegetables and other products of a market value of $114,539.48.

4-H Club girls in Texas have been taught by their Home Demonstration Agents an economical method of making a clothes closet from five orange crates, some cretonne and a broom handle.

S. W. Boynton, Negro Extension Agent in Dallas County, Alabama, reports that Negro farmers in his county cooperated with the AAA Soil Improvement Campaign by planting 25,000 acres of Vetch and Austrian Winter Peas.

E. M. Little of Garrett Grove, Lee County, Arkansas owed $200 in 1938. He sold $141.00 worth of hogs and $110.00 worth of cattle and paid his debt. "This beats sticking to cotton," said Mr. Little who owns a 70-acre farm.

As a result of a cotton-mattress demonstration conducted by Booker D. Harrison, Negro Extension Agent in Caddo Parish, Louisiana, 57 Negro farm families made new mattresses at an average cost of $3.65 per mattress. Many more mattresses were renovated and rebuilt.

In the new use of land campaign in Talladega County, Alabama, Miss Mildred Daly, Home Demonstration Agent reports that the Keith-4-H Club of Childersburg recently set out 60 peach trees on a plot of land. Gladys Reynolds, president of the Club is a Freshman at Talladega College.

M. E. Dean, Negro County Agent in Louisville, Mississippi, has inaugurated an annual County-wide Fruit-Vegetable Show. A munity placing the best exhibit banner is awarded to the Com- and all the products bring a fancy sale price at the display.

In urging the farmers in Lee County, Alabama, to grow surplus corn, John A. Kitchens, County Agent and Miss G. M. Williams, Home Demonstration Agent, in a joint letter say: "Corn is now selling for around 50c a bushel but when fed to chickens, cows and hogs will pay you $1.00 per bushel."

27,022 persons attended 1938-39 Negro Farmers Meat Shows in Texas. In most instances these shows were sponsored by the local white Chambers of Commerce. An added feature of the shows this year were exhibits of home-made laundry and to let soaps from by-products of the hog.

Activities of the Home Demonstration work in Hillsborough County, Florida, include distribution 878 packages of garden seed and the participation of 67 4-H Club girls in the annual Strawberry Festival Parade. Miss Floy Britt is the Agent.

In order to supplement his cash crop, Scott Wilson, Negro farmer residing near Ruston, Louisiana, recently purchased a few cows and increased his feed crops. E. F. Purvis, Parish Agent reports that during 1938 Mr. Wilson sold $268.80 worth of milk besides having apple supply for home use.

### LOAFS 8 YEARS AS RELIEFER, SO JUDGE GIVES HIM WORK

Charles Murphy, 50 years old, has been on relief for eight years. Municipal Judge Thomas A. Green thinks it's high time Murphy went back to work. So Judge Green sent Murphy to the Bridewell yesterday to work out a fine of $200 for disorderly conduct. Murphy's wife, Margaret, said he sold their relief groceries to buy liquor. They have five children and live at 3408 Belmont avenue.

## National Negro Bankers To Meet July 3rd

Philadelphia, Pa. —(Special) — Completed plans for the meeting of the National Negro Bankers Association have just been announced by Major R. R. Wright, Sr., the president. All the sessions, says Major Wright, will be held in the Chamber of Commerce Building of this city. The first of the sessions will be on the morning of July 3rd at 11:00 A. M.

A special letter has been sent to all the members of the Association by Mr. M. C. Martin, the secretary, who is the cashier of the Danville Savings Bank and Trust Company of Danville, Va. Several guest speakers have been invited and have accepted the invitation to appear. Among them will be Mr. Leo T. Crowder, chairman of the Federal Department Insurance Corporation, who will lead a round-table discussion in the interest of all the bankers. In addition to this President Wright has announced that one day will be spent on a pleasure trip and a visit to the New York World's Fair by members of the Association. He has secured a batch of tickets which will be good from April 30th to October 31st.

It was understood here that the vice president of this Association, Rev. Henry Allen Boyd of Nashville, who is president of the Citizens Savings Bank and Trust Company of that city, is expected to attend, and to take part in all the deliberations and preside at one of the sessions.

# DETROIT PASTOR SUGGESTED FOR EDUCATION BOARD

DETROIT (ANP)—The name of the Rev. William H. Peck, pastor Bethel A. M. E. church, has been submitted to the board of education for consideration as one to fill the vacancy made through the death of one of the board's members. This is considered a forward step on the part of the Detroit Civic Rights committee and other organizations behind the move, all of whom agree that because of his outstanding ability as a religious, civic and business leader, Rev. Peck is the most logical man to place in the position.

A few years ago Rev. Peck was urged to make a bid for the office and it was generally believed that he would have been elected at large, but he did not choose to run. The general feeling here is that it is high time that a Negro sat upon that important board as it would offer a distinct advantage to the group educationally.

Rev. Peck who is highly respected by both white and colored citizens here, was prominently mentioned for the presidency of Tuskegee institute when Dr. R. R. Moton resigned.

# NATIONAL MEDICAL ASSOCIATION PLANS BIGGEST CONVENTION

## Governor and Mayor to Address Meeting to be Held in New York; to Have Day at Fair

New York, May 4—(ANP)—The details and tentative program for the New York program for the New York Convention of the National Medical Association Convention were approved at the meeting of the Executive Board of the Association held at Tuskegee Institute last month. Secretary John T. Givens announced at Norfolk, Va., this week. This convention promises to be the most interesting in history, according to Secretary Givens.

Governor Lehman of New York and Mayor LaGuardia of New York City have been invited, he said, to welcome the delegates who will be present in large numbers from all over the United States.

One whole day will be devoted to Clinics in New York hospitals through the courtesy of the Commissioner of Hospitals of the City of New York.

One meeting will be in the form of a Panel Discussion on the subject, "The Pro and Con of Socialized Medicine as It Will Affect the Negro People, and the Negro Professional Group." This discussion will be led by men who have studied all angles of this question and all present will have opportunity to participate freely in this vital subject.

Several of the public meetings will be held jointly with the National Dental Association which is meeting in New York at the same time. Problems affecting the two Professions can thus be conveniently worked out.

Many social affairs are being planned for the men and also for the members of the Woman's Auxiliary.

Grover C. Whalen has set aside a Day at the World's Fair to be known as "National Medical Association Day."

The Scientific Program will be full and the newest and best in the fields of the Cognate Professions, comprising the latest achievements, will combine to make this "Metropolitan Session" the greatest in the forty-six years of the National Medical Association.

The Local Committees have announced the following chairmen: Governor Herbert H. Lehman and Mayor Fiorella H. LaGuardia, honorary chairmen; James T. W. Granady, general chairman; S. M. Sidat-Singh, secretary; Adrain A. Freeman, treasurer; The President's Ball, C. C. Middleton; Souvenir Program, C. A. Petioni; Broadcasting, Lowell Wormley; Housing, Perry Chaney; Exhibits, H. Binga Dismond, chairman; J. J. Jones, vice chairman; Health, John West; Welcome, Myra Logan; Decoration, Oma H. Price; Publicity, S. A. Sidat-Singh; Red Cross, P. A. Beach; Registration, O'Brien Payne; Badges, Ira McCowan; Hospital and Clinics, P. M. Murray; Building and Ground, Cyril Dolly and Citizen, Col. B. O. Davis.

## Lou Swarz Honored By Elks Daughters

ST LOUIS, May 9 (ANP)—At the 19th anniversary dinner given by Phoebe's Pride temple No. 132, Daughter Elks, held at the AUK and D. of A. hall, Saturday night, Miss Lou Swarz, prominent teacher and actress, was presented with a beautiful carved wooden bas relief plaque of herself in appreciation of her "work in fraternal circles, her dramatic ability, the contributions she had made in the dramatic field and her special campaign to bring cheer to the shut-ins of local institutions."

Dr. Herman S. Greer of Douglas university and Mr. E. Monroe were principal speakers at the dinner to more than 300 people who crowded the hall.

### DEAR TEACHER: SONNY IS EXPECTING A COLD; P. S.—HE CAUGHT ONE

Newark, N. J.—Fred G. Giffoniello, gymnasuim instructor at the Boys' Vocational school, revealed today that he has had a secret hobby for eleven years. He has been collecting pupils' excuses from teachers throughout the country.

One note, purportedly from a parent, requested that her son be excused from school. "He expects a cold," the mother wrote. "P. S. He caught it."

One note was from parent whose child had been scolded for being unclean. "Dear teacher," it read, "My Bennie smells all right. The trouble with you old maids is you don't know how a man should smell."

### DISENGAGED

At one time during the Civil War, General George B. McClellan, then in command of the Union forces, was conducting a waiting campaign; and so careful was he to avoid mistakes that little headway was evident. President Lincoln thereupon wrote him a letter:

"My dear McClellan: If you don't want to use the army, I should like to borrow it for a while. Yours respectfully, A. Lincoln.

### JOANNE, 18 MOS. MAKES A MEAL OF ODDS AND ENDS

Mr. and Mrs. Guerdon Worth of Gurnee, Lake County, had a suspicion Wednesday that their daughter, Joanne, 18 months old, had eaten something she shouldn't have. They hurried her to St. Luke's hospital where physicians examined her. Then, using a bronchoscope, the physicians drew out of Joanne's interior four safety pins, two pearl buttons, two celluloid stickpins. X-rays were taken yesterday to determine if Joanne had swallowed any more oddities.

# KANSAS CITIZENS FORM COLORED COMMERCE CHAMBER

KANSAS CITY, MO., May—(ANP) Executive Secretary A. M. Smith of the Dallas Negro Chamber of Commerce addressed a large group of civic and business leaders in the blue room of the Street hotel here Sunday afternoon and laid the ground work for the establishment of a Negro Chamber of Commerce. Following Smith's address, which was filled with inspiring details, Roy Barker, local merchant, was elected temporary chairman and Undertaker J. A. Ficklin was elected secretary. A committee on permanent organization, headed by Atty. Herbert, was appointed and instructed to bring in an outline on permanent organization for the meeting next Thursday night.

At the behest of local business men, the Dallas leader was invited to bring the Sunday message and otherwise aid in getting the organization started. Mr. Smith is well trained and experienced in Chamber of Commerce work, and is one of the few salaried Chamber executives in the nation. The Dallas Chamber was the first such organization to be established.

Attorney R. Q. Mason accompanied Mr. Smith on this trip and was the principal speaker at the Kansas City Central Forum, Sunday. The Dallas men, together with Coach Jimmie Stevens, left for Texas Monday morning.

# UNEQUAL EDUCATIONAL OPPORTUNITIES FOR COLORED YOUTH IN SOUTH CITED

## WPA Survey Lists Conditions in New Report; South Carolina is "Worst Offender," Figures Show

**WASHINGTON, D. C.—The second volume of Index of Research Projects issued by the Works Progress Administration, in cooperation with the National Resources Committee and State Planning Agencies, includes the situation of the Negro as shown in the educational surveys made by State Planning Agencies in several Southern States.**

**Many of these research activities have been made possible by the assistance of WPA research projects employing trained white-collar workers taken from the relief rolls.**

**'The ratio of population to teachers in 1934-35 was 25.5 for white and 29 2 for Negro,'' the WPA Index reveals in its digest of the report of the Florida School Code Committee. Within the Everglade State the average monthly salaries for Negro teachers during the 1934-35 period was $51.44 a month, as against the monthly salary of $104.14 paid to white teachers.**

**Surveys in North Carolina completed in 1936 by the Department of Conservation and Development strike a more encouraging note in Negro educational welfare, according to the WPA Index. The number of accredited Negro high schools in the State increased from eleven in 1920, with an enrollment of 1,500, to 120 in 1934-35, with 25,000 enrolled. During the 1920-35 period, the enrollment of five institutions of higher learning for Negroes increased from less than 100 to more than 2,000. The State of North Carolina maintains two standard four-year colleges for Negro students, in addition to three normal schools for Negroes, the Index points out.**

**South Carolina presented a less favorable picture for Negroes in the realm of education. Summarizing the findings of the South Carolina State Department of Education completed in 1937, the Index states:**

**''Overcrowding was found in 1,417, or 22 5 per cent, of the white classrooms, and in 2,209, or 71.8 per cent of Negro classrooms. The median age for public school buildings for whites was 14 years; that for Negroes was 16 5 years. Sixty buildings for white and 204 for Negroes were at least 40 years old. The average number of classrooms per building for whites was five and that for Negroes two. Facilities for school lunches were found in 518 white and 319 Negro schools. Oil lamps were found in approximately one thousand classrooms. Thirty-seven white and 1,327 Negro schools were using homemade benches, 153 white and 372 Negro schools homemade desks.**

**The Building Survey Report for the South Carolina State Department of Education also indicates that no heating facilities were found in 99 Negro schools. Steam or hot water heat was reported in 29 percent of white schools and in 45 percent of Negro schools.**

**The reports of these research projects contain many facts of general interest on the whole school situation. It is clear that in a good many States the educational facilities are inadequate for both white and Negro children. And it is where there are poor provisions for all children that Negro children suffer most from lack of educational opportunity.**

**An important feature of recent educational history is the construction, repair and modernization of school buildings by the WPA. In the last three years, WPA workers have constructed over 2,200 new school buildings and have extensively improved and repaired over 22,000 more throughout the country. The picture given above of South Carolina conditions can be supplemented by the report of the United States Community Appraisal Committee in South Carolina, which says:**

**''Many who considered our educational future hopeless from the standpoint of physical facilities are now beginning devoutly to hope that with Works Progress assistance every child in this State may, at not too distant date, have the opportunity of attending school in a publicly owned building that is comfortable, safe and adequate. To this end much has been done in the past two and a half years, but much remains to be done—particularly among Negro schools.**

**In addition to listing and summarizing the educational situation of the Negro in various States, the Index is a guide to information about the condition of the Negro contained in the Planning Agency Project reports on health institutional care, housing, farm management, population and migration, social problems and crime. In most instances the WPA Index points to the Negro as an integral part of the important problems awaiting social and legislative solution in the South.**

### BARTON'S CREED

**By Floyd J. Calvin**

Congressman Bruce Barton (Republican) of New York City, speaking on a Brotherhood Week radio broadcast from Washington under the auspices of the National Conference of Jews and Christians Tuesday night, said in part: "When you see a fact that is different from your own, when you hear an accent that is different from your own, when you pass a church or a temple that is different from your own, remember that those features, that speech and that worship are all part of an immensely precious contribution to the sum total of America's culture and faith."

It is important for our group, we think, that Congressman Barton said, "When you see a face that is different from your own," for it is a change in America's psychological reactions to what is seen that is so much needed in racial relations. Current white writers of serious mien are freely admitting—(see Gallagher's "American Caste and the Negro College")—that the main thing against the Negro, where whites are concerned, is the very sight of him. The Negro is conspicuous because he looks different. All Jews or foreigners have to do is change their names and by this simple device they can escape proscription.

A Jewish school teacher who wants promotion at the hands of a board in which there might lurk some prejudice against the name "Rosenberg" might change to Ross and roll on to success; but a Negro, who must submit his picture, no matter what his qualifications, has to suffer not personal condemnation, but the condemnation of a mental image which might be 40 or more years old. So the Negro of 1939 is kept out of something on the basis of an impression gained around the turn of the present century.

We hope Congressman Barton's plea will be heeded; we hope Americans will adopt a new attitude—an attitude of greater tolerance and good-will—toward races that are different from their own.

# HAMPTON GRADS PLAN REUNION FOR FUND DRIVE

WASHINGTON, May 18 (ANP)—All roads will lead to Hampton, May 29 and 30, says the general alumni group of this school, when on these two days graduates of the institution and ex-students from the class of 1899 to 1938 gather in a grand reunion.

The purpose of this gathering is to discuss the many perplexing problems and changes which have arisen since the last grand reunion a few years back. The group is faced with the difficulties, financial and physical which Hampton along with other colored schools is suffering.

The general alumni will complete at this session the $5,000 student loan fund, and will turn its attention to the $15,000 scholarship fund which has been inaugurated by the Middle Atlantic Regional conference of the general alumni. The conference has in its treasury $1,103, and will make a substantial deposit to this fund at the reunion.

Aside from the business sessions, the executive committee is making plans for the social entertainment of the gathering. Various programs are being planned, and will be climaxed with a reception and banquet.

### ANOTHER NUMBER ONE PROBLEM

(The Constitution, Atlanta)

"Who will his teacher be?" has always been a number one problem to many parents of 26,000,000 American school children. Those mothers and fathers know the teacher will have much to do with the molding of their children's characters. Whether the school is allegedly progressive or just the traditional "little red school house," it's the teacher that counts most.

Some educators express amazement that the same parents who select their doctors and dentists with extreme care show little interest when it comes to putting their children in the hands of a school teacher.

The president of Harvard university devoted to a large part of his report last month to the subject of inadequately prepared school teachers. The Rockefeller general education board, also recognizing the need for improvement, has just given $520,000 to start ten summer workshops for teachers in universities in all sections of the country.

The average training of elementary school teachers in the United States is less than two years in normal school. This is not surprising because the average salary of teachers is under $1,200 per year. This average includes some country teachers making as little as $238 per annum, and often waiting to get it.

Teaching is a wearying job at best. When the small financial inducements are taken into consideration, together with numerous restrictions as to marriage, it is not surprising that many who have given time and expense to prepare themselves for the job desert the educational field for something pleasanter and more lucrative. This condition makes it necessary for many schools, even if able to pay higher and steadier salaries, to employ a certain number of poorly equipped teachers.

When it is taken into account that the teacher, in many instances, sees more of the child than do the parents, the argument for better equipped teachers gains force. But teachers, whether good or bad, cannot be expected to donate their services. They are entitled to good pay, more normal treatment, and steady jobs.

### TENNESSEE TENANT BECOMES LANDLORD

A tenant farmer who has moved 11 times in the past 18 years can fully appreciate what it means to own a farm.

William Emmett Howse and his wife, Emma, have moved for the last time to their beautiful 64 acre farm one mile north of Brownsville on Highway No. 54.

Since 1920 Bill Howse has been a sharecropper and renter on eleven different farms. His knowledge of farming and his unlimited capacity for work made him a valuable tenant and landowners bid for his services. His dream was to some day have a farm of his own but it seemed impossible to save enough to make the first down payment.

The arrival of a son and three daughters made the hope of farm ownership dim, but Bill and his wife were such good managers that they seldom had to borrow money. They owned their own tools, farm implements and work stock. At one time they had to borrow $75 from a merchant on a store account but that was due to a bad crop year.

The Tenant Purchase Committee of the Farm Security Administration, composed of leading farmers and business men in Haywood County, selected Bill and Emma as outstanding tenants capable of farm ownership and agreed to finance them in the purchase of a farm.

With $5,000 borrowed from the FSA at 3 per cent for 40 years, Bill selected the farm he wanted. He paid $2,500 for 64 acres of fertile land. His house cost $1,360 with all modern conveniences. Barn and outhouses cost $615. He spent $475 on terracing, liming and improving the soil and fencing. About $50 went or legal fees.

The gleaming white farm home with its well-spaced outhouses and straight fences surrounded by fertile rolling fields catches the eye of every passing motorist. What appears to them to be an uncommonly good farm is the fulfillment of Bill and Emma Howse's dream and life long ambition.

TVA has lightened the burden that Mrs. Howse has to bear.

No more carrying back breaking buckets of water from the well. She has an electric pump and running water in the house.

No more heating water in kettles on the stove for the Saturday night bath. The new home has a modern bathroom.

No more running to town to buy ice during the hot summer months. The new home has a frigidaire large enough to hold the food and milk a good farm produces.

No more sending the children to the store for coal oil. The new home has electric lights.

No more wondering what is going on in the world. A new radio is plugged into a wall socket and the latest farm news is available at the turn of a switch.

Out in the barn Bill has all the farm implements necessary to operate a small farm economically. He has two mules, two dairy cows, a sow eight pigs and 45 hens.

He expects to raise 14 acres of cotton, 15 1-2 acres of corn, 10 acres of lespedeza, four acres of soy-beans, seven acres of sudan grass and crimson clover and 2 1-2 acres of truck His farm plan shows that he expects to get $442 from the sale of cotton and truck; $241 from the sale of calves, pigs and poultry; and $145 from the sale of butterfat, eggs and pork.

Bill Howse and his wife know the meaning of security. They can smile at the puny efforts of economic conditions that once forced them to their knees. Never again do they need fear they might be forced to move. They are solid citizens of one of the best agricultural communities in the South. They will raise and educate their children as befits the children of landowners. They will pay their taxes and build up their farm and beautify their home. Each year will see their roots sink deeper into the fertile soil of West Tennessee.

### WANTED: A FARM WITH SOIL

Hordes of gullies now remind us
We should build our lands to stay,
And, departing leave behind us
Fields that have not washed away.
When our boys assume the mortgage
On the land that's had our toil,
They'll not have to ask the question
Here's the farm, but where's the soil?

—Anonymous.

### FISH HURTLES DOWN INTO FARMER'S LAP; IT'S A BIRD OF A STORY

Canton, Ill.—A one-pound fish fell from the air into Joseph Juraco's lap yesterday while he was driving a tractor through a river bottom field near Liverpool. Startled by the catch, Juraco looked up and saw, flying overhead a crane which had dropped the fish after picking it up in a nearby drainage ditch. The bird apparently became frightened by the roar of the tractor engine and released its prey.

FIRMNESS OF TOMATOES

"Taking advantage of a simple chemical reaction whereby a jelly-like compound is formed when calcium chloride is added to pectic acid, Dr. Z. I. Kertesz, chemist at the New York Experiment Station at Geneva, has demonstrated that this reaction can be used to good advantage in the canning of tomatoes and possibly other vegetables and fruits to insure that the product will retain its natural firmness during preservation," says an editorial in Fruit Products Journal (April). "It is a matter of common knowledge that calcium has a hardening effect on plant tissues and considerable effort has been made in the canning industry to avoid the use of water containing undue amounts of calcium and magnesium because of the toughening of plant tissues,' says Dr. Kertesz. Even calcium applied as fertilizer tends to toughen canned peas, and sometimes the canner will soak his raw products in common salt solution to soften the tissues by exchanging the calcium and magnesium in the tissues with the sodium from the salt. However, it is often desirable to retain the natural structure of vegetables, particularly tomatoes, in the canned product, hence this proposed method reverses the usual procedure and replaces sodium with calcium which,, in turn, forms a gel-like compound with the pectic acid in the plant tissue and supports the cell structure during destructive heating process. When treated in this way, the tomatoes will often "roll out of the can" and stand almost like fresh tomatoes.' In addition to tomatoes, Dr. Kertesz has experimented with apples, peaches, strawberries, and other products with encouraging results....."

SEED CLEANING SERVICE

Nation's Agriculture (May) reports that the Scott County (Mo) Farm Bureau organized a county service company, with the Farm Bureau holding all the common stock, and bought a large seed cleaner which was installed on a trailer. A man was hired to take the outfit to farms and do the cleaning. The complete outfit cost less than $1,000 and in less than two years the income from it has amounted to $3,247.74.

FERTILIZER SERVICE

A spread-on-the-land fertilizer service is now being offered by the Grange-League-Federation (co-op) at its Bridgeton, New Jersey, mixing plant, to all farms within a radius of 20 miles or so. In trucks that have endgate fertilizer distributors, the plant food is hauled in bulk from the mixing plant and spread on the field. Where as much as one ton to an acre is applied, the savings in bulk handling, and elimination of bags, pays for the service of spreading. (Farm Journal and Farmer's Wife, May.)

CHOPPED HAY STORAGE

"That chopping hay with the machine set for a two-inch cut results in lower hay temperatures, and consequently less danger of spontaneous combustion, than when the ordinary one-inch cut is used, has now been confirmed in further work at the Wisconsin Experiment Station," says Hoard's Dairyman (March 25). "A discovery which promises to have considerable practical importance is that 2x6 framing timbers, used horizontally inside the wall of a hay storage unit, furnish a cheap and effective method of ventilation. When the hay begins to settle, these timbers tend to hold it up near the wall, thus causing cracks to extend out into the hay. Moreover, an air space is left under each timber. Ventilated floors do not seem to offer much promise of improving the keeping quality of hay, judging by the results of one season's trials. The hay kept better only on the very bottom of a ventilated bin, in the first six or eight inches. No movement of air could be detected passing up through the ventilated floors, even with a sensitive anemometer...."

INCREASES IN FARM INCOMES

C. M. Purves, in the Agricultural Situation (March) says that while "public attention centers upon the great cotton, corn and wheat industries, to hundreds of thousands of producers, their products are more important" The cash income from all crops combined was $3,160,025,000 in 1938," he says, "as compared with $3 845,614,000 in 1937. But within these figures were several industries which had the largest cash income in several years. The cash income from corn (a major crop) was $271,659,000 in 1938 compared with $221,757,000 in 1937. The 1938 figure was the largest since 1930. Principal reasons for the increase in 1938 were the marked increase in sales and the quantity of corn placed under Government loan. The loan proceeds are included in the estimates of income. Peanuts were another crop showing larger income in 1938 compared with 1937. The $39,951,000 of income received by producers in 1938 was the largest in several years. The 1937 income was $36,-295,000. Principal reasons for the increase in 1938 were increased sales of peanuts and relatively stable prices when compared with 1937. Soybeans are rapidly increasing in importance as a contributor to farm income and in 1938 yielded a cash income of $31,933,000. This compared with $28,030,000 in 1937. The 1938 income from soybeans was the largest on Government record. The increase in 1938 over 1937 was due principally to the marked increase in output more than offsetting lower prices. The 1938 cash income from clover seed (red and alike) totaled $15,664,000 in 1938 compared with $9,862,000 in 1937. Lespedeza seed yielded $5,363,000 of cash income in 1938 compared with $4,757,000 in 1937. The producers of maple sugar and sirup had a cash income of $4,281,000 in 1938 compared with $3,808,000 in 1937 and the growers of sweet sorghum for forage received $2,760,-000 compared with $2,112,000 in 1937.

FARM LOANS IN INSURANCE

More emphasis is being placed by life insurance companies on the making of farm mortgage loans than for more than a decade, the Federal Home Loan Bank Review reports. The Review published a survey of investments of all kinds by life insurance companies showing that after a long period of uncertainty in farm financing, their farm mortgage portfolios have leveled off their downward trend in volume. The survey was based upon information obtained from about 50 insurance companies having more than 90 percent of the assets of all such companies in the United States. (Washington Post, Mareh 19.)

# HENRY FORD PLANS SCHOOL IN GEORGIA TO HONOR CARVER

WAYS, GA., May 9 (ANP)—His admiration for Dr. George Washington Carver of Tuskegee will cause Henry Ford to erect a new high school for Negro boys on his 70,000 acre plantation here, it was announced last week. The school will be called the George Washington Carver school.

Ford visited Dr. Carver at Tuskegee on March 10, 1938, where he saw the educator's famous contribution to science. The multimillionaire took special interest in his plastic experiments, since he uses a soy bean plastic for several automobile parts such as horn buttons, coil boxes and gear shift knobs.

# WRITER SUGGESTS STARTING COLLECTION OF MARIAN ANDERSON SONG RECORDS

By Frank Marshall Davis for ANP

Recent releases afford an excellent opportunity of starting a library of records made by Marian Anderson, world's foremost living contralto, who had added attention focused upon her because of the recent controversy in Washington over use of an appropriate concert hall and her resultant open air concert Easter Sunday at the Lincoln memorial.

Miss Anderson's voice is as compellingly beautiful on wax as before a living audience. Records permit enjoyment of her rare artistry whenever one desires and at the same time preserve the matchless quality of her voice for future generations. Since she has recorded many of the songs for which she is especially famous, the selective collector may choose spirituals, classics or both.

There are five recent Victor releases affording an excellent opportunity of either starting or adding to a Marian Anderson library. One of her favorite program pieces is "Ava Maria," by Schubert, available with another Schubert composition, "Aufenthalt" (My Abode.) Equally fine is the recording of Brahms' "Die Mainacht" ("The May Night" backed with "Der Nussbaum" (The Nut Tree) by Schumann. These are 12 inch releases. A less expensive 10 inch coupling is Handel's "Siciliana" along with "Komm, Susser Tod" (Come, Sweet Death) by Bach.

A set of four spirituals, in the 10 inch size, show Miss Anderson's complete mastery of interpretation of this form of folk music. The familiar "I Can't Stay Away," arranged by Roland Hayes, is combined with Harry T. Burleigh's arrangement of "Were You There," and "I Know the Lord Laid His Hands on Me" is a companion piece to the Edward Boatner arrangement of "Trampin'."

While this list is by no means complete, they are representative of Miss Anderson's ability. She is accompanied by Kosti Vehanen, the Finnish pianist, on each number.

Nature is a wonderful thing! A million years ago she didn't know we were going to wear spectacles, yet look at the way she placed our ears.

## Agriculture As A Way of Life

(Continued from Page 1)

beyond the power of man to modify or correct. We look upward and outward to nature."

Farm life has been described as dull and humdrum. To me, life on farms is dramatic for everyone. The process of growth and harvesting is always a contest with the elements, and one hour of storm, unseasonable frost, wind or flood may destroy all profits. It is only as we harness and assist these forces that we appreciate their strength for production as well as destruction. The well-being of cattle and all livestock also is a constant, all-absorbing interest. Any occupant of a farm must be dull indeed not to feel and take part in these dramatic events. The stoicism with which the farmer and his family meet the frequent tragedies in these drams is almost universal.

I was much impressed with the that fact a few years ago when all our section of the state was stricken with a sudden flood. The householders in the villages were most articulate and complaining about the farmers, whose losses were many times greater than those of the villages, made little complaint.

I grew up having all the opportunities for adventure which life on the farm afforded: Woods with their mysterious and sweet, cool smells; flashes of unknown birds, and the exciting moments when foxes or ruffled grouse startled me when picking berries or on other excursions. Then when driving horses on hay rakes, while I was learning skill and judgments, I was caught into the excitements of harvesting. It filled needs for adventure, now largely only sought in thrilling pictures. Stones were always material for constructing play houses and trees to climb became castles in the air, in fact. That there could be a point of view that did not appreciate these joys did not occur to me until, when I was an adult, a city guest when being questioned about her impressions of the country, remarked that she loved it for a vacation and thought she might even like to live in the country, but that she had always felt so sorry for the children in the country because she had had such a wonderful time with the children on the block when she was a child. It is my theory that we don't need to feel sorry for children anyhwere if they have a loving home, health, and are well-fed, and I still maintain that life on the farm can be, and usually is, a delightful one for children.

Farm women have frequently been depicted as down-trodden, overworked, crushed individuals. Some of us have capitalized upon this in our paralyzing desire for sympathy. That, fortunately, is not the attitude of the average farm woman. The average farm woman as I know her is a self-respecting individual who loves her home and is proud to take part in the production of the farm as a matter of course when her household tasks and her strength allow it. She keeps fit by so doing as probably no other American woman does, with the possible exception of a city woman who can afford to continue horse-back riding and other exercises, equally healthful, into her mature life.

When a farm woman feels compelled to curtail her part in production or to neglect her household tasks when she is physically unfit, it is indeed a tragedy as it is any place, but it is often a double tragedy on a farm for it sometimes spells failure.

Women love to grow things, and cheerful flowering plants are an almost universal hobby for farm women. In fact, women seem to be natural horticulturists and the vegetable gardens are largely their responsibility on the farms. One cannot but be impressed when driving through the country or entering its homes at the evidence of loving care that flowers receive, both inside the home in winter and outside in summer here in the North—and that is as true in our impoverished-appearing homes as well as the well-kept ones. I doubt if there is anything that tends to soften the discouragements and bring joy to the spirits of the woman to a greater extent than growing blooming plants.

When I was a young girl, I remember feeling that if we could have a good road to our farm and a telephone, I would never want to live any other place. Youth always craves freedom and without these opportunities of contact, I did not feel free. My sympathy is very much with those people still living on farms only reached by the poorest dirt roads. The radio has become a much more important part of farm living than the telephone. The joy radio can and does bring into farm living is inestimable. I used to hunger for good music. Today I time an hour of ironing I have to do with a an hour of very splendid symphony music. My neighbor might find her satisfaction in a cowboy program or perhaps in a dramatic sketch.

Radio offers splendid educational programs, news of the day, and programs especially adapted to farm interests. The greatest need is for someone to dramatize true farm life and people with the skill and understanding of human values that Mrs. Berg uses in depicting the city home life of the Goldbergs, and their excursions into the country, and to give, as is sometimes given on the Goldberg's program, the diginity and reverence to the Christian religion that Mrs. Berg gives to the Jewish faith even in every day living.

All too often the novelist deals with the sordid in farm life. I took a walk around a pasture field to inspect a fence one spring. There were brambles encountered as well as all the spring joys of budding leaf and flower, a carcass of a raccoon caught in a dead-fall and the trap never visited, and also, joy of joys, a partridge nest with ten eggs in it, and finally over the fence on a neighbor's land, a pile of carrion and refuse better left undescribed. If I had been a writer of fiction my chief theme might have been the neglected trap and the carrion pile, while the most lasting impression to me was the attempt of the mother partridge to entice me away from her precious home.

Farm women have always taken great pride in their housekeeping, in being good cooks and have been inclined to glorify hard work, and to be somewhat ashamed of doing things just for pleasure. To sympathize with the difficulty of the labor detracts from the diginity. There is a tendency for these points of view to be softened, fortunately, and where possible to use modern conveniences to assist with drudgery; and more and more to develop a realization that community contacts for pleasure are not disgraceful. Being satisfied with the old-fashioned methods of grand mother and mother was and still is, shall we say, a vice with some of our homemakers. This is not so with all women and many of them have been clamoring for more education, in their life task of home-making. They are intelligently learning to use new skills and to adapt old skills more efficiently to the ever-changing pattern of living.

The normal farm family life is a happy life. Husband and wife are business partners from the beginning and the details of successes and failure are known equally by both. The affairs of the farm naturally make up a large part of conversation and as a rule farm children see and know more of their father and his work than is true in most other occupations at least.

It is not at all unusual to see very small children following their father in the fields or riding with him at his work with horses. I think there may be something in his life that makes him more patient than most other men. Farmers have been severly criticized for their opposition to the child labor amendment and accused of exploiting their children. They naturally resent this, for it is their firm conviction that learning to share in the easy tasks and greater responsibilities is good training of character as well as skills.

There is a technique in handling tools and animals as surely as in playing a musical instrument, which is best acquired while young.

I have been asked if I believe that farmers are more or less religious than other people. Does any human know who are most religious? The farmer is so close to the re-creation of life and has proof that winter is not the end, so it is natural to believe that he is reverent even if inarticulate as to his beliefs. If he is not a regular attendant at church, at least it is not because he is self-indulgent.

We who love the land and its people hate to acknowledge that there are degraded homes on the land. It has been said that rural institutions are not so well equipped to care for the slum type of family as the institutions of the city. If this is true, it is a challenge to all and no one can afford to be complacent about it. Degraded homes do exist, dotted about in the northern states, and if we are to believe the spokesman of the southern share-croppers, degradations predominates.

I should like to visualize in the future, an agriculture which would finance a nation of farm homes like the best of these we know today where all members of the family take part in production and play, where there is a spiritual understanding of God's blessing, and the ability to make the best use of man's inventions for the comfort and convenience of the family and community.

## A PASSING ILLNESS

"What did your father die of?" the doctor asked an Atchison Negro who was being examined for life insurance.

"Ah don't know, boss," he replied, "but it wasn't nothing serious.—Minneapolis Journal.

# NEW YORK REPUBLICANS SEEK TO END DISCRIMINATION IN GIVING JOBS TO COLORED CITIZENS

### Frances E. Rivers, Assistant to Thomas E. Dewey, Gets Pledge from Party Leaders to Make Labor Groups Deal Fairly

ALBANY, N. Y.—A pledge of Republican support for "sound legislation" seeking to end discrimination against Negroes and other racial and religious minorities, was made today, Thursday, May 11th, by Oswald D. Heck, Speaker of the New York State Assembly.

The pledge was given in a letter to Francis E. Rivers, an Assistant District Attorney on the staff of District Attorney Thomas E. Dewey of New York County. In the letter, Speaker Heck, one of the outstanding Republican leaders of the State, warmly commends Mr. Rivers for his 'wise Counsel' and 'close cooperation' in preparing four anti-discrimination bills which the Legislature has advanced in the past two weeks.

The letter follows:

**The Assembly**
**State of New York**
**Albany**

**Oswald D. Heck**
**Speaker**

**May 11th, 1939**

**Mr. Francis E. Rivers,**
**75 St. Nicholas Place,**
**New York City**
**Dear Mr. Rivers:**

**Permit me to call your attention to the action of the Legislature in the past two days in advancing bills designed to provide equal opportunity for Negroes and to combat all racial and religious discriminations.**

**Yesterday the Assembly passed and sent to the Governor a bill which prohibits any form of racial, color or religious discrimination in the selection or appointment of persons for employment in the civil service of New York State, or any of its civil divisions or cities.**

**Today the Senate passed and sent to the Assembly a bill which provides that any labor organization which bars persons from membership by reason of race, color or creed shall be denied the benefits of the state relations act.**

**Together with two other anti-discrimination bills already passed by this Legislature (one of which enlarges the definition of places of public accommodation to insure equal rights to all persons, regardless of color, creed or race, and the other which prohibits civil service officials from passing over applicants because of race or color) these bills marks distinct forward steps for all Negroes in the State of New York. I can assure you at this time that every effort will be made in the Assembly to pass the labor organization bill which the Senate passed today.**

**Passage of measures such as these is in keeping with the Republican policy of supporting sound legislation designed to do away with the handicaps of discrimination. In devotion to the best interests of Negro and other racial groups, it is the Republican practice to give earnest consideration and careful study to all legislative proposals adapted to effecting such desirable results. Often it is important to avoid hasty action which may result in more harm than help.**

**In this connection, I wish to express the thanks and appreciation of myself and other Republican leaders of the Legislature for the assistance you have given us. We are deeply grateful for your close cooperation. We feel that you have done us, as well as your race, a great service.**

**With kindest regards, I am,**
**Very sincerely yours,**
**Oswald D. Heck,**
**Speaker.**

As a former member of the New York State Temporary Commission on the Condition of the Urban Colored Population, which Commission evolved and sponsored these bills, Mr. Rivers was greatly elated. He explained: "If Governor Lehman signs these bills, this is true: as regards civil service in New York State and its counties, no longer will appointing officials be able to pass over a Negro who is first on a list without stating in writing his reasons for so doing, and further—no longer will civil service officials be able to discriminate against Negroes either in appointment or promotion without the aggrieved Negro being able to appeal to a higher body for redress; as regards public places no longer will prejudiced apartment owners be able to deny Negroes the use of halls and elevators; and as regards discrimination by trade-unions no longer will they be able to get help from the State Labor Relations Board if they in any way discriminate against Negroes seeking membership in their unions."

"It is heartening to Republicans to know," said Mr. Rivers, "that their party in New York State has had the courage and devotion to fair dealing to aid the colored citizens on the road to complete equality of opportunity. What the Republican Party started in creating the Temporary Commission in 1937, it has now made into reality in 1939, assuming, of course, executive approval of this legislation. The Republican legislative leaders must be praised for having taken the time necessary for constructive study even though at the price of of having some important persons criticise them for what they thought was delay. This final result has more than proved correct this Republican practice of making haste carefully.

"New York State bids fair to go farther than any State in the Union in lending legislative aid to break down discrimination-barriers against Negroes seeking employment. All fair minded persons hope for such successful results in these laws as will inspire New York State to go even farther and other states to emulate the Empire State."

### RESTRICTED

"Have you much room in your new flat?"

"Heavens, no. My kitchen and dining room are so small that I have to live on condensed milk and shortbread."

Mistress: "Marie, when you wait on table at the party tonight, please don't spill anything."

Maid: "Don't worry, ma'am; I never talk much."

## Louisiana Baptists At Board Meeting

BAKER, LA., June 1 (ANP)—Louisiana State Baptist convention this week held its annual board meeting on Leland college campus. Business transacted included formulating plans for coming annual session to be held in Baton Rouge the week of July 15. Board officials present included: President Levy. Prof. R. P. Player, James E. Gayle, Jackson V. Acox and Mrs. Sallie C. Wade.

# THE MODERN FARMER

Vol. XII. NASHVILLE, TENN., JUNE 15, 1939 No. 5.

NEW YORK STATE COLLEGE OF AGRICULTURE
JUL 28 1939

## GOOD FARMING METHODS

### Curb on Weeds Strongly Recommended by Expert

YORKVILLE, Pa.—Weed eradication through good farming was stressed at a district weed control demonstration in Yorkville yesterday in connection with the state-wide fight against weeds. More than 300 farmers, weed and township commissioners, highway officials, and others from Kendall and neighboring counties attended.

J. C. Hackleman of the University of Illinois said clean cultivation was the best method he had ever found for eradicating weeds in crop fields. J. J. Pieper, also of the university, a specialist in pasture management, said: "Nothing controls weeds better than a good turf and that is equally true for a lawn or a pasture field."

**Advise Clean Crop Seeds.**

Both advise using only clean crop seeds and cutting weeds in pastures, meadows, and on vacant land before the weed seeds mature.

L. A. Moore of the state department of agriculture said every effort was being made to enforce the state's noxious weed laws. Enforcement in the past has been lax, he declared.

The spread of Canada thistle in Illinois was cited as an example of how weeds may flourish despite laws against letting them grow. Moore said Canada thistle has been outlawed in the state since 1872 and that today there are a thousand acres of the weed for every acre at the time the law was passed. He estimates that Canada thistles now are growing on at least 100,000 acres of Illinois farm land.

**Shows Thirty Kinds of Weeds**

More than thirty kinds of weeds pulled from fields and roadsides near Yorkville, were brought to the meeting and identified by Joseph E. Barnes of the state department of agriculture. They included Canada thistle and field bindweed, considered two of the worst noxious weeds in the state.

A control demonstration was held in the afternoon on the Anderson farm near the village of Helmar. Field cultivators equipped with broad shovels, commonly called duckfoot shovels, were used on a field infested with thistles. Repeated cultivations with these machines are effective

## HEN LAYS NINE-INCH EGG—AND THAT'S JUST HALF OF IT

BLOOMINGTON, Ill., —Mrs. Elmer Kraps of four miles south of Bloomington today found in her henhouse an egg nine inches long and five inches wide. Another perfect egg of ordinary size was inside.

## NATIONAL HEALTH MEASURE

### Senator Wagoner Has Presented New Bill

By Federated Press

Recommendations of the National Health Conference were incorporated in legislation introduced in the Senate recently by Senator Robt. F. Wagner, New York.

Using the procedure of grants-in-aid to the states adopted in the Social Security Act, the Wagner bill would make available grants for establishing, expanding and improving state programs for child and maternal health, general public health services, construction of hospitals and health centers, general programs of medical care and insurance against loss of wages due to sickness.

"It should be clearly understood," Wagner said, "that the bill does not establish a system of health insurance or require the states to do so. The states will be free to develop plans of their own choosing, subject to necessary basic standards.

"Such plans may be limited to those on relief or include others more fortunately situated in the economic scale....The method and scope of medical services are likewise for the states to determine and may include services rendered through existing private agencies of institutions."

Appropriations authorized in the first year for all phases of the program amount to approximately 80 million dollars, ex-

(Continued on page 16)

## FARM MORTGAGE INTEREST RATE LOWEST ON RECORD

The Farm Credit Administration declared this week that "the farmer is paying a lower average interest rate on his farm mortgage today than at any time on record, and an average rate lower than the long-term interest charge paid by any major industrial group, except the railroads and public utilities." Governor Hill of the Administration said the total farm mortgage interest bill has dropped steadily during the past 10 years, from 586 million dollars in 1928 to 372 million in 1937 and approximately 365 million last year.

"The annual interest bill on 2,250,000-odd farmers who have mortgages on their places now averages about $160 per mortgage farm," he said. "The number of dollars the farmer has to pay is not only smaller than for a long time, but also the interest bill takes a smaller part of his income." The average interest rate on all farm mortgages dropped from approximately 6 percent in 1929 to 5.25 percent in 1937, and available data indicate a further decline during 1938, according to figures cited by Governor Hill.

## MUTUAL AID ON PROBLEMS

### Secretary Wallace Wants Study of Production—Distribution by Four-way Council

From Cooperative Consumer

Addressing the Third Annual Farm Institute in Des Moines, February 18, Secretary of Agriculture Henry A. Wallace outlined the following points as describing the current situation in the United States:

"First, production of unneeded amounts of some farm commodities—particularly wheat and cotton—along with too little production of non-farm commodities, such as houses and a great variety of manufactured articles that are used in houses and in people's daily lives.

"Second, an excess of perhaps 10 million city workers over the number that private industry today is prepared to employ.

"Third, an excess of population on farms, consisting partly of unemployed from the cities who have sought refuge in the country and partly of young people who normally would leave the farm if jobs were open in private indus-

## INDIANA FARMER DIES; GAVE OWN FUNERAL SERMON

COATESVILLE, Ind.,—The body of an eccentric farmer who preached his own funeral sermon two years ago was removed to his home near here today in the casket he carved out of a huge oak tree on his farm. Wade Millman, 90 years old, died in Indianapolis yesterday.

In hs uniqne service two years ago Millman told a crowd of 5,000 friends and curions spectators who gathered at the Caanan Methodist church, four miles northwest of here, that he wanted to die "unremembered and with no preacher or singing" at his funeral.

However, there will be singing and a preacher in charge when funeral services are held for him at 2 p. m., tomorrow. The body will be buried in Caanan cemetery under a black tombstone which Millman imported from Switzerland several years ago and set up in the family plot.

## MODEL FARM COW BEST PRODUCER IN TEST CHECKUP

A registered Holstein owned by the Model Dairy farm with a record of 79.4 pounds of butterfat during February was the best individual producer of 487 head in the Scott County Cow Testing association while Iowana Farm had the high herd record for the month with an average butterfat production of 33.56 pounds for 28 days

## UNITED IN MOVEMENT

### Japanese Villages Assisting Their Farmers

By Yusuke Tsurumi

Famous Japanese Author

It is an internationally notorious fact that the farm life in Japan, because of its high density of population, is extremely difficult. How can this population pressure be relieved? One way to bring about this relief is the industrialization of the country while another is the improvement in farm management and operation.

In this connection, there began to appear a very interesting movement in 1932. The movement is known as the NOSON KOSEI UNDO. The basic philosophy behind this movement is the conviction that no economic salvation of Japanese farmers can be achieved so long as they continue to operate their farms under the old individualistic principles. So they started a movement in which farms are to be operated with the whole village as a unit—the financing, marketing, and purchasing functions to be done by the community as a whole. The products of the farms are to be sold by the community while the necessary funds are to be borrowed by the village.

BASED ON NEEDS

Production is to be allotted on the basis of the nation's needs, while extra labor is to be expend-

(Continued on Page 16)

## MEAT WILL TAME STRIDENT FLAVOR OF WILD GREENS

Greens such as mustard and dandelion must be tamed down a bit by mixing other vegetables or meat with them before they are acceptable to an unaccustomed palate. Either of these greens may be baked in a loaf with a ham and tomato filling.

STUFFED SPRING GREENS.

1 quart cooked chopped greens (dandelion, mustard)—about 2 pounds
1 cup fine dry bread crumbs
1-2 cup cooked ground ham
1 tablespoon butter
1 tablespoon chopped onion
Canned tomatoes, seived
1 teaspoon horseradish
4 strips bacon

Place half the cooked greens in a layer in bottom of greased baking dish. Combine bread crumbs, ham, butter, chopped onion, and horseradish with enough seived canned tomatoes to moisten. Arrange this mixture over greens and top with layer of remaining greens. Cover with strips of bacon and bake in a moderately hot —oven (375 degrees) for twenty minutes or until bacon is done.—Chicago Tribune.

## MESSAGE TO CONSUMERS

### R. M. Evans Administrator of AAA Writes Article

(In Consumers Guide)

OCCASIONALLY the mistaken argument is made that the farmer and consumer have fundamentally conflicting interests. "The farmer," it is sometimes said, "wants a high price, and the consumer wants a low price—in fact, the consumer would like to get for nothing the food which the farmer produces."

That's a mighty short-range view Farmers who think, and consumer wants a low price—in ter. Excessively high prices are bad for sellers. Excessively low prices are bad for buyers. That's the sonnd economics of it. That's the actual experience of farmers and consumers in America.

For instance, in 1932 a farmer neighbor of mine gave away a carload of cattle to the people in a nearby town. He had tried selling. He had shipped a carload of steers to market, and the return had been so small he decided it was more sensible to give away the beef outright and be done with it.

So my farmer neighbor told the folks to come and help themselves. Butchers cooperated, and people just came and got the meat. By selling the hides he got more for this carload than from the first.

That free food was expensive for the people of the town My farmer neighbor got no money to buy the goods the production of which means jobs for the people in the towns and cities. He could not exchange his goods for the goods produced by city workers. All over the country the same situation prevailed. Whether it was cattle or hogs, cotton or fruit or vegetables, farmers throughout the land were literally giving away the sweat of their brows and the fertility of their soil. Farms were foreclosed, farm families lost their homes, banks closed their doors, surpluses piled up, joblessness increased, breadlines got longer.

In the depression years we had surplus food and foreclosures, surplus bankruptcies and unemployment, surplus hunger and misery. Scarcity of everything that everybody wanted.

Farmers made up their minds

(Continued on Page 16)

## FOUR WOMEN RULE TOWN (BUT MAN HAS TO HELP)

DOVER, N. C.—The hand that rocks the cradle rules this town of 700 citizens. The mayor and three of the commissioners are women. One commissioner is a man.

## GENERAL FUNC-- TIONS OF THE UNITED STATES PUBLIC HEALTH SERVICE

As the representative of the Public Health Service on this anniversary program, it is fitting that I refer briefly to the general functions of the Service. Although rigidly condensed, the summary I give will, I hope, indicate to you the diversified responsibilities of the Federal health organization in protecting the Nation's health.

FIRST, there is the duty to prevent the introduction of disease from foreign ports. Through our system of maritime quarantine and immigration inspection we succeed in preventing the importation of pestilential diseases.

SECOND, certain designated diseases must not be permitted to cross State lines. The Federal system of maritime quarantine and with the able cooperation of the several State Health Departments keep down the spread from one State to another of diseases which if unchecked tend to become epidemic.

THIRD, the diseases of mankind must be studied; epidemiological factors must be determined, and methods developed for prevention and control.

In addition to the widely known and justy celebrated National Institute of Health, the Public Health Service operates laboratories for special research in Syphilis, and certain other diseases whose characteristics render them highly significant.

FOURTH, the manufacture of biologicals and analogous products used in the prevention and treatment of diseases is supervised and licensed by the Public Health Service. Thus the public is assured that all vaccines, serums, antitoxins, arsenicals and similar preparations conform with the highest standards of purity and potency.

FIFTH, the study of mental diseases and drug addiction and the investigation of the legitimate needs for narcotic drugs are conducted as functions of a special Division of the Surgeon General's Office.

SIXTH, The Public Health Service stands always ready upon request to cooperate with State and local boards of health in all matters pertaining to the public health. Through this avenue the resources and facilities of the Service are available at all times to whatever section of the population may need assistance in coping with problems affecting the health of the community.

SEVENTH, The collection and publication of reports of disease prevalence in the United States and foreign countries, and the compilation and publication of State laws and regulations and of court decisions relating to public health are activities which are accomplished in the Division of Sanitary Reports and Statistics, as is the

EIGHTH, general function of the Public Health Service, the dissemination of public health information. Under this heading will be found Dr. Brown's work and the several phases of health education, details of which would require far more than our allotted time tonight.

SPECIALIZED OBJECTIVES

In addition to these general objectives, particular reference should be made to Surgeon General Parran's intensive and highly effective campaign for the control of syphilis; to the creation of the National Cancer Institute for the scientific investigation of one of the remaining great scourges of mankind; and to the greatly expanded States Relations function through which the health provisions of Federal Social Security Act are directed toward securing more adequate health and medical care for needy persons in the several States.

THE PARTICIPATION OF THE NEGRO IN HEALTH SERVICES

The ten major objectives of the specialized efforts directed toward the solution of health problems which seem to affect in greater degree the Negro population, are well stated in the article by Dr Brown under the title of "The National Negro Health Movement," reprinted from THE HEALTH OFFICER, a monthly publication of the Public Health Service. I give you Dr. Brown's words, they can hardly be improved on;

1 Consultation with State health officers to learn at first hand of the public health problems relating to the colored populations of the several counties and cities in which large numbers of colored people are to be found.

2. Contact with State and local Negro organizations to secure their aid in furthering movements for the protection and promotion of the health of the Negro and their support of approved measures sponsored by the State and local health authorities.

3. Stimulation of the employment of Negro public health personnel; including doctors and nurses, by State and local health departments and other agencies.

4. Consistent efforts to elevate the standards of training for Negro nurses and to induce persons with good educational background and aptitude to fit themselves for public health work.

5. Special efforts to emphasize health work in Negro schools. The interest of teachers and pupils alike should be aroused. This purpose may be accomplished by the employment of doctors and nurses for work in the schools, health projects, and educational programs.

6. Maintenance of a register of speakers qualified to give talks on public health subjects. The list should be comprehensive and permit a wide range of selection. The utilization of such a list would reduce much long-distance travel and facilitate fulfilment of requests for speakers.

7 Establishment in the central office of the National Negro Health workers for the information of State and local health authorities or others who desire to secure the services of such persons.

8. The development of a depository of health information relating to the colored population. The library should provide an abstracting and reference section.

9. Analysis of census data and vital statistics to determine the distribution of population and the nature and extent of health problems.

10. Promoton of the National Negro Health Week as a period during which emphasis may be placed on the general health status of the Negro population and on the program for its health improvement.

* * * * * * *

Not all of these objectives have been accomplished, but statements appearing in the literature of many official and voluntary agencies are the best evidence of an awakening sense of public responsibility to provide adequate health services for the Negro population. It is highly significant that the use of trained Negro health workers is becoming more widely recognized as an essential requirement for the complete success of the undertaking.

While this public forum is no place for the giving of detailed health hints and admonitions, I cannot forego the opportunity it presents to sound a general note of warning. Never before has there been a greater need for sanity and conservatism in health work. Those of us who are professionally engaged have a great responsibility for teaching only what is tested and true. It is difficult or impossible for the public unaided to recognize the truth amid the mass of fad and fallacy which overloads the delicate mechanism of health education and this imposes on our leadership a serious burden. Through the Division of Sanitary Reports and Statistics the Public Health Service seeks to disseminate timely and reliable health information. The success of this undertaking is measured by the extent to which the public uses the material we produce. Our resources are at all times available to your membership and to your people; it is our privilege to work with you and for you.

The public's acceptance of the program developed by Dr. Brown is the testimonial in which he should feel the greatest pride. What better evidence could there be of his faith, his devotion, his endurance and of his efficiency in the pursuit of the ideas he has sponsored since the beginning of his work. (1) that the Negro shall have equal health opportunity he must accept his full share of responsibility.

In closing, I heartily commend the achievements of the Old Dominion Medical Society during its 34 years of activity, and congratulate Dr. Brown upon the well-merited recognition he has received at this Society's hands tonight.

Address delivered by Assistant Surgeon General C. V. Akin, U. S. Public Health Service, Washington, D. C., at meeting of Old Dominion Medical Society, Richmond, Virginia, June 13, 1939.

## Right To Work Boys On March

WASHINGTON, June 29 (ANP)—Approximately 300 Negroes are in Washington attending the Right to Work congress of the Workers' alliance. The largest delegation hails from New York, but there are quite a few delegates from the South. Other delegations are from Pennsylvania, Ohio, Illinois, New Jersey, Indiana and adjoining states. The Negroes are taking an active part in proceedings of the congress, and are out in full attendance at all sessions.

## NOTABLES APPEAL FOR RETENTION OF RELIEF THEATRE

WASHINGTON, June 29 (ANP)—Powerful interests, headed by Mrs. Roosevelt, Representative Emanuel Celler of New York, Heywood Broun and others, are working in the interests of the federal theatre projects, eliminated in the recent bill passed by the House on Friday.

Supporting these notables, a petition signed by every critic of importance in the metropolitan area has been submitted asking the rescinding of the order eliminating the federal theatre. Signers of this petition include Brooks Atkinson, New York Times; Burns Mantle, Daily News; Sidney Whipple, New York World-Telegram; Allene Talmey, The Vogue; Wolcott Gibbs, New Yorker magazine; Otis Ferguson, New Republic; John Gassner, Forum magazine; Paul Peters, Life magazine; Joseph Wood, Krutch, National magazine; Mrs. Euphemia Van Rensaler Wyatt, the Catholic World; Kelcey Allen, Daily News Record and Women's Wear, Arthur Pollack, Brooklyn Eagle.

Prominent actors and actresses, headed by Talullah Bankhead, daughter of Speaker Bankhead; Blanche Yurka, Donald Ogden Stewart, actor and author, and Philip Barry, author, have talked with Senator Claude Pepper of Florida to lead the drive to restore the federal theatre project to the appropirations list.

The name of Ethel Waters is frequently mentioned, and in his article, Heywood Broun says: "When people like Eddie Cantor and Helen Hayes and George Abbott and Ethel Waters demand the right to be heard, it is for members of the house of representatives to listen to their betters."

## Recreation Park For Oklahomans

ARDMORE, OKLA., June 29 (ANP)—At the last meeting of Lake Murray Boosters' club, the guest speaker, Campbell Cameron, state park supervisor, assured the members and friends present that the whole lake peninsula is being developed for exclusive use of the colored people of the state, and he wanted them to take advantage of its facilities.

As part of its plan to direct the attention of colored Oklahomans to the vacation features of Lake Murray and Camp Site No. 3, the Boosters' 'club arranged an open house and inspection day for last Sunday which attracted a large number of visitors. Other "build-up" events included a motorcade goodwill tour on Friday and a big mass meeting Tuesday.

Booster club leaders include Mrs. O. V. Ragsdale, W. E. Mitchell, J. H. Boyd, Miss Thelma Cherry, Sam Smith, Mrs. Thelma Boyd, Miss Gloria Ainsworth, M. F. V. Wilson, Miss Albirdie Townsend, Mrs. Celle Gaines, Mrs. Matchelor and H. W. Ragsdale.

## Atlanta University

ATLANTA—(ANP) — Thirty-four young men and women, one of the largest classes in history of the school, received their diplomas last Friday from Atlanta University Laboratory school. Exercises, held in the Howe Memorial hall, featured the commencement theme, "The Negro and the Jew—A Comparison," outgrowth of the social studies teaching unit, on problems of minority groups. Discussions on the subject were made by four ranking students, Rowena Bell, Austella Walden, John Brister Turner and Alma Vaughn. Honors to students were announced by Principal W. A. Robinson. President Rufus E. Clement of Atlanta University presented the diplomas

KIDNEY TROUBLE

Stop Getting Up Nights

To harmlessly flush poisons and acid from kidneys and relieve irritation of bladder so that you can stop "getting up nights" get a 35 cent package of Gold Medal Haarlem Oil Capsules and take as directed. Other symptoms of kidney and bladder weaknesses may be scant, burning or smarting passage—backache—leg cramps—puffy eyes. Get the original GOLD MEDAL.

## "Run Li'l Chillun" Cast Quits West Coast WPA For Jobs

LOS ANGELES, June 22 (ANP)—"Run, Li'l Chillun," Federal Theatre project play which ran 11 months here and in Hollywood, last Tuesday passed from federal into private hands with the resignation of the 60 members of the all-Negro cast.

Alexander Leftwich, project director, said the actors told him they now have private employment with "Mr. Warner of Pasadena." It was reported that the production will be taken to Broadway, New York City. Director Leftwich said he was forced to cancel opening of "Run Li'l Chillun" in San Diego Thursday night, and might have to abandon "Mikado in Swing," another all-Negro musical comedy in which he had planned to use most of the resigned actors.

## Tuskegee Athletes

TUSKEGEE INSTITUTE, ALA., July, 1939—Charles H. Smith, captain of the 1937 Golden Tiger football team, who is a member of the faculty of the Palatka Public school, Palatka, Fla., is enrolled in the Tuskegee Institute Summer School. Smith is taking additional courses in Education

Vernon Davis of Portsmouth, Va., who received his Bachelor of Science degree from Tuskegee Institute in 1932, took his master of Science degree in industrial education from New York University, June 7. Davis was a member of the Tuskegee Institute football team and was very active in undergraduate activities on the campus.

Alonza L. Redmon, quarterback on the Golden Tiger football team in 1937 and who received his degree with the class graduating in the Spring of 1938, has been promoted to the assistant principalship of the Garrison High school at Chillicothe, Mo., for the Academic Year 1939-1940.

Tuskegee athletes, both men and women, are writing a chain letter this summer. It is expected that the letter will wind up at Tuskegee Institute on or about September 1 and Coach Cleve L. Abbot has been named as the recipient. The letter will furnish interesting data on the activities of the members of the various athletic teams during the summer months. Captain R. S. Darnaby is said to have originated the idea and will see that the letter keeps moving.

In the Spring, Robert H. McClasky, of Lexington, Ky., sent his usual plentiful supply of Blue Grass seed to be sown in the Alumni Bowl. The velvety appearance of the grass in the Bowl is beautiful even now to look upon. The Bowl should be in ideal condition for the opening football game with LeMoyne College Saturday afternon, Sept. 23.

Baseball is being played by students and teachers during the summer, but tennis is engaging the attention of the larger number of persons. These tennis fans may be seen practicing on the championship courts daily. A large delegation from Tuskegee will go to Hampton in August for the Nationals.

Capt. Frank L. Drye wants a hundred members in the Tuskegee Band for the Academic Year, 1939-1940. Fifteen applications, three from young women, received the same day for membership in the band, has encouraged Captain Drye in the hope for increased personnel in the organization of Crimson Pipers.

## WALLACE ON COTTON

"Secretary Wallace disclosed a few days ago that the United States would call an international conference this summer or fall to seek ways of improving cotton prices and dividing world markets equitably among all exporting nations," says an Associated Press report from Little Rock, Arkansas. "A State Department inquiry regarding desirability of an international agreement, Mr. Wallace said, has brought favorable replies from all important cotton-exporting countries. Until such an international agreement is put into operation, the secretary declared it was necessary for the United States to embark on a program of subsidizing exports to regain this country's fair share of world markets and to help dispose of a record surplus. The plan is designed to expedite foreign sales of cotton, which reduce surplus stocks of about 14,000,000 bales, of which 11,400,000 are stored under Government loans to producers.

"In a speech prepared for a meeting sponsored by farm organizations and the Little Rock Chamber of Commerce, Mr. Wallace advanced a five point program for solution of the perplexing cotton problem. In addition to the international agreement, the program includes: First, continuation of the loan as a protection for the farmer's price of cotton; Second, continuation of benefit payments to build and protect both incomes and soil resources; Third, increased efforts to expand domestic consumption; Fourth, maintenance of our fair share of the whole market—now, by the necessary export subsidy program; as soon as possible, and for the long run, by an international agreement on cotton and by the reciprocal trade agreements program; Fifth, attainment of a more nearly fair and equitable division of the national income with farmers through a processing tax, or its equivalent, to serve as a continning source of revenue. Mr. Wallace explained that his advocacy of the subsidy proposal contradicted views he expressed at Fort Worth, Texas last fall. 'Since that time conditions have changed,' he said. He contended that there was 'no clear evidence' at that time that the Government loan of 8.3 cents a pound would hold the price of American cotton above world prices and thus discourage exports.

"Challenging critics to submit a plan that 'will do the job as well and at less cost,' the Secretary declared' apparently the real objective of administration critics was 'destruction of the entire agricultural program.' 'High tariffs on manufactured products, discriminatory freight rates and price-determining powers of the great corporations,' Mr. Wallace declared, 'have combined to put cotton into a more difficult situation than any other major farm product except possibly wheat. Before the World War cotton farmers received 3 percent of the national income. Last year, even with benefit payments added in, they received only 1.4 percent. There are a million more people living in cotton farms of the South today than before the war.' Denying the bounty plan was 'dumping,' the Secretary said it was designed to 'offset the loan by payment on our exports sufficient to make American cotton as competitive with foreign cotton as our present supplies warrant.'"

# WHO WON LOUIS-GALENTO FIGHT IS BURNING QUESTION

### Most Papers Deny To Brown Bomber Fair Praise For Victory Over Italian Challenger

WASHINGTON, July 6 (ANP)—By mutual consent, sports writers of the great Caucasian press dusted off the old threadbare laurel wreath and placed it on the dizzy, aching head of one Dominick Anthony Galento Thursday morning, following what was called the greatest fight since the Dempsey-Firpo imbroglio some years back. And to the winner of the Galento-Louis bout, they merely directed a polite nod in the direction of the champion, Joseph Louis Barrow.

The lavish praise showered upon the loser would seem to this writer to be a machiavellian plot to discredit Mr. Louis—or are we seeing this thing wrong?

There is no recalling any praise being showered upon Louis after the first Schmeling fight—when it took the Black Uhlan from Naziland 12 (count 'em) rounds to whip Joe into submission.

And when sports writers declare that Louis has only met worn out old fighters Schmeling, Carnera, Sharkey, Braddox, et al—who else would they shove in to do any better? And even in their prime, these gentry weren't any too hot.

Way back in the dark ages, when Jack Dempsey was the toast of fistiana, they imported one George Carpentier—a worn out lightheavyweight bloated into some sort of shape to meet the "killer" Dempsey. And there is no denying that Carpentier, gallant fighter that he was, failed to make things interesting for "Killer-diller Jack."

And the historic fight in the Yankee stadium by which all others are measured, the Dempsey-Firpo fight—who helped the mighty Dempsey into the ring after Firpo had hit him and knocked him through the ropes into the laps of the sports writers? And how long did it take the Manassa Mauler to finish off the Wild Bull?

Don't forget Tommy Gibbons out there in Shelby when he went those 15 rounds with Dempsey and made him look very silly. Ah, there, boys! Tommy wasn't supposed to have a chance with the mauler, but he stayed the 15 altho Jack got the decision. To mention one or two others, we might add the names of Billy Miske, a third rater who gave Mr. Dempsey no little trouble, and Bill Brennan who had the Jack on the verge only to lose the fight in the seventh round, we believe.

And then the Tunney thing in Philadelphia and the later encounter in Chicago made famous by the long count business.

Mr. Powers of the Daily News said it was the "cleanest" (with emphasis on the word) fight ever held in Yankee stadium. Barring, of course, a couple of times Galento butted Louis and the back hand blow which Louis received. Of course, Mr. Powers would not be in a position to see these things, being as he was safely in the press row, outside the ring. It would have appeared better for Mr. Powers to say, it SEEMED to be the cleanest fight, or in his opinion." But one never knows unless he is on the receiving end.

Without detracting one iota from Galento's stand against the champion, in all fairness he deserves some credit, but from the appearances of what is written after the fight, the loser was the victor with just a matter of 23 stitches taken in his face after the fight.

Taking it all with a grain of salt and without becoming too partisan or two radically inclined, there is no doubt that Louis is head and shoulders above the crop and it is no fault of Louis' that there are no better fighters in the game today than there are.

All of the fouls in a Louis fight are perpetrated by his opponents, so there is no reason to be so careful to see that Louis does not commit a foul—why not watch the other fellow, the one who does the yelling,

Louis met the style affected by Galento in the match with Paulino Uzcudum—and his answer to that was a crashing wallop that sent another hitherto unknocked down man crashing to the canvas, his face distorted in a terrific gargoyle-like mask. And Mr. Galento wasn't exactly smiling when Arhtur Donovan stopped the battle to save Two-Ton from annihilation.

So we let the boys have their little say and sit back and smile contentedly while they dig up and build up another victim for the thunderbolts that Louis carries in both hands, even with his "weak" chin exposed to murderous attack.

And while we are on the subject, when Joe decides he has had enough and we would like to see him retire as the undefeated champion—there are others inspired by this marvelous work who are coming along and will bring the Negro race added laurels, unaided by the facile pens of writers—who never yet made a champion. Champions are born and gain their honors through deft handling of fists, and not through praise or venom heaped upon them by chameleon-like controlled experts.

## Two Graduate At Nebraska Univ.

LINCOLN, NEB., June 29 (ANP)—Two Negroes received degrees at the 68th annual commencement exercises of the University of Nebraska, Monday morning. They were Carlos George Smith and Claiborne C. Hill.

Smith received his master's degree, majoring in German. He has taught at Wiley college for 29 years and is a member of Phi Beta Sigma fraternity.

Hill received his degree from the dental college. He plans to practice in Charleston, W. Va. He is a member of Alpha Phi Alpha fraternity.

"Not every one that sayeth Lord, Lord will enter the kingdom of Heaven."

# N.A.A.C.P. CLOSES ANNUAL SESSION IN RICHMOND, VA.

### Presentation Of Spingarn Medal To Miss Marian Anderson By Mrs. F. D. Roosevelt Is Highlight

RICHMOND, VA. July 6 (ANP)—Highlighted by a message of greeting at the opening session from Pres. Roosevelt and award on the closing day of the Spingarn medal to famed Contralto Marian Anderson by the gracious First Lady of the Land, the 30th annual convention of the National Association for the Advancement of Colored People ended its six-day session here Sunday when an overflow mass meeting at the great Moxque auditorium, show place of Richmond.

Still another feature, but not on the convention program, was the excitement Wednesday night at conference headquarters, Fifth Street Baptist church, over the Louis-Galento fight in New York City. Without general knowledge, some one installed a radio and loud speaker in the church auditorium, and suddenly as a panel discussion was taking place and delegates were properly absorbed in the interesting topic—the fight was tuned in and soon cries for "Joe Louis" were heard on every side.

A few who probably thought the broadcast ill-timed went outside, but most of the big audience seemed delighted and remained as the ringside description of the short battle came over the air. Some said that those who left the hall kept an anxious ear cocked at partly-opened doors, completely lost their indifference when Galenti floored Louis in that hectic third round. All was forgiven when Joe was announced the winner by a TKO, and the prangster who installed the radio was given an unofficial vote of thanks.

Ample accommodations for the more than 600 delegates attending the big conference had been arranged by the committee in charge and all business details of the meetings were handled with ease and facility. The programs of the various sessions were smooth-running and not boresome, and speeches by celebrities and nationally-known NAACP officials were for the most part restricted to 30 minutes. Fifth Street church, commodious and inviting, has all facilities for large conventions and numerous small rooms for conferences and discussions.

At one session there was serious discussion of whether or not commissions should be paid to workers in membership campaigns. The opinion expressed, endorsed prizes and honor awards, frowned on cash prizes, many declaring: "This noble work should be done without expectation of personal reward."

S. H. Dykstra of the U. S. Department of Labor made an interesting talk at the Wednesday morning session, telling frankly of the Negro workers' handicaps in private and government work. He told one of Dean Pickens' stories: How American whites are more disturbed at seeing a Negro in a dining room "eating his own soup," than they are about the Negro coming from the kitchen "with his thumb in their soup."

The panel discussion on "Economic Security" by Attorneys Charles Houston, James Tyson and others, was interesting. Atty. Tyson argued strongly that the only security for the Negro must be under federal management of projects and of security administration. His idea seemed to impress the delegates.

## SOUTHERN PROBLEMS

Whether the South is the nation's No. 1 economic problem received conflicting answers last night at Chapel Hill, North Carolina, from Senator Bailey of North Carolina, President Graham of the University of North Carolina and John Rust, co-inventor of the cotton-picking machine. Senator Bailey cited data on wages and income and what he termed "simple facts of current record." in his contention that "there is no nation's problem here except the problem of a just national policy." Dr. Graham, member of the Southern Economic Council, took a different view, saying: "....We have the most eroded soils, the poorest housing and health record, the least organization of labor the most tenants and sharecroppers, the lowest wages and purchasing poower, the highest interest rate, the highest illiteracy, the least per capita book circulation, the lowest proportion of students in high school and college. Mr. Rust stated that the South was not only the nation's No. 1 economic problem but was also the nation's No. 1 economic opportunity. (New York Times).

# GOVERNMENT SKIMPS ON PAY OF COLORED WORKERS ON HOUSING PROJECTS, CLAIM

### Figures of Administrator Straus Show Negroes Getting Only Three Cents out of Each Dollar Spent

RICHMOND, VA., July 6—(ANP)—An insight into the money paid as wages to Negroes and white workers on federal housing projects was given last Tuesday when Nathan Straus, administrator of the United States Housing Authority addressed the opening session of the NAACP annual conference.

According to Mr. Straus, the employment of Negro building trade workers on low-rent housing projects has already netted these workers $125,000 in wages. Thus, based on the ruling that Negroes must receive 3 per cent of the amount paid in wages to white workers, the whites received slightly more than $4,000,000 as compared with $125,000 for colored workers.

It was learned that colored housing project workers in Chicago and other cities have long complained of the disparity between the wages paid them and that paid white workers. Many colored workers, it was said, also resent the glowing statements of colored representatives of USHA, who address gathernigs of Negroes telling of the thousands of dollars being paid Negro workers, while pay checks of the whites total many millions.

Mr. Straus told the NAACP delegates: "Reports from 16 cities in which projects are under construction with the financial assistance of the USHA, indicate that as of May 15, 1939, a total of $124,478.90 has been paid in wages to Negro workers, skilled as well as semi-skilled and unskilled. With the volume of construction work increasing daily, undoubtedly later reports will reveal a considerable increase in the amount of wages paid these workers."

## Howard University Secretary Better

WASHINGTON, June 29 (ANP)—Richard Hurst Hill, secretary of Howard university, now confined to the John Hopkins College hospital in Baltimore, is showing marked improvement, according to latest reports, and his recovery is merely a matter of time. Mr. Hill succeeded to the post formerly held by Dr. Emmett J. Scott, and has established a record for efficiency seldom equalled in any institution. Extremely popular, the young secretary's wife has been bombarded with telephonic inquiries concerning his health.

## Willis Ward Is Now A Lawyer

DETROIT, Mich.,—Willis Ward, one of the most famous football and track stars of the University of Michigan, who graduated from the university in 1935, received his diploma as a graduate in law from his Alma Mater on June 19. Mr. Ward is now the director of colored workers at the Ford River Rouge plant, a position he held while pursuing his law course.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## EDITORIALS

FROM THE BIBLE:—

"I have fought a good fight, I have finished my course, I have kept the faith: henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day." 2nd Tim. 4: 7, 8.

There is no unbelief:
Whoever plants a seed beneath the sod
And waits to see it push away the clod,
He trusts in God."

—Lizzie York Case.

### A JOB FOR GRADUATES

A majority of the colored people of the nation who cannot read or write live in five of our southern states, namely, Alabama, Georgia, Louisiana, Mississippi and South Carolina. Unfortunately, most of these people live in rural sections, where, in this day and age, enlightenment is badly needed. Much has been done to decrease this illiteracy and much more is needed to be done.

Some of the best schools and colleges for our group are located in these five states. Graduates of these schools, who are looking for a chance to help their fellows, can find no bigger or better job than the job of helping reduce this illiteracy—the job of teaching adult illiterates to read and write.

This job may not pay big wages but it is a job someone must undertake and it is an ideal job for the young graduate. No job is a better character builder. Fortunate is the graduate who realizes the big opportunity he or she has to render such service. The satisfaction of having been able to give to others the greatest gift in the world,—the gift of knowledge, will bring joy to his soul throughout his life. Early will he himself learn the valuable lesson that "to give is better than to get," and that he who is the servant of all is really the greatest.

So we humbly suggest to the young graduates who will teach the rural school this year, offer your services freely to the adults who also wish to go to school. Start night classes in the school house, in the community church, or in the humble home. Don't be backward with your giving. It is more your job than any other person's. You have youth and enthusiasm, you have good health, you have had wise training and instruction. Go to it. You will be surprised what you can accomplish, what good you can do. The writer of this editorial taught the first night school for colored adults in the state of North Carolina. In two years illiteracy had been reduced fifty per cent in his community.

Again we say, don't forget these people who never had an opportunity to learn to read and write, and do your part in helping to reduce Negro illiteracy. You will be more proud of Tuskegee when you know that less than 26.2 per cent of Alabama's colored rural citizens are illiterate, and, if graduates of schools of either of the other four states above mentioned, the same will hold good too.

### FIRST, THE FARM

Because we believe that most of the New Deal is here to stay we believe more strongly than ever that the farm and farm life will remain, as today, the best way of living for our Group in this nation. But the Negro farmer must realize that this is an age of GROUP LIVING, and it will soon be hard for him to get along at all unless he is willing to unite with his brother-farmers and work and think for the welfare of all.

The cooperative movement is growing fast in this country and colored farmers who are not interested in this movement are behind the times. Our leaders must strive valiantly to awaken them.

Colored farmers should organize and buy, produce and sell cooperatively. This can be done, it is being done now by Units of the National Federation of Colored Farmers in some communities, and the farmers of these communities realize they are gaining much by practicing cooperation. Their Units will grow and prosper as others realize the value of working together for the common good.

The farmer must think of his farm first, of the happiness he may obtain from its possession during his lifetime and of the value it may be to those who will inherit it.

### QUESTIONS BY A STRANGER

The following letter was written to a prominent Chicago daily paper by one of our group, a native of the island of Haiti. We wonder what some of our real 100 per cent Americans thought when they read it. Certainly others can see our faults and shortcomings better than we can see them ourselves.

I am a native born Haitian, have been a citizen in this country for three years, and I am fortunate to hold a position with an importing company, due to the fact that I speak French, Spanish, German, Italian, Russian, and English. In my native country this is not strange, but here it seems strange—a black face among thirty whites in our office. Now they have become accustomed to me.

What I want to know is this—why do the white Americans dislike the black ones so? As far as they are concerned, the black ones should not hold good positions, only heavy labor. Why? As far as I can understand, the black Americans are very loyal and good toward the white ones.

And another thing. When the white ones pay $35 a month for rent, and move out, black ones move in and the rent goes up to $45 or $50, and the best of their salaries is $15 a week for men, while white Americans average from $25 to $50 a week. Why so much injustice?

And, please, one more question. Is it the custom for the women to give money to the man? Every man I meet wants to know if I am employed, and when I tell him where, right then he wants to buy a car with my money. Does that go for the white Americans also?

Antoinette Beaucaire.

### "GIVE ME LIBERTY OR—"

(The following article was written by Merlin G. Miller, director of education for Consumers Cooperative Association. It was published in a recent issue of The Cooperative Consumer.—Editor's Note.)

"As for me, give me liberty or give me death!" How could a true American say any less?

Yet today hundreds of millions—Germans, Russians, Italians, Japanese—have surrendered liberty to governments that guarantee jobs. Russians have toiled at forced labor in forests and mines, on dams and Arctic canals. The German government has just announced that it will widen the Kiel Canal. At the same time it issued a decree making all Germans, men and women, subject to forced labor.

In the lands of the dictators there are no unemployed. Everyone has a job. The millions of unemployed are in the democracies. The U. S. A. has 6 1-2 per cent of the world's people, 60 per cent of the world's gold, and half the world's unemployed.

Our trouble is not too much liberty, but too little. We are free in government, but enslaved in business— enslaved to monopolies that set prices too high for the masses, that shut down factories and refuse to buy from farmers, when profits cease. We need more freedom—freedom for the people to buy and use America's vast surplus wealth.

This liberty, the cooperative movement provides. Instead of business controlled by a few financiers on Wall Street, it is a federation of thousands of small businesses. Instead of thousands of votes to the millionaire, the cooperatives give one vote to each of thousands of members. As the cooperatives expand, more and more people become business men, owners of shares; more and more people become voters in an economic democracy; and more and more people share in the prosperity and the liberty which is now reserved, in our "free America," for the few who have great wealth.

Liberty or jobs! Why not choose both—more liberty in business through cooperative democratic control, and more jobs through expanding cooperative business which brings wealth back into the hands of the common people?

## DENTISTS DAY AT FAIR IN AUGUST

NEW YORK., June 29 (ANP)—Grover A. Whalen's 156-million-dollar New York World's fair, the "greatest show on earth," his a notation on its official calendar setting aside August 17 as National Dental Association day in honor of America's Negro dentists and to be held in conjunction with the association's annual convention here August 14-18.

Included on the day's fair program are visits to the famed Trylon and Perisphere. Court of Peace, the $5,000,000 Constitution hall, Avenue of Patriots, Lagoon of Nations, Fountain Lake Amphitheatre the various exhibits buildings, the Court of States and other wonders of the World of Tomorrow.

On August 17, NDA-World's Fair day, starting from convention headquarters in Public School (113th st. between 7th and 8th aves.), the dentists and their families will begin a conducted tour of the grounds. Buses will take them direct to the fair entrance, thence to the various places of interest by uniformed guides provided by NDA's committee on arrangements.

After the tour, an open business meeting will be held in the fair's open air auditorium. Arrangements have been made for the entire party of men, women and children to be served dinner at special rates in fair restaurants.

Recreation facilities available for Dentists' day visitors include 72 tennis courts, 24 handball diamonds, 11 children's playgrounds, bridle paths, bicycle paths, 31 miles of walks, a boat basis, soccer, football and lacross fields, a pitch-putt goli course, archery ranges and other features. There are 4,500 public toilets, 65 per cent of them free. Fair hours are 9 a.m. to 10 p.m. except for the amusement zone (night spots, cabarets, etc.) which remain open until 2 a.m.

Dr. Louis Fairclough, convention program chairman, said that during the five-day session, clinics will be held in the College of Oral and Dental Surgery of Columbia university, also in Harlem hospital, and conducted by outstanding specialists in their particular fields. Dr. Millard R. Dean, NDA chairman of publicity, advises dentists planning to attend the August convention as follows:

"Make reservations for rooms in homes or hotels for yourself and family by writing Dr. S. Hutton Craig, 168 W. 128th St., New York City, as his committee on housing has official accomodations for all—first come, first served."

## Georgia State

INDUSTRIAL COLLEGE GA.—(ANP)—At last Friday's 48th annual commencement exercises of Georgia State College, the principal address was delivered by Dr. Matthew S. Davage, president of Clark University, president of lowed by presentation of certificates and diplomas by President B. F. Hubert. Meldrim auditorium on the campus was filled to capacity for the program, those present including scores of alumni and prominent Savannah residents. Music was by the GSC Girls' trio and a mixed chorus of unusual excellence.

## WALLACE ON FARM PLANS

Secretary Wallace contributes an article, "Farm Program; 1939 Model," to the New York Times Magazine (April 2). He says in part: "While I believe it is wise for the United States to put herself strongly and competitively into the world market with her export products, I do not look on this as the ultimate objective. The altogether important thing is to bring about stability of market supplies and market prices. The great cause of world-wide depression in 1921 and again in the early Thirties was the accumulation of large stocks of raw materials. In this connection the Birmingham Chamber of Commerce, in England, has made a very interesting observation in a memorandum which it submitted on Jan. 30, last. Pointing out that the accumulation of surplus stocks which began in 1927 was 'a cause and not an effect' of world economic crisis, and warning that a surplus is again accumulating, the memorandum says that the world's 'agricultural production' can be controlled 'if for no other reason that it must be.'

"'A condition where a bumper crop means ruination to farmers is too absurd to be allowed to continue,' the memorandum says. It recognizes that the fluctuations in the prices of primary products 'influence materially the prosperity of the manufacturing communities of the world' and declares: "The evil effect is not limited to farmers: it repercusses on all of us, and it is just as much in our interest as in that of the farmers that it should be remedied.' The memorandum goes on to suggest: 'Nature's vagaries in the way of favorable or unfavorable seasons cannot be controlled, but they can be tackled by the formation of buffer pools which would absorb surplus accumulations of stocks and remove them from available market supplies in years of plenty and replenish such available supplies in lean years, thus keeping world supplies on a normal basis and preventing violent price fluctuations, somewhat on the lines of the Exchange Equalization Fund in London. In other words, there is here a suggestion for the ever-normal-granary arrangement on a world-wide scale.

"What we need is a series of international commodity conferences which will provide export quotas, and effective ever-normal granaries or warehouses operating on an international scale backed up by effective production control to prevent excessive fluctuations in prices and supplies. The first step in obtaining an objective of this sort is to make a real success of the international wheat conference for which active preparatory work is now under way. If the different nations assembled at London work out and sign an agreement, the next step will be to hold an international cotton conference. In the meantime we shall probably be furnishing the various cotton-producing nations of the world some real competition instead of holding an umbrella over them and retiring from competition as during recent months."

# News From and For Members Of The N. F. C. F.

### A CITY FARMERETTE JOINS

Mrs. Carrie Kinlaw, of Chicago, Ill., has recently renewed her membership in the N. F. C. F. Mrs. Kinlaw was one of the first members of our organization and a very faithful one. Although not engaged in farming directly, she is interested in farming and farm life and shows her appreciation of what our organization is doing for the farmers by helping to support it. Mrs. Kinlaw says she wants her name to always remain on the roll of members of the N. F. C. F.

### FARMERS SUNDAY, A GREAT DAY

Farmers Sunday of 1939 was observed generally by all Units of the N. F. C. F., although some Units did not carry out their programs until a later date than April 20th. Reports reaching the national office state that many groups observed the day who are not directly affiliated with our organization. One of the best celebrations was given by a group of Wisconsin dairy farmers of the white group. These farmers held religious services early Sunday morning, April 30th, and the chairman of the group read and commented on the proclamation issued by the president of the N. F. C. F. The remainder of the day was spent as a get-together for all the farmers of the community and their friends from nearby towns. A picnic dinner was served and the young folks enjoyed games and athletic activities.

If our colored farmers don't watch out the farmers of the white group are going to take Farmers Sunday and run away with it.

### LOCAL UNIT'S CHARTER REVOKED

The National Executive Committee of the N. F. C. F. announces that the local Unit charter, issued to the Harviell, Mo., Unit last October has been revoked on account of failure of local officers to obey the laws and regulations of the national organization. It will be necessary for this Unit to reorganize with a new corps of officers.

This is the first and only Unit that has fallen into difficulties with the home office during the past two years. The mistakes made by these local officers are to be regretted and it is hoped that members will soon reorganize and that Harviell will again have a prosperous and flourishing Unit.

### REDWOOD, MISS. UNIT PROGRESSES

Our local Unit at Redwood, Miss., under the leadership of Brazzie Petty and Albert Winston, is progressing and increasing in membership. This Unit had a fine observance Farmers Sunday. One of the best programs reported by any Unit was rendered by this group of organized farmers.

This Unit has met difficulties hard to surmount, but if they will continue to stick together they will overcome their troubles and all will be more prosperous and happy farmers next year.

### BUTLER COUNTY, ALA. UNIT REORGANIZES

Butler County Unit, of Georgiana, Alabama, under the faithful leadership of D. F. Hall, first vice president of Ala., N. F. C. F., has reorganized and promises to become the liveliest Unit in the entire state. Charter members include the following farmers: C. H. Sellers, Prof. A. B. Carter, James Haygood, C. H. McKee, H. C. Hicks, H. O. Rue, P. E. Hall, Walter H. Hall and Robert Ballard.

Alabama farmers are becoming more interested in the N. F. C. F. every day, according to reports from vice president Hall. We expect that many, now under the wing of the Farm Bureau, will leave that organization after this year and get into the N. F. C. F. where they rightfully belong.

### REDEMPTION OF COTTON CERTIFICATES

Recently an extension of twelve months was granted for the redemption of cotton certificates. The expiration date for the redemption of these certificates is now December, 1939. Readers are asked to pass this information on to their neighbor farmers who may be interested.

### A NEW NORTH CAROLINA UNIT

Willing Workers Unit, N. F. C. F., Marietta, N. C., has recently been organized by first vice president A. Gordon Thompson of N. C. This Unit is located on the N. C.—S. C. state line, and the members represent farmers of both states.

The charter members include J. J. Thompson, W. A. Ford, A. J. Johnson, Burney Colman, and Claude Ford.

We congratulate these progressive farmers and trust their success will influence many other colored farmers of the state to get under the banner of the N. F. C. F. and march forward.

### FARMERS SUNDAY AT HALCYONDALE, GEORGIA

As we go to press we received a report from Bro. J. S. Wilson, secretary of Progressive Unit, Halcyon Dale, Georgia, that his Unit will observe Farmers Sunday the second Sunday of June. Bro. Wilson says that this will be the first time such an observance has been held in his community, and they are arranging a fine program and expect a great day and a large attendance.

This Georgia Unit is wide-awake and is constantly working for the welfare of its membership and of Georgia farmers.

### ATTENTION: STATE VICE PRESIDENTS

State Vice Presidents of the N. F. C. F. who have not recently reported to the national office should do so at once. This has been a good and successful year for the N. F. C. F. and we wish to give all credit to those faithful officers and members who are striving to build up the organization and made it what it should be, the greatest and the best Negro organization in the nation.

What are you doing in your state? Are you striving to make your state the first in organization and unity. Let the national office know what you are doing and how you are progressing.

### ON TYLERTOWN, MISS. UNIT

Next month the Modern Farmer will feature an article on the progress of the local Unit of the N. F. C. F. of Tylertown, Miss. This Unit now has the honor of being the largest and most active in the organization. Watch for this article.

## N. Y. Age Editor Is Honored On 82nd Birthday

NEW YORK, June 29—(ANP)—An all day celebration in honor of the 82nd birthday of Fred R. Moore, editor of The New York Age, for more than 30 years, was held this past week.

Beginning at 10 a. m. when a group of school girls from P. S. 81 presented him with bouquets of flowers, the celebration included a party to which 1,800 children came, at P. S. 119 where he is president of the PTA.

An evening party at the Monterey cafe was the surprise event of th day. Given in honor of Mr. Moore by Mr. and Mrs. Matthew Henson, more than 200 people attended. Telegrams and messages of con gratulations were received from all parts of the country. Magistrate Fyles A. Paige was principal speaker at the party.

# WELCOME EXTENDED BAPTISTS ATTENDING OKLAHOMA MEETING

Tulsa, Okla., June 29—(By Viola Drew for ANP)—To the 34th annual session of the National Sunday School and B. Y. P. U. Congress came thousands of delegates this week from all sections of the country. They began arriving the latter part of the week in order to get situated and ready for the opening sessions and pre-Congress activities which opened at Convention hall Monday night with a mammoth musical program of more than 500 voices in the chorus directed by Mrs. Carrie Persons-Neely.

With banners of welcome waving across the main streets of the Negro section, Tulsa threw open its doors to the delegates and they predict one of the most successful sessions in its history. The welcome program was held Tuesday night at Convention hall, where all general assembly meetings will be held during the week, with the Rev. J. H. Dotson acting as master of ceremonies. President Jernagin of Washington introduced Rev. Dotson, who in turn took charge for the evening. Mayor T. A. Penny gave the welcome on behalf of Tulsa and assured delegates they held the key to the city during their week's stay here. Dr. J. W. Storer (white) pastor, First Baptist church and radio minister, delivered the on behalf of the white Baptists. Welcome on behalf of other denominations was delivered by the Rev. Waymon A. Jennings, pastor, Vernon A. M. E. Church; Prof. E. W. Woods, principal, Booker Washington high school delivering words of welcome for the business and professional men.

# NEAR CLOSING OF WILBERFORCE IS TOLD BY PRELATE

## Bishop D. H. Sims Gets GOP Governor Of Pennsylvania To Plead For AME School

**PHILADELPHIA, June 29 (By G. James Fleming for ANP) How Wilberforce university came near being seriously crippled or wiped out was revealed for the first time last week, as Bishop D. H. Sims was commended by his A. M. E. colleagues for having saved the Ohio university by quick thinking and action.**

What the threat was and how it was stalled was told on Tuesday when the executive committee of the bishops' council received newspapermen in interview. The bishops present were S. L. Greene, Little Rock, and W. A. Fountain, Atlanta, in addition to Bishop Sims.

It was just a few weeks ago. Wilberforce had submitted its needs. In the legislature everything seemed to say that the over half a million dollars needed for the next two years would be appropriated and approved by the governor.

State Assembly man Chester K. Gillespie had attacked Wilberforce's president, Dr. D. Armonde Walker, but nothing had come of his efforts. Many friends had risen up in the university's defense, and the North Central association had admitted the institution to Grade "A" rating.

Out of the clear, rumblings began to be heard to the effect that Governor Bricker was going to slash the proposed appropriation. It was not just a rumor; the governor had decided to cut the Wilberforce money to the bones—so much so that Wilberforce could not have functioned, it is said.

Whatever would have been the official reason given, the real motive lies deep in the past political activities of the governor and the university president. They are on different sides of the fence politically, and Dr. Walker has been outspoken against the things that the governor holds dear and vice versa, it is stated.

Word came to Bishop Sims of the slash. So serious was the whole business and such was the need for speed that the bishop had to get audience immediately with the governor. His words and plea alone were not enough, so he had to turn to Pennsylvania's Governor Arthur H. James as an intercessor.

Governor James induced the Ohio executive to give audience to the A. M. E. bishop, who was accompanied by Bishop Greene, "but all the credit is due to Bishop Sims," Bishop Greene declared.

What Bishop Sims said and what arguments he gave, only those present know, but Governor Bricker was won over and the $550,000 for Wilberforce left in the appropriation bill and the bill signed.

If Wilberforce had not received this money, its entire educational program would have been deeply shattered, to the exent that it would have undoubtedly lost its "A" rating. Thus, Bishop Sims was also being praised for saving the rating of the school.

When questioned as to the fitness of Dr. Walker, who formerly pastored St. James Episcopal church, Cleveland, and about the recent dismissal of six professors at Wilberforce, the bishops were united in warmly defending the Wilberforce head.

They said: (1) Dr. Walker is a most capable administrator and his efficiency has been noted by the North Central association which rated Wilberforce. No evidence that Wilberforce suffers for having a clergyman as president.

Our book with prepared church and Sunday school addresses and prayers for all occasions is 60c in stamps, check or money order or C. O. D. plus postgae. Write Public Speakers Society, Box 1114-D, Oakland, Calif.

(2) Dr. Walker is putting all his talents into Wilberforce and is not using the presidency as a stepping stone to the bishopric. Indeed, Dr. Walker has declared in public that he is not a candidate, and does not intend being a candidate for the episcopacy.

(3) Of the faculty dropped, only one man—Dean F. H. McGinnis—was dismissed. The other five were given leaves with pay as high as $1,000 to study in the field in which they were teaching. These are eligible for re-employment when they have brought up to date.

(4) For the men given leaves there was, and is, no idea of penalizing them. Rather, they are the men who were pointed out in the North Central report as teaching subjects for which they were not prepared, instead of the subjects in which they had majored. The bishops agreed that this was not the men's fault, but the fault of past administrations, with for instance, a man who specialized in sociology teaching nothing but philosophy.

Despite a strike at Wilberforce during the past year, this threat to its appropriation and the dismissal of six teachers, the bishops' counsil did not take any official action on this school, since only the board of directors has authority over the institution.

Wilberforce is the premier educational center of the African Methodist Episcopal church, but its major support comes from the state of Ohio, which the school serves through certain departments. For years this division of sponsorship and support has been evident at the school where "the state side" has come to mean the campus, departments and teachers which are in the best connection are the most well equipped and are the best paid.

Whether the men dropped from Wilberforce will bring suit or take any other legal action is not yet known, but there was general feeling here that the bishops—and especially Bishop Sims—will be able to steer the ship of state out of all troubled waters. The ex-Wilberforce teachers involved in addition to Dean McGinnis, are George F. David, head, department of sociology; M. L. Kiser, head, department of Latin; Lindell C. Ridley, head, department of philosophy; Harry B. Baker and Mary Pytrle, both of the music department.

# DR. L. D. REDDICK IS SUCCESSOR TO ARTHUR SHOMBURG

## Will be Curator of Negro Literature in New York Library

NEW YORK, June 29—(ANP)—The New York public library, through its chief of circulation, Franklin F. Hopper, has announced the appointment of Dr. Lawrence D. Reddick to the position of curator of the division of Negro literature and history, located in the 513th street branch at which Ernestine Rose is librarian.

A native of Jacksonville, Fla. Dr. Reddick was graduated from Fisk University in 1932, received his M. A. from the same institution in '33; and has this year received the degree of doctor of philosophy in history from Chicago University.

Before going to Chicago, he served as instructor in history at Kentucky State College, Frankfort; and associate professor of history at Dillard University, New Orleans. He has also been associated with the Journal of Negro History as assistant editor.

Mr. Reddick will report on August 1 to take over this important position in the library system of New York City, which was formerly held by the late Arthur A. Schomburg.

## "LISTEN TO THIS"

Copyright

By Hobart T. Mitchell

BLIND TOM

Thomas Green Bethune (Blind Tom), a musican of note, died June 13, 1908. He was born a slave near Columbus, Georgia, May 25, 1849.

Y. M. C. A.

Anthony Bowen, an employee of the United States Patent Office. was the first president of the first Colored Young Men's Christian Association which was organized in Washington, D. C., in 1853.

FREE

June 19, 1865, General Robert S. Granger, who had command of the District of Texas, issued a proclamation to the colored people of Texas telling them they were free.

WHITE HOUSE GUEST

Frederick Douglass was the first Negro to dine at the White House as the guest of a President of the United States (1864).

ELECTED IN 1866

Edward G. Walker and Charles L. Mitchell who were elected in 1866 to the Massachusetts House of Representatives, from Boston were the first Negroes in the history of the race to sit in the legislature of any state.

THE AIR OF ENGLAND

Lord Mansfield delivered the opinion of the court, June 22, 1772 in the famous Somersett case.

James Somersett was a Negro brought from Africa and sold to Charles Steward of Jamacia. Mr. Steward having occasion to transact business in England, with an intention to return, brought Somersett to attend and abide with him, and to carry him back as soon as the business should be transacted.

Somersett did remain in his services till the time of his departure and quitted it without his consent.

Charles Steward by force put the slave on board the Ann and Mary in charge of Captain Knowles, to be kept till he should set sail, and then to be taken with him to Jamaica, there to be sold. Somersett sues for his freedom.

The opinion of the court: The mere fact of the foot of a slave touching British soil, worked an emancipation. The air of England is too pure for a slave to breathe

SETTLED IN ALABAMA

The second settler in Alabama was a Negro. He visited the country with De Sota—liked the climate and the country—stayed and lived with the Indians (1540)

PATENT GRANTED—1834

The first Negro to be granted a patent was Henry Blair, of Maryland, who received official protection for a corn harvestor.

FIRED FIRST SHOT

A man of color fired the first shot at Manila Bay, from the Olympia. flag ship of Admiral Dewey, commanding the American forces on the Asiatic station, during the Spanish-American War. He was John Jordan, chief gunner's mate United States Navy.

LIBERIA

Liberia about the size of Kansas lies on the west coast of Africa. It has a population of about 2,500,000 people and there are only about sixteen doctors in the whole country according to Mr. Joseph N. Togba of Wichita, Kansas. Mr. Togba has been in this country about a year attending school. He is a native of Liberia of the tribe of Kru.

COLORED TEACHERS

First normal school for colored teachers—established in New York by John Peterson (1853)

# ONLY ONE COLORED GRADUATE IN 1939 CLASS AT HARVARD

## C. A. Braithwaite Gets Bachelor of Arts Degree

BOSTON, July 6—(ANP)—The one Negro graduated with the Bachelor of Arts degree from Harvard University this year was Coleridge A. Braithwaite of Cambridge, Mass. He is the son of Dr. and Mrs. John A. Braithwaite, long residents of Cambridge where Dr. Braithwaite has practiced medicine since his graduation several years ago from Harvard Medical School.

Young Braithwaite majored in music and modern languages and was graduated cum laude. He was an honor graduate from Cambridge High and Latin school. During his years at Harvard he was for a time a member of the Glee Club and the Chapel choir as well as on the staff of the Phillips Brooks house and a member of the Music and Italian clubs. He held the Buckley and Student Council scholarships and a position on the honored dean's list. His thesis for graduation was a voluminous piece of research on the Achievements and Contributions to Music of Samuel Coleridge-Taylor, which will be filed in the Harvard University library.

In addition to completing the required work of his class in music, Braithwaite has done other composing of orchestral and chamber music. He plays both the piano and organ and is a member of the choir of St. Peter's Episcopal church, Cambridge. He plans to return to Harvard in the fall for his master's degree in musical composition and pedagogy. Other Negro alumni from Harvard this year were from the various graduate departments.

# W. SYDNEY PITTMAN IS ON PAROLE FROM FEDERAL PRISON

## "Brotherhood Eyes" Editor Gets Job With Texas Insurance Company

DALLAS, July 6—(ANP)——Confirmation of the release from Leavenworth prison of W. Sidney Pittman, former editor of the "Brotherhood Eyes," was noted last week when Pittman arrived in Dallas and started working for the Excelsior Life Insurance Company. Henry Strickland, president of the risk firm, reportedly signed the parole papers, rumored to have taken effect last February.

Pittman was convicted in Dallas Federal Court in 1936 of sending obscene reading matter through the mails, and given a five-year sentence. Until stopped by action of the Federal Court, "Brotherhood Eyes" allegedly exposed, berated and denounced Negroes of high and low estate, laid bare their private lives omitting no details, held up many a man and woman to public ridicule.

Pittman's foot slipped when he selected as a victim, Edward L. Snyder, at that time a representative of the Universal Life Insurance Company which Pittman was lambasting in a merciless editorial attack. Snyder fought back, exposed the editor and helped direct the legal attack which soon placed the paper on the defunct list, its editor behind prison bars.

Boss: "You are twenty minutes late again. Don't you know what time we start to work at this factory?"

New Employee: "No, sir, they're always at it when I get here."

# GOOD JOBS OFFERED IN CIVIL SERVICE; APPLY BY JULY 27

WASHINGTON, D. C., July 6 (ANP) —Examinations announced this week by the U. S. Civil Service Commission and application deadline dates, are as follows: Principal Silviculturist, $5,600 a year; Senior Silviculturist, $4,600 a year; Silviculturist, $3,800 a year; Associate Silviculturist, $3,200 a year and Assistant Silviculturist, $2,600 a year. Application deadline dates, July 24-27, for Bureau of Plant Industry and Forest Service, Department of Agriculture.

Chief Occupational Anerapy Aid (Arts and Crafts), $2,300 a year, St. Elizabeth's Hospital, Department of Interior, Washington, application deadline, July 24-27; Senior Architect, $4,600 a year; Architect, $3,800 a year; Associate Architect, $3,200 a year and Assistant Architect, $2,600 a year, application deadline, July 24-27. Full information concerning examinations may be obtained from your local postmaster.

# DETROIT STUDENT ENTERS WEST POINT

## White Democratic Congressman Names Clarence Davenport to Soldier's School

DETROIT, July 6—(ANP)—West Point received another Negro student when Clarence W. Davenport, of this city entered that institution July 1. Davenport, who was notified as to his acceptance May 11 after having taken the written, oral and physical examinations at Fort Sheridan, Ill., which he passed with a high rating, was appointed by ex-Congressman George D. O'Brien, democrat, while in office.

In his three years at the University of Detroit, young Davenport who majored in chemistry, minored in mathematics and philosophy, kept a B plus average, carried off all scholastic honors, and was declared by professors to be one of the most brilliant students in the school.

Davenport is the first Negro in Michigan to receive an appointment to West Point and Congressman O'Brien said he was willing to break the ice. Credit, however, for the appointment is due to the efforts of Mrs. Mable E. Flack, an outstanding woman in civic and political affairs here. It was Mrs. Flack who, without the aid of any political organization, prevailed upon Mr. O'Brien to make the appointment after having found a young man with the right qualifications. No other names were entered in opposition to Davenport and the thing was certified before political leaders had an opportunity to put up the customary howl and clamor for their respective choices.

Davenport, a quiet, unassuming but studious and hard working young man, worked his way through school under very difficult situations and he believes his strong will and determination to succeed under any circumstances will steel him for the ostricism, segregation and undue hardships which might be heaped upon at West Point. He hopes to emulate Col. Chas. Young.

A public reception was tendered Davenport at the Lucy Thurman Y. W. C. A. Sunday evening at which more than 22 citizens attended. Ex-Congressman O'Brien, who made the appointment, and State Senator Chas. C. Diggs were the principal speakers.

Employing my time in the work that seems to be most lasting and the most worth while in the sight of God should be my ideal.

## MILKHOUSE MADE OF OLD POTATO BUILDING

Caring for milk on the Dallas County, Ark., farm of Mr. and Mrs. W. K. Van Arsdel is much easier and is better done since they converted an unused potato house into a milk house, Mrs. Van Arsdel told Miss Floy Maynard, home demonstration agent.

The Van Arsdels removed the potato bins, put windows across one side of the building, added a floor and painted the building white, both inside and out, the home agent related.

Tables, shelves, an ice box, an oil stove, the separator, and milk utensils are all conveniently at hand, reducing the time spent in caring for the milk, and leaving more room in the farmhouse kitchen for regular kitchen equipment.

## BIG GAIN IN CORN YIELD WITH VETCH

Two hundred and fifteen bushels of corn where only 70 bushels once grew.

That's what vetch has done for seven acres of hill land on the Drew County, Ark., farm of Ben Nichols, said Clifford Alston, county agent.

Mr. Nichols has planted vetch on this land for three years, the county agent related. The first year the yield increased from 10 to 15 bushels an acre, a small increase, but due mainly to the fact that the vetch did not make much growth before turning.

In the spring of 1938, however, a good crop of vetch was turned on the entire field, and 30 bushels of corn an acre was harvested. On one acre that had been fertilized with manure as well as vetch, 35 bushels were produced.

The land has plenty of humus supplied by the vetch, and withstood the drouth much better than other land on the farm, Mr. Nichols said.

## DOUBLED MILK YIELD OF HIS SIX COWS BY FEEDING TRENCH SILAGE

D. E. Neuhart has doubled the milk produced by his six cows by feeding them from a trench silo, he told J. O. Krupe, Franklin county Ark., agent.

Mr. Neuhart has a silo nine feet wide at the top, four feet deep, seven feet wide at the bottom and 20 feet long, on his farm near Charleston, and he said he used only about half the contents for the six cow and three calves he wintered. He plans to use silage this summer to supplement pastures during the hot, dry weather, he added.

"It's the cheapest storage on the farm, and the best feed we can produce on prairie land," Mr. Neuhart declared.

## Dr. J. L. Leach Was Speaker At Commencement

June 29 (ANP)—Dr. J. L. Leach, Flint, Mich., president-elect of the National Medical association, last Thursday addressed the graduation class of Meharry Medical college. He urged the graduates and members of the colored medical profession to join NMA, and do their bit to aid the struggle for recognition and equality of opportunity for the Negro professional.

Before returning to his home in Flint, Dr. Leach will address the Texas Medical Dental and Pharmaceutical association at Waco, the Arkansas State association and the Tennessee Volunteer State Medical association.

By increasing my courtesy toward others, I increase mine own happiness.

If I love other people they are going to find it easier to love me.

# ROOSEVELT AND VANDENBERG SEEN AS RIVALS IN '40

WASHINGTON, June 29—(ANP)—According to an early poll of 500 newspapers, it was revealed here this week that President Roosevelt and Senator Arthur Vandenberg will be the candidates of the Democratic and Republican parties respectively next year.

For the Republican nomination, Senator Vandenberg was the first choice with 33 per cent. In second place is District Attorney Thomas E. Dewey of New York with 31 per cent. Senator Robert A. Taft is in third place with 14 per cent. Fourth place goes to Senator Bridges of New Hampshire with 12 per cent.

President Roosevelt occupies first place with the Democrats with 35 per cent; Vice President Garner is second with 31 per cent; Secretary of State Hull, third, with 12 per cent, and Postmaster General Farley fourth with 3 per cent.

The majority, 63 per cent, feel that the nominee of the Republican partly will be elected. Twenty-four per cent feel that the Democratic party nominee will be elected.

## ALFALFA FOR POULTRY

Dr. L. E. Card, University of Illinois, who reviews recent poultry research in the Poultry Tribune, says in the April issue: "There is ample evidence in the poultry industry of the tendency to go to extremes in the use of certain management and feeding practices, a recent example being the use of alfalfa meal. Because it is known to be a valuable ingredient in poultry rations some persons have used it at too high levels. The results of a test at the Rhode Island Agricultural Experiment Station are of interest in this connection. Five different groups of hens were fed rations in which the mash used contained 0, 5, 10, 15, and 20 percent of alfalfa leaf meal. There was a close association between the amount of alfalfa fed and the depth of yolk color. Analysis of the yolk color showed an increase in the amount of red and a decrease in the amount of yellow and black with increasing levels of alfalfa leaf meal. Hatchability was not appreciably affected by any of the first four levels, but when 20 percent of alfalfa was fed there was a considerable decrease in hatching power. Similarly, egg production and efficiency of feed utilization in terms of eggs were lowest for the lot fed 20 percent of alfalfa leaf meal in the mash. While optimum levels of alfalfa were not established by these feeding trials, it is clear that too high levels are detrimental."

# CLUB WOMEN OF NATION TO MEET IN BOSTON, MASS.

### Biennial Convention of NACW Will Take Place July 21-29

BOSTON, June 27—(ANP)—Officials of the National Association of Colored Women, headed by President Jennie B. Moton, Capahosic, Va., and Executive Secretary Sallie W. Stewart, are perfecting plans for that organization's 21st biennial convention to be held in Boston, July 21-29.

It was announced this week that convention headquarters will be at Symphony hall, Massachusetts and Huntington avenue, and that all board meetings prior to the session will be held at Horticultural hall, 300 Massachusetts avenue. The Sunday mass meeting will be held at Charles Street A. M. E. Church, and a pilgrimage will be made to the grave in Auburn cemetery, Cambridge, of Mrs. Josephine St. Pierre Ruffin, the founder of organized work among colored women. Mrs. Alice D. Scott, Boston, is chairman of homes for convention delegates and visitors.

Mrs. Elizabeth Carter Brooks, one of the few living charter members of the organization founded 44 years ago, will preside at the Massachusetts Night program on July 24th. Delegates will visit the New York World's Fair at the close of the convention. In her nationwide call for the Boston conclave, NACW President Moton, wife of Tuskegee's president-emeritus R. R. Moton, said:

"For 43 years this organization has been working for the uplift of the race generally and for advancement of Negro women in particular. We are returning to Boston, cradle of the organization, and this time we are centered upon growth among Negro women and upon uniformity of the work of the organization. We are also trying to bring to a close the drive for funds for payment of the purchase price of our headquarters building, and for the furtherance of our work.... We trust that every state will send her full quota of delegates and join in this commemorative meeting.

## SUDDEN THOUGHTS

How did ants get such a reputation for being hard workers when they're always at picnics?

Believe it or not, the dimmest lights have the greatest scandal power. —Papa's Pride and Joy.

True Christians should endeavor to speak kind, gracious words.

## GARDENER'S HYMN OF HATE

Althought it's very wrong to hate,
(The Good Book makes that clear).
Some things I must abominate;
That settles me, I fear.

Bugs and weeds, weeds and bugs,
Burdock, crabgrass, cutworms, slugs;
If I burn for it, doggone
I'll still hate you, every one.

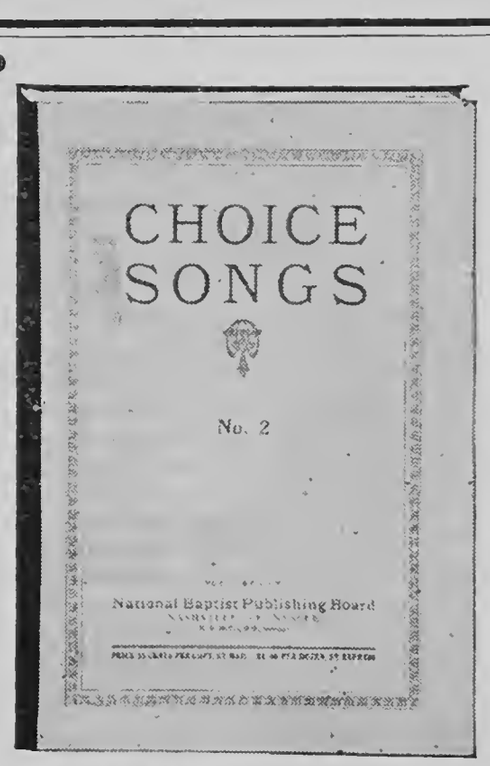
You chickweed, pigweed, dandelion,
And ragweed, thistle, too;
You plantain, mustard, chokeweed vine,
I scorn, detest, loathe you.

You caterpillars, big and small,
Ants, beetles, you're not nice;
And you, the squeamish aphids call—
To me you're just plain lice.

Weeds and bugs, bugs and weeds,
Borers, chewers, flying seeds;
Though I'm cast below today,
I won't love you anyway.

Gaycelle.

I do not need to be wise, or rich, or in any way especially favored through talents or privileges in order to find God.



**Choice Songs**

**NO. 2.**

Exceedingly popular, worth twice the money. Millions of folks have sung from this book, fitted for use in all meetings of an evangelistic nature and well adapted for any other religious use.

## NO SALE ON TWO BIT DOLLAR

ONLY THREE PERSONS TAKE OFFER OF MERCHANT

RALEIGH, N. C., (AP). Will Wynne proprietor of a Raleigh radio shop, held a sale.

Along with radios, he placed 10 one dollar bills in his shop window.

Attached to the bills was a sign reading: "original price. 1.00 sale price 25 cents."

Only three persons took advantage of the opportunity to buy a dollar for 25 cents, he said Monday.

## SEEK THIS MAN, O PEOPLE

Wanted: a man of fine integrity
Not burdened with his years nor yet too young,
Who holds his honor, as a legacy
To treasure and pass on; who guards his tongue
From foolish utteranee. One wise in ways
Of men and law; a frugal patriot
Without pretense, and free from his past days.
An unbought man intolerant of the bought.
A man who sees extremist groups, clear-eyed,
And deals in justice, and is fearless too;
For he must know he may be crucified
Despite the finest work that he can do.
When he applies, give him the high command,
O people, if you love this troubled land.

—Tom Chekouras in Chicago Tribune.

## THE FARMER'S DOLLAR "GOES TO TOWN"

STARTING with Aaron, Ky., and ending with Zylks, La., the Census of 1930 lists 15,616 towns of less than 10,000 population.

These are the crossroads of commercial America. Through them there flows from the cities to the farms a broad stream of manufactured goods.

Back into these towns and through them to the centers of finance and industry flows a stream of farm dollars.

These are the towns whose prosperity depends upon this flow of goods and dollars. In these towns the farm dollar makes its first stop.

On the downward turn of farm prices, the last decade, every drop of $100 in farm income was accompanied by a drop of $80 in rural retail sales. On the upturn of farm prices during the 10-year period, every $100 increase of $71 in rural retail sales.

The farmer's dollar always goes to town. In 1938, farmers had nearly twice as much to spend as in the depths of the depression. Compare commercial reports for 1938 with those for 1932: Rural retail sales 82 percent higher in 1938.....Farm machinery sales 350 percent higher....Fertilizer sales 88 percent higher....Automobile sales n farm States 100 percent higher.

This increased farm buying power put back to work over 20 percent of all factory workers reemployed since 1932.

When the flow of farm dollars to town is slow, what is the cause?

Is it lack of efficiency? Agricultural efficiency has more than kept pace with industrial efficiency, as judged by output per worker. From 1910 to 1930 output per work increased 39 percent in factories; 41 percent on farms. The record of the last 10 years is equally impressive.

Is it lack of production? In the 2 years 1937 and 1938 the average production on farms was 5 percent greater than in 1929. Factory production for the same years was 19 percent below 1929 levels. With no marked change in farm population the last 40 years, farmers are providing abundantly for city populations which increased more than two-thirds during this period.

Too often the farmer has been penalized for this increased production. The abundance of farm products often has been accompanied by relative scarcity of city products. The result has been low buying power for farm products. For many years low buying power has driven farmers to mine the soil in a vain effort to produce more in order to meet fixed obligations and buy as much as formerly. This has run down the land, kept spendable income low. It has hurt the towns.

Since the War, surpluses of farm products have been more frequent. Reasons: An over-expanded farm plant on the one hand and shrunken markets on the other. The farmer increased his cropland by about 40 million acres during the War. His increased efficiency has had the same effect as expanding total acreage. The shift from horse power to gasoline power has lost the market for feed from about 35 million acres. Immigration restriction and declining birth rate have not helped the farmer's market. The world-wide surge of nationalism, starting in the 20's, resulted in tariffs, quotas, and embargoes which have cut export markets sharply.

On about 310 million acres of cropland farmers can produce abundantly for all domestic needs, with no one needing to go hungry. To produce what it is estimated can be exported the next few years will probably require about 25 million acres. For sales at home and abroad about 335 million crop acres probably can supply all present available markets. Crops normally are harvested from about 360 to 365 million would be great.

This means that—

American farmers have about 30 million surplus acres for which they lack markets.

This condition forces agricultural adjustment. If there were no national farm program, the adjustment would work itself out in time, but the cost to the farm family, to the soil, and to the Nasoil, and to the Nation would be great.

The lessen the cost and hardship of this adjustment to new conditions—

The Agricultural Adjustment Act of 1938 declared it to be the policy of Congress to bring the assistanee of the whole Nation to farmers to help them conserve the soil and, insofar as practicable, attain parity income with other groups, and at the same time to assure consumers a steady abundanee of farm products at fair prices.

Nearly 4 million farmers are cooperating in this AAA farm program. It is one part, the economic pivot, of a broad national farm program.

While other public agencies deal with other phases, the Agricultural Adjustment Administration helps farmers to—

Shift surplus acres to conserving grasses and legumes and build up the soil.

Maintain farm income by:

(1) Acreage allotments in line with markets. (2) Conservation payments to help pay cost of soil building. (3) Parity payments to help bridge gap between market price and parity price. (4) Crop loans to tide over low price periods. (5) Crop insurance to guarantee the wheat farmr a crop to sell every year.

Maintain the ever-normal granary to help stabilize supplies and income, and to furnish consumers abundance at reasonable prices, good years and bad.

Also included under the Agricultural Adjustment Act of 1938 and related acts, but administered by other Department of Agriculture agencies, Congress has authorized search for better markets and wider consumption by:

(1) Improved distribution through marketing agreements to establish more orderly selling conditions for farm products. (2) Removal of price-depressing surpluses from congested markets for distribution to needy families. (3) Increased exports through subsidies if needed to provide the United States its fair share of the world's export markets. (4) Establishment of four regional laboratories to search for new uses for farm products. (5) Study of freight rates looking toward more equitable rates and better distribution for farm products.

It is through these broad agricultural programs that farmers are doing their part to bring full employment, good wages, and town and city prosperity.

## FORTY LEADERS OF NATION ASK PASSAGE OF ANTI-LYNCH BILL

NEW YORK CITY, July 6—(ANP)—A strongly worded letter sent last Wednesday to members of the House of Representatives and the Senate by the Volunteer Christian Committee to Boycott Nazi Germany, urged passage of the Gavagan anti-lynching bill through the House and Senate before the present Congress adjourns. The letter was signed by Committee Chairman William Jay Schieffelin who is also a member of the board of trustees of Tuskegee Institute—and by more than 40 others, prominent in art, science, religion, civil rights and national affairs in America. The letter concluded: "Above all, we urge that this grave issue must come to a vote, for if the anti-lynching bill were defeated it would be bad enough, but the cowardly and undemocratic tactics of avoiding a vote, which were resorted to last year, were a double defeat for Democracy."

## Insurance Men Hold Bi-State Conference

GULFPORT, MISS., July 6—(ANP)—Pledging their support to Negro business and the Negro Press, members of the Bi-State Underwriters Association (Mississippi-Louisiana), concluded their four-day session here on Sunday. Elected as delegates to the National Negro Insurance Association convention, (July 12-14) in Los Angeles, was outgoing President J. H. Coates. P. L. Agrams, Jackson Miss., was elected Bi-State president and F. N. Baskin, Tupelo, Miss., was re-elected executive secretary. The convention meets next in Baton Rouge, La., in June, 1940

## CATHOLICS OPEN COLLEGE DOORS TO COLORED STUDENTS

NEW YORK CITY, July 6—(ANP)—More than 150 delegates attending the Catholic Press Association's 29th annual convention here, last Saturday heard Association President Charles R. Ridder read a statement from Father John LaFarge, S. J., thanking the Catholic Press for its "forthright cooperation in the cause of the disadvantaged American Negro and its support of the Catholic interracial movement." Father LaFarge, widely known authority on race relations, spoke for the Catholic Interracial Council, composed of prominent white and colored Catholics and the "Interracial Review", its official publication.

The statement declared that within the last two months six more Catholic colleges have stated their willingness to admit Catholic Negro students, that the number of such colleges is increasing every year. The statement urged Catholic editors to support the movement and declared: "May we remind the writers of these editorials that something further needs to be said from the point of view of the thousands of Negro Catholic readers—some of whom have been denied admittance to Catholic colleges solely on the ground of color. (We are not referring to the sections of the country where the laws prohibit Negroes from attending the so-called 'white' colleges.)

"We are confident that if consideration is given this unhappy problem, that in the future editorials on this subject by our Catholic editors will discuss not only the obligation of Catholic parents to select a Catholic college for their sons and daughters, but also will point out the obligations that devolve on Catholic authorities whenever duly qualified Negro students apply for admittance to their institutions."

## Consolidated

WASHINGTON, June 29 (ANP)—The American legation and consulate general at Monrovia, Liberia, has been consolidated, with the American minister assuming full supervision over both offices. In recent years the diplomatic post has grown in influence and prestige. Although the amount of work has steadily increased the numerical strength of the personnel remains the same. The present staff includes Lester A. Walton, Envoy Extraordinary, and minister plenipotentiary; William C. George, vice consul; Alphonse G. McGee, foreign service clerk, and two African clerks.

## Major M. S. Caver Army Chaplain, Retired June 20

WASHINGTON, July 13 (ANP)—Major Monroe S. Caver, for the past seven years chaplain of the Ninth Cavalry stationed at Fort Rily, Kan., was retired from active service June 30. He had been in the army for around 20 years.

Major Caver, who has been ill for two months, will remain under care of post physicians at Fort Riley for some time before accompanying his wife and family to Chicago prior to going to their ranch in Arizona.

At present no official word has come from the army's chief of chaplains concerning the replacement of Major Caver with a Negro who would have to be commissioned from civil life.

## SENATE CHANGES WPA AS PASSED BY LOWER HOUSE

WASHINGTON, July 6 (ANP)—Charges of "projects spreading communism at the expense of the taxpayers" began the speech attempted by Sen. Robert Rice Reynolds of North Carolina in the midst of the senate debate on the relief bill Wednesday night, and to all intents and purposes Reynolds was off on a long peroration.

But Sen. Alben Barkley, Democratic leader, interrupted in the midst of the speech and succeeded in obtaining a 20 minute limit for each senator on the bill and 15 minutes on each amendment.

The federal theatre project, the butt of so much criticism, was finally compromised when it was voted an appropriation of $13,000,000. Several disgusted senators who had planned other entertainment for the evening left the chamber hurriedly as the battle began over the theatre project. The house bill had banned the theatre, but the senate appropriations committee recommended that they be continued, provided they had local sponsorship.

The senate stood pat on the house recommendation that persons who had been on the relief rolls for 18 months or more must step aside for persons who have been on certified lists for three months or more and have been unable to get WPA work. The only exception made is where such a move would cause undue hardship. Thus persons who have had continuous employment on the WPA rolls for 18 months or more will be forced to take a six months vacation. This is believed to be a direct aim at "career" reliefers.

Jail sentences and fines are recommended for WPA officials found guilty of interferring in a political campaign or election.

The bill further requires the WPA to make public each month the salaries in excess of $1,000 annually paid to its personnel.

It also fixes WPA wages on the basis of wages prevailing in the individual communities for the same type of work.

Sectional fights for benefits from the provisions of the relief bill were common. Southern and western senators, where there are large migratory populations, sought to have federal aid for migratory camps in their states.

Senators from the eastern industrial states fought the amendment which called for states putting up 25 per cent of the aggregate cost of non-federal WPA projects. However, the amendment was passed despite the vigorous fight against it.

## Think Of Others

When we bow our heads to pray,
Think of others;
When we enjoy a glorious day,
Think of others;
There may be some on the wrong road,
There may be some astray;
Share your prayer, gently with them,
So they may find the way.

When we're in a world of peace,
Think of others:
Who woefully dwell where wars never cease,
Think of others;
If you send a prayer to them,
Accompanied with a song;
The victory will soon be won,
And the war won't be so long.

Show your love for a friend
By doing some good deed;
Be of service wherever you are,
And you'll get friends in need.

—James Hendrix.

It is when I walk in obedience that God reveals to me his plans and purposes, and shows me what He wants me to do.

I must not covet positions for which I am not neither qualified nor worthy.

## U. S. HOUSING BENEFITS NEGRO FAMILIES

WASHINGTON, D. C.—Low income Negro families in 10 communities from New England to the deep South will participate in the slum clearance and low-rent housing program of the United States Housing Authority under terms of loan contracts with local authorities which recently received Presidential approval.

These loans, totaling $27,514,000 to defray 90 per cent of the cost of developing 23 projects in 19 cities, were approved upon recommendation of Nathan Straus, USHA Administrator. Of the 7,196 family dwelling units to be provided under these contracts approximately one-quarter will be occupied by Negro tenants.

Three of the projects to rehouse 912 families will be erected in Washington, D. C., where Langston Terrace, a PWA Housing Division project is located and where a previously executed loan contract calls for the development of four USHA-aid projects including two for Negro occupancy. Other cities on the current list providing for Negro participation include Bridgeport, Connecticut Fort Lauderdale and West Palm Beach, Florida; Peoria, Illinois, Frederick, Maryland; Omaha, Nebraska; Allegheny County, Pennsylvania; and Bristol, Virginia.

Loan contracts have now been approved for the construction of more than 92,000 new, decent, safe, and sanitary dwelling units in 120 communities throughout the country. Rehousing about 368,000 slum dwellers, these units will be developed in 232 low-rent projects. The program to date provides for the rehousing of approximately 31,448 low income Negro families in 82 communities. 64904 H

## Crediting Horses' Spirits For Curing—Illness Japanese Artist Paints Them by Thousands

TOKYO— Believing the benign influence of the spirits of departed horses was a potent factor in curing a serious illness, Mr. Toku Kofuji, Tokyo artist, vowed 20 years ago to paint 1,000,000 pictures of horses as a token of gratitude. He has just finished his 940,000th painting and still is going strong, the Chugai Shogyo says.

The strange debt of gratitude, and the artist's perserverance in discharging it, has just come to light as a result of the current campaign to popularize horses and to honor the spirits of military horses killed in China.

RIDERS
PUBLICIZE STORY

The Tokyo Saddle Club is giving the story wide circulation to impress the public with the good that may result from spiritual association with the horse.

It seems that back in 1918, when Mr. Kofuji was bedridden with what he thought to be an incurable malady, he had a strange vision, in which he was bidden to write the kanji character for horse one thousand and one times.

When he awoke, says the newspaper, he took a brush and inkpot and immediately set about the task. As the work progressed, his bodily ailments began to desert him. When he finished the one thousand and first character, he got out of bed, completely cured. So great was his appreciation and awe for the supposed spiritual intervention, that he resolved to paint 1,000,000 horses
EXPERT ON
HORSES

He at length became such an expert at depicting horses, in profile, full face and other ways, that his services were in high demand. He made thousands of yen from commissions to paint horses and used some of his profits' to buy a huge bell, which he dedicated to the Temple of Kwannon, Buddhist goddess who protects the spirits of horses, in Tochigi Prefecture.

Mr. Kofuji, who is now 43 years old, takes great pride in his scrolls, in which he paints 1,001 horses in varions postures. He recently donated one of these to the War Office.

## EMPEROR USES CHARCOAL AUTO AS AN EXAMPLE

TOKYO—To encourage the saving of gasoline, now scarce and strictly rationed in wartime Japan, His Imperial Majesty, the Emperor Hirohito has had one of his American cars converted to use a charcoal burning engine.

A "patriotic" charcoal gas generator, externally resembling a very large baggage container, has been fitted to the back of the car that the Emperor will use exclusively within the palace grounds when proceeding from the inner mansion to the official halls where he gives audiences. Prince Chichibu, the Emperor's younger brother, already uses a charcoal-burning car.

Charcoal-burning engines have been fitted at the rear of a number of Tokyo busses. They are cumbrous in appearance but seem to work satisfactorily. Rationing of gasoline at the rate of twelve gallons a month to private car-owners has made a great difference in the street of Tokyo which are now quieter than they were ten years ago.

"Man needs both bread and freedom; it is a calamity when he must barter one for the other, and the result may be the breakdown of civilization."

HENRY A. WALLACE,
Secretary of Agriculture

## SURVEY SHOWS MACHINE AGE ON ILLINOIS FARM

URBANA, Ill.,—Changes in the use of labor and machinery on Illinois farms in the last fifteen years are reviewed in a study just completed by the college of agriculture of the University of Illinois. Along with the shift from horses to tractors there has been a rapid increase in the use of machinery such as combines, corn pickers, and pickup balers and in motor cultivators for row crops.

The number of work horses per farm in central Illinois has been reduced 50 per cent, the number of hours worked per horse has declined 40 per cent.

The number of hours of labor by men for each farm declined 30 per cent.

# SENATOR ROBERT A. TAFT INTERVIEWED ON ISSUES FOR PRESIDENTIAL CAMPAIGN

### Ohio Statesman Impresses ANP Reporter as Being Deeply Interested in Welfare of Colored Citizens

WASHINGTON, June 29 (By A. E. White for ANP)—Most of the candidates or potential candidates, named at this early date by the Republican party are either sound business men who have succeeded in public life or well seasoned men with fine background of family and tradition.

A happy combination of the two is found in the senator from Ohio, so frequently mentioned as a candidate for president by the Republican party. We are referring to Senator Robert A. Taft.

From the state which has given many presidents, Senator Taft comes as the latest offering of this proud commonwealth.

Quoting from the Congressional Record biographical sketch: "Robert Alphonso Taft, born in Cincinnati, Sept. 8, 1889; attended the public schools of Cincinnati and the Taft school, Watertown, Conn.; was graduated from Yale university with B. A. degree in 1910 and from Harvard university with LL. B. degree in 1913; attorney at law; served as assistant counsel for the United States Food administration, 1917-1918; counsel for the American Relief administration in 1919; member of the Ohio house of representatives, 1921-26, and served as speaker in 1926; served in the Ohio senate 1931-32; elected to the United States senate on Nov. 8, 1938, for the term ending Jan. 3, 1945."

The activities of Senator Taft cannot be told in the brief story, nor can his career be traced through these facts. Early in his life, he was familiar with the awesome program of the White house, where he and his brother were domiciled during the brief term of his father, William Howard Taft, who succeeded the great Theodore Roosevelt.

Here he learned many of the things through contact with the great men of the country which stood him in good stead in his later years. Immediately upon entering a life of political activity, Mr. Taft was thrown into a busy arena where he acquitted himself as the son of a president should. Meeting after meeting was held at which young Taft was the principal speaker. On each of these occasions, he impressed his audiences so much they sent him to the Ohio house of representatives for five years and then to the senate for one year.

Following 1932, he retired to private practice only to come out, after his brother had won his political spurs, and defeated an old line senator, Robert J. Bulkley, democrat, in a decisive fashion. Spurred on by this success, Mr. Taft has made himself an important factor in the deliberations of the United States senate, and despite the attempts of various older senators to discredit him, has carved himself a place in the Republican party.

In his office in the senate office building, where he is surrounded by an efficient corps of assistants headed by the very capable and efficient secretary, Miss Reeves, Mr. Taft sees all comers, working late into the evenings frequently, to catch up on his voluminous correspondence and demands for speeches.

Easy of approach, intelligent and gracious, Mr. Taft has come a long way since his name first was mentioned as a possible presidential candidate. Our first contact with him was when we talked with him on the infamous Bilbo bill to deport Negroes to Africa.

After the importance of the subject had been explained, Senator Taft made his statement, "I am opposed to any mass migrations. If any individual wants to go back to Africa, he is free to do so, and I'll give him all the assistance I can."

When reminded of this last week, Senator Taft laughed easily and made the same statement.

"Of course," he said, "I have addressed too many Negro gatherings to remember all of them. I think the only Ohio towns where I have not spoken to Negro groups are Akron and Youngstown. But I have made many addresses and have also made many friends among the Negro citizens of Ohio.

"I hope they will not be forgotten in the matter of jobs."

Outspoken on topics dealing with Negroes and their welfare, Senator Taft when asked about the establishment of a permanent relief set-up in the United States to take care of the millions of unemployed said:

"I do not believe that the federal government should engage in any permanent system of relief. The federal government should conduct a public works program covering projects in which the federal government has a direct interest, and that program should be varied so that it is larger in hard times than in good times. As far as relief is concerned, I believe it should be returned to the state as soon as possible, so that direct relief and work relief may be combined under one administration. I believe the federal government should grant to each two-thirds of the total cost of relief, on condition that the states put one-third, but that some leeway should be given so that in special cases of hardship the federal government might put up more than two-thirds. The federal grant should be based on administration of relief agencies under civil service, and a condition of the granting of federal money should, of course, be that there be no discrimination whatever, either in rate of wages or in character of jobs, because of race, color or any other arbitrary classification. I believe the federal government would be in a position to insist upon fair treatment to all, and would do so."

Senator Taft favors slum clearance to the fullest extent. He says:

"I am in favor of federal assistance to a slum clearance program. I voted recently for the additional housing money, although it seemed to me that the work should proceed somewhat more slowly than is contemplated because of the fact that the buildings are still of an experimental character. In slum clearance projects, special attention should be given to the elimination of slums where colored people live, because in many cities they have been forced into the most undesirable neighborhoods."

The problem of the "white primary" in the South was not quite clear to Senator Taft, but he feels that if there is a curtailment of constitutional rights for Negroes, something should be done in the matter.

"I am in favor of insuring Negroes their constitutional rights in the South. For this reason, I am in favor of federal anti-lynching legislation along the lines of the bill which failed last session, and would vote for cloture to bring about the passage of such a bill. I am in favor of every practical means of insuring the colored people the right to vote in the South," continued Senator Taft. "With respect to primary elections, I hesitate to have the federal government interfere in the methods in which primaries or conventions may be held in the different states. If the colored people can be insured their right to vote at the election, any party which adopts a white primary is going to stand a good chance of losing the election."

The military service of the United States also should be opened to Negroes in all phases, the senator believes.

"I am in favor of fair treatment of Negroes in appointments to all branches of the army and navy air service, and I believe that the aeronautical program should insure training for Negro pilots, whether they attend Negro colleges or other colleges. I voted for the amendments, to the airplane bill," Mr. Taft continued, "intended to insure this result, although the one finally adopted was not as complete as I think it should have been.

"In the civil service, I am in favor of eliminating the requirement of a photograph in the making of civil service applications. I think there should be a greater proportion of colored appointees in the various government departments in Washington."

Referring to the National Association for the Advancement of Colored People, Mr. Taft said:

"I have always had a pleasant relation with the various gentlemen connected with this institution. I think they have found me cooperative. I have addressed many colored gatherings in the state of Ohio, particularly in Cleveland, Columbus, Cincinnati, Toledo, Lima and other cities. In Cincinnati, I have always insisted that the Republican organization nominate colored men for office, and we have succeeded in electing them to city council and to the legislature.

"As a member of the executive committee, I insisted on the election of Dr. R. P. McClain as president pro tem of the Cincinnati city council. I think you will find that the colored people in Ohio have found my attitude always sympathetic."

Referring back to the days when his father, William Howard Taft, was president, senator recalled that his appointments to office included many Negroes, some of whom held exceptionally high posts in the government. Later, President Taft was a trustee of Hampton institute and took a most active interest in the affairs of that institution.

Tall and well proportioned, the senator from Ohio is verging toward stoutness although his well set up frame is able to carry any excess avoirdupois with becoming dignity and ease.

Although he is a well seasoned political leader, Senator Taft is easy of approach and through the early sieges of the campaign has acquired mannerisms and poise which should make him a genuine favorite. However, he is thoroughly at home in the important committee of which he is a member, the committee on Appropriations and in this committee he has to match wits with such astute personages as Carter Glass, senator from Virginia, whose reputation is known to the far flung corners of the earth.

When presidential candidates are considered, the name of Senator Taft looms large on the horizon, and well it may, for here is a man who in the eyes of the people of his own state has the ability and the will to do, backed by experience and training for leadership.

Concerning the affairs in his own state of Ohio, Senator Taft referred to many Negroes who have been active in political circles and spoke highly of their services to the party. He was genuinely interested in the welfare of the Negro in Ohio and expressed the hope that the present administration would continue the same attitude toward Negro voters as former administrations had observed.

An able man, of distinguished lineage, well trained and sympathetic to minority groups throughout the country, Senator Robert A. Taft will be a factor to reckon with when the Republican National convention is held.

## SUGAR-CURED MEAT

FRED GRAVES, Iowa. For 100 pounds of pork take 6 gallons of water, 2 pounds coarse salt, 1 ounce of black pepper, 1 ounce soda, 3 pounds of brown sugar, 3 ounces of salt peter. Boil and skim as long as anything rises on top. Set away to cool. Sprinkle a little ounce of black pepper, 1 ounce salt in barrel or jar." Pack meat in firmly, then put brine over it and in six weeks it will be ready to smoke.—Myrtle E. Leu, Nebraska.

## ARKANSAS LAND LAW

Arkansas has recently enacted a new land policy law which may solve the problem of handling land which has reverted to the state through tax delinquency and abandonment. The law authorizes the state land commissioner to condnct investigations regarding the best usage for the 2,000,000 acres of state-owned land. After an appraisal of the land is made the commissioner will determine if it is suitable for agriculture or should be used for parks or forests. Suitable land for agriculture may be developed by the state in cooperation with the federal government and this land may be returned in small tracts to farm families through sale or outright grants under state "donation" law, the American Society of Planning Officials reports. The purpose of the law is to eliminate dumping on the market of unproductive land which soon becomes tax delinquent and reverts to the state. Also it is intended to prevent "dollar-an-acre" sales of state land which later may be more valnable for public use. While the use of state land is of major importance in Arkansas, which owns one out of every 16 acres in the state, the problem has also challenged the attention of many other states, including California, Oregon, South Dakota and New Jersey. (Wall Street Journal).

# HOUSEHOLDS OF RUTH CELEBRATE ORDER'S FOUNDING

### National Tribute Paid to Patrick H. Reason, Who Brought Odd Fellow Lodge to U. S.

WASHINGTON, D. C. (C. N. S.)—The Household of Ruth—Women's department of the Grand United Order of Odd Fellows in America—on the third Sunday in June, held "Ruth Day" exercises throughout the United States, the West Indies, and in other places in various parts of the world. This celebration is held annually and is coupled with commemorative ceremonies in honor of Patrick H. Reason, who is given credit for having been the originator of the Ruth branch of Odd Fellowship, which came into existence in 1858, the first household of Ruth having been chartered on September 29, 1858. It was and is located in Harrisburg, Pa.

In localities where a number of households of Ruth exist these anniversary celebrations of Ruth Day nsually are held in Churches or other places of public assembly and are open to the public, which is appreciative of the privilege.

With the beginning in Harrisburg, the idea of having households of Ruth proved popular among the wives, daughters, and widows of the male members of the Order, and spread rapidly throughout its jurisdiction. More than forty years ago the limitation of membership to the females of an Odd Fellows' family was liberalized, so that thenceforth any respectable family became eligible for membership in the household of Ruth if vouched for by five of its members.

The number of active households of Ruth reported by Grand Secretary Jesse L. Nichols as of June 30, 1938, was, in round numbers, 3,000, with an aggregated membership of approximately 60,000.

# DR. KELLY MILLER URGES TESTIMONIAL FOR WALTER WHITE

### Believes Thousands Would Pay Tribute to Intrepid Leader of NAACP

By Kelly Miller

WASHINGTON, D. C.—At the June Commencement Howard University conferred the Degree of Doctor of Laws upon Walter White, the Executive Secretary of the National Association for the Advancement of Colored People. I personally enhooded William E. B. DuBois and James Weldon Johnson, on similar occasions when Howard University conferred upon these distinguished candidates a like Degree; but I am persuaded that my Alma Mater never conferred this honorary Degree more worthily than upon this intrepid advocate of human rights.

Walter White, while not distinguished for scholarship and learning is neverthe less a man of college training and intellectual resourcefulness. However his well merited title of Doctor of Laws rests upon his reputation as a leader in the field of agitation and social reform. There are few if any Americans of his day who deserves greater recognition for leadership in the domain of human rights.

Dr. White is not a radical advocate but merely insists upon the American people living up to the requirements of their own Constitution. There is no reason why the privilege of conferring the Honorary Degree for distingiushed public service upon this fearless champion of Law and order should have been reserved for a Negro University. The service of the N. A. A. C. P. under his dymamic leadership is by no means limited to the benefited race, but rather applies to the nation as a whole.

At the last Annual Meeting of the National Association for the Advancement of Colored People, I suggested that a personal Testimonial of race-wide and nation-wide proportions should be tendered this inimitable champion of human liberty. I was disposed to repeat that suggestion at the Thirtieth Annual Meeting recently held in Richmond, Va., but out of deference to Dr. White's personal wishes, I desisted from further insistence in this direction. At the same time I advised him that I reserved the right to print without leave.

However, I am still persuaded of the wisdom of my original suggestion, notwithstand Dr. White's modesty which forbids indorsement, in advance, of the proposed honor.

I believe that there are hundreds, if not thousands, of admirers and well wishers of Dr. White by reason of the cause of which he has become the chief exponent, who would be glad to contribute at least the cost per plate, including traveling expenses to where the banquet is held, to some suitable memento of their appreciation in a more enduring form. If some agency should be forthcoming competent, willing and ready to effectuate my suggestion, the Testimonial should be awarded at a National Session of the N. A. A. C. P. without extraneous expense. The same as is done in case of the Spingarn Medal.

If some sponsor will put my suggestion in the form of a motion and if it should be seconded and carried, I beg to enroll myself among the list of subscribers. The contributors to such a Testimonial need not be limited to Negro subscribers but should be endorsed and supported by the whole American people whose ideal Dr. White has upheld and extolled.

**Patrick H. Reason**

Patrick H. Reason, through whose initiative the households of Ruth of the Grand United Order of Odd Fellows in America came into existence, was one of a coterie of freemen in New York City constituting the Philomathean Literary Society, organized for literary and social betterment of its members. This organization, in 1842, became the first lodge of the Grand United Order of Odd Fellows in America, known as Philomathean Lodge No. 646, that number following consecutively the enumeration of lodges in England up to that time.

Reason was fairly well educated. He early evinced a genius for drawing and engraving. He became an expert draughsman and penman. Notable among his early productions were—(1) The frontispiece to "The History of the New York African Free Schools," published in 1830. This drawing bears the legend, "New York Free School No. 2, engraved from a drawing by P. Reason, a pupil, aged 13 years;" (2) the frontispiece to "The Fountain," an antislavery book published in 1836. This engraving is the picture of a shackeled slave in the attitude of prayer, and bears the legend "Engraved by P. Reason, a colored young man of the city of New York, 1835;" (3) engraved portraits of Louis Tappan (abolitionist), and Henry Bibb (fugitive slave). He also engraved a large plate from which printed certificates of membership, Grand United Order of Odd Fellows. This plate is now in the Arthur A. Schomburg collection of the New York Public Library. For a time Reason was employed by a New York firm to engrave plate for printing bank notes.

## CHOOSES BRIDE UNSEEN FROM FAR OFF CHINA

JERSEY CITY, N. J.,—Miss Yee Tew Nigar of Canton, China, whose name means "the daughter of the best part of the year," and Ben Lee, a New York laundryman, were married at Bergen Baptist Church here today, with the aid of an interpreter. The 21 year old bride's brightly colored kimono contrasted sharply with her husband's grey business suit.

A few weeks ago Lee told his friend. Yee Goon Choy, who owns a restaurant in Corona, L. I., that he wished to marry. Both men are members of the Chinese Sunday school connected with the Bergen church. Choy informed Lee that he had a pretty daughter in China where she had been reared in a Baptist mission. She arrived here two weeks ago.

Forgiveness simply means that by the help of God I am able to not retain any wrong attitude or feeling or coldness toward any of those who may mistreat me.

## WORLD MILK RECORD

Cherry, an 8-year-old shorthorn cow, set in England recently a new world's record for a year's milk production, 41,644 1-2 ponnds or an average of 57 qnarts a day says an Associated Press report. The record was announced by the American Shorthorn Breeders Association. Carnation Ormsby Butter King, an American Holstein-Friesian, was the previous record holder, with a production of 38,606 pounds.

### Ethiopian World Federation Issues Call For Convention

NEW YORK CITY, July 6 (ANP)—The Ethiopian World federation, Inc., this week issued a call for its first international conference to be held here July 19-23, to discuss the present world outlook for black peoples—the status in Ethiopia, Africa, the West Indies and elsewhere. Dr. Lorenzo H. King is the federation president, and Dr. Malaku E. Bayen, personal representative in America for former Emperor Haile Selassie of Ethiopia, is the vice president.

# National Jubilee Melodies

Songs of a Burdened People, Songs of Redemption, Songs of Oppression, Songs of Rejoicing and Thanksgiving, all are found in this splendid book, with round and shaped notes

"Swing Low Sweet Chariot"

"Steal Away To Jesus"

"Study War No More"

"Lord I Can't Turn Back"

"Ride on King"

and many other spirituals that express the soul of a race that has come from darkness into the light. These songs will last as long as the Negro race dwells on the face of the earth.

## GEN. C. V. AKIN'S ADDRESS DELIVERED IN RICHMOND, VA.

SILVER ANNIVERSARY OF ORGANIZED NEGRO HEALTH WORK

Officers and Members of the Old Dominion Medical Society and Woman's Auxiliary, their guests and friends assembled;

It gives me a great deal of pleasure that my first public appearance since assuming my new duties in Washington is to address the Thirty-fourth Annual Session of the Old Dominion Medical Society and Woman's Auxiliary, particularly so in view of the fact that your program tonight celebrates the SILVER ANNIVERSARY of Organized Negro Health Work. It adds greatly to my interest and pleasure that you are gathered here to give formal recognition and to pay tribute to a pioneer in one of the most significant fields of public health, Dr. Roscoe C. Brown, Director of the National Negro Health Week Movement and Health Education Specialist of the Health Service, a valued associate in the Division to which I have just been appointed.

Although approximately one-half of my 25 years of Service activity has been devoted to maritime quarantine, I am no stranger to the broad fields of public health for it has been my good fortune to have been intimately associated with the health problems affecting the colored populations of the Southern States, where for six years I worked with your people and my people for the community welfare.

I know and am sympathetic to conditions affecting the Negro in Mississippi, my native State, and in Louisiana, South Carolina and Maryland, in all of which I have undertaken general health programs in which the white and the Negro populations shared equally the responsibilities and the benefits of our efforts. My background of experience and my beliefs place me in harmony with the general purposes of this meeting tonight and I am happy that I was selected to speak for the Public Health Service on this occasion.

As the years have passed I have watched with appreciative eyes the development and advancement of Organized Negro Health Work under Dr. Brown's leadership. I recall his earlier activities in the Division of Venereal Diseases following his service during the World War in military training camps and extra-cantonment zone areas. I have kept conversant with his later and greater accomplishments through the National Negro Health Week publications, the National Negro Health News, and through news releases and articles on special phases of the increasingly important work he is doing. In stimulating your people to organize for health work, to band together to face and to overcome certain conditions which seemed particularly to threaten them. Dr. Brown, with the support of such groups as this I face tonight, has brought into being a movement which promises to benefit all of us, regardless of creed or color.

## POKEWEED

(Baltimore Evening Sun)

Our gastronomic correspondent writes:

"It may interest some of your readers to know that pokeweed, or pokeberry weed, is now in perfect condition for eating. Here and there about the city, in those grocery stores which make a point of supplementing the usual market groceries with produce brought into them by small farmers, it is possible to buy the delicate young asparagus like shoots of this wild American vegetable.

"The pokeweed is found and picked by farmers' wives, who in this way are able to make a little seasonal pin money.

"Those who have not tried this delicacy have a treat in store for them. Pokeweed is good to eat only for a limited period during the spring. Ordinarily the young shoots are simply boiled in an excess of water and served hot with a little melted butter on them. The flavor, which is delicious, may perhaps best be described as a cross between the flavors of fine spinach and of asparagus. Actually, however, the resemblance to either of them is slight. It is a fine vegetable in its own right.

"Another good way of serving it is first to boil it and then to serve it cold with French dressing.

"Please note that the pokeweed must be well boiled. This is, of course, contrary to the best thought on the subject of preparing green vegetables. It is now generally considered that green vegetables best retain their flavor if, instead of being boiled, they are steamed. But in the case of pokeweed a mere steaming may easily lead to distressing results. For pokeweed, thus cooked, retains a certain laxative principle which, to say the least, is not one of its attractive qualities. But by boiling thoroughly (some even believe in boiling in two changes of water) this principle is completely dissipated.

"Several years ago Mr. Andre Simon, an eminent Anglo-French gastronome, had his first taste of porkweed while on a brief visit to Baltimore. He was delighted. When he returned to Europe he left directions behind to have some seed of the pokeweed sent on to him. This was done. And pokeweed has now been introduced into Europe under his auspices. I predict a big future for it across the water."

---

Mother was poking about in the shrubs when she suddenly called out: "Look, Junior! Here's a little green snake!"

"You'd better look out," cautioned Junior, "it may be just as dangerous as a ripe one."

---

Speaker (desirous of raising money): All who will give $100 stand up.'

To musician: "Play the 'Star-Spangled Banner."

## "Beating the Gun"

(By Al Moses for ANP)

**We Think He'll Make That Boat!**

Over at Lincoln park, Jersey City, last Saturday afternoon, we watched "pokerface" Herbie Thompson, former Pioneer Boys club sensation, race Columbia university's ex-track captain, Ben Johnson into defeat in the 100 and 200 yard dashes.

It wasn't the fact that the man the Drews, Butlers, Peacocks, Thompson licked was "Gentleman Ben," for track fans well know the former wearer of the blue and white has not been himself for more than a season now, due to a muscle injury. Rather, it was the unquestionable class Thompson displayed in towroping the field.

Away from his holes like a sullet in both races, the sphinx-like 165 pound Jerseyite looked more like Ellerbees, Metcalfes, Tolans, Hubbards, et al, than at any time in his short but meteroric career.

There was no denying the fact that his time of 9.8 for the century and 21.4 for the furlong earns him the right to try out for the U. S. Olympic squad that sails for Finland sometime in 1940.

With such great dash men of color as Ellerbee, Peacock, Anderson, Flagg and Ben Johnson rounding into their best form again, Thompson has his job well cut out in winning that coveted berth. But win it he will, we say, and we're not all unmindful of the fact that with this statement again "go out on the limb" as far as predictions are concerned. ers, let's talk about that sterling

And while on the subject of spritpentathlon performer and dasher, Eulace Peacock, former Temple university satellite.

The same afternoon at Brunswick, N. J., competing in the New Jersey State A. A. U. track and field championship, Peacock etc a new state record of 9:6 in one of his heats and then went on to win the final over Tom Flagg (bronzed ace) in 9 and 7-10 seconds.

Needless to tell you readers, both performances represent "human flying," not merely foot-racing. Peacock, like a score or more great sepia athletes, races for the Shore Athletic club of Jersey, a mixed aggregation of track stars.

Shortly prior to the 1936 Olympic games trials, when Jesse Owens proved himself the finest all-around athlete America has ever produced, Peacock suffered a major injury.

Competent track experts prediceed that the cruelly torn ligament in his leg would possibly heal, but that he'd never be able to race again. Some even ventured to say he'd never walk again except with a perceptible limp.

But here we have the "unpredictable" Eulace Peacock flirting with time that Howard Drew at his running best was only able to attain once or twice throughout his entire career?

Who among us is farsighted or all-knowing enough to say, Peacock will not be on the 1940 American Olympic team squad?

It took courage that mere words fail to convey for this return to form on the part of an athlete who licked Owens when Owens was truly Owens

It will take more than pretty words throughout by competent writers to keep back this sable-skinned lion of the track who told us one day two years ago, when a beaten man (by Ben Johnson) at a local track meet: "Al, I'll be back up there cracking records again one of these bright days." That day came true last Saturday when Eulace raced a blazing century in time not much slower than the "fastest human' have ever traversed the route.

---

Word flashed over the country the other night that Charlie Burley, Pittsburgh's crack welterweight contender, lost a decision. It wasn't the fact that Burley dropped "a duke" that knocked us for a loop, but it was the in opportune moment in which defeat came. Scheduled to face Ernie Roderick, English champion, in what would have meant his largest purse to date, the Pennsy star now faces a postponement. With With good hands, Burley in our estimation is the finest 147 pounder alive, saving the titleholder. Yes, we know all about his defeat at the hands of unranged Irish Eddie Dolan but doesn't that happen to the best of us? How many of you fight bugs figured Gus Lesnevich to knock out with a punch Joe Louis' classy stable mate Dave Clark? Well, that's just what the aquat Lithurian fresh from Aurtralian wars did to Dave the other evening out Jersey way. And that by the way, is the uncertain history of the roped arena where fame and fortune is made with a single clout and just as dramatically taken away from you!

## MESSAGE TO

(Continued from Page 1)

that this should never happen again. Congress provided the authority. Farmers entered upon a program to balance America's farm abundance, protect farm income, conserve the soil, and make sure that consumers should obtain an adequate and steady supply of foods and fiber at fair prices. And speaking of consumers—today as a result of that farm program nearly six million farm family consumers of city products are back into the market for the purchase of city products.

Progressive minded farmers are interested in the efforts of consumers to test the quality of goods and services offered for sale. Such farmers are interested in the efforts of consumers to cut unreasonable costs. Farmers do such testing, make such inteligent efforts, in their own capacity as consumers.

Equally, consumers who are of alert minds are interested in the efforts of farmers to stabilize agricultnral production. Such consumers are interested in the efforts of farmers to insure national prosperity by soundly adjusting production to consumption by eliminating gluts and surpluses. For city consumers have themselves built up, in their capacity, as producers, whether they are business, professional, or labor folk, organizations which endeavor to stabilize THEIR activities even as the farmer is now stabilizing his.

This interest of farmers in consumers' efforts, and of consumers in farmers' efforts, is demonstrated increasingly. For we are all Americans, and we all strive to make the American dream of opportunity and security for the common man come true. Time was when every man could go his own way. Today in our complex society the achievement of the American dream depends upon the understanding of and cooperation with groups other than our own.

"FEELING SLUGGISH? Appetite bad? Losing weight? Complexion below par? In short, is there anything wrong with you? If there is, you need vitamins. You need them for breakfast, lunch, supper, and don't forget the good-night snack. You need Vitamins A, B, C, D, E, F, G, H—all the way down to Z—and you need them concentrated, a capital dose, something you can gulp down with a glass of water, or a pill to melt on your tongue. If you don't get them, beware. Quick now.....look for the package wrapped in cellophane. Take your vitamins three times a day, and you'll never have another doctor's bill. This is the twentieth century miracle—the fountain of youth, yours for the asking at your drug or grocery store counter."

Sounds like the modern version of the street corner medicine man who ballyhooed snake oil as the sure cure for everything, you say? Exhortations like these greet modern consumers at almost every corner, over the air, on paper, in packages. You are told you can get your vitamins in de luxe style or just plain. Once you have them you are assured, your troubles are over. And you don't have to go far to get them. You can buy vitamin milk, vitamin rich soap ("soaks the vitamin in through the skin"), vitamin candy bars vitamin tooth paste, and vitamin rich breakfast cereals. The world is waiting for the wizard who invents a vitamin hat!

The business in vitamins runs up to $100,000,000 a year, so consumers are to be pardoned for being impressed, and even for asking: Do I really need all these vitamins, or is this just a fad, like weight-reducing? The consumer does well to ask.

Even scientists in the laboratory have hardly laid the cornerstone of vitamin research. A good start has been made on tracking down vitamins, identifying them, busting them up into their own little family trees, but scientists will tell you they are only starting to learn the mysteries of these food nutrients. They know something of the best sources of the vitamins they are already acquainted with. They will inform you with some assurance of things likely to happen to you if you run shy on several vitamins. Only a little progress has been made in setting up requirements of the human body for each of the known vitamins. Some work has been done in developing methods of preparing foods with a minimum loss of vitamims. And finally, the last few years have seen some progress in the preparation of what—for want of a better name—have been called "Concentrated vitamis," in the form of capsules, pills, and fish oils.

Here the awed consumer inquires: "Do I need these concentrated vitamins?" There's no rule of thumb that answers that question.

Consumers should remember two things when they sit down to figure out the meaning of any type of vitamin ballyhoo.

First, the average person—unless his doctor tells him differently—can get all the vitamins he needs from a balanced diet of carefully selected foods, properly prepared, and served 3 times a day.

And, second, so far as scientists know now the only people who really need vitamin concentrates are babies and young children, expectant and nursing mothers, persons recuperating from sickness, and those following doctor's orders. If you think you need vitamins in a special form, go to your family physician. Chances are he can fix up your diet to give you an ample supply of vitamins. If he can't, he will give you a druggist's prescription, and you will take your "concentrates" in full knowledge that you are not acting on a hunch that can cause deep inroads in your personal budget.

## NATIONAL HEALTH

(Continued from Page 1)

clusive of amounts which may be appropriate for mental and tuberculosis hospitals. The sum will be gradually increased over a period of years and will be available to match sums appropriated by states. No new federal payroll taxes are authorized.

"No social legislation projected in our time is more closely related to the general welfare than a national program of health protection," Wagner declared in a statement accompanying his bill.

"No legislation makes as wide an appeal to the public conscience and to the dictates of sound economy. No legislation was launched with more widespread approval among persons in every walk of life. We must take action now to conquer this last remaining frontier of social security in America."

## GOOD FARMING

in controling thisties and bindweeds. Small patches were sprayed with sodium chlorate.

W P. Miller of Yorkville was in charge of the meeting and the field control demonstration.

## UNITED IN

(Continued from Page 1)

ed in the manufaeture of wooden toys, implements and baskets, and canned fruits, fish and vegetables or parts of automobiles and bicycles. Factories are being established for the purpose, and this tended in the decentralization of industries, a very wholesome aspect in an industrial country.

Since this farm rejuvenation movement got under way six years ago, farm distress has been somewhat lessened. Although the whole movement is left to the autonomous management of the villages, the financing of the projects of this farm program is largely done by the Central Government. To this extent our rural unrest is alleviated, Japan's social unrest will be lessened, and this question of lessening social unrest is a very vital social problem confronting contemporary Japan. The people outside of Japan may find it difficult to realize the full significance of this movement, but if this Kosei Undo is extended to the whole Japan there seems to be no doubt that it will have a wholesome effect upon the future course of Japan, both internal and external.

## MUTUAL AID

(Continued from Page 1)

try.

"Fourth, an excess of plant capacity in our city industry over the facilities needed to produce for the markets available at present levels of employment and consumer buying power.

"Fifth, an excess of financial resources, which because of lack of opportunity for profitable investment, are not being used.

"Sixth, technological advances in both industry and agriculture that displace more people than they provide with jobs.

"Seventh, world conditions that make impossibe a healthy foreign trade.

"Eighth, a large portion of our population—both on farms and in cities—lacking sufficient quantities of the nourishing food they ought to have, lacking adequate clothing, dwelling in miserable houses and generally having a standard of living far below what we have come to consider a decent American standard.

"What farmers want," Wallace said, "is for industry and labor to get busy and match the abundance of agriculture....the home market ...is woefully inadequate as long as industry and labor, consciously or unconsciously, are following policies that lead to scarcity of goods, scarcity of employment, and scarcity of purchasing power.

"From the standpoint of agriculture, it is absolutely vital that the leaders of industry and the leaders of labor get together with the leaders of agriculture and the leaders of government to achieve abundant production, abundant distribution, and abundant consumption for the products of both farm and city."

Referring indirectly to international trade restrictions, Wallace remarked, "We must always remember that we cannot export unless we also import."

Wallace called for an independent council of industry, labor agriculture and government to study economic problems.

In a speech in New York before the "Lincoln's Birthday Committee for Democracy and Intellectual Freedom." Wallace said that deeds and not words will make democracy work.

## No Negro Help; Soft Drink Firm Is Boycotted

COLUMBIA, S. C., June 29—(ANP) Negro soft drink stands and cafes in the "black" district of Columbia, S. C., are boycotting the Double Cola company because they refused to employ Negro help and show signs of discrimination, it is reported here this week.

The Double Cola company is a concern recently estamlished in Columbia by capitalists from Louisville with Mayor Hayes of the Kentucky city one of the general managers. The new plant is modern in every way and is selling a very popular drink that is fast competing with Pepsi-cola and Coco Cola concerns manufacturing soft drinks here. Efforts are being made by the management to offset the Negro boycott, and they are rapidly making places for Negro help.

## $75,000 EXPOSITION BILL PASSES LOWER HOUSE OF ILLINOIS

SPRINGFIELD, Illinois June 29 (ANP)—The Illinois House of Representatives Wednesday passed 97 to 1—Bill No. 809, introduced by Representative Charles J. Jenkins and providing for an Aframerican Emancipation exposition to be held in Chicago July 10—Sept. 10, 1940. Under terms of the bill, the state will appropriate $75,160 for the event.

Purpose of the exposition is to celebrate the 75th anniversary of the liberation of the slaves by Abraham Lincoln. James W. Washington of Chicago is promoter of the project sponsored by the bill, which Thursday was called up for second reading in the senate. Sponsored by 40 members of the lower house, the measure also provides for establishment of a commission, composed of the governor, five members each of the house and senate, and five representative citizens. If the bill carries and is signed by Governor Horner, Promoter Washington and associates plan the greatest exposition of its kind ever presented in America.

## Virgina Union

Richmond, Va.—(ANP)—Virginia Union University graduates numbering 108 received their diplomas last Tuesday at the commencement exercises held for the first time on the grounds of the university. It was the largest number of candidates for degrees in the history of the scohol. Four honorary degrees were also awarded.

## DAVID LASSER IS HOT OVER CUT IN HIS RELIEF MONEY

WASHINGTON, June 29 (ANP)—The Workers Alliance president, David Lasser, incensed over the passage of the 1940 Relief bill in the house Friday, has sent a strong letter to the 1,500 affiliated locals of his organization denouncing the action of Congress.

"On Friday in the house of representatives," he wrote, "the works program for the unemployed was all but destroyed by a combination of Republicans and reactionary Democrats. By this action, the heaviest blow at recovery of the season was struck. Under the guise of "improving' the program, they have effectively wrecked it. Unless the people of the country can persuade the senate to reverse this action, the Hoover policies of relief will ride triumphant throughout the country."

Flaying the action which resulted in the passage of the bill, Mr. Lasser then points out the effect it will have upon the country at large.

"One notable result of the present bill will be to force 1,020,000 WPA workers onto the labor market in the next 60 days. As indicated already, 570,000 of them are permanently off the rolls, the other 450,000 are on a 60-day furlough without pay, with no assurance of getting back. It is obvious to anyone with elementary knowledge of the facts that only a small percentage of these million will be able to secure jobs in private industry during this period. No such drastic action has been taken, even in the days of Hoover. It is difficult to believe that responsible men would inflict such crushing hardship on this great army of needy families. It means that 40 per cent of the present WPA rolls will be out on the streets in the next 60 days."

Mr. Lasser is urging all members of the alliance to work for the passage of the Murray-Casey bill, which would have increased the appropriation over the President's request and improved and streamlined the whole program.

## Martinez Seeks Editorship Of "Star Of Zion"

BIRMINGHAM, ALA., June 29 (ANP)—Rev. D. F. Martinez, A. M., D. D., presiding elder of the Tuscaloosa district, North Alabama Conference of the A. M. E. Z. Church and well known throughout the connection has announced himself as a candidate for the editorship of the Star of Zion, the official paper of the A. M. E. Z. Church, published at Charlotte, N. C.

Rev. Martinez, who has had wide experience as a newspaperman in various sections of the country before he entered the ministry, having been connected with a number of the larger papers of the country, feels that he would bring a storehouse of knowledge and experience to the post. It was announced here this week that Rev. Martinez would speak on the radio program, "Wings Over Jordan," Sunday, July 23.

## GIRL FINDS DIAMOND RING LOST 18 YEARS, IN GARAGE

KANKAKEE, Ill.,—A ring lost for 18 years has been found and returned to its owner, it was disclosed here today. The ring, bearing a diamond in a Masonic design, was lost in 1921 by Edward L. Wolgast of Danforth. Last week-end it was found by Neila Sparrenberg, young daughter of Mr. and Mrs. George Sparrenberg, in their garage which formerly was Wolgast's property.

## "STAY IN AMERICA"

### Advice to Race by African Industrialist

(Chicago Defender)

"Stay in America—take advantage of the opportunities you have right here," was the advice offered by A. S. W. Shackleford, a large manufacturer and industrialist from Nigeria, West Africa who is visiting Harlem and the world's fair.

Both Mr. and Mrs. Shackleford were the guests of honor at an informal dinner meeting of the members and patrons of the Consumers and Craftsmen's Guild of Harlem, Inc., sponsors of the Negro Industrial Fair, which opened June 17, at 132 West 125th street, New York.

The dinner was held at the Little Gray Shop last Monday, in an attempt to comply with a request of Mr. Shackleford to meet the local manufacturers while here.. As the membership of the Guild consists largely of manufacturers of varying sizes, a call was sent out filling the large dining hall of the Gray Shop to over-flowing, eager to meet this outstanding visitor.

"I visited New York City nearly 20 years ago," he said, "and I made a mental prophecy at that time that eventually the business enterprises in Harlem would be run by Negroes. To a certain extent this is

## WOMEN TO THE PLOW

SPRINGFIELD Journal: The position of women under the Nazi regime in Germany continues to decline. Since last January young women who wanted to get jobs had first to spend a year laboring on the farms. In the near future, according to the president of the German Institute for Labor Placement and Unemployment insurance,, all unmarried women under 25 will be required to spend a year working on farms.

This is the result of the labor shortage in Germany which has led the Nazis to claim they have no unemployment problem. It is obvious that any political regime which has to compel young unmarried women to work on the farms isn't bothered by unemployment. The problem might be more accurately described as serfdom.

## FOOD MUCH HIGHER

### Pre-war Days Were Cheaper Says Farmer

Studies by the bureau of agricultural economics show that consumers are paying higher than pre-war prices for foods, notwithstanding that farmers are getting less than pre-war prices for the raw products. In 1939, the farmers received only 40 cents of the consumer's food dollar spent for fifty-eight foods. In 1913-15 farmers received 53 cents.

The increased cost of distribution is cited by F. L. Thomsen of the bureau as "one reason why prices (received by farmers) on domestically consumed products are not as high as one might be led to expect by comparing domestic demand conditions before the war and now."

Dr. Thomsen discusses the question of below pre-war farm products prices in the July issue of the bureau's monthly publication. The Agricultural Situation.

The increased cost of distribution he attributes to the fact that consumers' demand more service in connection with the processing and handling of the commodities." This, together with higher wage rates and other middlemen's costs, "has considerably increased," he declares, "the total handling charges involved in marketing farm products. The farmer gets what is left."

## MIMIC OF MOCKING BIRDS FINDS HE'S MARK FOR MOCKER!

WINTER GARDEN, Fla.—(AP)—Charles S. Given is proud of his bird imitations—the taunting notes as well as the lilting ones—but hereafter he will confine conversation with his fine feathered friend to the social amenities.

Sitting beside his trailer in a park here. Given tried put his best bird language insults on a mocking bird in a nearby tree.

The mocker replied in kind and concluded his rebuttal by flying down and picking up a pair of glasses Given's wife had laid on a limb. As the mocker chirruped triumphantly, Given had to climb to the top of the trailer to retrieve the glasses.

## TERRACES PREVENT GULLIES

### Evade Erosion and Help Save Fertility

Freeport, Ill.—One way to cure a gully is to starve it to death.

That's the way Louis L. Schermerhorn, near here, describes his experience with erosion ditches. He quit feeding them topsoil and cut off their water supply by building terraces across the slopes.

"Before I had terraces, I used to go out every spring and plow the ditches with machinery. But I was just feeding the gullies. Before the end of summer, the runoff plowed them open again," Schermerhorn explained.

"Now the terraces catch the runoff and divert it around the slope into grassed waterways."

Schermerhorn says there's another reason he likes terraces:

"Whatever I put on the soil stays put—whether it's lime, manure, or a new planting. In the old days, a sudden, intense rain not only washed away the soil but also the time and manure. And sometimes the crop washed out, too."

Not all of Schermerhorn's cultivated land is terraced. The rest of it, which is not so steep, is protected by buffer strip cropping. Permanent bands of alfalfa between strips of corn and small grain check the speed of the runoff, filtering out soil washed down from above.

There's one gully on his farm which Schermehorn hasn't tried to starve to death. It's a big one originally eight to ten feet deep, with ragged head and two hungry forks. He has built a concrete notch dam at the head of this gully, which is now healing over and handling safely the runoff from sixty acres of land.

Schermerhorn's terraces, strip

## VENGEANCE ON RATS

BLAKESBURG, Ia., When Mr. and Mrs. Ottis Davis returned home from town they found that the rats had carried off 110 of their young chicks.

They waged a war of vengeance and killed 28 rats under the floor of their garage.

## FLEXIBLE FARM LEASE

### Improved Help for Tenant and Owner

Farm Security Administration has distributed within the past year 1,000,00 copies of its written lease form designed to improve rental arrangements between farm tenants and landlords. Both have applied in large numbers for this "Flexible Farm Lease" which is intended to take the place of oral agreements that still prevail in many sections of the country.

The lease form is designed to encourage statements of landlord-tenant agreements in clear-cut terms and minimize the misunderstandings that arise from word-of-mouth agreements.

The "rental rates" clause carries a suggested form for stating exactly the share of each crop or the cash payment the tenant is to give the landlord.

The "improvement compensation" clause in the lease form provides for an impartial sharing of responsibility for property improvements—both permanent and removable. The amount of compensation the tenant is to get for improvements he makes on the landlord's property during his tenancy

(Continued on page 16)

## SCRAP COTTON SUPPLIES MATTRESSES FOR HOME

Low-priced cotton may be a disadvantage to the farmer, but the farm women of the Sardis home demonstration club, Conway county, Ark., have taken advantage of its low value to provide their families with a good supply of bedding, according to Mrs. Robin Whitworth, assistant home demonstration agent.

The members of this club have made 39 quilts and nine mattresses during the past year. The cotton used was scrap cotton, from their own fields or picked on the halves in neighbors' fields.

The women plan to continue their mattress making this fall until all their beds are equipped with good all-cotton mattresses. In the meantime they are piecing quilt tops, ready to quilt as soon as the cotton crop is available.

## A NEW FRONTIER

### "College Trained Men" By Albon L. Holsey

Such dark and forbidding pictures have been drawn of Southern agricultural conditions that all too frequently many of the brighter aspects are completely obscured.

The pressure, however, upon the Negro colleges to meet increasing demands for new outlets for their graduates, will eventually lead to a wider exploration into agricultural possibilities.

To the average student, the very suggestion of agriculture or rural life, instantly brings to their minds long hours in the field, drudgery, little or no recreation and an uncertain income which offers no economic security.

Because these conditions do exist, country, state and national governments are organizing to meet the challenge and to take steps to make farm life more attractive. Thus, in between these agencies and the farmer there is a steadily increasing number of trained workers who are helping to interpret the new objective to the farmer.

Negro colleges are adding courses in rural education in order to provide teachers for replacements and new opportunities in rural schools.

Another important group is composed of the itinerant teachers vocational agriculture and home economic. Men and women who qualify for these positions must have at least a Bachelor of Science degree and the number of these workers is gradually increasing each year.

Under the United States Extension Service, there is still another group of these colleges trained men and women who are touching and influencing the lives of thousands Negro farm families. In addition to about 450 of these county workers there are two Negro State Leaders in most of the Southern states

(Continued on Page 16)

## CONVINCED TREATING OF COTTON SEED PAYS

"Treatment of cotton seed before planting pays good dividends," said Jay V. Toland, Howard county, Ark., according to Paul N. Eddlemon, county agent.

Mr. Toland treated seed for his entire 968 acres of cotton in 1938, the county agent related and his average yield per acre was 276 pounds, a 10 per cent increase over 1937.

He attributed the increased yield to the uniform stand and vigorous growth throughout the season caused by treating the seed.

The usual growth was so noticeable that many neighbors commented, asking what kind and amount of fertilizer was used. Mr. Toland's reply was, "No fertilizer was used at all, just seed treatment.

## Calling All Delegates and Visitors to the Tenth Annual Convention of the National Federation of Colored Farmers, October 25-27, 1939.

**The National Convention of the National Federation of Colored Farmers, Inc., will meet in its tenth annual session at Lincoln University, Jefferson City, Missouri, October 25-27, 1939. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our organization are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of state and federal agricultural departments who plan to attend the Convention should communicate with us not later than September 1st. Suitable arrangements will be made to entertain all delegates and visitors. All farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.**

**Arrange to attend the greatest Convention of organized Negro farmers in America.**

**Yours for United Colored Farmers,**

**LEON R. HARRIS, Pres. Box 285 Moline, Ill**

**S. B. WILSON, Secretary-Treasurer, 447 4th Ave., N., Nashville, Tennessee**

# Garden Notes

### EARTHWORMS

Earthworms actually are beneficial to soil but their castings on lawns where great numbers of worms are working in rich ground are unsightly. They are more noticeable in thin grass. Worms choose shady spots where grass is likely to be poor. If possible, castings should merely be raked off at intervals without destroying the earth worms. The lawn owner should be certain that he is not destroying or leaving injurious grubs or other worms. Arsenate of lead will get rid of most kinds of worms infesting turf. It is spread on when the grass is dry, one pound to 200 square feet of lawn. It should be washed in thoroughly with a strong stream from the hose.

### STINGING NETTLE

Any thorn or prickle may cause an infection. This nettle is not classed as a poisonous plant, though it is wise to handle it with gloves on. Plants on cultivated ground should be dug before they can go to seed. In waste land, mow down the tops, grub out roots. Young plants may be killed by application of sodium chlorate, one ounce to a gallon of water for each 100 square feet, or one pound to 1,000 square feet, applied dry. The chemical may be mixed with two gallons of sand. Double this amount will destroy all vegetation, including the nettles. This chemical is highly inflamable.

### LATE PLANTING

It is much harder to get plants to grow well now. They are older and the hot, dry weather is a drawback. Nevertheless, one can still find flats of annuals, which, if kept shaded several days and watered well, will take root. The soil should be fine and have some peat moss mixed in to hold moisture. It is helpful to pinch out the tops of long straggling plants. Potted roses and dahlias and gladiolus corms may be set out for late bloom. Shirley poppies, mignonette, candytuft may be sown.

### DIANTHUS CUTTINGS

Cuttings of annual or perennial pinks may be rooted now.

### MILDEW

No harm will be done by a light attack. The grey coating is unsightly and may be cured by applying Massy dust, dry Bordeaux mixture or powdered sulphur. Lightening the foliage to allow air and sun to penetrate will prove beneficial. Mildew develops in shade during hot weather when moisture is present. Watering the tops and foliage of plans therefore encourages the fungus, as does watering while the sun is high.

### RUBBER TIRE HAS BECOME IMPORTANT ON POWER FARMS

Rubber tires have definitely found a place for themselves in modern power farming, it is indicated by R. I. Shawl, associate chief in agricultural engineering of the University of Illinois.

"Rubber tires for farm equipment, first introduced in 1932, have made a phenomenal increase in use especially on tractors," Shawl explained. "Whereas, there were rubber tires on 14 per cent of the tractors manufactured in 1935, it is estimated that 75 per cent of the tractors manufactured in 1939 will be equipped with rubber tires.

"As compared with ordinary wheels, rubber tires allow a tractor to roll so easily that there is 20 to 25 per cent more horespower available at the drawbar. There is also a saving of about 25 per cent fuel for heavy work with tires and a year-around saving of from 14 to 17 per cent for all types of work.

Additional advantages of rubber tires on tractors are increased tractor life as a result of reduction of shocks of working parts, greater comfort for the operator, higher road speeds going to and from fields or from farm to farm, possibility of hauling with a trailer, use of tractor in hay fields and in crossing walks, roads and yards without injury to the surface and driving the tractor to town for dealer repair work.

Furthermore, tests have established the value of using rubber tires on the heavier farm machines such as combines, corn pickers, threshing machines, manure spreaders, pick-up balers and wagons.

### THE FARM POPULATION
**(Grand Rapids Press.)**

Reports of the bureau of agricultural economics reveal that the farm population of the United States at the beginning of this year was within about 18,000 of the all time peak of 32,077,000 of January 1, 1910. The current figures is 32,059,000.

This tells only half the story, however, for while the farm population of 1910 was approximately 35 per cent, or more than a third, of the total population of near 92,000,000, the present number, although almost equal, is only 25 per cent, or one-fourth of the present population of around 130,000,000. In thirty years, therefore, the nation's agricultural status has shifted from one in three to one in four.

Rural population, including those in small towns, still is about 40 per cent of the total. But those who actually live on the farms make up an increasingly smaller sector of the country's people.

One of the significant facts brought out by these figures is the revelation that farm population has been maintained only because birth rates are relatively higher in the rural regions. The increase of 240,000 in farm population in 1938 is credited wholly to births. There was a net loss of 202,000 in migration to and from farms. This would indicate that rural births, 442,000 in excess of farm deaths last year, are contributing a major share of the population gain, although the farms are holding a comparatively smaller percentage of the whole population.

The decline of the relative position of the farm population therefor appears to be one of the major factors in the trend toward a stationery population to which sociologists and economists have given so much attention of late.

But what worries the economists more is why the 32,000,000 farm people of today, with 130,000,000 people to feed, appear to be worse off than the same number thirty years ago with only 90,000,000 to feed. To answer that calls for excursions into the statistics of productivity and into the economics of the tariff and the relative purchasing powers of the agriculturalist compared with the urban resident. Even then the answer is not evident, although there are plenty of politicians and "experts" who wish they had it. The government is planning to give nearly $40 per capita to farm residents in the coming year, having set aside more than $1,200,000,000 in subsidies. The farm is the source of one the country's biggest headaches. From the subsidy standpoint it is just as well that the farm population has not kept pace proportionately with general population growth.

### THIS SHORT CAKE WILL PUT MANY FRUITS TO WORK

It would be too bad to lose one's taste for shortcakes in the middle of the berry season. The shortcake idea lends itself to variations that will last right through the season for strawberries, dewberries, blueberries, blackberries, and raspberries. Try this cakelike ring filled with fruit and garnished with whipped cream:

FRUIT FILLED CAKE RING

½ cup shortening
1 cup sugar
1 egg
2 cups sifted flour
2 teaspoons baking powder
1-4 teaspoon salt
1 teaspoon flavoring
1 cup milk

Cream shortening and sugar together until light and fluffy. Add egg and beat well. Sift flour, baking powder, and salt together. Add flour and milk alternately to the creamed mixture. Add flavoring. Turn into greased ring mold and bake in a moderately hot oven (375 degrees) until done, about forty minutes. Serve filled with sweetened, chilled fruit and garnished with whipped cream.

### BOLT OF LIGHTNING HITS SOW ON HOOPPOLE FARM

Hooppole, Ill.—Lightning killed a fattening sow Wednesday afternoon during an electrical storm on the Charles Grose farm two miles north of Hooppole. The sow was owned by Leonard King, tenant.

### VIOLENCE IS WASTE

Violence ever defeats its own ends. Where you cannot drive you can always persuade. A gentle word, a kind look, a good natured smile can work wonders and accomplish miracles. There is a secret pride in every human heart that revolts at tyranny. You may order and drive an individual, but you cannot make him respect you. —**Hazlitt.**

### TEXAS SEEKS NEW USE FOR COTTON: OFFERING $1,000

Austin, Tex.—King Cotton in the state of Texas has been relegated to the role of a figurehead, that he is much more ornamental than he is useful, therefore the state, by virtue of a bill passed in the house last week appropriated the sum of between $5,000 and $10,000 to be given to the individual who is fortunate enough to find a new use for 300,000 bales of Texas' excess cotton supply.

The exact amount of the sum to be offered awaits the pleasure of the committee whose constituents are college presidents.

Pittsburgh Post Gazette: We are living in a machine age, all right, with half the people being run through it.

# Southern Farmer Gets High Praise From AAA Director

ST. LOUIS, July 27—(ANP)—Praise for Negro farmers of the South and a frank discussion of the causes and some proposed remedies for low income of Southern agriculture were high spots of an address delivered here Sunday by Dr. I. W. Duggan, director, Southern division, Agricultural Adjustment Administration, Washington.

Speaking before a large and appreciative audience which greeted him at the morning service at Lane Tabernacle C. M. E. Church, Dr. Duggan was welcomed by Dr. Noah W. Clark, pastor, who told the guest speaker that "we who live in this section of the country are deeply interested in the progress of the people in the South."

In speaking of the fear which some persons have of the changes in our economic structure which have been initiated by the government, Dr. Duggan said:

"If we succeed in solving our economic problem, I am not afraid of a change in our form of government. If the average factory worker has steady work at good pay, he will not be lured either by Fascism or Communism. If the farmer gets a reasonable price for the things he raises, he will oppose radicalism. But we cannot expect men to give their support to a system of government which does not give them an opportunity to earn a decent living. We must provide that opportunity to earn a decent living. We must provide that opportunity if we are to have a stable national life. To do so we must solve some fundamental problems. The federal government is the only agency which has the resources and the power to cope with many of these problems. Among them, as I see it, is the farm problem."

Of the 654,000 Negro farmers in the cotton producing states, Dr. Duggan paid tribute for their cooperation with the government's farm program and added:

"Most students of the problems of the Negro farmer have, I believe, overlooked factors in these farm programs which have proved beneficial to him and will prove more beneficial as time goes on. These programs have centered the attention of the country upon the South and the sharecropper. The sharecropper has been in the South since the Civil War. The AAA programs did not create the tenancy problem of the race problem. We have had them for years and not until we began national programs for agriculture did the country awaken to the situation among the sharecroppers and the farmers in our backward areas. The programs have been responsible for hundreds of meetings which were attended by Negro farmers. The Negro farmer has had an opportunity to learn fundamental facts and to examine his own situation in their light. To a large extent, these programs have brought the Negro farmer out of the eddy in which he lived and back into the current of action and vigorous thought. The programs have even called the attention of some planters to the plight of their own tenans. I know of a health clinic in Arkansas which grew out of the desire of a planter to have his tenants use the land taken out of cotton to grow more food and food for home use.

"I am certain that these programs have helped dissipate race prejudice. Any movement which brings Negro farmers and white farmers together to discuss common problems is bound to result in a better understanding. The programs have caused many of us to have a better realization of the contribution that Negro farmers have made to Southern agriculture. We have come to realize that the South cannot progress until all its people progress, whether they are landowners or tenants, white or colored. The need for conservation of human resources is just as great as the need for conservation of soil resources."

U. S. Falls, local fish merchant and vice-president of the St. Louis Negro Business League, presented A. L. Holsey, field officer, AAA and secretary, National Negro Business League, who in turn, presented Dr. Duggan to the audience.

# New Stars Shine At National A. A. U. Meet

LINCOLN, NEB., (ANP)— Two colored stars who loom as probable members of the 1940 U. S. Olympic team were uncovered here last Monday and Tuesday at the 51st annual National A. A. U. track meet. They are Joe Batiste, hurdling high school boy from Tucson, Ariz., and Norwood "Barney" Ewell, Penn State freshman.

At the same time several of the old reliables came through, among them Bill Lacefield of Los Angeles and Lilburn Williams of Xavier, while others fell by the wayside.

Batiste, who came to the meet unknown except for his immediate vicinity, astounded the assemblage in the junior championships Monday by setting a new record of 14.4 seconds in the 110 meter high hurdle and then pushing Marsh Farmer, Texas Tech white boy, to a 14.2 victory in the final. Next day in the senior events Batiste showed even more class by trimming Fred Wolcott of Rice, Allen Tolmich of Wayne, Farmer and other stars to win in 14.1. It is understood the young star plans to enter Ohio State in the fall of 1940.

Ewell is not exactly an unknown, for as a high school student he won several national sprint championships and during the recent indoor season he set a new world record in the 50 yard dash. But he was not expected to defeat Clyde Jeffrey of Stanford who all spring has been pushing Jesse Owen's world record in the 200 meter dash. Yet Ewell whipped Jeffrey by a foot in the fine time of 21 seconds flat. Mack Robinson, second to Jesse Owens at Berlin, failed to survive the preliminaries.

Bill Lacefield retained his broad jump championship won last year while a student at U. C. L. A. by leaping 25 feet 5 1-3 inches, just four inches more than Bill Watson of Michigan, second, and 4 3-8 inches ahead of Ed Gordon, 1932 Olympic champion, who was third. Lilburn Williams tossed the shot 53 feet 7 inches for first, just 7-8 inch better than Watson who was second also in this event.

Long John Woodruff of Pitt, 800 meter champion, withdrew to give Curtis Giddings of New York U. a clean shot at the tile and the chance to go to Europe this summer on the American team, but Giddings failed to place. Woodruff did run the 400, but was nosed out by Edwin Miller of Southern California in 48.3 seconds. Jim Herbert of New York U. was third and Fred Alliniece of Prairie View who Monday won the junior championship in 48.5, was fourth. Archie Williams, Olympic champion, finished out of the money.

Herbert Thompson of New Jersey, Barney Ewell and Mozel Ellerbe of Tuskegee were second, third and fourth in the 100 meters behind Jeffrey who won in 10.2 with a strong tailwind. Ben Johnson, last year's champion, failed to place.

For the first time in eight years no colored athlete won or tied for the high jump championship. Mel Walker and Dave Albritton, former Ohio State stars, leaped 6 feet 7 to tie for third. John Borican, indoor sensation, failed to place in the 400 meter hurdles.

Giddings, in the junior events, was second in the 800 meters. Batiste tied for second in the high jump at 6 feet 4 and W. A. Arrington of Michigan State was fourth in the broad jump at 23 feet 1 inch.

Thomaston Times: A woman is a person who doesn't know what kind of dress she doesn't want until she buys it.

### ILLINOIS LISTS CHANGES IN LABOR, POWER AND INDUSTRY

Six revolutionary changes in the use of labor, power and machinery on Illinois farms during the past 15 years have been noted by the Illinois College of Agriculture. These include a general shift from horses to standard type tractors and from standard type tractors to the general purpose tractors. They include a rapid increase in the use of complicated and expensive machinery such as combines, corn pickers, and pick-up balers, and in motor cultivation of row crops.

The number of work horses on farms in central Illinois has been reduced 50 per cent but the cost of an hour of horse labor in 1936 and 1937 was about the same as in 1923 and 1924. The number of hours of use of tractors has been doubled and the cost per hour cut in half. Hours of labor on the farm have declined 30 per cent.

### GEORGIA TOBACCO GROWERS FAVOR FEDERAL INSPECTION

Georgia tobacco growers who patronize the auction markets at Nashville, and Douglas, Georgia, have voted by a majority of 87 per cent as favoring Federal inspection and grade certification of all tobacco offered for sale on these markets. Designation of these 3 Georgia markets for the free and mandatory inspection provided under the Tobacco Inspection Act of 1935 will bring the number of designated markets to a total of 37. A referendum is being held for the Greenville, North Carolina, market during the week of June 19-24 and several other referendums are contemplated for the next few months. Approximately 250 million pounds of tobacco were graded and certified by Federal inspectors during the 1938-39 season. Facilities have been expanded to provide for the official inspection of twice this quantity of tobacco during the market months for the 1939 crops. The official inspection is supplemented by a market news service which provides growers with current average prices for each grade for the type area.

### COTTON SITUATION

Increased prospects for a cotton export subsidy are among the factors ascribed yesterday by the Bureau of Agricultural Economics for the fact that domestic prices of spot cotton have reached the highest figures since August 1937. Other figures leading to the rise in spot prices set forth by the bureau are exceptionally small stock of "free" American cotton, relatively high domestic and foreign mill consumption, improved domestic sales of cotton textiles, and somewhat unfavorable weather conditions. The bureau reported that despite the largest domestic stocks on record, the quantity of free cotton on hand in the United States is now 50 to 60 per cent smaller than it was a year ago, while foreign stocks of cotton are much smaller than they were then. United States exports, it is said, are running much below foreign consumption of American cotton. Foreign consumption of American cotton, the bureau said, continues substantially smaller than a year ago and is the smallest in 20 years, while the consumption of foreign growths continues at near record high levels. (New York Times.)

### FLOUR PACKS DOWN EASILY, SO SIFT BEFORE MEASURING

Always sift flour before measuring. Flour packs down so easily that a whole extra cup may be put into a recipe if it is not sifted first.

### COUNTY AGENT AID INCREASES

Any notion that farmers fell into an unprogressive rut during the depression is dispelled by the announcement of the results of personal interviews with 32,000 farmers in thirty-five States, which disclose that farmers are more eager to learn and to use the latest scientific farming methods than they were in the boom days of 1928. This year more than 53 per cent of the farmers attended meetings or demonstrations held by their county agents, and more than 28 per cent made the long drive to their State experiment station's farm and fields for up-to-date pointers on advanced farming, it was announced by the National Fertilizer Association which conducted the nation-wide poll. This mass pilgrimage to centers of argricultural information represents a gain of 16 per cent in the number of farmers who reported that they attended county agents' meetings and demonstrations, over a similar survey made by the association ten years ago. (Press.)

### DOWN TO EARTH

Cambridge, Ill—The hen at the Oscar Peterson farm, east of Cambridge, which made her nest in a tree ten feet from the ground, yesterday hatched out eleven chicks from the twelve eggs she had laid there, and indicated she was ready to come down and live the life of ordinary hens.

Mr. Peterson moved her to the ground and she was strutting around yesterday with her brood. The hen had hijacked the perch from a cat, who earlier in the season had claimed the tree for a home and who gave birth to her kittens there also. Mr. Peterson had placed a stepladder for the hen, which used it to ascend and descend from her nest each day.

### BROKE AND CONTENTED

Illinois State Journal: From a resident of Arkansas comes the rather remarkable statement that Arkansanas want no additional government dole. He says the state has limited its relief for "good and sufficient' reasons and that it resents criticism from other quarters.

"No one in Arkansas," he writes, "is going to go hungry. We are taking care of our poor, as we have always taken care of those in distress. But we don't want to set up a fixed standard of relief that will attract mendicants from all over the country. We are thinking about Califorina's experience."

The writer says Arkansas is "broke, but more contented than states that are always blowing about their climate and wonderful hospitality.

Boston Transcript: A physician says a woman's foot will be shaped like a horse's hoof in 100,000 years, because of feminine footwear. Horseshoes would cost less anyhow, and wear longer.

### SWEET CORN GROWERS TO SEE 124 VARIETIES ON ONE FARM

One hundred and twenty-four different types of sweet corn growing on the Earl Sirois farm, five miles east and seven miles south of Kankakee, in Kankakee county, will be on public exhibition tomorrow at a field day for sweet corn growers of northern illinois. Both hybrid and open pollinated types are included. There is a new yellow type that matures in fifty-five days, said to be the earliest yet produced.

### SUPER POLICEMAN

Christian Science Monitor: When you next see a crowd staring in awe and admiration at what seems to be an ordinary policeman you can be certain that you have read the statement of a British policeman, Chief Constable H. W. Young, who says: "The model policeman must be as wise as Solomon, as patient of Job, with leadership of Moses, the faith of David, the strategy of Alexander, the diplomacy of Abraham Lincoln, the tolerance of Confucius, and the kindness of the Good Samaritan."

### ON BEARING THE HEAT.

Kansas City Times: There's one question that makes the whole world kin these hot days of midsummer: how to keep cool. And nowhere does human nature display its wide divergence so completely as in the attempts to achieve that delectable objective.

The schools of thought are almost as numerous as the individuals who make up our citizenry. Take the old family argument of open and shut windows. Usually the feminine contingent holds for all windows closed, while the masculine division insists that open windows may result in a few degrees higher temperature, but that the fresher air makes for greater comfort. There are the hot drink advocates who gulp scalding coffee on the theory that by contrast the temperature will seem more equable, and the cold drink advocates who hold to the opposite view.

In the Sahara desert the Arabs contend that heat should be shut off from the body and they go about swaddled to the eyes in heavy garments. America has many who take a similar view and remain clothed in winter garb: but on the other hand there are those—particularly women—who believe the scantiest shorts are the answer.

There are those who eschew meat in summer, drink sassafras tea to "thin the blood," spend long hours in the swimming pool, even take sun baths on the theory that the tan thus achieved deflects the sun's rays.

In the end all of them are probably about equally warm. Nor is philosophy a refuge. No matter how detached is the body, a temperature of 100 degrees is a very concerte fact, and sooner or later philosophy flees.

Summer heat is summer heat. About the only thing we can do is grin and bear it—or, like the old Quaker, we don't have to grin—and unite in hoping for a durable cool wave soon from somewhere.

Iola Register: If an American is going to work, he gets out of bed at eight; if he is going fishing, he rolls out at five.

# COLORED WAITERS AT WASHINGTON, D.C. STATION LOSE JOBS

## Employes Joined Union Which Failed to Come To Their Aid

WASHINGTON, July 13 (ANP—Even though ours is now a hectic era that forbids anything to be startling, regular rail travelers in an out of the Washington union station got the shock of a decade when they entered the terminal restaurant last Saturday to find white waitresses and busboys, all ready to serve them.

For more than a half-century terminal eaters had been served by colored waiters and kitchen helpers; first in the old 6th Street depot, where President Garfield was fatally shot in 1881, now submerged from memory by the Mellon Art gallery's mammoth east wing, and since 1907 at the present locality.

But like Garfield, and the old 6th street place, the Negroes are gone. now; and their going was unheralded, their exit forlorn and unsung. Sole notice of their ousting was one of fact, which is to say, first knowledge of their finish came when the early shift reported for duty, as usual Saturday morning. They number about 60. Not so long ago they were organized into Local 781 of the Hotel and Restaurant Employes, that American Federation of Labor internation union which created and controls locals of dining car cooks and waiters, principally through the Joing Dining Car council, propaganda agency of the setup, and of which Ishmael Flory, colored, is secretary.

Although this international had jurisdiction over all organized hotel, restaurant and bar employes in the United States (except in Dave Beck's Seattle, Wash.) there isn't a first class hotel of its Washington jurisdiction in which a colored cook or waiter could get a job.

And now for the seeming paradox: the colored men were employes of a lessor, Savarins of New York, but Savarins didn't oust them; all went out tgether, Savarin by desire, the colored folk without choice. There appears as much of coincidence as ingenuity in the incident. And what happened was this:

About nine years ago, Savarins, perator af a chain of rail station eateries in eastern cities on the Pennsylvania railroad, leased the Washington plant and took over personnel from the Terminal company. Not long ago the A. F. of L. organized the waiters and attempted to negotiate a working contract. Savarins balked, stalled, and it was reported the union would call a strike to enforce collective bargaining; then it developed, it is said, that owing to Savarin's refusal to finance air-conditioning of the place on demand of the terminal people, they would not renew the lease, due to expire at midnight of June 30. They didn't.

At midnight of June 29 down came Savarins' signs, up went the Union News Co's successor, away went Savarin and out to the accumulating heap of Washington's unemployed went the colored waiters and kitchen service help. It is rumored the union will picket the restaurant. But Savarins is gone; so it looks as though the union will have to follow them elsewhere for the Union News company fetched in its own help, even non-union bartenders to supersede the union's white drink-jigglers.

My opinion is that Savarins, finding Washington a "dried up lemon," exulted over the good reasons for getting out and discovered a grand opportunity of thumbing the nose at the A. F. of L. and advising it to depart where Sherman said what war is. "And the end isn't yet."

Bunkie (La.) Record: There are many fellows who graduated from the school of hard knocks, and are still paying on their back tuition.

# SOUTHERN YOUTH CAMPAIGN FOR USE OF BALLOT

BIRMINGHAM, July 20—(ANP)—The Southern Negro Youth Congress has launched a campaign to enlist 10,000 Negro young people in 15th southern states in a crusade for voting. Under the slogan of "full citizenship rights for all" these young people are to conduct an intensive 12 months drive on the significance of Negroes' voting. Laws pertaining to voting have been carefully studied by officials of the congress for several months and youth volunteers will thoroughly acquaint themselves with laws governing registration in their respective communities, poll tax laws, and other questions dealing with voting.

The methods to be used have been chosen out of the past experience of the Youth Congress in citizenship drives. Special efforts are again being made to reach first voters who are 21 years old, before high poll taxes have accumulated. Another device to be used is holding citizenship institutes where people will be instructed in the procedure of registering and qualifying as voters.

# MRS. MARY BOOKER NOTED WOMAN OF ARKANSAS, PASSES

## Was Graduate of Roger Williams University and Mother of 8 Children

LITTLE ROCK, July 20—(ANP)—Mrs. Mary C. Booker, widow of the late Dr. Joseph A. Booker and former dean of women at Arkansas State college, was buried from Mt. Zion Baptist church, Tuesday afternoon. She had been in ill health for a year, suffering from a heart ailment, when she passed away last Monday.

A niece of Dr. Elias C. Morris former president of the National Baptist Convention, Mrs. Booker was graduated from the old Roger Williams university and after being married in 1887 helped build up Arkansas Baptist College for 40 years, meanwhile teaching English. During the past five years, after leaving Arkansas State, she confined her activities to church and club circles.

Eight children who survive her included Mrs. Albert Pearry, department of music Southern university, Baton Rouge, La.; Mrs. Carrie B. Neeley, supervisor public school music, Tulsa; Mrs. Sara B. Turner, department of music, Leland College Baker, La.; Joseph R Booker attorney of Arkansas; William A. Booker now of Chicago, formerly attorney at Little Rock; Walter M Booker, department of biology Prairie View college; James H. Booker. R. F. C., Washington; two brothers, Dr. R. M. Caver, formerly of Little Rock, now pastoring at Bethany Baptist Church, Cleveland, Major Monroe S. Caver, retired chaplain at Fort Riley, Kansas, United States army; and a sister, Mrs. Mattie C. Harris of Nashville, Tenn.

### IT'S IN THE BAG

D. S. writes: What can I do to relieve myself when I get hiccups?

REPLY.

Hold a paper sack tightly over the mouth and nose and breathe in and out. This increases the amount of carbon dioxide in the lungs, which, in turn, influences the breathing center in the brain. The treatment is in the bag.—**Chicago Tribune.**

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

**"OUR SLOGAN"**

5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

## EDITORIALS

FROM THE BIBLE: "Yea, the Lord shall give that which is good; and our land shall yield her increase."—Psalm 85:12.

I watch the farmers in their fields
And marvel secretly,
They are so very calm and sure,
They have such dignity.

Their pleasure is so grave and full
When gathered crops are trim,
You know they think their work was done
In partnership with Him.

—William Alexander Percy.

### GIVING AWAY THE SURPLUS

A practical Illinois dirt farmer has suggested a way out of the depression. He says it would be a good plan to take all the wheat, corn, meat, butter, eggs and lard, also all the cotton and tobacco out of storage and give it away to the poor and those on relief. We would see prices rise quickly then, he says.

Well, we will admit that about every plan but this one has been tried and we still have the depression. And, as soon as the poor ate up the surplus we now have, were we to give it to them, we would probably discover to our sorrow that the depression had not vanished with our surplus products.

This depression is not what it seems to be. Plenty did not bring it here and scarcity is not going to take it away from here. Changing of laws and changing of money may change it a little bit, but only a change of the Nation's heart is going to cure it.

But this practical dirt farmer has given us an idea. All of us, citizens of this great nation, must stop thinking so much about getting more, piling u pmore and hogging down more, all at the expense of somebody's happiness and welfare. We have got to get rid of some of our national greed and selfishness. We have got to adopt a policy of "Live and let live." Along with surplus crops, surplus products and surplus money, all of which is doing nobody any good, let us get rid of some of the big corporations' surplus profits by giving workers better wages and shorter hours; let us get rid of some of the big farmers' surplus acres by giving farmers who have no acres opportunity to own some; let us get rid of some of the big banks' suplus money by providing capital at decent interest rates to citizens who want good homes and the comforts of life they deserve.

We will never lick this depression until we lick American greed, selfishness, intolerance and injustice.

### ORGANIZE A LOCAL UNIT

Colored farmers who are organized, who are working with their neighbors in their local communities to get the things they want, are gaining much for themselves and at the same time are contributing strength and power to their racial group. All colored farmers should belong to a local Unit of the National Federation of Colored Farmers.

Under the constitution of this national farm organization, local Units are simply cooperative societies. The members think first of all about the affairs of their own neighborhood and work together to solve the problems affecting themselves and their own community. The affairs of the local Unit are not controlled or supervised by the national office. The national office provides instruction and advice. It works for the interests of all members. But always, the local Unit must seek the good of its own neighborhood first of all, for cooperation, like charity, begins at home.

The local Unit should be the business association of the community. It has a right to engage in business and should do so for the benefit of its members. Members should purchase their home and farm supplies cooperatively. They should produce and sell some farm products cooperatively. They should meet regularly and discuss their problems together. They should do everything they can do to help each other prosper.

Slowly but surely our farmers are beginning to realize that they must band together and do more for themselves and their own welfare. When a majority of the Negro farmers of the nation are organized under the banner of the NFCF, the Race will have taken a long step forward.

### YOU AIN'T STUCK TO IT

Many tears have been shed and many moans moaned for the hapless plight of people who have been compelled to go on relief or accept a chance of keeping alive and being fed and clothed by working for WPA. We have neither cried nor moaned. We have been mighty glad the country could give necessary relief to those who needed it and we have thought the WPA was a pretty good opportunity for the unfortunate brother or sister who didn't have a job and was too proud to beg and too honest to steal.

We well remember a day when we were broke and hungry and applied for a meal at a farmer's kitchen door. But we didn't ask the farmer's wife to give us anything. We told the good lady we would change the appearance of her woodpile for that meal and she gave us an axe and told us to go to it. We got the meal and the farmer's wife got enough stove-wood to last her for several days.

That woodpile was an original WPA job. We chopped up so much wood in so short a time that the farmer wanted to hire us to work for him always. But somewhere, we knew there was a better job for us, so we refused. We left and kept going until we found the better job. For we were in the United States of America, thank God!

Whatever is wrong with the WPA, if anything is wrong with it, one thing is sure. NOBODY IS COMPELLED TO REMAIN ON ITS ROLLS. This is the United States and we are free to search for a better job if we wish. We do not have to have a passport to go from Alabama to Mississippi. We can keep going and searching until we find the job, the new opportunity and the new home.

The real mean, if he is physically and mentally able to be a real man, will not stay long on relief or on the WPA job. He will want to draw his hands out of the other fellow's pockets as soon as he can. And although the searching may be harder and the jobs not the best ones, we believe at least fifty per cent of colored people now on relief or with the WPA could get out and find a better way of living if they had the will and the nerve their foreparents had.

### SECRETARY WALLACE IS RIGHT

Secretary Wallace has endorsed the tenancy provisions of President Roosevelt's new lending program, under which the Farm Security Administration would use six hundred million dollars over a seven year period for loans to tenants and sharecroppers for the purchase of family-sized farms. The Secretary told the senate banking committee that 42 per cent of all farmers now are tenants, that the total is increasing, and that if this trend is not checked the country's traditional system of family sized farms cannot survive.

The trend toward tenancy increase and the trend toward corporate farming, which we also consider to be an evil, will never be checked until better opportunities are offered tenants and sharecroppers to purchase farms of their own. "Let the real farmer have the land," should be the slogan of all good citizens.

### DAVENPORT AND BIAS

The National Federation of Colored Farmers has lost two staunch friends and supporters during the past month. Both did what they could for the welfare of the organization. Both were lovers of their Race and of their fellowmen. Both served well, each in his own place and in his own way. They were great men because they were unselfish men. They thought of others first.

A. D. Davenport, Secretary of Howard-Trinity Unit, NFCF, Tchula, Miss., was a charter member of the first local Unit of the NFCF organized in the nation. His energy and faith were largely responsible for the remarkable success this Unit has achieved. His advice was, "Let us talk less and do more." He was the great Planner for his Unit, and all his plans were good ones. A firm believer in cooperative endeavors; his Unit was the first to engage in cooperative production and marketing. He will be sorely missed by his fellow-members. His love for the Federation was truly expressed in the words of Vice-President of Mississippi Walter Riley, who said, "He could never say or do too much for the NFCF."

Prof. J. H. Bias, president of the State Normal School, Elizabeth City, North Carolina, was one of the best friends N. C. farmers have ever known. He emphasized the importance of training for rural leadership, and his students who went out among the farmers and their children loved the people with whom they labored. He believed in organization of farmers with all his heart and soul and his advice to the officers and leaders of the NFCF over a period of years helped them to surmount many difficulties. North Carolina has lost a great ciitzen and Race leader.

### FALSE-PACK, BAD CHECKS BRING CALIFORNIA PENALTIES

The California Department of Agriculture reports that John Rivara of Colma, California, has been fined $100 and placed on probation for a 2-year period for having sent potatoes to the San Francisco market packed in such a way that the larger and better ones showed on top and screened the smaller ones in the bottom of the containers. The potatoes were intercepted by a Department inspector, as packed in violation of the State fruit and vegetable standardization laws. Rivara had previously been in court two times for similar infractions of the standardization laws.

Bad check charges brought fines and jail sentences to Al Battaglini, truck operator and wholesale produce dealer of Portland, Oregon. In 1935, Battaglini, despite the fact that he failed to apply for a California State license required under the Produce Dealers Act, operated in California as a fruit buyer. He paid for some of his produce with bad checks, however, and this was construed by California courts as failure to pay growers. Returning to California recently, Battaglini was apprehended and sentenced to 30 days in Sacramento Road Camp for one of his transactions. Upon his release he faced further proceedings in Placer County where he was sentenced to 90 days in the County jail, fined $50 and ordered to pay the grower or spend an extra day in jail for each dollar unpaid.

## Alpha Kappa Alpha Sorority Opens Its Mound Bayou Clinic

MOUND BAYOU, Miss., July 27 (ANP)—Alpha Kappa Alpha Sorority opened its fifth annual clinic here Monday with a large number of patients waiting to receive the medical treatment and advice provided by the AKA health unit.

The health program, originated in 1934 by Miss Ida L. Jackson, was aimed to combat the venereal disease among Negroes in the deep South. Over 500 cases have been treated during the present clinic many of whom return annually for advice and examination.

National and state health officials have checked closely on the work undertaken by the AKA women and as a result have urged them to continue and to expand their plans for improvement of the health of the Negro.

At the beginning of this year's clinic, Dr. R. D. Dedwyler, county health supervisor for Bolivar county, announced that during the year 1,500 cases whose treatment had been initiated by the sorority staff workers had been completed by the personnel of the county health department, using medications which had been provided by the Alpha Kappa Alpha health unit.

Dr. Dorothy Boulding Ferebee, chairman of the health committee Dr. Mary Williams, nationally known in the field of rural public health, and Miss Jackson, founder of the project, are members of the clinic staff, each one of whom has given five years of service to the promotion of the project.

This health proect began operating through a venereal immunization program, which has expanded each year to include dental health maternal health and venereal disease case-finding surveys.

For the 1939 clinic, the health committee introdueed a demonstrational dietototherapy project. This plan, based on five year's observation had for its purpose combatting the devastating results of malnutrition and diet deficiency diseases traceable to the great needs of rurala reas of the South.

Dr. Thomas Parran, surgeon general of the United States Public Health service highly endorses the work of the sorority and is anxious that this new work be launched. Mrs. Franklin D. Roosevelt and Mrs. Henry Morgenthau wife of the secretary of the treasury Mrs. Thomas Parran, wife of the surgeon general, are greatly interested in the work being done by these women toward better health.

One of the greatest achievements aside from the fact that this project is showing what can oe done by groups of interested people is the changed attitude and spirit of cooperation that the white residents and health officials of Mississippi have shown. This work has done much to promote good will and understanding between Negroes and whites in the South.

The health committee introduced treatment for venereal disease with Wasserman tests as a part of their health program dur ing 1937. Although this was the original plan, the immunization program for children took precedence because Health Child programs are established with greater facility. Since September, 1938, a daily clinic for venereal disease has been operating in some sections of Bolivar county as an extension of work begun by the sorority.

With the health committee for this year's clinic are Miss Marjorie Holloman of Washington, D. C., who has served in the clinic for four years; Miss Alma Porter, teacher of physical education and hygiene in the public schools of Indianapolis; Miss Sallie Cullars of Newark, N J., and Miss Bessie Lee of Alexander, Va., both graduates of Freedman's Hospital School of Nursing

# Shall Government Funds Be Used to Build Organization Membership?

SOME UNPLEASANT FACTS HAVE RECENTLY BEEN BROUGHT TO LIGHT

Leading Senators Condemn Tactics Employed

—From National Grange Monthly

THERE IS A growing demand in Congressional circles for an investigation of the Agricultural Extension Service, particularly in certain States of the South and the Middle West, due to revelations that have been made regarding improper activities on the part of county agents in "high-pressuring" farmers to join the American Farm Bureau Federation and pay dues to that organization.

When the claim is made that to this particular farm organization belong all the credit for the benefit payments that are being made under the Agricultural Adjustment Act, and when it is asserted that no further payment of this nature will be made to farmers unless they join the Farm Bureau Federation, it is perhaps only natural that members of Congress, who make these appropriations, should show some irritation and resentment. Not a few of them want to know what inducements are offered to county agents, or what pressure is placed upon them, to tempt them to engage in such practices, which are clearly in violation of the letter and spirit of the Smith-Lever Act and the rules and regulations governing the Agricultural Extension Service.

Many members of Congress take the position that, for the good of the extension service itself, and for the good of agriculture, this condition of affairs, wherever it exists, should be cleaned up.

---

Newspaper dispatches report the case of the extension agent for Perry county, Alabama, R. L. Griffin, who on March 15 mailed a letter to the farmers of his county, in franked envelopes of the Department of Agriculture, stating that since 1933 the farmers of Perry county had received a total of $1,532,780 in AAA benefit payments and that these payments had been secured solely through the influence of the American Farm Bureau Federation. In his letter Mr. Griffin made this observation:—

"There is only one way to continue to receive these payments: It is through the membership in an organization which is strong enough to tell Congress what you want. The American Farm Bureau Federation is the largest farm organization in the world, and only through this organization have you been able to receive these payments."

Continuing, Mr. Griffin's letter stated:—

"For each dollar you invest in farm Bureau dues, you have received $125 in government benefit payments. I know of no better investment of insurance that you can make on your farm or in business today."

Mr. Griffin said that there were no active Farm Bureau Federation members in Perry county when the membership drive was launched about two months ago, at approximately the time this multigraphed letter went out. It appears that the Federation unit in that county had dissolved as a result of a factional feud involving litigation. According to the county agent, there are now between 600 and 625 dues-paying members in the county, organized into seven community bureaus!

Mr. Griffin told a reporter that he wrote his form letter after consulting some leading farmers in Perry county. He did not know whether similar letters had been circulated in other counties.

The complete text of this letter was printed in the Washington Daily News for June 1, and was brought to the attention of Dr. C. W. Warburton, chief of the Bureau of Agricultural Extension, together with the Post Office Department and various members of Congress.

SOME OFFICIAL COMMENTS

"I first learned of this case," Dr. Warburton said, "two weeks ago. I immediately wrote to P. O. Davis, Alabama extension service director, pointing out this violation of our policy. I have just now finished talking with Mr. Davis over the phone. He said that he had looked into the case. He said the agent admitted that in a moment of enthusiasm he had done something that was contrary to policy. He has been reprimanded and I am sure it won't happen again."

A Post Office Department official, upon being interviewed, said that if an agent sent out anything but official matter in franked envelopes, he would have to pay for the stamps he should have used.

Senator Carl A. Hatch of New Mexico, who has been making laudable efforts to divorce partisan politics from the expenditure of works and relief funds, said:—

"I don't like that sort of thing at all. I am strong for the agricultural program, but I don't approve of any such methods."

Senator Charles L. McNary of Oregon, formerly chairman of the committee on agriculture and forestry, and now its ranking minority member, characterized County Agent Griffin's action as "a very grievous indiscretion," calling for rebuke by the Department of Agriculture. Henry Wallace, Secretary of Agriculture, expressed appreciation of the work being done by farm organizations in general, but condemned the "improper actions" of the extension representative of Perry county. Secretary Wallace said:—

"County Agents are not subject to hire or fire by the Secretary of Agriculture. They receive their salaries in part from Federal funds allocated to the states, and in part from state, county or farmer sources. Their status is a product of both Federal and state legislation. The power to hire or fire rests with the state director of extension. If it were not for the danger of Federal over-centralization, it would be an improvement from the standpoint of responsible administration if the power to hire and fire rested in the Department of Agriculture rather than in the state.

The Department of Agriculture rather than in the state.

The Department of Agriculture, in view of the fact that it allocates Federal extension funds which pay part of the county agents' salaries, is properly interested in promulgating standards. These standards have been set forth from time to time in official letters and bulletins. Undoubtedly this particular county agent has stepped over these regulations. He will be disciplined. Under no circumstances should the impression ever be given that it is necessary to belong to a particular farm organization to get farm benefit paymets. It is not fair either to other farm organizations or to the Federal government to give this impression.

We in the Department of Agriculture appreciate having called to our attention irregularities of this sort which are in violation of our own regulations. We shall in the future as in the past take action as fast as we discover irregularities, whether we find them as a result of newspaper investigation or our own investigation.

Farm organizations have a fine and legitimate function. They should fight continuously for equality for agriculture but to use Federal programs in an improper way in order to obtain organization members injures both the programs and the organization in question."

---

## R. D. DAVENPORT PASSES

With sorrow we report the death of Bro. R. D. Davenport, secretary of Howard-Trinity Unit, NFCF, Tchula, Miss. Bro Davenport was a charter member of this Unit, the first organized in Mississippi and the first organized in the United States.

As the efficient and well loved secretary of Howard-Trinity, he saw this Unit early take the lead in co-operative activities. His enthusiasm and tireless energy contributed much to the success achieved.

Bro. Davenport was also a good farmer. Last year at the annual convention in Forsyth he carried away highest honors for cotton and was awarded a pair of registered Hampshire pigs, the Amos 'n Andy prize.

The sympathy of the Modern Farmer and of the entire organization is extended to his bereaved family and the members of his Unit.

---

Did you know that there is no valid objection to cold storage eggs since they are laid in the spring when eggs are best?

## FROM NOW ON, FAIR-PLAY

By Leon R. Harris, President NFCF

Elsewhere on this page is an interesting article, taken from the National Grange Monthly, which tells about the improper activities carried on by Mr. R. L. Griffin, County Agent of Perry county, Alabama. This County Agent got himself in hot water because he advised the farmers of his county to join the American Farm Bureau Federation, telling them that it was the largest farm organization in the world and that only through this organization had they been enabled to receive AAA benefit payments.

Mr. Griffin is a white man and we do not know whether he advised the colored farmers of his county to join the Farm Bureau or not. But such advice has been given to colored farmers by some colored County Agents and we are glad Mr. Griffin's activities have been given public notice, for it gives us an opportunity to say something to these colored agents we have been wanting to say for some time but did not say it because we feared our statements would be misunderstood.

The National Federation of Colored Farmers has always desired the friendship of Negro County and Home Demonstration Agents. The NFCF has always worked for the interests of our colored agents, never against them. We have cooperated with our agents, men and women of our own racial group, at every opportunity. But many colored agents have been far more friendly with the Farm Bureau than they have with the NFCF.

We have long known why this was so. Our colored agents have been handicapped. Perhaps they have had to do somethings they really did not want to do. Many are under the thumb of white County Agents and think they must do and say what they are told to do and say. Some few have guts and are independent thinkers and doers. They won't be the "handkerchief-headed type." Such agents have won our respect and the respect of their superiors. And such Agents are liked well by the farmers they serve.

Colored Agents who have advised colored farmers to join the Farm Bureau have been traitors to the farmers they were supposed to advise and serve. The Farm Bureau never thought about admitting colored farmers to membership until the NFCF came upon the scene. Leaders of the Farm Bureau have said that colored farmers did not have sense enough to be in the organization. And what is a fact, no colored farmer in any southern state has ever been really admitted to membership in the Farm Bureau. They have probably paid dues but they have never had a voice or a vote. We know of one group of colored "members" that appeared at the door of the room in the county courthouse where the Bureau was holding meeting and was told by the doorman in charge to go outside and sit under a tree until they were ready for them. He told them he would call them when they were ready. He has never called them and as far as we know, those colored farmers are out there under that tree yet.

There are three large white national farm organizations in this country and one colored national farm organization. Colored farmers should get in their own organization and stay in it. They should get into an organization where they can be members sure enough. If their county agent advises otherwise they should politely tell him to go sit under a tree awhile until he cames to himself. And County Agents should turn a deaf ear to those superiors of theirs, who tell them how they should advise the farmers they are serving. Some of these superiors are of their own group, "Big Negroes but handkerchief-headed."

Colored dirt farmers are getting tired of County Agents who are forever telling them they should imitate the white folks, join in with the white folks and follow after the white folks. They have found out that everything white isn't God and they know that everything black isn't the devil. They wonder why these Agents don't know this too.

From now on the NFCF expects fair-play from County Agents of our own group and we mean to have it. We are asking no favors from white farm organization, neither are we asking any special favors from colored County Agents. But we are warning colored county agents to cease whooping it up for the Farm Bureau, to cease telling colored farmers that they get AAA benefit payments through the Farm Bureau and to stop telling colored farmers they can pay their Farm Bureau "membership" dues when they get their benefit checks.

## THE BAWLING AUTO HORN

Peoria Journal-Transcript: A correspondent to the columns. The People Speak, in this newspaper complains of the use of motorcar horns to express the party mood of weddings and similar festive occasions. We are inclined to agree. But we don't think he goes far enough. We believe excessive use of horns to denote great joy is not the only abuse of them. We suspect they are also used too often to express contempt, anger, impatience, and all of the other unpleasant emotions sometimes felt by auto drivers.

The horns on automobiles are put there for the purpose of warning, and—infrequently signaling. But to use them to call somebody out of an office or a store, to use them to call your best girl out on a date, the use of them to hasten the fellow in front of you to get started on the change of the light, or to use them curtly to express contempt for a pedestrain who happens to be walking across the street just as the light changes, is to use them wrongly and offensively.

The man who bawls at people with his automobile horn is a boob and a boor. We can understand why people might feel like leaning on a horn button at a wedding. Despite the fact it assaults the car, there is no malice behind it. But the fellow who uses his horn as a profane vocabulary ought to have his driver's license taken away from him.

## "THERE IS NO UNBELIEF

There is no unbelief;
Whoever plants a seed beneath the sod
And waits to see it push away the clod,
He trusts in God.

There is no unbelief;
Whoever says, when clouds are in the sky,
"Be patient, heart: light breaketh by and by,"
Trusts the "Most High.

There is no unbelief;
Whoever sees, 'neath winter's field of snow,
The silent harvest of the future grow—
God's power must know.

There is no unbelief;
Whoever lies down on his couch to sleep,
Content to lock each sense in slumber deep.
Knows God will keep.

There is no unbelief;
Whoever says "tomorrow," "the unknown."
"The future," trusts that power alone.
He dares disown.

There is no unbelief;
The heart that looks on when dear eyelids close,
And dares to live when life has only woes,
God's comfort knows,

There is no unbelief;
For thus by day and night unconsciously
The heart lives by the faith the lips deny,
God knoweth why.
—Lizzie York Case.

## SAYS EVERY FARMER SHOULD PLANT SORGHUM AS SURER FEED CROP

"I am convinced that every farmer should plant some sagrain or other sorghum as a feed crop, since it stands drouth better than corn," said A. C. Smith, rice and livestock farmer near DeWitt, Ark.

George W. Sorrells, county agent in Arkansas county, reports that last year Mr. Smith planted six acres to sagrain. During the summer he fed a wagon load of it per day to 75 head of hogs for 76 days. He cut the remainder with a binder, shocked it to let it dry, and then sold the seed for $27.

The cost of producing the sagrain was only $2.10 per acre, Mr. Sorrells added.

## HE'S CERTAIN OF MOISTURE

### SHELBY COUNTY FARMER CAN IRRIGATE

HARLAN, La.,—Through irrigation, Dale Swanson, farming four miles north of here is going to assure his corn and potatoes plenty of water even if rainfall is below normal during the growing season.

He has purchased a centrifugal pump capable of pumping 30,000 gallons per hour and with it he can put a three inch stream of water into the field. The Nishnabotna river, which flows through his farm, is running at the rate of 560,000 gallons per hour so that there is a sufficient supply without noticably lowering the level of the river.

It will take about 2 1-2 hours of running to put the equivalent of an inch of rain on the potatoes. Swanson plans to equalize the rainfall with frequent applications of the irrigating system to induce a profitable growth.

If rain comes in sufficient quantities it may not be neeessary to irrigate the corn but Swanson is prepared to add moisture to that field if is needed.

# BRITISHER FAVORS BUFFER STATE FOR AFRICAN PEOPLE

LONDON, Eng., July 13 (ANP)—A. J. Siggins' proposal for an African Buffer state seems to find greater favor among African people than the fantastic plan offered by America's Senator T. G. Balbo, according to press dispatches received here. Outlining his plan in a statement printed in the British Australian and New Zealander magazine, Mr. Siggins, prominent white Britisher, said:

"The proposal is that Great Britain, France, Belgium, Portugal, Italy, Spain, Egypt, Abyssinia (because the conquest by Italy has not been recognized by U. S. A., U. S. S. R. and the majority of colored peoples and the Union of South Africa should agree to the formation of a free and independent Buffet state between the Tropics of Cancer and Capricon in Africa, to replace the present colonial possessions.

"Abyssinia and Liberia shall be recognized as independent states within the Buffer state, but shall be part of the latter's framework. The Buffer state shall be administered by a regency council while research is being made for the best form of a constitution, codes of law, monetary system and all the machinery of a modern state; bearing in mind, however, that the new state will be an African state, and the regency council will fulfill all the duties and assume all the responsibilities of ideal trustees.

## Colored Democrats Of Chicago Not in WPA "Royalty Class"

CHICAGO, July 13 (ANP)—Local political leaders of both parties last Friday scanned with interest a list, printed in a morning newspaper, naming all Illinois WPA employes receiving a salary of $1,200 or more a year.

A cursory examination of the 4-column list printed in the Chicago Tribune failed to reveal the names of any colored employes among the 1,000 WPA-ers in the upper income-brackets. The names were obtained through efforts of Congressman Leo E. Allen (Ape., Ill.) ranking member of the house rules committee.

## Georgia Supervisor Of Colored Elementary Schools Gets Post At Morris Brown

ATLANTA, July 6—(ANP)—Mrs. Helen A. Whiting will become instructor of Rural Education and Supervisor of Rural Practice at Morris Brown College here in addition to her regular work as State Supervisor of Colored Elementary schools.

Mrs. Whiting is a specialist in the field of education, including curriculum construction, primary education and children's literature, and has recently extended her talents in the field of rural education. Her training has also included graduate work at both Iowa and Chicago universities, and she is a candidate for the doctorate at Columbia University. She is chairman of the Rural Activities of the American Teachers Association, and has written considerably on her field.

## Evangelist Coffee Has Nervous Break

CLEVELAND, O., July 13 (ANP)—Last week, enroute from Chicago to Dayton where she was scheduled to conduct a revival at Philips C. M. E. Temple church, Pauline J. Coffee, former stage and screen star turned evangelist, suffered a mental breakdown and was taken to an asylum in Richmond, Ind., for treatment.

As the representative of the Four Square gospel denomination, Miss Coffee was widely known. Clevelanders remember her for having conducted revivals at Gethsemane Baptist church, of which Rev. Glenn T. Settle is pastor, which reportedly roused the ire of the Baptist Ministers' conference of Cleveland and led to his explustion by that body.

# COLORED EMPLOYES CALLED IN PROBE OF LOUISIANA SCANDALS

### Nearly 300 Workers Testify Before Grand Jury Which Has Negro Member

BATON ROUGE, La., July 27 (By Robert McKinney for ANP)—This town, capital of Louisiana, where Huey P. Long reigned as kingfish and was assasinated by a belligerent follower, is agog with all kinds of state and federal probes. Everywhere you turn you see probers digging deep into the affairs of Dr. James Monroe Smith, ex-president of Louisiana State university, and his associates who are being charged with everything on the books in one of the most sensational school scandals ever known in the south.

Diversified opinions have it, and testimonies show, that millions of L.S.U. dollars, most of which came through WPA, have been squandered. The probers are taking no chances, they are threatening to question everybody who worked for L.S.U. or who is presently employed there, causing nearly 300 of its Negro employes to talk very cautiously.

The Baton Rouge grand jury thoroughly questioned Link Bryant, Negro L.S.U. building superintendent, and reported right hand man of George Caldwell, L.S.U. building superintendent, who has been indicted and charged with embezzlement for having taken a two per cent cut on all buildings constructed on the campus in the last two years, totaling more than a half million dollars. The majority of Negroes in Baton Rouge feel sorry for Mr. Caldwell, and refer to him as "a very kind man to Negroes." Mr. Bryant, a very high salaried man, came from under the grueling test of the grand jury without having incriminated himself. Roosevelt Ashberry, influential chauffeur of Dr. Charles Loric, state senator and now resigned president of the Louisiana State Medical society, was also questioned on Friday evening.

And strangely enough, the keenest mind on the grand jury belongs to a Negro, Carl T. Weathers, pastor of a Methodist church, mail carrier and member of the Colored Civic Improvement association.

While Dr. Smith and Mr. Caldwell were somewhat friendly with Dr. J. S. Clark, who recently retired as president of Southern university, it is doubtful that Southern will be brought into the scandal. However the contractors (Caldwell Brothers and Hart) who built the L.S.U. buildings also constructed the newest buildings on the Southern university campus, which cause some to think that Dr. Clark may be questioned. Influential persons who are helping to fight the state administration say, "don't be surprised at what happens; anybody may be questioned."

Although the Dr. Smith farce is attaining national prominence, the "big guns" who started the "mess" are moving down to New Orleans to expose the "shots" who are behind the gambling there and where, if anything serious takes place, more than 650 Negroes connected with the rackets, will lose good paying jobs.

WEED POISON IS DANGEROUS

SODIUM CHLORATE SAFEST WHEN USED DRY, SPECIALIST ADVISES

Spreading dry sodium chlorate crystals over weed infested areas is a much safer way to apply this chemical weed killer than to use it in the form of a spray, advises L. W. Kephart, weed specialist of the U. S. Department of Agriculture.

The chemical is widely used for killing such perennial weeds bindweed, Johnson grass, leafy spurge and Russian knapweed, Mr. Kephart explains. Because it destroys all vegetations, but leaches out so that the land can be cropped again in from one to two years, farmers are using increasing amounts of the chemical although it is both costly and dangerous to handle, the specialist continued, adding: "Sodium chlorate by itself is not dangerous, but once the chemical becomes mixed with any organic substance it is highly inflammable. This may happen if the chemical spills on a wooden floor or wagon bed, especially if these are dusty.

"The greatest risk of personal injury is to workmen applying the chemical as a spray, for they can scarcely avoid getting their clothes soaked with the solution. As soon as the clothing dries it will flame up from the least spark.

"This danger is largely avoided when the chemical is applied in the crystal form.

APPLY WITH SPREADER

"Most farmers applying the crystals use a hopper mounted on wheels that spreads the chemical much as fertilizer is spread by grain drill attachments. It is necessary, however, to spread the crystals by hand in fence rows or other tangled places."

For safety the chemical is never stored in barns or other valuable outbuildings, because if it should become mixed with dust on the floor it is a serious fire hazard, the specialist warned. There is not much danger of fire when the dry crystals are spread on the fields, if all dead vegetation and trash have previously been raked and burned, he said.

In studying the effect of the chemical, the department scientists find that more chlorate is needed to kill weeds on fertile soil than on poor soil. For this reason farmers who plan to kill weeds from cultivated ground this fall or next should not fertilize the preceding crop.

Also, farmers may make heavier applications on the more fertile parts of a field and lighter applications on the thinner portions, the scientists point out. On highly fertile soils it may be better to use only cultural or cropping methods of weed eradication, they added

## Government To Hold Exams For Armament And Other Experts

WASHINGTON, July 27—(ANP)—Exams announced this week by the U. S. Civil Service Commission, salaries of positions offered and the deadline dates for applications are as follows: senior inspector, ordance material, $2,600 annual; inspector, ordnance material, $2,300 annually; asociate inspector, ordnance material, $2,000 annually; asistant inspector, ordnance material, $1,800 annually; junior inspector, ordnance material, $1,620 yearly: application deadline dates, August 14-17; all positions in ordnance department, Ward Department.

ADMINISTRATION F. S. A. LOANS AID SCHOOLING

The Farm Security has announced that its nation-wide survey of rehabilitation borrowers showed that 186,619 children of school age in these low-income farm families had been enabled to attend school last year as a result of the program. These children were members of the 232,947 families covered by the survey. During the past year, the survey disclosed, they increased their total net worth by $62,773,173, or about 38 percent an average of $269 per family. It was this improvement in economic status which enabled so many families to send their children to school. In the past, school attendance had been prevented by using the children for income-producing work, by the lack of suitable clothes and food, by ill health, or by frequent movies which made attendance in school impracticable. The increase school attendance from zero in Massachusetts and Rhode Island to 19,622 in Texas.

ELECTRICITY REDUCES EXPENSES OF FARMER

NEW DEVICES ALSO AID HIM TO IMPROVE PRODUCE

COSTS ARE ESTIMATED

A Nickel's Worth of Power Can Saw A Cord of Wood—Dime Will Pay For Doing Family Washing.

A farmer, like any other business man, has to watch his costs. That is why one of the educational demonstrations at the Electric Show this week will be an analysis of the expense of operating the electric farm appliances now on the market.

In the earlier days of electricity, the first thought was wiring for lighting only. With the big increase in the development of appliances and equipment for use of electricity, however, there is an entirely new idea of its usefulness on the farm. It is applicable for farm equipment, including ranges, cleaners, water pumps, water heaters, refrigerators, milkers and poultry equipment.

COSTS ARE ESTIMATED

At the lower electric rates prevailing in Memphis and Shelby County, it is stated that 8 cents worth of electricity will milk a cow for a whole month. Five cents worth a day will pump all the water needed on the farm. A nickel's worth a day can supply the ice for a farm home or supply light for the average farm. A nickel's worth also can saw a cord of wood or churn 100 pounds of butter. Ten cents worth can wash the family's clothes for a month.

Ultra-Violet for dairy cattle laying hens and baby chicks is another important service by electricity.

In the farm home, all of the appliances found in the city home are needed, such as dishwaters, electric cleaners, electric clock, fan, ironing machine, radio, range, refrigerator and washing machine.

DOES MANY TASKS

In many ways special equipment is available to make farming more profitable and pleasant. Its practical results include the following:

Liberating the farm family from many of the difficult jobs and turning those jobs over to electricity; removing many of the costly losses and uncertainties from farming by giving the operator better control; making the farm less dependent on outside help particularly during the rush seasons, and making it possible to get a higher price for farm products because of higher quality in them.

## Young Soprano Wins Praise In Tuskegee Recital

TUSKEGEE, July 20—(ANP)—Patrons of the Tuskegee institute entertainment course were loud in their praise of the recital Friday night of Miss Gretchen Branche lyric-coloratura soprano given at Logan hall.

Miss Branche, a niece of Dr. George Branche of the Veterans facility, included in her program numbers from Franck, Verdi Handel Mozart, Grieg and other classical composers. According to critics the yung singer has one of the most promising voices yet heard at Tuskegee.

# ALBON L. HOLSEY MAKES ADDRESS TO ACCOUNTANTS

CHICAGO, July 27—(ANP)—Albon L. Holsey, secretary of the National Negro Business League, was guest speaker at a special dinner session of the Chicago chapter of the National Society of Accountants held at Poro college Wednesday evening, July 19.

Mr. Holsey not only delivered an inspiring address to the group of prominent business executives and members of the society but he also outlined a program which would greatly enhance the speed and growth of Negro business throughout the country.

Starting with the educational problem, Mr. Holsey stated: "Our present day graduates of high schools and colleges, instead of assuming that pioneering spirit and creating a place for themselves in the business world as was the custom in the past, seek jobs ready made for them." He further stressed the point that the present educational setup does not put sufficient emphasis on group achievements. Because of this a great many youths are deprived of valuable knowledge concerning the work of Negroes who have made noteworthy contributions in every field of endeavor.

"Organization," said Mr. Holsey, "will be the medium through which much will be done toward bettering the economic condition of the race."

## Howard University May Help In Survey Of Small Business

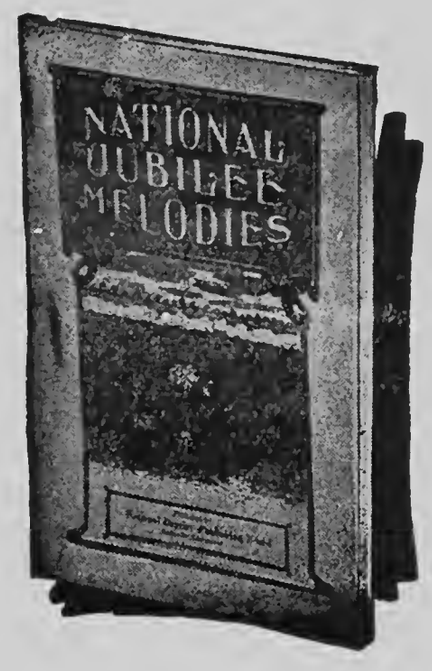
WASHINGTON, July 27 (ANP)—Howard university would be included in the educational institutions which are to make a nation-wide survey of small business men under terms of an amendment to a Senate bill introduced by Senator Francis T. Maloney, Dem. of Connecticut. The amendment is to a bill on the Senate calendar which was presented by Senator Morris Sheppard of Texas. The bill, calling for the survey, did not include the District and Senator Maloney said he believed Howard university is better equipped to make a survey of the Negro small business man than any other institution in the country.

# National Jubilee Melodies

Songs of a Burdened People, Songs of Redemption, Songs of Oppression, Songs of Rejoicing and Thanksgiving, all are found in this splendid book, with round and shaped notes

"Swing Low Sweet Chariot"

"Steal Away To Jesus"



"Study War No More"

"Lord I Can't Turn Back"

"Ride on King"

and many other spirituals that express the soul of a race that has come from darkness into the light. These songs will last as long as the Negro race dwells on the face of the earth.

HOW LONG HAS THIS BEEN GOING ON?

Crackers didn't make many American beds uncomfortable prior to 1865—that was the year crackers of American manufacture were introduced.

Such facts as that were rounded up in droves by Paramount's researchers for "Union Pacific."

Here are a few more FIRSTS:

The first self-cocking revolver was the "Rider Model" of 1856, made by Remington.

* * *

Gingham was first made at Clinton, Mass., in 1846.

* * *

The first oil lamp to burn kerosene from petroleum was patented and developed in 1857.

* * *

Potato chips were introduced by a Negro chef in 1865.

* * *

The first metallic cartridges were made by Smith and Wesson in 1857.

* * *

Paper bags were first introduced in 1867.

* * *

The corkscrew was patented Mar. 27, 1860.

* * *

Condensed milk was patented in 1856.

* * *

Machine-made needles were first manufactured by the Excelsior Needle Co., of Wocottville, Conn., 1866.

* * *

The first wire nail machine was built in 1851.

* * *

The first derby hat was manufactured in 1850.

* * *

The roll top desk was invented about 1850.

BOOKMOBILES IN VIRGINIA

A chance to have 12,000 books brought within easy reach of Virginia rural inhabitants became a reality recently, when the first of 12 proposed library trucks was launched into service by the WPA and state instruction agencies, says a report in the Richmond Times Dispatch (June 27,). The new "bookmobile" is a part of the WPA statewide library project, for which $989,000 has been allocated from federal and state sources. The present truck will carry daily a load of 700 books to cross-roads centers and even to the homes of rural shut-ins. W. A. Moore, Jr., supervisor of the WPA project, said yesterady. The plan, he explained, is for local school, public or other libraries to pool their loanable volumes with the WPA stock of books and let the "bookmobiles", give them the widest possible circulation. The local library groups act as cosponsors of the project with the State Board of Education and the State Library Board. The bookmobiles also will carry Government bulletins and other practical information for farmers.

SAVES ROSE BUSHES

Rose slugs are easily controlled by spraying with one tablespoonful of arsenate of lead to one gallon of water, said Leonard Haseman of Missouri college of agriculture. By adding two tablespoonfuls of sulphur the spray will also keep down mildew, he advised.

HIS PUREBRED COWS HIS BEST BUY, HE SAYS

No money he ever spent has given him as much pleasure and profit as $275 he paid for three purebred cows, A. Foster, Stephens told Price J. Young, Ouachita county, Ark., agent.

"In the early 1900's I became sick and remained so for several months. At the time my family was using milk from a very common Arkansas cow.

"One day my neighbor's wife brought some milk to me and remarked that I might like it for a change. I was so surprised at the difference in the quality of the milk that I asked her where it came from.

"She replied that it was from a purebred dairy cow. I immediately made up my mind that I would buy a purebred cow and convince myself that there was a difference in milk from a common cow and a high bred one.

"A few years later, in 1916, I found a cow I liked and bought two other purebred cows in order to get her. Since that time I've never been without a good dairy cow for home use and several others to increase my farm income."

Mr. Foster estimates that the three cows have returned him $3,000, the county agent said, adding that a purebred bull was bought in 1918, since when the farm has never been without one for more than brief periods.

"Because of the quality of animals Mr. Foster has bred and maintained, he has never been able to supply all the requests he gets for cows, and so he has received an average of $75 and up for all cows sold," the county agent related.

"The money has been returned to the farm and home to raise the living standard, and Mr. Foster now living in a beautiful new brick house."

HIS FARM IS SMALL BUT IT FEEDS FAMILY

J. F. Runnells, of the Provo community, Sevier county Ark., is building up the fertility of his soil and, at the same time, making it feed his family and livestock, he told M. F. Stanford, county agent.

Mr. Runnells has a 62-acre farm with 23 acres in cultivation, the county agent said. In 1938 he had 4.3 acres in cotton, 10:8 acres of corn, 1.7 acres of other general crops and 6.4 acres of soil-conserving crops.

The land is in rather small fields because of natural lines, and due to the small amount of land in cultivation, Mr. Runnells must get the maximum use of his land. An example of the intensive land use of his program is as follows, the county agent related:

On a one-acre field, he harvested a crop of oats that produced an estimated 25 bushels. Mr. Runnells followed the oat crop with cowpeas, and after picking all the peas he would need for feed and seed, he turned the crop under an applied manure and 200 pounds of 4-8-6 fertilizer.

He then planted turnips on this acre, producing enough to supply his family, five cows and six hogs for five months. He also gave turnips to neighbors.

Early this spring he saw that he had a good stand of volunteer oats, so he took out the remaining turnips and has just harvest a crop of oats estimated at 40 bushels from the acre. The land was then planted to cowpeas, and Mr. Runnells will follow last year's system, varying it only by sowing an improved variety of oats this fall.

Mr. Runnells has a similar cropping system worked out for each field, and his production is increasing each year, the county agent added.

# BISHOPS ANNOUNCE CME CONFERENCES FOR NEXT FALL

JACKSON, TENN., July 20 (ANP)—Schedules for 15 of the 40 annual conferences, Colored Methodist Episcopal Church were announced this week by three of the nine bishops of the church. Rev. C. E. Chapman, Kansas City, Mo., secretary department of public relations, said the three Episcopal districts whose conference schedules have been arranged are the following: Second district, embracing the five conferences in Texas, Bishop Randall A. Carter, presiding. Third district, embracing three conferences in Tennessee, Louisiana conference and Kansas-Missouri conference, Bishop J. Arthur Hamlett, Kansas City, Kan., presiding; and the Fifth district, embracing four conferences in Alabama and the Florida conference, Bishop Henry P. Porter, Jackson, Tenn., presiding.

## Bishop Walls Files Suit In Indianapolis

INDIANAPOLIS, July 20 (ANP)—Charging he was refused service in the Indianapolis union station restaurant unless he accepted it in a jim crow corner reserved "for Negroes only," Bishop William J. Walls of the A. M. E. Zion Church filed suit last week through his attorney, Robert Lee Breckenbridge, former N. A. A. C. P. president, against Mary R. and Irvin A. Fendrick, restaurant proprietors, for violation of the state civil rights law.

## Columbia Publishes Folk Music Records

BRIDGEPORT, CONN,. July 20—(ANP)—Sanders Terry and Mitchell's Christian Singers of North Carolina, who were featured on the "From Spirituals to Swing" concert at Carnegie hall December 23rd have made two folk music records released this month by the Columbia Recording Corp.

Sanders Terry, who is nearly blind, plays a harmonica and sings, apparently at the same time. His numbers are "Train Whistle Blues" and "New Love Blues." Neither is in dance tempo. Mitchel's Christian Singers, and untrained quartet from Kinston, N. C., render without orchestral accompaniment two spirituals popular in that section. "My Poor Mother Died Ashouting" and "Standing by the Bedside."

## Texas College To Teach Agriculture

CROCKETT, TEX., July 27 (ANP)—Mary Allen Junior college located here will offer agricultural courses. At present the land-grant school, Prairie View, is the only Negro college in the state where students may be trained for farming. Pres. R. B. Smith of Mary Allen has spent some time this summer in conference with officials at Prairie View outlining an agricultural course covering the first two college years. Students finishing this course may enter the junior class at Prairie View. Between 200 and 300 acres of land will be used as an experimental plot.

## Interdenominational Ministers' Alliance At Alcorn College

ALCORN, Miss., July 13 (ANP)—A state-wide committee composed of leaders of the race and representing all of the denominations in the state is sponsoring an interdenominational conference and institute for town and rural ministers here at Alcorn A. & M. college, Aug. 7-12. The project has been pledged the support of such denominations as the A. M. E., M. E., C. M. E. and Baptist. Also, the Federal Council of the Churches of Christ in America, through its director of race relations, Dr. George E. Haynes, is supporting the project.

The institute will deal mainly with socio-economic opportunities to the end that they may improve the social and economic as well as the spiritual condition of their parishes. Theme of the institute will be "A More Abundant Rural Life."

The Federal Council of Churches of Christ in America reportedly will furnish one of its specialists to handle the section on rural church organization and administration. The college will furnish leaders from its departments of agriculture, home economics and physical education to handle the sections on rural social trends, home agriculture and play and recreation. Efforts are being made to get someone from the state board of health to handle the section on personal and community hygiene, also a representative from the state department of education to discuss the possible service ministers may render in improving the Negro public schools, and federal representatives to discuss the program of the AAA, FSA and FCA. Bishop S. L. Greene, A. M. E., is institute chairman, and President William H. Bell, Alcorn A. & M. college is secretary.

## Christian Recorder Is 91 Years Old

PHILADELPHIA, July 13 (ANP)—George A. Singleton, editor and manager of the Christian Recorder, official organ of the A. M. E. Church, has announced a special edition for the second week in August, in commemoration of the paper's 91st anniversary. Known as "Mother of the Negro press," the Recorder was started in 1848 as the Christian Herald, four years later changed to its present name. Bishop D. H. Sims is president of the publishing company, and Bishop M. H. Davis vice president.

# SOUTHERN STATES SPEED UP PLANS FOR FAIR SCHOOLS

## Section Will Comply With Equal Education Edict of Supreme Court

ST LOUIS, MO., July 13 (ANP)—Recent activity on the part of the board of curators at Lincoln university to expand that school's facilities and start post graduate courses at the coming fall term, has found an echo in various other states of the South.

Stem of the present activity South in the supreme court ruling of last December 8, which ordered the University of Missouri to admit Law Student Lloyd Gaines to its classes or "provide equal educational facilities within the state." The state legislature appropriated $200,000 for graduate and professional study at Lincoln university, whose board, headed by President Sherman D. Scruggs, is trying to have the school of law ready to admit students on Sept. 1.

In Austin, Texas, fortnight ago, the legislature appropriated $50,000 for the next two years, for graduate and professional courses for colored students. In addition to this, an additional grant of $200,000 was made to Prairie View college for graduate work. Both grants will be used to provide scholarships to Negro students for out-of-state study until the state can conform with the supreme court ruling. Dr. Thomas W. Currie and Dr. R. T. Hamilton, prominent Texans, were largely responsible for getting favorable action on the scholarship grants in the legislature.

# MISSISSIPPI NEEDS DOCTORS, HOSPITALS BADLY, SAYS REPORT

## Socialized Medicine Group Gets Comfort From AMA Findings

CHICAGO, July 13 (ANP)— With only one colored physician for each 14,221 Negroes and only 731 beds in general hospitals for the entire Negro population of 1,009,718 colored Mississippi is badly in need of improved medical care, according to a report on Hospital and Medical Care in Mississippi prepared by the council in medical education and hospitals of the American Medical association and just pubilshed in the A. M. A. Journal.

The association has been fighting President Roosevelt's plan for socialized medicine on the grounds that virtually all persons in need of medical service could now obtain it. This report, however, indicates that Negroes are not being adequately served by private medicine and unless private medicine displays an initiative hitherto lacking, socialized medicine is apparently their only salvation.

Negroes are approximately 50 per cent of the total Mississippi population. In 1938 there were 100 hospitals in the state, 75 of them registered, with 2,381 beds for whites in general hospitals and only 731 for Negroes. There are also five registered hospitals devoted exclusively to Negroes with a total of 112 beds. In 1934 only 43 general hospitals accepted patients of both races, but today that number has been raised to 70. Last year of 5,698 hospital births just 479 were of Negroes.

It is estimated that 75 per cent of the deaths from tuberculosis in that state are colored. But despite this there are only 40 beds available for Negroes out of 450 at the state sanitarium. The state, says the report, needs three times as many beds as are at present available.

The report also points out that the demand for medical care among the state's 50 percent Negro population "is likely to be less than among whites." It was not explained how this conclusion was reached in view of the high death rate from tuberculosis.

The number of general hospital beds for Negroes is .7 per 1,000, while for whites it is 2.4. Conditions are far worse in rural areas than in cities. The proportion of colored physicians, one to each 14,221 persons for a total of 71 in Mississippi, is the highest in the nation for a state. The national average is 2,984 to each physician, while for the North it is 1,497 to one.

The FSA has worked out a plan whereby it lends to clients between $12 and $30 annually per family for medical care. Some Negroes are understood to have profited by this scheme, but there is no record of colored doctors having been used.

But despite the lack of hospital space, small number of hospital births, lack of doctors, etc., the A. M. A. report closes by saying that:

"Extensive inquiry among all classes of the population including doctors, health officers, nurses and residents, the almost uniform response is that there is practically no one in Mississippi who cannot receive medical care regardless of his ability to pay."

The report did not state how many, if any, Negroes had been questioned on this matter.

### CANS HIS OWN , TOMATO CROP

#### FARM PLANT HAS PROVED PAYING BUSINESS FOR OHIO MAN

A tomato grower in Ohio found a good market for his crop by canning it in a plant of his own.

Twenty to 30 carloads of canned tomatoes a year now roll away from the William Hirzel farm, in Defiance county, Ohio, for besides processing his own crop, he contracts with neighbors to grow tomatoes for him, according to Capper's Farmer.

His leading product till 1933 was butter, the publicatron relates. He had a large dairy herd and had developed a market for 1,500 pounds of butter a week.

Then a fire destroyed his plant and his feed. The price of feed was climbing and butter prices were tending downward. He had been a tomato grower for some time, and decided there was a better chance for profit in canning his tomatoes than in making butter.

Mr. Hirzel felt his way and put in equipment that would process 3,000 cans a day at first. After he had proved that his farm cannery was a sound business proposition, he enlarged and now can process 4,500 cans at one time.

The first year the factory was operated, he increased acreage from 25 to 40 to give him enough tomatoes for a good test season. In three years his own acreage was increased to 80, and he contracted with neighbors to grow an additional 60 acres.

#### HIGH QUALITY PRODUCT

To build up and hold a quality market, Mr. Hirzel put up from the start a high-class product. No tomato not evenly ripened to a uniform red can go into a can. As a grower, he had learned that green stem ends and other defects could be eliminated by use of fertilizer.

He tests all soil on his own fields and those of neighbors who grow on contract for him, and makes certain that the right fertilizer in sufficient quantities is applied.

Utmost care is exercised in the factory to make the product superior. Inspectors are on hand to see that no inferior tomatoes are used, to see that contents of each can exceed a minimum weight and to make sure that no bits of skin enter the containers.

Whole tomatoes go into the cans and no water is added. Such a product brings orders for larger quantities.

The first year the largest order was for 1,000 cases each containing 24 No. 2 cans. Three years later one wholesale grocery firm took 12 carloads.

Machinery used in the factory is leased from the manufacturer of the can. Mr. Hirzel says such equipment cannot be bought.

## Arkansas Backs Dr. Clayborn For A. M. E. Bishopric

LITTLE ROCK, July 20 (ANP)—Leaders of the A. M. E. Church throughout Arkansas are backing Dr. John H. Clayborn, native-born son, for the Bishopric at the 1940 General Conference to be held in Detroit. Rev. O. Sherman, presiding elder Camden district, declared here this week. Dr. Clayborn is editor of the Southern Christian Recorder, the treasurer of Shorter college and a prominent Little Rock business man. Concerning the wide-spread support of this churchman for the Episcopacy, Rev. Sherman said:

"We have endorsed Dr. Clayborn in all of our state meetings, all of our annual conferences and district meetings and the delegates elected in our various electorial colleges have endorsed his candidacy. We are standing by no other one. He is rich in experience, highly trained, was a successful pastor and presiding elder: he is a friend to man—a big brother to all who know him."

### STRIP CROPPING HALTS EROSION ON HIS FARM

Marvin Parks of Cabot., Ark., has solved the problems of soil erosion through a system of strip cropping on his 80-acre hill farm, reports H S. Hinson, Lonoke county agent.

After watching the tertile topsoil of his farm wash away in the rains for several years, Mr. Parks two years ago established the strip system.

The strips are 25 feet wide running with the contour of the land 75 feet apart, and are rotated each year between row crops such as corn or cotton and solid cover crops.

Usually they are sown to a combination of oats and vetch in the fall, and peas and Sudan grass in late spring, and cut for hay.

In this manner the land is utnized to the fullest extent, built up each year by rotation of crops, and protected against erosion, the county agent commented.

### SAFE GRAZING OF SUDAN EXPLAINED

Declaring that Sudan grass is one of the most satisfactory crops for temporary pasture in Arkansas, because it makes rapid growth, yields a large amount of juicy and nutritious forage, and stands drouth well, an extension specialist points out that its chief drawback is the chance of it poisoning livestock.

The poison which forms in the plant under some conditions is prussic acid, and is quickly fatal to animals, the Specialist explained.

Fortunately, however, he continued, Sudan grass may be managed that there is very little danger to livestock pastured on it. He added:

"It is the short, dark green Sudan grass that is high in cyanide and is dangerous to pasture. The second growth, when it is short and dark green, is especially dangerous.

"Sudan grass that is two feet or more in height, whether first or second growth, and Sudan grass of any height that is pale or yellowish-green in color is low in cyanide and safe to pasture.

"Keeping these facts in mind it is relatively easy to work out a system of grazing Sudan grass that is safe to livestock. It should usually not be pastured until it has reached a height of 18 to 24 inches or more. If two or more fields are available, a system of rotational grazing is advisable.

"Drouth increases the danger of poisoning by keeping the plants small ,a stage in which they are high in cyanide. During or immediately following a drouth, the crop should be pastured with great care."

# LEGAL STAFF OF NAACP IN FIGHT FOR R. R. WORKERS

## Attorneys Seek To Retain Seniority Rights Of Colored Firemen, Brakemen

JACKSON, TENN., July 20 —(ANP)—Colored railway workers, especially firemen and brakemen, through their organizations—the International Association of Railway Employes and the International Association of Colored Trainmen and Locomotive Firemen—this week pressed their fight to retain seniority rights and to stop the replacement of colored workers by whites.

Activity among the colored trainmen was given impeus following a conference of leaders with officials of the NAACP during the recent annual conference in Richmond, Va. Present at that meeting were L. R. Moloy, representing IARE; J. A. Reynolds and Richard Birkes of the colored trainmen's association; Thurgood Marshall, Leon R. Ransom and James M. Nabrit, Jr., of the NAACP legal staff and Charles Houston and Joseph Waddy, counsel for the colored trainmen's association.

The conferees discussed the present status of colored workers on the railroads of the South, particular attention being given to the case of Ed. Teague, veteran fireman of the G. M. and N. Railroad who was displaced in the switching service.

Moloy, employes' representative of IARE general organizer told the group that the Interstate Commerce Commission has before it an order that all coal burning engines over a certain tonnage over the minimum. He said the only engines which will be hand-fired in 1943 will be yard engines and switch engines. He also said that under a secret ontract between the railroads and the Brotherhood (white), regarding mechanically stoked engines, the white firemen get preference on regular runs.

Attorney Houston expressed the opinion that when seniority rights prevail, a senior firemen has a property right in his job as against a junior fireman and that anyone who violated the right was liable Further, that in the Teague case, the Railroad and the Brotherhood were in conspiracy to destroy Teague's rgihts under the senority rule.

Attorney Nabritt said that the Brotherhood, as bargaining agent, could not use its position to destroy the minority, that such action was not representation, but misrepresentation, fraudulent and an action in bad faith.

All present at the Richmond conference were agreed that this secret contract (between the railroads and the Brotherhood) could ultimately be broken. Work has already been started on the case. Organizer Moloy said the case should interest colored rail workers all over the country, especially firemen and brakemen, because if the secret contract or agreement is not broken, in a few years Negro firemen and brakemen will be a thing of the past. He based his prediction on the fact that no new colored employes are being hired in these jobs and those already working are being rapidly displaced.

## Alcorn Receives 'B' College Rating

ALCORN, MISS., July 20 (ANP)—Students, graduates and friends of Alcorn A. and M. college this week, learned that on June 22, President Bell received a letter from Dr. D. A. Grossman, examiner, University of Illinois, stating that Alcorn had been given a "B" rating by the committee on admissions from higher institutions of the University of Illinois, which is a member of the North Central Association of Colleges and Secondary schools.

# GRADUATE NURSES ANNOUNCE PROGRAM FOR ANNUAL MEET

## Specialists Will Deliver Addresses at Convention In Washington, D. C.

WASHINGTON, July 20 (ANP)—Plans for the 32nd annual convention of the National Association of Colored Nurses, to meet at Howard university, Aug 21-25 were announced this week.

Among subjects to be discussed are the national health program, place of nursing in a welfare movement, current concepts in good psychiatroic nursing, national accreditation of nursing schools, place of the nurse in the student health program of a college, and relationship of the N. A. C. G. N., to other National nursing agencies. The subsidiary workers and the value of registries will also be discussed.

On Tuseday evening at the public meeting, Mrs. Estelle M. Riddle, president, will make her annual address and the Mary Mahoney award will be presented to Miss Petra Pinn of New York.

On Thursday evening a panel of tuberculosis has been arranged.

Among speakers who will appear on the program are: Mrs. Mary Elon Manley, director, division of nursing, New York City department of hospitals; Miss Gladys Sellow, department of sociology, Catholic University of America; Miss Edity Hayden, superintendent of nurses, St. Elizabeth's hospital, Washington; Miss Claribel Wheeler, executive secretary, National League of Nursing Education; Miss Pearl McIver, senior public health nursing consultant, and Dr. Roscoe C. Brown, health education specialist, U. S. Public Health service; Miss Naomi Deutsch, public health nursing consultant, Childrens bureau; Dr. Virginia Alexander, student health service, Howard university; Mrs. Roscoe C. Bruce, secretary citizens committee, N. Y. Local Association of Colored Graduate nurses; Dr. Numa P. G. Adams, dean, medical school, Howard university; Dr. T. E. Jones, surgeon in chief Freedmen's hospital; John W. Davis, national secretary, National Negro congress; Mrs. Lorna Doone Mitchell, director of nursing, Sea View hospital, N. Y.; Mrs. Ernest Grant, director, District of Columbia Tuberculosis association; Mrs. Josephine Prescott, director nursing division District of Columbia Health deparement; Dr. Howard Payne, tuberculosis clinics, Freedman's hospital; Dr. Barklie Coulter, director of clinics, District of Columbia Health department.

The Student Section had been planned this year to give the student nurses the opportunity to be present at many of the graduate sessions, which will bring them in close relationship with situations that will effect them later as graduate nurses. Two closed sessions however, have been planned especially for them. Miss Lulu G. Warlick, director school of nursing, Mercy hospital, Philadelphia; Miss Virginia Harrison, director school of nursing, Homer G. Phillips hospital, St. Louis; Miss Hulda M. Lyttle, dean, school of nursing, Meharry Medical college, Nashville; Miss Anna Sewell, science instructor, Harlem hospital, N. Y. City; Dr. Ruth Moore, instructor of bacteriology, Howard university, have been invited to address the students at these two sessions.

Other features of the program are a garden party on the campus of Howard, a tour ofthe White House, and a sightseeing tri pending with the placing of a wreath on the grave of Frederick Douglass.

## Bridge Association Announces Annual Tourney for Aug. 14

NEW YORK, July 20 (ANP)—The seventh annual national tournament of the American Bridge association will be held in the auditorium of the Y. W. C. A., in New York City the week of August 14, announced Arthur C. Curiel, secretary, this week.

On the schedule for the week are the team-of-four for the Jose Cesteros trophy, the open-pair for the H. C. Koch trophy, the mixed-pair for the Dr. Subbeal S. Anderson trophy, the men's pair for the Porter Davis trophy and the women's pair for the Koles Herb Tea Co. trophy.

Also schedules is the masters' individual event for another Koles Herb Tea Co. trophy. This is an invitational affair limited to the 25 highest ranking players in the association.

The Tri-State Bridge association, host for hte nationals this year, is sparing no effort to make this years' championships a gala success. Special care is being taken so that out of town players receive suitable housing accommodations.

The national office has been assured large delegations from Chicago, Detroit, Cleveland, Washington Atlanta and Mobile not to mention the large representation from the Atlantic Seaboard.

With the World's Fair as an added attraction, a record attendance is anticipated and the competition bids fair to be the keenest in the history of the American Bridge association.

## Mrs. A. L. Fleming Heads Club Women Of Pennsylvania

WEST CHESTER, PA., July 20—(ANP)—At last week's 36th annual convention of the Pennsylvania State Federation of Negro Women's Clubs which attracted women leaders from all sections of the States, Mrs. Adelaide Harty Fleming of Philadelphia was re-elected to serve her third term as president.

President Fleming, who is superintendent of the Convalescent hospital in the Quaker City and active there in social welfare work and church circles, will represent Pennsylvania women at the convention of the National Association of Colored Women which meets July 21-29, in Boston, Mass.

At last week's State meeting here, which ended on Thursday, Miss Bernice Coleman of Homestead, Pa. was elected president of the Junior Federation. Highlights of the convention were award of four scholarships to Cheyney State Teachers' College; taking a Federation membership in the NAACP, and an appeal for the judicious use of the ballot by women voters.

## Colored Clerk Named Foreman

CHICAGO, July 27—(By Perry R. Hines for ANP)—Postmaster Ernest J. Kreutgen of Chicago, announced Monday, through President Norval E. Perkins of the Chicago branch of the National Alliance of Postal Employes, and J. Wesley Jones, of the advisory committee of the organization that Charles T. Dotson, 29 year veteran employe of the local post office, was being promoted to foreman, effective as of July 16th.

Dotson has been a special clerk for several years and has an outstanding record of service with the government. His promotion is regarded as a result of efforts of the alliance to secure more recognition for colored employees in the postal service here. The matter of more supervisory positions was taken up with Postmaster Kruetgen last month by O. Grady Gregory, welfare chairman of the Chicago branch of the alliance.

RETAILERS RECOGNIZE A FACT

For some time now retail merchants have exhibited a stiff opposition to the cooperative form of distribution. A few years back they exhibit the same opposition to chain store distribution. To the cooperatives, it has been a silly attitude which retail merchants have taken in either case. Now comes Louis E. Kirstein, chairman of the board of trustees of the American Retail Federation, in his final address before The Retailers' National Forum, May 22-23 in Washington, D. C., saying: "The retail industry should recognize the growth of consumer cooperatives as a legitimate form of retail distribution."

It is indeed refreshing to learn that this nationally-known leader of retail merchants is taking the right attitude toward the cooperatives. It should help to break down the pettiness of small merchants located near consumer cooperatives who think that a harsh attitude and unfriendliness to the situation will forestall progress of user-owned service stores. Present-day cooperatives succeed in spite of such neighboring opposition and, in fact, are oftentimes augmented in their growth by it.

It is because true cooperatives —country and city—are basically sound. There is no real barrier to the progress of a true cooperative made up of loyal member-patrons.

Mr. Kirstein has come to the place where he urges recognition of the cooperatives as a legitimate form of retail distribution but he takes a "crack" at tax exemption privileges in this statement: "In recognizing the competition of this method (cooperative) of retailing, however, the retail industry should urge that federal, state, and local governments refrain from subsidizing it by direct or indirect grants, by outright tax exemption, or by any other special privilege not available to all retailers alike." Any tax exemption allowed by law to consumer cooperatives is legitimate and sound as they are non-profit institutions that are organized for profit as are all other retail establishments—The Ohio Farm Bureau News.

BOYS SHOULD FLY

Only the fewest of parents are encouraging their boys to learn to fly; flying is thought to be a highly dangerous sport even for young men 17 and 18. Oddly enough, most of the parents who feel this way about it did not deny bicycles to the boys (or to their sisters) when the youngsters were in second or third grade.

The contradiction is a curious one. Flying is no more difficult to learn than bicycle riding and the grown boy in an airplane is in considerably less danger of serious injury than the small boy on a bicycle amid automobiles. The flying risk is minimized in this prairie region, where an emergency landing can be made in almost any farmer's field.

The future is in the air. The boy who has been forbidden to learn to fly will have just cause to complain of parental timidity and stupidity. The young man who knows how to handle a plane will be that much better equipped for life and leadership in his generation. The boys know that. They are all eager to learn and many of them will take the matter in their own hands if permission is refused. The wise father instead of thwarting a wholesome ambition will see to it that his boy learns to fly from responsible and experienced teachers.

—Chicago Tribune Editorial.

# RICHARD H. HILL, SEC. AT HOWARD, DIES IN HOSPITAL

## Brilliant Aide Of Mordecai Johnson Was Lincoln Graduate, Class Of '38

WASHINGTON, July 27 (ANP)—Richard Hurst Hill, 33, secretary of Howard university and noted educator and theologian dies Wednesday night in the Johns Hopkins hospital, Baltimore, after an illness of ten weeks.

At the time he was stricken, various stories concerning his illness were circulated and only after a series of phone calls that it was learned of the serious nature of Mr. Mill's illness.

Of a noted religious and professional family he was of the sixth generation of clergy and the third son of a third generation to graduate from Lincoln university, Penna.

He was born December 12, 1905 in Baltimore, Md., and educated there and in Washington public schools. He was graduated from Lincoln in 1938, cum laude and held B.D. and S.T.B. degree. Prior to going to Howard, he was a Baptist minister in charge of a church in West Virginia.

Mr. Hill taught in the School of Religion at Howard before becoming executive secretary to the president. In July, 1938, he was promoted to the position of Secretary of the University, which job he held when stricken with his fatal illness.

Noted as a debater and peach advocate, beginning while he was in college Mr. Hill carved for himself a niche in the world of speakers. In 1927, through a national competitive examination, he was selected the only colored member of a delegation sent to study conditions in Russia. While an undergraduate he won many prizes for debating and was one of the founders of the first Interracial Internationall Debates. A member of the N.A.A.C.P., Alpha fraternity and active in Y. M.C.A. work, Mr. Hill was a popular figure in civic and educational circles.

Surviving are his wife, Mrs. Hilda Anderson Hill and a number of brothers and sisters. Funeral services will in all probability be held in the Howard university chapel.

## 35 Signatures Are Needed to Bring Up Anti-Lynching Bill

WASHINGTON, July 27 (ANP)—If Congressman Joseph Gavagan of New York succeeds in getting 35 more signatures to his anti-lynching bill, that petition will be brought before the house before adjournment. It is necessary to have 218 signatures to the petition before the bill can be brought to the floor.

In the senate, Wagner and Van Nuys believe that the anti-lynching bill will be reported favorably by the senate judiciary committee before the end of this session. If the house passes it before adjournment, it will then be ready for consideration by the senate when congress convenes in January, 1940. It is generally considered the political significance of 1940.

HARD-HEADED MEN AND COLD FACTS

"At a meeting of the Advanced School of Education at Teachers College, Columbia University, three leading industrialists and a banker attacked American educators on the ground that 'they had let the business man down by neglecting their responsibility to teach appreciation of the existing social order." This is a remarkable statement.

"The business men, it will be noticed, did not undertake to argue with the teachers, did not attempt to prove that the existing social order is good. They merely announced that the teachers have a 'responsibility to like the social order and to make their classes like it.

"Would these same business men say to their doctors, 'Look here, I know that my kidneys are wheezy and that a destructive critic might insist, I'll soon be dead. But I've come to you for a cheerful report. It's your responsibility to make me think that my kidneys are as good as new.

"Of course, the business men can take the stand that they pay the salaries of teachers, and therefore they have a right to ask for any sort of teaching they want. But they also pay the fees of the doctors. And they don't ask for reassuring medicine; they ask for correct medicine.

"Why should the social sciences be the one field in which they don't want the truth? Why should the teacher be the one expert who is paid to conceal what he knows?

"At the same meeting, Mark Jones of the Akron Belting Company asked the teachers whether they will allow the current widespread impression to prevail among business men that teachers are persistently questioning the social usefulness of the enterprise system."

"Again, would Mr. Jones say to his doctor, "Are you going to let me leave this office under the impression that you are persistently questioning the usefulness of kidneys?' The doctor, I suppose would answer, 'I am only questioning the usefulness of your kidneys, not of all kidneys. I am telling you that your kidneys don't work any too well. If you'll pay attention, perhaps we can improve them."—Herbert Agar in the Louisville Conrier-Journal.

SILK PRODUCTION WILL BE TRIED IN ALABAMA

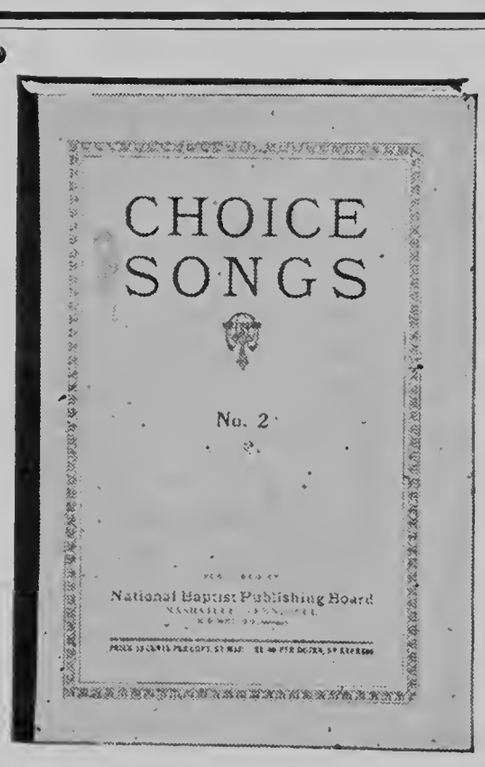
Alabama, with convict labor, is setting out to retry an experiment first begun by King James I of England in 1619—to produce silk in America.

"It isn't going to cost the state a thing, except convict labor, and there's more of that than we can utilize," said Col. W. E. Persons, chief of corrections and institutions.

A contract has been signed with a New York firm whereby the state agrees to devote 20 acres to the production of 20,000 white mulberry trees, on which silkworms feed.

The state will cultivate and tend the trees with convicts, the Eastern corporation furnishing certified eggs from which the silk-spinners will be produced.

Dr. Ludwig Harpootlian of Brooklyn, represented to Persons as one of the nations outstanding sericulturists, will supervise the project at Atmore State Prison Farm, 50 miles from the Gulf of Mexico.



**Choice Songs**

**NO. 2.**

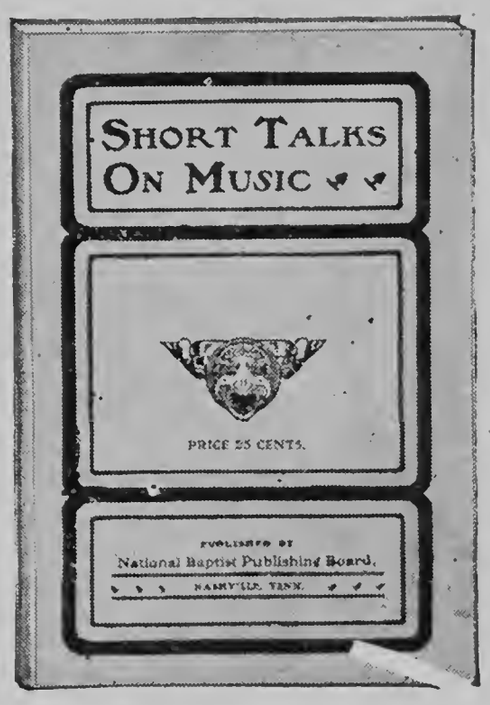
Exceedingly popular, worth twice the money. Millions of folks have sung from this book, fitted for use in all meetings of an evangelistic nature and well adapted for any other religious use.

**Price 20 cts. per copy. $2.40 per dozen. By the hundred, $11.00, express charges not paid.**

**SHORT TALKS ON MUSIC**

This book contains the simple instructions for those who want to learn vocal music. It is almost a self instructor. No greater help can be found for the anxious student.

**Price 30 cts per copy, $3.60 per dozen.**



**NATIONAL BAPTIST PUBLISHING BOARD**

**Henry A. Boyd, Secretary,**

### TESTS SHOW MEAT NEEDN'T BE COOKED WITH THE BONE

The old fashioned theory that meat always is better when cooked with the bone has been disproved by recent experiments. For instance, at the University of Minnesota a group of men and women were asked to taste samples of meat, half of which were cooked with the bone, and half with the bone removed. Results showed that the boneless roasts were just as juicy and flavorsome, if not more so, than those cooked with the bone.

### PICNICS—STREAMLINED

Christian Science Monitor: The "open" season for meals is now well advanced, and the sport of picnicking is being enthusiastically pursued. At the same time, the public would seem to be coming to the conclusion that, as a recent editorial comment in the Times of London put it, picnicking "reaches its rarest heights of enjoyment when it is a by-product, and not an end in itself."

For the old-fashioned picnic, which was the grand climax of the day, which spread its table in the wilderness with a sumptuousness that would have done credit to the diningroom "mahogany" of any gourmet, is largely no more. People are more inclined to hike, and ramble, and tour, and to eat only, literally and figuratively by the way. The picnic may still be "the thing" to them, but lies in the scamper and not in the hamper.

Whether the change is for better or worse is a futile question which will engage the attention only of those who some day intend to go. The true picnicker is taking his picnics as he finds them and leaving the unspoiled meadow the same way.

### EXTENSION PERSONNEL

Under the provisions of the Smith-Lever Act, the Cooperative Extension Service was set up on July 1, 1914, with 1,613 workers. At the beginning of the current year 1939, there were 8,680 extension workers. Serving the farmers in the 3,000 counties in the United States and including the agents in Alaska, Hawaii, and Puerto Rico are 4,074 argricultural agents and their assistants as compared to 881 in 1914. Working with homemakers in these counties are 2,136 home demonstration agents and their assistants, which has developed from the original group of 389 women on the rolls in 1914. County 4-H club agents were not employed in 1914 but now 278 men and women are located in the counties to devote their entire time to the work of 4-H clubs. From a nucleus of 50 Negro extension agents working in the field on July 1, 1914, the number has grown to 504 extension agents devoting all their efforts to the benefit of the Negro farm family in the South. To support the work of the county extension agent and keep the machinery running smoothly, 622 administrators and supervisors are required in 1939 as compared to 162 in 1914. In addition, the services of 1,570 subject-matter specialists are now available as compared to 221 in 1914. (Extension Service Review, June.)

### GARDEN TRACTOR

Farm Machinery and Epuipment (June) reports a new small tractor, weighing only 104 pounds, for use in the truck patch or flower garden. This little tractor has only one wheel and its 1 1-2 h. p. motor is mounted directly inside the wheel where practically all its power is utilized to pull or push different attachments. The tractor rides on a corrugated hard rubber tire six inches wide.

### MISSOURI POULTRY PRODUCE PLANT

According to the Missouri Ruralist (June 24) "Missouri has the largest poultry produce plant in the world, the Producers Produce Company, a Missouri Farmers Association cooperative. "The plant, started 17 years ago, has paid $45,000,000 to Missouri farmers for produce, and has returned $950,000 to the members of the co-operative in dividends. Two operations of this plant are outstanding. Poultry is picked by the wax dip method in a large unit that will handle 15,000 chickens a day at top capacity. It takes only 33 minutes for a chicken to go through the packing plant. The other operation is breaking the eggs. Only No. 2 eggs are broken. Either the mixed yolks and whites are sold or either one separately. From 1,000 to 1,500 cases a day can be handled in the breaking department. The eggs are candled and subjected to expert inspection after they are broken. All produce is picked up through local exchanges, about 90 in all."

### RATS!

A whisper of infection in one or two corners of the country has caused officials of the United States public health service to warn that rats can spread disease, including bubonic plague and typhus.

Another whisper of infection and we shall find ourselves in a full-fledge campaign to bat the rat, which would be useful work even though there were no threats of epidemics.

Of all rodents that infest the haunts of men, rats are the boldest. They will nip the ears of sleeping babies, kill lambs and even grown sheep. Hagenbeck once killed three elephants crippled by hungry rats. Rats have been known to destroy dams and weaken houses, to gnaw holes in Uncle Sam's mail bags and destroy the mail. Our proud in modern sanitation is somewhat dampened by the fact that rats are on the increase throughout the world.

The immediate benefit to be obtained by fighting the rat is the saving of resources. One authority says every one of the 150 million rats in the United States costs every citizen $1.50 apiece annually—Maine Dispatch.

### MINTED PEARS WITH ROASTS

Minted pears with roast veal or lamb—that's something! Simmer canned pears in their juice to which you have added a few drops of green coloring and a third of a cup of granulated sugar for each two cups of juice. Add an eight of a teaspoon of cinnamon and a quarter of a teaspoon of oil of peppermint. After cooking four minutes, carefully remove the pears and let then cool on a platter.

## A Good Time Was Had By All of the Insurance Men and Women at National Convention This Year

### Highlights of Social Activities Engaged in By "Tired Business Men" Given By ANP Correspondent

LOS ANGELES, July 27 (ANP)—It is Monday morning. It is not just another Monday----it is Monday after a week crammed to the brim with rubbing elbows with America's keenest business minds and their associates. At 8:15—much to early for ye scribe to make it—the N. N. I. A. delegation to the 19th annual convention answered the "all abroad" call of the conductor on a special train out of this "City of the Angels."

Methinks the good-byes of the four score men and women were a little reluctant. For Los Angeles threw open its arms and hugged them close for a full week, for one breathless round after another of fun that added zest to sessions, for treats of a kind that can only be found in the Golden West. And they were welcome and appreciative guests. Los Angeles will remember them a long, long time. There is one reason for success of the whole: Reciprocity, the exchange of hospitality and graciousness between hosts and guests.

The convention really began at the train, a fleet of Golden State cars driven by the courtesy committee parked just outside the palm bordered avenue to the station entrance, whisked visitors to hotels and homes. Not before both amateur and professional photographers conducted a play in poses—not before everyone wanted to know "that man in the ten gallon sombrero." It turned out to be one N. H. Martin of Tampa, Fla., who headed the "night lifers" on the trip west, who broke all the rules in taking money out of California by his luck with the "hosses" and who was the life of one party after another.

Among smart ladies in the crowd were Mrs. B. T. Bradshaw in black satin travel dress, and Mrs. J. B. Strickland in black tailored pin striped suit with a pair of foxes that did things for the suit—Mrs. Strickland is vice president of Excelsior Life, and Mrs. Bradshaw is wife of the president of Virginia Mutual Benefit Life.

Registration that afternoon at Golden State Mutual brought more laughs and laughter. Significantly enough, the last man to find his way to the desk was one A. F. Herndon of the Atlanta Life Insurance company—the same gent that we left in Alberqurque eating chilli. The story goes that Mr. Herndon caught the train—on another train of course, that hailed the special—Then there was that tall man, H. L. Street, and Mrs. Street, also tall, of Louisville, who proved to be one of the most popular couples at the convention, both possessing a keen sense of humor—and naturalness.

But, here—I'd better get down to brass tacks of what was done and who did it. Wednesday afternoon, officers of the host company rounded up officers of the N. N. I. A. and took them out to Hollywood—every pretty girl's ambition—to see some of the stars in action (and that's the first time a Negro delegation has been so fortunate.) Trips were made possible through arrangements with studio executives by Golden State executives.

The group that went to Walter Wanger's United Artists' lot saw Loretta Young and David Nevin in action—for the filming of a production to be released soon, and those who went to Fox 20th Century saw one of Charlie Chan's new pictures in production.

In the party to United Artists were Messrs. and Mmes. L. C. Blount, Detroit; B. T. Bradshaw, Richmand, Va.; F. A. Toomer, Atlanta; C. L. Towns, Richmond; George A. Beavers, Jr., Normon O. Houston, Los Angeles; F. A. Young, Louisiana A. T. Spaulding, Durham, N. C. In the party to 20th Century-Fox were C. R. Alexander, Baltimore; Dr. and Mrs. J. W. Kelso, Memphis; M. S. Stuart, Memphis; P. P. Creuzot, New Orleans; J. E. Smith, Louisville; Miss Mamie Hickerson, Chicago; E. J. Johnson and Mrs. Johnson, Dr. H. H. Towles, Mrs. S. P. Johnson, all of Los Angeles.

Thursday afternoon and Thursday evening, parties of delegates toured the CBS studios out in Hollywood and were guests of the 7:15 broadcast of Joe E. Brown. Following the broadcast a score or more of conventioneers got together in the Memo club, popular night spot, for cocktails—They included Dr. and Mrs. J. W. Kelso, Messrs. and Mmes A. W. Willis, F. A. Toomer, Green, George A. Beavers, Jr., N. O. Houston, Mrs. J. B. Strickland, Miss Mamie Hickerson and C. R. Ransom.

Friday evening, delegates really let themselves go---What with convention business over, and officers for the ensuing year elected---with the "California Rhythm Rascals" swinging popular tunes, the visitors "swung out" with California in the Elks' ballroom--- most beautiful in the West with a revolving ball in the dome that gave the illusion of moonlit sky. Couples strayed upstairs to the cocktail lunge or out into the softly lighted patio to chat with new and old friends. At two, the swingsters put up their instruments and headed for their homes, and the merrymakers found their several abodes and beds until Saturday morning.

Saturday morning at nine, sightseeing buses loaded with the N. N. I. A. entourage and Golden Staters of every denomination wadded their way through Hollywood and Beverly Hills to see the shops and sites that give Hollywood so much a personality of its own, to "oh" and "ah" at the beauty of Beverly Hills, and then off to Cabrillo beach.

Baseball, swimming, barbecue, photo-ing and all the other pastimes that belong to a picnic pervated the general comraderie that kept the hours racing during the entire convention. The picnic celebrated the 14th anniversary of Golden States as well as honored the N. N. I. A.

But Sunday was the fitting climax to a glorious week. Sunday was the day everyone lived the week through for! Sunday brought the trip to the "Magic Isle of the Pacific," Catalina island! Sunday morning at nine, some 80 N. N. I. A. guests and Golden Staters were ushered up the gangplank of the S. S. Cataline--- who lifted anchor at 9:30 for the 22 mile trip.

Aboard the pleasure boat, we did the rounds of deck, ballroom and barroom---- in the latter ever so often one A. W. Willis could be seen with whomever else "felt that way" downing a "Tom Collins." In fact, the bar tender developed a real affection for Mr. Willis----believe Mr. Willis hails from Memphis.

In the ballroom, we swung awhile with Dee Hodge leading the party off----Others wended their way to the music, the Bradshaws, Atty. J. Leonard Lewis of Afro-American Life who didn't get in until Wednesday night about an hour before time for his public address; with Mrs. Lewis, F. A. Young of Louisiana who dropped his wife a card every few minutes, and whom everyone will remember in a bathing suit!

From the upper deck, W. C. Buford of Louisville quit snoring and talking (and he can really do both right well at the same time) long enough to come below and trip lightly despite his 200 or more pounds.

Met at the Catalina dock, the entire retinue was taken in buses to the Congo club for dinner---with music and all that. Reports have it that Friend Buford ate three dinners ----(I wasn't at that end of the table.) Host and hostess for the party on the island were the Clarence Fullbright---- Mr. Fullbright being identified with the Catalina Visitors Country club.

Then came the skyline drive---Up and around the mountainous island to look down on one shade of postcard blue blending into another, where white sand beaches ended in a green sea that became blue as it left the shore. There followed an half hour to shop in Catalina curio places, and then the ride in the glass bottom boat across the aquatic gardens of the Pacific. Four-thirty and the boat is off again to Los Angeles, where packing must be done for the train the next morning. But not before a party of tireless conventioneers went to Chinatown for the evening meal. And who can forget H. L. Street's and A. W. Willis' refusal to try any of the Chinese dishes that they didn't recognize in good old American terms----With Street the Oriental food set up a nostalgia for plackeyed peas----which Willis was sure they didn't sell in Beale street of his native Memphis.

This is much too long, and yet so very short to recount even sparingly the personals and personalities that charmed the Southland for a week.

Afterthought: the only thing N. H. Martin lost was a golf game. He shared defeat with N. O. Houston at the hands of Atty. Lewis and F. A. Toomer on the links of the Santa Catalina Visitors Country club The results were three to two. Meet you in Baltimore in '40. Adios!

## JAMES A. COBB LOSES HOWARD U. SUIT FOR SALARY

WASHINGTON, July 20 (ANP)—Howard university won its case against former Judge James A. Cobb when the district court of appeals ruled in favor of the university's dismissal of Judge Cobb as dean of the law school, in a decision handed down here this week.

Justice Rutledge wrote the opinion, his first since he ascended the bench. Judge Cobb's claim that he was entitled to hold his place for life failed, Justice Rutledge said, because the act incorporating the university gave the trustees power to "remove any professor—when the interest of the university shall require it."

Judge Cobb claimed that he was dismissed because he opposed certain appropriations for the school in testimony before a congressional committee.

The appeal ends a bitter fight being waged against the school by Judge Cobb, who had been associated with the institution for a number of years.

## RACE RELATIONS CONFERENCE HELD BY CHICAGO GROUP

CHICAGO, July 27 (ANP)—Delegates from civic, labor, religious women's and other organizations met last Saturday at Wabash Avenue, YMCA in a formal conferenee on race relaltions. Alderman Earl B. Dickerson of the 2nd ward was the chairman, and a round-table discussion on democracy and race relations was conducted by George R. Arthur, executive director, Wabash Avenue, "Y" and advisor of the Rosenwald fund.

The conference program will be of great value to the Illinois, State committee established by the last legislature and given a fund to $10,000 to study urban Negro conditions. Five representatives, five senators and three members-at-large, all appointed by Governor Horner, will comprise this committee. Officers of the conferenee sponsoring committee were Ald Dickerson, chairman; Max Kopstein, vice-chairman; Lillian Summers treasure, and Dorothy Munselle, Secretary

## "STAY IN AMERICA"

(Continued from Page 1)

now true, but there is still much to be desired.

"We hear much of your so-called back-to-Africa movements over there but my advice to you is to stay right where you are and take advantage of the opportunities right here where you are," he advised. "Here in America you have opportunities for learning modern manufacturing methods that we do not have in Africa. You can learn, and you should learn to be able to manufacture practically everything you need. You need to concentrate on establishing industries on a large scale to make jobs for yourselves.

"I am very glad to see and meet so many of you who are engaged in manufacturing already. From my own personal experience this is the only practical solution to the unemployment problem and where you live in such a large community as Harlem, with such a tremendous purchasing power, you have a wonderful opportunity.

"In Africa, we already have sufficient labor. What we need is direct outlets for our raw materials. We produce most of the cocoa used in the world, as well as other products. You have labor and machinery. There is nothing to prevent us from buying and selling to each other and exchanging our products.

"I want to congratulate you, in concluding, for having a dreamer amongst you—a man of vision—who can see the great possibilities of cooperative production and distribution and has had the ability to create the great Negro Industrial Fair as an outlet for your products."

Mrs. Shackleford is not only a business woman in her own right but a connoisseur of African arts and crafts. She told, very modestly of the tremendous difficulties that her husband had met and overcome on his way to the top, and how he has become the leading industrialist and largest employed of labor in Negeria. The most influential natives, because of his honesty and dependability, she said, now come to him daily for advice and counsel.

The Shacklefords' interest include minerals, a water transportation company, gasoline stations and bread factories. He is known in Nigeria as "The Bread King."

The meeting was presided over by Ralph O. Gothard, executive director of the Guild. At the conclusion of the talks by the honored guests, responses were made by David Doles, Dr. Bayen, I. Sharp, Benjamin F. Thomas, Ernest L. Dimitry, Lucius L. Delaney and Mrs. W. Roe Carter.

Mr. Gothard explained how the idea of the Negro Industrial Fair was started—after 76 different kinds of products were found being manufactured in Harlem. In addition to the products of Race manufacturned in Harlem. In addition to the products of Race manufacturers, there will be a Hall of Science and Invention, a Hall of Fame, and an African arts and crafts exhibit.

The discoveries of the famed Dr. George W. Carver will be the center of attraction of the exhibit, it is believed and preparations are being made to entertain more than 100,000 visitors this year. The fair will run as long as the World's fair.

## FOOD MUCH HIGHER

(Continued from Page 1)

As to prices of farm products in international trade, Dr. Thomsen says "the United States has changed from a debtor to a creditor nation, yet hesitates to accept imports of industrial goods with which foreigners can make payments on their debts owed to us and at the same time pay for agricultural commodities imported from the United States. Thus, we might say that one reason prices of farm products are lower than pre-war is that we have not learned that international trade necessitates a 2-way flow of goods."

Dr. Thomsen points out that of course many factors have influenced changes in prices of farm products since the pre-war years: monetary and other factors affecting the general price level, changes in population, industrial activity and consumer purchasing power in the United States, changes in international trade and foreign demand conditons and changes in both the domestic and foreign supplies of farm products.

"Every one of these conditions," he says, "has contributed importantly to the determination of the present level of farm product prices compared with pre-war." He cites the reduced foreign demand for farm products, and increased cost of domestic distribution as two important changes.

## TERRACES PREVENT

(Continued from Page 1)

crops, and gully dams are part of an erosion control program which he is demonstrating in cooperation with the Freeport project of the United States soil conservation service and the extension service, College of Agriculture, University of Illinois.

He has also increased his pasture, fenced in his timber, and applied lime to every acre of tillable land.

Practices similar to this are being carried on by thousands of Illinois farmers who are cooperating with the extension service of the College of Agriculture in its coordinated soil improvement and erosion control project.

## FLEXIBLE FARM

(Continued from Page 1)

has often caused disagreements under oral leasing.

Another matter of concern to the landlord and tenant is the annual renewal of their contract. Leasing from year to year is a prevalent tenure practice. In many cases, Farm Security Administration officials say, this procedure works to the disadvantage of both parties. Tenants hesitate to initiate crop rotations; landlords hesitate to make changes or repairs in buildings which may not be needed by succeeding tenants.

To provide for such cases the "Flexible Farm Lease" contains an "automatic renewal" clause. This clause in effect causes the lease to remain in full force until either party wishes to terminate his contract.

Experience has shown that the use of a lease of this kind makes for better protection of the landlord's property and for more security for the tenant and his family.

## A NEW FRONTIER

—a man and a woman and two Negro Field Supervisors over seven and eight states respectively.

The Farm Security Administration with about twenty-three rural housing projects are increasing the number of Negro nurses, home economists and farm managers.

In each of the Southern States there are from twenty to thirty-five Jeanes Supervisors whose functions are such that they are practically assistant county superintendents of education in charge of Negro schools. These highly trained women exercise a high degree of authority in selecting teachers and in curricula making.

All of the afore-mentioned workers have cars for carrying on their work, for which they receive upkeep wholly or in part and their status gives them both prestige and influence in their county and state.

Passing from the official group to the opportunities which are open as private operators many examples are convincing that hard, conscientious work with an objective has its reward.

Of the 654,000 Negro farm operators in the cotton states, 122,000 are owners of 10,533,682 acres of land valued at $207,932,597. These farms vary in size from two or three acres to as much as 4,000. Most of the owners made small down cash payments or else began as tenants or renters.

What these men have done, others can and are doing. Some years ago, a farmer in Texas started with less than $100.00 and when he died three years ago he left his daughter, who is a Wiley gradute, to manage the 4,000-acre farm and she, with the aid of her mother, is doing an excellent job.

Contrast this with an offer which was made to a couple of graduates in agriculture to become managers of a large farm on a basis which assured them a larger share of the returns. They said they "didn't care to leave the city."

There are many opportunities for strong, well-trained college men to organize farmers into marketing cooperatives as well as to become managers on a share basis with work stock, implements, etc., provided.

Through the AAA, the government is helping the Southern farmer to increase income and yields through three types of payments and that alone gives an edge to the farmer over that which was available six years ago.

Aside from the fact that there is great need for finding new employment outlets another reason of equal importance is expressed in the recent report of National Emergency Council to President Roosevelt on Economic conditions in the South. The report says:

"As long as the agricultural worker cannot gain assurance of a continuing existence on the farm, he remains a threat to the job, the wages, and the working conditions of the industrial worker."

The urgent need to help the farmer towards that "assurance" is trained leadership and many of our colleges and universities are properly equipped to help supply that need.

By increasing my courtesy toward others, I increase mine own happiness.

# INSURANCE MEN END CONVENTION IN LOS ANGELES

## P. P. Creuzot Of New Orleans Is New President; Go To Baltimore In '40

LOS ANGELES, July 27—(ANP)—P. P. Creuzot, D. D. S., secretary, Louisiana Industrial Life Insurance Company, New Orleans, was unanimously elected president of the National Negro Insurance Association at the close of the 19th annual session in Los Angeles last Friday evening.

C. L. Townes, vice president and secretary, Virginia Mutual Benefit Life Insurance Company ,Richmond, was re-elected secretary of the association for the third consecutive year. L. C. Blount, outgoing president under whose leadership the organization has progressed rapidly during the past year, was elected chairman of the executive committee for the ensuing year.

Baltimore was chosen as the meeting place for the 20th annual conerson, Jr., president, Golden State writers' association of Maryland as host upon the invitation tendered by C. R. Alexander.

Other officers of the convention are first vice president, J. R. Smith, vice president and agency director, Domestic Life and Accident Insurance company, Louisville; second vice president, C. R. Alexander, Underwriters' Association, Baltimore; third vice president, William Nickerson, Jr.fi president, Golden State Mutual Life Insurance Company, Los Angeles; fourth vice president, Dr. J. W. Kelso, medical director, Universal Life Insurance Company, Memphis.

Also C. B. Andrews, secretary-treasurer, Mammoth Life and Accident Insurance Company, Louisville, treasurer; C. N. Walker, assistant agency director, Atlanta Life Insurance Companyfi chaip surance Company, chaplain; Miss Mamie Hickerson, statistician, Supreme Liberty Life Insurance Co., Chicago, statistician.

General counsel, Atty. J. L. Lewis, general counsel and vice president, Afro-American Life Insurance Company, Jacksonville; actuary, Asa T. Spaulding, assistant secretary and actuary of North Carolina Mutual Life Insurance Company, Durham, and historian, M. S. Stuart, vice president, Universal Life Insurance Company, Memphis.

## Check WPA Teachers Who Went On Strike

WASHINGTON, July 27 (ANP)—Members of the House are interested in having th names of all WPA teachers who take part in the one-day stoppage planned by the Teachers Union in New York City. Hirman Burton, of the Woodrum WPA committee's investigation staff made the announcement to New York administrator Brehon Somervell. It is reported that 10.000 WPA teachers were called upon to quit work for the day and join in the half-day demonstration of protest against the newly effective Federal relief act.

Thomastown (Ga.) Times: "This country will never have another depression," declared a New Dealer. Please mister, don't tell us this one is going to last always.

Detroit Free Press: There is a certain joy in conscious ignorance of a subject. One doesn't need to have an opinion.

# RACE PREJUDICE IS BORN OF IGNORANCE, SAYS NOTED LEADER

## Philadelphian Sees Cure In Proper Education of Americans

PHILADELPHIA, July 27 (ANP)—Racial and religious prejudice originates in ignorance, said Dr. John P. Turner, a member of the board of education, Monday as he voiced his distaste for intolerance through the American Friend's Service committee.

"You and I are born," he said, "under environmental conditions that instill into us beliefs, notions and convictions. Because my mother and father were protestants. I grew up a protestant.

"Yours may have been Catholic or Jew We may be reared to feel we are superior to our next-door neighbor, or that the race to which we belong is better than another race. In that way, the young mind starts on its wraped journey of the superiority complex."

But, he pointed out, this need not be the ease.

"That the man of tomorrow may be as free as possible from prejudices," he stated, "the boys and girls of today should be reared in an atmosphere of fine human interests."

"In such an atmosphere, he said, "Jew and Gentile, Negro and Caucasian will know each other's joys and sorrows, each other's triumphs and defeats.

"The American ideal of fair play and justice for all will be greaty aided by beginning to help children know each other.

"All of this may be summed up in one word—education."

He conended with a statement that it must be insisted that children learn the rights of others.

## Supreme Chancellor Of Pythians Will Visit Cuban Lodges

CHICAGO, July 27 (ANP)—Atty. S. A. T. Watkins of this city, supreme chancellor, Knights of Pythias left last Monday for the South, enroute to Cuba, where he will visit lodges and set up new bodies which are awaiting his arrival. He stopped off in Jacksonville, Fla., to confer with the order's attorney, S. D. McGill.

In Miami, he visited Mrs. Emma J. Colyer, supreme worthy instructress, and on Friday sailed for Cuba, arriving there July 22. A reception committee, headed by Sir James H. Deveaux, met the supreme chancellor, his wife, Mrs. Watkins, who accompanied him on the trip. If time permits, he will visit lodges in West Indies. He will return in time for the K. of P. supreme convention which meets Aug. 15 in Detroit.

## Annual Negro Day In N. Carolina

MANTEO, N. C., July 27 (ANP)—A crowd estimated at 2,000 persons was present last Friday night at Waterside theatre to take part in the observance of second annual Negro day, featuring Paul Green's historical drama, "The Lost Colony" The observance date was set aside by Governor Clyde Hoey and sponsors of the event included Dr. James E. Shepherd, Pres. North Carolina College for Negroes; Dean J. L. Tilley, Mrs. L. B. Yancey and Dr. N. C. Newbold. Four choruses, composed of 200 singers from Durham, Raleigh, Elizabeth City and Manteo, furnished music.

# Pres. Leon Harris' Address To Teachers College

## COOPERATION WITH RURAL PROGRESS

**BORDENTOWN, N. J.,—The address by Leon R. Harris, president of the National Federation of Colored Farmers, at the Convention of the National Vocational Agriculture Teachers' Association, was well received by the members of that body and is published herewith by request.**

The address follows:—

GENTLEMEN:—

"GREATER VOCATIONAL EDUCATION EFFICIENCY THROUGH COOPERATION"

My knowledge and my experience will not permit me to advise you how Vocational Education Efficiency may be increased by your cooperation with each other. The fact that you have organized this national association is proof that you

(Continued on Page 2)

## DES MOINES, IOWA, NAMED

### Gets Award as Fifth City for Stamp Plan Test

Selection of Des Moines, Iowa, as the fifth city in which the food order stamp plan for distributing surpluses through normal channels of trade will be inaugurated was announced today by Secretary of Agriculture Henry A. Wallace.

Decision to try out the plan in Des Moines followed conferences there last week between representatives of the Federal Surplus Commodities Corporation and representatives of local welfare agencies, public officials, and members of the wholesale and retail food trades.

Des Moines, a concentrated trading area in a leading farm section, is reported as unusually well adapt-

(Continued on Page 16)

## TEXAS WOMAN MANAGER

### Has Four Thousand Eight Hundred Acre Farm

THOMPSON, Texas,—(ANP)—Three women, a mother and two daughters, are carrying on a farming operation here in Fort Benn County which certainly ranks with big business and they are accomplishing the task with rare success. Mrs. Y. U. Jones, Miss Beatrice M. Jones and Miss Willa Jones direct and manage the operation of a farm comprising 4,800 acres.

When Y. U. Jones, widely known planter and cattleman, died here a few years ago, there was some apprehension among his friends as to the future of the large estate he had built up. Farming and the

(Continued on Page 16)

## Mr. and Mrs. Cartwright Purchase 160-Acre Farm

FRANKLIN, Tennessee, (Special)—There has just come to light here an unusual accomplishment by a member of the minority group in just five years of labor. The facts are these: Mr. William Cartwright and his wife, Amanda, residing out from the city in Williamson County, were tenants on a farm belonging to a Mr. Elsworth Daniels, a white farmer of one hundred and sixty acres. Mr. and Mrs. Cartwright, and their son Joe, about twenty-one or twenty-two years of age, accepted the challenge to till the soil and took an option to purchase the land. They worked conscientiously, untiringly and now they are the proud owners of this one hundred and sixty acres of land. The white farmer lived up to his contract, accepted their small but regular payments and at the end of the five years, which was this year, 1939,

## FARM FUND RESTORED

### One Hundred Nineteen Million Put Into Bill

**WASHINGTON,—The Senate appropriations committee, speeding under preadjournment pressure, rushed to the Senate floor today the session's final appropriation bill carrying funds needed to maintain the administration's farm-price program.**

The measure—the third deficiency bill—provided for appropriations totaling about $135,000,000 more than the $54,000,000 provided by the House.

Senator Adams (D.) of Colorado acting chairman of the appropriations group, obtained immediate consideration even before senators knew just how much the bill contained.

CUT IS RESTORED.

In it, however, was most of the

## FCA NEGRO MEMBERS

### Race Individuals Making Excellent Record Is Report

WASHINGTON, D. C.,—"Many of our best Negro farmers are member-borrowers of Farm Credit Administration lending services," states Cornelius King, Special Assistant to the Governor of the FCA. Mr. King has recently returned from a tour of seven southern states, visiting farms of Negro members of production credit and national farm loan associations. Mr. King says that thousands of colored farmers throughout the region visited are benefiting from Federal land bank, production credit, and emergency crop loans.

The Negro representative of the Farm Credit Administration found that colored member-borrowers are not only making a good reputation as credit risks but they are also re-

## LOUISIANS ARE SAYING: 'THEY HAVE SOMETHING THERE,'

### As State Rural Normal's $400,000 Building Program Nears Completion

By K. F. Hewins

Ruston, La., August 4—Visitors are joining in the chorus with residents at Grambling to assert "they've got something there." They mean buildings and appurtenances thereto, which "must be seen to be appreciated."

Grambling is the seat of Louisiana's state Rural Normal school for Negroes, located about six miles west of Ruston. Since last December, the state board of education and the PWA practically have rebuilt the Grambling school at a cost of $400,000, and the WPA will cover

## ARKANSANS WIN JUDGING CONTEST AT N.F.A. MEET

BORDENTOWN, N. J.,—The fifth annual conference of the Association of New Farmers of America, meeting at the New Jersey Manual Training school here ended its business sessions in Aug. with the awarding of prizes and honors to participating teams in the various contests.

The awards were made by Donald F. Fenn of the department of agriculture at Hampton institute, Va. The most popular event during the four-day conference was the produce and live-stock judging contest in which the prospective farmers have the opportunity to put to practice their knowledge acquired in the study of vocational agriculture. The herds and crops used for the contest were those of Rutgers university.

The highest award for judging went to the team from Arkansas. Second and third places went to Georgia and Alabama teams, respectively.

The highest individual judging

## GETS SOUTH CAROLINA TO ADOPT NEGRO BOOKS IN ELEMENTARY SCHOOL

### Small Town Tutor Credited With Placements

COLUMBIA, S. C. (By I. M. A. Myers for ANP)—South Carolina State Department of Education has adopted Negro books for the first five grades in elementary schools. The books are written by noted Negro authors. The list was approved after some study by a committee of selection of state adopted books upon suggestions of Miss Thomas, state supervisor of elementary education. She is a ranking member of the department of education of South Carolina.

The whole matter of placing

## Calling All Delegates and Visitors to the Tenth Annual Convention of the National Federation of Colored Farmers, October 25-27, 1939.

**The National Convention of the National Federation of Colored Farmers, Inc., will meet in its tenth annual session at Lincoln University, Jefferson City, Missouri, October 25-27, 1939. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our organization are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of state and federal agricultural departments who plan to attend the Convention should communicate with us not later than September 1st. Suitable arrangements will be made to entertain all delegates and visitors. All farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.**

**Arrange to attend the greatest Convention of organized Negro farmers in America.**

**Yours for United Colored Farmers,**

LEON R. HARRIS, Pres. Box 285 Moline, Ill

S. B. WILSON, Secretary-Treasurer, 447 4th Ave., N., Nashville, Tennessee

## COOPERATION WITH RURAL PROGRESS

(Continued from Page 1.)

realize the value of cooperation. You meet and discuss problems of common interest, and, by doing so verify the fact that you are good cooperators. A good cooperator does not wish his neighbor well: he assists,—he helps his neighbor well. I believe you are all good cooperators and I wish your association success.

I do know, however, that you can increase the efficiency of vocational education through cooperation with your students—especially by cooperating with them individually. I have known students who possessed some mighty big ideas,—ideas so large that the only instructor who could grasp them was the one who had a big mind and a big heart.

I remember a student who once remarked to his instructor in Gardening that he believed he could make some extra money that season by growing sweet peppers of the Chinese Giant variety, and by shading the large pods or fruits (whichever is correct) in such a manner that the sun would tinge just certain portions of the surface, could produce a vari-colored product that would look very beautiful. I don't know where the idea came from but the wise instructor realized its worth and together they planned the experiment. It was a big success. He sold those beautiful peppers at prices that ranged from ten to fifty cents apiece.

I believe you will agree that was a fair illustration of increasing the efficiency of vocational education through cooperation.

Yes, let's cooperate with the students individually when possible. Many a student has become a successful farmer because the instructor took an out-of-the-class room interest in his dreams, and gave him a full measure of cooperation. And I think it wise that we also remember this,—a true cooperator can do more good by making a fellowman like HIM well, than he can by making that person like WHAT HE KNOWS WELL.

Then too, I believe you can increase the efficiency of vocational educational through cooperation with the parents of students when possible. Usually, the opportunity to cooperate with parents comes through the students and every advantage should be taken of any opportunity that comes.

A few years ago when Pres. Hoover's Farm Board reigned,—and many farmers were preparing to kiss their farms "Good-by," I visited the Southeastern peanut tobacco belt and found that our farmers in a certain community were offered only one and three-quarter cents per pound for their peanuts farmers' run. At such a price farmers would have hardly been able to have paid their Fertilizer bills. They raised in this community about every variety of peanuts known, but happily, most of the crops were Jumboes and Jumbo peanuts were wholesaleing in Chicago at seven and a half cents. I advised grading the crop but there were many objectors. How could a big crop of peanuts be graded by hand? It was a preposterous idea. But I insisted. These same farmers would sit day in day out, grading by hand, tobacco for which they were getting hardly the cost of production, and it seemed reasonable to me that they could as well grade their peanuts by hand. Knowing that if they did they could get a good price,.....one hundred per cent more than they could get "Farmers' run." To add to my persuading and to make things easier for them, I figured out a home-made apparatus,—a hopper and a rotating belt mounted on a frame, around which the entire family, young and old, big and little could sit and do the grading.

A brilliant student, attending State College came home for the week-end, and of course was asked by his father to participate in the hand grading. He carried to his instructor on his return, a brief apparatus. The instructor and student went to work, improved the idea, and within thirty days a dozen of the things were in use in that community. Those farmers sold their graded product at an average of better than five cents a pound. And best of all, ever since these farmers have been able to obtain the top market price for peanuts. If they don't give them that price they'll grade and get it and better.

This one instructor, by cooperating with that boy, brought a pretty big blessing to an entire community. And note, if you please the extent of that blessing. A community received a lesson in cooperation,—students received a lesson in proper grading and marketing,—both farmers and students learned that some farm conveniences can be made at home,—that you don't have to run to the store for everything,—and some hoggish track buyers learned that there really was a limit to the process of skinning poor Negro farmers. A sure-enough case, don't you think of vocational education being made more efficient through cooperation.

Greater vocational education efficiency. You know, I have found that there are degrees of efficiency,—but whether efficiency counts for anything or not,—much depends on the guy who possesses it. A degree of efficiency that cannot command the respect of those who blunder is valueless to its possessor. You can say what you please, a fellow isn't going to have much respect for what you know if he hasn't much respect for you. The good cooperator.—especially in your positions. Gentlemen. —must really be unselfish. The good cooperator must be efficient in more than his chosen vocation. He must be efficient in manhood and in character.

Efficiency. Having power to act effectually. Competent. Productive of effects.—Gentlemen, my definition for efficiency isn't found in any dictionary,—and now I have come to the point where I do not care whether the eagle is a bird or a beast, just so it suits the text. My definition for efficiency is this:—"Crawling, walking, or running,—but going someway,—somewhere." The efficient person in my estimation is the fellow who goes ahead and does it.

Let's read that theme according to my definition: "Greater Vocational Education Going Somewhere Through Cooperation." Not so bad.

Immediately I think of rural progress. The rural community getting somewhere the farmer going somewhere, Greater vocational education efficiency through cooperation with rural progress!

The rural community progresses as the rural church progresses,—as the rural school progresses,—as the rural cooperative group progresses,—as the rural credit union progresses,—as the rural local farmers' organization progresses. Can we really find ways to cooperate with this rural progress?

I believe all of you realize that you are educating farmers, farm teachers and farm leaders. You are educating few true-to-type specialists. You will educate them to cooperate with rural progress.

The rural church must exist Where there is no church there is no God. Where there is no God there is no integrity, no honor, no love, no civilization. Education those young men to have faith in the community church,—to support the church, not the creed. —a community church, strong and virile, under the care of a clean courageous and conscientious pastor. I favor the sort of a church like we find in some of the communities in rural New England,—which shelters all the creeds and all the Christians under one roof. Our little poor Methodist-bred-and-Methodist-born, and Baptist-washed-and Baptist-ironed churches must pass away. The rural school must continued to progress I want to see the rural school the right kind of a school for the farmer's children. Our organization, the National Federation of Colored Farmers, is advocating now the establishment of a school farm in connection with. and if possible adjacent to every rural high school. We don't want school gardens,—we want sure enough school farms. We want these farms to be model farms supervised by trained agriculturists. We want those farms to be well-supplied and well-managed We want them there beside those rural schools,—to show the sons and daughters of poverty-stricken farmers that a farm need not be a source of miserable living but that it may be a source of happy living. We want them there,—that master—farmers may be trained, reared and educated in our rural communities. We want them there —the beacon lights of rural education. The school farm. We want you teachers of vocational agriculture to help us put it beside every rural high school. It will also mean more positions for trained agriculturists more employment, more lucrative employment for farm boys and girls. Our government recently spent a million and a half dollars on just one model farm colony. There are only five hundred farm families in the colony. The same amount of money would have established a thousand of more school farms and good managers and instructors would have made them model farms in course of time and thousands would have learned much during the process.

The rural credit union, under government supervision, is a good thing. This is cooperative financing. It is extremely valuable to Negro farmers. I hope that whenever and wherever possible you will cooperate with those endeavoring to establish and operate rural credit unions.

I believe in the cooperative movement. I believe Negro farmers in their communities should buy, product and sell cooperatively. Local Units of our organization are urged to study and to practice cooperation. The local Unit is the farmers' Chamber of Commerce,—his business Asso. Such an independent gronp of farmers, —can render valuable assistance to County and Home Demonstration Agents,—to the community school,—and to you who teach agriculture. Through such a group you can feel the pulse of the rural community,—you can discover the cause for failure or retrogression,—and on the other hand,—through such a group you can map the way of progress. I urge you to cooperate in every way possible with the local community farm organization. Such cooperation will make vocational education more efficient,—it will make vocational education go somewhere,—it will make vocational education not only get something done,—but very much done for the welfare of our rural population.

Cooperate with rural progress. —with the farmers you desire to serve. You are teaching and training students richly endowed with uncommon sense,—with keen mother wit,—with more than the average amount of horse-sense.—You are teaching students endowed with an innate love for the soil,—soil made sacred by the tears of their mothers,—by the sweat and blood of their fathers. I hope to see the day, Gentlemen, when these boys,—and when Negro farmers,—parents of these boys will see you as you are,—will see you as you should be,—first, as friends,—who understand their problems,—who know how they feel when crops fail,—when debts cannot be paid,—when the boy must wear the old shoes and the girl the old dress. —also,—as friends who can rejoice with them over their successes. I want them to see you as advisors,—as wise counselors —who can give advice tactfully and honestly. And I want them to see you as leaders,—who by friendship and counsel can influence them to follow,—to go places and do things that will make their lives more prosperous and happy.

The Negro farmer is a mighty big man in my sight. He is to be the father of Negro statesmen. —Negro philosophers,—Negro orators,—Negro poets: He will establish our race here in America,—will guide our race and will uphold our race. So give him,—you his teachers,—you favored ones,—your sympathy,—your encouragement,—your prayers. Clear up his pathway,—gather out the stones,—make his way straight.

And last of all, permit me to remind you, Gentlemen,—the American Negro farmer is not going to give up one scintila of anything he has gained during the past seven years, contributory to his welfare and progress Equal opportunity in this his native land, he means to have and he means to keep,—to purchase farmhand,—and to erect a decent farm home,—to establish a stable farm community This is his heritage and this is his bounded duty. For the day will surely come,—when the Black Farmer of America ill be called upon to save the Nation from its own sins.—from the forces of greed, selfishness and corruption, that would overthrow it. Ten in that day, will this humble Black Man, —whose soul has struggled through the torture of every fiery furnace Evil could devise,—gather together and preserve the fragments of true democracy,—and rebuild here,—not the white man's civilization,—but a Christian civilization,—greater and holier tthan any of which the world has ever dreamed. Then, in that day, will this humble Black Man step forward,—and his hand shall be stretched forth.

## NEW FIELDS INVADED BY JAPANESE BEETLES

### 'CONTINUOUS INFESTATION' FOR WESTCHESTER AND LONG ISLAND

WASHINGTON, —The Japanese beetle scourge is spreading throughout the United States, despite efforts to control it, and now afflicts parts of seventeen States, Department of Agriculture officials said today. While some control methods are partly effective, there is no known method of complete extermination, officials said.

The beetles spread each year a distance of ten or twelve miles beyond the area infested in the previous year. Experts regard infestation, as it occurs, as continuous. An area of continuous infestation exists in New Jersey, Eastern Pennsylvania. Northwest Maryland and Delaware, it was said, and it has spread to the metropolitan area of New York and parts of Long Island and Westchester County.

The best known agency for control of infestation is a parasite which is brought from Japan. The Department of Agriculture is importing these parasites and liberating them wherever the grubs from which the beetles hatch are known to exist in sufficient numbers to support the parasites.

Impregnation of the soil with a preparation of lead arsenic is another preventive, and this is effective to destroy the grub in solid turf, which is a favorite breeding place. Beetles can be driven from golf courses by this method, but it is not recommended for cultivated lands as it reduces the fertility of soil in which crops are grown. There are some sprays which also have been used effectively.

Quarantines have been established in all continuously infested areas to prevent transportation of flowers, vegetables and other commodities which might carry the beetles into regions where they are not now found.

"Faster cars on the road require safer drivers at the wheel."

## ONE-FOURTH TEXAS NEGRO FARMERS OWN FARMS.

### Variety In Crops Is Seen As Big Asset

PRAIRIE VIEW (ANP)—Twenty-five per cent of the 76,000 Texas Negro farm families own their farm stated Jack Shelton, vice extension director and state agent from College station in addressing the 2,500 Negro delegates from 53 counties who are here attending the 32nd annual farmers congress and short course.

Both adults and 4-H club members participated in judging contests, instrumental courses and demonstrations, objectively directed toward vitalizing the congress motto: "More Food on Texas Farms."

In his address, Mr. Shelton described several Negro farms which he has recently visited and told his audience that the test of a good farmer is the amount of food and feed supplies which he has grown and stored for year round use on the farm and in the home.

**Explains AAA**

E. A. Miller, assistant to director Southern division, Agricultural Adjustment administration, Washington, D. C., explained the new feature of the 1940 AAA program which provides payments for the family garden and in stressing the AAA benefit payments told the group that "you cannot have diversified farming until you have diversified thinking."

President W. R. Banks welcomed the visitors and stated that the greatest problem facing the Negro today." He commended the Negro home demonstration agents for their excellent service in teaching economical short-cuts in household management and praised the Negro mother for her ability to "stretch her meager income in order to feed and clothe her children."

This year's exhibit included, from the men, hams, shoulders, pecans and syrup. Reports showed 84 syrup mills owned and operated in the state by Negro farmers and last year's production was 164,780 gallons of sorgo syrup and 14,767 gallons of can syrup.

**Pecan Prosperity**

In the pecan industry Negro farm agents instructed farmers to approve 3,900 pecan trees and in meat production 1,110,000 pounds of meat were cured and smoked. This was in contrast to the record seven years ago when the meat projects were started and the farmers only cured 26,000 pounds.

William S. Hart, 18-year-old 4-H club boy from Bay City, was awarded a gold medal and $25 in cash for all round 4-H club work. From his cotton, corn, pigs and jersey cows, Hart earned last year a net profit of $443.08 and has saved enough to enter the freshman class at Prairie View college next month.

Among the demonstrations carried on for men and boys were: sub-irrigated gardens, better production and uses of field crops, making and repairing farm implements, sanitation and feeds for live stock and poultry and concrete work. These demonstrations were under the direction of John H. Williams and H. S. Estelle, district agents.

**Use Milo Maize**

One of the unusual demonstrations for women was the use of milo maize for breadmaking. The maize was ground with an inexpensive hand mill and following a tested recipe delicious muffins were made and served. Other demonstrations for women included pickle making, canning and bottoming chairs, food preparation and needle work. These demonstrations were under the direction of Mrs. I. W. Rowan and Mrs. J. O. A. Conner, district home agents.

C. H. Waller, state extension leader, who is in charge of the congress reports that over $2,500 has been jointly raised by Texas Negro Farmers Council of Agriculture and the Texas Negro Home Demonstration council for the purpose of erecting a model summer camp for Negro 4-H club boys and girls which will be located near the Prairie View campus.

## 129 COUNTY AGENTS STUDY AT HAMPTON

HAMPTON, Va.—The first training school for Race extension workers of the upper region of the Southern States, covering a term of three weeks, just closed at Hampton institute, under the direction of John B. Pierce, field agent extension service, U. S. Department of Agriculture, who is a graduate of both Tuskegee and Hampton.

Some 128 county and home demonstration agents (83 men and 45 women) assembled from eight states. In addition, there were 13 district agents present.

**Learning by Contacts**

Mr. Pierce summarized the unique training school as follows: "The object of this work for farm and home demonstration agents is to give Negro county workers important contacts with one another, so that they can profitably exchange views on their experience and at the same time make contacts with Federal and State specialists who have served as instructors."

## MOB STRIPS AND PAINTS N. J. COUPLE

NEW YORK—New Jersey state police have launched an intensive search for 12 masked hoodlums who resorted to Ku Klux Klan tactics last week and stripped and painted a man and his wife.

It is reported that the white maniacs broke into Mr. and Mrs. Jake Preston's home, located near Cranbury, N. J., stripped the couple, painted them white, then ordered them and five others, all men, to start running south and get out of Jersey.

As the seven fled into the night, their hands bound behind them, the hoodlums fired into the air.

After the raiders had driven away in four cars, covering themselves with potato sacks to conceal their identity, the Prestons returned to their home.

It is believed that the demonstration was made in an effort to frighten workers away from their jobs as potato pickers. All of the persons intimidated are said to have recently come from Georgia and have been engaged in potato picking on a local farm.

There is no end to what may be achieved by the mind and heart by earnest effort.

**Lord shall give that which is good; and our land shall yield her increase."—Psalm 85:12.**

# HOUSEHOLD HINTS

### DAMPEN EDGES OF PIE TO AVOID MESS IN STOVE

It's no trick to make a good fruit pie, but there are a few preventive measures to be taken, if you want to avoid a sticky mess in the oven.

First of all, be sure that the fruit is well drained before filling the pie crust. Flour or cornstarch may be mixed with the sugar in the recipe to act as a thickening agent; 2 or 3 tablespoons of flour, or 1-1 1-2 tablespoons of cornstarch is the usual proportion for nine inch pie, although this will depend upon the juiciness of the fruit used.

If the edges of the crust are moistened well with cold water and then pressed together carefully, there will be little chance for the juice to escape. Over-running pies frequently are caused by using too hot an oven; the correct temperature is 425 to 450 degrees for the first ten minutes, and moderate heat, 350 degrees, during the remainder of the baking period.

A tiny paper funnel may be inserted in the upper crust of the pie to help retain the fruit juice, and another very convenient device is pie tape, a vegetable parchment for wrapping the pie edges, which is available in the household departments of most stores.

Despite these precautions, if there is a large excess of juice in the pie, it may be forced out during baking. It's always necessary to pay a good deal of attention to the filling, to make sure that the fresh fruits have been well drained, that there is sufficient thickening, and that the pie is not overcrowded with filling.

### BUFFET BEANS

One cup whole ripe olives, two-thirds cup chopped onion, one-half cup chopped green sweet pepper, one-third cup brown sugar, one-fourth cup vinegar, one cup tomato sauce, three cups canned baked beans, two slices bacon. Cut olives from pits in large slices. Fry onion and pepper in bacon fat or butter until tender. Add brown sugar and vinegar and stir to blend. Combine with tomato sauce, ripe olives and beans in a baking dish and mix well. Place bacon on top. Bake in a moderate oven (325 degrees Fahrenheit) for one and one-half to two hours or until beans are of desired consistency.

### SQUASH DISHES

When it's too warm to eat heavy foods and your appetite seems temperamental, the garden offers variety to tempt the tongue. That is, if you have grown Summer squashes and vegetables marrows.

They are becoming staple articles of the mid-Summer table menus, after a slow progress toward popularity. Domestic science and popular cooking lectures and columns show how to use these vegetables, and are in part responsible for their popularity.

**Fun to Grow**

These modern squashes and marrows may be had on the market now. But the pleasure is doubled when you grow your own. Some of the varieties form small mounds of vines, and will not take a great deal of space.

The marrows are a variety of Summer squash, the fruit of which grow to a huge size. They may be used when only a few days old or they may be picked when half grown, while the flesh is tender, and cooked for the table.

**Flavors Differ**

The flat, white squash, or Patty Pan, is quite different in flavor from the yellow or crook-necked squash. Another one which has a delicious flavor is the Italian marrow, or cocozelle—a dark green oblong shape with yellow stripes. This variety is best used when the shell is still tender.

The culture of squash is the same as for cucumbers—warm, well-drained soil, thoroughly enriched and with a plentiful supply of moisture.

The same army of bugs menace the marrow and Summer squash that attacks the melon, cucumber and Winter squashes. Pyrethrum is a good all-around spray, or the plants may be dusted with five parts calcium arsenate and ninety-five parts agricultural gypsum.

# DR. HORACE M. BOND OF FISK IS NAMED COLLEGE PRESIDENT

### Brilliant Educator to Head School at Fort Valley, Georgia

FORT VALLEY, Ga., Aug. 24—(ANP)—It was announced here this week that the Fort Valley Normal and Industrial Institute had been transferred to the state of Georgia and would henceforth be administered as a unite of the university system. The transfer, and plans for the rapid development of the former junior college into a four-year college, has been greatly advanced by generous gifts from the Julius Rosenwald fund.

Plans on foot call for the development at Fort Valley of an outstanding college, giving special emphasis to the training of teachers. Dr. Horace M. Bond, formerly head of the department of education at Fisk univrsity, has been elected as president. Current improvements in process call for a strengthened faculty, improved library and laboratory facilities and an immediate renovation of the physical plant.

The Fort Valley school achieved world-wide acclaim as a result of the distinguished labors of the late Henry A. Hunt, who, in successive years, was awarded the Harmon and the Spingarn medal for distinguished service in the field of Negro education and race relations.

Mr. Hunt developed a great institution in Georgia. That the state has seen fit to carry on the work of this leader is considered a happy omen of the rapidly changing picture presented by race relations in the South. The aid from philanthropic sources promises to bring forth an expanded program at Fort Valley that will in short time produce a unique collegiate institution, distinguished by good facilities, an outstanding faculty and a selected student body.

The institution at Forsyth, the State Teachers and Agricultural College, formerly conducted by the state, has been merged with the Fort Valley institution.

# DALLAS MERCHANTS CLOSE TRADE WEEK WITH CELEBRATION

DALLAS, Aug. 24—(ANP)—The second annual "Negro Trade Week Drive" closed here Monday night amidst a whirlwind of glory, and 67 participating Negro merchants are still jubilant over the results of this cooperative effort.

From a specially prepared outdoor stage in Hall Street park, an estimated crowd of 5,000 persons cheered several speakers and made a new rsolution to support local Negro merchants and businessmen to help build a greater Dallas. The outdoor mass meeting which commenced at 8 o'clock was preceded by a street parade of the participating merchants which assembled at the high school, led by the Owens' band and passed through the busy streets that led to the park.

J. H. Owens was the keynote speaker for the occasion and greetings to the public were extended by J. S. Jones, president of the Retail Merchants Association, and B. B. Lipscombe, secretary of the Association. A Maceo Smith presided at the microphone and introduced the participating merchants. "Cooperation means dollars and sense," was the theme on which Editor Owens exhorted the hearers to support Negro businesses and those white businesses which employed Negro people. Fifty dollars in cash prizes were awarded to holders of lucky numbers on "Trade Week" coupons which were distributed by the member-merchants during this business stimulation drive which began August 1 and closed Tuesday night, August 15th.

During the day a committee of housewives from the Business and Professional Women's club, headed by Mrs. L. G. Pinkston, made a survey tour of the member-merchants and announcement will be made later of their selection of the "Merchant Prince" of Dallas. Special mention by this committee was made of the establishments of shoemaker W. I. Dickson and grocerywoman E. D. DeMarr of the Pla-Safe Grocery store.

# FUNERAL DIRECTORS HOLD CONVENTION IN "WINDY CITY"

### Mrs. W. H. McGavock Conducts Memorial Services at Opening

CHICAGO, Aug. 24—(ANP)—With many delegates present from throughout the nation, the annual convention of the Progressive National Funeral Directors' Association, Inc., got under way Sunday night with a public meeting and welcome with a program at Metropolitan Community center.

Although a hard thundershower started a half hour before the meeting was scheduled to begin, the attendance was over 300. T. B. Watkins of Kansas City, Mo., was master of ceremonies. The program included music and addresses by business and civic leaders as well as introduction of visiting morticians by William J. Morsell, of Chicago, national president.

Business sessions began Monday morning. Those scheduled to address this and meetings Tuesday and Wednesday included Robert N. Miller of Chicago, W. E. Officer of East St. Louis, B. G. Clanton of Chicago, Thomas M. Crane of Chicago, Clark Young of St. Louis, Guy L. Miller, Jr., of Atlanta, Emile Labat of New Orleans and J. H. Irvin of Philadelphia.

A memorial service was conducted Monday afternoon by Mrs. W. H. McGavock of Nashville, second vice president. New officers are to be installed Thursday night.

Social events included a moonlight excursion on Lake Michigan Tuesday night, a lawn party for visiting women under auspices of the Undertakers' Wives Charity club, a picnic and barbecue Wednesday at President Morsell's farm near Chicago, and a grand ball at Bacon's casino Thursday night by the charity club.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## EDITORIALS

From the Bible:—

"Acquaint now thyself with Him, and be at peace; thereby good shall come unto thee." Job 21:22.

"And what is He?—The ripe grain nods
The sweet dews fall, the flowers blow;
But darker signs his presence show:
The earthquake and the storm are God's
And good and evil interflow."
—John Greenleaf Whittier

### THE NEW FARMERS OF AMERICA

The New Farmers of America, the best boys of our racial group, met in their annual convention in Bordentown N. J., this month and made it very plain to all the "doubting Thomases" that this present generation of Negro farmers will be succeeded by farmers who are filled with new hopes, new courage, new ambitions, and with a degree of fortitude that is going to give them a place in American agriculture everybody will have to recognize. Their meeting brought inspiration to all fortunate enough to be with them. We are indeed proud of the New Farmers of America.

These boys were not born with silver spoons in their mouths. Many of them are sons of tenant farmers and sharecroppers. Many of them do more work in a day, before and after school, than the average city boy does in two weeks. And they are learning early that work is necessary and honorable and that the best work will be best rewarded.

These boys have made some remarkable records in their projects and contests. Their work is equal to, and in some respects superior, to work performed by the Future Farmers of America, the boys of the white group. They should receive all the encouragement we can give. Thev are giving now, and will continue to give our Race valuable lessons all of us need to learn. The dignity of labor; the worth of knowledge and efficiency; the necessity of accepting sound advice, instruction and leadership; the joy that comes from doing the best one can do; these are some of the lessons we need to learn and lessons our farm boys can teach us.

All honor to the New Farmers of America and may their organization continue to illuminate the pathway of racial progress.

### TWO FARMERS YOU SHOULD KNOW

Recently we have met and talked with two farmers of our group, two successful farmers, and we were impressed by the fact that both these farmers achieved their success because when they were young men, "starting out" as we say, they sought advice from the best and most successful of their neighbor farmers about planting, cultivating and marketing their crops. They were confident they could do just as well as the big white farmer who lived nearby when they discovered what that big farmer was doing that brought him success. So they were friendly, watchful and inquisitive. They learned how to farm well. Today, they too are big farmers.

John Carter, of Windsor, N. C., owns a fine farm, has tractors, electric lights, a bath room with running water, and just about everything else you will discover on a modern farm anywhere. And, although successful, he is still curious to know, still eager for information.

E. D. Abrams, Milo, Okla., has the enthusiasm of a boy. He is proud of his success, and has a right to be proud, and a keen desire to see others of our group succeed, especially our young farmers.

Best of all, these two farmers have a host of friends of both racial groups.

### THEY EXHAUST OUR PATIENCE

We have received numerous communications recently from colored tenants and sharecroppers informing us that high pressure organizers for various farm organizations are holding meetings in many sections of the South, and, as usual, we are asked to give advice relative to the merits of these organizations. It appears at this time that the states of Louisiana and Georgia are particularly affected.

A Louisiana farmer informs us that the organizer who visited his community was a stranger, a white man, that the "joining fee" was a quarter, and those solicited for membership were told that his organization was going to get twelve cents a pound for cotton; farms for every member who wanted a farm of his own; government check as big again as those they had received, and, best of all, a reduction in the price of every necessity they were compelled to purchase. The organization also was going to compel landlords to reduce cash and share rentals from one-third to one-half.

In Georgia the plan seems to be to get Negro farmers organized into something, but nobody seems to know just what. The orgaizers in most cases are white men, some fairly well known in that state. Usually at the meetings, one or two Negro speakers are also on hand. The biggest inducement made is a promise that those who join will receive better favors from the government than they are now receiving, and it is implied that the government is particularly anxious to have all farmers join.

Again we are advising all colored farmers, tenants and sharecroppers, as we have advised our Louisiana and Georgia correspondents, to join and continue to stick with the National Federation of Colored Farmers, and to leave these unknown farm organizations alone. We would certainly be afraid of a white preacher if such an one would attempt to persuade us to join a white church, and we are just as "skeered" of a white organizer who is trying to persuade Negro farmers to join his farm organization. There's a CATCH IN IT SOMEWHERE and the Negro farmer who "bites" is going to know it sooner or later.

Negro organizers for such organizations are usually working for a price. These Negro speakers are the only Negroes such organizations will aid. The Negro farmers who join up will get nothing.

Again we say, join the National Federation of Colored Farmers. The N. F. C. F. does not need paid organizers and does not use paid organizers. Get together in your community and organize your own Unit. Boss your own Unit. Work for your own interests. Try out such an organization as the N. F. C. F. and you'll soon learn what a Negro farm organization really is, and you'll discover it can do more for you than any other possibly can do.

### ARK FARMERS HONOR RAY FOR SERVICE

Pine Bluff, Ark.—A surprise feature of the 4-H Short Course and Farmers conference which closed a three-day session here Thursday at A. M. and N. college, was the presentation of a traveling bag to H. C. Ray, district extension agent in recognition of his 25 years of continuous service in extension work.

William Harris, county agent, Helena, made the presentaton on behalf of the extension workers of the state.

The short course this year brought together 614 4-H club members and 221 adult farmers from 15 counties in the state.

The most spirited contest of the session was between the counties for the much coveted silver cup, which was awarded to Mississippi county. W. S. Barabin is the county agent and Mrs. Mary M. Banks the home agent.

### 95% OF NEGRO FARMERS IN SOUTH, FSA REPORT REVEALS.

WASHINGTON (ANP)—City folk give little attention to facts and figures about farm life in the United States, especially among the Negro population. But it is astounding to know that farming is both a business and a way of life for half of all Negroes in America. Furthermore, 95 per cent. of all Negro farm operators in the United States live in the southern states, and more than three-fourths of these are tenants.

Farm tenants, according to the Farm Security administration, fall roughly into three classes.

**1. Sharecroppers, who contribute labor only, receiving in return a share of the crop.**

**2. "Third and fourth" tenants, who supply equipment and bear some managerial responsibility and receive larger shares of the crop according to their contribution of feed, fertilizer and equipment, a third of corn and a fourth of the cotton being a common rental.**

**3. "Standing renters," who rent the land outright, paying for its use either in cash or produce.**

In the South, one half of all sharecroppers are Negroes. The number of Negro sharecroppers exceeds the number of whites in Georgia, South Carolina, Arkansas, Louisiana and Mississippi, with the latter state having three and one half times as many Negro as white sharecroppers.

Fully half of the Negro children growing to manhood and womanhood on Southern farms face the drudgery and neglect typical of most croppers' children of any race. Chief among the evils which the poor man on the farm—small owner, tenant or laborer—has to face are poor housing, high mortality, insecurity and debt.

Bad housing and sanitation are reflected in hook worm and anemia. Faulty diets result in the dread pellagra. The yearly toll from death and disease add to the burden of indebtedness, while beneath all these hurtful conditions lies the menace of insecurity, crippling both landlord and tenant.

The figures on the farm tenancy in 14 states in the South reveal interesting facts. There is no relation between the number of owners, operators, tenants or croppers. In some states the croppers outnumber others, but in other states the croppers form the smaller group. Mississippi is an exception, having as it does a number of croppers double that of Georgia and Arkansas three times the number in other states.

**Virginia in Lead**

In the matter of farm ownership, Virginia pridefully takes the lead, showing a 6,000 majority over its nearest competitor, Mississippi. Tabulated, the figures show the following results:

| | |
|---|---|
| **Owners** | 185,166 |
| **Operators** | 814,227 |
| **Tenants** | 629,070 |
| **Croppers** | 380,855 |
| **Total farmers, (Negro)** | 2,009,318 |

This figure represents the individual heads of families in the 14 Southern states among Negro farmers, and is equal to the number of "farms" operated in that section by Negroes.

The total figure for the number of Negroes on farm lands in these same states shows that there are 4,494,958 individuals on these farms, or two and a fraction over per farm, a very low figure.

**Church Members**

About 200,000 people of color are members of the Roman Catholic Church.

**Gingham was first made at Clinton, Mass., in 1846.**

### SPINGARN PERPETUATED MEDAL

(Special to the Herald Tribune)

POUGHKEEPSIE, New York — A $20,000 trust fund to perpetuate the Spingarn Medal, awarded annually for outstanding achievement by American Negroes, together with monetary gifts from the trust was established in the will of Col. Joel Elias Spingarn, which was filed for probate today in Surrogates Court here. Col. Spingarn, educator, literary and art critic and champion of the Negro, died in New York on July 26. His home was at Amenio, N. Y.

Col. Spingarn provided for a town or county memorial to perpetuate his lifelong interest in criticism and art. The will provides specifications for the continuance of the Spingarn Medal, which was awarded this year to Marion Anderson, Negro singer. The will stipulates that the winner of the Spingarn Medal, established in 1913 shall be designated by the National Association for the Advancement of Colored People. In the event the association ceases to function, the will directs the creation of a Spingarn Medal Committee to name the recipient.

The bulk of Col. Spingarn's estate, the value of which was not estimated will go to his wife, Mrs. Amy Spingarn. His brother, Arthur B. Spingarn a New York attorney, will receive a bequest of $20,000.

### THE SOUTH LISTENS

**(From Journal and Guide)**

Lest it be overlooked in the enthusiasm of the moment, we hasten to record with pleasure the fact that the epochal national conference of the National Association for the Advancement of Colored People at Richmond, enjoyed honorable coverage by the white press associations and its major activities, particularly its resolutions and the addresses of Mrs. Franklin D. Roosevelt and Walter White, executive secretary, were headlined, edited calmly and given front and inside pages one and two of the leading Virginia morning and afternoon papers.

This is not alone a moral victory for the N. A. A. C. P. and the liberal forces associated with its educational functions in removing illusions and fears in high places—the unusual attention given the Richmond deliberations by certain of these dailies which once branded the organization, its sponsors, leaders and constituents as Communistic, radical, and persona non grata in the South, is due largely to the inroads made by enlightened social forces in recent years in making the white press aware of its moral and spiritual responsibilities in race relations to the communities and interests it serves.

## N. A. C. W. ART AND CRAFT DEPT. DISPLAYS WARE IN BOSTON

BOSTON, Mass.—(Special to the Farmer)—An outstanding feature of the twenty-first biennial convention of the National Association of Colored Women, Inc., held in Boston, July 21 through July 29, was the exhibit of the department of arts and crafts. The display of art work exhibited by the department was valued at $150,000. Mrs. Susie V. Bouldin of Kans., national arts and crafts chairman had charge of the display which was acclaimed the finest in the history of the N. A. C. W.

ART AND CRAFT EXHIBIT

Shown in Boston's Symphony hall, the exhibits consisted of collections of all types of arts and crafts.

FINE ART EXHIBIT

In addition there was a collection of the fine arts including oil paintings, water colors. etchings and charcoal drawings, sculptured articles and art pottery. The number of pieces exhibited was estimated at 4,315.

AFRICAN EXHIBIT

Over 3,000 persons viewed the exhibit. the work of which was done by outstanding women and men of the Race. One of the special features of the exhibit was a large collection of African articles, valued at several thousand dollars. The African exhibit was displayed through the courtesy of its owner, the daughter of a high governmental official of Liberia. Another unique feature was a miniature replica of a landscape architectural project done by Mrs. Ruth Steele of Chicago. Several unusual examples of Mexican art were a part of the exhibits sent from Arizona and New Mexico. The state of Mississippi was represented in a clever collection of articles made from pine needles and cones and corn shucks. Articles varied from rugs, mats, vases, hats and fans to coat and dress buttons. A large showcase and several baskets were used to display a beautiful exhibit of fiber flowers.

## LIFTING THE HAT

A YOUNG MAN, not wishing to do anything that was not agreeable to the laws of etiquette sent the following question to the editor of a Kansas paper: "Please tell me when and where it is the correct time for a gentleman to lift or remove his hat?"

And here is the reply he received.

"Without consulting authorities on etiquette—in fact, giving it to you offhand so to speak—we would say that at the following times and on the following occasions, respectively, that the hat should be removed or lifted as circumstances indicate.

"When mopping the brow, when taking a bath, when eating, when going to bed, when taking up a collection, when having the hair trimmed, when being shampooed when standing on the head."

When a woman takes in washing for three dollars a day, that's labor. When she does it for nothing, that's love.

## MEMORY

THE story is told of a Kentucky colonel who had an argument with Satan. The latter claimed that no one had a perfect menory, but the colonel maintained that there was an Indian on his plantation who never forgot anything. The colonel agreed to forfeit his soul to Satan if the Indian ever forgot anything.

Satan went up to the Indian and said: "Do you like eggs?"

The Indian replied, "Yes." And Satan went away.

Twenty years later the colonel died. Satan thought, "Aha, here's my chance." So he went back to the Indian, and raising his hand, gave the tribal salutation, "How?"

Quick as a wink the Indian replied, "Fried."

## MACHINERY CHANGES FARM

A new phase is being added to the American Negro Problem. The problem of living for a great many Negroes in the United States is becoming daily more acute. The new Wage and Hour law, the several bills passed by Congress for crop control, and the adoption of modern machinery for farming, have added new hardships to the already pitiable plight of many Negro families. The Negro share cropper, or tenant farmer, has come to be America's No. 1 problem. Unemployment in farming sections until recent years was an unheard of thing. Now, with the many new adjustments in agricultural sections, unemployment has become distressing. It is reported that on one big Mississippi plantation, 160 families were required to operate it. Recently, the operator purchased 22 farm tractors, and now only 30 families are required. Changes like this, are taking place over the entire South and throughout the country. The Negro race today is sadly in need of adequate leadership to face this complex situation. It is to be hoped that many of our fine young men and women will be lead to dedicate their lives to rural leadership and thereby help to improve the distressing situation of our people.—From Lott Carey Herald.

## A PRAYER

GIVE me a good digestion, Lord,
And also something to digest.
Give me a healthy body, Lord,
with
Sense to keep it at its best.
Give me a healthy mind, Lord,
To keep the good and pure in
sight,
Which seeing sin is not appalled
But finds a way to set it right.
Give me a mind that is not bored
That does not whimper, whine
or sigh.

Don't let me worry overmuch
or sigh.
The fussy thing called I.
Give me a sense of humor, Lord,
Give me the grace to seek a
joke;
To get some happiness from life
And pass it on to other folk.

Bunkie (La.) Record: There are many fellows who graduated from the school of hard knocks, and are still paying on their back tuition.

A person who can govern his tongue can govern his whole nature.

# ANP CORRESPONDENT VISITS MEXICO AND FINDS RACE PREJUDICE ABSENT

MEXICO CITY, Aug. 24 (By K. Dolphus Stroud for ANP)—As the hour approaches for my return to the U. S. A. and its practical, rushing life, repiete with Jim Crowism and prejudice of every kind—sometimes so cruel and embarrassing as to overshadow the advantages of good roads, sanitation, beefsteak and diversified recreations—I cannot help feeling a little sad about leaving Mexico and its friendly, hospitable people who haven't yet learned that black skins are infectious and will contaminate all that they touch.

The trip I am now completing, which has carried me through 20 of Mexico's 27 states, and over 4,000 miles of her railroads and highways, is my 19th extended sojourn in Spanish America. Each successive trip has convinced me that American Negroes should take more interest in Spanish America, where they can give free play to their talents and educational accomplishments. All through Spanish America there are opportunities for engineers, tractor drivers, mechanics, architects, electricians, radio operators—chances to succeed in those fields that are almost completely closed to us in the states.

And while I'm on the subject of the Negro's interest in Spanish America, I'd like to make a suggestion to our Negro colleges and universities: In Mexico City I talked with the president of the Mexican National Sports confederation about the establishment of athletic relations between the universities and high schools of Mexico and the Negro schools of similar grade in the U. S. A. The entire personnel of the office was immediately interested and asked me to begin working out such a relationship immediately upon my return to the States. Such international contests can be worked out in football, basketball, track, tennis, swimming, golf, volley ball and baseball at little or no cost to any of our institutions, and in some cases with substantial profits, while the educational advantages resulting to the players who make these trips would be equal to three months of class work. Two hours in the Palacio de Bellas Artes in Mexico City were more stimulating to me from an educational standpoint than were the combined efforts of all my high school and college instructors. But I mustn't get started to writing about Mexico City, because I am going to save that for aonther day.

In concluding this article your correspondent would like to suggest that American Negro tourists who plan to visit foreign countries give some thought to Mexico. I have kept an accurate account of expenses on this trip in order to be able to estimate the cost of any projected Mexican tour for American tourists. I have done all my traveling second class for three reasons: to save money, to be able to arrange the least expensive trips for persons who haven't much to spend; to come into contact with the average Mexican and get his viewpoint on the vital questions of the day.

Two weeks of travel and pleasure in Mexico cost me exactly $46.30. This amount includes passport, 4,000 miles of travel, hotel bills, food, two rounds of golf and caddy fees at Torreon, Coah, nine hours of roller skating on three successive nights in Mexico City, a trip to the top of the monument to the revolution, six picture shows, ten hours of swimming in Torreon and Mexico City, shoes shined twice daily, 30 malted milks, 15 dishes of ice cream, stamps for mailing 40 letters, four suits cleaned and pressed, 20 newspapers, purchase of two beautiful zazrapes of sheer silk, purchase of two baskets and a hat of beautiful straw work at Querctaro and 54 miles of taxi riding in several different cities. Tips to shoe shine boys, waitresses and waiters and tennis and golf caddies are not included in this amount.

For $46.30 American money I have seen as much and enjoyed myself more than I could have done for double that money anywhere else that I have ever been—and had I not insisted always on hotel rooms with private bath and the best of food, I could have gotten by on considerably less.

# PICKENS SPEAKS TO POSTMEN; GROUP GIVES NAACP $100

## Lecturer Tells of Handicaps Workers Face and How to Overcome Them

CHICAGO, Aug. 24 (ANP)—A featured speaker at the Thursday afternoon session of the 10th biennial convention of the National Alliance of Postal Workers and the 9th biennial convention of the women's auxiliary, held at Wabash Branch YMCA was William Pickens, director of branches for NAACP civic leader.

Dean Pickens was in Chicago enroute to fill speaking engagements in Colorado, Utah, California and other Western states, after which he will enjoy a vacation period in Oakland.

Following his speech, the convention without a dissenting vote gave $100 to the N. A. A. C. P. Previously the largest contribution had been $25 a year. The Women's auxiliary pledged to continue paying by itself the $25 usually paid annually by the alliance.

Highlights of his message to the postal workers follow: "Whether one is an individual or a corporation, often the other fellow can do for him what he cannot do for himself. The N. A. A. C. P. is the organization which can make the most effective fight for justice to Negroes in other organizations, especially those organizations whose members are engaged in public service.

"The National association can fight better for equal salaries for Negro teachers than any teachers' association can. But some individual teacher has to stand as principal complainant in such a fight, and perhaps be sacrificed.

"The Negro postal employes, I am told, number more than 25,000, but have less than 20 supervisors in branch post offices. The Negro personnel is kept down to lowly work and low income. Those who stand high in examinations and merit appointments as clerks are often, always, assigned to carrierships or put on postal baggage handling and janitorships. The American government reflects the habits, good and bad, of the American people, for the American government is so largely the American people.

"There are white men in the postal service who got their start of training under some Negro railway mail clerk,—and those white men are now postmasters or even in the Post Master General's office,—while the Negroes who trained them are still on the road.

"These abuses call for opposition,—for well directed fight. A postal carrier cannot fight the post master, but the N. A. A. C. P. can. Some carrier must stand up in the fight, but it must be engineered by some organization which can also stand up.

"As a fighting front the N. A. A. C. P. should be used by all other Negro organizations,—when they fight for civil and constitutional rights."

## Alabama Delegates

BIRMINGHAM, Aug. 24 (ANP)—At a meeting of the electoral college, West Alabama Conference AME church, held last Tuesday at Fairfield, lay delegates and alternates were elected for the 1940 AME general conference to be held in Detroit.

Delegates chosen: M. S. Howell, Ensley, Ala.; J. B. Johnson, Bessemer, and H. D. Davidson, Centreville. Alternates: J. C. Cooper, Boothton, Estelle Glover, Bessemer and W. E. Shortridge, Ensley. Bishop D. H. Sims, presiding prelate of the diocese and Ira T. Bryant, prominent AME layman, addressed the meeting.

# OLD PORO COLLEGE TO HOUSE NEW LAW SCHOOL OF LINCOLN

## State College of Missouri Gets Ready to Give Legal Training

ST. LOUIS, Mo., Aug. 24—(By R. C. Fisher for ANP)—The famous Lloyd Gaines case, in which Gaines was seeking admission to the University of Missouri Law School, is still unsettled.

Boone county circuit court is the original jurisdiction of the Gaines case, and as such must hold future hearings to determine the rights of Negroes under the new Taylor bill, creating the law department at Lincoln university.

The state supreme court recently held that it cannot decide at this date whether the new law school is to equal the law school at the University of Missouri. This question must be decided upon its merit after the school is established.

In the meantime, the old Poro College building, 4300 St. Ferdinand avenue, has been chosen as a site for the law school, to be known as Lincoln University School of Law, which will be opened here on September 20th, and to be supported by public taxes.

Workmen already are making the few alterations necessary to convert the three-story, fireprook brick structure to its new use, under the supervision of William E. Taylor, recently named dean of the institution.

Taylor, who is on leave of absence from the law faculty of Howard University, Washington, for two years, is a gradate of the University of Iowa, where he studdied law. He joined the Howard faculty in 1929, after a practice of law in Des Moines and Chicago.

# 10TH YEAR CENSUS OF NATION TO BE STARTED IN APRIL

## And Uncle Sam Demands That Everybody Answer All Questions "Or Else"

WASHINGTON, Aug. 24—(ANP)—Field work on the gigantic task of counting the population of the United States will begin April 1, 1940. Two weeks are allowed the bureau to complete enumeration of city areas, a month for rural areas and a little more time for outlying areas such as Alaska.

To accomplish this work, some 130,000 enumerators will be utilized, and it is hoped that some of them will be taken from the relief rolls in the great industrial areas where it will be necessary to supply aid for many months to come.

Government officials anticipate no difficulty in obtaining answers to the intricate questionnaire to be filled out, but they rely far more on the education and good will than on the law which makes it an offense to withhold information or give false answers. Although the bureau may find it necessary to haul some tight-lipped crank to court, officials reveal, with elaborate fanfare of publicity and its consequent effect on others, it hopes that these cases will be exceptionally few.

## JUDGE BY THE FACTS

(National Grange Monthly.

THERE IS ROOM enough and work enough for more than one farm organization in this country; but there must be reasonable cooperation if success is attained in the hard struggle to secure equality for agriculture and to win for the farmer his fair share of the income of the nation. Any self-respecting organization must battle for justice, equality and a square deal for its own members and for its program of activity. This means that a vigorous self-help organization must rely on its own finances and resources. More than this, farm organizations must respect each other and must always be fair toward each other if there it to be cooperation, assistance and team work—and results. There is real value in healthy competition, but jealously, bitterness and falshood have no place in a program for serving the best interests in rural life.

Elsewhere in this issue attention is paid to farm organization and governmental affairs, due to development of the past few weeks, which so vitally affect all agricultural interests that to ignore the facts is impossible, and to attempt to smother or conceal them would be unworthy a publication that endeavors truthfully to record the happenings of the times. Members of the Grange also hold membership in either the Farm Bureau or the Farmer's Union, and almost without exception Grange leaders and workers have supported educational, extension, research and governmental activities. We hope to continue this cooperation. The present Secretary of Agriculture and the Extension staff, both club and vocational, have rendered outstanding service in this great period of agricultural distress and readjustment. That events have occurred which throw the shadow of suspicion over these activities is cause for universal regret.

Itself a self-supporting farm organization, the Grange has always contended that no discrimination should ever be permitted so far as the Extension Service is concerned—as between the farmer who does, or who does not, choose to take out membership in any organization. On no other point has the Grange placed greater emphasis for many years and it here and now postively reiterates that contention.

That such discrimination has been made in the past has frequently been charged, with damaging facts apparently now brought into the limelight. That increasing publicity will be given to the situation is inevitable, and the farmers of the country will have an opportunity to form their own conclusions.

The Grange will continue to support all agencies and all programs, governmental or otherwise, that seek to better the condition of the American farmer. It will continue to pay its own bills, refuse all subsidies and maintain its self-respect. Free from entangling alliances of every sort, and therefore unafraid to express its views clearly and frankly, the Grange faces the future confidently and will still devote all its energies to the service of Rural America.

It is not in the present province to pass judgment upon any other organization—those Who create embarrassing situations must find their way out. The Grange will go on trying to give a square deal to everybody and to cooperate heartily with all who honestly desire such cooperation; but it insists that in agricultural plans, as elsewhere, there shall be honest dealings, truthful utterances and generous consideration and teamwork all around.

## 10,000 COTTON PICKERS

Tupelo, Miss., (ANP)—There are 10,000 cotton picking jobs awaiting Negroes in Northeast Mississippi, but thus far only a very few takers, it was stated last week by Jim Laccy, white, director of the state employment service, who added the northeastern part of the state was being given first chance to supply labor for the heavy delta crop because summer floods had cut local crops about 50 per cent.

## NECESSITY MAKES WOMEN WORK

**Labor Department Survey Discloses That large Percentage of Fair Sex Are Breadwinners for their Families.**

Some time ago Mrs. Franklin D. Roosevelt got into a controversy with a New England social registeritc over the question of whether women, especially those with husbands, should be permitted to work in industry.

The "First Lady" insisted that many women work not because they want to, but because it is necessary to provide food and shelter for dependent members of their families.

This contention is sustained by a survey just completed by the Women's Bureau of the Department of Labor. In a report this week giving the results of the investigation, the Bureau said:

"Women get scant credit for the heavy load of family support they carry. Too seldom is it realized that the weekly pay envelope of many thousands of women—single and married, white and Negro, native and foreign-born—are used to the last penny for family needs."

To get the most accurate line possible on this much-mooted question, the Bureau conducted house-to-house investigations in Fort Wayne, Ind.; Bridgeport, Conn., and Richmond, Va. Women workers were asked why they worked and what they did with their wages.

Of more than 58,000 women questioned, more than a third replied that they combined the job of breadwinner with the many tasks and responsibilities of home-maker. The percentage differed only slightly in the three cities.

While the burden of support for dependents fell heavily on the widowed and divorced women, in many cases married women, especially the Negro women, were the sole support of families of considerable size, which very often included children. In a large number of cases single women supported dependent parents and small children.

As a rule, the report emphasized, when a woman leaves her home to enter a factory or domestic service, it is because hard necessity presses upon her.

# COLORED POSTMEN CLOSE CONVENTION HELD IN CHICAGO

## Delegates Representing Workers In 45 States Send Petition To Farley

CHICAGO, Aug. 24—(By Trezzvant W. Anderson for ANP)—Representing nearly 18,000 Negro postal workers in 45 states, the 10th biennial convention of the National Alliance of Postal Employees came to a close here last Friday night.

With major statutes enacted into law, and with resolutions calling upon Postmaster General James A. Farley to provide for the creation of new official positions in the major supervisory offices in Washington, and a financial report showing that an all-time high peak in total receipts of approximately $60,000 had been reached, the convention passed into history as one of the most constructive as well as the biggest in the 26-year history of the group.

There were no changes in the major offices in the N. A. P. E., with the exception of Joseph B. Brown of St. Louis, who replaced Percy R. Hines of this city as editor of "The Postal Alliance", the official organ. Mr. Hines did not offer for re-election this year, and the returns from the votes sent out from Washington gave all the incumbent office-holders their posts again for bi-ennial period.

The officers for the ensuing two-year term are Lafayette J. Ford, St. Louis, president; Alvin W. Bryant, Atlanta, vice president; Thomas P. Bomar, Washington, secretary; Joseph B. Brown, Jr., St. Louis, editor, The Postal Alliance, and Robert E. L. Hutton, New Orleans, treasurer.

On Thursday morning the N. A. P. E. presented Dean William Pickens, branch director of the N. A. A. C. P., with a check for $100 and this was taken as an indication of a unity of programs in the field of discriminatory practices against Negro postal workers in the matter of promotions, appointments, the securing of supervisory positions, and the general elimination of existing injustices against colored Postal Ebployes, Leaders of the Alliance have fought for years to have provisos for cooperation with other welfare groups worked into their program and this step marked the realization of these hopes for the first time in a tangible way.

Negro postal workers represent approximately $36,000,000 in annual incomes, and this economic stability as a group is reflected in the solvency of the National Alliance of Postal Employes, which showed in the treasurer's report a gross net worth in cash and government bonds of $53,518.36, clear and unencumbered.

A plan for the building of a national office building and home in Washington was introduced by Phillip H. Holland, Birmingham, after a referendum to the membership at large had shown a desire for such a home, and the plan was accepted by the convention. Holland's plan calls for the allottment of a portion of each member's monthly dues to be laid aside in a separate fund for the present banking accounts, to accumulate over a five-year period, after which time the N. A. P. E. will have sufficient funds to buy a building in Washington outright and by cash payment, without interfering with any of the other funds of the organization. It will be necessary, however, for the next convention in 1941 to continue the program inaugurated by constitutional action, in order to assure its permanency. There appears to be no doubt as to the possibility of such action being taken.

The report of the national welfare director, G. N. T. Gray of Washington, occupied the spotlight at the convention, for it was this department which formed the fundamental basis for the organization of the NAPE. Mr. Gray reported numerous instances where the welfare department of the alliance had functioned to developed improvements in the status of the Negro

(CONTINUED ON PAGE 11)

**Woman's Missionary Society LITERATURE**

The Woman's Home Mission Guide, price 15 cents; Y. W. A. Guide, 15 cents; Shepherd Boy's League Guide and Girl's Auxiliary combined, 15 cents; Starlight Band, 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Hope Magazine**
PUBLISHED MONTHLY

No better publication can be placed in the hands of women who are doing mission work and interested in the Fireside School development than Hope Magazine, published every month in the year, price 50 cents a year. It contains helps for every department of Woman's Mission Society Organizations, as well as suggestions for religious entertainments. For more than fifty years this Magazine has been an invaluable help. It was founded by the late Miss Joanna P. Moore.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**ORTHODOXY**
of the
**Missionary Baptist Churches**
By Dr. E. R. Carter of Atlanta, Ga., and Rev. E. H. Borden. Just off the press.

You can't afford to be without this book. Buy one. Know the why and wherefore of your denomination. The price is small but the information contained therein is invaluable.

Price 25c

Nashville, Tennessee.

# DAILY DIGEST

SALES OF FARM EQUIPMENT

Close observers of conditions in the farm implement industry now believe that sales for the year will probably run about 10 percent under the 1938 dollar totals, according to a Chicago report to the New York Times. This contrasts with earlier expectations that the last half would be sufficiently ahead to bring a small increase for the full twelve months of 1939. Low prices for grains and a freakish distribution of crop yields are blamed for the disappointing showing.

RAIN AIDS N. E. CROPS

Rainfall has soaked parched farmlands from Virginia to New England, given new life to burned pastures, removed the threat of forest fires and assured an adequate water supply, says a report in the New York Times. From the farmlands of New Jersey, Long Island and upper New York optimistic reports told of new hope for crops and pastures that had been damaged by drought and sun. Strong winds accompanying the rain caused some injury to crops but this was far outweighed by the benefits of the storm.

FOOD STAMP PROGRAM

Federal Farm officials, setting up nation-wide machinery to expand the food stamp plan, have expressed concern that funds may not be sufficient to meet applications from scores of cities eager to try the relief scheme. says a report in the Washington Post. Secretary Wallace estimated he had "between $50,000,000 and $60,000,000" to us on the experiment this year. Grocers, who formerly protested the free distribution of competitive products, have been enthusiastic supporters of the stampplan because it gives them additional sales.

DAIRY REPORT

The Bureau of Agricultural, Economics looks for continued heavy production of milk this summer and fall. Prices are low, and pastures are in poor condition, but feed grains and feeds are plentiful and relatively low priced. Consumption of fluid milk and cream has increased in recent months. Consumption of manufactured dairy products this summer has been the highest on record, reflecting largely the distribution of butter by Government relief agencies. The relationship between prices of butterfat and feed grains favors dairy production, the Bureau says, Prices of manufactured daily products have been stable at a low level, but prices of feed grains and feeds have declined Total milk production on August 1 was the second highest on record for that date.

COTTON LOANS EXTENDED

The Secretary has announced that the Commodity Credit Corporation has extended the maturity of its loans on 1938 crop cotton one year to July 31, 1940; that it has taken title to the remainder of the 1934 crop cotton under government loans; and that, in order to acquire additional cotton for delivery under the cotton rubber exchange with Great Britain, it will take title on September 1, 1939, to the 1937 crop cotton which is under government loans.

UNDERGROUND IRRIGATION

"Experience of the Kelseys, Kaw Valley, potato growers, with irrigation from the underflow demonstrates the soundness of this form of farming," says an editorial in Topeka Capital (August 6). "Their irrigated acres produced an average of 200 bushels, while the unirrigated portion of their crop made no more than 150 bushels per acre. On the basis of the Chicago market, the difference is somewhere near $50 per acre.....The everlasting water supply is but a few feet below the surface. Wells are relatively inexpensive, when the returns are considered. Recurrent dry spells in Kansas have given irrigation a big boost. Where the underground water strata is close to the surface, it is being trapped to provide moisture.....The Kaw Valley spud raisers may have to resort to universal irrigation in self-defense. It has been proven over and over again that irrigation pays large dividends on the cost. During the July drouth many Valley corn fields dried out, when the roots were not more than twenty to thirty feet from an inexhaustible supply of water. These fields could have been saved with irrigation at the right time....."

FILM STRIP ON LIVESTOCK TB

"Eradicating Tuberculosis from Livestock and Poultry" is the title of a new film strip just released by the U. S. Department of Agriculture. It illustrates some of the ways in which tuberculosis may attack livestock, and practical methods for its prevention. Tuberculin testing, sanitation, and the use of disinfectants in fighting the disease are emphasized. While the United States is now practically free of tuberculosis of cattle, the new strip is intended to help preserve this desirable condition. and also to create interest in eradicating the disease from swine and poultry, large numbers of which are still affected. The film was prepared cooperatively by the Bureau of Animal Industry and the Extension Service. Information regarding this and other film strips of the Department may be obtained form the Extension Service, U. S. Department of Agriculture, Washington. D. C. (Coastal Cattleman, August.)

"MIDGET" TRACTORS

A Des Moines report in Farm Implement News (August 10) says that the "midget" tractors are finding a much greater market than expected. The volume of these machines sold in Iowa since their introduction has been astonishingly large. The principal market, of course, is with operators of 40 to 80 acres farms, but there has been an unexpected demand from operators of larger farms already owning and using larger tractors. These smaller machines are being purchased to do farm work usually handled by a team.

SOILS AND FERTILIZERS

An address printed in American Fertilizer (August 5) on soil science and fertilizer practices, by Richard Bradfield, Cornell, University, says in part: "In order to use fertilizer with greatest efficiency soils must be kept in good physical condition. We had a striking example of this on our experimental field at Ithaca last year. A small plot was planted to corn, the entire plot was adequately fertilized. Different carriers of phosphate were tested. We found no difference in the value of the phosphate carriers, but we did find a tremendous difference in the yield of corn due primarily to the difference in the physical properties of the soil in different sections of the experimental plot. One section which had been under cultivation for a long period of time became very hard and intractable while the other remained loose and friable throughout the season. Both received the same application of fertilizer which was adequate for a high yield. A high yield was realized, however, only on that portion of the block which was in good physical condition....."

COTTON LOANS

The Secretary of Agriculture has announced that Commodity Credit Corporation has extended the maturity of its loans on 1938 crop cotton one year to July 31, 1940; that it has taken title to the remainder of the 1934 crop cotton under government loans; and that, in order to acquire the necessary additional cotton for delivery under the cotton-rubber exchange agreement with Great Britain, it will take title on September 1, 1939, to the 1937 crop cotton which is under government loan.

TOMATO PRODUCTION

The Agriculture Department's crop reporting board estimates this year's production of tomatoes for commercial manufacture will total 1,645,700 tons. This compares with 1,737,700 last year, and a 10 year average of 1,458,600 tons. The tomato crop generally has escaped serious injury from the widespread hot, dry weather which prevailed up until August 1 over much of the country, it is reported. (A. P.)

PLOW HISTORIC

The Smithsonian Institution has acquired the first steel plow forged by John Dere at Grand Detour, Ill., in 1837. Made of an old sawmill saw because other suitable steel was lacking, it was able to shear through the tough roots of the prairie grasses that balked the relatively feeble eastern-type plows which the pioneers had brought with them. The historic implement will be added to the collection of early American plows already in the Smithsonian Institution, some of which date back as far as 1797. (Science Service.)

FATS, OILS SITUATION

Secretary Wallace said today he did not feel an export subsidy on lard or other fats and oils is warranted, in view of an analysis of the fats and oils situation. He said other proposals for dealing with the conditions brought about by comparatively low prices for lard, cottonseed oil and other fats and oils are still under consideration. Among these proposals are. (1) Domestic diversion of some of the surplus fats and oils from edible channels to the soap trade; (2) the purchase of lard and possibly other pork products for distribution to the needy (this program, if it becomes necessary to undertake it, probably will begin sometime late this fall); (3) additional increases in exports of lard and soybeans through the underwriting of sound credit transactions (such a program would be undertaken by the Export-Import Bank and its possibilities are being discussed with bank officials). Lard and cottonseed oil shortening will shortly be made available through the stamp plan to those receiving public assistance. The corn reseal ing program, which will withhold from feeding 257,000,000 bushels of corn in 1940, will mean 300,000,000 less pounds of lard than would otherwise be produced, he said.

PORTABLE SEED CLEANER

Grain and Feed Journals (August 9) contain an item on a community portable seed cleaner "The idea has been successfully practiced," it says, "by millers and grain dealers of Indiana and Illinois in cooperation with the Purdue University Experiment Station. An advantage to the grain buyer is that it leads to the growing of the one best variety that can be shipped in unmixed carloads to sell at a better price than mixtures. The equipment is mounted on a trailer to be pulled from farm to farm. The cleaner is a 29-D machine. air controlled, with traveling brushes, driven by a small gasoline engine of 1 1-4 h. p. The assortment of screens available makes it possible for the man in charge to clean every kind of field seed offered. The charge is 5 cents per bushel, with a minimum of $2.50 for one setting. For smut treatment a seed treater is used, at 5 cents per bushel, with the same minimum charge."

1940 WHEAT PAYMENTS

The AAA announced today that conservation and price adjustment wheat payments which farmers may earn in 1940 for complying with the AAA program will be between 18 and 22 cents a bushel. The 1940 payment will be lower than the 28 cents in 1939, because the 1940 allotment is 62,000,000 acres, compared to 55,000,000 in 1939.

POULTRY CONGRESS

An article in the Prairie Farmer (August 12) by Don Turnbull, commenting on the success of the World's Poultry Congress, says, "More than 5,000 birds competed in the live poultry show, thus making it the largest competitive event of its kind anywhere. Better than 3,000 birds were displayed in the Pageant of Poultry, thereby hanging up another record for the largest exhibition of this type. Approximately 35,000 persons passed through the turnstiles on the opening day to look at all this poultry and the 500 or more other exhibits, commercial and non-commercial. That was another record for poultry congress attendance. Total attendance was well over 750,000 persons—and that is another record. Poultry men from 48 states, practically all the United States possessions, and from 44 foreign countries registered. Approximately 500 persons came from foreign soils--"

NEW DAIRY BY-PRODUCT

In the constant search for new ways to use waste dairy by-products, scientists of the Bureau of Dairy Industry have devised a new food article from two surplus products—skimmilk and cull potatoes. The potato and skimmilk mixture, with a little salt added, is made into wafers, chips, sticks or croutons, and even dried to crispness. These products contain no cooking fat and consequently keep indefinitely without becoming rancid. Food specialists and others have found the wafers, chips and sticks desirable for use with soups, and for serving with light luncheons, in much the same way crackers and potato chips are used. (The American Produce Review, August 16.)

TOBACCO CURING

"Application of the principles of air conditioning to curing tobacco in a new research laboratory at the Kentucky Experiment Station may develop curing information which will enable burley planters materially to increase the proportion of high-selling grades in their crops," says C. A. Lewis, Agricultural Editor, University of Kentucky, in Country Gentlemen (September). ".....Nine curing chambers, designed by Prof. L. S. O'Bannon, air-conditioning expert, have been constructed at the Kentucky station to give complete control of heat, humidity, circulation of air and other factors involved in curing tobacco....Information obtained so far while in no way conclusive, indicates that humidity rather than temperature may be the most important factor in developing the bright leaf that brings the top price--Best results have been obtained where the humidity ranged from 65 to 70 percent. Expert graders were unable to distinguish consistently between tobacco cured at 65 degrees and at 90 degrees....In a large majority of the tests, expert graders from the Lexington loose-leaf markets preferred tobacco cured at a constant humidity of 68 percent to that cured at a humidity of 77 percent for two weeks, after which the humidity was reduced to 68 percent. Every grader discriminated against tobacco cured at a relative humidity of 77 percent or higher throughout the curing period....."

TVA ELECTRIC APPLIANCES

Approximately $3,687,000 worth of residential electrical appliances were purchased by domestic consumers of the power produced by the Tennessee Valley Authority during the twelve months ended June 30, 1939, according to reports by the TVA. This total compared with $1,612,000 worth of such appliances sold during the preceding twelve months' period. It was estimated that sale of these appliances increased consumption of TVA power by more than 17,600,000 kilowatt-hours.. (Press.)

CROSSBRED HOG STUDY

"The Iowa Experiment Station in a ten-year study of crossbreeding swine has confirmed the results previously reported by Minnesota," says C. D. Lowe, Extension Animal Husbandman, Department of Agriculture. "The experiment which involved 1015 pigs from 105 litters showed that crossbreeds were larger and more vigorous at birth than purebreds, and made better gains. The crossbred pigs outweighed the purebreds from three to four pounds a head at weaning, and the litters were larger. Furthermore, the crossbreds outgained the purebreds in the feedlot by about one tenth of a pound per day and reached a weight of 225 pounds on from 25 to 30 pounds less feed than was required by the purebreds." (Country Gentlemen September.)

AGRICULTURAL COOPERATIVES

""There is a definite limit to what the Farm Credit Administration or any other outside agency can do to bring about the development of sound agricultural cooperatives," says F. F. Hill, Governor, Farm Credit Administration, in the August issue of News for Farmer Cooperatives. "They must in the last analysis do the greater part of the job themselves. When we speak of a strong cooperative we mean one in which: (1) The majority of members continue actively behind the organization; (2) the members are willing to accept responsibility, including their share of the financial responsibility, for the success of the organization as well as to accept the benefits which it has to offer; (3) there is a strong, resourceful and self-reliant management capable of doing a good job whether in the marketing of farm products, the purchasing of farm supplies, or the furnishing of farm business services.....The Research and Service Division of the Farm Credit Administration can assist cooperatives by constantly keeping in touch with their operations and by pointing out those policies and practices which have worked and those which have not worked. The Farm Credit Administration can point out what we believe to be weaknesses and suggest moves which we believe will strengthen the organization. By making credit available on terms suited to the needs of the business and at reasonable interest rates, the Farm Credit Administration can assist in placing the cooperative's financing on a sound basis and in reducing its costs. However, the banks for cooperatives are lending institutions expected to make loans on a sound basis. This means among other things that the membership of the cooperative must provide sufficient capital to give them a reasonable equity in the organization as a basis on which to make a loan.."

SEED BIDS REJECTED

The Agricultural Adjustment Administration today announced that bids in response to a recent advertisement for the purchase of 5,512,000 pounds of hairy vetch and Austrain winter pea seed have been rejected because the prices bid were considered too high. Except for one bid on a small quantity of seed, bids ranged from $5,225 to $5.90 per 100 pounds for peas, delivered at local points in the Southeastern States, and $10.10 to $16.00 per 100 pounds for vetch. The rejected bids covered seed which would have been furnished to farmers in the South and Southeast in lieu of payments under the 1939 Agricultural Conservation Program. The purpose of the proposed seed purchase was to increase the use of winter legumes in the Southern and Southeastern States, where land is subject to severe leaching and erosion.

PLAN TOBACCO REFERENDUM

Instructions for a referendum on flue-cured tobacco marketing quotas for the 1940 crop have been approved by Secretary Wallace, the Agricultural Adjustment Administration announced yesterday. While the Secretary has not proclaimed a quota, the size of the 1939 flue-cured tobacco crop apparently will bring supplies to a level requiring proclamation of a quota not later than December 1. The referendum must be held within 30 days after the proclamation. The Secretary is required to proclaim a national quota when the total supply is above the reserve supply level. This level is fixed at 5 per cent above the normal supply, which is 275 percent of a normal domestic consumption and 165 per cent of a normal year's exports. The crop estimate on August 10 placed the 1939 production at 1,028 million pounds in 1930 and the current estimated world consumption of about 750 million pounds annually.

TURKEYS AND CRANBERRIES

There will be plenty of cranberries as well as turkeys for an earlier Thanksgiving Day next November, Agriculture Department experts said yesterday, according to a report in the Washington Post. Growers have reported to the department that turkey production increased this year over the 1938 crop of 26,000,000.

JAPANESE BEETLE SPREAD

The Japanese beetle scourge is speading throughout the United States, despite efforts to control it, and now afflicts parts of seventeen States, Department of Agriculture officials have said, according to a report in the New York Times. While some control methods are partly effective, there is no known method of complete extermination, officials said. The beetles spread each year a distance of ten or twelve miles beyond the area infested in the previous year. Experts regard infestation, as it occurs, as continuous. An area of continuous infestation exists in New Jersey, Eastern Pennsylvania, Northwest Maryland and Delaware, it was said, and it has spread to the metropolitan area of New York and parts of Long Island and Westchester County. The best known agency for control of infestation is a parasite which is brought from Japan. Impregnation of the soil with a preparation of lead arsenic is another preventive. Beetles can be driven from golf courses by this method, but it is not recommended for cultivated lands. There are some sprays which also have been used effectively. Quarantines have been established in all continuously infested areas to prevent transportation of flowers, vegetables and other commodities which might carry the beetles into regions where they are not now found.

My personal character, daily conducted and training must all be considered before I am endorsed as a true Christian.

# LYNCHING TECHNIQUE MARKS TRIAL HELD IN DALLAS, TEXAS

## Writer Asks "Year Book" Properly to Record Fate Of Accused Man

DALLAS, Aug. 31—(By Fritz Cansler for ANP)—Here is one for the statistician who compiles the lynching figures for the year-book! About 10 days ago near the small Texas hamlet, Terrell, 30 miles from Dallas, a white woman reported that she had been the victim of a criminal assault and she gave the police the description of a Negro man as the perpetrator. For a whole day and night a "posse" of citizens searched for the assaulter until finally a man was found who seemed to answer the description, near Ben Wheeler, a few miles from the place the crime is alleged to have occurred. The Negro, heavily manacled, was hurried to Dallas' lynch-proof jail and promptly indicted for criminal assault, a capital offense in Texas.

With the speed with which such cases are handled in the South, under a change of venue the Negro, guarded by 15 officers and a half dozen Texas rangers, state police, left the Dallas jail at 3:30 a. m. last Monday for Kaufman in an adjoining county. Promptly overruling a defense motion to quash the indictment on the claim of racial discrimination in the selection of the grand jury, and in the face of the statement of several witnesses, including Judge Joel R. Bond, chief justice of the Texas court of appeals, who stated that Negroes had never been summoned for grand jury service in Kaufman county, the trial was underway and testimony taken. After a characteristically short trial in which the Negro's life was at stake, the case was turned over to the jury, who deliberated for five whole minutes, and returned with the verdict "guilty as charged," with the punishment, electrocution.

Citizens commenting on the case are of the opinion that regardless of the guilt or innocence of the accused, that the presence of hundreds of spectators crowding the court room and the streets around the court house during the course of the trial, must have had their effects on the jury. Others have stated that five minutes is all too inadequate a time to consider the evidence offered at the trial, unless opinions of the jury had already been formed through newspaper publicity and other incidents which attend such a trial almost anywhere in Dixie.

Instead of jubilating too much over the published statistics, the compiler who is really desirous of giving a true picture of the trends in the south must make some note of convictions of this sort. Mr. Year Book editor, in what respect does the above recital differ from the story of any other lynching?

## POPE PIUS APPOINTS FOUR AFRICAN BISHOPS TO WORK AMONG COUNTRYMEN

**History Of Catholic Church Shows That Rome Was Presided Over By Three African Popes During Early Christian Era**

By Henry Watts
(Interracial Review)

A few weeks ago it was reported in the press that Pope Pius XII had promoted two Negro ecclesiastics to the episcopate. The secular journals seemed to find something extraordinary in this. However, there is more to come. For news from Rome is that two more colored priests are to receive episcopal consecration. The word colored is used rather than Negro; because while both the new prelates are natives of Africa, only one may properly be described as a Negro.

The high distinction of being the first African Bishop, certainly in modern times, goes to His Excellency the Most Reverend Joseph Kiawanuka, a native of Uganda, who is appointed Vicar Apostolic of Masaka, in the Uganda territory.

His Excellency was born June 11, 1899, in the village of Nakibare, of Catholic parents. Entering the Order of the White Fathers in 1930, after he made his studies at Bakulasa and Katigondo, he was sent to the Angelicum in Rome where, in 1932, he took the degree of Doctor of Canon Law magna cum laude. The new Bishop is renowned for his wide knowledge of Latin as well as for his elegance and proficiency in speaking the Church's language. Bishop Kiawanuka is, by the way, the first native of Uganda to enter the Order of the White Fathers.

Of the recently appointed bishops-elect, the first is Monsignor Joseph Faye, of the Holy Ghost Fathers, who was ordained priest by Cardinal Verdier at Notre Dame, Paris, on October 25, 1931.

Father Faye comes from a remarkable Catholic Negro family. His father, who was in the employ of the French Company of Carabane, used to attend Mass every morning at half-past five, before starting out for his day's work. It was the custom for the whole family to assemble every day for family prayers in common, and from such a household it is not at all extraordinary that there should have come vocations to the priesthood and the religious life. Of the five children of the elder Mr. Faye one is the bishop-elect, another son is a seminarian. The three daughters entered religion. One of them, now dead, was a religious of the Daughters of the Sacred Heart of Mary; the two surviving daughters are novices in the Sisters of St. Joseph of Cluny.

The new ecclesiastical territory, of which Father Faye is to be Prefect Apostolic, lies somewhat to the south of Senegal, between British Gambia and Portuguese Guinea This is a fertile and populated district known as Cassamance. It has been detached from the Apostolic Vicariate of Dakar and erected into a new Prefecture Apostolic. It was a Sedhiou, in this same territory, that Joseph Faye was born May 22, 1905.

After his studies at Ngasobil and the School of the Missions at Allex, in France, Joseph Faye entered the novitiate of the Congregation of the Holy Ghost, making his religious profession October 26, 1927. The new territory over which he will exercise episcopal jurisdiction as Prefect Apostolic counts 8 Holy Ghost Fathers, 2 Brothers, 7 Sisters, and 88 cathechists, who work among 11,247 Christians and 1,186 catechumens.

The other native African who has been nominated to the episcopate by Pius XII, is Monsignor Ignatius Ramarosandratana, a secular priest, Malagasy by race, who is appointed Vicar Apostolic of Miarinarivo, in Madagascar.

The bishop-elect is a former pupil of the Jesuits, under whom he made his studies at St. Michael's College, Tananarive. On February 18, 1925, together with eight companions, he was ordained to the priesthood by Bishop De Saune in the cathedral of Tananarive. It is important to observe that these nine newly-ordained priests were the first secular Malagasy clergy in Madagascar. Not, be it noticed, the were already five native Malagasy priests in the Society of Jesus.

The two Africans who will shortly be consecrated Bishops of the Catholic Church, while chosen for the fidelity and piety of their lives, were the choice of the Holy See for intellectual reasons as well. Monsignor Faye was, from 1932, a professor in the junior Seminary of Poponguine, a post which he held until he fell victim to the dreaded sleeping sickness of Africa, from which he made a complete recovery.

Although the four recently appointed Bishops--elect are referred to as the first African Bishops, they are by no means the first rulers which Africa has given to the church. In the first centuries of Christianity three of the Popes certainly were Africans; whether they were of European extraction or of the colored race has never been definitely settled. This much is certain—there have been three African Popes.

Nothing more pointedly proclaims the universality of the Catholic Church than the appointment of clergy, native to the missionary countries, as rulers and administrators of that church. And, by the way, it is interesting to note that the Society of Jesus is promoting this apostolate of universality by the ordination and professing of members of races other than the white race in the ranks of the Society.

## 'OLDEST' COW DIES

BATH, N. Y., Aug. 3 (AP)—"Queen Victoria," the Holstein cow with a $700 trust fund, is dead.—at 29. Believed by its owner to have been the oldest cow in the United States, the animal received its name by virtue of having been born on British Queen Victoria's birthday. Its owner, Miss Idah M. W. Vanhousen, established the trust fund.

## NEGRO CHOSEN TO DIRECT PHILADELPHIA ART WORK

Special to The Christian Science Monitor

PHILADELPHIA—Allan Freelon, South Philadelphia Negro, whose paintings of quiet fishing scenes in Gloucester, Mass., have received wide attention, has been selected to direct art work in the public junior high and vocational public schools of Philadelphia. An art supervisor in the public schools here for the last 17 years, Mr. Freelon finished first in the examination for his new positon.

## RECOMPENSE

By Lyla Myers

The summertime's vacation time.
Tired city workers know
If they hang on til summer days,
Away—then—they can go.

And, coast to coast, each city one
Seeks change in some retreat
Out in the country, far from noise
Found on the city street.

But country persons never talk
Of change or of vacation.
They work right through each day—all year—
These farmers of our nation.

I think I know why they don't get
Vacations in strange places:
It's 'cause they're blessed by daily work
In God's fine open spaces!

—Afro-American.

## CONNECTICUT COW NAMED AS THE MOST BEAUTIFUL

Hornedbel Maggie II, an unambitious six-year-old cow, was chosen as the most beautiful cow in the United States and received the title of "Miss Americow" from a jury of experts yesterday. The cermony was held at Carnivaland in the amusement area, and fifteen cows from different states participated. Horncdbel Maggie II is from the Borden exhibit and is owned by W. H. Carpenter, of the Talisman Farm, Bridgewater, Conn. The judges were Normal Bel Geddes, Frank Buck and Howard Smith, of the Living Magazine Covers show in the amusement area.

## TURKEY DAY SHIFT AROUSES NATION

New York, (SNS) — President Roosevelt's decision to advance the observance of Thanksgiving Day one week had created a national controversy Tuesday. As in most controversial issues, there were many for the idea, many against it.

Most heavily listed among the ones against the idea are the football people, coaches, players and fans. Traditional New Englanders, whose ancestors started the observance in this country, were a close second. Poultry dealers who thought turkey sales might be hurt were also listed among those who dislike the idea.

**O. K. With Some**

But, among those with the President are, particularly, the business people, who think it will give more time for economic recuperation before Christmas. Then there are the thousands who think one Thursday for Thanksgiving observance is just about as good as the other.

The possibility that states might observe different Thanksgiving dates loomed strongly. The Presidential proclamation in regards to Thanksgiving is binding only in the District of Columbia and territories belonging to the United States. Though it has been their custom, governors of the several states may conform to the President's proclamation—or may not.

**F. D. R. Has His Say**

Mr. Roosevelt, a guest in Halifax Canada, said he had decided the traditional last Thursday in November was too late for Thanksgiving, so he was advancing the date from November 30 to November 23 this year.

## Colored Postmen

(Continued from Page 7)

postal employe. Acquiring of foremen in post offices in Chicago, Washington, New York City, Baltimore, Detroit, Columbus, Cleveland, St. Louis and Philadelphia were cited as evidences of the increasing influence of the organization. Among the speakers addressing the convention were Foreman J. Wesley Jones of the Chicago post office, and Burress Cooper, a clerk-in-charge of the Chicago Terminal Railway Post Office, the only Negro holding such a post.

Calling attention to the fact that the only supervisory position of any importance now held by a Negro was that of assistant chief clerk-at-large John Wesley Dobbs, Atlanta, introduced a resolution on Friday calling upon Postmaster General James A. Farley to create the positions of chief clerk, and assistant chief clerk-at-large, both new positions, in the office of the second assistant postmaster general, and two similar posts in the office of the first assistant postmaster general. The second assistant postmaster general handles the transportation of the mails, all branches, and the first assistant is in charge of the post offices. The resolution was adopted and the letters prepared for forwarding to Mr. Farley, after the convention had approved this action.

With 84 accredited delegates, and over 200 visitors from all parts of the country, the convention went into history as being the biggest convention ever held by the alliance since its inception at Chattanooga, Tenn., in 1913. An outstanding visitor was former National President Alonzo Glenn of Cleveland, under whose administration the alliance changed its constitution to permit the admission of post office clerks, letter carriers and other affiliated employes of the department into membership. At first the NAPE was an organization composed entirely of railway postal clerks who had organized to combat their exclusion from the ranks of the Railway Mail association which adopted a "lily-white" policy in 1911. It was in 1921 that this rule allowing only railway postal clerks in the alliance was changed.

The convention opened on Monday night with public welcoming services at the Metropolitan Community Church, with Percy R. Hines, retiring editor, as the master of ceremonies. In the absence of Mayor Edward J. Kelley, who was on the West Coast and unable to return in time for the gathering, Major Oscar Patterson, assistant corporation counsel of Chicago, greeted the group for Mayor Kelley. Others who spoke were Ralph Mizelle of Washington, attorney in the solicitor's office; Postmaster E. J. Kruetgen, Sidney M. Jackson, Washington, and President Fred. Norval E. Perkins, president of the Chicago branch, was assisted in convention arrangements by William A. Little, who was general chairman, and Mrs. Maude L. Riggs, president of the Chicago Ladies Auxiliary, was in charge of the arrangements for the meeting of the auxiliary to the N. A. P. E. Mrs. Marie M. Gray of Washington, president of this body, was the presiding officer.

In spite of the fact that many amendments to the constitution were presented to the convention from different branches in the country, very few constitutional changes made, and the particular amendments aimed at reduction of the monthly dues were not approved by the committee in charge of this legislation. However, the office of the national welfare director suffered some changes, which gave it more latitude in operation.

The Chicago committee of arrangements had prepared a full program of entertainment for the visitors and delegates, and the social calendar included a smoker and card party at the Quincy club, a dance at Bacon's Casino, excursions through Chicago's Chinatown, the Chicago post office, largest in the world ,and the stockyards.

## IOTA PHI LAMBDA SORORITY TO HOLD 10TH ANNIVERSARY

WASHINGTON, Aug. 24—(ANP) —The Sixth Annual Convention of Iota Lambda sorority will be held August 26-29 on the campus of Howard University. This is the 10th year of the sorority's organization, and it is expected that many of the addresses during sessions will be centered around an anniversary theme. The business sessions are to be held in the lecture room of the New Founders Library.

On Sunday, August 27th, the educational meeting will be held in the Andrew Rankin Memorial chapel when persons prominent in educational and civic circles will appear on program.

Mrs. Velma Williams, member of the board of education, will preside at this session; Prof. Charles M. Thomas, well known educator of Washington, will deliver the main address, and the response to the addresses of welcome will be made by the national president of Iota Phi Lambda, Mrs. Lola M. Parker of Chicago.

An elaborate social program, including formal dances, cocktail parties, reception and a sight-seeing tour of Washington and nearby Mt. Vernon and Arlington will be tendered the visiting sorors and delegates by chapters of various Greek letter organizations.

Officers of Gamma, the entertaining chapter, are Marguerite E. Harvey, president; Jane Bosfield, vice president; Louise Jenkins and Sarah Plater, secretaries; Lottie Harrison, journalist; Vivian Brown, dean of pledges; Emmie Floyd, recording secretary, and Elsie Lewis, treasurer.

## CHICAGO CLUB IS HOST TO MOORE, VIRG. ISLANDS JUDGE

CHICAGO, Aug. 24—(ANP) — "When those who know you best pay you homage, it's praise indeed." Some thought such as that expressed by that ancient couplet must have occurred to Judge Herman E. Moore, recently sworn in as district judge of the Virgin Islands of the United States, Saturday night as he and Mrs. Moore were the honored guests at a banquet tendered by the famous "Forty" club of Chicago, at Morris cafe. and heard his most intimate friends extol his virtue and worth. The occasion was one of a series of events honoring the new appointee. Judge Moore is a veteran member of the Forty club, which is composed of business and professional men of the city who have grown up together, many of them occupying important places in the civic, official and commercial life of Chicago.

President Walter Abernathy presided and introduced the speakers. Among those who spoke were Attys. William H. Temple, Joseph D. Bibb, Wendell E. Green, C. C. Wimbish, Aaron E. Payne, William H. Haynes, Dr. Louis Gans, Edgar G. Brown and Mrs. Moore. Present were Messrs. and Mesdames Walter Abernathy, C. C. Wimbish, Nelson Glover, Fred G. Trapp, Leslie Abernathy, Macon Huggins, Benjamin Martin, Claude A. Barnett, Frank Edwards. G. W. Mollison, Wendell E. Green, M. M. Dillard, Mr. and Mrs. Cheeks of Evansville, Ind., Drs. N. Alfred Diggs, Louis Gans, James Allison, J. Pratt and company, Maurice Hebert and Miss Lillian M. Greer, A. W. Williams, Ted Cole, Mrs. Brown and Edgar G. Brown.

Pittsburgh Post Gazette: We are living in a machine age, all right, with half the people being run through it.

## LOUISIANANS ARE SAYING

(Continued from Page 1)

up the few remaining rough spots to beautify the grounds.

The construction program includes a large classroom building costing $129,000; a girl's dormitory, $64,000; a gymnasium-auditorium, $40,000; library building, $34,000; a dining hall, $36,000, and a home for the president, the latter having been erected from an allotment of $6,000, which included funds for some of the landscaping of the campus.

An additional $31,000 has been provided for a water and sewage-disposal system and a sum of $23,000 for furnishings to equip the new buildings.

**Plan Dedication**

All of the new structures are expected to be ready for use with the opening of the fall term in September, according to the president, Ralph W. E. Jones.

Plans are being made for a formal dedication of the new buildings about the middle of November, at which time persons who have gained distinction in education and in other endeavors will participate, President Jones said.

Preliminary work has started on the building of a hard-surfaced black-top highway leading a mile and a half from the Shreveport highway to Grambling.

All of the new buildings are of red brick and of colonial design. They face a large quadrangle, which will be landscaped and made into a beauty spot.

Fixtures in the new structures attract considerable favorable comment from visitors and are said to be drawing more than local interest.

There are no gold faucets in the bathrooms, but what is there is ornamental as well as useful. Gray marble walls separate showers, which are equipped with marble corner seats.

The gymnasium-auditorium is outstanding in its novel appointments. Along the side of the basketball court are some new-fangled seats that can be folded up and "shelved" out of the way when the floor is desired for dancing.

In one wing of the building is a smaller auditorium and stage suitable for play-rehearsing and surrounded by music practice rooms. Under the main stage, at the other end of the auditorium, are lockers and towers.

**To Offer 3 Year Course**

Massive white columns add to the attractiveness of the new girls' dormitory. Rooms in that building have hardwood floors and hallways are covered with an inlaid composition material.

In brief, everything in every building is considered as "the last word" in modern conveniences.

Such is the status of the state's school at Grambling, which is getting in shape to become a three-year college, perhaps this September, it is said. The school at present operates as a two-year institution.

Grambling is the center for Race schools in other parts of the state. It has an enrollment of about 600 students in regular terms and about 400 in Summer sessions, although the new facilities are expected to swell the number of students. The teaching staff at present totals 32 members.

The Grambling president, Jones, was a teacher of Grambling for 11 years before succeeding Charles P. Adams as head of the institution about three years ago.

President Jones is a graduate of Southern university, holds the master's degree from Columbia university in New York City, and has done some work toward the doctor's degree.

His accomplishments at Grambling are said to draw attention in various parts of the country, with the school being visited frequently by people interested in education, particularly the field of rural education.

**Founded in 1903**

Grambling was founded about 36 years ago as the result of a squabble that "split the ranks." The school, at first sponsored for the most part by church funds, was established at a place called Allen Greene, only a short distance from the present site of Grambling.

Allen Greene, as well as Grambling, was located on the Illinois Central railroad. When some differences arose the school was moved to Grambling. which at the time included little more than one sawmill. It was some time before the Grambling faction succeeded in getting the trains to stop at their place, the trains continuing to stop at Allen Greene.

Eventually, however, the railroad depot was placed at Grambling. Several years later, in 1929, the Grambling school was given state aid for maintenance.

Today, the place has a postoffice, operated by Race postmaster three stores and several churches and homes besides the buildings on the school campus.

Thus, a new day has dawned for the all-Race community which got its start through dissension. But, there's no grumbling at Grambling today—not with all those fine new buildings.

## MR. AND MRS. CARTWRIGHT PURCHASE

(Continued from Page 1.)

Mr. and Mrs. Cartwright made the last payment and now hold the deeds. The son, Joe, never lost a day, he seldom socialized, he saw very little of the white lights of the city but like the father, the son applied himself while the elder Cartwright and his wife sacrificed, toiled, labored by tickling the earth, knowing what to do with the soil it yielded and brought forth in abundance and they took their products to the market sold them and made regular payments on the farm. This all happened in Williamson County, here in the Volunteer State.

The life of Mr. William Cartwright and his family is one worthy of emulation. What man has done, man way do," is clearly demonstrated by this member of our group and should serve as a stimulus to those who wis hto accomplish something in life.

## STUNG BY BEE, COLLINSVILLE MAN DIES HALF HOUR LATER

EAST ST. LOUIS, Ill.,—Leo R. R. Conwell, 53 years old, died at his home, Aug. 23, near Collinsville thirty minutes after being stung in the forehead by a bee. Directed by a physician, firemen worked on Conwell with a pulmotor for an hour, but were unable to revive him.

## 50,000 MILES IN SOUTH OF SOIL CONTROL TERRACES

**Christian Science Monitor**

SPARTANBURG, S. C.—Broad-channel terraces—over 50,000 miles of them—have been constructed on soil erosion control projects and CCC camp areas in seven Southern States, as farmers prepare for the long seige against water, it is reported by Dr. T. S. Buie, regional conservator.

## Nabrit Is Chosen Acting Secretary At Howard Univ.

WASHINGTON, Aug. 24—(ANP)—James M. Nabrit, executive secretary to President Mordecai Johnson of Howard University, last week was appointed acting secretary of the university for the months of August and September. The appointment is subject to confirmation by the executive committee of Howard's board of trustees.

In addition to his other duties, Prof. Nabrit is a member of the school of law faculty. Several months ago he attracted national notice when he appeared before the U. S. Supreme Court, won a decision in the case of Lane vs. Wilson. By the high court's ruling, the registration laws of the state of Oklahoma were declared invalid, as being discriminatory.

## Fascists Suffer Heavy Defeat In Ethiopia

PARIS, Aug 31.—News of the most serious diseaster that has yet befallen Italian armies in the still unfinished struggle of Ethiopia for national independence has just leaked through the strict censorship imposed from Rome on all news coming from the East African country.

An Ethiopian querrilla army operating in the district of Bagaundir cut off the entire local Italian force of occupation and captured the whole Italian army staff of the district. Among the prisoners were General C. Tosti, Colonel Angeloni, Major E. Piccone and Lieutenant Fantuzzo, Longlio and Barardinelli.

Numerous troops, both Italian, including Carabineri and native Askaris, together with additional officers whose names are not known, also fell into the hands of the Ethiopians.

**Fail in Ethiopia Drive**

The climax to the campaign in which the fascist forces not only failed to make any impression on the Ethiopian troops holding out in the mountains, but were forced at one time to retreat as far back as the fortified lines outside Addis Ababa itself. The base of the Ethiopian warriors was only 40 miles from the invader-held capital.

Over two-thirds of Ethiopia is today practically free of Italian occupation. This includes the greater part of the provinces of Shoa and Gojam, and districts of Bagaumdir Semion and Ambo, stretching from ADdis Ababa south towards the mountain lakes.

The administration of justice and other state functions is carried out in the name of the exiled Emperor, Haile Selassie, and the only Italian garrisons are in scattered forts provisioned principally by air craft. It was in attempting to relieve the occupants of one of these forts that the fascists detachment met disaster.

Even within the strongly-held areas, Ethiopian raids make economic life impossible. Attempts to revive cotton and coffee-growing have failed. The railways and roads are frequently made impassable by destruction at the hands of armed bands.

The unconquerable spirit of the people is typified in the statement of Lis Yohido Yasu, commander of the forces that won the victory in Bagaumdir, in a letter to Haile Selassie:

"We have taken guns, machine guns and rifles from the Italian, he writes, and henceforth we shall fight them with their own arms."

Potato chips were introdueed by a Negro chef in 1865.

## GETS S. C. TO ADOPT NEGRO BOOKS IN ELEMENTARY SCHOOL

(Continued from Page 1)

Negro books in the public school list is due to the credit of a Negro school teacher in the Allendale school at Allendale, S. C. Little is known of this young woman, for she works in a small town. But she is one person who is interested in the development of her race. Her name is Hilda V. Grayson. While attending school, she was convinced of the importance of the story of the Negro race reaching the ears of the boys and girls of her race. She said, "They will see the possibility of rising in spite of all handicaps."

**Allowed To Present Views**

So intent was this young teacher in her beliefs that she was permitted to present her story to 5,000 members of the Palmetto State Teachers association. At its last session in March, she directed a history group which was a credit to her race. With her own means, she gathered and arranged a program which placed emphasis on Negro life. This included methods of presenting the materials, the use of Negro music and literature in schools. Included in this program was an exhibit long to be remembered by the 1,100 persons visiting the group. In the exhibit were over 50 Negro journals, more than 100 pictures of leaders, and 20 very good displays from various schools showing the progress made by Negroes in South Carolina and America. Among the autographs colle ted during this meeting were those of officials from the state department of education.

This young woman has made several trips to popularize her belief in Negro literature. Among these was a trip to New York where she made personal contacts with book publishers and libraries, visiting the Shomberg collection, in an effort to collect material suitable to be presented for adoption by her state. She was a member of a committee that visited the department of education in an effort to have books adopted.

**Extensive Writer**

She has written over 100 articles to teen-age boys and girls, telling them about leading men and women of their race. She has in a scrapbook many complimentary letter from such persons as Mrs. Mary McLeod Bethune, Dr. C. C. Spaulding, Dr. J. J. Starks, the Rev. L. K. Williams, Dr. Carter G. Woodson and others.

## EGYPT TO TRADE COTTON FOR ARMS WITH BRITAIN

CAIRO, Egypt, Aug. 2.—(UP)—The Ministry of Finance announced today that the government was negotiating to exchange a large quantity of cotton for British arms and munitions, and that an agreement was expected soon.

It was added that the Spanish government was prepared to take a large quantity of cotton on easy terms.

The agreement with Britian would provide that the cotton it took would be held in storage for five years, and would be used before the expiration of five years only in an emergency.

## WHITES REPLACE COLORED IN N. C. LEAF FACTORIES

Raleigh, N. C., (ANP)—Negro tobacco workers throughout the state are alarmed over the Kinston, N. C. "experiment," of using white women instead of Negroes as tobacco stemmers and which has resulted in throwing hundreds of colored employes out of work.

David Stowe, assistant administrator, state employment service said last week that after filling an order for 100 white women workers, his office had been requested to supply 400 more as stemmers and tyers. Reasons for the "experiment," as given by the white tobacconists reportedly were as follows:

Reported dearth of young colored women efficient enough to earn the minimum wage of 25 cents per hour.

The inability as yet of stemming machines to imitate the human touch in processing tobacco.

This season's rule of employers that stemmers must be able to remove 25 to 30 pounds of stems a day in order to make their employment profitable under the Wages and Hours act.

Prior to the act, workers did 'piece work" and were paid a straight wage rate per pound of tobacco stemmed. Some of the colored women traced their percent trouble to disgruntled white housewives who pay Negro servants top wages of $4 and $5 a week, then protest when the domestics leave in the Fall.

## Dr. J. Leroy Baxter Of New Jersey New Head Of Dentists; Enroll 500 Members; Go To St. Louis

NEW YORK, Aug. 24 (ANP)—With the naming of Dr. J. Leroy Baxter of Orange, N. J., as president-elect, the National Dental association closed what observers called the most successful convention of its 26 year existence here Friday. At the final business session the secretary-treasurer, Dr. J. A. Jackson, reported a membership of over 500 dentists. St. Louis was selected as the site for the 1940 convention with the Mound City Dental society as hosts. Dr. Waldo J. Howard of Houston is the new national president for 1939-40.

The convention opened at the headquarters, Public School 113, Monday morning with the invocation by the Rev. John H. Johnson, rector of the St. Martin's church.

Dr. C. D. Maxey, president of the North Harlem Dental society, welcomed the members from the 30 states on behalf of the host society and pledged the support of his organization to the program of the national body. Response to the welcome address was made by Dr. Waldo Howard, president-elect, who replied that this program was one of the best to be presented to the national body in its years of existence.

The address of the president, Dr. S. C. Hamilton of Chicago, stressed the fine spirit of cooperation exemplified by the local and state organizations. He stated that the association was in accord with the principles of the Wagner Health bill in so much as it offered better health services to the indigent and needy. But, he felt that the Wagner Health bill should contain more exacting reference to dentistry, and also to the protection of the minority groups throughout the country. This protection can best be carried out by the inclusion of members of the association on the "state advisory council" and representatives of the national administrative offices carrying out the distribution of the health funds.

Dr. George W. Bowles of New York, president of the National Medical association, expressed the desire of physicians for a better understanding between the two separate and distinct organizations, feeling that there is an opportunity for these two groups to serve a definite and distinctive purpose in their respective fields.

The scientific session opened Tuesday at the school of dental and oral surgery, Columbia university, in the Medical center. Dean Houghton Holliday welcomed the delegates as the first Negro professional organization to hold sessions in their dental school. Faculty members presented scientific sections.

Dr. E. C. McBeath addressing the session on "Dentistry for Children" made the statement that decay of teeth is more prevalent in the late winter and early spring months than any other time during the year. His reason was that in these periods the lack of proper sunshine permitted rapid decay since only sunshine, concentrated cod liver oil and ultra violet rays give the needed vitamin D. to the system. Dr. McBeath also stated that dietary control along with controlled environment and a daily routine has cleared up decayed teeth in children.

Dr. Waugh discussing orthodentics for general practitioners mentioned that around the age of seven was the most opportune time for any corrective measures of straightening the teeth.

Abyssinian Baptist church was the scene of the joint public welcome meeting of the National Dental association and the National Medical association by the citizens of New York. Heading the reception was Fiorello H. LaGuardia, mayor. Others appearing on the program were Lt. Governor Charles Poletti, Col B. O. Davis, chairman, Local Citizens' committee; Dr. Charles C. Middleton, president of Manhattan-Central Medical society; Dr. C. D. Maxey and Dr. George William Bowles.

In the joint meeting of the N. M. A. and N. D. A. at which the subject was "Medical and Dental Education for Negroes in the United States," Dr. Numa P. G. Adams of Howard university stated that hospitals should be controlled by the medical schools. There should always be close cooperation between hospitals and medical students in training. In this manner the patient becomes the teacher and provides the opportunity for the student to get actual experience. Direct contacts with patients makes for better physicians and dentists.

Dean Russell A. Dixon of Howard stressed the advancement in the training of dentists, and deplored the fact that not enough dentists obtained further training. This training may be provided by post-graduate courses in some of the class "A" dental colleges.

Dr. M. O. Bousfield, director of Negro health, Rosenwald fund, presented statistics showing the limited facilities offered Negro doctors and dentists. Dr. Wilson Smilley, professor of preventive medicine, Cornell Medical college, felt that there should be no discrimination between the races since disease germs make no discrimination in their attacks. He contended also that equal opportunity for training is vital to the health of the whole community.

Officers elected in addition to those previously listed are Dr. Leon A. Reid, vice president, Richmond, Va.; Dr. H. C. Edwards, Washington, assistant secretary; executive board, 1939-42 are Dr. C. D. Maxey, New York; Dr. W. H. Springer, Cincinnati; Dr. J. M. Tinsley, Richmond, Va.; Dr. P. W. Hill, Clarksdale, Miss.; Dr. E. L. Harper, St. Louis, and Dr. O. L. Lattimore, Houston, Tex.

Committee chairmen are: public relations, A. S. Hunter, N. C.; National Health week, S. J. Cullum, Texas; publicity, Millard R. Dean, Washington; national program, M. D. Wiseman, Washington; journal, L. H. Fairclough, N. Y.; budget, F. S. Upshur, Pa.; educational extension, R. A. Dixon, Washington; clinic research and progress, W. J. Madison, Wash.; national exhibits, W. J. Morris, N. J.; dental bulletin, Stephen J. Lewis, Va.; statistics and history, Cicero Edwards, Washington, and credentials, W. O. Clayton, Wash.

## FCA NEGRO MEMBERS

(Continued from Page 1)

paying their loans as rapidly as they secure income from the sale of farm products. He states that this is a good plan to follow and brings about a considerable reduction in the cost of the loan. He reports further that he found several farmers who were not able to qualify for loans due to insufficiency of collateral, lack of clear title to property, or failure to have cancellation of mortgage recorded. "These are serious problems facing Negro farmers and must be given careful consideration in our programs for agricultural improvement," says the successor to the late Dr. H. A. Hunt.

Questioned as to specific cases concerning some of the colored member-borrowers of FAC services, Mr. King cited the following examples selected from the Oklahoma territory:

Mr. Robert Partridge of Boley, Oklahoma, has 1160 acres of land with more than 800 acres under cultivation. He has 38 very fine Hereford cattle, 138 Poland China hogs, and ample poultry and turkeys. Even at this season he still has on hand some 500 pounds of cured pork. The place is managed by his two sons and worked by eleven tenant families.

Mr. Partridge is a member of the County AAA Committee and is also a member of the State FSA Committee.

Mr. P. L. Anderson, member-borrower of the Farmers National Farm Loan Association at Okemah, Oklahoma, owns 120 acres, of which 72 acres are in cultivation. He has a 5-acre orchard composed of apple, peach, pear, and plum trees, and about one acre in grapes. His orchard is considered one of the best in that section. Over 300 chickens, seven beef cattle, and 18 hogs serve to supplement the income from the orchard and cotton crops. Mr. Anderson's son is in partnership with him.

The most interesting member of the Eastern Oklahoma National Farm Loan Association at Tahlequash, Okla., was a widow, Mrs. Gordon, who was operating a 160-acre farm with the help of her three boys, ranging in age from 12 to 23 years. The county agent, Mr. A. H. Furh of Muskogee has assisted in helping her to secure the loan and was therefore intensely interested in instructing them in the proper management of the farm so as to support the family, meet the semi-annual payments, and also keep up operating expenses. Mrs. Gordon proudly showed us her turkeys, chickens, hogs, and beef cattle she was raising to supplement the cotton and small grain as major cash crops. She stated that the income from her turkeys met the fall land bank payment and the income from her poultry met the spring note.

The Special Assistant to the Governor of the FCA says that Farm Credit service is available to all farmers who can qualify, regardless of race, creed or color. He urges Negro farmers to make more extensive use of these low-interest-bearing cooperative services.

Colored farmers desiring information relative to Farm Credit assistance may secure it from the county agents, teachers of vocational agriculture, or may write directly to Cornelius King, Special Assistant to the Governor, Farm Credit Administration, Washington, D. C.

## FARM FUND RESTORED

(Continued from Page 1)

$160,000,000 cut out by an economy bloc in the House. Senators were hopeful restoration of this could not cause a deadlock which would delay adjournment.

In calling up the bill in the Senate, Adams announced the Committee sought consideration at once in order to expedite plans for adjournment tomorrow night, despite the fact there were no printed copies of the amended bill.

Senator Byrnes (D.) of South Carolina, a member of the appropriations committee, said the only Senate reduction was elimination of a $300,000 House-approved item to begin construction of a rigid airship for the navy.

The biggest increase was the $119,000,000 for the Commodity Credit Corporation, which makes government loans on farm crops.

Only a short time before the bill reached the chamber it had been approved in its present form by the appropriations subcommittee. which restored the $119,000,000 item for the Commodity Credit Corporation.

The action came almost simultaneously with indorsement by President Roosevelt of Secretary Wallace's insistence that the money, for the Commodity Credit Corporation, be restored to the third deficiency bill, from which it was slashed by the House. He said it was essential to continuance of the farm loan program.

The Secretary appeared before the Senate appropriations committee yesterday as that group worked at top speed to get the deficiency bill ready for Senate action in order to permit adjournment of Congress Saturday night.

The controversy over the farm fund was the lone threat to adjournment at that time.

## TEXAS WOMAN MANAGER

(Continued from Page 1)

cattle business are two industries which must be closely watched and skillfully managed to produce profitable results. Events have proven that the fears of friends were groundless. Mr. Jones had trained his daughter, Beatrice, carefully as his secretary and with the aid of her sister and astute mother, their operations have been increased over what they were when Mr. Jones lived.

The Jones family's plantation, consists of 1,700 acres which is owned outright. On this land this year they planted 300 acres to cotton on which they made 150 bales. Five hundred acres were planted in cover crops, soil buildings legumes required under the government conservation program. Their check from the government alone under the payment for cotton subsidy was $3.00. Their 21 tenant families received $1,000 as their subsidy share. The Joneses received an additional $800 from the government for their soil conservation planting.

Miss Beatrice Jones explained that they rented 3,160 acres for pasture purposes upon which they feed 500 cattle. They sell three carloads each year of calves and old cows, but through a lucky stroke she was able to rent one-third of her rented acreage to a rice grower the rice farm rental covering the entire cost of her pasturage making the cattle grazing a clear profit. She rents another 100 acres to a white farmer at an additional profit.

Most of the 21 tenants on the Jones plantation this year are Mexicans, although formerly they were all colored. Seven of these are sharecroppers, working on halves and the others are tenants who own their own equipments and furnish their own upkeep, thereby paying one-third and one-fourth of their crop for rental.

Although oil wells are producing all about them and they have received $30,000 over a period of time for leases on their lands, their holdings have not as yet been drilled.

Their home is a lovely mansion like structure built by their father. Beautifully furnished, with every modern convenience, an electric range, natural gas, gorgeous dining appointments, needle point chairs and rare dishes, the home reminds one of an historic plantation dwelling.

Hospitable and gracious, the three greet and entertain their friends, colored and white, with a gentility which smacks of true aristocracy.

"What we have been able to do is not so wonderful," said Beatrice Jones. "We have used simple, straightforward business methods and have tried to apply common sense to our operations. The governmental programs of the AAA have proven a great boon to us. Without their aid we would have been compelled to find new crops to plant. The government acreage reduction has been rather severe, however, on our tenants. We would prefer they had larger tracts to farm."

"These holdings and our opportunity for service are the result of the great wisdom and ability of Mr. Jones," said the mother. "He made this farm, buying one tract after another until he had assembled the whole. He was a contractor in his early days, manufacturing ties for the railroad company. He saved his money, invested it wisely, and it is our purpose to carry on in the same spirit."

The family is well known socially throughout the country. Both daughters are graduates of Wiley College and Beatrice is an active member of the Alpha Kappa Alpha sorority. Miss Willa Jones is the former wife of Attorney Bob Booker of Little Rock, Ark. They have one son who has been named Y. U. Jones, II. He is attending high school in Houston, but since he is heir, to the estate Mrs. Jones wishes him to be trained in practical agriculture and is planning, after a year's work on the farm, to send him to Tuskegee to finish his education.

## DES MOINES, IOWAN NAMED

(Continued from Page 1)

ed for experimental test of the food stamp plan. There are about 10,700 relief cases in DesMoines, representing about 30,000 individuals. The total population of Des Moines is given as 142,500 (1930 census).

Variations of the stamp plan to be tried out in Des Moines will be quite similar to those already being tested in Dayton, Ohio. One group of about 2,500 families at present receiving general relief, part of which is in the form of grocery orders, will be eligible to receive free blue surplus food order stamps to provide for additional food purchases.

This group will not be required to buy the orange colored food stamps which are provided in other forms of the stamp plan. The value of the blue surplus stamps which will be given families in this group will be determined on a basis of approximately 50 cents per week for each member of the eligible family.

The remainder of the approximately 10,700 eligible families, including about 4,500 WPA workers, and those receiving old age assistance, aid to the blind, the mothers' pensions, will be given the opportunity to buy orange colored stamps with cash and to receive free blue surplus stamps in the ratio of one dollar's worth of blue stamps for each two dollar's worth of orange stamps bought. The orange stamps provide for a continuance of normal food purchases by the family, and the free blue stamps are used to secure specially designated surplus food commodities, as additions to the family's food supplies.

Participation in the stamp plan in Des Moines, as in other cities where it is being tried out, will be entirely voluntary.

Actual operation of the plan in Des Moines is expected to start within about a month.

## FAMILY GETS 96-ACRE TRACT

(Continued from Page 1)

move from their present three-room house to a spacious new five-room house near Kerrville next fall immediately after the cotton is picked and the corn gathered.

**Undergoes Improvement**

Homer Jakes, Shelby county Farm Security administration supervisor, announced Thursday that the Joneses had been selected as one of Shelby's nearest ideal tenant families for a loan of $5,110. They will have a period of 40 years to pay it back.

They will have for their convenience a new barn, new outhouses, new well, a carload of lime for soil improvement and new fences built on the farm.

"I don't know of a more deserving Negro family," said Mr. Jakes. "Both have been good managers. They own their livestock and tools, two cows, two heifers, pigs, chickens and grow a year-round garden. They have kept all their children in school."

**Ninth in County**

The Jones family is the ninth Shelby family to benefit from the Bankhead-Jones act and the third Race family. Mr. Jakes said other Shelby farmers will be given the same opportunity, though the exact number has not been determined.

The families will be selected by F. S. A. officials and the Shelby Tenant purchase committee.

## ARKANSANS WIN

(Continued from Page 1)

honors went to Virgil of Georgia; Key of Arkansas, and Cooper of North Carolina, won second and third places, respectively.

The public speaking was won by the team from South Carolina. The quartet from Florida won first place in the singing.

The 600 delegates and teachers attending the conference were addressed by several speakers including Walter White, executive secretary of the N. A. A. C. P.; Miss Frances Murphy of the Afro-American; Claude Barnett of the Associated Negro Press; Leon Harris, president of the National Federation of Colored Farmers; C. C. Spaulding, president of the North Carolina Mutual Life Insurance company; and W. R. Valentine, principal of the Bordentown Manual Training school.

## MUSICIANS END BIG CONCLAVE IN BOSTON, MASS.

BOSTON, Aug. 31 (ANP)—With hundreds of the nation's outstanding musicians, soloists, choral directors and composers in attendance, the National Association of Negro Musicians, Inc., held the closing session of its 19th annual convention here last Friday.

President W. Kemper Harreld of Atlanta delivered his annual address at the Tuesday meeting, outlining the accomplishments of the past year and detailing the planned program for the future. President Harreld is director of music at Atlanta University system, and directed the augmented Baptist choir in Atlanta at the recent World Baptist congress.

On Friday night's concluding program, designated as National Artists night and held in Jordan hall, the following artists appeared: Catherine Van Buren, soprano; Josephine Harreld (daughter of President Harreld) pianist and Marion Cumbo, violin cellist.

The conference program was well spaced and moved with facility; headquarters were established at Ebenezer Baptist church. The public meeting, which attracted a capacity crowd, was held last Sunday at Zion A. M. E. church. Presiding officers during the various sessions were Ernest G. O'Banyoun, Mrs. Lillian LeMon, William H. Wilkes, Margaret Bonds, Mary Cardwell Dawson and Maude Roberts George.

At Sunday's mass meeting, the delegates were welcomed to the city by Boston's Mayor Maurice J. Tobin after which the Hallelujah chorus from Handel's "Messiah" was rendered by an augmented choir directed by Ja. Wesley Jones of Chicago, who annually directs his big Metropolitan choir at the Chicagoland Music festival in Grant Park.

Among the interesting conference subjects discussed were "Training of the Pianist," "How Shall the City Teacher Maintain Standards?" "The Principles of Voice Building," "Choral Conducting," "The New Electric Organ," "Modern Trends in Music Education," "Church Music" and many others.

# THE MODERN FARMER

Vol. XII. NASHVILLE, TENNESSEE, SEPTEMBER 15, 1939. No. 8.

# National Convention of Farmers Meets in Jefferson City, Mo., Oct. 25-27

LIBRARY OCT 2

## OFFICIAL CALL ISSUED BY PRES. LEON HARRIS

### Tenth Annual Convention—Third Time in The Sate of Missouri

Moline, Ill.—It was announced today from the office of the president that the tenth annual convention of the National Federation of Colored Farmers will meet at Lincoln University, Jefferson City, Mo., Oct. 25-27. This is the third annual meeting of the organization to be held in Missouri, two previous meetings having been held in Charleston, in the southeastern section of the state. This meeting no doubt will be attended by more farmers of the race than any other, due to the fact that it will draw large delegations and visitors from Southern states where local Units of the organization are operating as well as farmer-members from all northern states.

The N. F. C. F. is the only national organization of colored farmers which has stood the test of the years. Supported wholly by its membership, it has retained its independence and has thus been able

## HESSIAN FLY LISTED GREATEST ENEMY OF 1939 WHEAT CROP

Urbana,—Hessian fly appears to be the greatest single enemy of the wheat crop in Illinois this year, according to officials of the AAA and entomologists of the College of Agriculture.

Illinois growers numbering 901 have put in claims for wheat crop insurance losses, which also include flood, winter-kill, hail, drouth, rust and other insect pests. A total of 12,153 wheat growers insured their crops under the 1939 program.

Up to September 8, about 716 claims had been settled, and the growers had received the equivalent of 52,799 bushels of wheat to compensate them for the losses. This would amount to about $31,200 as extra wheat income for these insured growers.

Adjustment of loses on the 1939 crop is now about 85 percent completed and nearly all settlements will be finished within the next month, according to J. Francis Bull, state crop insurance supervisor. He estimates that probable losses to insured crops will total 65,000 bushels for the state.

Crop insurance officials say that the indemnities being paid Illinois farmers for their losses are helping them in many ways, such as providing interest payments on loans, payment on back bills and money for home improvements.

## CREDIT UNION AND ITS AIMS

### C. R. Orchard, Director, States Purposes

The Federal agency for which I am speaking this evening, like most other branches of the government, was created to satisfy some particular need of the American people. The credit union's whole aim and purpose is to help the man of small income with his personal finances. For most of us our whole life, our comforts and amusements, our family welfare, revolve around the making and spending of money. Anything such as the credit union, therefore, which helps us solve our money problems, gets right down to where we live, so to speak, and has its helpful influence on almost everything we do.

**Two Ways of Meeting Money Problems**

Nearly everybody has these money problems. A man's first concern is to get an income, which usually means finding a job. His next is to adjust his expenditures to suit his income, and many times that is not an easy thing to do. Out of the regular pay envelope he supplies food for the family, pays the monthly rent, and takes care of numerous other little demands on his pocketbook. But there are many demands which cannot be met out of current income. A winter coat or overcoat, moving expenses, insurance premiums, coal bills, advance to relatives, Christmas and vacation expenses, school tuition, occasional out-of-town trips—all these cost more than the usual surplus over bare living expenses. And then there are the more serious situations to be met—the attackers of sickness, the untimely accident, the calls for treatment of teeth or eyes, a sudden operation, a death in the family. These seldom wait on our convenience to descend upon us with their compelling demands for extra money. How do we meet such demands?

## COLLEGE EDUCATION AND FARMING

### Shreveport Sun Discusses All Absorbing Topic

The modern education, college education, is beginning to make itself felt in different fields of endeavor is becoming more manifest every day. For a long time the idea has persisted that the acquiring of an education, in most cases, made it no longer necessary for its possessor to do manual labor. Because of this erroneous opinion, most young men and women who struggled for higher education chose to become teachers, doctors, ministers, teachers of music or secretaries—those being the principal white collar fields open to educated colored citizens.

But since these professions and fields, in a large number of cases, have become overcrowded this opinion is fast changing and other trades and lines of endeavors are being found and chosen in which to utilize the great advantages offered by a well-planned, practical education. Many of these newly in-

## FIELD AGENT TELLS HOW FARMER SOLVES HIS HOUSING NEEDS

MONTGOMERY, ALA., Sept 28 (ANP)—T. M. Campbell, widely known farm expert and U. S. Field Agent stationed at Tuskegee Institute, authors an interesting article on the bad housing conditions among rural Negroes of the South, in the September issue of Extension Service Review.

Writing on the subject "Out of the Old House, Into the New Home," Campbell tells how Willis and Julia Thurman, small landowners in Elmore County, Alabama, solved their perplexing housing problem by building a brand-new, five room house at a cost of $690.50. The

## MISSISSIPPI MATRON OPERATES DAIRY FARM

### Former School Teacher Co-operates With County Agents

(From Black Dispatch)

**Uses Pressure Milker on 50 Cows**

Chatawa, Miss., (ANP)—Demonstrating that femininty is no handicap to a successful career on a farm, Mrs. Anna Dillon operates here a paying truck and dairy farm. Although she is married, Mrs. Dillon who appears to be about 45 years old, manages every detail of the business.

Peas, beans, corn, vetch and clover are the principal items grown on the place. She specializes in Black Valentine beans, planting two acres each season. Pike county is a truck section. She packs and ships to the nearest market which quotes the best prices.

Mrs. Dillon's dairy herd consists of 26 jerseys. In her immaculate milking shed are installed self-

(Continued on Page 13)

## WILT-RESISTANT ALFALFA

### Ten Strains Being Raised to be Used For Seed

Ten new strains of wilt-resistant alfalfa are being increased this year, and it is hoped that sufficient quantities of seed of the most promising strains will be available for limited distribution by 1942, reports H. L. Westover, alfalfa specialists of the federal bureau of plant industry.

Before wilt became serious alfalfa stands lasted six to twelve years and longer in regions best adapted to the crop. Since the disease put in its appearance about fifteen years ago, it is not unusual for fields to fade out in two to four years, says Mr. Westover.

None of the usual cultural methods helped control the wilt, so department scientists turned to breeding for wilt resistance. The first job was to get breeding stock resistant to wilt. These were found by Mr. Westover on plant exploration trips to Turkistan in 1929 and 1934. Here, where alfalfa has been grown for centuries, little wilt was found

Several hundred samples of the Turkistan alfalfas were brought back to this county for breeding work carried on mostly at the Nebraska, Kansas and Wisconsin experiment stations. They were crossed with American varieties and subjected to wilt inoculum in concentrated form to find those with most resistance. The new strains also were observed to see which could withstand the most cold, which ones could produce the most seed and forage, and which ones were most resistant to other diseases such as leaf spot.

Many hundred strains were studied since the first importations were made. In the cooperative work

## RICHES OF CHRISTOPHE, HAITI'S EMPEROR LURE TREASURE SEARCHERS

Cape Haitien, Haiti —Here's an opportunity for fortune hunters. A treasure cache of more than a million pounds sterling (approximately $4,200,000) is reported to be buried deep in the secret tunnels of the Citadel de la Ferriere, on a mountain top not far from this town.

The fantastic fortress was built by Henri Christophe, black emperor of Haiti. To make sure his plans never would be divulged, he had his architect thrown over the ramparts. The only other man knowing the secret was Christophe himself—and he killed himself without telling where he had hidden his vast wealth.

As a result, no one living today knows the whereabouts of the treasure. Native Haitians insist it's still under the huge Citadel.

## Calling All Delegates and Visitors to the Tenth Annual Convention of the National Federation of Colored Farmers, October 25-27, 1939.

**The National Convention of the National Federation of Colored Farmers, Inc., will meet in its tenth annual session at Lincoln University, Jefferson City, Missouri, October 25-27, 1939. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our organization are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of state and federal agricultural departments who plan to attend the Convention should communicate with us not later than September 1st. Suitable arrangements will be made to entertain all delegates and visitors. All farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.**

**Arrange to attend the greatest Convention of organized Negro farmers in America.**

**Yours for United Colored Farmers,**

**LEON R. HARRIS, Pres. Box 285 Moline, Ill**

**S. B. WILSON, Secretary-Treasurer, 447 4th Ave., N., Nashville, Tennessee**

## MIGRANT WORKERS CREATE DELMARVA SOCIAL PROBLEM

**5,000 Nomads Shift with Crops; Meager Schooling Offered by Trained Supervisors**

(In Afro-American)

**By Trezzvant W. Anderson**

Bridgeville, Del. — Five thousand migrant workers from the States of Virginia, North and South Carolina, Florida, Georgia, Mississippi and Alabama, working in the vegetable fields of great canneries, on this long, large tongue of land stuck between the Atlantic Ocean and the Chesapeake Bay, are creating a serious social problem, as they go about their seasonal work of plucking ripe fruits for the markets of this and other nations.

On the Atlantic Seaboard, from New Jersey to Maryland, twenty-one especially trained migrant camp supervisors, taken from the halls of the nation's best colleges, both colored and white, are doing social work in camps strung out over the area.

Child care and education for both youth and adults comprise the chief needs as found by the camp supervisors, along with proper nourishment.

**Bean-Picking Active**

At the present time, bean-picking is the leading occupation, with the workers toiling in the fields from 7 in the morning to 5:30 in the evening, earning their pay according to the poundage of the beans they pick. A good picker can average from three to four dollars a day.

While the parents are in the fields during the day, their children are taken to "centers," supervised by the migrant camp supervisors.

Here the children are bathed, dressed properly, taught fundamentals in education, and are also taught various games, for their recreational pursuits. Hours at the "centers" vary anywhere from 6:30 in the morning to 6 in the evening. After this time, the adults are in from the fields, cleaned up, and at the centers to acquire what elementary education they need, or can master.

**Have Uniform Shacks**

These migrants live in one-room frame shacks, built in uniform groups, and the composite fenced-in units are called "the Yards." There are from three to four hundred workers, including children, in each set element.

No guns are allowed in any part of them, and a deputy sheriff, white, hired by the canning company, is the only armed individual in the neighborhood.

Each shack is electrically lighted, and provided with bunks in decks, with plain straw for mattresses, over which sheets are placed when bed time comes.

**Live as Nomads**

The canning companies make every effort to provide for their workers, by operating these camps, but the tragedy of the whole thing lies in the fact that the work is purely seasonal, and does not last the year round.

This makes it impossible to maintain systematic and coordinary educational courses, for when the season for bean-picking is over, the workers move up the coast to New Jersey, where they become oyster shuckers—nomads, as it were, calling no place home.

Thus they cannot be in one place long enough to acquire educational or social advantages, and the social worker is given the problem of trying to crowd into seven or eight weeks, all that normally requires nine months in a well-regulated setup.

The adults, as a result, are practically at an intellectual standstill, and what few advancements are to be had go principally to their children, who range from 18 months to 14 years of age.

**Pathetic Cases Seen**

One mother in a camp, in the Delaware area, is reported to have fed her infant son on whiskey instead of milk, and now the boy, at the age of 10, is practically a paralytic, with impediments in the use of arms and feet.

As one camp supervisor put it, "It is pathetic to see some of the cases, and realize that some of these people starve that we and others might eat."

**No Economic Progress**

What economic progress has been made at the end of a season by the workers is a question that is still undecided. Out of their incomes must come the necessities of life, for themselves and their families.

The shacks are rent-free, electricity costs nothing, but food, clothing, medical attention, and the customary money spent on Saturday night for "Joe" (corn whiskey) and other hard liquors take their share of the family disbursements.

Almost all of the workers are married and have families, thereby eliminating the prospects of feuding over some nifty looker who may barge into camp.

**Supervisors Trained**

Of the twenty-one camp supervisors at work on the Atlantic Seaboard, seven are colored. All the supervisors receive special training in this kind of work at Colgate University, Hamilton, N. Y., before the season begins.

Each supervisor has about three hundred workers in his or her area. There are three hundred here, and three hundred at Hurlock, Md.

The products harvested and canned on the Delmarva Peninsula include: tomatoes, string beans, beets, asparagus, clam chowder, apples and peaches.

## Barbers Boycott "Fitch" Products

WASHINGTON, Sept. 14 (ANP)—A widespread movement to discontinue the use of Fitch products here is gaining impetus and according to well founded information, the Barbers association of this vicinity is planning to take similar action and stop using the well known hair preparations because during the past summer broadcasting of the "Fitch Bandwagon" radio program, no Negro bands were used and none was considered. The program had gained widespread popularity and more than once, the sponsors ignored the hundreds of thousands of Negro users of their products by bringing obscure bands to the fore while the Negro musicians idled or toured.

If the program of the Washington barbers is put into effect, it will be the first organized group of Negro barbers to boycott the Fitch product.

According to the plan, it is reported that the barbers at a meeting will draft their objections and submit them directly to the Fitch company.

## THE NEGRO AND DEMOCRACY

**By Kelly Miller**

A aphoristic definition of Democracy is contained in Lincoln's Gettysyburg Address "A Government of the People, for the People, and by the People." Whether such a type of Government can prevail in a heterogeneous nation, composed of peoples diverse in race, color and culture remains to be demonstrated. There is no such example in history nor among the contemporaneous governments in the world today.

The framers of the Constitution, within the framework of the Declaration of Indepedence were confronted with the necessity of inaugurating such a government. But they sought to dodge the responsibility by ignoring the presence of the Negro within their midst. They had serious misgivings of conscious concerning the trouble which the presence of the unrecognized race would cause in the future. Therefore, they strove with great shrewdness to evade the human demand of the Negro by devious phrasiology, cunning and circumlocution. 'Conscience makes coward of us all.' But the demands of human nature have no pity for pose of nations. The Constitution accorded the slave only a negative place in the body politic, not so much by reason of his human personality, as by virtue of his utility as a tool. For purposes of apportionment and taxation the Negro was given three-fifths of the representative capacity of a free person, which represented the ultimate political unit. This fractional political potentiality grudgingly accorded the Negro manipulated to increase the power of those states which profiteered upon his inferior political status.

The Bill of Rights forms the bedrock of American Democracy was intended to secure individual rights and liberties of white people only. These rights were put in the form of the categorical negative—"Thou Shalt Not." They were taken for granted as being applicable to all Anglo-Saxon folk, but in the nature of the case, the Negro slave, or for that matter, the free person of color, was not contemplated as falling within the purview of the Bill of Rights. Freedom of Speech, the Right of Petition, Freedom from Search, and the Right to Bear Arms, could hardly be predicated of a slave devoid of political personality.

The Negro race as a whole, including former slaves as well as free persons of color, derived its political privilege and prestige from the Fourteenth and Fifteenth Amendments rather than from the original Constitution including the Bill of Rights.

The Thirteenth Amendment abolished slavery but did not fix the political and civil status of the newly emancipated race. It added to the individual Negro the supplementary two-fifths of his representative capacity withheld in the original Constitution.

The Reconstruction Amendments theoretically made the Negro a Free Person, and an integral instead of a fractional unit. The Fourteenth Amendment sets forth "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce laws which shall abridge the privileges of citizens of the states; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the law." This Amendment was intended to take the political and civil status of the Negro away from jurisdiction of the state and place it under direct control of the Federal Government, and thus make the eleventh hour newcomer into the vineyard of citizenship heir and joint heir of its benefits on equal terms with those who have borne the heat and burden of the day. On its face American Democracy is supposed to operate without regard to race or color. But human experience shows that the theory of government is one thing and its practice another. "For forms of Government let fools contest, What's best administered is best." No Government yet devised by God or man has ever been able to overcome human interest, passion and prejudice against which our Constitution, like a German Treaty, too often becomes a scrap of paper.

The Fifteenth Amendment is observed or ignored according to the disposition of the several states.

There have been nine Presidents of the United States since Benjamin Harrison all of whom have taken the solemn oath "I will to the best of my ability preserve, protect, and defend the Constitution of the United States," and yet no one of them has even attempted to preserve, protect or defend" the Fourteenth and Fifteenth Amendments against flagrant and ruthless violation. Their only plea in justification must be looked for in the saving phrase, "To the Best of my ability."

It was Grover Cleveland who said that "We are confronted by a condition and not a theory." In states with a relatively heavy Negro population, the political rights of the race are ignored or suppressed by the connivance of the South and convenience of the North. It makes absolutely no difference which political party is in the ascendency his political lot is left to the tender mercy of the state, whether they shall or shall not observe the Amendements of the Constitution intended to confer upon him political equality.

Let us squarely face reality. The Negro's legal and civil status is upheld by the Supreme Court, wherever cases of discrimination are squarely and competently brought before the august tribunal for adjudication. But this political status is left to the political branches of the Government which are disposed to yield to prevailing conditions.

The Negro's right to vote is undisputed in thirty-six states of the union where there is no legal opposition, but he is effectually denied these provisions in twelve states, counter to the plain letter and spirit of the Constitution, where local opposition is strong.

The pertinency of race and democracy to the late World War and its aftermath as reflected in the present European conflict will constitute the subject of my next release.

## U. S. OFFERS TO EXCHANGE TEACHERS WITH SOUTH AMERICA

**Says There Will be no Color Test for Either Those Who Come or Go.**

WASHINGTON, D. C., Sept. 28 (ANP)—The Department of State, in conjunction with the United States Office of Education, Federal Security Agency, has perfected plans which will set in motion the official exchange of professors, teachers and graduate students between the governments of the United States and the other American Republics which have ratified the Convention for Inter-American Cultural Relations. To date, the Governments of Brazil, Chile, Costa Rica, the Dominican Republic, Guatemala, Haiti, Honduras, Nicaragua, Panama, Peru, Venezuela and the United States have ratified the Convention.

Leaflets and application forms have been prepared explaining the provisions of the Convention. These will immediately be distributed by the Office of Education to the colleges, universities, scientific institutions and technical schools of this country for professors, teachers and graduate students interested in submitting applications for offical exchange professorships and fellowships. These exchanges are available for professors, teachers or graduate students in the humanities, natural sciences, social sciences, law, medicine, pharmacy, journalist technology and engineering.

All preliminary work in the selection of nominees for professorships and fellowships will be handled by the Office of Education and that agency is now prepared to accept and evaluate applications of those seeking exchange professorships and fellowships. "Teachers" as distinguished from "professors" is understood to refer to teachers in primary or secondary schools.

No limitation as to color, sex or creed will be made in the nomination for the exchange posts. The utmost possible latitude has been allowed in the field of intellectual activity in which professors, teachers and students may engage to encourage applications from those interested in any field of learning, facilities for which may exist in the country in which the applicant is interested.

Expenses involved in the exchange program are shared by the participating governments. In the case of fellowships, the nominating government will pay the round trip travel costs to the country chosen, together with other incidental expenses of the graduate students or teachers selected. The receiving government will pay tuition, subsidiary expenses together with board and lodging at the institution designated. Exchange fellowships will cover a single academic year. Under unusual and exceptional circumstances, they may be renewed for one additional year.

All expenses incident to the exchange of professors will be met by the sending government. Such expenses will include travel to and from the country to which exchange professors are sent as well as maintenance and local travel costs during the period of residence in the foreign country. The term of an exchange professor will not exceed two years, unless he shall have been included on the next list after first being selected and hereafter again selected.

By agreement between the two interested governments, the term of an exchange professor may be limited to less than two years and another selection made from the current list. Vacancies caused by the voluntary withdrawal of a exchange professor, or by his death or disability to continue service, will likewise be filled from the current list.

## JAPAN CONTINUES IN FIRST PLACE IN COTTON TRADE

WASHINGTON—The textile division of the U. S. Department of Commerce said that despite the general curtailment of activities by the Japanese cotton textile industry during 1939, Japan maintained first place in the world cotton trade. Japan's total cotton piecegoods shipments are estimated at 2,180,810,000 square yards, which compares with the previous year's 2,643,429,000 square yards.

The United Kingdom was in second place, exporting cotton piecegoods amounting to 1,386,460,000 square yards during 1938 against 1,921,334,000 square yards in the previous year. During the first quarter of this year, Japan's cotton cloth exports to South America sharply declined, while her exports to British India, the Dutch East Indies, and the United States increased.

Pittsburgh Post Gazette: We are living in a machine age, all right, with half the people being run through it.

### CIVIL SERVICE OFFERS JOBS TO FARM AGENTS

New York City —(SNS)— Negro farm demonstration and extension agents and other colored persons with the necessary qualifications throughout the country were advised this week by the National Urban League to file applications for an examination to be given soon by the United States Civil Service Commission, leading to such positions as Principal Extension Agriculturist at $5,600 per year; Senior Extension Agriculturist, at $4,600 per year; and Senior Extension Home Economist, at $4,600 per year. (Announcement No. 72).

According to the Urban League's Department of Industrial Relations, the tremendous number of Negro farmers served by the Department of Agriculture's Extension Service and the increasing number of Negro farm agents employed to do this work have created a demand for more of Negro supervisory employees. Since appointments to supervisory positions are made from Civil Service lists only.

### DIES AT AGE OF 119

DETROIT (ANP)—A remarkable case of longevity, reportedly without parallel in American history, was disclosed here this week with the death of Mrs. Maria Adams former Alabama slave, who died at 119 after outliving her 20 children.

The centenarian's oldest child, Mrs. Mary Turner, died on March 30, at the age of 89, and the aged woman's husband, Jesse Adams, has been dead 34 years. Authenticity was given Mrs. Adams' age by the Social Security administration, whose official records list her as being 119 years old.

According to her family, Mrs. Adams was born in Alabama, a slave on a plantation there until the Civil War. Later she moved to West Point, Miss., then to Cleveland. She had lived in Detroit since 1929. Survivors are two granddaughters, with one of whom Mrs. Adams made her home; six great-grandchildren and three great-great-grandchildren.

# DRAFT LOOMS IF U. S. RUSHES INTO PRESENT WAR

WASHINGTON, Sept. 28—(ANP) Having fully developed plans for the mobilization of the man power in this country for war purposes, it is reliably reported that the "selective service" will be in effect once more should occasion arise which jeopardizes the United States. And to all who are old enough to know, selective service is merely another name for the old "draft."

During the last war, many interesting stories grew out of the draft and some experiences were had by untrained Negroes out of the South into the camps.

But of all the stories to come out of the war, the actual experience of Mr. X, now employed in the government service here in Washington, was the tops.

Very light complexioned, Mr. X had blond hair and blue eyes. He never denied the fact that he was a Negro, yet he was never taken for a Negro. To avoid going into the army, Mr. X had occasion one day to call on a certain senator from his state, Georgia, Mr. X stated his case. Was his face red when the senator leaned back in his chair and in his very best senatorial attitude blustered:

"Don't worry Mr. X, you won't be called in this draft; in fact, they ain't draftin' nothing but niggers from there now.' '

Mr. X. flushed deeply thanked the senator, backed out and promptly went down and joined the navy, in which he served for the duration of the war.

# HOLD LAST RITES FOR NOTED NEWSMAN IN NEW YORK CITY

## Large Crowd Attends Funeral of Floyd Calvin; High Tributes Paid

NEW YORK, September 14 (ANP) —With representatives from every important newspaper and news service in New York crowding the Community Church of Christ, 67 W. 128th street, funeral services for Floyd J. Calvin, nationally known journalist were held here Wednesday afternoon at 1 p. m.

Rev. John W. Robinson, pastor delivered the funeral sermon, telling of the high esteem in which the church, community, state and nation held Calvin.

Mr. Calvin died at the Neurological institute of the Presbytedian Hospital Medical center, Friday morning, 6 a. m., Sept. 1 He had been a patient at the hospital for the past three weeks, trying to gain strength for an operation for the removal of a brain tumor from which he had been unknowingly suffering for a few years. It is supposed the tumor resulted from an automobile accident occuring some years ago in which he received a head injury.

**Resolutions Read**

At services, a resolution commending Calvin for his work in the newspaper field was read by Cleveland G. Allen, a long time friend, and signed by many working newsmen. Other resolutions were offered in behalf of the Community church, and for the "Men of Tomorrow Forum" of the church. Calvin was an active member of the latter. Billie Rowe of the Pittsburgh Courier spoke in behalf of the paper for which Calvin had worked nearly a decade before starting his own service.

Active pallbearers were A. Merrill Willis, Ted R. Poston, U. S. Poston, Billy Rowe, J. E. Stephens, E. L. Hercules and W. E. Clark. Honorary pallbearers were Cleveland G. Allen, J. J. Allen, Ebenezer Ray, Ted Yates, L. B. Whitney, John H. Thompson, George S. Schuyler and Al Monroe.

Mr. Calvin was born in Hope Ark., in July, 1902. He attended grade and high school in that state and finishing became a helper o n the local paper. With the smell of printers' ink in his nostrtils from which he never escaped until his death. He came to the East, securing a job as a printer on the New York Age in 1919. More interested in the writing end of journalism, he taught himself to write and edit copy by reading discarded copy from the editorial rooms. He began his own news service in 1932.

**Ardent New Dealer**

An ardent supporter of the New Deal, he was an assistant in the Census department for some time. Hhe was considered an authority on the Negro Catholic, having served as publicity man for many Catholic organizations.

Surviving him are his widow, Mrs. Willie Lee Calvin, two daughters, Bernice and Dolores, whose fame as musicians and composers is known nationally, although they are in their teens; a father, Joseph, who lives in Hope Ark., and a brother in Chicago.

### A DECADE OF RAILROADING

The prospect, foreseen by most reliable trade indices, that the Class 1 railroads of the country will be in the back for the second half of the current year, as opposed to a deficit of approximately $40 000,000 for the last six months of 1938, comes at the close of a decade that has seen more revolutionary changes in railroad technique than any era since the abandonment of strap iron rails and the beginnings of the classic American eight-wheeler locomotive. Since 1939 every phase of railroading from power design and rail laying to passenger equipment, advertising and merchadising has undergone profound changes.

Nearly a hundred passengers trains of new design have come into being or emerged from already established standard equipment units in this period, and several score flyers such as the Burlington's Zephyrs, the Rock Island Rockets, the Espee's Daylight, the Santa Fe's El Capitans and Super Chief, the Central's Pacemaker, the Pennsy's Trail Blazer, the new Twentieth Century Limited and Broadway, the Atlantic Coast Line's Vacationer. the Milwaukee's Hiawatha and literally dozens of other units have laid hold on the general imagination and boosted traffic with their attractions and facilities.

But behind these visual improvements lay a determined effort to increase the volume of business and drastically to reduce operating expenses. The life of railroad ties, for example, through the ageney of new preservatives, has been prolonged from five or ten to twenty-five or thirty years. Heavier rails have permitted tremendous advances in speed. New signaling and train control devices have speeded up operating schedules so that in many instances double-track operation has given way to the single-track technique of a century ago. Extra fast freight services such as those of the Illinois Central's MS-1 and the Frisco's Flash, with pickup and delivery service at all stations, have snatched merchandise service from the rapacious truck lines. The efficiency of standard steam power, challenged by Diesel, has been improved to a degree where, for example, the Santa Fe's locomotives on the passenger haul between La Junta, Colo., and Los Angeles are not changed during the entire run where once they were shifted every 300 or so miles. The decade of the '30s so far as railroading is concerned, will be remembered as a decade of profound change and all of it for the better.

Edition of the Herald Tribune

## No Quotas For Air Training At Colleges

WASHINGTON, Sept. 28 (ANP)—Although interest is at fever pitch in the aviation courses proposed for West Virginia State college and at A. & T. in North Carolina, the Civil Aeronautics authority through Robert Hinckley, director, states that to date, no quotas have been assigned these two institutions.

However, it is anticipated that the most rigid examinations will be required of candidates and a very stiff course will be given the same as in the white institutions where flying is taught.

# COOPER SCHOOL IS FINE EXPERIMENT IN ADULT EDUCATION

NEW YORK, Sept. 28 (ANP)—What is perhaps one of the most intcresting experiments in adult education, which is doing much to meet the needs of the community, is the Cooper school located at 316 West 139th street. The school since its establishment has made a fine contribution towards the cultural and economic development of those who have taken its courses.

It was founded in 1930 by R. James Cooper, a teacher in the public school system of New York, who saw the need of an institution that would enable adults and young people to continue their education under the best auspices. Mr. Cooper, who is a graduate of Boston university and who received his M. A. degree in education from the college of the City of New York, made a study of the situation as it relates to the adult education program and believed that an institution was needed to meet these needs. The success of the institution has justified the venture, and today it is one of the leading private schools of the country.

The Cooper school specializes in individual instruction which helps students to progress under the most favorable conditions. The school has no formal entrance requirements, yet its work is maintained along the highest academic lines. The curriculum has been carefully planned, and has been designed to meet the needs of those who are seeking college entrance, to make up work in high school, to improve one's economic status, and for general and self improvement. A feature is afternoon study classes for school children, which helps them in preparation of home work. This department, which cooperates with home and public school, has been of tremendous aid in providing ideal surroundings for school children to prepare their lesson for the next day's work in the school

## The NYA And Negro Youth

(First in a series of Articles contributed by H. C. Russell, State NYA Supervisor of Negro Activities in Kentucky).

1. **National Youth Administration Helps Many Negro Youth:** The public is but dimly aware of the vast scope of service the National Youth Administration is rendering to Negro youths in the State of Kentucky. So quietly and systematically have the directors of the Youth Administration gone about their duties, the every day citizen accepts these vocational, social and educational activities of our young people just about as they do those of the long established and traditional public school system.

To surmise what might now be the condition of many of the twelve hundred young people of the race if this NYA service had not been established, is a difficult proposition. Today, approximately 500 out-of-school youths between the ages of 18 and 24 years have been temporarily rescued from a period of inevitable floundering and eventual despair and placed upon a self-sustaining basis while they are learning useful types of work to fit themselves for self-support in regularly organized industry. Many of these young citizens were not only unemployed, some were in direst need of such ordinary essentials as sufficient foods, respectable clothing and shelter. Probably all of these would have become rich material for anti-democratic propaganda.

While 500 of our out-of-school young folk have thus been pointed toward constructive lives, another 700 have been enabled to remain in schools and colleges to pursue their educational courses rather than to swell the number of drifting youths outside of school and out of work.

It is the expressed and ever present policy of the NYA through the State Youth Administrator that there shall be no discrimination of benefits to any group or any individual on grounds of race. The State Supervisor of Negro Activities is constantly charged to see that such discrimination is not permitted to go unnoticed in any part of the State. Due to difficulties inherent in the sparse Negro population in many communities, three central resident projects have been established at Paducah, Lincoln Ridge and Frankfort to insure opportunities for those whose communities are too small for local work operations. Allotments for school-aid have been made to every approved high school in the state, regardless of its size. Of course, problems are constantly arising, but none are ignored and the best solution of every problem is attempted.

# LAWRENCE PAYNE SITS AS JUDGE IN CLEVELAND, OHIO

CLEVELAND, Sept. 28—(ANP)—On Monday and Tuesday of last week a Negro sat on a common please court bench and performed all the functions of judge. The Negro was Parole Commissioner Lawrence O. Payne, who conducted the hearings in the current parole probe, seeking to uncover irregularities in the granting of paroles under the old parole board.

The hearing grew out of charges that numerous criminals have been turned out of penal institutions through a collusion between parole board members and lawyers. Former Parole Commissioner Frank Sotak has already been called before the inquiry, the details of which are not available at this time to the press or public.

Mr. Payne in sitting as presiding judge at the hearing, recorded another first for Cleveland Negroes and possibly for the entire country.

# HARLEM'S 369TH TO ENTER ANOTHER CAMP BEGINNING OCTOBER 2

NEW YORK, Sept. 28 (ANP)—Rumors have it that New York's famous 369th regiment, commanded by Col. C. B. Davis, is slated to return to a training camp for an extended period beginning Oct. 2.

On Sunday, the 369th came home from Camp Smith at Peekskill, where it established another record training period under Col. Davis. Old timers in the regiment marveled at the manner in which Col. Davis conducted the "maneouvers" and admitted that under the Negro commander, a graduate of West Point, they had learned more than they have previously.

As to the returning of the regiment to another camp for training, two places were mentioned in the wild tales which flooded Harlem almost overnight. The first stories had it that the regiment was to be sent to Plattsburgh, where the field maneouvers held earlier this summer by white outfits showed the need for similar and more intensive work for all outfits.

The other story was to the effect that the regiment would be shipped to Fort Huachucha in Arizona, a regular army post for Negro regiments now in the service.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## THE THREE "C'S" OF RURAL LIFE

### President Harris Addresses New Farmers at Bordentown, N. J.

The following address was delivered by Leon R. Harris, president of the N. F. C. F. before the annual convention of the New Farmers of America, at Bordentown, N. J., Manuel Training School, Aug. 7. The address was well received by the hundreds of delegates, teachers and visitors present. The address follows:

"I congratulate you, New Farmers of America, because you still have faith in Agriculture. You have faith in an old business that is always a new business. Agriculture is as old as mankind, yet it is as new as a new day, as new as a new springtime. Having faith in Agriculture, you have faith in a way of living that will bring to you more happiness and satisfaction than any other way of living known. As New Farmers you will know how to live, how to achieve success, how to discover the joy of living.

Your Convention theme interests me exceedingly. What organization should be better able to develop rural talent than your own? You are young men, new men, in a new world. You have new visions and new ideas. You have new education and new training. You can and you should do a much better job than any organization of oldsters can do. You will do that job and we will pray for your success.

Your convention theme is inspiring. It induces me to request you to do a bigger job, you as an organization, you as individuals. While developing rural talent will you not also seek to develop what I ask you to permit me to call the three great C's of rural life.

New Farmers, going forth, perhaps, to live in old communities, among the old farmers of our group, among farmers who have so often been discouraged, among farmers who have never learned to work together for the common good, among farmers who know so little of the sweet joy of living, yes, you can help, and I know you will.

First, you will seek to develop Rural Courage, O, how I envy you New Farmers, who at the very beginning of life, have so much to conquer! Will you have the courage to make your dreams come true? Will your example put courage in the hearts of those who have been disappointed, those who have failed, those who say, "It can't be done?" I have known some courageous farmers who have completely changed the economic status of their communities. Where there was abject poverty there is now a degree of plenty. One of our own group, near a populous city in the deep South, set out an acre of tomato plants in August and all his neighbors, white and black, laughed at him. They did not laugh when he sold 150 bushels of tomatoes in October and November at a dollar and better a bushel. Courage, I know another young colored farmer, way back in the backwoods, who took all his Christmas money, fifteen dollars, and purchased just one sitting of eggs. And didn't those cotton farmers there about laugh at him. But today those farmers sell their poultry products cooperatively, and their annual net income is seven times more than it was when they were slaves to the one crop. Courage. I got a letter the other day from a fellow in Huntington, W. Va., a young man and I am sure he is a member of your organization. Said he was going into the dairy business. Said it could be made a success there and he was certain of it. Sure he will succeed. Courage.

New Farmers, develop rural courage! Ccurage to do different and to be different. Aren't you New? American Negro farmers need their backbones greased, their upper lips stiffened, their chins propped up. The best practical dirt farmers in the world should let nothing discourage them. Put back into their hearts and souls the courage of our foreparents, who bought farm homes and paid for them, who paid for most of the education their children received, who kept the rural church standing in the pines. Develop rural courage.

Next, you will seek to develop Rural Cooperation. You will do this because you love your race, because you have faith in your race, because you know your race cannot reach the heights of civilization unless we climb those heights together, as one.

In school, in college and out of school, you have been hearing all your life why we are divided, why we can't get together, why we should get together. I know and you know just about all the "Whys." Are we going to prove that our knowledge is worth something?

The practice of cooperation has succeeded and has brought untold blessings to some Negro rural communities but those communities are few and far between. This is a new field for the plow of the New Farmer. It is a rough and rocky field. But New Farmers, the soil is abundantly fertile. It will produce a thousand-fold.

If you want to serve well, and I know you do, start some new cooperative enterprise in that old divided community. Get the people working, all for one, one for all. I know a community in Mississippi where, some ten years ago, a group of poverty stricken tenant farmers and sharecroppers met together and chipped in a few dollars to purchase some home supplies. They got better rice at two cents a pound than the rice they had been paying six cents a pound for. They got better sugar at four cents a pound than the sugar they had been paying ten cents a pound for. But that didn't mean so much. What meant more than anything else was that practical, simple lesson in cooperation. It banished discouragement from their souls. It gave them a vision. It kindled within every breast that fire of independence, that fire that smoulders in the breast of every real American. They wanted freedom. Freedom from dependence on the landlord. Freedom from debt-slavery. Freedom from poverty and ignorance. Freedom from the one-crop and the two-room shack. And the farmers of that community have conquered. This year they have made three trips to Memphis with truckloads of livestock and farm produce, which they have produced and sold cooperatively, and the checks divided among those cooperators have been written in four figures, not counting the cents. And too, today, eighty per cent of that group are farm owners.

New Farmers, sometimes one head can bring light and peace and prosperity to a community. Is that head on your shoulders? Use it to develop Rural Cooperation.

And last, Rural Contentment. Certainly we cannot ignore the economic aspects, but the farm always has and always will be, more valuable as a home than as a business. The biggest rewards of farming are social rewards, and we who do not prefer the simple life should not be farmers.

The farmer who can be contented with the simple life is surrounded with wealth more valuable than money. You know this is true, you who love the farm for its own sake. The farm home will continue to give our race its greatest thinkers, its greatest leaders.

Farmers, live on your farm, really live. Don't just exist to make money, to have more acres than your neighbor, to have the best stock, the best crops, and the best car. Let your life be a shining example, a life of unselfish service, a life of contentment, a life of peace.

Courage, Cooperation, Contentment. I call these the three great C's of rural life. Will you not seek to develop these?

## FARMERS ESTABLISH CO-OP MARKET IN TALLADEGA, ALA.

Talladega, Ala., (ANP) — The Log Cabin Curb Market which is located here within a block of the famous Talladega College is owned and operated by Negro farmers of the country.

Luke Jankin, president of the Curb Market Association which operates the Market reports 48 members, nearly half of whom sold sufficient products during 1938 to "carry them without having to buy on "credit" Mr. Jankin himself sold over $500.00 worth of products.

P. F. Thomas, Negro county agent who sponsored the organization of the Market reports that one tenant farmer cleared enough through the market to make a down payment on a farm of his own.

By special arrangement with the City Health office, the Market sells fresh meat which enables the farmers to realize larger cash returns for their cattle and hogs.

---

For years Japan has been the best customer of the American cotton grower, but recently economic and political events have forced Japan to limit consumption and at times to seek other markets. An important factor in this unwelcome necessity on the part of Japan has been the limiting of American purchases in Japan far below the level of the total of Japanese purchases in America. "Favorable" balances in trade relations cannot be paid endlessly in gold.

### Must Sell to America If Japan Is to Buy

Exchange or foreign bills growing out of trade must be available to balance accounts, or trade eventually dwindles. Japan must sell to America if she is to buy from America.

The cotton trade, prior to 1936, thought of Japan as the traditional consumer of 1,600,000 to 1,800,000 bales of American cotton a year, or one out of every eight or nine bales produced. In 1936 the Japanese mills to 1,356,000 bales and in 1937 were forced to reduce their consumption to 890,000 bales. Last year they bought 1,028,000 bales. The expansion from the previous year was accounted for in part by the sharply reduced price of raw cotton. Instead of being 43 per cent of American exports to Japan as it was in 1936, cotton in 1938 accounted for but 22 per cent of such exports.

### Cut in Cotton Cost Caused Expansion

The vital interdependence of agriculture in the two countries is but half the story. Vast sums of capital and hundreds of thousands of workmen are employed in spinning and weaving the silk and cotton in the two countries. Other capital and other workers are employed in trading, shipping, finance and distribution. Untold evils would attend the people of both countries if trade in these two basic commodities were further curtailed or terminated.

God sends every bird its food, but he does not throw it into the nest. —Spurgeon.

---

Potato chips were introduced by a Negro chef in 1865.

## HUNDREDS OF CHILDREN SEE FESTIVAL OF DOLLS AT NEW YORK WORLD'S FAIR

Their faces wreathed in happy smiles, hundreds of children filed through the Grand Hall of the Japanese Pavilion at the New York World's Fair on Monday August 7, to be presented with dolls, kites, and paper carp in celebration of one of Japan's oldest and popular events—the Boys' Festival and the Festival of Dolls.

The Boys' Festival, which is celebrated in Japan on March 5 and the Girls' Festival of Dolls held annually on March 3, were jointly celebrated Monday at the Pavilion so that American schoolchildren, now on their summer vacations, would be able to attend. One of the oldest of holidays, the Boys' Festival dates back eleven centuries in Japanse history, while the girls' Doll Festival is several centuries old.

So great was the juvenile attendance that a special officer was required to keep the children in line as they passed by the distributing booth at the center of the Grand Hall.

Dolls of various sizes, authentically attired in colorful Japanese kimonos were presented to girls, while brilliantly-colored paper carp and paper kites were gifts for the boys. Within a few hours after the Pavilion opened, Pavilion officials estimated, that several hundred of the children's gifts had been distributed.

In keeping with the holiday spiri of the festival, the interior and exterior of the Pavilion was decorated with paper carp and ornamental paper lanterns. In the garden surrounding the pavilion, huge vividly-colored paper carp over thirty feet long were flown from several flag staffs.

Sponsored by the Japanese World's Fair Commisssion, the Children's Festival was held to acquaint American children with a cercmony that is comparable to Christmas day throughout the Western world.

With a huge lacquer screen serving as a background, the dolls and other children's exhibits were displayed in two separate categories one for the boys and the other for the girls.

In the girls' display, the elaborately-conceived dolls were arranged in the same manner as they are shown in Japan.

## JERSEY LOSES COMPLEX NOW RECORD MILKER

OXFORD, England, Aug. 2.—(AP) --The history of a cow with an inferiority complex that developed into a record milk producer was related to the London Individual-Psychology Summer School here by W. B. Tobey

He said herdsman Malcolm Bradbury stepped up the milk production of a Jersey from 350 to 2,000 gallons a year, and quoted Bradbury as saying:

**Cows are like women. They need petting and fussing. I caressed her and fussed over her and changed her diet to things she liked most. Her inferiority complex has gone. Cows need psychological understanding."**

## LIGHTNING KILLS MAN, DOG NEAR SYLVANIA

SYLVANIA, Ga.,—(SNS)— One colored man was killed and another was injured during a storm between Sylvania and Newington Thursday afternoon.

The dead man was listed as John Henry Bedford, while the injured man was unnamed.

Reports said that Bedford had entered a garage to be protected from the rain with a group of cotton pickers and was sitting on an old car which was in the garage. The car had no tires on it. Bedford was lying on one running board of the car and had his head on the fender when lightning struck it. The charge killed him instantly. The injured man was seated on the other running board with his feet on the ground and the charge knocked him to the ground and stunned him.

A dog belonging to Judson Walker, white was killed.

---

Emergency regulations effective in the United Kingdom this week provide for placing in cultivation an additional 2,000,000 acres of land for 1940 harvest in England, Scotland, Wales and Northern Ireland. That's just another of the tragedies of war, and the farmers of the United States know well of it.

Dr. Hugh H. Bennett, chief of soil conservation service, said this week, "In the emergency of the last war, thousands and thousands of acres of grassland in the plains were plowed up....Breaking the plains during the World war was the most costly plow-up in the history of the world. We are still paying for it, paying not only in dollars and cents but in its effect on the lives of thousands of men, women and children.

---

## A FAITHFUL QUEEN

(A Missionary Story)

For years the simple people of Hawaii believed that the outbursts of their great island volcano was caused by a goddess they called Pele. They believed Pele sent out the great fire in anger upon them. To appease her anger these superstitious islanders had thrown some of their fairer young men and maidens into its burning crater.

When Queen Kapiolani became a Christian, she no longer had any faith in the goddess Pele. "Could I but free my people of their fear, gladly would I die. she exclaimed. She finally resolved she would go to the crater's month. She would call upon God to save her, and show her people that Pele could not harm her.

When she told her people what she was about to do, they said, "Pele will destroy you," but the queen annswered, "I will trust in God. he will protect me and save us all." Leaving eighty of her subjects at the foot of the volcano, the queen climbed up its sides, alone, but resolute and unafraid. At the mouth of the crater she paused, and the people heard her say: "God hath kindled these fires. If I perish my people will fear Pele. If not they will come to believe, as I do, in the power of God to save us all" When the people heard their queen say these words and saw that no harm came to her, they sang a hymn of praise to God. Queen Kapiolani through her faith in God had saved her people from fear. For them the goddess Pele existed no more.

Dare to be brave, dare to be true,
Strive for the right, for the Lord is with you;
Fight with sin bravely, fight and be strong,
Christ is your Captain, fear only what's wrong.
Chorus
Fight then, good soldiers, fight and be brave,
Christ is your Captain, mighty to save.

# N. F. C. F. OFFICIAL BULLETIN

LEON R. HARRIS, President
Box 285, Moline, Ill.

S. B. WILSON, Sec.-Treas.
447 Fourth Avenue, North,
Nashville, Tenn.

*TO ALL OFFICERS AND MEMBERS—GREETINGS:—*

THE BIG NEWS is that our Tenth Annual National Convention will meet at Lincoln University, Jefferson City, Mo., October 25-27, 1939. All members and friends, all Negro farmers in the United States, are invited and urged to attend this meeting. Do not forget that your wife and children are also invited. Urge your neighbor farmers who are not members to attend. We want to make this the biggest meeting we have ever held.

*TEN YEARS OF PROGRESS*

The National Federation of Colored Farmers was organized in 1922, seventeen years ago. It was incorporated under the laws of the State of Illinois, nine years ago. Our first National Convention was held at Howard, Mississippi, ten years ago. We have progressed during the past ten years. You have progressed in your communities because you belonged to the N. F. C. F. But our work has just started. Six hundred thousand Negro farmers must be enlisted under our banner. Then we can go places and do things sure enough. Come to the Convention. Get inspired and encouraged. Meet farmers from twenty states. Learn what is being done for you and what Negro farmers are doing for themselves.

*EXHIBITS AND PRIZES*

You are urged to bring to the Convention exhibits of farm and farm home products. Bring samples of your best cotton, corn, wheat, tobacco, rice, vegetables, flowers—anything you produce. Bring exhibits of domestic art, a dress, quilt, bedspread, needlework, etc. We expect prizes this year to be better than ever. These prizes will be divided into two general classes. CLASS "A" PRIZES WILL BE AWARDED TO FINANCIAL MEMBERS. CLASS "B" PRIZES WILL BE AWARDED TO MEMBERS OR FRIENDS. All prizes will be well worth striving for.

*PROGRAM AND SPEAKERS*

We will have the best program for your instruction and entertainment that we have ever had. Learned and well-informed representatives from the Federal and State Departments of Agriculture, representatives from educational institutions, master-farmers selected by the Governors of many states to represent them, leaders of our churches, leaders of the COOPERATIVE MOVEMENT, which is becoming so interesting to Negro farmers, dirt farmers who have won success,—these speakers will be on hand and it will do you good to hear them. The best speakers and agricultural leaders of the nation attend conventions of the National Federation of Colored Farmers. Be there to hear them.

*YOU CAN HELP NOW*

The N. F. C. F. needs your support NOW. NOW IS THE TIME FOR YOU TO PAY YOUR ANNUAL MEMBERSHIP DUES THAT YOU MAY ATTEND YOUR CONVENTION WITH A CLEAN SLATE AND A CLEAN CONSCIENCE. CAN WE DEPEND ON YOU FOR THE NECESSARY FINANCIAL SUPPORT? UNITS, SEND IN YOUR FINANCIAL REPORTS NOW! FUNDS ARE NEEDED NOW FOR CONVENTION EXPENSES. Members who are in arrears should pay up now, whether connected with a Unit or not. GET BACK WHERE YOU BELONG,—IN FULL MEMBERSHIP. You owe the National Office Three Dollars ($3.00) per year if you are not connected with a local Unit. You owe the National Office Two Dollars ($2.00) per year if you ARE CONNECTED with a Local Unit. If you cannot pay all of your back membership dues, pay as much as you can. Do not fail to do this. If you are not a SUPPORTING MEMBER you are not worth much to your organization. Send funds direct to The National Federation of Colored Farmers, Box 285, Moline, Ill. Pay up and get a new membership card.

*TO ALL OUR FRIENDS*

This Official Bulletin is being sent to many of our freinds who have never been members of the N. F. C. F. If you are one we would appreciate your membership. If you are financially blessed you may wish to pay for memberships for Negro farmers you know, who should belong to our organization. Or, you may desire to pay for memberships for good Negro farmers,—many of them tenants and sharecroppers, whom we would like to have as members, but who are unable to pay their own dues. We know of hundreds of rural preachers and teachers, as well as farmers, who would join us if they could. They need your help and we need them in our organization. Help us gather them in. The N. F. C. F. encourages Negro farmers to become better farmers and better citizens. Let us have your membership and the memberships of your friends.

*LET US HEAR FROM YOU*

All who plan to attend the Convention should write to the National Office at once. Let us know how many are coming from your Unit that all plans may be made to entertain them. Friends and visitors are also urged to write. You are welcome. Let us really make this Tenth Annual Convention the best we have ever held.

THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

The President's Address is:
LEON R. HARRIS,
Box 285,
Moline, Illinois.

The Secretary's Address is:
S. B. WILSON,
447 Fourth Avenue, North,
Nashville, Tennessee.

## WILD HEAD—HUNTER'S COVENANT

"From Lahu and Wa lands, along the frontiers of northern Burma, missionary work is conducted. Rev. Harold M. Young through gospel preaching among wild head-hunting tribes: Mong Mao is a samll valley in the center of the Wa States. known as the covenant meeting place for all the wild headhunting Wa circles. There are a gronp of villages there made up of settlers from the various circles, and once or twice a year the leading wild Was gather for discussing questions of mutual interest and settling circle disputes. While I was in Lashio, a delegation headed by the Mong Mao chief visited me and asked that I send workers to them. I sent in two of the Wa preachers and they have had great success. Many came for instruction, and soon chapels were erected. Since the men have gone there, we have had 578 baptisms, and splendid progress is being made. The bazaar at Mong Mao is the gathering place of practically all the main head-hunting circles, and the workers are making contacts with some important chiefs. The Lord has opened up for us the most strategic centers, and as the country is developed by administration and permission is granted to enter the restricted areas, we may confidently expect great harvests of precious souls."

## PROBLEM CHILDREN AND CRIME

Warden James A. Johnston of Alcatraz prison a few days ago told teachers attending the National Education association's convention that they can do much to reduce crime by discovering children's criminal tendencies and treating them in school days.

You deal with all the signs and beginnings of waywardness leading to delinquency" he said.

It is a strange circumstance that the United States is abreast of any country, and the peer of most, in the number and excellency of its "character-building agencies." Only the most isolated children are removed from daily exposure to boy scout or girl scout organizations, Y. M. C. A. and Y. W. C. A. churches, Sunday schools and a host of other groups, all dedicated to youth guidance. In no other country are these organizations financed as well as they are in the United States, and in no other country do they have more ernest and competent directors. Still, when it comes to crime, we lead all civilized countries.

Perhaps the warden was directing his remarks intelligently when he urged the teachers to take an active hand. Most instructors, however, may not feel themselves called upon to teach morals, except in the abstract, especially in grade schools. Teachers may feel, and with some justification, that their business is to teach whatever the text books prescribe.

Further, there was a time when school teachers in many districts were chosen not only for their educational qualifications, but for their strong right arms; and when the school's tough boy challenged authority he went home severely chastened smarting from the rod. Today male teachers are in a minority, and in many cases the parents of a child justly trounced will sue the teacher, the school board and everyone in sight. Many teachers feel, no doubt, that what most of these problem children need is a good, plain dusting off, but the lady teachers are not noted for their pugilistic tendencies—and as remarked, male teachers are too scare.—Chicago Tribune.

## WALLACE BACKS FARM TENANT LOAN PROGRAM

WASHINGTON, D. C.,—Secretary allace today indorsed farm tenancy provisions of President Roosevelt's new $2,800,000,000 lending program as one way to check a steady increase in the number of farm tenants.

Testifying before the senate banking committee, Wallace said 42 per cent of all farmers now are tenants, and that the total is increasing.

"If this trend is not checked in the very near future," he said, "there is grave doubt whether America's traditional system of family sized farms can long survive."

Under the lending program, the farm security administration would use $600,000,000 for a seven year program of rehabilitation loans to tenants.

## CARROT TIMBALES

On the word of Miss May E. Foley, nutritionist at Massachusetts State college, motorists subject to night blindness ought to eat lots of carrots. Carrots have quantities of vitamin A and a good stiff serving before a drive will keep eyes alert for hours on end.

This is probably the best news for epicures that has come out in some time. Now it will be proper to devour carrots anywhere, and at any time, in the general interest of safety. Raw, they may be carried in the pocket and munched on the job, at the wheel, or as hors d'oeuvres in the most genteel company. Eaten in early evening they will prove invaluable toward preparing one for the rigors of a double-feature motion picture. Taken in quantities prior to a blind date, they will rectify the beauteous, but often dangerous, errors of the moonlight. In the office they will fortify against the microscopic print of leases, insurance contracts, government regulations, and similar prolix documents which often hide interesting and portentous little facets from the weary eye. A brace of carrots at a poker game will be worth many times their weight in blue chips.

Further, these roots, long renowned as producers of fine complexions, lend themselves to easy preparation for the most discriminating and prejudiced of palates. You may eat them raw, simply as full-blown, golden gleaming umbelliferae, or diced, cubed, sliced, in salads or sandwiched. Or, you may prefer them boiled, stewed, mint glazed, as carrots poulette or carrot timbales.

Carrott timbales! There is a dish! Heat up two cups sliced carrot, one (tablespoon butter, with boiling water to cover. Strain and add one egg, white, salt and pepper. Mix well. Garnish with cooked egg, set in pan of hot water, and bake forty-five minutes in a moderate oven. There is nothing comparable, unless, perhaps, it is carrot and sauerkraut salad, a recipe too well known among gourmets to need repeating here.

## SLIGHT RAISE GIVEN TEACHERS OF N. CAROLINA

RALEIGH, N. C.—(ANP)—The state board of education last week voted a pay raise of $18 a year for the state's most experienced white teachers, and $32 a month raise for the most experienced Negro teachers. For the colored teachers, the board approved a schedule adopted by the state school commission.

There are approximately 6,000 Negro teachers in the state, and under this appropriation they will receive a total of about $117,000. This will be distributed among all Negro teachers with "A" certificates, to lower somewhat the current differential of between 25 and 30 per cent between the salaries of colored and white teachers.

Under the increase, top salary of a colored teacher with an "A" certificate and eight years or more experience, will be $100 a month. A white teacher in the same classification ("A" rating, eight or more years' experience,) will receive a monthly salary of $125.

## GEESE USED TO SAVE LABOR ON COTTON FARMS

WASHINGTON—(ANP)—Hey Mr. Ripley—look at this—they are using Geese in some sections of the south as a labor saving device in cotton plantations! And that is part of a report sent to Dr. W. W. Alexander as the utmost truth. It's this way. Geese like the tender shoots of crab grass that grow in the cotton fields, so Mr. Planter just gets a flock of geese and turns them loose in the cotton fields. They wander in, select a row of cotton and go through it carefully, each goose taking an individual row for his very own. ..

Then they assemble at the end of the rows and under their own leader, take another assignment being very careful not to touch the cotton plants, but giving full attention to the grass that hampers cotton growth. The goose service is very cheap, many planters relying upon them to do more work more efficiently than the hired hands.

## SPECIALISTS REPORT NO DANGER OF LACK OF SUGAR SUPPLIES

URBANA, Sept. 20—There's no need to buy quantities of sugar and even those folks with a decided "sweet tooth" won't have to worry about cutting down on their usual quota. If housewives are becoming "scared" into buying more sugar than usual, it's time they took a look at what's on hand in the national cupboard, say home economics specialists at the College of Agriculture.

Uncle Sam has at present 1,035,000 tons of cane sugar, which is 125,000 tons more than he had last year at the same time. His beet sugar supply is 705,000 tons or a gain of 225,000 tons of sugar as compared with last year's supply. Moreover Uncle Sam has stored under the "ever normal granary" plan, some 800,000 tons which can be released if a need arises. Amplifying this is a huge sugar supply from his next-door neighbor, Cuba.

Boiled down to kitchen terms, the fact is just this: There is no immediate danger of one-lump coffee or sugarless cereal. "Immediate," according to sugar authorities, means for the next five or ten years to come. Hallowe'en, Thanksgiving and Christmas can come and go with the usual accompaniment of sweet delicacies and everyone can "have his cake and eat it too."

The reason given as to why sugar prices are rising in the face of these supplies is that the rush to hoard has caught retailers, jobbers and refiners short of refined sugar. The solution is for housewives to give refiners a chance to turn the ample supply of raw sugar into refined sugar. This means buying only the customary amount of sugar instead of hoarding quantities which may deteriorate with improper storage, the home economists say.

Those housewives who knew the "emergency" measures of the last war, may still be a bit apprehensive about the sugar supply. However, if they will think back to 1913-14 days, home economists say, they will remember that housewives the world over competed for the available sugar.

Reports show that the European beet crop, now being harvested, is enough to satisfy the continental appetite for some time and that England now looks to Australia and the West Indies instead of Germany and Austro-Hungary for her ready sugar supply.

**Woman's Missionary Society LITERATURE**

The Woman's Home Mission Guide, price 15 cents; Y. W. A. Guide, 15 cents; Shepherd Boy's League Guide and Girl's Auxiliary combined, 15 cents; Starlight Band, 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Hope Magazine**
PUBLISHED MONTHLY

No better publication can be placed in the hands of women who are doing mission work and interested in the Fireside School development than Hope Magazine, published every month in the year, price 50 cents a year. It contains helps for every department of Woman's Mission Society Organizations, as well as suggestions for religious entertainments. For more than fifty years this Magazine has been an invaluable help. It was founded by the late Miss Joanna P. Moore.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**ORTHODOXY**
of the
**Missionary Baptist Churches**
By Dr. E. R. Carter of Atlanta, Ga., and Rev. E. H. Borden. Just off the press.

You can't afford to be without this book. Buy one. Know the why and wherefore of your denomination. The price is small but the information contained therein is invaluable.

Price 25c

Send All Orders to

National Baptist Publishing Board
523 - 2nd. Ave., N.
Nashville, Tennessee.

**WHY I AM A BAPTIST**
By
E. H. Borden, Ph. D.

A straightforward statement of facts set out in this little book that will help you as it has helped others. Do you really know why you are a Baptist? Is your faith backed up by facts, or, are you a Baptist because some one before you was a Baptist?

Price Only 10c

# DAILY DIGEST

STOCK RAISING
IN THE SOUTH

Conditions for profitable live stock raising in the South are changing for the better, partly because of more effective control of animal diseases and parasites, Dr. John R. Mohler, Chief of the Bureau of Animal Industry, said today at the annual convention of the AmericanVeterinary Medical Association. "There are better opportunities than formerly for making a good living from cattle," he said. Science has provided the means for adding favorable forces and reducing the number and effect of unfavorable ones. As other elements beneficial to the South, he mentioned improved types of lives, better pastures and systems of management, increased use of artificial refrigeration and the establishment of numerous market outlets for meat and dairy products. The prospects, he stated in conclusion, are definitely toward diminishing risks and increasing stability for the livestock industry of the South.

VOCATIONAL
AGRICULTURE

"The charge is sometimes made that the farmer is ultraconservative when it comes to learning or adopting new practices and theories on his farm," says an editorial in Southern Agriculturist (Sept.) "Those who think the farmer is slow to learn should ponder over these facts: Last year enrollment in vocational education schools and classes—agriculture, trade and industry, home economics, and the distributive occupations—was 1,810,150 farm people—an increase over the previous year of more than 313,000. Enrollment in vocational schools and classes has increased steadily and consistently, even during the years of economic recession, over a period of 21 years. One of the important developments in the field of agricultural education is the practice followed by vocational agriculture teachers in a number of states and local communities of cooperating with home economics teachers in setting up programs for the improvement of the farm, the farm home, and the community. Because of the tremendous interest, some states have found it necessary to meet the demands of adult farmers for instruction in evening classes by appointing special teachers to devote full time to adult classes An effort has been made in the past year to meet the need for instruction of out-of-school farm youths who desire or need training to help them to become established in farming----"

ALFALFA AND
TIMOTHY

"Alfalfa has been used successfully in pasture mixtures in many localities, but it has not been commonly used in mixtures for hay purposes," says R. I. Trockmorton, head of the agronomy department, Kansas State College, in Country Gentleman (September). "The Iowa Experiment Station has found that such mixtures are well adapted for hay purposes, especially on the less fertile upland soils. C. P. Wilsie, of the Iowa station, has reported that over a period of three years a mixture of alfalfa and timothy produced from 30 to 35 percent more hay than alfalfa alone. From 25 to 50 per cent of the first cutting consisted of timothy, while the second cutting was almost entirely alfalfa. He found that the timothy caused a small reduction in the number of alfalfa plants and reduced the stooling of the plants to some extent. Mr. Wilsie believes that after the alfalfa plants are well established the grass does not tend to reduce the stand, but that when the stand of alfalfa becomes thin the timothy will occupy the spaces that otherwise would be vacant. It has been learned that grass growing with alfalfa develops a darker green color, has a heavier plant growth with more leaves and contains a higher percentage of protein than grass growing alone. Thus the yielding capacity of the timothy plants and the feeding value of the timothy hay are increased by growing the crop in a mixture with alfalfa. The seedbed and time of seeding requirements for the mixture are the same as for alfalfa grown alone. The Iowa station suggests seeding ten to fifteen pounds per acre of alfalfa and not to exceed five pounds per acre of timothy."

LOW-COST
HOME AID

A simplified long-term plan to finance the construction of small homes—costing not more than $2,500—which it is estimated families with incomes ranging from $900 to $1,500 annually will be able to take advantage of, has been announced by Stewart McDonald, Federal housing administrator. The new plan will require the purchasers to make "down payments" as low as 5 percent. Under the plan, effective September 1, home builders may have 15 years to pay off their loans. Excluding taxes and fire insurance, monthly payments on a $2,000 home would be only $17. the plan is designed primarily to aid families in the lower income brackets, who hereto have been unable to take advantage of F. H. A. home financing facilities. "It should be clearly understood," said Administrator McDonald, "that this plan is intended as a supplement and not as a substitute for the home ownership program in operation during the last five years under the National Housing Act...." (Press.)

SMALLER WORLD
COTTON SUPPLY

The world is expected to have a slightly smaller supply of cotton this season than last, it was reported yesterday by the Bureau of Agricultural Economics. The 1938-39 supply was an all-time high record of 50,500,000 bales. The bureau said that although the carryover of American cotton is the largest on record, the increase this year over last in the carryover is expected to be about offset by the smaller 1939 United States crop World carryover of foreign cotton is considerably smaller than the high record of a year ago. It seems likely that the 1939-40 foreign production may be somewhat smaller than last year's output. The bureau looks for a marked increase in United States exports of cotton in coming months, contingent upon the lessening of political tension in Europe.

FEEDING
CHICKENS

Harry W. Titus, of the National Agricultural Research Center, discusses system of feeding chickens in Country Gentlemen (September). "In a recent bulletin from the Wyoming Experiment Station," he says, "M. O. North reports the results of a three-year experiment in which all-mash feeding of laying hens was compared with the mash-grain system and four modifications of it. In one modification one third of the grain was hand-fed in the morning and two-thirds in the evening. In another all the grain was hand-fed in the evening, and in a third all the grain was hand-fed in the morning. In the fourth modification the chickens had free access to the grain only in the afternoon. Egg production of all six groups of these hens ranged from 42.7 to 46.6 per cent. and the cost per dozen eggs from 10.7 to 12.2 cents. The all-mash system was the best from the standpoint of both egg production and the cost of a dozen eggs, but the differences in favor of this system were comparatively small in four of the five comparisons. Furthermore, none of the six methods of feeding had any significant effect on egg weight, mortality, gain in live weight, fertility or hatchability. Many of North's findings are in general agreement with those of other investigators and suggest that the system of feeding is of relatively little importance so long as it supplies all the essential nutrients in adequate quantities.....Undoubtedly, of the two systems, all-mash feeding is simpler and involves less labor; but for the skilled feeder the mash-grain system is the more flexible"

(Continued on page 9)

# SOME TAKE HIGH ROAD

Frances Fitzpatrick Wright

A woman I know once lived on a plantation in the South. Her house was located near a river, and the section was badly infested with malaria. She once said to me, "I was born in that house, and of course I loved it. But I can never forget the misery of those summers I spent in the lowlands. Every year, I had a long seige of chills and fever. When the house burned, I thought it was a calamity, but it proved to be a blessing in disguise. We had to move to a house that stood on a high hill, so high it was above the mosquito line. I recovered from malaria, and I have never had an attack since. Nothing could persuade me to live again in a malarial region."

Another woman I know, lived for many years in a section that was without electricity. When the power lines reached her, and her house was wired, she wrote me of the change. "You know that I have always lived by lamp-light," she said, "but since I have become accustomed to this wonderful light, when I go into a house lighted by lamps, I feel as if I were in the dark."

Paul once wrote a letter to a friend of his, named Titus, in which he contrasted the life he had had, after he became a Christian, with the old unhappy life he had led before. "We ourselves also," he writes, "were sometimes foolish, disobedient, deceived, serving divers lusts and pleasures, living in malice and envy, hateful and hating one another. But after the kindness and love of God our Saviour toward man appeared --- he saved us."

It was John who wrote of the great change Jesus had brought into his life in these words, "The darkness is past, and the true light now shineth --- We have passed from death unto life." Like health after sickness, like radiant light after darkness, did Paul and John find Christian life to be.

Some one once said, "I see church members who call themselves saved, and I want to ask, "Saved from what? Not from greed, not from snobbishness, not from fear, not from spitefulness." We know that when these unchristlike traits remain in our lives, it is because we have not surrendered completely to Jesus, as did Paul and John. We still are living in the lowlands, we still have refused to admit much of the true Light into our lives.

# TO BE PITIED, OR ENVIED—WHICH?

By Guy Edward Mark, D. D.

POOR soul, she has never had a chance to get ahead. All her life she has had some one to take care of, or to help support, and now her own husband is a helpless cripple. It is too bad."

It was a kind hearted observer who made the remark. "Poor soul .....too bad." I found myself repeating the words, over and over again. "Poor soul....too bad."

It was later in the chill, gray November afternoon that I made my last call for the day. The cases of trouble I had found, together with the dreary, depressing atmosphere, were beginning to dampen my own spirits. I wearily climbed the long flight of steps and reluctantly pushed the bell button. I dreaded to go in. I had often wondered how the frail little woman ever got along. There was grandmother (very feeble), and sister (an invalid), her own husband and two children—and two small children that she had taken to mother for a while. Their own mother had proved to be unworthy of her sacred trust. She had left a note saying that no one need look for her as she had gone forever, (It was later learned that a husband and father living not far had disappeared the same day, leaving a similar note.)

"You look tired," I said to the little woman, as we sat down together in the spotlessly clean living room. And then I stupidly blurted out: "Poor soul, your lot is too bad."

"Why, what do you mean?" she asked rather sharply as she shifted her gaze from my face to the bedroom. In the bed lay the aged grandmother, by the window sat the invalid sister, and on the floor at the foot of the bed played the two children forsaken by an unworthy mother.

"I just love my Lord" she said as she returned her gaze to my face, "and I love to serve him." Then she once more shifted her gaze, this time to the wall at my left, and as she did so her eyes lighted up with a peculiar heavenly radiance. I glanced in the direction where she was looking and read: "Inasmuch as ye have done it unto one of the least of these.....ye have done it unto me."

"Unto one of the least of these .....unto me," I mused. Ah, stupid souls, you and I. How blind we are to the sources of greatest comfort, blessing, and reward. Here were two women, the one who was dubbed "poor," and the other who looked "tired" whose crowns will probably be more radiant than mine. And there are thousands of others, too God bless them!

# YOUTH, 19, WINS SUPERIOR FARM AWARD AT NFA MEET

Spaulding Gives Winner Check for $100.00

Bordentown, New Jersey, (ANP)—James W. Smith, a lanky lad just turned 19, stood in the assembly room of the historic Bordentown Training school during the fifth national convention of New Farmers of America last week, and was proclaimed the Ranking Superior Farmer of America for 1939 for a record of successful operation of a 100-acre farm near Gause, Texas.

The convenution then adjourned to the Equitable Garden of Security, New York World's fair grounds, where Dr. C. C. Spaulding, president, North Carolina Mutual Life Insurance company, presented young Smith with a cash award of $100. The fair program was broadcast over the Farm and Home hour on a nation-wide hookup of the National Broadcasting company.

At Bordentown, Dr. Ambrose Caliver, specialist in the United States office or education announced the decision of judges from the office of education, giving Smith the coveted honor. The scene before the nearly 1,000 delegates was one of dramatic suspense. Smith was one of the ten NFA members who had just lined up to receive the "superior degree," highest rank in the national organization of students of vocational agriculture. No one knew just who would be chosen ranking superior farmer. With the announcement, the boy from faraway Texas was designated the peer of more than 25,000 young Negro farmers.

**Yates Is Second**

Lee Allen Yates, North Carolina, was second in the race for the award, and Jethro Hill, Arkansas, was third. Those receiving the superior farmer degree besides the three already mentioned were J. M. Martin, Jr., Louisiana; Henry King, South Carolina; Isaiah Landwin, Alabama; A. J. Anderson, Tennessee; James Warren, North Carolina; Amos Kennedy, Louisiana; and Russell Lindsay, Virginia.

The conferring of the above honors climaxed four days of activity of the fifth national convention of NFA.

Distinguished speakers heard were Walter White, NAACP executive secretary; D. Stewart Graven, president, New Jersey board of education; W. P. Valentine, principal, Bordentown Manuel Training school; Miss Frances L. Murphy of the Afro-American and director of the Baltimore Clean-up campaign, Baltimore; Leon Harris, president, National Federation of Colored Farmers, Moline, Ill.; and Dr. Louis C. Wright, U. S. office of education, Washington. Awards were also given winners in the national agricultural judging public speaking and quartet singing contests.

**Winners Announced**

Mrs. Charlie F. Milner of Greensboro, presented the H. O Sargent award, honoring the late Dr. H. O. Sargent, for many years federal agent for vocational agriculture for Negroes, to the national organization. Mrs. Milner is a daughter of the late Dr. Sargent. Lester Albert, retiring president, Delray Beach, Fla., accepted the plaque for the NFA.

Winners - - in the agricultural

contest were announced by Donald F. Fenn, director, school of agriculture, Hampton Institute, who acted as judge. In team judging by totals, Arkansas was first, Georgia was second, and Alabama third. George won first place in mule judging, Arkansas first place in dairy cattle, and Georgia led again in swineffi Tennessee proved best in corn, Texas in potatoes and Alabama in hens.

Individual winners by totals were Washington Virgil, Georgia, first place; S. Keyes, Arkansas, second place, and H. Cooper, N. C., third. E. G. Moore, Oklahoma, led in mule judging; E. Jenkins, Ala., and G. Yarborough, Tenn., tied for first in dairy cattle. B. Young, Ark., led in swine; Washington Virgil, Ga., and C. Womack, Tenn., made it a tie in corn; W. Lincoln, W. Va., H. Steele, Ala., and D. C. Murray, Texas, shared a three-way tie in potatoes, and T. Newell, Miss., led in hens.

**Mrs. Fauset Present**

The awards for the above were presented by Mrs. Crystal Byrd Fauset, member Pennsylvania general assembly.

Willie Hopkins, Eastover, S. C. youth was the winner in the national public speaking contest Second place went to William Buford, Okla., and third to Willard Vernon, La.

In the quartet singing contest, Florida won first place, North Carolina second and Louisiana, third.

New national officers for the organization, elected last week, are Jethro Hill, Fordyce, Ark., president; J. W. Smith, Gause, Texas, first vice president; Ferdinand Holmes, Whitehaven, Tenn., 2nd vice president; Johnson Maner, Allendale, S. S., third vice president; Clinton Woodard, Grambling, La., secretary; Isaac Coggs, Muskogee. Okla., treasurer; Clinton Cunningham, Evergreen, Ala., reporter, and J. R. Thomas, Petersburg, Va., national adviser. S. B. Simmons, North Carolina, supervisor of vocational agriculture, is executive secretary.

Concerts were given daily throughout the convention by NFA bands from Laurinburg Institute, Laurinburg, N. C., and Snow Hill Institute. Snow Hill, Ala. Concerts were also given by the NFA bands in the Equitable Life Assurance company's Garden of Security, New York World's fair, Wednesday.

Dr. Louis C. Wright reviewed the progress made by the Negro in agriculture in the last 50 years. Teacher trainers also came in for praise due to their unusual work in training vocational agriculture teachers. Receiving special mention by Dr. Wright were George W. Owens of Virginia and C. S. Woodard of Arkansas. Mr. Owens founded the New Farmers of America organization, and Mr. Woodard has trained over 1,200 boys who are now successful practical farmers.

In the other significant speech of the convention. Walter White said that extension of the franchise, more justice in the court, and collective bargaining are necessary for Negro progress in agriculture. Mr. White also singled out for attack incompetent and bigoted southern congressmen who are making the plight of agriculture a dire one.

DAILY DIGEST

(Continued from Page 8)

PICKING

BUCKET

A recent marketed picking bucket for orchard fruit has a heavy canvas bottom which can be easily loosened so that the fruit rolls out into the boxes without injury. One side of the bucket is curved to fit the body of the picker and the top opening is padded. There are adjustable shoulder straps and the bucket bottom is protected by leather when the bucket is rested against a limb or box. (Country Home, Sept.)

---

TENANT

PROGRAM

The Farm Security Administration reported today that during the first two years under the Bankhead-Jones farm tenant act it had made 6,181 loans to tenants for the purchase of farms. The loans aggregated $33,339,684, or an average of $6,394 per farmer. Farms acquired by these tenant borrowers averaged 134 acres each, but the average greatly according to the kinds of farming. Except for Rhode Island, where only one loan was made, the lowest average in continental United States was 43 acres in California, where irrigation makes small farms profitable. The highest was 520 in South Dakota, where range farming prevails.

During the second year of the program, ending last June 30, the loans ran a little higher, the farms were somewhat bigger, and more improvements were made, than during the first year. The 4,341 loans during the second year aggregated $24,140,675, or an average of $5,561. The average acreage was 136. The 1,840 loans during the first year aggregated 59,199,008 or an average of $4,999. The average farm bought was 130 acres. First year borrowers spent $1,626,733 for improvements to the farms they bought, or about 18 percent of their loans. Second year borrowers spent $5,778,268, or about 24 percent of their loans for improvements.

---

QUICK-FROZEN

POULTRY

The U. S. Egg and Poultry Magazine (September) contains an article on quick-frozen, ready-to-cook poultry, by Rob R. Slocum, of the Bureau of Agricultural Economics (reprinted from Western Frozen Foods). Discussing the advantages of full-drawn, quick-frozen poultry, he says: "One of the economic advantages is a saving in weight of approximately 25 to 30 percent as the result of the removal of head, feet and entrails. This enables a shipper to pack the same number of birds in a package smaller than that formerly used. Because of the lesser weight, there is also a saving in shipping charges and in storage charges. Another economic advantage is the lowering of the costs of drawing the poultry. This is made possible by concentrating the work at points where considerable volume is handled and usually at country points where labor costs are lower. Poultry prepared in packing plants at country concentration points has definite sanitary advantages. The facilities that it is practicable to provide at such points are superior for doing a good job of drawing, and the fact that the poultry is quick-frozen checks immediately any tendency toward deterioration. At plants where poultry is prepared under government inspection there are rigid requirements with reference to sanitary equipment and methods of operation that further insure the sanitary condition of the quick-frozen inspected product. Wrapping of birds individually protects them against further handling and therefore improves the sanitary conditions under which they are merchandised. From the standpoint of sales appeal and acceptability to consumers may be mentioned the fact that a carcass wrapped individually in cellophane constitutes package goods. Undoubtedly, particularly as time goes on, the merchandising of full-drawn poultry as package goods will extend the outlets through which such poultry may be retailed and should therefore increase poultry consumption. Moreover the more attractive appearance of poultry so wrapped unquestionably makes a greater appeal to purchasers...."

THE IRVING BERLIN OF JAPAN SEEKS INSPIRATION IN U. S.

NEW YORK — Swing Music has taken the Japanese, as it has the Americans, by storm, according to Japan's favorite composer of popular songs, Masao Koga, now visiting here. But the Japanese, unlike the Americans, do not dance to swing, they listen to it.

"Swing to us is concert music," said Mr. Koga, "for dancing we still prefer tangos, fox trots and waltzes. The "torch song" or sentimental song is the most popular for singing."

Mr. Koga, only 35, has earned a name for himself as "The Irving Berlin of Japan" with more than 200 sentimental song hits which have sold a total of more than 5,000,000 records. Among his most popular compositions are "Wine and Tears," and "When It Is So."

The popular music of the United States and Japan is a great bond between the two countries. Mr. Koga declared, and he pointed out that American tunes and orchestras are as well known in Japan as Japanese ones. American moving pictures, particularly, he said, have familiarized the Japanese with American music.

"Benny Goodman, Tommy Dorsey and Andre Kostelanetz, in that order, are the most popular American orchestra leaders in Japan," Mr. Koga said. "And the 'St. Louis Blues,' the 'Peanut Vendor,' and 'The Music Goes Round and Round' are popular U. S. songs there."

Father surprisingly, Mr. Koga pointed out that Stephen Foster's typically American folk songs enjoy a tremendous vogue in Japan, and one hears "Swance River" and "The Old Folks at Home" more often in Tokyo than in New York.

Mr. Koga, who started his musical career at 9 when he studied hymns at an American Catholic mission in Tokyo, is in this country to find inspiration for a song expressing his impression of the spirit of the United States.

## BUILDS UP BIG BUSINESS KANSAS COUPLE HAS REACHED THEIR GOAL

By C. E. Chapman

EL DORADO, Kan.,—(ANP)—From an humble and unostentatious beginning five years ago to a substantial, thriving, solvent and paying business in squabs is what best describes what has transpired in the case of William Huggins and his wife, Mrs. Anna Huggins, who now operate the successful Royal De Lux Squab company, located here.

In 1934, the Hugginses invested $125 in 25 pairs of Plymouth Rock Extra White King squabs, which they purchased from Melrose, Mass. They paid $5 per pair. During the five intervening years, they have sold approximately 20,000 squabs from that small beginning at rather high market prices which the buyers were glad to pay due to the size, taste and quality of the products of the El Dorado couple.

SUPPLIES SECTION

One of the few enterprises of its kind in this section, the company is the main source of supply of squabs in this section and ships large orders monthly to points far removed from El Dorado. The largest individual firm buyer is the Security Produce company, Chicago, to which one large shipment goes each month, averaging 125 dressed squabs, weighing an average of one and one-fourth pounds per squab, and selling at 80 cents per pound. Other monthly sales are made here in El Dorado and Wichita.

The local firm supplies squabs to the El Dorado hotel, largest hostelery in the city; the Shamrock cafe and the Allen hospital. The Municipal Airport cafe, Wichita, also purchases them. In addition to these, which get rather large shipments monthly, many private individuals in El Dorado and nearby towns get small supplies at intervals as the supply may be able to meet.

The net income is sufficient to afford Huggins and his wife freedom from care and worry as to necessary means to meet current bills, plus laying aside something for the proverbial "rainy day." At present they have several hundred producing pairs of squabs and hundreds of others nearly old enough and ready to be dressed for the market.

20 SQUABS A YEAR

"Each good working pair averages from 20 to 23 squabs each year," says Huggins. "The average cost or expense per squab from hatching to delivery to the buyer, is only seven cents. The breed we have is thoroughbred and 'all season' producers that is, they produce the year around. They begin laying when six months and continue for an average of eight to 12 years. In extreme cases some squabs produce for as many as 20 years."

According to Huggins, of the original 25 pairs bought five years ago, only six have died, and this number, includes their total losses in matured squabs. The senior member of the firm is William Hubbins, well known civic and political leader among Negroes of Butler county of which El Dorado is county seat. He has been employed as custodian of the El Dorado National bank for the past 22 years.

## A LESSON FROM HOLLAND

The American people can learn a valuable lesson from the lifeguards at the beaches of Holland!

For, according to an item in the Dairymen's League News of New York, these guards make a practice of drinking a glass of milk every hour to give them greater endurance.

Medical men and dieticians often observe that the per capita consumption of milk in this country—by both children and adults—is far lower than it should be, in the interests of health. Few foods contain as much nutritive value as milk, few are more palatable, and few are less expensive. A national milk consumption double or more that existing today, would result in marked betterment of the average standard of health. And, incidentally, it would mean a great deal to the dairy farmer, who has been faced with excessive production over consumption. —Editorial—Atlanta Daily World.

## SEATTLE'S FOREST IS PAYING ITS OWN WAY

The city of Seattle, Wash., which owns and operates the nation's largest community forest—62,000 acres—expects a net return of $2.25 an acre a year after all operating expenses are paid, reports the United States forest service. Purchased thirty-nine years ago to protect the Seattle watershed, the forest has already paid back on the sale of wood products more than $1,000,000—which has been sufficient to retire all debt and take care of all expenses.

Every spring Gladys Deck of Toronto, Kas., plants pop bottles with her lettuce and radishes in such a manner that the bottle necks protrude about four inches above the soil. At the slightest wind the bottles whistle and hum, scaring the rabbits away. All of which probably makes the spot an eerie place at night.

## GUARD PROTECTS PRIZE PAINTING IN KANSAS CITY

KANSAS CITY, Mo.—(ANP)—The painting of Mrs. Percy Lewis, of Marshal, which won the blue ribbon, awarded by the museum of art of the recently ended state fair at Sedalia, was transferred Friday to the Towers theatre of downtown Greater Kansas City, where it will remain on exhibition throughout the week ending Sept. 3.

The picture, cited by a host of the estimated 100 carefully tutored, white exhibition artists as a "poorly painted offering" which violated all rules of perspective not only resulted in Mrs. Lewis being referred to as "the Southwest's Woman of the Week,' but also inspired the manager of the Towers theater, Benny Joffe, to value it to a point which prompted him to exhibit it under the supervision of a guard who was instructed not to let anybody bother it.

The publicity given the woman by correspondents and editors of white papers of the Southwest was in perfect accord with the decisions of the white judge, Professor A. Firacy, who lauded it as the foremost of all example of primitive art that he had ever seen.

# AN OLIVE BRANCH AND A SWORD

(AN EDITORIAL)

By Berry M. Cooper, Editor Illinois Page National Baptist Union-Review

I saw an account in a Shreveport newspaper the other day where it was said that a certain Baptist executive stated that every effort that was humanly possible had been made to bring about the union of the two bodies of the National Baptist Convention of America. He further stated that progress had been made along those lines, and that a complete union of the two conventions was in the making. After reading the above statement, I began to search my mind for a satisfactory answer to the truthfulness of such a statement; and I have been unable to find one. Knowing as I do the real conditions of the Baptist work here in Illinois, I am questioning that Baptist leader's statement. My only answer to the whole thing is that some one is trying to pass the "buck" and they had a crude way of doing it. I have followed the leadership of the two conventions since that never to be forgotten event that happened here in Chicago, twenty-four years ago. The more I study this thing the less chance I see of any union of these two bodies.

Now, let us be fair with ourselves. Do you think that a man who is free would be willing to let another make him a slave? I should say not! All this talk about getting together, is "Dutch" to me. I rather think some one is talking peace while they are sharpening their swords. In other words, there is an olive branch being offered in one hand, and a sword in the other. I am thinking of certain conditions that I know about that do not taste like unity to me. Any one who has worked in the Baptist field here in Illinois knows what I am talking about.

I am not an alarmist nor am I a fighter in that sense where one would term me a meddler. I am a fighter for what I think is truth and right. I represent the younger group of the ministry here in the "Prairie State" and I champion the cause of the Baptist State Missionary and Educational Convention of Illinois and the National Baptist Convention of America. I am grateful to the men and women who make up the membership of these two great organizations for they gave me my chance to make good, and I am not going back on them. Dr. Henry Allen Boyd to my way of thinking is the greatest Baptist living today. And no man can find any better men than Drs. J. M. Harvey, J. H. L. Smith, President of the Baptist State M. and E. Convention of Illinois. I. M. Hendon, Cor. Secretary of the Home Mission Board of the National Baptist Convention of America, J. L. Griffin, Moderator of the North Wood River District Association, J. M. Foster, Mod. Friendship District Association, R. B. Bozeman, Mod. Calvary District Association, W. M. Cosey, L. W. Mingo, E. Thurston and others who make up the personnel of the District State and national work here in Illinois. These men are the cream of the Baptist group, and I do know that they are some of God's best men. To tell me that they are wrong in their stand is like throwing dirt in the face of your best friend. There may be some reason for the minister's statement, but, brother Cooper, cannot see it.

I do believe in unity; but I also believe in Christ's way. I cannot see much of Christ's way in certain conditions that I know exist in certain groups hence; I am not in harmony with the thing that the good brother was talking about. To tell the truth, I haven't been able to find any foundation for the statement. I am quite sure that if such effort had been made on the part of the National Baptist Convention of America, some one would have known about it in Los Angeles, and some actions taken towards that end. I read the annual address of Dr. Green L. Prince, and I did not find any reference to any such plan as outlined in the statement of the minister as given in the Shreveport Sun. I rather think that some one is trying to fool some one, and that like other things I know about, they are trying to show that the National Baptist Convention of America is a little organization out here struggling for its life.

Now fellow workers, you all know that this is not true. The National Baptist Convention of America is one of the greatest religious organizations in the world. Any one doubting this statement can consult the records of the fifty-ninth annual session of the convention which just closed in Los Angeles, and they will find a record filled with real honest to goodness achievements.

In the face of all these things this proves the untruthfulness of the statement that prompt me to attempt to write this article. I am forced to say that I cannot see nothing but "An Olive branch and a Sword." What do you think? The National Baptist Convention of America is doing fine. We are not weary in well doing. And we shall not faint.

Well the annual session of all the organizations is about over, and the holidays are well on the way. The Baptist family is blessed with the knowledge that they have performed well the task assigned to it. Beginning with District Associations, the Sate Conventions, the Baptist World's Alliance, and the National Baptist Convention, each group has played an important part in the development of the work of our Christ in earth.

Let us strive to do more in the future than in the past. Christ is depending upon each of us to do our part. Illinois Baptists are striving to make "The Prairie State" the beacon light for Negro Baptists above the Mason and Dixon Line. Illinois Baptists wish you to join them in prayer to God for the success of the work both in Illinois and throughout the U.S.A.

Union-Review.

## A Christian Statesman Falls Asleep At His Post Of Duty

When we learned of the death of Philip M. Davis, chairman of the Deacons' Board of Friendship Baptist Church, Atlanta, Georgia, Dr. E. R. Carter, pastor, we recalled the expression made by the late Asa G. Candler, Sr., at the funeral bier of the lamented Lee B. Maxwell. Mr. Candler in delivering a eulogy at the funeral of the Rev. Dr. Maxwell, pointed to his body and said, "There lies a Christian statesman who has done his work well." We can say in full satisfaction of our soul, that Phil M. Davis, purchasing agent of Morehouse and Spelman Colleges and chairman of the Deacon Board of Friendship church, was a Christian statesman, who did his work well. We know no higher compliment that the Union-Review could pay his memory than to say that Phil Davis did his duty under God as he had the light to see it on every job that he was called to perform.

In Brother Davis' death, his wife and children lost a devoted husband and father; the church, a devoted and self-sacrificing member; the city and state, a good citizen, Morehouse and Spelman College, an able and conscientious officer; and the race, a leader worthy of the laurels he wore; the editor, a personal friend that he regarded as a man shirking no duty and offering no apology for the life he lived. His chief delight was to serve Friendship Baptist Church, and as head of the Deacon Board he made a greater contribution to the success of the church financially than any officer Friendship has had in a quarter of a century. Peace to his ashes, and may his life prove an inspiration to the officers of the church who supported him so loyally in his efforts to take Friendship over the top. God bless his memory.

The National Baptist Union-Review extends its heartfelt sympathy to the family, Morehouse and Spelman colleges and to his many friends throughout the nation. Like all Morehouse boys, he made good.

—Union-Review.

## BOWL OF RICE PARTIES

EVERY available device to raise money for the suffering civilian population of China is worthy of consideration. In order to alleviate the wide distress of men, women and children throughout China, a nation-wide "Bowl of Rice Party" appeal in this country is being made by the United Council for Civilian Relief in China, "Bowl of Rice Parties" will be held on an evening which will be most convenient during the week of October 30. The governors of seventeen states and the mayors of 300 cities last year proclaimed the day as "Humanity Day." China's ill and homeless millions are very much on our hearts today, and they must not be forgotten, even though our attention may be diverted to the more dramatic events which have entered the stage of the world's internation-

"Faster cars on the road require safer drivers at the wheel."

## COLLEGE EDUCATION

(Continued from Page 1)

vaded and accepted fields of labor to the surprise of many, have been found to offer greater financial returns for the amount of mental and physical effort invested than do the professions, in addition to offering more permanency and security and opportunity for advancement as far and as high as one's ability will carry him, or her. With the advancement of science and improved machinery, these newly invaded fields are inexhaustible.

A case in point, is J. B. Lee, a college graduate of Tougaloo college, who applied his college education on a farm at Indianola, Miss. It is said that when the neighbors learned that he was a college graduate, they shrugged their shoulders and said: "He Wont Stay Here Three Months." But Lee did stay, and since 1906 has acquired 320 acres of land, a beautiful home, has a daughter attending Tougaloo college and a son studying medicine at Meharry. He is now, also a Trustee of his alma mater. He made ninety-five bales of cotton last year.

J. B. Lee had to "blast" the mischievous idea that a person with college education is not supposed to, or cannot, do manual labor. He proved beyond any doubt whatsoever that education fits one to work, and more effectively.

## MISS. MATRON OPERATES SUCCESSFUL TRUCK, DAIRY

(Continued from Page 1)

milkers which operate by air pressure. Bottles are washed automatically by motor and inspection by the state department of health are frequent. Her daily production is 50 gallons. She ships to a creamery at Cleveland and in addition sells all the butter and dairy products she can manufacture to a Catholic girls seminary located here. Her sales from milk and dairy products net her $100 to $150 per month.

"My sixty chickens average about 30 eggs a day," said Mrs. Dillon. "Eggs and chickens are in demand here and I seldom have enough. I live pretty much at home. This year I raised four excellent hogs. I can meat and chicken also as well as vegetables, salads and fruits, using the pressure cooker. This year I have 175 cans of beef meat, pork and chickens. The broilers are thus taken on the yard and I keep chiefly the laying hens. I fry the chicken before canning it. If you have never eaten canned chicken you don't know what's good."

Mrs. Dillon was a teacher when she married some twenty years ago. Her husband, Austin Dillon, who has been employed all of his life at the white Catholic seminary, objected to her continuance in the school room so she plunged into farming partly as an avocation.

One of the most interesting phases of Mrs. Dillon's home is her collection of antiques. She has four canopied four-poster beds, relics of early ante-bellum days, numerous marble topped carved tables and similar early furniture, much of it bought when plantation owners were selling out or modernizing. Her eventual plan is to sell it. In the meantime she says she is enjoying it herself.

"I cooperate closely with G. W. Bryant and Mrs. Eva L. Gordon, our extension and home demonstration agents," said Mrs. Dillon. "And I do not feel that what I have done is exceptional. All that is needed to succeed in the country is willingness to work and the use of your head as you would in the school room or the city."

## OFFICIAL CALL

(Continued from Page 1)

to speak authoritatively on matters pertaining to the welfare of Negro farmers. Since 1929, when the first Unit was organized at Howard, Miss., its growth has been substantial. It now has members enrolled from 21 states.

The objectives and efforts of the N. F. C. F. relative to the welfare of colored farmers have received the endorsement of agricultural leaders of both races throughout the nation and the commendation of Federal and State Departments of Agriculture. Members are encouraged to practice cooperative buying, production and marketing, to own the land they till and to improve living conditions in their homes and communities. By advice and instruction the Federation has aided many tenant farmers to secure farms on reasonable terms. Eleven years ago, it organized the first cooperative in the nation, the membership of which was composed mainly of tenant farmers and sharecroppers. Today, most of these members are farm owners and are selling several thousand dollars worth of their farm products cooperatively annually.

Many prominent agricultural and race leaders will deliver addresses at the convention. These include Hon. Lafayette Patterson, Washington, D. C., who will represent Secretary of Agriculture Henry A. Wallace; Hon. E. A. Miller, Asst. Director, Southern Region, AAA; James P. Davis, Head Field Officer, Little Rock, Ark., a former president of the N. F. C. F.; James A. Jackson, Standard Oil Co., New York; James W. Washington, Chicago, Ill., president of the United Cooperative League and general manager of the Aframerican Emancipation Exposition which will be held in Chicago next summer; Mrs. Jennie B. Moten, president National Association of Colored Women's Clubs and many others. Representatives of State Departments of Agriculture, of land grant colleges, of the extension and home demonstration services and prominent colored farmers commissioned by the governors of many states will also attend.

As is customary at all annual conventions, valuable prizes will be awarded for best exhibits of farm and farm-home products.

The National Federation of Colored Farmers was organized in 1922 and incorporated under the laws of Illinois in 1930. Present officers are Leon R. Harris, Moline, Ill., Pres.; Maj. R. A. Byrd, vice Pres.; S. B. Wilson, Nashville, Tenn., Sec.-Treas. State and regional vice presidents include A. Gordon Thompson, Lumberton, N. C.; W. Brown, Millen, Ga.; P. B. Boston, Oviedo, Fla.; D. F. Hall, Georgiana, Ala.; Maj. H. C. McCormick, Taft, Okla.; Walter Riley, Tchula, Miss.; Rev. Wm. Freeman, North Little Rock, Ark., and Prof. L. B. Boler, Charleston, Mo.

# W. VIRGINIA STATE COLLEGE WILL GET ROTC UNIT, REPORT

INSTITUTE, W. Va., Sept. 28 (ANP)—An ROTC unit at West Virginia State college seems assured, a delegation of Charleston leaders reported after a conference with Rep. Andrew Edmiston, a member of the house of representatives' military affairs committee.

The group conferred with Edmiston at Weston Monday and quoted the congressman as saying that "while establishment of an ROTC unit is almost a certainty, the outlook for a Negro national guard unit is not encouraging."

The war department requires that inactive guard units in the U. S. be rehabilitated before new ones are authorized, Edmiston told the group.

The present war situation abroad is a factor which may change these policies. The delegation stressed the need for making available opportunities for Negroes to receive adequate military training in advance of war-time conscription. The military units and training programs advocated by organizations represented in the delegation would afford these opportunities.

The delegation included E. L. Powell and A. H. Brown representing the Charleston Business and Professional Men's club and the West Virginia Civic leagues; A. H. Calloway, chairman of the legislative committee of the West Virginia State Teachers association, C. W. Dickerson of the American legion and J. C. Evans of West Virginia State college.

## REPORTED BY NEGROES BETTER RACE FEELING

Special to The Christian Science Monitor

BIRMINGHAM, Ala.—Education as the keynote to better race relations was the predominant note of the two-week school on race relations held here the last of July at the Negro Y. W. C. A. Conducted under the auspices of the Southern Leadership Training School System and directed by the Rev. W. H. Lewis, president and founder of the training school system and national field secretary of the Inter-racial Commission of the United States, the purpose of the school is to train Negroes who have shown qualities of leadership so that they in turn may teach others of their race the ways of inter-racial friendship and cooperation. A graduate of Tuskegee Institute, Rev. Lewis is a disciple of Booker T. Washington and strives to spread his spirit and teachings.

"Negroes need to be educated," he declared, "in order to live properly among themselves and get along with white people. Inter-racial relations though is not a job for the Negro alone, it must be carried by both races."

As an indication of improved race relations he cited the decreased number of lynchings and the increased educational facilities for Negroes.

## BABY CHICK ASSOCIATION TO CONVENE HERE.

The International Baby Chick Association voted to hold its 1940 convention in St. Louis in July, according to a telegram from Frederick H. Rein, secretary and general manager of the St. Louis Convention and Publicity Bureau, who is attending the convention at Cleveland. The convention will last a week.

This organization will use all the facilities of the Municipal Auditorium and will bring between 3500 and 4000 persons to St. Louis.

Among the delegates from St. Louis were C. S. Johnson, manager of the poultry department, Ralston Purina Company, and Charles F. Hicks of that company.

# COLUMBUS, O. CITIZENS ENDORSE DR. SETTLE FOR SPINGARN MEDAL

COLUMBUS, O., Sept. 21 (ANP)—Rev. Glen T. Settle of Cleveland, founder and director of the radio program, "Wings Over Jordan," was boosted as a candidate for the 1939 Spingarn medal in a letter sent to Oswald Garrison Villard of New York, chairman of the award committee, by the Frontiers' club of this city. A. P. Bentley is president, and J. S. Hines, Jr., secretary of the local group.

In supporting Rev. Settle's nomination, the local club points out: "Wings Over Jordan" is one of the three most popular radio features in the nation today, and is broadcast by short wave to Europe and South America. A faithful and sympathetic interpretation of Negro life enters many homes each week. Eminent Negro leaders, skillfully interpreted Negro music and many sound facts are presented weekly to millions of listeners. There is abundant evidence to show that this program is educating millions, is softening racial prejudice, and has gained unprecedented respect and tolerance

## HOME LOOTED 3 TIMES; FARMER SEIZES BURGLAR

Leo Hammond, a farmer of Wayne township, DuPage county, has been sleeping with one eye open because of three burglaries in his home in the last four months. Early yesterday he heard a noise downstairs. He seized a shotgun, crept downstairs, and captured Francis Schramer, 27 years old, of Winfield, Du Page county. The prisoner, a farm hand whom Hammond discharged six months ago, had $10, two watches and other jewelry belonging to Hammond, who held him until Sheriff Elmer Hoffman and Deputy Charles Pratt could be summoned. Schramer denied he had robbed the home before.

## ETHIOPIANS READY FOR MAJOR BLOW

Djibuti, East Africa— (CNA) — Ethiopian leaders of the incessant guerilla warfare against the fascist army of occupation in their country are closely watching the present war crisis in Europe and are rushing preparations for a major offensive should Italy become involved in a European war, according to advices reaching this French port.

The Ethiopians, the reports say, are confident that the Italians, already driven out of large sections of the country, could not maintain their present precarious hold upon Addis Ababa and other centers where British and French aid to the invaders discontinued, as it would be in event of a war between Germany and Italy, on one hand and France, Britain and Poland on the other hand. This aid, they have pointed out at various times, has been extended not only by British loans to Mussolini but by British and French aid in facilitating shipments of war supplies through the Sudan and this French port for Italy's beleaguered garrisons in Ethiopia.

The Ethiopians, however, are not holding their fire while awaiting developments in Europe, but even now are conducting a sharp offensive in the Tigre and Shea provinces where Italian troops have lately suffered severe set-backs, including the capture of a whole Italian army staff by the Ethiopians. Should Italy join Hitler's war offensive in Europe, this campaign would be greatly intensified and extended throughout the length and breadth of Ethiopia, according to the plans of the geurilla leaders.

# EDUCATED AFRICAN, WHO SPEAKS 13 LANGUAGES, AIDS GREAT BRITAIN

WASHINGTON, Sept. 21 (ANP)—Discovery of a native African Negro chief who speaks 13 languages, including three European tongues, was reported several days ago here.

In a report prepared before he was recalled to England at the outbreak of the war, Bridadier H. S. Wintermbotham of London, general secretary of the union, said he found the Negro chieftain, apparently an Oxford university graduate, in a small village in Uganda.

He owned a library ranging from Shakespeare to Mark Twain, the English scientist said, and helped train native s to run survey lines through different jungle areas, even teaching them to use telescopes to fix the positions of such lines by star-positions. His name was not given.

## U. S. PLANT EXPLORER RETURNS WITH RARE JUNGLE TREASURES

By a Staff Correspondent of The Christian Science Monitor

WASHINGTON, July 11—About 2,600 botanical specimens, including seeds of the alabaster-like wax palm, have been brought back from the jungles of Colombia by Ellsworth P. Killip, Smithsonian botanist.

Mr. Killip's expedition—his third to the South American country—was undertaken as a cooperative enterprise between the Smithsonian Institution and the National Botanical Institute of Colombia, a part of the National University at Bogota. The material collected will eventually be used in compiling a complete catalogue of the flora of Colombia.

Plant exploration is less venturesome than it was in 1922 when Mr. Killip first crossed the Quindio Pass, habitat of the rare wax palm, in cargueros—a chair suspended from the shoulders of two natives. Today it is reached by an automobile road, but botanical pioneering is still far behind engineering and Mr. Killip will give names to hundreds of plants that have never before appeared in botanical lists anywhere in the world.

**Wax Palm Experiments**

The seeds of the wax palm, a species found in the northwest mountain areas of South America, will be turned over to the Forest Service by Mr. Killip. Department of Agriculture specialists believe there is a faint chance that the tree might grow successfully in certain high altitude in California.

Growing to a height of close to 200 feet, the wax palm is surmounted by a crown of silvery leaves 20 or more feet high. Its tall, straight trunk is coated with shining white wax giving an appearance of an alabaster column.

While most palms live only in warm climates, this regal species endures temperatures close to zero in the peculiar climatic conditions near the equator. Growing between the jungles of the plateau and the alpine meadows, the wax palms have been described by the botanist, Humboldt as "a forest above a forest."

**Flowers for Florida**

Mr. Killip also brought back seeds of the rare passion flower, to go to the Miami, Fla., garden honoring Dr. David Fairchild, noted plant explorer.

Most spectacular flowers in the Colombian jungle, the Smithsonian explorer says, are the brilliant yellow Marila flowers sent out in spikes from the top of trees in the black, sultry forests.

By a gentleman's agreement, the Smithsonian confines its botanical researeh in South America to Venezuela, Ecuador and Colombia. The Field museum of Chicago is covering Peru; the New York Botanical Garden has the Guianas and the Amazon area of Brazil, while Harvard University concentrates on Chile, the Argentine and the southern portion of the continent.

Most of Mr. Killip's explorations on this trip were made on Gorgona Island, an uninhabited offshore area, in the Choco country, and around Villavicencio.

Before the catalogue of Colombia flora is written, Mr. Killip will compare his discoveries with those made by European botanists and hopes to locate some 3,000 paintings and drawings of Colombian flora done between 1785 and 1808 by the great naturalist, Jose Mutis, that were in Madrid before the recent war in Spain.

**Grass Grows Long In Africa—48 Feet**

By the Associated Press

New York.

Discovery of the leviathan of all grasses, a single strand that grew 48 feet along the earth's surface, is announced in Nature, Britain's official natural science journal.

This strand sent down roots every few inches, and from them grew blades up to three feet tall. Nature says this grass offers a new aid to stopping soil erosion.

The grass was found in East Africa, and is a cousin of Bermuda grass, which grows luxuriantly in the southern United States.

## SOUTHERN FOOD CROPS COMPETING WITH WEST?

Christian Science Monitor

AUBURN, Ala.—If the South finally turns to the production of its own food and feed crops, will that mean a loss of markets for the Middle West which now largely supplies that need? The answer is no, according to Dr. P. O. Davis, Director of the State Extension Service. He holds that Midwest farmers will sell their products to those who make clothes and other things for the Southern farmers instead of selling food direct to Southern farmers.

## DR. CARVER JOINS WITH DR. CARREL IN FOOD RESEARCH

### Famed Scientists To Center Study In Florida

TUSKEGEE INSTITUTE, Ala. —ANP—Dr. George Washington Carver, world-famous scientist, will join Dr. Alexis Carrel in a study of growing of foods, to be centered in Florida, it was learned this week Dr. Carrell, would figure in scientific research, has been associated with Col. Charles A. Lindbergh in "artificial heart" experiments, at the Carrel laboratories in France.

The Carver-Carrel research will be conducted under the Rockefeller foundation. Studies of citrus fruit growing are already being made in Florida to determine maximum nourishment, Dr. Carver said.

The wizard of Tuskegee whose peanut, sweet potato and other experiments have brought him world renown, told of the present food research plan last Thursday in Montgomery while addressing members of the Alabama Hotel association.

Dr. Carver said he, Dr. Carrell and a group of other scientists will make an exhaustive study of food growing to make discoveries of food properties that "will make the human race healthier and happier."

## FIELD AGENT

(Continued from Page 1)

house was visited recently by field agents who attended the summer school at Tuskegee. The new home replaced a one-room house with a lean-to kitchen, typical of the countryside.

Having only $100 each, the Thurmans borrowed $450 more (with interest at 8 percent, four years to pay) and soon commenced work on the new home. Concerning their achievement, Campbell writes:

"The home was completed for $690.50 and given a public opening attended by Dr. F. D. Patterson, president of Tuskegee Institute and many other people, both white and Negro, who were interested in every feature of the planning and building of the five-room house and the cost of each operation. They also were interested in the account of the 23 similar projects we have under way.

"I firmly believe that such a combination of intelligent planning, the use of native and local materials and the farmers' own labor will make possible many more homes for small landowners and tenants in the rural South. This can be done within a very low price range if a way is found to provide simple builder's plans and obtain local builders."

Campbell does cooperative extension work in agriculture among the Negro farmers of Alabama. This valuable extension service is sponsored by the U. S. Department of Agriculture. with State land-grant colleges cooperating.

There is no end to what may be achieved by the mind and heart by earnest effort.

## CREDIT UNIONS

(Continued from Page 1)

Looking at your own experience I think you will see that ordinarily there are just two ways. One is to save for them in advance. Many of us are prudent enough to set aside a certain small stake but probably the great majority of us, deep down in our hearts, harbor the uneasy feeling that we really should be saving more than we do. The other way of meeting extraordinary calls for money is to borrow. We may get actual cash through a loan, or we may borrow by running a charge account or buying on the instalment-plan or simply letting the bills run until we can meet them conveniently. All these are forms of borrowing and in one way or another we always pay for such credit service—often far more heavily than we realize. If we cannot meet the calls for money through either saving or borrowing we may sell what property we have for whatever it will bring, or, failing that, simply get along as best we can without the money, suffering whatever hard consequences may follow.

**Credit Union Serves Both Needs**

The credit union is an aid to better living because it is designed to serve both these needs. Let me take a typical example. A factory or a store or a government bureau employes, we will say, numbers of men and women. They work side by side month after month and year after year and get to know each other very well. A small group within this company may decide to form a credit union, and after due investigation by the Credit Union Section a Federal charter is issued to them. They elect directors and committeemen, find a desk or small office, and are ready to do business.

They begin taking in the savings of their members and building up a central fund. Others join, and the fund grows, first into hundreds and then into thousands of dollars. From this fund the members borrow as they may need money, in amounts ranging from a few dollars up to many hundreds of dollars. They pay back these loans usually in regular pay-day instalments, having up to a year or even two years, if necessary, to repay the whole amount. There is thus a constant in-flow of money from these repayments and from additional savings of old and new members, and all this money is at hand ready to be loaned out again, over and over, in a steadily revolving fund. Interest charges on these loans cannot by law exceed one percent for each month on whatever amount still remains unpaid. Earnings from interest go first to pay expenses and then to set up a reserve, and the rest may be paid back to members in dividends, which often amount to as much as 6 percent per year.

**Lending Service Is Aid to Saving**

Such is the primary operation of a credit union, the way they are operating by the thousands, everywhere in the United States. It is obvious that the employed worker, in office, school, or factory, stands to benefit from the steady service the credit union holds out to him. I am inclined to think that the greater of its services is the facility and encouragement it gives each individual member to look out for his own future needs by saving money against them. On pay days the credit union office is right at hand. It is only a matter of a few minutes to make the regular payment at the window, or hand it to the credit union agent if the worker is employed at a distance from the central plant. And once a man tastes the pleasure of thrift, of carrying around with him all the time the consciousness of the growing fund to his credit on the books. he is not likely again to become the shiftless hand-to-mouth wage earner with no outlook beyond the limits of his current pay. The experience of credit unions everywhere is that a goodly proportion of their members begin saving regularly for the first time when the credit union makes it easy and convenient for them to do so by setting up its office in their midst.

But the loan service is not to be minimized. It enters the picture usually when the individual of small income either finds that his accumulated savings are not enough to carry him over a period of financial stress, or sees an opportunity to make a handsome saving through the wise use of credit. It is only in more recent times that the public has come to understand that the man who lives out of his pay envelope has need for a line of credit in handling his own small finances, just as much as the business man or the great corporation. Too often such credit is not open to him at all. And when it is he not infrequently has to pay such a high price for his small loan in interest and special charges that the remedy for his need proves worse in the long run than the original need itself. It is just for that reason that he has built up this system for providing his own source of credit by joining with others like him, pooling his slender resources with theirs, and making himself independent of outside sources of aid.

**Helpful Purpose Made Evident**

The great virtue of the credit union is that its object is to help the man of small means and not to take advantage of his need. Such a purpose works out very practically in the setting of an interest rate at as low a figure as seems advisable, consistent with the smooth running of the credit union. It also works out in other ways that may be even more important to the hesitating applicant for a loan. For example, when a credit union member asks for credit, in the properly-conducted credit union at least, he is met by a sympathetic understanding of his circumstances on the part of officials who are his daily associates and who themselves face much the same problems that he does. The loan procedure is simple. He merely makes out his application for a loan, stating why he wants the money, and hands it in at the credit union office. The credit committee wants to be assured that the need is a sound one and that there is a reasonable assurance of repayment, and if those requirements are satisfied the loan is likely to be made. He may be called upon to have someone sign the note with him, or to give other security, but up to $50 even that may not be required and he may get the money simply on his own good reputation among his associates.

Sometimes these loans are just a convenience. Sometimes they come under such circumstances that the benefits from their timely help are lifelong. Our records show that credit union members borrow chiefly for relief of body or mind. In nearly every case where a credit union lists the purposes for which it has loaned money, medical, dental, and hospital expenses are close to the top.

Alongside this purpose there is also nearly always another which throws a revealing flash of light on the common mental state of the man who works for a living. He borrows from the credit union to pay off piled-up bills, or to relieve himself from the harassment of insistent creditors. In great numbers of cases he borrows to pay off other loans whose excessive interest charges have made it impossible for him to reduce the principal. Health of body and peace of mind—these inestimable boons may thus be said to be the chief products of credit union loan service. The essential honesty of the borrowers is shown by the fact that nearly all credit union loans are repaid in full, and the loss to credit unions from uncollectible loans is so small as almost to be called negligible.

**Credit Unions Varied in Type**

I have referred to credit unions as being set up among groups of employees of some governmental agency or private firm. The great majority of them are actually set up in employee groups but they are by no means confined to such groups. A credit union, for example, may be organized within the membership of a given church. A labor union may have a credit union of its own. A grange or the local of a lodge, a benevolent or social society, a group of teachers, a college faculty, a neighborhood club may obtain a credit union charter and operate with great success. We may even have a credit union serving all the residents in a given community if community spirit is strong and the population fairly settled and not too large. More than a hundred parish credit unions are doing a fine work, and I am convinced that there is a vast field for credit unions among churches of all denominations, and that this field will be more and more occupied. At the present moment we are having evidences of a special stir of interest in credit unions among teachers, some 350 such organizations having already been chartered.

The movement to organize credit unions in the United States has been going on for about thirty years. In its earlier stages momentum was slow. Only in late years has the movements really come into its own, and even yet it can be said to have had only a good beginning. There are now many thousands of credit unions in the United States, with a membership estimated in round numbers at some two million persons. The real goal toward which the leaders of the credit union movement look forward is still many years away. That goal is nothing less than the creation of a network of credit unions throughout the United States so closely woven that every resident on American soil who needs credit union help will be within the reach of its service.

**How Credit Unions Function**

All these credit unions supply their own capital. They get no funds from the government, either as gifts or as loans. Subject to supervision and auditing by state or Federal government, they run their own affairs. They elect their own board of directors, their own supervisory committee and credit committee. They are democratically controlled, each member having one vote no matter how much or how little his holdings in the credit union. No one makes money out of the credit union, except for the dividends returned to members out of net earnings. Officials except the treasurer serve without pay, and the treasurer usually receives only a small salary, if any salary at all. Full attention is given to the safety of money put into the credit union. In a Federally chartered credit union, funds must be deposited in an insured bank within 48 hours. The treasurer must be bonded, and the kind of investments of idle funds that may be made is strictly limited by the law.

Credit unions flourish in large cities or small. Boston, New York, and Philadelphia have scores of them, supported by the dimes and quarters of bell boys, waitresses, telephone girls, office clerks, railroad men, and working people of every type. Providence, Wilmington, Baltimore, and smaller cities like York and Lancaster have flourishing and well managed credit unions. In the national capital the various departments and their subdivisions furnish an excellent basis for credit union operation, and their growth in this favorable soil is truly astonishing. Recently I saw the statement of a Washington credit union less than three years old whose shareholdings had passed the $200,000 mark. Outside of the government service credit unions in Washington among the city's firemen, employees of business firms, stores, and the like have made notable records. Towns and cities have seen by far the greater part of our American credit unions organized, but they are beginning to make their way also in rural districts.

**How to Form a Credit Union**

To get a credit union under way it is necessary first to have a group of persons numbering about 100 as a minimum who are closely enough associated in their daily lives to know each other reasonably well or at least to have some common bond of employment or the like. If at least seven persons in the group (30 if the group is other than occupational in type) sign an application for a Federal charter and send it to the Credit Union Section in the Farm Credit Administration, a representative will call to see if conditions are such that a credit union could probably operate successfully. On a favorable report from him, the charter will usually be granted. The Credit Union Section also stands by to help the new group get under way and later to lend a supporting hand whenever necessary. Several thousand credit unions have taken out Federal charters since the Federal act was passed in 1934 and the number increases month by month.

## WILT RESISTING ALFAFA

(Continued from Page 1.)

at Lincoln, Neb., these have been weeded out to the present ten. This number probably will dwindle down to two before any are released for commercial growing.

All ten strains, Mr. Westover reports, appear to be equal or superior to Hardistan in bacterial wilt resistance, superior to Hardistan and at least equal to Grimm in seed and forage productivity. Some of the strains apparently possess much more leaf-spot resistance than commercial Turkistan and all recover more rapidly after cutting than Ladak.

The first metallic cartridges were made by Smith and Wesson in 1857.

# Annual Address of President National Federation of Colored Farmers

## MR. LEON R. HARRIS RENEWS YEAR'S WORK

### Leader of Agricultural Organization Tells What Membership Can Accomplish

"This is the tenth annual convention of the National Federation of Colored Farmers. Organized seventeen years ago by men who believed that the best Race citizens in America were Negro farmers, that the best job in this Nation for colored Americans was the job of farming, and that the progress of our race here in America would be judged and measured by the progress made by the farmers of our racial group, these men, these founders and organizers stated in their foreword to the nation and to the race, "It is our hope to make life on the farm more attractive and more profitable, and to build up in this nation a Negro group of organized, influential and satisfied producers.'

Today it is my happy privilege to report to you that this hope is being fulfilled. Colored farmers and the friends and leaders of colored farmers realize what organization, what group representation has accomplished for the welfare of all farmers of this nation. Through organization farmers have made their wishes known to those in administrative and legislative positions. Through organization farmers have brought about a greater degree of economic equality for agriculture in the nation. Through organization farmers have been able to command respect and their intricate problems have received due consideration. And through organization, and only through organization will Negro farmers be known and recognized as influential producers, and alone, through organization, will Negro farmers in this nation become satisfied producers.

**National Program for Agriculture**

At last we have a national pro-

## Farmers Close 1939 Session

### Twelve States and Many Units Sent Messengers to Convention

Jefferson City, Mo.—The tenth annual convention of the National Federation of Colored Farmers, which recently closed its session here was attended by delegates and visitors from twelve states.

The opening meeting Wednesday was called to order by Leon W Harris, president of the Federation, of Moline, Ill. Rev. J. P. Washington, pastor of the Christian church of Jefferson City, preached the annual farmers' sermon, substituting for Rev. C. B. Johnson, who had been called away suddenly. He was assisted by the Rev. H. A. Clinton.

The local welcoming program was given Wednesday evening. Prof. A. L. Hammons, of the department of agriculture, acted as master of ceremonies. Dr. Sherman D. Scruggs, president of Lincoln University, Mayor Jesse Owens, Commissioner of Agriculture of the state of Missouri, Mr. Jewell Hayes, and Prof. J. N. Freeman, acting director of the department of agriculture, welcomed the convention. Responses

## Agricultural Parity And a New America Under The Constitution

## A Farmer Bags a Million Dollars From The Soil

### Article by Mr. Geo. Kent, From "Think" Magazine

How an Illinois corn-grower, burning with a single idea, braved ridicule of his neighbors and starvation to develop a corn of better quality and endurance and that would outyield all others____Ten years of painstaking experimentation, of inbreeding and crossbreeding, crowned ultimately with success____Owner, today, of $1,000,000-a-year seed business.

For ten years, up until 1935, Lester Pfister's neighbors in El Paso, Illinois, were convinced that he wasn't "quite right in the head." They couldn't understand why any sane individual should spend hours in a field under the boiling sun trying paper bags on corn tassels. When his farm went into ruin because he couldn't give it the time it required, fatherly old men used to stop him on the road and beg him to quit his foolishness.

And then, after years of ridicule and going about ragged and half-starved, Pfister drove his "crazy" experiment through to a successful conclusion. In 1935, while his neighbors were averaging $2,000 for a season's work, Pfister took in $35,000—payment for corn seed that he had developed. The following year he sold for $10 a bushel every kernel he could raise, and took in $150,000. Here was a corn that

## FARM CREDIT REPRESENTATIVE

### Remarks of Dr. Cornelius King on How To Secure Credit

Washington, D. C.—Returning from a recent visit to North Carolina, Cornelius King, Farm Credit Administration representative, said that agricultural and other leaders frequently asked questions relative to consideration that would be given Negro borrowers of the FCA lending institutions in view of the condition of the tobacco market and the low prices of cotton.

Mr. King told these leaders that the Farm Credit Administration was taking cognizance of these conditions, and he added further that in keeping with the general policy of the FCA, colored farmers would share with other farmers in the special considerations being given distressed borrowers in that section. "Not only are Negroes given consideration in receiving the services of this organization," said Mr. King, "but they are also given consideration whenever difficulties arise over which they have no control"

The Negro representati e o' the

## SEVENTY-FIVE YEARS OF PROGRESS

### "Individual Responsibility" by Jas. W. Washington Delivered At Conference

Jefferson City, Mo.—Mr. Chairman. President, Officers and members of the National Federation of Colored Farmers, Incorporated, Friends, Visitors and fellow Americans. It is with profound pleasure that I greet you today, and, I deem it an honor as well as a privilege to appear before this assemblage here at Lincoln University at Jefferson City, Mo. I have chosen as the subject of my talk, "Individual Responsibilities."

Success in farming depends, as it does, in all other enterprises, on formulating a definite plan. It depends on a word, on the proper exercise and co-ordination of the three great factors that govern human undertakings. First, staff work or planning. Second, executive or seeing that it gets done. Third, labor, or doing it. Neither function is more important than the other. Often on the farm as elsewhere (we speak from experience), one individual

(Continued on page 16)

### Special Assistant to The Administrator Of AAA Before Colored Farmers

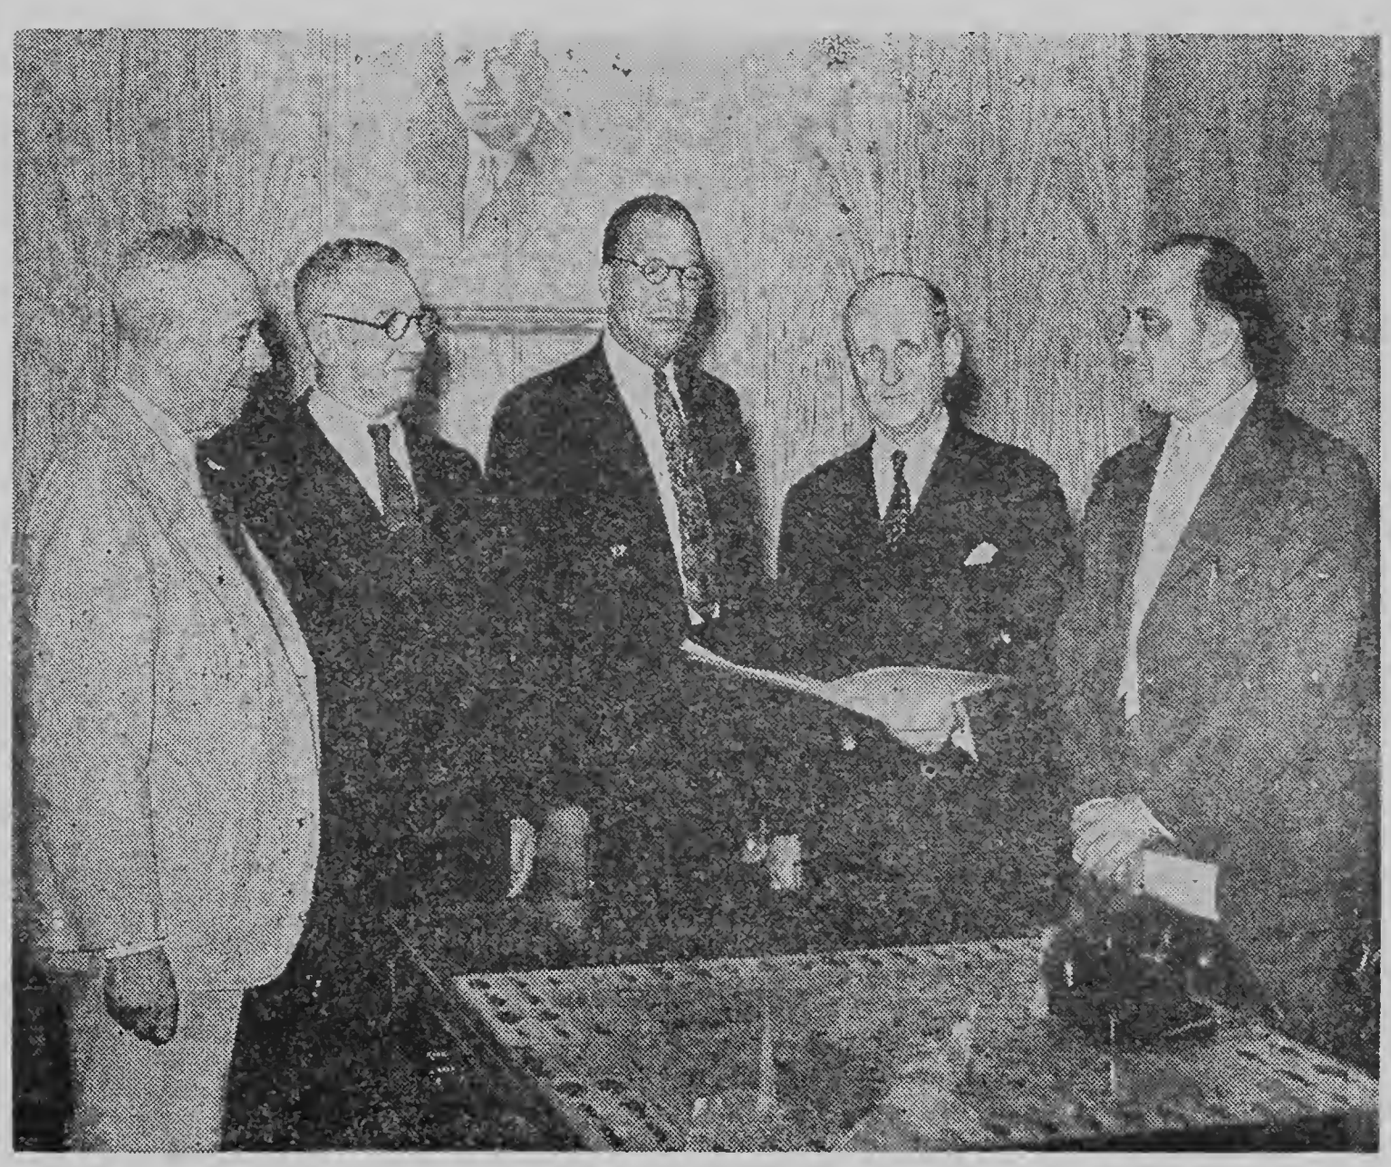
Jefferson City, Mo.—"Mr. President, ladies and gentlemen, I am deeply grateful for the honor your organization and your president have paid me by inviting me to address you for the Department of Agriculture again this year.

A great many changes have occurred since I last talked with you. In some way, this old world has rolled along and gone through a number of crises, though conditions are still such in the world that none of us today can tell what the next twelve months may bring. I think we can say, however, that our economic problems are fundamental and that this country can never be the great country it should be until some of the challenges they present are met. In my humble way I am glad to bring you a personal message from Secretary Wallace and Administrator Evans which will show that so far as they and their advisors are concerned they have not compromised and will not compromise on the fundamental question that the farmers of this country are entitled to parity income and that we believe further that parity income is basic, not only for the welfare of farmers, but for the welfare and safety of the country and our economic life.

To try to determine how vital

(CONTINUED ON PAGE 15)

## AFRAMERICAN EXPOSITION COMMITTEE RECEIVING BILL PASSED BY ILLINOIS STATE ASSEMBLY



Reading left to right, Adjutant Gen. C. E. Black, Illinois, Maj. R. A. Byrd, Springfield, Ill., Vice President N.F.C.F., James W. Washington, Pres. United Cooperative League of America, Chicago, Ill., Alexander Wilson, Administrative Asst. to Gov. Henry Horner, holding the bill, and S. L. Nudelman, Director of Finance Dept., State of Illinois.

## DR. GEORGE CARVER DELIVERS ADDRESS AT N. Y. FORUM

NEW YORK CITY, Nov. 2 (ANP)—A featured speaker on last Wednesday's session of the Herald-Tribune's Forum on Current Problems was Tuskegee Institute's famed Dr. George Washington Carver, scientist and chemist, who discussed the part played by chemistry in warfare and in peace.

Dr. Carver's appearance as forum speaker was a prelude to the more formal occasion last Friday night when the noted chemist was awarded the Theodore Roosevelt medal "for distinguished service in the field of Science.' The presentation was made following a dinner at Roosevelt House on East 20th street and present for the impressive ceremony were Dr. Frederick D. Patterson, president of Tuskegee Institute and Dr. Wm. Jay Schieffelin, chairman of Tuskegee's board of trustees and Dr. A. W. Curtis, Jr., assistant to Professor Carver.

Co-speaker with Dr. Carver on the Forum program was Col. Adelno Gibson, chemical warfare officer of the United States Army, 2nd Corps Area. Dr. Carver told his hearers that the present European conflict would develop new needs of humanity which research chemists

(Continued on page 16)

## Mr. Leon R. Harris Renews

(Continued from page 1)

gram for agriculture which has been approved by a vast majority of the nation's progressive farmers. This program will succeed if all farmers will cooperate with those responsible for its administration. Because this program recognizes the worth and the needs of the small farmers of the nation, colored farmers especially should appreciate its value and give it wholehearted support. This program gives hope to the competent farm tenant, sharecropper and farm laborer. It provides an opportunity for many thousands of our group to become successful farmers and responsible citizens, owning the soil they till, living in decent houses, building progressive and happy farm communities.

Your national farm organization will do everything possible to see that you and your interests are not overlooked in the carrving out of this program. I appeal to you to help make your organization large enough and strong enough to carry weight when it presents your cause to those who can help you. Organize a Unit of the N. F. C. F. in your community and keep it organized. Let your community group have a voice, a loud voice, which cannot be silenced by fear, by patronage or bribery. Join with other Units in your county and in your state and work aggressively, all together, for the best interests of all. There is power and strength in organization. Without it, in this day and age, we remain simply a tribe and a clan of parasites. We get nothing that will add to our own prosperity, we give nothing that will benefit our fellow-citizens.

### Cooperative Efforts

I take the liberty to remind you of the fact that the National Fed eration of Colored Farmers organized the first cooperative group in the United States, the Majority of the members of whieh were tenant farmers, shareeroppers and farm laborers. When the story is told of the remarkable success this group has achieved, it will be recognized as a sage in the annals of the economic progress of our raee in this nation. Ten years ago this group colleeted a few dollars and ordered, cooperatively a small supply of groeeries and farm needs from a firm in a nearby eity. This year the same group has sold, eooperatively, several truekloads of livestock and farm produce, and nearly all of their farm and home supplies have been purchased cooperatively. Ten years ago the cooperatives transactions carried on by this group amounted to less than one hundred dollars. This year their cooperative business has been worth more than three thousand dollars. Ten years ago every member of this group was in debt to landlord or merchant and the only money crop was cotton. This year none of them owe anything worth mentioning and they have paid their bills, supported their families, and pocketed surplus dollars from the sale of a dozen different farm crops. Ten years ago, ninety per cent of this group were tenant farmers, sharecroppers and farm laborers. Today, eighty per eent are farm and home owners. And another fact worth mentioning is this: the members of this group have requested very, very little government assistance.

I point to the reeord of this group as proof that Negro farmers anywhere in this broad land of ours can free themselves from the swamps of poverty and debt-slavery if they will study and practiee SIMPLE COOPERATION. There are far too many poor Negro farmers. A poverty-stricken farmer ean neither be a good farmer nor a good citizen. The time has come when every Negro farmer who is a sure-enough farmer, earning his living from the soil, must belong to a cooperative group of farmers. We must buy, produce and sell cooperatively. See that your loeal Unit engages in cooperative enterprises for the common good. Let your local Unit, cooperative, affiliate with other cooperative groups in your county and state. The eooperative way is no longer an experiment. It has succeeded among other groups and it will not fail us.

Right now the organized Negro farmer who is a cooperator, and all organized farmers are cooperators, is looking for a friend, a long lost friend. That friend is the organized Negro consumer. We must have organizations of Negro consumers wherever possible. I am not a fool about this doctrine of "Buying Black" "Spending your money where you can work," and "Giving only where you can get," but all peoples and groups are compelled to do some things for self-preservation. The members of our organization are ready to do business, and some good business right now with consumer groups among our own people. I trust that the National Cooperative League, the National Negro Business League, our Housewives' Leagues and even our Insurance and Undertakers Associations will take due notice. Organized colored farmers believe in cooperation.

### Tenant Problems

The farm tenancy problem will be of vital interest to our racial group just as long as we have among us seven hundred thousand tenant farmers and sharecroppers and less than two hundred thousand farm owners We must find a way to turn those figures around.

The Farm Security Administration is doing something toward solving this problem and colored tenants and sharecroppers who have been assisted by this agency are fortunate indeed and should be very thankful. But all of us who have the interests of the farmer at heart should consider today the question, what of the thousands of tenants and sharecroppers of our group which meehanized farm power is forcing from the farms and plantations?"—Are they still farmers and what will become of them?

Before it is eternally too late, and before poverty, misery and insecurity makes this vast group of good Americans a discouraged anti-social class of Reds or outcasts, something should be done for their salvation The United States needs these people. From such a elass sprang Abraham Lincoln and Booker T. Washington. And Ameriea needs them as farmer-citizens.

There is room enough for these farmers in the nation and on the land. America will remain a Democracy, a land of liberty, as long as it remains a nation of family-sized farms. The absentee landlord is not a real farmer. The owners of the big eorporate farms are not real farmers. The owners of the big ranehes and plantations, who carry on their farm operations with hired help and hired managers, these big landowners are not real farmers. The farm soil of this nation should belong to the farmers of the nation, to the real farmers, who cultivate their soil. So let us increase the power and the scope and the aetivities of the Farm Security Administration. Let us tax these big millionaire making farms out of existence and sell them in portions and parts to our competent tenant farmers and shareeroppers. The time to do this is now, gradually, while the nation is sane. The time when we will have to do it will surely come. Better do it now before strife and hate and revolution compel us to do it. Such a plan is progressive, not radical And even should the plan require radical ehanges in our laws, I would rather see radical laws on the statute books than radical, hungry, discouraged citizens in the slums and ghettoes of congested industrial centers.

### Land Ownership

Our organization must continue to advocate land ownership. We must guard well the legal rights of tenants, shareeroppers and small farmers. In most of the states of the south the highest taxes are paid on the smallest farm. This condition should be remedied. Negro farmers, especially must have bigger and better opportunity to own and to till good soil. They must not be restrieted to all the marginal and sub-marginal land in the nation.

### Supporting Government Program

I urge you to support the government program for agriculture because by doing so you are working for your own best interests and for the best interests of the nation. You are working for equality for agriculture, to give to agriculture a larger share of the Nation's income, to conserve the wealth of the soil, for the stability and the security of the Nation's rural life. You must be patriotic and not selfish.

Too many Negro farmers are whining because they cannot plant as much cotton, or as much of some of the other so-called money crops as they desire to plant. They want the other fellows' crop to be limited but not theirs. These whining farmers should realize that their is such a thing as working together for the common good of all. From now on, the farmer who depends on the one-crop system of farming will be a failure. He deserves to be a failure. The one-farmer-for-himself-system will also be a failure.

We should remember that control of surpluses was the primary aim of the AAA and is the primary aim now. When your acreage is restricted you are simply helping yourself and your brother-farmers to control surpluses, and this benefits you and your brother-farmers.

The quota system was not initiated to make any farmer poorer. If it is making you poorer you are not taking advantage of the advantage of the system. You are not farming progressively.

I believe the government has a sound farm plan and this plan should be supported and followed. It should not be abandoned, no matter how loudly the fellows howl who lives off the farmer, not off the farm. These are the ones doing the loudest howling.

I speak to you as organized farmers. Your only means of making your wishes known is through your national organization. Remember that ORGANIZED FARMERS differ from other farmers. When they know a thing should be done for the benefit of the farming group and of the Race, they go out and do it. You must earry your case to our friends and relatives in the towns and cities. Make them see that the colored farmers of the nation are not going to give up one scintilla of anything we have gained during the past seven years eontributory to our welfare and progress. Equal opportunity in this our native land we mean to have and we mean to keep, to purehase and own farm land, to ereet and live in a decent farm home, to establish a stable farm community. The government's farm program goes a long way toward guaranteeing for us this opportunity. So we will support it.

### Rural Education

Someone has said that a poor community cannot have good sehools. I doubt the truth of this assertion. I was mostly reared in a community where nearly every house was a whitewashed cabin, where most of the soil was too poor to sprout peas where the little log Negro school was not as large or as comfortable as an average Western farmer's hog-house, yet that school had a fine eonseientious, selfsacrifieing teaeher and the scholars were eager to learn and some mighty fine progressive farmers reeeived about all of their education in that little country schoo'

I fear that today, too many teachers of our rural schools are out of plaee in the rural community. They cannot and they will not cooperate with rural progress. They cannot appreciate the unselfish and loyal serviee of the County and Home Demonstration Agent. They cannot see the need for the Rural Credit Union, for the farmers' local organization, for the elubs for the women, the boys and girls of the farm community.

Perhaps they, the teachers alone are not responsible for their imperfections. Perhaps they were trained in the sehools they attended to see the value of their salary and not the value of the hand, head and heart of the little country boy or girl Teaeher-training schools may be improved in more ways than one But we do hope and prav that they may never forget to teaeh their students the value of INTRA-Racial cooperation, just as they endeavor to teach the value of INTER-racial eooperation.

The local farm organization and your national organization must keep on striving for the welfare of the rural school, for the improvement of rural education. The rural school should be a nine month school in every state. A minimum salary should be established for the rural teacher. We want a school farm, not a mere garden plot, but a model farm, well-supplied and well-managed, established in connection with every rural high school. We want that farm to be there that superior farmers of our group may be reared, trained and educated in our rural communities. We want that farm there as the beacon-light of rural education. And organized Negro farmers are going to put those farms there beside our rural high schools.

### Our Policies

The National Federation of Colored Farmers should remain an independent organization of Negro farmers serving Negro farmers. Our policies should be sane and practical. We have no right to request of our fellow-citizens, special favors and consideration simply because we are a minority group, a group often oppressed and humiliated. But neither should our fellow-citizens expect us to be satisfied with the crumbs. We want just what the other fellow wants and we are going to try and get it.

A few weeks ago a prominent individual was addressing the student body and faculty of one of our great Southern educational institutions. This man had travelled all over the world and during the course of his address he remarked that the colored tenant farmer and sharecropper did not realize how well off he really was, he was so much better off than certain classes of farmers in foreign countries.

Well, perhaps we are better off, but is that any reason why we should be satisfied with our condition? There is only one United States and there is no room here for any kind of a peasant class. The humblest American farmer, black or white, is the peer of any foreigner, be he aristocrat or coolie. For the humblest American farmer is an American citizen.

I do not believe in a program of points. I notice that these much heralded five and ten point programs for agriculture and other things are soon forgotten. The points become dull and rusty. However I would like to mention some problems vexing Negro farmers, and the polieies of our organization respeeting these problems.

Probably the biggest problem is the problem of debt. Colored farmers are honest and will pay their debts if they can. The government, business, the farm organizations, all agencies serving the farmer must discover a way so he ean always pay his debts.

Investigations made by our organization this year have proven beyond a doubt that Negro farmers owe fewer small debts now than ever before. The merchants and the physicians are being paid. Their big worries are the debts on their farms and homes. In many eases, mortgages have been hanging over their heads for many years. When the mortgages were assumed, the terms for payments were reasonable But eeonomic conditions have ehanged much during the past ten and fifteen years and now those terms cannot be met.

Our organiaztion is endeavoring to do everything possible to persuade banks and institutions holding mortgages on Negro farm property to give the farmer time and a ehance to adjust his system of farming to meet conditions as they are today. The strangle-hold of the one-erop system of farming cannot be loosened in a year or even in two years. We believe that in most cases a fifty per eent payment now is equal to what one hundred per eent payment was ten years ago. There should be no foreelosure or eviction if the farmer is trying his best to farm progressively and is paving out faster than he is getting in debt.

### The Rural Church

The future of the rural chureh is another one of our perplexing problems. The rural chureh must not only exist, it must prosper and progress Where there is no church there is no God. Where there is no God there is no integrity, no honor, no love, no civilization. The wise Southerner who suggested a few weeks ago that there should be Jeanes preachers as well as Jeanes teachers expressed the finest suggestion that has been made for the welfare of the rural Negro church in the past forty years.

Our organization favors a church for the rural eommunity where men and women may serve God together as Christians, not as believers in any particular creed. The rural church of the future will be just a church. It will be pastored by a preacher who will live where his people live, in the country, not in the nearby city or big town. It will gather in more souls than dollars. It will stand there on the country road, neat, clean and comfortable, a hallowed shrine, where the exalted may learn humility, where the sorrowful may find consolation, where every seeker may find peace. May the country church never lose its power. May the country people never lose their faith in God.

Another problem that concerns organized farmers in particular is the problem of getting our farmers to cooperate with the great institutions that serve the farming industry, our Extension Service, Home Demonstration service, our agricultural colleges and experiment stations. The fundamental objective of any farm organization should be to improve the economic and social condition of its members. Negro county and home demonstration agents have not failed the Negro farmer. They have brought light where there was darkness, they have brought a degree of plenty where there was abject poverty. Unfortunately their influence has been limited.

Our organization will do everything possible to increase the number of county agents employed to work with our farmers and to persuade colored farmers to heed the advice and instruction given them. We believe that the Federal government should more largely support and more effectively supervise the activities of all county agents. And these servants of the farmers should de duly recognized as publie servants, a Retirement Fund should be established by the government for their benefit.

It shall continue to be a policy of our organization to work willingly and faithfully with all other organization of our raeial group, engaged in aetivities for the general welfare. As organizations, we should not let eaeh other down. We should help bear each others' burdens, always remembering that we must elimb the rocky heights together, all for each, each for all.

### Our Future

We are farmers and ours is a farmers' organization. Farming is our biggest business. There are almost a million Negro farm operators in the nation. Of the total population of our group we have nearly a million and a half more rural than urban. It would be better for the race if we had still more. We own more than eleven million acres of Ameriean soil. We should own four times as much.

Negro farmers have contributed much to the advancement of our group. A majority of our leaders are the sons and daughters of farmers. The best brain and brawn of the raee has come off the farms. Are we going to continue to give to the raee that discipline, that leadership so necessary for our substantial progress?

I believe we are. We will be the first to organize solidly for our economie welfare. We will preserve our racial heritage of music and other arts. We must realize at all times our importance and never be ashamed of our calling.

So let us take courage. Let there be a resurrection in our hearts and souls of those eternal virtues which alone have brought our race thus far and which alone will carry us onward and upward. These virtues are Hope, we must never become discouraged. FRIENDLINESS, we must be loyal to our friends and leaders. I am afraid of no enemies as long as I ean hold a friend. INDUSTRY, we must work our heads and our hands. Our foreparents bought farms and paid for them before the eoming of the AAA or the FCA. The only thing they knew anything about was the WWW. work, work, work. And they lived happy and eontented lives too, and most of them lived long lives. FAITH, we must have confidence in ourselves, believing that if we give we shall receive, if we plant, we shall harvest. And TOLERANCE,

we must be peacemakers, not trouble-makers, always remembering that here in the United States there are ways a plenty by which we can get justice without starving to get it our fighting and dying to get it.

There must be in this nation no blockout of Negro progress. There will never be as long as the Negro farmer is out there on the farm, keeping alive in the heart of His race a love for soil, for American soil, sodden with the sweat and tears of our slave fathers and mothers. Yes, he is out there to give hope to his race, to keep alive for his race a rural civilization, the bulwark of Democracy, the only type of civilization that is really Christian. The American Negro farmer will not fail his race. The American Negro farmer will not fail to bring honor and glory to his native land."

## McGEE CREEK ENTERPRISE UNIT FARMERS OF MISSISSIPPI ORGANIZE COOPERATIVE ASSOCIATION TO HELP LOCAL MEMBERS

TYLERTOWN, Miss.,—(Special)—Working in the interest of the individual members consisting of farmers down in this section, the Magee Creek Enterprise Unit has organized a Cooperative Society that is proving a mighty fine and helpful boon to the individual members. In a recent statement sent to The Modern Farmer by members who attended the National Federation Meeting October 25-26 in Jefferson City, Mo., they said:

"We are known as the Magee Creek Enterprise, unit of the National Confederation of Colored Farmers, of Tylertown, Miss., of Walthall County, have organized to buy and sell cooperatively. We have up to now about cooperatively, more than two thousand dollars worth of fertilizer and seeds, also farm supplies and groceries. In this we bought $140.00 of D. and P. L. number 11, cotton seed to plant one variety, at a saving of 50 per cent on the hundred pounds. We bought $140. worth of stringless bean seeds, which planted about twenty-five acres, which we sold from cooperatively a little above $900.00.

We were just organized about a year ago, and we find through cooperation that we have accomplished more, than we can individually. We are asking this convention to devise some plan that will be the means of our cooperation of getting a market place for what we grow, such as, beans, Irish potatoes, cabbage, sweet-potatoes ,watermelons, turnips, cucumbers.

We need your help.

C. L. Bates, Pres.
Tylertown, Miss., Box 172.
J. W. Mark, Purchasing agent and Selling agent.

## DR. CARVER APPEARS ON 'STRANGE AS IT SEEMS'

NEW YORK,—Dr. George Washington Carver, famous scientist, who as a child in the Civil war, was traded for a race horse, appeared on "Strange As It Seems," Thursday, Sept. 21. He is recognized as one of America's foremost agricultural scientists and is director of the department of agricultural research, Tuskegee Institute, Tuskegee, Ala.

After hearing a dramatized version of his being traded for a race horse, an event which changed his early life, Dr. Carver was interviewed by Alois Havrilla, master of ceremonies.

## 75 YEARS OF NEGRO PROGRESS EXPOSITION

CHICAGO , Ill.,—Confidence is what business men of the United States need, the economists say.

Detroit has it.

There are two ways of getting confidence. One is to be led by the hand on a clear path someone else has made. The other is to grab an ax and chop a way through the woods obstructing progress.

A little more than a year ago, some of the prominent Negroes in Detroit chose the latter method. They were told that an "All Negro" Exposition could not be staged. But a few of the ax-swingers of Detroit and Michigan decided to do something to put the facts of Negro Progress in America since 1865 out in ront. The only confidence they had that they could succeed was, at that time, the shadow of their courage. They went ahead with the plans for the Negro World's Fair. "Seventy-five Years of Negro Progress Exposition," which will be held in Detroit next May.

The Seventy-five Years of Negro Progress, according to Eddie Tolan, Executive Director of the Exposition, will attempt to exhibit the objective and tangible results within the last three quarters of a century in the following classes: Art, Law, Science, Industry, Medicine, Religion, Home Building, Patriotism, Education, Agriculture, Business, Athletics, Government, Architecture, and Engineering.

Many outstanding exhibits will portray the progress such as the Negro Hall of Fame, the Famous Underground Railway and a replica of Uncle Tom's Cabin. There will be statues of Harriet Beecher Stowe, Richard Allen, Frederick Douglass, Tom Brown and others. The forty-eight states, the Indies and Africa will be represented in vivid, animate displays.

### EXECUTIVE COMMITTEE

Members of the Executive Committee of the Exposition are: Dr. George W. Baber, general chairman; Mr. L. C. Blount; Honorable Charles Diggs, Michigan State Senator; Mr. Snow F. Grigsby; Mr. J. C. Dancy; Mrs. Sadie Lindsay; Mr. Louis Martin; Mr. Charles Mahoney; Mrs. Moses L. Walker; Attorney Charles Roxborough; and Mr. Carlton W. Gaines.

### HONORARY COMMITTEE

The honorary sponsoring committee is composed of Luren D. Dickinson, Governor of Michigan; Murray D. Van Wagoner, Michigan Highway Commissioner; Harry Kelly, Michigan Secretary of State; Thomas Reed, Michigan Attorney General; Senator Allen Ludington; Representative Joseph Warner, and Richard W. Reading, Mayor of the City of Detroit.

Harry James says that the wife of tomorrow will attempt to cook the pies like mother used to buy.

The piano industry announces another mark for September. More people are buying pianos than at any time in years. They have suddenly realized that a piano will never disturb them with bulletins from the war.

In Russia nobody has what the average man has in America. Let them alone in their Karl Marx "paradise."

## PREDICT HORSES AND MULES TO BE NEEDED IN EUROPE

Chicago, Oct. 30,—(UP)—Take it from the Horse and Mule association of America that animals and not high-powered tanks and trucks soon will move the armies of Europe into combat positions.

"Airplanes are destroying roads and bridges, forcing troops to traverse fields," said Wayne Dinsmore, association secretary. "And when roads are impassable and mud comes, and come it will, horses and mules will be indispensable."

Dinsmore said that was the outlook of American livestock growers as they anticipated urgent orders from European nations. He said the history of other wars indicated a sharp demand for horses and mules within a few weeks of the outbreak of hostilities.

During the World War America exported 950,000 horses and 320,000 mules to European markets. The average horse value, per head, was $205; for mules, $190.

Dinsmore said he had no idea how many animals would be required for the current conflict. He estimated values would measure up to the World War standard.

Nearly 8,000,000 people living in nearly 50,000 communities in the United States have no railroad service and depend entirely on the automobile for transportation.

## APROPOS OF NOTHING IN PARTICULAR

It will never work: "Sharing the wealth." Not after those who possess it have got the wealth. Take your own case. If you had two goats, like Hennessy, would you give one to Cassidy? Why should **you?**

We suppose the sun does set on the United States and its possessions, but it doesn't seem to worry **us.**

Are the ornery the somewhat demented. Most of our troubles in life seem to be brought about by people not quite normal.

People don't forgive and forget. It is useless. The false were false when they were born. It's a congenital flaw.

Millions like to be bossed, and the demagogues know it.

## MANGANESE BOOM COMES TO ALABAMA

Anniston, Ala., Oct ?,—(UP)—Farmers in this section of Alabama soon will have a new "money corp" in manganese, with establishment of a company here to buy the ore.

Numerous deposits of manganese ore are found within a 100-mile radius of Anniston, and the new company estimated farmers would average $7 a ton for manganese delivered at the plant.

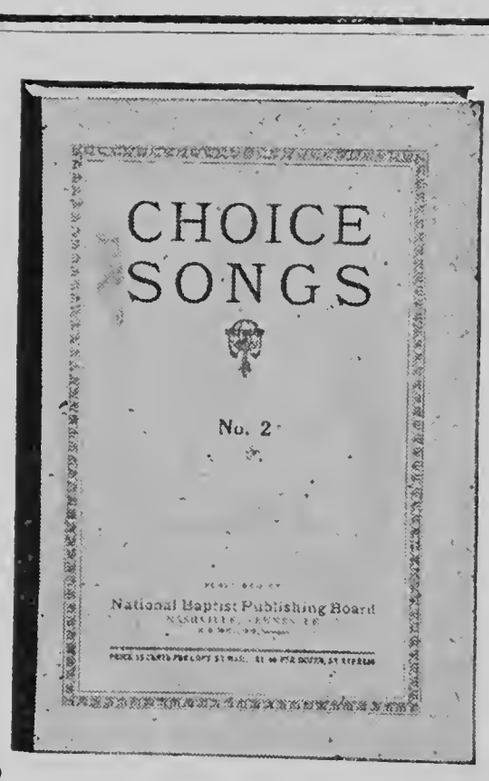
The ore ranges in value from $2.50 to $22.50 a ton.

The company plans to blend the ore to use in making steel, dry-cell batteries, paints and glass. Manganese sulphate, extensively used as a fertilizer in the Carolinas and Florida, will be a by-product.

The company announced any farmer who has manganese on his land can dig it in off seasons, haul it to the plant, and get cash for it.

In western Etowah county a manganese pocket has yielded 194 tons of ore in the last 50 years, and the new plant will employ 35 to 50 persons, it was announced.

We like conceited people who can do what they say they can.



**Choice Songs**

**NO. 2.**

Exceedingly popular, worth twice the money. Millions of folks have sung from this book, fitted for use in all meetings of an evangelistic nature and well adapted for any other religious use.

**Price 20 cts. per copy. $2.40 per dozen. By the hundred, $11.00, express charges not paid.**

**SHORT TALKS ON MUSIC**

This book contains the simple instructions for those who want to learn vocal music. It is almost a self instructor. No greater help can be found for the anxious student.

**Price 30 cts per copy, $3.60 per dozen.**

6. **Better rural churches, schools and homes.**

THE FARMERS' HYMN

(Official Hymn, National Federation of Colored Farmers Tune: "My Faith Looks Up to Thee")

God bless us, we who toil
Upon the goodly soil
Which Thou has made;
Uphold us by Thy might,
Help us to know the right,
And ever, day and night,
Be Thou our aid.

Send plenteous sun and rain
On mountain, hill and plain,
And valley wide;
Grant us prosperity,
Increase our faith in Thee,
O may we happy be
Whate'er betide.

Unite us heart and hand
In one fraternal band
Until the end;
That we may praise Thy name,
Of all men, Lord, the same;
Our God, whom we proclaim;
"The Farmer's Friend."

—Leon R. Harris

WORDS

A cad or a bounder, or even a crook—
If he makes pretty speeches like those in a book—
Can win all the damsels from here to Bombay,
And never need he the dinner check pay.
For soft words to women, like flowers to bees.
Are the essence of life and the best way to please
—H. P. "Chicago, Tribune"

NEGRO FARMERS HIGHLY LAUD AAA

JACKSON, Miss., —(ANP)—M. M. Hubert, Negro State Extension leader, has made public letters from two Negro farmers in Bolivar county who report progress made through participation in the AAA program.

Rev. Jim Jones states that prior to AAA he was in debt and living entirely on "furnish." In 1933 he began AAA and the first year had sufficient corn and hay of his own for his stock. Since then his condition has steadily improved.

"Since 1937," says Rev. Jones. "I have made some necessary improvements on the place, repaired my house and in the beginning of 1939, had plenty of food and feed, cows, hogs and chickens and money in the bank. Everything is in the clear: I don't owe anybody anything."

Rev. Jones' report on soil improvement is equally encouraging. In 1933 he reports that he was getting 18 bales of cotton from 30 acres, and last year made 17 bales from 17 acres.

George Burnley reports that in 1933 he was renting 80 acres and was over $600 in debt. Since then he has contracted for "40 acres of land for $2,400 and was given 10 years to pay for it."

By strictly following the AAA program of soil conservation and with the aid of AAA payments, Mr. Burnley has paid his old debt and by January 1, 1939, had paid $1,200 on his new place.

"I have plenty of everything I need to take care of my farm for the 1939 crop," said Mr. Burnley, "and had it not been for the advantage I received from the AAA program. I don't believe I could have done so well. So, long live the AAA."

## Housing Official Praises Colored Papers' Support

WASHINGTON, (ANP)—Greeting the Associated Negro Press representative at the reception marking the second anniversary of the U. S. Housing Authority, Housing Administrator Nathan Straus expressed his appreciation of the support given his project by the Negro press.

"The Negro press has accorded us one hundred percent support." said Administrator Straus, "and it has been greatly appreciated."

The affair was held at the Willard hotel, attended by news correspondents and representatives who have worked with the Administrator. Senator Robert F. Wagner of New York was also present and spoke glowingly of the work being done

**How a man with a paunch does despise picking up anything he has dropped on the floor.**

RATS INVITED TO BANQUET— FRIDAY, 13TH!

About 150,000 fresh sandwiches—half meat and half fish—will be served to rats on farms in Cook county on Friday, Oct. 13, when the county farm bureau holds its first annual "rat banquet."

The sandwiches will cost farmers 35 cents a hundred. The farmers hope they will cost thousands of rats their lives, for each sandwich will contain a lethal dose of red squill, a substance said to be deadly to rodents, but harmless to other animals.

The farm bureau has sent notices to the 3,000 farmers in the county asking them to "invite your rats to the Cook county rat banquet."

BIOLOGICAL SURVEY MIXES BAIT

The poison bait will be prepared in Joliet by the biological survey of the federal department of agriculture. It will be sold to farmers at cost. Notices sent to farmers listed 10 places in the county where the baits are to be distributed.

C. A. Hughes, county farm adviser, said yesterday that orders for the bait were pouring into the farm bureau office. He estimates that at last half the farmers in the county will take part in the campaign. Farmers in surrounding counties also are reported to be joining in the drive.

Hughes says rats are much more numerous this year than usual, especially on grain farms where they cause serious damage to stored grain that is not kept in rat proof buildings.

ANNUAL CAMPAIGN PLANNED

The campaign in Cook county is to become an annual one. Results this year will be studied as a guide to next year's drive.

**The farm bureau also has asked towns and cities in Cook county to join the work and expects a number of them to take part. He says rats are as numerous around garbage dumps, warehouses, and other rat harboring places in towns as on farms. No prepared bait is to be sold to towns, but town officials are offered information on how to prepare and use it.**

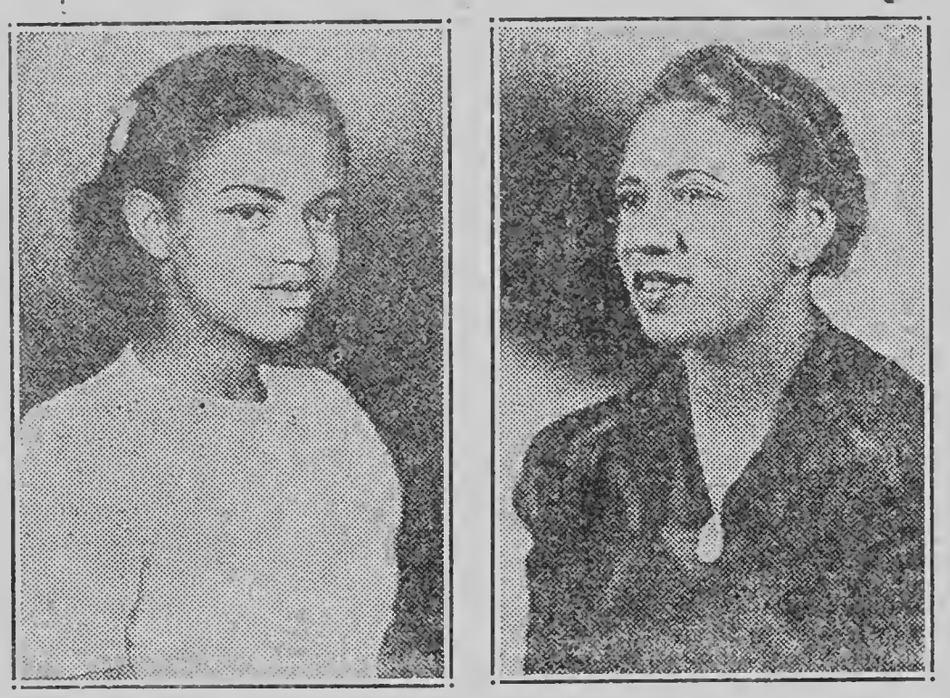
G. C. Oderkirk, district agent of the biological survey, advises cleaning up all rat harbors as the first step in bringing the rodents under control .

## Census Workers Take Training

WASHINGTON —(ANP)—Activities in the bureau of census are showing a bit of flurry, according to one of the most valued employes of that department. With the advent of the new 1940 census, already several Negroes are in training in the branch building over at First and M. Street, N. E. But it is hoped that the inclusion of Negroes in the civil service branch of the set-up will be followed just as with the whites.

Important work in the census demands careful and critical attention, is the belief of the officials there and inasmuch as many things depend upon the accuracy and speed with which this work is accomplished, the demand for trained personnel is never more important than now, although it is said that the civil service rolls are ample to take care of this need.

## Nationwide Winners in Contest on Tuberculosis



VIVIAN HAMPTON (left) of Nashville, Tenn. and Frankie N. Golden (right) of Ocilla, Ga., win first prizes for their essays on tuberculosis. More than 100,000 Negro students in high schools and colleges throughout the country participated in the annual contests conducted by the National Tuberculosis Association and its affiliated organizations. Miss Hampton is winner in the high school group. Miss Golden's essay was judged the best among college students.

## SUPREME LIBERTY LIFE TO GIVE AWAY INSURANCE HISTORY

CHICAGO, (ANP)—Because so many people have written letters asking for information about the history and development of Negro life insurance companies, the Supreme Liberty Life of Chicago, is now distributing free a booklet entitled "The Contribution of Negro Insurance Companies toward the Economic Status of the Race."

Written by Harry H. Pace, president of the company, the booklet gives a brief but comprehensive picture of the growth of the Negro insurance business, dating as far back as the founding of the African Insurance company in Philadelphia in 1810.

President Pace attributes much of the phenomenal growth of the insurance business to the fact that "the urge to get together for mutual benefit is perhaps the dominant trait in the character of our race." After tracing the growth of the business from one company in 1810 to approximately 60 in 1939, the author closes by saying:

"We have reached a stage of development in these organizations which is almost as far as we can go. There must be new trends, new ideas, new developments. There must be a campaign of education that will bring fully to the minds of all of our people the need for solidarity of race patronage that will make possible a larger measure of employment, a larger measure of opportunity for investment, and a larger measure of useful service to millions of our race."

Free copies of the booklet may be secured by writing to Supreme Liberty Life Insurance company, 3501 South Parkway, Chicago.

FLORIDA MINISTER IS SUCCESSFUL FARMER

GAINESVILLE, Fla.,—(ANP)—Rev. D. A. Miles, minister and farmer, located near here, has demonstrated that saving soil is just what is so much needed at this time. Rev. Miles started farming as a sharecropper and has gradually added to his holdings until he now owns more than 200 acres of rich land.

By scientific diversification and rotation of crops, this minister-farmer who divides his Sundays between four churches in rural areas, has qualified for special recognition from the AAA. During 1938 he has grown and marketed cataloupes, okra, lettuce, squash, sea-island cotton and flue-cured tobacco. In his pastures there are 75 hogs, 30 head of cattle and barn filled to capacity with ample feed for his stock.

In line with Secretary Wallace's idea of the ever-normal granary, said Rev. Miles, "I have and keep a reserve supply of feed for my stock for one year so that if we have a short crop at any time, we will be ready to meet the emergency. Recently Rev. Miles was selected as one of our merit farmers by Tuskegee Institute for his conspicuous service in the field of agriculture.

**STATEMENT OF OWNERSHIP**

The MODERN FARMER as required by the Act of Congress, August 24, 1912.
State of Tennessee.
County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business manager of the MODERN FARMER and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn in the above caption requested by the Act of Congress August 24th, 1912, embodied in section 443 Post Office laws, and regulations.

1. That the name and address of the publisher and business manager of the MODERN FARMER is Nashville, Tenn., S. B. Wilson, Business Manager.
2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.
3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) SADIE B. WILSON.

Sworn before me this 5th day of October, 1939.

M. G. Ferguson, Notary Public.

My Commission expires April 5, 1943.

## FLANAGAN VIEWS RURALS OF STATE OF ALABAMA

By Thomas Jefferson Flanagan —In Atlanta Daily World

ONE of the most important phases of our missionary work is to help bring the rurals back. One in riding over the country marvels at the fine lands going to waste, once prosperous looking farmhouses and barns tumbling with their former inmates and worshippers wandering the four corners of the earth and for the most wards on their government.

The writer of this editorial column, from time to time has been released from his desk to tour the rurals, meet the people who comprise the back bone of our civilization, shake hands with the farmers and learn from the first hand their reactions and problems.

COTTON VALLEYS OF EAST ALABAMA

This finds us in the cotton valleys of east Alabama, in the heart of the socalled black belt. We knew these parts in the good old days when cotton ruled as king and the people here were a thriving aud prosperous people. We have seen this place at harvest time and thrilled beneath the strange and piereing tones of the hymns the cotton pickers sing and the shrill whistle of the cotton gin as it turned over its snagging teeth the white staple in great sheets for the bags which bore their contents to the cotton mills.

Unlike many sections we have known in Georgia, we find the country heavy populated with our group. At a simple country church service, we heard the old time singing, the fervent hymns of the old long meter never leaving out "Old Hundred" that ancient theme of the old soldiers of the cross.

Like Georgia, the school question is an all absorbing one. Short terms, poorly paid teachers and no busses for the transportation of the pupils to consolidated schools. The little one room shanty is still in evidence. The impression is made that justice is still in the making for our people on this school question. We have just noticed that the courts handed down an adverse decision in the question of equalization of salaries in Florida, a sister state. Fights have been planned in this state for a like counter, but now the thing is discouraging. Until the dates of the Supreme Court are carried out relating to the placing of men of color on juries where cases of our people are involved, there will never be any satisfactory justice for our people.

We find that the state is requiring the teachers to take summer courses. This involves a heavy expense in the face of poor salaries —not paid when they are due.

MUCH WORK TO BE DONE

There is much work to be done by our civic and political organizations or the children of the rural districts. This condition is responsible in a large measure for the failure of the rurals to attract our people. Nobody wants to come into a condition where there are no school and church facilities.

Road building is in a boom Great trucks, hauling dirt day and night, Sunday and Monday are in the highways getting the roads in shape.

Electric lights have been extended to this rural area and nearly everybody has access to a daily newspaper and a radio. These are the main inviting features of the rurals. But the rurals cannot come back with a one sided school system and colored citizens being barred from the polls and jury duty. Our public men and the presses should stress a more tolerant system of justice and education if the rurals would come back. Just so long as the government pours out millions for recovery with no effort to see that the school facilities and salaries are equalized, the stopping of lynching, it will be making a useless sacrifice. These things must go up together. The colored people know that they are not being treated justly and there is no grounds for the expectation of many of them in the crowded cities getting back where they can make a living as long as the present condition are allowed to obtain.

Our conclusion from this quarter is that the rurals can come back, some extended effort must be made for better living conditions before the relief rolls, our penal institutions and other organizations dealing with the unfortunate and diliquent can feel a relief from that terrible condition that has swept the poor people from the farms into the malestrom of the maddest scramble for bread in the history of the world.

## "CHARLIE" SPEARS, POPULAR NEWSMAN DIES OF INJURIES

SUMTER, S. C.,—(ANP)—Charlie Spears, widely known newspaperman and artist, died Monday at his home here in Sumter, the victim of an auto accident. Mr. Spears, who was a staff member of the Associated Negro Press, was one of the most popular and widely read columnists and feature story writers in the race. His columns, which ranged in their content from humor to pathos, anecdote and philosophy to legal hints clothed in lay language, were exceedingly popular.

A veteran of the World War, widely traveled, Charles Spears was educated in Boston. He attained wide distinction as an artist but painted as the spirit moved him, since he was financially independent. He followed all of the bents which amused him, photography being another hobby in which he was most proficient.

He leaves a daughter and his widow, Mrs. Eva Jessye Spears, the famed choir leader. Mrs. Spears had left Sumter for a tour of Canada and the middle west with her singers when the accident occurred.

Flour made from sawdust that possesses nutritive qualities has been developed by German scientists for adding to other flours in bread.

Both smoked and canned rattlesnake meat is sold for food all over the United States and in several foreign countries by a Florida man.

An automatic device has been invented to be installed in drain traps to prevent sewer gas and objectionable odors backing into buildings.

## STUDY CONFERENCE OF FSA LAUDED BY GILES A. HUBERT

WASHINGTON—(ANP)—Thoroughly pleased with the results of the recent "Study Conference" for Farm Security professional workers, Giles A. Hubert, directing the work, returned to Washington, expressing the hope that the event will become an annual affair.

In discussing the conference, Mr. Hubert said the attendance was nearly 100 percent of the professional workers in his set-up. Twenty-three men and 30 women attended the conference, with two of the men being regional purchase assistant supervisors.

Almost all of the attendants were unanimous in declaring the conference beneficial. It was the first time the majority of the workers has any concept of the magnitude of the whole project and of the aims behind their work.

Learning the philosophy of the Farm Security administration and knowing the general program of the organization and where their jobs fitted into the whole, was a profitable experience for the workers.

In studying the possibilities of cooperatives and what could be accomplished through them, workers were able to get information unavailable in schools and colleges they had previously attended.

"This was a valuable 'Inservice training program' to step up the personnel to the job," said Mr. Hubert.

Continuing, he said:

"In view of the changing conditions in the South are making differentials in farm management, credit and even in the philosophy of the South. The Negro must keep up with these things or they will fare worse since they are a marginal people. And strange to say, some of the benefits that apply to the Negro also apply to the white farmers of the South and they are quick to take advantage of them."

Facetiously speaking of his office as a job in "rural social engineering," Mr. Hubert outlined the progress being made and his hopes for future development.

## BAILEY GETS POST AS ASSISTANT CHEMIST

DES MOINES, Iowa.—(HNS)—Secretary of Agriculture, Mark Thornburg, has announced the appointment of Mr. William Bailey of Ottumwa, Iowa, as an assistant chemist in the Department of Agriculture, effective September 18.

Mr. Bailey will be stationed in the chemical laboratories at the State House, in Des Moines.

He is the first Negro to hold this appointment in the State Agricultural Department.

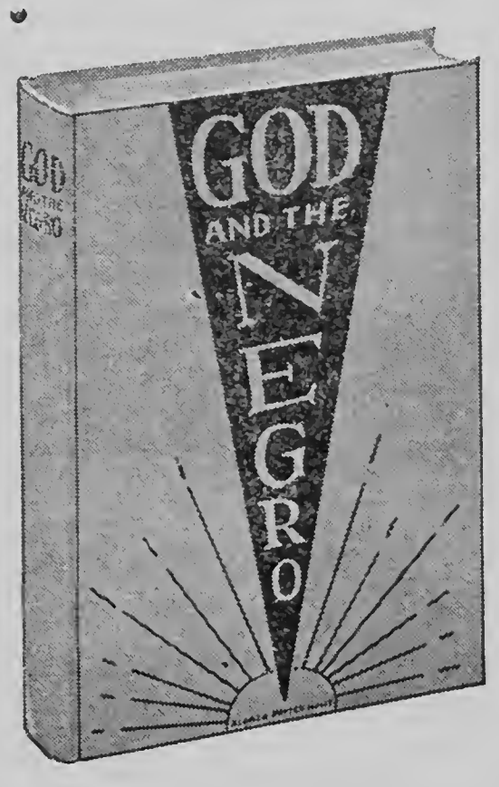
## WEST VIRGINIAN NAMED ASSISTANT U. S. ATTORNEY

### George W. Crockett to Serve in Wage-Hour Division of Labor Department

WASHINGTON—(ANP)—George W. Crockett, Jr., of Fairmount, West Va., has been appointed an assistant United States attorney in the Wages and Hours division of the U. S. Department of Labor. Mr. Crockett has been assigned to the litigation section and will be located in Washington.

The son of the Rev. and Mrs. George W. Crockett of Jacksonville, a product of Jacksonville public schools, Morehouse and Michigan University Law School, Mr. Crockett is married, father of two children, affiliated with the Elks as assistant grand legal advisor and the Kappa Alpha Psi fraternity.

Mr. Crockett's appointment is the second made in that Wages and Hours Division in the past two weeks. William T. McKnight of Toledo was sworn in on Oct. 9, his title of special assistant to the attorney general of the U. S. being explained by the fact that Mr. McKnight will be located in Cleveland and hence handling interstate matters.



GOD
And The
NEGRO
Is a new book just off the press

## FIELD AGENT TELLS HOW ALABAMA FARMER SOLVED HOUSING PROBLEM

### T. M. CAMPBELL WRITES STORY IN SERVICE REVIEW

MONTGOMERY Ala.,—(ANP)—T. M. Campbell, widely known farm expert and U. S. Field Agent stationed at Tuskegee Institute, authors an interesting article on the bad housing conditions among rural Negroes of the South, in the September issue of Extension Service Review.

Writing on the subject "Out of the Old House, Into the New Home," Campbell tells how Willis and Julia Thurman, small land owners in Elmore County, Alabama solved their perplexing housing problem by building a brand-new, five-room house at a cost of $690.50. The house was visited recently by field agents who attended the summer school at Tuskegee. The new home replaced a one-room house with a lean-to kitchen, typical of the countryside.

Having only $100 cash, the Thurmans borrowed $450 more (with interest at 8 per cent, four years to pay) and soon commenced work on the new home. Concerning their achievement Campbell writes:

"The home was completed for $690 and given a public opening attended by Dr. F. D. Patterson, president of Tuskegee Institute and many other people, both white and Negro, who were interested in every feature of the planning and building of the five-room house and the cost of each operation. They also were interested in the account of the 23 similar projects we have underway.

"I firmly believe that such a combination of intelligent planning, the use of native and local materials and the farmers' own labor will make possible many more homes for small landowners and tenants in the rural South This can be done within a very low price range if a way is found to provide simple builder's plans and obtain local builders."

Campbell does cooperative extension work in agriculture among the Negro farmers of Alabama. This valuable extension service is sponsored by the U. S. Department of Agriculture, with State land-grand colleges cooperating.

## "JIM" MEAD DEMANDS WAR ON PROFITEERS

### NEW YORK SOLON ASKS PROTECTION OF HOUSEWIFE; SAYS FARMER IS NOT TO BLAME

Protection of consumers from profiteering was demanded this week by Senator James M. Mead (Dem. N. Y.)

In a letter to Attorney General Frank Murphy, Mead called attention to widespread complaint of higher living costs, and urged that machinery be set up to expose and punish those responsible.

Mead pointed out that farmers cannot be blamed for the plight of house-wives calling attention to a statement by Secretary of Agriculture Henry A. Wallace that farm prices are "still far below parity."

## 4,000,000 YOUTH OUT OF WORK IF GIVEN JOB, "FORGOTTEN" BOYS AND GIRLS WILL DO SURPRISING WORK, DECLARES AUBREY WILLIAMS

IN this country today there are more than 4,000,000 young people who are out of school and out of work—youth, eager, ready and willing to work, but who can't find jobs, no matter how earnestly they search.

That tragedy was emphasized as one of the nation's greatest problems in a radio broadcast this week by Aubrey Williams, head of the National Youth Administration. As long as these young men and women are idle, he said, they represent almost a total loss to the country.

Since 1933, when the Federal government launched its relief program, nearly 5,000,000 of these "forgotten" youngsters have been given work through the Civilian Conservation Corps and the National Youth Administration. For the $1,500,000.000 in wages paid out, William said, the people have received substantial return.

"When the Federal government makes an investment in its youth or in the country's natural resources," William said, "some people call it spending. True, it is spending, but it is spending which should be chalked up on the credit rather than the debit side of the government's ledger.

"Surely an educated and well trained boy or girl is more of an asset to the country than an illiterate youth who has never or who has been employed only in the simplest forms of manual labor. If the C. C. C. and the N. Y. A. creates such an asset, as they have done in thousands of cases, then we must think of their appropriations as an investment in the country's resources.

"The money which the Federal government has spent on employing millions of boys and girls should not be considered as lost and gone forever. It is in every sense of the word a gilt-edged investment.

"But the real problem is to give these youths jobs and a regular income. Given the opportunity, they can produce work to a quantity and quality which it is hard for someone who hasn't seen it with his own eyes to believe possible."

## NOW IS THE TIME TO BUY LAND

Not since the old days of claim staking has it been so easy for those who desire to anchor their hope in the soil to buy land. Good land begging for an owner is a common occurence. Much of this land can be bought cheaper than it formerly rented. In fact some of it now available for purchase, in more prosperous days, could not have been rented.

In riding along the highways and railways it is no uncommon thing to see fine farm land growing up in weeds and woods. The old deserted houses bear the testimony of the fertility of the soil We can never reach a recovery until we can find the missing link between the farmer and the farm.

From here he was driven and against his will. Hard times, poor markets and high taxes contributed to the exile of the farmer.

The federal government now seeks to bridge the gap between the farmer and the farm. Information can be gotten from nearly every locality as to how one may come into possession of a farm on long term payments.

Many farmers are taking advantage of these opportunities. With the advent of war and the ever increase in the price of food-stuffs land is bound to go up. Under this condition it will be hard to obtain.

There are many industrious and thrifty persons who desire to establish themselves on the farm. Such a resettlement would not only bring back prosperity, but would reestablish the old church, school-house and local movements which in the past have made our rural areas attractive to those who inhabit them. —Editorial Atlanta Daily.

# "FOR WHITES ONLY" IS UNCLE SAM'S ORDER TO CADETS

### Example of Bigotry Set By Army in Training Course at Nation's Capital

WASHINGTON—(ANP)—"A private showing for white high school cadets only" could easily have been the sign on the Central High school stadium here Tuesday afternoon at two o'clock, when the U. S. army put on a demonstration of modern military methods for the benefit of the white cadets.

The unit from Fort Meade, used some of the latest equipment in making this display for the cadets, showing the most intricate maneuvers.

Negro instructors in military tactics at the three Negro high schools with cadet corps, Dunbar, Armstrong and Cardoza, were not invited to participate nor were the colored cadets invited.

When brought to the attention of the board of education, the excuse was made that Col. Craige, white instructor in things military for Districts 1 to 9 in the school system, had made the arrangements with the officials at Camp Meade and that Col. Atwood, colored military instructor in charge of Divisions 10-13, the Negro grouping in the school system, had no inkling of what was transpiring.

This is the second time that the Negro cadets and their instructors have been ignored in such things, for on a previous occasion a demonstration at Fort Meyer, was held for the benefit of the white teachers and no invitation extended the Negroes to participate.

Whether or not a separate demonstration will be given the Negro cadets is uncertain.

In Hyde County, N C., farmland is measured in hills of corn instead of acres. Roughly, an acre is equal to 2750 hills of corn.

Texas landowners in 1938 received $44,000,000 in oil royalties.

Washington Post: Next year, is general election year and leap year and a large number of men will be running—some for offices, and many from women.

Boston Herald: A travel writer explains that there is practically no middle class in South America. Gosh, how refreshingly different. Who gets stuck for everything down there?

# SUPREME COUNCIL OF MASONS HOLDS FIFTY-THIRD SESSION IN TUSKEGEE

TUSKEGEE INSTITUTE, Ala., (A N P)—Headed by Willard W. Allen, most puissant sovereign grand commander, the United Supreme Council, Southern Jurisdiction, Ancient Accepted Scottish Rite Freemasonry, 33rd degree last week held its 53rd annual session here at the institute. Council meetings were held Monday and Tuesday and the public meeting and reception was held Sunday evening in the chapel of Tuskegee Institute.

Commander Allen was in charge of the public program, arranged as follows: Invocation by Rev. Walter S. Jackson; selection by the student choir; addresses of welcome by Dr. E. P. Bollson, representing the grand master of Alabama, Rev. W. A. Richardson for the churches, Dr. W. T. B. Williams, for Tuskegee Institute and J. J. Flood for the citizens; Responses by Bishop M. H. Davis, A. M. E. church, J. W. Dobbs, grand master of Georgia, John L. Webb, grand master of Mississippi, Alfred Nixon, secretary Southern Life Insurance company of Maryland and Raymond E. Jackson, imperial potentate, Order of the Mystic Shrine; oration by Rev. J. E. A. Johns and benediction by Rev. A. J. Payne.

At Monday's official opening of the council session, MPSG Commander Allen delivered his allocation which lasted more than an hour and in course of which he paid glowing tribute to the life and work of Dr. Booker T. Washington, founder of Tuskegee Institute. Commander Allen said: "Masonry is most admirably calculated to make good citizens, good husbands, good fathers and good sons. The principals of our craft makes good friends."

He closed by quoting Dr. Washington's declaration: "Racial battles are to be won by marching forward, not by holding back."

With the sister jurisdiction in the North, the Supreme Council, S. R. Masons represents a membership drawn from 5,500 lodges of Masons, affiliated with Prince Hall grand lodge of the country and its jurisdiction. Leaders in every phase of life are included in the supreme council and consistories under its charter.

At the close of the morning session lunch was served in the cafeteria and from there delegates went to the grave of the late Booker T. Washington where services were held and a floral wreath placed on his grave; thence to the statue where a picture was taken of the members of the Supreme Council.

Later, the Supreme Council met in the Masonic Temple where the following were elevated to the 33rd degree: Dr. A. J. Payne, Dr. F. D. Patterson, William A. Richardson, Dr. E. T. Bolsaw, Kerint Hall, H. C. Galloway, Dr. E. A. Johns, Willis J. Conners and Dr. G. J. Garnett.

In the evening, the members were entertained by the faculty of Tuskegee Institute, at the Oaks, home of the late Booker T. Washington; refreshments were served.

Tuesday morning the Supreme Council resumed its session and the reports of the various committees were heard. Fifty dollars were donated to the Institute for the purpose of helping some deserving student. A visit was also made to the U. S. Veterans' Facility which is in charge of Dr. Dibble, chief of staff with an all-colored personnel. Dr. Dibble addressed the delegation, stating that the hospital project had 64 buildings and a monthly disbursement of approximately $112,000.

# BAR ASSOCIATION PLANS FIGHT FOR COLORED SOLDIERS

ST. LOUIS, Mo.—(ANP)— The National Bars association has launched a vigorous attack to end discrimination practised by most of the states in refusing to admit Negroes to enlist in the state militia. Connecticut, Massachusetts, New York, New Jersey, Ohio, Illinois and the District of Columbia are the only states that accept Negroes in the national guard.

A concerted effort is being made to have the congressional act appropriating money for the national guard contain a provision to the effect that states refusing to let Negroes enlist will not be eligible to share in the fund.

Atty. S. R. Redmond, president of the National Bar Association, stated that efforts are also being made to have Negro soldiers in the regular army treated as soldiers rather than as servants for white officers. He stated an investigation revealed that Negro soldiers were seldom permitted to drill; that all are not furnished with guns, that it is impossible for a whole troop to drill at one time and that the discrimination practised against Negro soldiers in the matter of promoting them to the rank of officers is nothing less than "a national disgrace."

The convention in New York provided for the appointment of a committee to consider the proffer of some practical type of fellowship and affiliation from the association to Negro lawyers practising in foreign lands. Mr. Redmond appointed the following committee, which will report next August in Columbus; Attorney William L. Houston and George Parker of Washington, Judge James S. Watson and Attorney Albert C. Gilbert of New York, Attorney Raymond Pace Alexander of Philadelphia and Attorney George W. Lawrence of Chicago.

# GOVERNOR LONG OF LOUISIANA FIRES COLORED WORKERS

BATON ROUGE, La.—(By Leon Lewis for A N P)—Earl Long, brother of the famed Huey Long, who ascended to the gubernatorial chair when the G-men turned the heat on Ex-Gov. Dick Leche and scores of other Louisiana politicians for corrupt practices, extended his ousting panic to include 32 Negroes employed in various capacities at the state capitol here.

In the last few days the governor, popularly branded as the "earl of thievery," used state troops to oust Atty. General Ellison, who was instrumental in the investigation of grand jury charges against New Orleans District Atty. Charles Byrne.

Statements have come that the 32 Negroes fired will be replaced by white employes, as a patronage move to secure votes for his re-election, since Negroes cannot vote in state elections.

Colored leaders and organizations are up in protest to the precedent that they may be extended to affect hundreds of others in state employ. Several resolutions and letters of protest have been sent the governor.

Discussion throughout Negro circles in Baton Rouge and New Orleans is growing in momentum and the governor has been accused of "furthering the shame that this state has blazened to the nation."

Give your fullest. The full life is the only safe life. Danger comes not by excess, but by defect of vitality.—**Phillips Brooks.**

It is such a piece of good luck to be natural.—**Lowell.**

THE HISTORY, PURPOSE AND ACTIVITIES OF THE UNITED COOPERATIVE LEAGUE OF AMERICA, INCORPORATED.

The United Cooperative League of America, Incorporated was organized December Fifth, 1934 at Chicago, Illinois with Five members the first call meeting was held December 22nd., 1934.

Members were organized into camps in every community; the object of each camp was to better business and employment relations in its own community with the assistance and influence of the whole organization behind it. The Washington Camp was organized with Twenty-one members which increased to One Hundred members within a short period of time. When we had organized Seventeen camps in the City of Chicago with a membership of 3,200 we sponsored a franchise with the City Council of the City of Chicago and were instrumental in securing the endorsements of 222,000 persons for the work accomplished by the League. We have carried on this work since our incorporation and to date we have received the endorsement of over Seven Million persons whom we can contact within a period of Thirty days.

THE PURPOSE

The purpose of the The United Cooperative League of America, Inc. is to advertise the business of persons or firms who are affiliated with the League. To secure helpful information in expanding the businesses of individuals and firms who are affiliated with the League.

The United Cooperative League of America, Inc., has made a study of the achievements of the Race, "Up from Slavery" and during the brief space of Seventy-five years of progress and freedom. It is fitting, that here in Chicago, the League should release for the information of the world and for the inspiration of the Negro the cultural progress made in education, in Agriculture, in Art, business, professional, religious and music field Negroes of the United States will do well to memorialize their advancement and contributions in all lines of endeavor which have grown out of the service which he has cheerfully given to the nation, and, in Chicago, where humanitarian cooperation has made this city the Mecca for the Race. The United Cooperative League of America, Inc. is the sponsor of the Afra-Merican Emancipation Exposition which is to be held at the Coliseum in Chicago, Illinois from July Tenth to September Tenth. 1940.

On July 18th, 1939, Governor Henry Horner of the State of Illinois, signed House Bill No. 809 which provides for an appropriation of Seventy-five Thousand One Hundred and Sixty Dollars ($75,160.00) toward defraying the expense of promotion work of the Afra-Merican Emancipation Exposition. Our President, James W. Washington has worked untiringly in the interest of the Exposition for more than Five years together with the assistance of the loyal member of the League which tends towards making it the greatest in the history of the Race.

The League has secured the endorsements of leading Church, Fraternal and Civic organizations throughout the United States; it has also obtained the pledges of many Governors of states and Mayors of cities to make suitable appropriation toward defraying the expenses of an exhibit from their respective states and cities at the Exposition.

The Chicago City Council has unanimously endorsed our program and we have been assured of the cooperation of the Chicago Chamber of Commerce together with that of thousands of business firms and industries. We have contact or field men at work in the interest of the Exposition; they are covering the North, South, East and West, in order that all sections of our country may be well represented.

We plan to reserve one of our largest exhibit halls for the Agriculture Division and for use by it National Federation of Colored Farmers, Inc.

NEW FARMERS OF AMERICA PLAN BIG YEAR

GREENSBORO N. C.—(ANP)—S. B. Simmons, national executive secretary, New Farmers of America, this week announced a comprehensive work program for 1939 40, for the organization's membership of 53,000 students of vocational agriculture.

The program was submitted by a committee appointed for that purpose at New Farmers' fifth annual convention held in August at Bordentown, New Jersey. Committee members were Johnson Spence, Allendale, S. C., chairman; Henry King, Manning, S. C., and Ransom Murdock, Grambling, La.

Suggestions in the program are made as to activities of the organization and the individual member in (1) supervised farming, (2) community servine, (3) cooperative activities, (4) publicity, (5) thrift, (6) membership, (7) leadership (8) scholarship, (9) meetings, (10) character building, and (11) recreation.

It is the goal of the organization to have each of its 53,000 members conduct three or more projects and to carry out one major and nine minor supervised farm jobs. These with four year supervised programs are to be filed by the Department of Agriculture.

As to community service, the organization will take the initiative this year in educational service and organizing campaigns to stamp out pests such as mosquitoes, flies, rats, plants insects, plant disease and parasites. Improvement drives will also be carried on.

The idea of cooperatives will be sold to each chapter since each chapter must conduct regular buying and selling markets. Members are also asked to subscribe to one farm magazine and one Negro paper.

Each NFA local chapter is to have at least 40 active members in good financial standing. All banking is to be done through the medium of the chapter.

REMEMBER THIS

A record is a fragile thing; you can't lower one without breaking it.

Nothing will blind a man so effectually as throwing gold dust in his eyes.

All men are born equal and few of them are born equal to an emergency.

A man now lives on hope he will spend his old age on somebody else's expense.

If a man avoids scraping acquaintances, he misses a lot of scrapes that acquaintances get men into.

CORN-ON-THE-COB

St. Louis Post Dispatch: This department has just consumed a description of corn-on-the-cob by that eminent man of letters, Christopher Billopp of the Baltimore Evening Sun. We say consumed advisedly. The modern Charles Lamb of our esteemed contemporary serves his roasting ears golden ripe, piping hot, drenched in butter and touched up with just enough salt. He knows what makes corn food for gods and man and he speaks his mind on those dullards who know no better than to douse an ear into a glass of water as a cooling off process.

Brother Billop does, however, trip up at one point, and the spill is a bad one. He says the trouble with corn-on-the-cob is that "while one ear is far too little, two ears are far too much." Now, as to the inadequacy of one ear, there is no argument whatever. But the Baltimore essayist misses the barn as well as the barn door in the other direction. Two ears too much? Why, three ears, four ears, five, six, seven—there is no such thing as too much corn-on-the-cob. Did the economics teacher ever illustrate the law of diminishing returns in terms of corn-on-the-cob? Of course not. Corn-on-the-cob, hot from the kitchen and dripping blobs of yellow butter stops Old Man Economics dead in his tracks.

# CITIZENS HONOR MRS. BOUSFIELD, SCHOOL PRINCIPAL

## Chicago Educator is First Member of Her Race Put at Head of City Public School

CHICAGO, ILL., (ANP)— More than 500 Chicagoans, prominent in the civic, educational, business and professional life of the city, attended a testimonial dinner last Saturday at Chicago Women's club, sponsored by the Douglas League of Women voters and honoring Mrs. Maudelle Bousfield, recently appointed as the first colored principal of a Chicago high school, the Wendell Phillips.

Mrs. Wendell E. Green, League president, presided and those at the speakers' table were: Dr. William H. Johnson, suprintendent of schools, who spoke in high praise of Mrs. Bousfield's long service with the city's school system; Dr. Edwin R. Embree, president of the Rosenwald Fund; Mrs. William Bryant, president Cook County League of Women Voters and Mrs. Dixie Brooks, chairman of the League's business and professional women's committee.

Miss Etta Moton, concert recitalist and star of stage and screen, sang three numbers, one of which, "A City Called Heaven," she sang unaccompanied. Other artists appearing were: Maurice Cooper, Arthur Crittenden, Miss Edna Bowles and Miss Nelmatilda Ritchie. Mrs. Bousfield spoke briefly in response to the tributes paid her by the speakers.

A reception preceded the dinner, and standing in the receiving line with Principal Bousfield, were: Charles Brown, her 85-year-old father, soon to be honored in St. Louis for his 50 years' service as school principal in that city; Mrs. Katie Bousfield, mother of Principal Bousfield's husband; Dr. Johnson, Dr. Embree, Mrs. Bryant and members of the Douglass League of Women Voters.

Mrs. Bousfield's husband, Dr. Midian O. Bousfield, director of Negro health for the Julius Rosenwald Fund and vice president of the Supreme Liberty Life Insurance company, fortnight ago was appointed Chicago's first colored member of the Board of Education.

# TENNESSEE AND GEORGIA STUDENTS WIN PRIZES IN T-B ESSAY CONTEST

NEW YORK CITY (ANP)—Students from Georgia and Tennessee have been judged the winners in its annual essay contest for Negro students, it has been announced by the National Tuberculosis Association.

Frankie N. Golden of Ocilla, Ga., student at the Georgia State college in Savannah, is the winner in the college group. Vivian Theodosia Hampton of the Washington Junior High school, Nashville, has, in the opinion of the judges, the outstanding essay among high school students. More than 100,000 students throughout the country participated in the contest.

Miss Golden receives $50 for first prize. Since her graduation last June, Miss Golden has been Jeans supervisor in Irwin county, Ga., with 20 elementary schools under her supervision. She is no newcomer to the annual essay contests on tuberculosis for in 1936 she won third prize in a competition sponsored by the Chatham-Savannah Tuberculosis association. The subject of Miss Golden's winning essay is "Tuberculosis in My Community; What is Being Done and What Can be Done to Reduce it."

The national committee of judges had such difficulty in selecting an essay for second place that it decided to give second prizes of $25 each to two persons. They are Margaret Louise Garrett of Lawrence, Kans., a student at the University of Kansas, and Grace B. Syphax of Washington, who is studying at Howard university.

A special prize of $10 will be awarded to Mrs. Jane Keeber Saunders of Institute, W. Va. Mrs. Saunders is a student at West Virginia State college. Honorable mention and carrying with it a prize of $5 each, goes to the following: Louise J. Johnson, Cheyney, Pa., State Teachers college; W. Anna Chatman, Nashville, Tennessee Agricultural and Industrial State Teachers college; Cecil Tarrance, Louisville, Ky., Municipal college; William Wilson, Bowie, Md., State Teachers college, and Albert L. Lott, Alcorn, Miss., Alcon A. & M. college.

"What I Told Thom" was the subject of Miss Hampton's essay in the high school division. The first prize is $25. In her community Miss Hampton is interested in activities designed to better the neighborhood. Her teachers regard her as a superior student.

Second prize of $20 in the high school group was awarded to Thelma Stull of Port Arthur, Texas. Harold Boucree of New Orleans, submitted an essay that won third prize of $15. Marjorie Frances Jackson of Louisville, Ky., won fourth prize of $10, and a special prize of $7.50 was made to Anna Mae Jackson of Pittsburgh.

The following received honorable mention and prizes of $5 each: Flora Clepper, Jeffersonville, Ind.; Nettie Ann Geiger, Jacksonville, Fla.; Ellis Moore, Crossett, Ark.; Patricia Collins, Camden, S. C.; Winifred Collier, Brooklyn, N. Y., and William Williams, St. Louis.

# ASSOCIATION FOR STUDY OF HISTORY MEETS IN SOUTH

## Organization Directed By Carter G. Woodson Well Attended; Dean Taylor On Board

NEW ORLEANS, LA., (ANP) —The annual meeting of the Association for the Study of Negro Life and History closed it sessions here Monday after what was termed one of the most highly successful meets in the history of the association. Meetings were held in Mt. Zion Methodist church, Xavier university, Dillard university.

**Mrs. Bethune Re-elected**

Mrs. Mary McLeod Bethune, Daytona Beach, Fla., was elected president to succeed herself. Other officers elected were L. R. Mehlinger, Washington, D. C., secretary-treasurer; Carter G. Woodson, Washington, D. C., director of research. Members of the executive committee elected were Charles H. Wesley, Washington; Roscoe Dunjee, Oklahma City; John M. Gandy, Va. State college; Lucy Harth Smith, Lexington, Ky.; Evarts V. Green, N. Y.; Joseph J. Rhoads, Marshall, Texas; John C. Bruce, Washington; W. R. Banks, Prairie View, Texas; Alexander J. Jackson, Chicago, Ill.; A. M. Schkessinger, Washington; Bishop R. A. Carter, Chicago; A. A. Taylor, Nashville; H. Councill Trenholm, Montgomery, Ala.; E. P. Southall, Jacksonville, Fla.

**Many Speakers**

Many prominent speakers appeared on the various programs. Among them were Miss Gertrude Green, New Orleans, local president; Miss Genevieve Taylor, State Teachers college, Montgomery, Ala.; Mrs. Laura Knight Turner, Cincinnati; J. G. Hardy, State Teachers college, Montgomery; W. L. Davis, Huston, Texas; W. T. Fountaine, Southern university; Prof. Frederick Hall and Benjamin Quarles, Dillard university; Dr. Luther P. Jackson, Va. State college; David Jackson, Xavier, J. E. Pierce, Montgomery, Ala.; W. Sherman Savage, Lincoln U., Mo.; C. H. Wilson, Alcorn college, Miss.; J. Mason Brewer, Lincoln high school, Dallas, Texas; Samuel E. Warren, Prairie View, Texas; Lorenzo J. Greene, Lincoln, Mo.; Bishop R. A. Carter, C. M. E. church, Horace Mann Bond, Ft. Valley Ga.; Ralph N. Davis, Tuskegee Institute, Ala.; Felton G. Clark, Southern university, Scotlandville, La., and Miss Ione Berteaux, New Orleans.

**Social Activities**

Guests and delegates were entertained lavishly by members of the local chapter and residents of the city. A breakfast was held in the Xavier Refectory and one in the Dillard refectory. Exhibits were placed in the public library and at the various schools and colleges. A tour was made of the principal places of the city.

Pittsburgh Post Gazette: We are living in a machine age, all right, with half the people being run through it.

RESOLUTIONS OF THE TENTH ANNUAL CONVENTION OF COLORED FARMERS, INC., LINCOLN UNIVERSITY —JEFFERSON CITY MISSOURI. OCT. 25-27, 1939.

1. We commend the efforts of our national officers and Board of Directors in endeavoring to carry out the original aims and purposes of our organization. They have efficiently and wisely carried on the business of our organization and deserve the encouragement and support of every member. We urge each member to attend and acquaint himself with the functions of the organization, that we may double our efforts to support the organization financially by plans already out-line our offorts to support the organization financially by plans already outlined or by a new plan that may be worked out, thus removing the burden now resting upon the founders and ardent supporters of the organization.

2. We recommend the organization adopt a definite plan for systematically handling the exhibits which come to it from year to year by cooperating with our land grant colleges, high schools, and vocational and extension workers in all states where we are organized.

3. We urge all members to strive to increase the membership of the organization. State and Regional Agricultural organization, and Marketing and Cooperative organizations, now have the privilege of merging, joining, or affiliating with our organization, and we especially urge the membership of such groups to accept our standing invitation to unite with us and help us carry out our aims and purposes.

4. We desire the cooperation and friendship of all institutions serving the farming industry, the Extension service, Home Demonstration Service, Land Grant Colleges, Vocational Agriculture Service, and all other such institutions.

5. Cooperative purchasing, production, and marketing have benefitted all Units that have engaged in such efforts. We should enlarge our cooperative activities in every state and section where we are organized.

6. Our Units should investigate the possibilities of Federal Credit Unions and organize them wherever possible.

7. The goal of every organized farmer should be to own the land he tills and to till the land he owns. Tenants and share-croppers should make every effort and accept every opportunity offered to become farm owners.

8. We commend the efforts the Farm Security Administration and other agencies are making to halt the growth of farm tenancy and assure these agencies they will receive our support.

9. We believe a way can be found to provide tenants with free or very low cost medical service. Our officials are instructed to study this problem and submit recommendations.

10. We suggest that landlords take advantage of long time Government loans now available to provide better housing for tenants and share-croppers.

11. We condemn the activities or radical organizations seeking to mislead tenants and share-croppers of our group.

12. We commend the program for American Agriculture initiated and planned by the officials of the present Federal Administration. In most of its essentials, we believe it is the best ever devised for the American farmer and especially for the farmers of the South. Colored farmers are urged to continue supporting this program and the friends of the program.

13. The method of distribution of Soil Conservation Payment Checks, we find in some localities is still a cause for dissatisfaction and misunderstanding. We suggest that an effort be made to improve the present method in some way.

14. We express our gratitude to all authorities and agencies who have made it possible to increase the force of Negro Farm Extension Agents, Home Demonstration Agents and Vocational Agriculture Teachers in the southern states. It is our desire to have more agents of our group appointed in all states where needed, and especially in the border states of Missouri, Illinois, Kentucky, West Virginia and Maryland.

15. We recommend that a retirement fund be established by the Federal Government and under the direct supervision of the Federal Government for the benefit of farm extension agents Home Demonstration Agents, and Vocational Workers.

16. We urge our members to support the rural church and the rural school and to keep ever bright and shining these Beacon Lights of rural civilization.

17. We endorse the idea that a school farm be established and maintained as a necessary adjunct to every rural high school, and we instruct our officials to investigate the possibility of securing appropriations from the Federal Government to purchase rural high school farms.

18. We urge our members to patronize Ngro business anl industry and those corporations and industries that employ Negro labor.

19. We endorse the objectives and activities of the United Cooperative League of America and pledge to this organization our support and cooperation in their effort to make successful the Aframerican Emancipation Exposition which, under the leadership of this organization, will be held in the city of Chicago, Illinois next summer.

20. We request the Secretary of Agriculture and officials of government credit agencies to show reasonable leniecy to those farm owners who are attempting to pay their debts as payments fall due. As many colored farmers are freeing themselves from the one-crop system of farming but have not as yet been able to adjust their farm operations so as to be able to meet obligations assumed many years ago, we believe that such farmers should be granted extensions on their notes if they are proving that they are getting out of debt faster than they are getting in debt.

21. We express our thanks and gratitude to all who have contributed to the success of this Convention—to our hosts, the president faculty, and student body of Lincoln University —to exhibitors of farm and farm home products, to donors of prizes—to the citizens of Missouri—to her noble Governor and State Government officials—to all our friends who have made us welcome, may we ever merit your interest and support.

COMMITTEE ON RESOLUTIONS

S. B. Wilson, Tennessee
J. W. Marks, Mississippi
R. H. Sanders, Indiana
J. W. Washington, Illinois
H. G. Paige, Iowa
R. C. Darity, Arkansas
W. G. Mosely, Missouri

## VOCATIONAL AGRICULTURE TEACHERS ASSOCIATION

### ANNUAL MEETING HELD IN BORDENTOWN, N. J.

The National Vocational Agriculture Teachers Association, the membership of which includes Negro teachers of agriculture from all southern and border states, held their annual meetings at the Manual Training School, Bordentown, N. J., August 7-8. Teachers and delegates representing all states attended.

All meetings were extremely inspiring and interesting. Highlights included the appointment of an objective committee to formulate plans to increase membership and to interest and inform all vocational workers of the country of the objectives of the organization; an address by J. C. McAdams, of Texas, on "Opportunity or Making Money from Poultry," and Address by Prof. Alva Tabor, of Georgia, on "Realizing a More Effective Organizaton," and an address by Leon R. Harris, president of the National Federation of Colored Farmers, on the Convention theme, "Greater Vocational Education Efficiency. Through Cooperation." All addresses were well received.

# ADULT EDUCATION IS LEADING TOPIC OF COLLEGE HEADS

## Annual Session Of Land Grant Presidents Will Open In Washington Monday

WASHINGTON, D. C., (ANP) — Adult education in rural and urban areas, cooperation of colleges with community adult education programs, how land grant colleges can serve the Negro masses, the responsibility of colleges for improving the civic and social life of the community and many subjects of like nature will engage the attention of the presidents of Negro Land Grant colleges at their 17th annual convention to be held here, Nov. 13-15, in Douglass Hall Auditorium of Howard university.

Delegates will be honored by a banquet on Tuesday evening tendered by the faculty of Howard U., with R. B. Atwood, Kentucky State college and Conference President, presiding. Banquet speakers will be Dr. Arthur D. Wright, president, Southern Education Foundation; Dr. Alain Locke, professor of philosophy, Howard U.; Franklin Hooper, member executive board, American Association for Adult Education and Dr. Mordecai W. Johnson, president Howard university.

Theme for the conference will be: "Adult Education and the Negro Land Grand College," and presiding over the various sessions will be the following presidents:

John W. Davis, West Virginia; Sherman D. Scruggs, Lincoln U. Missouri; John M. Gandy, Virginia State College and J. B. Watson Arkansas State college.

Colleges and presidents of the Conference represented at the meeting were the following:

Alabama A. & M. Institute, President J. F. Drake; Arkansas State College, President J. B. Watson; Deleware (Dover) State College, President R. S. Crossley; Florida (Tallahassee) A. & M. College, President J. R. E. Lee; Georgia (Savannah) State College, President B. F. Hubert; Kentucky (Frankfort) State College, President R. B. Atwood; Louisiana (Baton Rouge) Southern University, President F. G. Clark

Maryland (Princess Ann) Princess Ann College, Mississippi (Alcorn) A & M. College, President W. H Bell; Missouri (Jefferson City) Lincoln university, president Sherman D. Scruggs; North Carolina (Greenboro) A. & T. College, President F D. Bluford; Oklahoma (Langston) Langston University, Acting President B. F. Lee; South Carolina (Orangeburg) State College, President M. F. Whitaker; Tennessee (Nashville) A. & I. State College, President W. J. Hale; Texas Prairie View) State College, President W. R. Banks; Virginia (Petersburg) State College, President John M. Gandy and West Virginia (Institute) State College, Presiden John W. Davis.

Associate members are Alabama (Tuskegee) Tuskegee institute, President F. D. Patterson; District of Columbia (Washington) Howard University, President M. W. Johnson; Georgia (Fortl Valley) N. & I. School, President Horace Mann Bond; New Jersey (Bordentown) Manual Training School, President W. R. Valentine; Ohio (Wilberforce) Wilberforce University, President D. Ormond Walker and Virginia (Hampton) Hampton Institute, President Arthur Howe.

## DEMONSTRATES MEAT CURING TECHNIQUE

PRAIRIE VIEW, Texas, May 9. —(ANP)—One of the largest and most interesting exhibits ever held at Prairie View College was the recent meat show and curing demonstration arranged by county agricultural and home demonstration agents of the Cooperative Extension Work. The modern method of curing ham, bacon and other pork products was a feature of the exhibition which attracted more than 27,000 visitors.

The Prairie View exhibition was one of 32 shows held in as many Texas counties under supervision of colored extension agents and climaxed the 1938-39 meat curing season in which 2,621 demonstrators produced swine as part of their live-at-home program. During the season 1,379,640 pounds of pork were cured by improved methods. In the 32 counties, 3,523 pieces of cured meat and 1,591 pieces of pork were shown.

Two obectives of the exhibits: To assemble the meat of farmers who have had experience in swine work and enable them to compare their products with those of other farmers; to give their phase of the work publicitly as it is the plan, soon as a surplus can be secured, to make meat curing a home industry, Cooperative Extension Work at Prairie View functions through cooperation of the U. S. Department of Agriculture.

## THRIFT THROUGH CREDIT UNIONS

C. R. Orchard, Director, Credit Union Section, Farm Credit Administration

It is a real privilege to be permitted to talk about thrift to the thousands of boys and girls who make up such a large part of the audience of the Farm and Home Hour. For thrift is a fascinating subject. Fascinating because its intelligent use so often opens the door of the university to the ambitious boy or girl; because it provides the means for that much-desired trip to the city, the mountains, or the sea shore. It re-roofs the barn; it paints the house and provides new furniture. It lightens mothers' burdens; it eases fathers' worries; it provides the nest egg which helps so much when one of the rising generation steps out to meet the world.

(Continued on Page 13)

# Vanderbilt President Wants Fisk Chosen As Center; Tigert Prefers Land Grant Colleges

ATLANTA, GA., (ANP) — Regional universities to which neighboring states would contribute upkeep funds was advanced as a possible solution to the educational problem raised by the supreme court's famous Gaines case decision in a conference here last week attended by leaders from 41 southern white colleges and universities.

The entire problem of providing equality of opportunity for Negroes to study law, medicine and other advanced subjects was placed by this meeting, the fifth annual Southern University conference, in the hands of a special committee headed by Dr. Harmon W. Caldwell, president of the University of Georgia.

In a general discussion at the closing conference session, Dr. Caldwell said, "we must do something quickly" and added:

"I do not believe it feasible to admit Negroes to southern institutions used by white students just now. The most practical solution is the setting up of regional Negro universities to which all states in the region would contribute. This arrangement would relieve the states of tremendous if not prohibitive costs of establishing separate graduate schools."

However, the university president did not give an opinion as to whether this would satisfy the high court ruling which stated that Negroes were entitled to equal education facilities within the borders of their native states. The awarding of scholarships for study outside the state was held illegal. Regional universities would mean that Negroes would be forced to cross state lines to reach the regional institution supported by their state.

O. C. Carmichael, chancellor of Vanderbilt university, Nashville, asked if Tennessee could designate Fisk as a state university and have the state pay Fisk "a certain sum to allow Negroes to do professional work there.' Dr. Caldwell said he believed this plan would be legal. Dr. John J. Tigert, University of Florida president said the establishment of Negro land grant colleges in several states had proved "a very satisfactory solution."

TEACHER'S NEW CRAFT DRAWS ATTENTION OF MRS. ROOSEVELT

MOVIE SHORT IS MADE OF HER ORIGINAL WORK

CHICAGO,—(ANP)—Mrs. C. Rosenberg Foster, a teacher in Chicago's DuSable High School has attracted so much attention with the new picture making technique which she has developed as "busy work" in connection with her classes in weaving, that Mrs. Eleanor Roosevelt has received four pictures which she ordered for the White House and Paramount Moving Picture Corporation of Hollywood has just completed a movie short showing her work.

Using as materials discarded trash from waste baskets and cast off products of nature such as acorns, butterfly wings, barks, candy, crash rags, cotton, corn, coffee grounds, cobs, clinkers, chicken bones and feathers; also cigar stumps, cellophane, egg shells, felt, fish scales, birds, dried flowers, gum balls, kleenex, many kinds of leaves, lichen, moss, matches, peanut hulls, sawdust, sandpaper, stamps, sticks, soap sponge, shells, velvet, wood shaving and a variety of other products.

Mrs. Foster has taught her pupils to develop pictures whose beauty and attractiveness have created a sensation in educational and art circle wherever she has shown them.

MAKE MOVIE SHORT

Paramount pictures has just completed an educational short showing Mrs. Foster making these unusual pictures. Schools are petitioning their local exchanges for a showing of the picture. In addition the W. M. Welch Publishing House, 1515 Sedgwick Street, Chicago, is publishing her book, "Trashcraft," containing 75 illustrations of various pictures, many of them in color, which she has made from these waste objects.

No paint or brush or commercial dyes are used nor is a knowledge of drawing or artistic talent needed to produce the pictures, according to Mrs. Foster.

Mrs. Roosevelt was so attracted that she has after securing Mrs. Foster's permission, written an article for the September issue ot the Magazine. Woman's Day, distributed through the A. and P. stores. Mrs. Roosevelt likewise wrote an endorsement of her work pointing out its value in schools and featured Mrs. Foster in her syndicated column, "My Day."

GIVEN LEAVES

The Chicago Board of Education has taken so much interest in her work that it grants Mrs. Foster leaves of absence for lectures which school authorities in various sections of the country request. Recently she has lectured at the University of Illinois before a state gronp of teachers and at the Oklahoma State Teachers Association, while a number of state colleges in the northern states have seen her exhibits.

Mrs. Foster, a native of Arkansas, taught eight years in Oklahoma in the colored school system before coming to Chicago where for 16 years she has been a member of the faculty of the DuSable High School.

FLORIDA CATTLE GROWER IS BIG SHIPPERS OF BEEF

KEEPS MORE THAN 2,000 HEAD OF STOCK

KISSIME, Fla.,—(ANP)—Down in this section, the natives call this place "Cow-Town" because of the large number of beef cattle sold here each year. One of the oldest established and largest dealers in cattle is Lawrence Silas, Negro farmer.

"My father was a rancher," says Mr. Silas, "and I started riding and helping to round up cattle when I was four years old. I'm 52 years old now, and don't know any other line except breeding, growing, buying and selling cattle."

Mr. Silas admits that the ranch land which he owns and leases amounts to over 10,000 acres, and he keeps on hand from 1,500 to 2,000 head of cattle, 20 horses and several trucks.

Recently Mr. Silas bought five Brahma bulls from Texas. "When bred with native stock," he says, 'we get more meat and each head of cattle sold brings from $4 to $5 more."

Local citizens say Mr. Silas is a heavy stockholder in the local Stock Yard.

THE SUNNY SIDE OF THE SOUTH

An humble janitor of a wealthy white church died last week and his funeral, because of its unusal setting and mixed audience in attendance, all at the aristocratic white church provoked richly stimulating thinking about this "Awful South" which can have a sunny side in the midst of sorrow and mean wrongs.

It gave three paragraphs to Ed Wilson, the man who kept South Highland Church fit for worship. Wilson typified many of the pure-hearted and toil-true members of his race who have learned to know about the "Awful South" by keeping in mind the suuny element, yet never forgetting the sustaining optimism that has been the salt of the race.

Yet, in death, pointing the way to us who live, of the worth of humanity and in all of its forms, Ed Wilson gave birth to a thought and brought two races together in "grateful admiration."

We print the editorial here:

NEGRO TREATMENT IN THIS AWFUL SOUTH

Ed Wilson was just a Negro janitor. For 46 years he had kept clean the building and premises of the South Highland Presbyterian Church. He was a menial performing a menial task.

Ed Wilson died this week, died in the church he had served so long. And they buried him from that church. Its pews were crowded with members of his own race and by several hundred white persons. It was a moving service as white and black people joined in tribute to this humble janitor.

Perhaps Ed Wilson had heard of the Scottsboro boys. Perhaps he knew of the share croppers on the plantations. But all this did not seem to matter much to him. Ed Wilson did well what fell to his hands to do, and whites and blacks buried him with the honors of a grateful admiration.—From The Birmingham (Ala.) WORLD

# BISHOP H. Y. TOOKES BURNS MORTGAGE OF FLORIDA COLLEGE

JACKSONVILLE, Fla.—(ANP)—A crowd, estimated at more than 10,000 persons, including leaders of Florida's clergy and laity as well as hundreds of visitors from other states, swarmed over the campus of Edward Waters' college to attend the recent mortgage-burning ceremony at the college, and to honor Bishop Henry Young Tookes, presiding prelate of the Florida diocese under whose leadership the institution has become debt-free.

Following the tragic death in an auto crash of the late Bishop R. A. Grant, Bishop Tookes was assigned to the Florida diocese and at once set himself to the task of liquidating all bonded indebtedness of the college. With his 29 presiding elders and 800 pastors, the entire state was organized and all efforts centered on the work at hand. Their big task was completed on October 3.

Outstanding speakers were heard throughout the day-long celebration, among them being Dr. D. E. Williams, state agent for Negro education, Pres. J. R. E. Lee, president Florida A. & M. college and many others.

The feature of the mortgage-burning celebration was the torchlight parade, with Bishops Tookes and Gregg leading, which took in the business sections of the city, the music being furnished by the Florida A. & M. college 35-piece band.

The mortgage-burning program was held in Durkey stadium, one of the finest in the southland. The principal address was by Bishop J. A. Gregg of Chicago. Other speakers on the program were former Governor Martin, Drs. George Singleton and John Clayborn.

Music for the occasion was furnished by the chorus of 200 under the direction of Mrs. Lillian Sutton. Several musical numbers were also given by the band from the state college, directed by Prof. Curtsey.

Florida A. M. E. church leaders paid high tribute to the leadership of Bishop Tookes and his accomplishments at Edward Waters. During the celebration the bishop said he is planning for the building of additional dormitories that will be in keeping with this fast growing institution. Dr. C. S. Long, Jr., is president of the college.

Realizing it will be impossible for Bishop Tookes to reach his goal by the next general conference, many declared it is the desire of the people of Florida, led by the delegates, that he be returned to this diocose for another four years.

## Denver Baritone Presented At University of Chicago

CHICAGO, Ill.—(ANP)—Jean Pilon, a native of Denver, now teaching voice at the Chicago Musical College, was presented to Chicagoans last Friday at a musical tea, sponsored by Miss Josephine Hubbard, University of Chicago sociological student, at International house on the University of Chicago campus.

Mr. Pilon, a baritone who has appeared on the concert and operatic stages, is a graduate of the Lamar Professional School of Music, Denver, and of the Chicago Musical college where he now teaches.

Prominent Chicagoans acted as host and hostesses on this occasion of Mr. Pilon's debut here, among them Miss Maurine Sprott, resident secretary of the South Parkway branch Y. W. C. A., and Miss Ruth Montrose, popular social worker.

Others assisting Miss Hubbard were: Marcel Cailloux, Miss Florence Coristine of Canada, Eugene Dell, Miss Mary Ranney, Miss Joan Reid of Australia, Dr. Sunder Joshi of India, Marywaniy of Iran, Miss Josephine Tsui of China and Miss Lalita Kumurappa of India.

Morris Erickson, of North Dakota, a director of the National Farmers Union, estimates that farmers constitute more than 24 per cent of the population of the United States but receive less than 11 per cent of the national income.

## FEDERAL RULES ON GRADING SCY BEANS RELAXED

### REGULATIONS TO AFFECT BUMPER CROP

Federal soy bean inspectors have been ordered to adopt less rigid methods of grading this year's bumper soy bean crop, J. E. Barr, chief of the department of agriculture's soy bean inspection service, told cash grain dealers in a meeting yesterday at the Board of Trade.

**Complaints had** reached the department of agriculture because of the prevalence of green, or immature, beans in the 1939 crop with a corresponding increase in price discounts resulting from grading rules.

"It is possible," Barr said yesterday, "that many of our inspectors might have been rigid in their grading, confronted as they were with the unusually high percentage of immature beans in this year's harvest."

GRADED ACCORDING TO SAMPLES.

Soy beans are graded by per cent of damage in samples of the immature beans, which show an intense green color in the meat, are considered damaged and their prevalence detracts from the grade of a shipment of beans.

However, under a memorandum issued by Barr to soy bean shippers, dealers are now to be regarded sound "if the individual bean is plump, well developed, and not damaged by frost." A cross section of the bean, according to the memorandum, should show the meat to be firm and of a light green color tinged with yellow. He emphasized that this suggestion to inspectors would not change the federal standards by which grades are determined.

ILLINOIS LARGEST PRODUCER.

Illinois leads the six major soy bean producing states with a 1939 crop estimated at 39,490,000 bushels. The others are Indiana, 12,740,000; Iowa, 9,093,000; Ohio 7,332,00; North Carolina, 1,444,000, and Missouri, 715,000 bushels.

The extraordinary prevalence of the immature beans has been noticed in Illinois, Indiana, and Ohio, Barr said, although no reports have come to him from the other states. North Carolina's harvest, due in November should be free of the condition, he said.

## THRIFT MACHINERY NEEDED

(Continued from Page 9)

Thrift is an antidote for the blues. It helps to make possible the realization of our hopes and dreams. The thrifty family seems to work together more harmoniously to better purpose than the extravagant one. And happy indeed are the fathers and mothers of those youngsters who early in life resolve to do their part. However, to be effective, the practice of thrift needs convenient machinery. It is true that we in America have always had some machinery for this purpose. We have commercial banks and savings banks; we have building and loan associations; we also have insurance companies. All these are splendid and if they fit your needs and are convenient, I urge you to use their services.

But I want to tell you of another thrift plan which is newer than those I have just mentioned. By its very nature it will be near to you, and better still, this plan is one which farm boys and girls can help their fathers and mothers to start. Once it is in operation they can use its services, and as they grow into manhood and womanhood be better prepared to take over their share of its management.

I speak of the credit union. To many of you the term is strange, and I should explain that a credit union is a local club or society, organized by persons of modest income to serve two purposes. The first purpose is to help build up habits of thrift among members by receiving their savings, which are promptly deposited in an insured bank. The second purpose is to use these accumulated savings to make loans to members of the credit union whenever they need money for some useful end. Thus, in your own case, if you belong to a credit union you could build up a saving account, and some time in the years ahead, you could use it for your education, or for buying livestock or a tractor, or to help build a house, or whatever else you wish. If at any time you did not have enough for your particular purpose you or your parents might borrow from the credit union, paying back the loans in a year or so with a reasonable interest.

CREDIT UNIONS WIDESPREAD

There are now over 7,000 credit unions in the United States—2,900 have been chartered by the Federal government, the rest by the various states. These credit unions have enrolled over 1 1-2 million members and have assets of over 100 millions dollars. They serve farmers, cooperators, teachers, members of churches, government employees (city, county, state and Federal) and workers in almost every industry in the country. They flourish in every state and in the Hawaiian Islands.

Each credit union is an independent unit, controlled by its members through directors and committeemen whom they elect from their own number. If the credit union is operating under a Federal charter it must send quarterly reports to the Federal government, and a Federal examiner comes periodically to examine the books. Through its fieldmen the Farm Credit Administration keeps a friendly watchfulness over its operations.

Those who believe in cooperation are wont to stress the fact that the funds in the credit union are under the control of the members and that the credit which is built up because of this accumulation of capital is also directed by these same members.

SMALL NUMBER MAY START CREDIT UNION

It takes only a small number of interested persons to start a Federal credit union. In a country community we require at least thirty signatures to the application before we will consider the granting of a charter. Once the charter is granted one of our representatives will help the new credit union get under way, the first step being to elect a board of directors and two committees. New members come in, the savings fund piles up, and the credit union begins to make the loans which are nearly always in de-

The membership fee is only a quarter, and there are no dues. Each member gets a pass book, and when he wants to add to his account he gives the money to the treasurer, who enters the amount in the pass book. Any amount you want to save is acceptable, whether it is just a little change or a $10 bill.

I cannot tell you more just now about how the credit union operates or what an immense good it has done and is doing every day. I can only say that in countless cases lives have been brightened, hope rekindled, and grown men and women as well as boys and girls have been led to know the pleasure and the benefit of thrift. If you will write to the Farm Credit Administration, Washington, D. C., we will send you pamphlets showing the simple steps which, if followed, will bring credit union service to your community.

## BREAK FOR FARMERS

Farmers in debt to Uncle Sam got a break this week from Secretary of Agriculture Henry A. Wallace, who announced Commodity Credit Corporation interest rates on farm loans would be cut from 4 to 3 per cent, effective November 7.

## ONE WAY OUT

When woman is not pretty
And feels it some disgrace,
Reverse the hat; the snood will
Then cover up her face.

# CITIZENS MAY LEAD BOYCOTT AGAINST HENRY ARMSTRONG

### Los Angeles Group Opposes Fighter Helping Promoter "Jim Crows" Fans

LOS ANGELES, (ANP)—A local citizens committee composed of Dan Shaw, Harry Levette and Leon H. Washington, Jr., will form the nuculeus of a nation-wide citizens' committe to boycott all Henry Armstrong fights if Armstrong fights Ceferino Garcia under the promotion of Charlie McDonald, who will not permit Negroes to fight in the Hollywood Legion stadium.

According to Shaw, Armstrong stated definitely that he would not fight for McDonald as long as the Jim Crow condition existed in Hollywood. The next day, however, the metropolitan papers carried pictures of Armstrong signing a contract to fight Garcia under the direction of the Hollywood crowd. Recently a group of citizens appeared before the state athletic commission protesting the un-American tactics at the Legion stadium. At the state Legion convention a protest was made by the local Benjamin J. Bowie post. Nothing has been done to remedy the condition.

"We believe Henry," said Washington, "has a splendid chance, by refusing to fight for the Hollywood legion, which undoubtedly will be the biggest gate of the year, to help end the Jim Crow ban at the Hollywood stadium. I believe that when Henry realizes the importance of this matter, he too will cooperate in helping stamp out this unsportsmanlike procedure on the part of the legion."

A letter is being prepared by the committee and will be sent to Armstrong for the purpose of determining whether or not the committee may expect his cooperation. "It is our hope that he will," said Washington.

**Woman's Missionary Society LITERATURE**

**The Woman's Home Mission Guide,** price 15 cents; **Y. W. A. Guide,** 15 cents; **Shepherd Boy's League Guide** and **Girl's Auxiliary** combined, 15 cents; **Starlight Band,** 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Hope Magazine**
PUBLISHED MONTHLY

No better publication can be placed in the hands of women who are doing mission work and interested in the Fireside School development than Hope Magazine, published every month in the year, price 50 cents a year. It contains helps for every department of Woman's Mission Society Organizations, as well as suggestions for religious entertainments. For more than fifty years this Magazine has been an invaluable help. It was founded by the late Miss Joanna P. Moore.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**ORTHODOXY**
of the
**Missionary Baptist Churches**
By Dr. E. R. Carter of Atlanta, Ga., and Rev. E. H. Borden. Just off the press.

You can't afford to be without this book. Buy one. Know the why and wherefore of your denomination. The price is small but the information contained therein is invaluable.

**Price 25c**

## Address Hon. Lafayette Patterson

(Continued from page 1)

Secretary Wallace's goals are for the whole people of this country, let us make a brief survey of the happenings of the past twenty years. Statisticians have pointed out time and again that the amount of wages paid to labor and farm income are always close together and run hand in hand. Time and again it has been shown that when farm income was around ten billions of dollars, wages were around ten billions, and when farm income sank to the low levels of 1932, wages for labor followed and sank to the same level.

As a further illustration of how closely this farm income question is to the prosperity of the whole country, some have gone so far as to set up figures and attempt to prove that the farm income was a direct index to the national income; that if farm income be multiplied by seven, it would give you the approximate national income in any one year. It should be pointed out here that economists have not accepted this theory, but those who have put their forward contend that you can take the farm income of any year in the past twenty and multiply it by seven and you will have a figure which will equal the total national income. It may be, as some economists contend, this is just a coincidence, but it is known that farm income has a very definite relation to the income and welfare of the whole nation. Since this is true we can easily calculate what a different country we should have today and a different farm population had farmers been getting parity income for the past twenty years.

Remember, my friends, the lack of parity for agriculture affects us—no annually—but it is accumulative. Some farm statisticians estimate that the farm income for 1921 was three billion dollars below parity and in 1932 it was more than four billions below. I think we might safely estimate that during the past twenty years farm income has averaged 2 1-3 billion dollars below parity income yearly or a total of fifty billion dollars lost to the farmers and to the country.

When you consider that wages and farm income parallel, you can see what a tremendous impetus the prosperity of the whole country should have received and would have received had the Secretary's ideas prevailed. An average of 2 1-2 billion dollars annually for agriculture would mean a relative increase for wages and if there should be anything to the estimate of those people who contend that you can get the national income by multiplying the farm income by seven, this would add from 15 to 20 billion dollars annually to the total national income—the average of which divided among the 30 million families would increase the annual income of each by six hundred dollars—a total of more than millions of families receive at this time.

It can be seen from these few statistics the broad and far seeing statesmanship upon which Secretary Wallace's goal of parity for agriculture is founded and why he and this Administration are justified in driving steadily toward the goal. I am glad that you and I have an humble part in this program. Secretary Wallace thinks it is a program for all the people to take part in achieving. Not something that he intends to hand down to you, but instead he leans heavily upon you for your cooperation and support in bringing this about for each is in reality a vital part of it.

Then what is contained in parity for agriculture? Greater national income; better houses for our people: adequate clothing: better health conditions; better food; healthful recreation: employment, morality and general stability—and above all, education and development of our people in American principles which will assure the safety of our Government under the Constitution.

When I think of the statement of our President who said in one of his great speeches that one-third of our people are ill-housed and realize the timeliness of such a statement and reflect on the housing conditions of many of our people, it distresses my very soul. I verily believe, and facts support it, that parity income for agriculture and mobilization of our resources and productive capacity would go far toward replacing the shacks and inadequate conditions which we have in this country and put in their stead comfortable modern homes and give our people an opportunity to live as they should. I shall not recede from that position until someone can show me, and I challenge anyone to show me that we do not have clay in the ground for brick, rocks in the hills, lumber in the forests and other materials which are commonly used in building to do this job; and also an adequate number of people who should be put to work on such a job.

Further think of the impetus to employment if our people were provided with good beds and home equipment to say nothing of bath tubs and other conveniences which should be put into homes. It is a challenge to us to discover ways to do this and parity for agriculture is at least one of the means of bringing about these accomplishments.

A similar situation can be shown as to clothing for our people. When I view my own childhood and that of the thousands of other people I have seen then and since—I see little children creeping about ill-clad, barefooted and cold—it brings tears to my eyes. We must meet this great challenge and remove this tragedy. We have the capacity to produce and people unemployed who need the work and the income which such a program would produce. We must not fail.

I fear we shall find even more appalling conditions with reference to the diet of our people. Statistics show that should our people have a liberal diet, we would have to increase our beef consumption by 33 1-3 percent; double our veal consumption by almost 100 percent and sumption by more than 25 percent; and our sheep and lamb consumption by more than 50 percent; and our fruit consumption by more than 100 percent; our vegetable consumption by 133 1-3 percent; our dairy consumption by almost 00 percent and our poultry consumption by approximately 45 percent.

We could go on ad infinitum and yet, my friends, no one will question that we have the productive capacity or the labor if properly mobilized to produce these things for our people. The result of such a mobilization of our productive capacity would be a call for more laborers rather than the unemployment problem we have today.

The development of such a program and mobilization of such productive capacity as we should to do this job and distribute these things to our people would bring with it a happy America and you would no longer find those tired, discouraged souls who look from day to day for a place to do honest toil—our employment problem would be completely solved. And that is the kind of America that we vision—this is the kind of America that we fervently hope for—and may we not here dedicate what little brain, brawn and spirit we have to the bringing of this about for I know it is in harmony with American principles and ideals as put forth by the immortal pen of Jefferson, consecrated by patriotic blood at Valley Forge and Yorktown, written into the Constitution by our forefathers and preserved by our Lincoln.

The clarion call rings today. Shall we answer clear and true as one of old, "Here am I. Lord, send me"—Dare we do otherwise? This is why our Secretary and this Administration are sponsoring programs today to bring about agricultural parity in this country. We recognize that this is not the entire answer, but it is a very large part of the answer and in coordination with this, the Administration is attacking the problem on other fronts. And agricultural parity and adjustment is not a program of security, but a program of abundance such as I have been describing to you here.

Wrapped up in this economic condition is also the problem of health and morality. Statisticians point out that many billions of dollars are lost annually on account of ill health They also point to the tremendous billions more crime is costing our people. The proper housing, food and clothing would go a long way toward eliminating the conditions which bring this loss in ill health and crime. For most of these things are deep seated in the economic conditions which our people face. Many a boy would have grown up to be a worthy useful citizen had he been properly fed and housed, instead of a criminal. Society and Government cannot escape their responsibility in this.

This economic problem must be solved and we must find ways and means to accomplish these ends if the stability of our nation is to be assured and we are to continue with the fundamental principles of America as expressed in the Declaration of Independence and written into our Constitution for a safe and secure nation. Our President and Secretary Wallace have repeatedly pointed this out. I thoroughly believe, my friends, that a stable democracy is possible under such an economic condition and can be brought about under the tenets of our Constitution. I think our forefathers visioned it as such when they enunciated these principles and sealed them with their blood.

As I come to you in the solemn hours of this occasion, I am glad to close my remarks by saying that I think it is a glorious thing that we humble people who know deprivation and sorrow and how to suffer should have a part in such a program under such great national leadership. And I know I speak for you when I say it is our fervent prayer that we may have the privilege of giving our best in an effort to bring about such conditions as we hope for here today—not radically, but by meeting the challenge of the age and acting through democratic processes and under the ark of our Constitution.

The attainment of such an America should be and will be an example for prosperity, peace and democracy—both now and forever."

## WOMAN, 42, IS CHAMP OF COTTON PICKERS

GREENWOOD, S. C.,—(ANP)—What is believed to be an all time picking record was set on the Whitehall Farm near Verdery, when Mrs. Cora Dowtin, 42 picked 471 pounds. J. Chris Penn, Patt Penn and the farm foreman E. P. Boazman, verified the woman's feat, declaring: "She started a half hour after sunup and quit three-quarters of an hour before sundown."

Penn said he believed the woman would easily have reached a total of 500 pounds if she had worked until dark Runners-up to Champion Dowtin were Frank Sprowl, aged 49, who picked 446 pounds and Monroe Dunlap, a one-legged man who finished third.

J. Chris Penn said: "These people were not picking in the best cotton on the farm and there were plenty of other hands who averaged around 300 pounds a day."

## WHEAT RESERVES IN U. S. TOTAL 10,458,000 BUSHELS

Washington, Oct. .. —(UP)—The Federal Crop Insurance corporation reported Monday its shortage of crop insurance reserve wheat amounted to 10,458,501 bushels on Oct. 20.

The grain, stored in 68 cities in 16 states, covers premiums paid by wheat growers who have insured their 1940 crops against all unavoidable hazards, and represents premium payments from nearly 300.000 winter wheat growers.

## HERE'S TALE OF A COW, HOT WEATHER, AND 6 POUND FISH

Hot Springs, Ark., Sept. 18—(AP)—James Sparkman said today that his cow, Sally, wadded into a shallow pond seeking relief from the heat. Then she lumbered back to the barnyard, bellowing and Farmer Sparkman found a six pound bass dangling from her tail, As proof of his tale, Sparkman offered to show skeptics the cow's tail.

## Dr. George Carver

(Continued from page 1)

would try to solve when peace came again. Declaring that the research chemist will be a great factor in future world development, Dr. Carver said:

"I believe that America is on the eve of the greatest scientific development it has ever known, and destined to become a leader along many lines of practical endeavor heretofore unnoticed. The chemist will no longer be satisfied to become a mere analyst, often going over the same thing day after day_____The ideal chemist of the future will be an investigator, one who dares to think and work with an independent freedom not permissable heretofore, unfolding before our eyes a veritable mystic maze of new and useful products, from material almost or quite beneath our feet and now considered of little or no value___

"The Southern section of the United States will probably become the greatest beneficiary of this research, on account of its vast and varied storehouse of undeveloped riches along many lines_____We really know so little of those fields, although they hold the golden keys of a happy and successful life, bubbling over with one joyous thrill after another as chemical and physical discoveries draw back the curtain on new wonders before our astonished gaze."

## FARMERS CLOSE 1939 SESSION

(Continued from page 1)

were given by Prof. L. B. Boler, first vice president, Mo., and Dr. Henry Allen, Boyd, Nashville, Tenn., member board of directors of the Federation. Music for the occasion which featured solos and quartet numbers was furnished by the university's music department.

Thursday morning's session, vice president Boler, of Charleston, Mo., presiding, featured an address by Mr. E. A. Miller, assistant director, southern region, AAA., and the annual address of President Harris. In his address the president emphasized the necessity for farm organization and cooperation and paid a glowing tribute to Units of the Federation that have engaged in successful cooperative enterprises. He also analyzed many acute rural problems effecting the welfare of colored farmers and suggested solutions. The address was well received.

Hon. Lafayette Patterson, principal administrative officer U. S. Dept. of Agriculture, representing Secretary Wallace, was the main speaker Thursday afternoon. Mr. W. N. Elam, federal supervisor for special groups, Washington, D. C., Mr. J. N. Perrin, state supervisor of vocational agriculture, and Mr. C. A. Franklin, editor, Kansas City Call, also addressed the convention.

Dr. Cornelius King, assistant to the governor, Farm Credit Adm., addressed the convention Thursday night on the subject, "Developing a Consciousness of Cooperative Group Action," and Dr. J. W. Washington, Chicago, president of the United Cooperative League, spoke on "Individual Responsibility."

Friday's sessions were devoted to business meetings, a meeting of farm women in charge of representatives from Indiana, Iowa and Mississippi and an address by Prof. J. E. Clayton, of Littig, Texas.

Exhibits from farmer-delegates and Missouri rural schools of farm and farm home products were excellent. The first prize, a pair of registered Hampshire pigs donated by the famous radio team, Amos'n' Andy, was awarded to J. W. Marks, Tylertown, Miss., for best sample of cotton.

## Farm Credit

(Continued from page 1)

FCA called attention to recent statements made by Hon. F. F. Hill, Governor, and Mr. H. A. Lake, Assistant Deputy Land Bank Commissioner of the Farm Credit Administration, relative to the fears of foreclosure in that area. Said Governor Hill: "Some North Carolina borrowers are unable to pay installments on their mortgages as they mature," and he goes on to assure them that "special efforts will be made to assist every borrower to adjust himself to the current consideration," Mr. Lake, the Assistant Deputy Commissioner, made the following statement: "I wish to assure you that every reasonable consideration will be given to the worthy borrower who is unable to meet his principal payments on his loan because of conditions beyond his control. Where a deserving borrower is unable to meet these payments, consideration is given to a method of postponement which will meet his particular needs."

To Negro borrowers in this area who are not in a position just now to make full principal payments or who may be facing foreclosure action because of depressed market conditions, Mr. King advises that they take to the secretary-treasurer of the local national farm loan association such portion of their installments as they may be able to raise and explain the details of their situations to that individual. Secretary-treasurers are in a position to consider the problems of individual farmers and to give them sound advice.

## Article By Mr. Geo Kent

(Continued from page 1)

would outyield anything ever grown in Woodford County by anywhere from six to thirty-five bushels! Orders rolled in from every state in the Corn Belt, and in 1937 he grossed $400,000. This year advance orders backed by deposits point to a take of half a million.

Pfister's quest for hybrid corn began in 1925 after a chance meeting in Des Moines with Henry Wallace, then an Iowa farm editor, now Secretary of Agriculture. The two men talked corn far into the night, and Pfister learned the new gospel of the corn breeder. Ear selection, he heard, was like breeding cattle and ignoring bulls. No breeder, outside of a few professors, had ever tried to control tassel pollen to produce better corn. Wallace sowed in his companion a great enthusiasm. When they parted, at two in the morning, Pfister said, "I'll get going tomorrow." And he did.

To avoid ridicule, Pfister began planting back of a hedge. But farmers, standing high in their wagons, were able to look down and see the field all decked out in paper bags.

"Maybe he figures to keep the shucks from freezing," they said.

Into the black earth Pfister had tucked the seed from 388 ears of top-notch Krug corn. On each tassel that sprang from the stalks he tied a paper bag. On the ear-shoots he tied another. When he figured the tassel bag was full of pollen, he slipped if off. This he inverted quickly over the silk of the ear on the same stalk. Then he snapped off the tassel. This was inbreeding. During his experiments he used 100,000 bags, made 50,000 pollinations.

At harvest time he discovered the many strains that had been blended to make Krug corn. Here were stalks thick as a baseball bat that wouldn't stand erect; here, tassels without pollen, cobs without kernel, A few bore runty ears, but were rooted deep and stood straight and strong. Ruthlessly he discarded the weaklings saving only 115 ears that showed promise. The following spring he planted them.

For five back-straining years he planted, bagged and eliminated, in addition to operating the farm for his living. In 1929 he was down to four ears. These were the twisted, misbegotten children of five inbred generations, but they were tough, had root systems that bored deep and made the most of the minerals in the earth; they stood erect in high winds and went through the summer unmarred by disease. He shelled these four ears, and was ready to make his first crosses.

The corn was planted in three rows. He designated the middle row the sire or pollinator, and this time he snapped off the tassels on the female stalks as fast as they appeared. The male tassels were free to shed their pollen in the silks of the rows on either side.

No rain fell and the sun was desperately hot. Stalk after stalk wilted. But Pfister, advised to irrigate, said simply: "If they can't take it, let them die."

His farm ran down and he made little effort to do anything about it. His arrival in town became a signal for snorts and laughter. But nothing could turn this thin, pale man from his purpose.

That winter he looked at the ears of his first crosses. No longer the undersized, gnarled offsprings of cousins and sister and brother matings, these ears were wonderfully filled down to the tips with evenly kerneled, heavy corn. From experiment stations he obtained federal inbreds to cross with his own. He was still dissatisfied.

During 1931 and 1932 Lester let his corn ride out grasshoppers and chinch bugs as he had let it ride out drought. "Let the weaklings die," he said.

His life became steadily more difficult. Having no crop, he obtained loans from his sisters, his brother and the bank. He was now $32,000 in debt. His hair turned white that year, and his weight dropped to 115 pounds. Day in, day out, all his children had to eat was cornmeal mush. In the winter the family huddled over a smolder of corncobs, and Pfister, his sheepskin in sheds, put cardboard over the holes in his boots to keep out the snow and cold.

All that sustained him was his pile of corn. That, and one inspiring sentence he had once read. He recited it to me, a little awkardly: "On the plains of hesitation bleach the bones of countless millions who, at the dawn of victory, sat down to rest, and resting, died."

Receiving notice of foreclosure from his bank the following spring, he wheeled a six-months' postponement by showing the bank officials some of his precious ears. The bank officials knew corn and were impressed. Urged by his wife, he sold his remaining hogs and made out a money order to a paper-bag manufacturer.

At harvest he shucked 225 bushels of the finest corn ever seen in Woodford County. Passing farmers jumped off their wagons to take a look. To some, Pfister gave a bushel or two.

These were all double-crosses, that is, a mating of the single-crosses of the preceding year—and they were bigger, heavier, fuller. Pfister had corn that would outdo anything he knew. His troubles were over.

That winter a man with a half section of land proposed that Pfister permit him to raise seed for him, on a 10 per cent royalty basis. Now twenty-five other large farmers produce each year a quarter of a million bushels, all of it marketed under Pfister's name.

Pfister now has a 580-acre farm, free of debt. He rents another 800 acres. His seed business will probably soon gross $1,000,000 a year.

This Illinois farmer is enjoying his success, for it means that his six children will not be obliged, as he was, to break off their schooling in the eighth grade. More than that, it means that every bushel of the hybrid corn that he sells will enrich the buyer. Now planted on more than 2,000,000 acres in Iowa, Indiana, Illinois and Ohio, his corn will, the figures, put $10,000,000 in farmers' pockets this year that would not otherwise have been there.

## 75 Years of Progress

(Continued from page 1)

combines in himself, all three. All these functions must be exercised in successful farming, is a fact that must not be overlooked or forgotten. There are certain mental, psychological and spiritual prerequisites in the formulation of successful farming plans.

We have enough experience in farm life to know that it has setbacks, perhaps, not all, but most of them severe enough to justify Jerome K. Jerome's definition of farming—"Suffering reduced to a science."

It was the Porter, at the opening of the second act of MacBeth, who said: "Knock, knock, knock! Who is there? the answer was, I, the name of Beezlebub. Here is a farmer that hanged himself on the expectation of plenty."

What Shakespeare meant is that the typical farmer loves to dwell on his misfortunes; in a year of plenty, when he has nothing of which to complain, he would hang himself for very chagrin.

Why dwell on misfortunes? The way to insure defeat is to invite it. Yet, the truth, so apparent, it should be obvious to the most disgruntled farmer, is that in the long run nature must give man, (in the language of slang,) the breaks. If that was not so, we should be still living in caves. Without the recourse to revolting optimism of a Pollyanna, one may still take a cheerful view of farm life. Instead of hanging yourself in the expectation of plenty, how much better it is to string along with that old orchardist, who cried: "Forward in the name of God. Plant, graft and nourish up the trees in your ground; the labor is small, the cost in nothing, the commodity is great; yourselves shall have plenty, the poor shall have somewhat in the time of want, and, God shall reward your good merits and diligence."

We shall digress here, to speak about a Bible character—Joseph. Joseph, you will remember was sold into bondage by his brothers, because of their jealousy of him; to illustrate a point of interest to you, as farmers. Joseph saved Egypt, his father and brothers during a seven year famine. This, was made possible by Pharaoh, who made him the head of the Agricultural Department of Egypt, during the seven years of plenty and promoted him to the office of Food Administrator during the seven years of famine.

Farmers have been the background of governments down through the ages. When nations go to war, the first thing they endeavor to do is to cut off the food supply from the erring nation or enemy, for they know that without food it is impossible to win a war, regardless to the strength of the army of the enemy. This is the very thing Great Britain is doing to Germany today, by blockade on the seas.

Nature will give you the advantage of one or more bumper crops every year, if you will give her a chance. With a sane concept of the value of labor, and an intelligent determination not to let failure get you down, you will be a successful farmer.

### Farm Drudgery Is a Myth.

We are reminded that no discussion of the farm labor problem is complete without a glance at the contention that "farm life" is all work and no play. There is no reason why strong men should shudder and beautiful women's chins tremble at the thought of doing farm work. Nearly all of the prejudices against it can be traced to these persons who, raised in backwoods as drudgers, have had the wit to escape to the city. However monotonous farm life can be, it has compensations to be found nowhere else in these times. There is good mental and nervous discipline in the tempo of the work, which must be slow, if it is to accomplish much, and, there is ever the elation that comes only with creative work. Unlike most sports or adult games, farm work is strictly non-competitive, and, is therefore the healthiest kind of exercise. It does not tax the highest reaches of numerous activities which contribute to the maintenance of human life and civilization and it cultivates the waste places of the mind to a degree nothing else does.

Wherever there is electric power, the internal combustion engine, gas and oil can penetrate drudgery and can be relegated to that place in which dwells the fabled loneliness and isolation of the farm.

### Individuals

Individual means a single person or thing. Every individual should know that he can live all history in his own person; that he is greater than all geography and all the governments of the world. Every individual's mind must know the whole lesson for itself, must go over the whole ground. What it does not see, what it does not live, it will not know. We must, as individuals, see the necessary reason of every fact—see how it could and must be. There is one common mind to all individual men. Every man is an inlet to the same. If the whole of history is in one man, it is all to be explained from individual experience.

The universal mind is composed of that of each individual man, and, is one more incarnation; all its properties exist in him, each new fact in his private experience flashes a light on what great bodies of men have done, and the crises of his life refer to national crises. Every thought was first a thought in one man's mind, and, when the same thought occurs to another man, it is the key to that era. It is the universal nature which gives worth to particular men and things.

The world exists for the education of each man. There is no age or state of society, or mode of action to which there is not something which corresponds in his life.

As an individual, be yourself, never imitate. You can present your own gift every moment with a cumulative force of a whole life's cultivation; but, an adopted talent from another, you will only have a half possession.

### Responsibilities

Responsibility means things for which one is held accountable. Life everywhere is full of responsibilities; We cannot shun them; we cannot sneer them down, we cannot laugh them down; nor always treat them as a joke. Every farmer, every merchant, every banker, every physician, dentist, railroad engineer and every professional and business man or woman must face responsibilities. We cannot shake them off; as long as the human soul is immortal and men are accountable for such consequences of their acts as are capable of being foreseen.

We must admit that the responsibilities of our field is no greater than in similar fields; the fact remains that responsibilities are very real and are very great.

Ignorance and incompetency stand helpless before responsibilities; knowledge and power rise with confidence meet the duties of the hour, however great they may be. When we assume responsibilities, we are willing to do more than is required of us—the ability to assume responsibilities will win us respect and command success.

"I thank you" for your kind attention and I hope that you will find food for thought in this discourse.

WHEN THE EYES GROW DIM

**OLD FOLKS' BIBLE**

AND FOR THE HOME

THIN AND LIGHT WEIGHT

*Weighs only 34 ounces*

Including a carefully Systematized Table for Daily Devotional Bible Reading.

EXTRA LARGE PRINT

HOLMAN SUPERIOR EDITION

Printed from large Clear Pica Type, with Column References, Family Record and Maps. This HOME BIBLE is new and very desirable for everyday use, containing all the advantages of a Family Bible in a compact size that can be easily handled, with Record for Births, Marriages and Deaths. The best Bible obtainable for old folks who need extra large clear print and a light-weight book.

NLR LIBRARY U.S. DEPT. OF AGRICULTURE

# Mitchell of North Carolina Addresses Nation's Farmers

## State Agent From Extension Work Gives Address

Cleveland, Ohio—One of the most informative and inspiring addresses ever delivered in behalf of the colored farmers of America was broadcast to the nation today on the WINGS OVER JORDAN program, Columbia Broadcasting System. This address was delivered by Prof. John W. Mitchell, District Agent, Farm Extension Service of North Carolina. Blasting the idea that the Negro farmer is wholly a "down-and-out-group," Prof. Mitchell emphasized the fact that thousands of farmers of our Group are modern and progressive and are extremely interested in making their future status what it should be. The speaker also lauded the efforts being made by the National Federation of Colored Farmers, the Extension and Vocational Agriculture Services, the Land Grant Colleges, New Farmers of America and 4-H Clubs and various Federal Agencies to increase the number of progressive Negro farm owners. The full address follows:

"The nation, especially American Negroes are deeply indebted to the Columbia Broadcasting System and those who go to make up the "Wings Over Jordan'" program. We, citizens of North Carolina, are proud of the Old North State's native son, Rev. Glenn T. Settle. We think he is worthy of any recognition or honor that may be conferred upon him.

I have been requested to discuss in this brief period, the Economic and Social Status of the Negro in Agriculture.

In discussing this subject, too oft-repeated, but nevertheless basic truths must be kept in mind. One, that agriculture is fundamental in the life of a people or nation. The other, that Negroes, because of their years of identity in rural life have a great opportunity.

The Negroes' opportunity in agriculture is well stated in a recent release from the Farm

## PRODUCTION CREDIT ASSOCIATION

### Five Thousand Colored Members in Three States

According to reports from the office of Cornelius King, special assistant to the Governor of the Farm Credit Administration, 20 per cent or more of the production credit association borrowers in many associations in the States of Alabama, Mississippi, and Louisiana are of the Negro race Short-term credit has been provided this year through the facilities of the Farm Credit Administration for more than 5000 Negro farmers in those States, "and incidentally," said Mr. King, "colored farmers are considered good credit risks of these institutions." The 5000 colored members in Ala-

## FIELD OFFICERS COMMUNICATION

### James P. Davis Sends Letter To Negro Farmers

Little Rock, Arkansas, November 9, 1939, 916 Gaines Street. Dear Sir: Knowing your great interest in questions relating to farming, and especially cotton, I am sending to you as one of the most progressive members of that locality some information which is, or should be, available to every citizen and every cotton grower in the Southland.

On December 9, 1939, and for the third successive season, cotton growers will vote on whether they want marketing quotas for the 1940 cotton crop, that is to say, whether they want to try to hold cotton production and marketing in line with demand. All farmers who produced cotton in 1939 are eligible to vote by SECRET BALLOT and no poll tax receipts are necessary. This opportunity is known as the Cotton Referendum.

In the last two years, more than 90 per cent of all cotton growers in the Southern Region participated in the program. The Secretary of Agriculture has proclaimed marketing quotas (cotton crop control) but the quotas cannot remain in effect unless two-thirds of the cotton farmers give their approval by voting on December 9, 1939. For 1938 and 1939 crops, more than 84 per cent of the cotton farmers voting said "YES" in favor of crop control.

Cotton Crop Control carried out in connection with Soil Conservation practices has resulted (in various localities) in lower production costs by increasing yield per acre. The average yield per acre in the ten year period up to 1932 was 170 pounds; the average yield for the following five years 1932 to 1937 was 212 pounds, an average increase of 42 pounds per acre. The reduction of cotton acreage has been accompanied by large increases of other crops. The possibility that the cost of food and feed products may increase further because of the European war making it all the more necessary for farmers to produce their own needs at home.

In general, large supplies of cotton mean low prices, and low supplies mean high prices. The supply is made up of the carry-over at the beginning of the season plus the current crop. A large carry-over means low prices. The carry-over of American cotton at the beginning of 1939 crop harvest was—United States 12,956,000 bales; abroad 1,167,000; total of 14,123,000 bales. The October 1, 1939 crop estimate was 11,928,000 bales.

The world supply of all kind of cotton in 1938 was 50,378,000 bales. Of this 27,739,000 bales were 1938

DR. SHERMAN DANA SCRUGGS, president of Lincoln University, Missouri's great institution for the education of Negro youth. Dr. Scruggs and his institution entertained the Tenth Annual Convention of the National Federation of Colored Farmers, and a great meeting it was.

## "BE THRIFTY" SAYS MILLER

### AAA Official Admonishes Negro Farmers in Address

WASHINGTON, D. C. (ANP)—E. A. Miller, nationally known economist and director of educational work among Negroes for the Agricultural Adjustment Administration, is regarded as one of the Government's best informed officials on problems affecting Negroes in the rural districts of the South.

His utterances therefore, carry both weight and conviction. Speaking recently, Mr. Miller paid tribute to the Negro's economic progress to date, gave him a working formula for the future. Mr. Miller said, in part:

"The records reveal that the Negro race since emancipation has demonstrated its ability in an increasingly successful manner to exercise the thrift habit. The 1930 census shows that Negroes own 181,012 farms valued at $334,451,396,

(Continued on Page 16)

## FARM LOANS FOR DROUGHT

### Flood Sufferers May Be Aided Says Governor Hill

Washington, D. C.—Governor F. F. Hill of the Farm Credit Administration announced today that emergency crop and feed loans for 1940 have been made immediately available in those sections of the country where farming conditions are seriously affected by drought or flood occurring this year.

Under this plan, emergency crop and feed loans in the affected areas are being made approximately two months in advance of the usual launching of the emergency crop and feed loan program, which customarily begins shortly after the first of the year.

Governor Hill pointed out that, as in the past, these loans will be made only to farmers whose cash requirements are small and who cannot obtain a loan from any other source, including production credit associations, banks, or other private concerns or individuals.

The money loaned will be limited, Governor Hill explained, to the farmer's necessary cash needs in preparing his land for cultivating his 1940 crops or in producing or purchasing feed for his livestock.

Borrowers who obtain loans for the production of cash crops are required to give as security a first lien on the crops financed or, in the case of loans for the production or purchase of feed for livestock, a first lien on the livestock to be fed.

Applications for loans will be received by field representatives of the Emergency Crop and Feed Loan Section, assisted by local crop loan committees, in the various counties included in the loan program.

# Dr. Carver is Termed Greatest Chemurgist

NEW YORK,—(SNS)—Dr. George Washington Carver, venerable scientist of Tuskegee Institute, is described as "the first and greatest chemurgist" in the recently published book "Pioneers of Plenty," by Christy Berth.

In his volume, which is the story of chemurgy, the most exciting of the newer chemical sciences, by which waste is converted into wealth, Berth gives an illuminating biography of Dr. Carver. The story is essentially the story of peanuts and the miracles wrought by Dr. Carver in the application of peanuts to the economy of the South.

Dr. Carver's work with peanuts, Berth points out, has resulted in a $200,000,000 a year business for the South.

### MEXICO TO GIVE FARMS TO NATIONALS IN U. S.

Mexico City—Nearly 20,000 Mexicans in the United States are to be brought home by the government and rehabilitated on farms, under a program announced by the government this week.

The repatriates will be given land, equipment and long-term seed loans.

# Sec'y Wallace Talks to Farm Unit at Tuskegee

TUSKEGEE INSTITUTE, Ala., —Penetrating into the deep South, where the bulk of Race farmers live, Secretary Henry A Wallace, head of the U. S. Department of Agriculture gave a striking outline of the government's farm programs designed to help the American farmer, in an address here Saturday.

Speaking to a large throng of farmers and agricultural leaders gathered from the states of Alabama, Georgia and Arkansas, Secretary Wallace told his hearers that this country cannot afford to continue conditions which deny privileges and opportunities to milions of Americans. The problem of privileges and opportunities goes beyond one of race, he assured his eager listeners.

He reminds them that as a rule, southern cotton and tobacco

### COLD STORAGE

Waiter: "These are the best eggs we have had for years."

Diner: "Well, bring me some you haven't had so long."—Pepper Box.

## Cold Storage Lockers Found Boon to Farmers

### Waste Reduced; Illinois Use Increasing

More than 100 rural Illinois communities are being served by cold storage locker plants in which farmers may rent space for storing fresh meats, fruits, and vegetables The plants were described in a report yesterday by E. E. Houghtby, treasurer of the Pure Milk association, at an Agricultural club luncheon in the Great Northern hotel.

They have been built in the last four years and the number is increasing, Houghtby said.

Houghtby said that approximately 2,500 plants have been put into operation in the United States, most of them in the last four years. and that they serve approximately one million families. About 80 per cent of these are believed to be farm families and the rest families living in the small towns where the plants are located.

**Waste Losses Reduced**

"There is little doubt but that there is a substantial financial saving to any family that makes proper use of the locker," Houghtby said. "The farm housewife who formerly was obliged to spend many hours of labor in canning cold packing, and rendering meats and lard perhaps appreciates more than any one else the advantages of this new method.

"Losses from waste and spoilage resulting from home butchering can be almost entirely overcome, and more scientific cutting or packaging will result where the experienced butcher in the locker plant does the work."

Roy Johnson, farm adviser of DeKalb county, told of the operation of the cold storage locker system in that county since it was started Jan. 15, 1938, by the county farm bureau There are five plants in the county, with 1,173 lockers in use Oct. 1.

**Most Rent For $12 Yearly.**

Most of the lockers are rented at $12 a year. A few smaller ones rent for $7 to $10 a year. There is a charge of 1 1-2 cents a pound for cutting and wrapping the meat, at the plant and preparing it for storage in the lockers. Most of the meat is butchered on farms and brought to the plants for processing and storage.

The lockers in DeKalb county handled 442,136 pounds of meat during the first nine months of this year, Johnson said. In addition, some farmers used their lockers for storing fruits and vegetables.

Johnson said the lockers enable farmers in DeKalb county to enjoy high quality products at reasonable cost. He said they encourage the use of more fresh meat by making it possible for farmers to butcher hogs and other meat animals any time of the year. He said they do not compete with local butcher shops or wholesale handlers of fresh meats.

## Boy, 17, Is Soloist With Denver Symphony Orchestra

DENVER, Colorado (ANP)—A 17-year-old Negro boy, Eugene Cash, was guest soloist with the Denver Civic Symphony orchestra at its second concert held Sunday afternoon at the Denver auditorium.

# WHITE YOUTH IS FOOTBALL PLAYER AT NEGRO SCHOOL

## Dean of Virginia Union Has Good Word For Lincoln's Star, No. 52

(By Dean Gordon B. Hancock for ANP)

RICHMOND, Va.—If and when, the catches the cat or the man bites the dog, it is news, then when a white boy plays football on a Negro team its news of the newsiest sort. This is what happened last Saturday on Virginia Union's gridiron.

Seeing was believing last Saturday at least. I had heard of this white boy on Lincoln's team but like Thomas of old I wanted to put my hand on the situation. Far more thrilling than the game itself which was immensely thrilling, was the sight of a young white man tangling up on the gridiron with young Negroes. My mind went back to the days of the Abolitionists who hailed from Boston and spread their philosophy throughout the nation. Here in this young white man was abolitionism reincarnated in the year of our Lord 1939. Nothing happened except Lincoln incidentally won the game by one point. A good time was had by all and the young white man whose number was 52 had demonstrated Jesus Christ on the gridiron.

I want Number 52 to preach Christ unto me for the Christ he preaches has meaning. Fifty-two can talk culture to me for he epitomizes culture. Fifty-two can impress me with his doctrines for he has impressed me with his behavior. Gradually the light is breaking and it is breaking fastest among the younger generations. The late Dr. C. T. Walker, greatest preacher of his generation, used to say there was always the question of the olders to the younger generation, "What is going to happen when all the old folks die and get out of the way?" Dr. Walker always replied that the world is going to move on for they had no business getting in the way."

**Deaths Will Help**

Race relations are going to receive a mighty impulse forward with the death of many now living. I am pinning my hopes on the wakening humanitarianism of the younger generations of white men and women in this country. Young Negroes must be able to meet them half-way Number 52 has set standards which are Christian in their implication I have wondered about 52's parents. They must be great in their spirits for often, like parents like children They too are abolitionists in their hearts. The fellow who is "up there" making a speech on race relations can never compare with the fellow "in there" playing his heart out with and for the fellows.

While I pondered as 52 drove through center, the thought occurred to me that there were some young men in Richmond born below the Mason and Dixon Line, who also would play on Negro teams and with Negroes if let alone. They must be restrained from their laudable impulses. The 52 feelings are not confined to any one section of the nation but is widespread. There is considerable more 52 feeling than 52 playing. The feelings are most important for they are bound to register themselves one way or another. For lo, these many years, we have been reading of Negroes playing on white teams of the North, but not until the coming of 52 have we read of a white athlete playing on a Negro team.

Those Negroes who try so hard underestimate the importance of interracialism ought to think on 52. Fifty-two is an interracialist of the practical kind and there will be others tomorrow. It should nerve the arm and strengthen the heart of the younger generation of Negroes to know that abolitionism is not dead. It is true there is no white man to attack Harper's Ferry but there is no need of this today. We need 52s just as certainly as we need John Browns and the rest of the Abolitionists. Those whites who stirred this nation with anti-slavery propaganda and those who built Negro colleges and those who support them and the 52s are all of the same mould. They all had the 52 sentiment in their souls

Negroes must learn not to put all their energies on the anti-Negro white man and his programs. While cursing the Negrophobes we must not overlook the Negrophiles. It is more popular to curse the former than to bless the latter but the popular course is not always safest and most profitable. Interracialism is not dead nor is it obsolescent. So while we praise 52 for what he is doing we must not forget the fellow who is just waiting for a chance to "52."

## The Diary of a Bible

### Was It Yours?

January 15—Been resting quietly for a week. The first few nights after the first of the year my owner read me regularly, but he has forgotten me, I guess.

February 2—Clean-up. I was dusted with other things and put back in my place.

February 8—Owner used me for a short time after dinner, looking up a few references. Went to Sunday school.

March 7—Clean-up. Dusted and in my old place again. Have been down in the lower hall since my trip to Sunday school.

April 2—Busy day. Owner led League meeting and had to look up references. He had an awful time finding one, though it was right there in its place all the time.

May 5—In grandma's lap all afternoon. She is here on a visit. She let a teardrop fall on Colossions 2:5-7.

May 6—In grandma's lap again this afternoon. She spent most of her time on 1 Corinthians 13 and the last four verses of the 15th chapter.

May 7, 8, 9—In grandma's lap every afternoon now. It's a comfortable spot. Sometimes she reads me and sometimes she talks to me.

May 10—Grandma gone. Back in the old place. She kissed me good-by.

June 3—Had a couple of four-leafed clovers stuck in me today.

July 1—Packed in a trunk with clothes and other things. Off on a vacation, I guess.

July 7—Still in the trunk.

July 10—Still in trunk, though nearly everything else has been taken out.

July 15—Home again and in my old place. Quite a journey, though I do not see why I went.

August 1—Rather stuffy and hot. Have two magazines, a novel, and an old hat on top of me. Wish they would take them off.

September 5—Clean-up. Dusted and set right again.

September 10—Used by Mary a few moments today. She was writing a letter to a friend whose brother had died, and wanted an appropriate verse.

September 30—Clean-up again.

—From Lutheran Bible Inst.

About 170 new capital stock issues a month were issued and sold to investors in the nineteen-twenties Recently they have been averaging from 20 to 25 a month.

# COLORED SOLDIERS TO GET CHANCE AS ENGLISH FIGHTERS

## But Colonials Of Britain Are Not Treated Fairly As In France

LONDON, England (By Rudolph Dunbar for ANP)—An interesting specimen of "spade propaganda" pertaining to the mobilization of British colonials and the colonial regiments of France has just come my way. My reluctance to deal with this ludicrous falsity before is due largely to increased activities imposed upon me as a result of the war.

I wish to disseminate the facts pertaining to the inaccurate absurdities of these statements which most surely insinuate doubt into the mind of the most confirmed devotee of scandal and propaganda.

**Sengelalese Soldiers Exaggerate**

It is universally known that Senegalese soldiers are noted for their fighting prowess and are therefore indispensable to France both in peace and war time. But, it must be remembered that since the war has begun, there have been no major operations on the Western front where these troops will be thrown against the huge mass of merciless steel for human destruction. Therefore, there is no foundation for the spurious exaggeration relating to the exploits of these troops. There are no large divisions of them on the Western front either, as is generally assumed.

Since the war was declared, the British war office has at no time, issued any war communique for the mobilization of colonial troops. As a rule, colonials are never conscripted. This was true in the last war. The colonial expeditionary troops that entered the last war joined up voluntarily. Moreover, the British army has all the men it can handle at the moment.

Unlike the British, a black French colonial is considered a full-fledged Frenchman and he receives the dignity and privileges as such. Therefore, it is possible for him to rise from the rank of a private to a general in the French army. In view of these facts, military service and conscription affect every Frenchman alike regardless of race, color or creed.

When war was declared, there were thousands of Sengales troops on the march in Marseilles and other parts of France. This was not so in England and when the war office carried out the spectacular feat of transporting the multitude of British troops across the channel to take up their positions in France, there wasn't a single black soldier among them. For a Negro to enter one of the fighting services in the British Army is a task not easy to accomplish. A Britain which permits her black subjects to join the army on the same footing as British subjects from the United Kingdom, would have to treat them as free and equal with herself and must guarantee them the certainty of the same kind of material stake in the cause she wants to serve as she herself possesses.

Hitherto, Britain had jealously resolved to thwart all progress along these lines. However, an unprecedented statement has just been issued by the prime minister in the house of commons which, if executed in truth, would open a new vista for Negroes in the army, especially doctors. The statement reads thus:—

"We have had in the last few days a striking demonstration of the united determination of the empire. From Canada, from the commonwealth of Australia, from New Zealand, from the Union of South Africa, and from India have come cabinet ministers and representatives who have travelled thousands of miles in order to make personal contact with ministers in this country and to see with their own eyes the gigantic efforts in which we are engaged.

"As honorable members are aware, the empire has already shown how generous and whole-hearted is its spirit of cooperation. The fuller knowledge which we shall now gain of the plans of the different governments as a result of the presence of their ministerial representatives here will be of great value to us. And in their turn we are confident that the dominion governments and the goverment of India will find that the first-hand impressions of their representatives will afford them invaluable aid in gaining a fuller appreciation of our common problems, and of the best and quickest means of solving them.

"Equally striking is the wholehearted cooperation that we are receiving from all parts of the empire, including Burma, and from the colonies.

"I have expressed before, on behalf of his majesty's government, our great appreciation of the spontaneous messages of support which came immediately after the outbreak of war from every single territory of the colonial empire. We did not ask for these messages; the colonies have not been forced into war by Great Britain against their will. The action of so many peoples of various races is a witness to their consciousness that threat to Great Britain is equally a threat to that freedom and well-being which has been assured to them under British rule.

"Although at the beginning the war effort of the colonies will be mainly on the economic side, and every colonial government is doing its utmost to help us in the organization of supplies of essential raw materials and food-stuffs. I should like to refer with gratitude to the numerous offers of personal service from residents in the colonies.

"It is the intention of his majesty's governmnent to employ the manpower of the colonial empire as may be most effective, and plans for doing this are being worked out.

**Recruits For Armed Forces**

"In many cases openings are already being provided in locally raised units. For example, in Africa the strength of the Royal West African Frontier force has been more than doubled and that of the King's African Rifles in East Africa more than trebled; and, in fact, the voluntary offers of service throughout the empire have far exceeded our immediate requirements. As announced some time ago, British subjects from the colonies and British protected persons who are in this country, including those who are not of pure European descent, are now placed for entry into the armed forces on the same footing as British subjects from the United Kingdom.

"Such is the nature of the help we are receiving from the empire. Eagerly offered and gladly accepted, it is a splendid example of free cooperation and ungrudging self-sacrifice in a noble cause throughout the lands which owe allegiance to the King."

## Plan International 'Moral-Re-Armament' Observance

NEW YORK CITY, Nov. (ANP)—Calling attention of the Negroes of America to next month's international Moral Re-Armament observance, Dr. Mary McLeod Bethune of Washington, D. C., head of the division of Negro affairs, NYA, said this week:

"Newspaper and radio broadcasts—nation-wide and world-wide—will be carrying a Moral Re-Armament message during the weekend of Dec. 1-3. Over 100,000,000 people in many nations will be united in thinking creatively as to how we together may find a basis for peace which will permeate the home, industry, the nation and the entire world. We know that the readers of the Negro press desire to be a part of this worldwide endeavor."

## King Cotton Dethroned At Gala Hog Festival

Monroeville, Ala.—The first of its kind to be held in the United States was the hog festival here Tuesday. Nov. 14. Cotton, which has held the farmers of this county down to less than a living, was given the back seat, and the hog, which has been pouring in a stream of dollars into teir bank account, was honored as never before.

Officers estimated the crowd at between 12,000 and 15,000 and from the beginning of the program at eight o'clock in the morning, until late in the night, visitors joined in the greatest educational program ever staged in this country," says Mr. E. Salter, local newspaper publisher.

The program consisted of judging, grading and preparing for the big hog sale for the afternoon. The huge crowd saw scores of show hogs at the stockyard and enjoyed such stunts as climoing the greasy pole, greasy pig races, feeding pigs from bottles, riding pigs, hog calling, washing pigs by a group of young ladies and air plane riding. All of these feats proved interesting to cameramen and newsreel representatives as well as the throng which pammed the sidewalks

The only violation of the traffic laws and disturbance of the peace of the day was committed by a big hog. He raised so much sand that the traffic officials found it necessary to arrest and carry him to jail.

The parade at eleven o'clock was led from Legion Field by Monroe County High School band. Following the band came the Festival Queen's float. The School floats came next which were five in number and very attractively decorated. Following the school floats came those of the business places of the county, which were 12 in number.

At the end of this line came four colored school floats, led by Tuskegee Institute band and followed by Snow Hill Institute band. The Monroeville Rosenwald school and Riley's Crossing School floats were designed and decorated by the Home Demonstration Agent, Miss E. M. Harris, County Agent W. C. Odom, Jeanes Supervisor, Mrs. Mary J. Gardner and the faculty members of the two schools. It is felt by the critics and newspapermen that the Monroeville Rosenwald Negro school had one of the most unique and suggestive floats in the entire parade. King Hog was crowned on a throne near the back of the float. The figure of King Cotton was lying under a guillotine constructed near the front of the float. "His Majesty Has Beheaded King Cotton," was the slogan of the float.

The Riley's Crossing school had a float decorated with a balanced ration and mineral mixtures with the slogan "Grow a Ton LITTER" and WELL BRED HOGS YIELD MOST MEAT" Five Hogs were in a pen on the float.

The Monroe County Training school float of Beatrice was designed and decorated by the faculty of that school. This float represented the down fall of King Cotton and the Crowning of King Hog. The front showed King Cotton leaving the throne, being held up by shippers, manufacturers, warehousemen, who were trying to revive him. The back of the float showed the AAA, County Agent Vocational Teacher, bankers and business men escorting the hog to the throne. The hog was being followed by the New Farmers of America and 4-H Club members.

The float of the Clausell school of Monroeville was planned by the Vocational teachers of the school, was decorated with cotton and smilax. A large hog on the throne placed around the float with the words, Orchard, Livestock, diversified farming, grow gardens, cover crops, pastures on them as commanded by King Hog.

## Joe Geddes Gets Appointment As Aide To Business

MEMPHIS, Tenn., Nov. 28—(ANP) Dr. J. E. Walker, president. National Negro Business League, announced today the transfer of Joseph P. Geddes, regional vice president for Louisiana to membership on the Steering Committee of which Dr. F. D. Patterson of Tuskegee Institute is chairman.

To fill Mr. Geddes' place as regional vice-president, George G. McDemmonds, New Orleans member of the League's Executive committee, was appointed.

"Our Steering Committee," said Dr. Walker, "is the League's planning committee and was able during our Oklahoma City convention to outline a program of activities which is largely responsible for the present widespread interest in the league.

Other members of the Steering Committee are: George W. Cox, Durham; J. B. Blayton, Atlanta; B. G. Olive, Memphis; Edward Simmons, Charleston, S. C.; and Carlton Gaines, Detroit.

## A Good Neighbor Priceless

According to the best authorities, San Ysidro was plowing in his garden one Spring day. He looked up and behold an angel, who said to him: "The Lord wants to see you, Ysidro. Come with me." He answered that he was busy, "I can't go now, You tell the Lord that I am late in getting my corn planted and that I'll see him when I have finished."

The angel retired, but soon another heavenly messenger appeared in the field and said: "The Lord wishes to see you immediately, Ysidro, and directs me to say that if you do not come at once He will send hot winds and drought that will wither your corn." Ysidro, dripping with perspiration in the hot sun, continued plowing, pausing to send back the message: "I've seen hot winds and droughts many a time before. They don't bother me. I can bring water from the river. Tell the Lord I can't come now, but I will see Him when I have finished planting my corn."

Not long afterwards another heavenly courier with stern mien tapped Ysidro on the shoulder and said: "I am commissioned to tell you that the Lord does not like your attitude, and sends word to you that unless you come with me right now, He will send a plague of locusts to devour your corn from the top and a plague of cut-worms to eat its roots.' Ysidro did not stop plowing, but sent back an answer. "That does not frighten me. I've had plagues before but by the use of fire and hoeing and hard work, I've harvested my crop all right. You tell the Lord I'll finish my plowing tomorrow and will see Him when my work is completed."

The messenger from the skies disappeared and before the fourth messenger descended he had finished several furrows. This last angel had the appearance and bearing of authority. As he flapped his wings and walked along the furrows to keep step with the stubborn plowman, the angel spoke sternly: "The Lord isn't going to argue with you any more, Ysidro. He commands me to tell you that if you do not come with me without a moment's delay He will send a bad neighbor."

That threat terrified San Ysidro. He called "Whoa" to his mule, stopped him short and wrapped the reins around the plow handle. The look of his eyes showed that fear had taken possession of him.

"The Lord says unless I come He will send me a bad neighbor, does He? I cannot stand that infliction. Life isn't worth trying to live with a bad neighbor. You tell the Lord I can stand winds and droughts, locusts, cut-worms, and all kinds of plagues. I can endure anything but a bad neighbor. I'll go with you right now, and he stopped short in the middle of the row, not even waiting to unhitch the mule from the plow.—A Spanish Legend Quoted Recently by Josephine Daniels, Ambassador to Mexico.

## U. S. To Hold Examination For Editorial Clerk

WASHINGTON, D. C., Nov. 28—(ANP)—The U. S. Civil Service Commission this week announced tne following forthcoming examinations: Principal Editorial Clerk, $2,300 a year and Editorial Clerk, $1,800 a year, application deadlines dates Dec. 11-14; Assistant Inspector of Shop construction (mechanical). $2,600 a year, with U. S. Maritime Commission, application deadline, Dec. 11-14.

The following positions in Air Corps Technical school for assignment to U. S. Army Air Corps, War Department. Chanute Field, Rantoul, Ill.; Scott Field, Belleville, Ill. and Lowry Field, Denver, Colo.; instructor, $3,000 a year; Associate Instructor, 3,2000 a year; assistant instructor, $2,600 a yera and Junior instructor $2,000 a year; application deadline, Dec. 11-14. For full information concerning exams, see local postmaster.

Television, the experts seem to think may not be with us for some five years at least, but Screen Producer Samuel Goldwyn will give it to the public just the same—and within a short time at that.

## Youth Commission Fears War Entry Unless Jobs For Young Provided

WASHINGTON, Nov. 28 (ANP)—Gloomy indeed is the picture painted by the American Youth Commission, a non-governmental organization of industrialists and educators headed by Owen D. Young, in the report just released to the American public.

Warning that continued unemployment during a war boom may lead to involvement in the European war, the commission recommends that the federal government inaugurate a special program of public works for 4,000,000 jobless youth.

"Not even a war boom," says the report, "can supply jobs vitally needed for the nation's vast reservoir of unemployed youth."

The report urged the government to assist those who do not desire to continue school but who are unable to find jobs in private industry.

"Some action is imperative for the national welfare," continued the report, "because of the dangerous effect on American youth of prolonged and widespread unemployment plus the strain of the present war crisis.

"The continued pressure of unemployment on youth, in the midst of a war boom, will add to the danger of drifting into active participation in the war," the commission added.

## EDITORIALS

FROM THE BIBLE:—And we know that all things work together for good to them that love God, to them who are called according to his purpose. Romans 8:28.

"Let us give thanks that stalwart men,
Who dreamed and dared in days gone by,
Bequeathed to us in solemn trust
A heritage of liberty.

Let us give thanks for future years.
Each day the world is born anew,
And in the darkest hours man knows
The light of hope still glimmers through."

Gail Brook Burket.

### LAND GRANT COLLEGE PRESIDENTS DISCUSS PROBLEMS

A perusal of the proceedings of the recent annual meeting of the Association of Presidents of Negro Land Grant Colleges inclines us to believe that these educational leaders of our Race have now become really interested in the progress and welfare of the Group—more so,—perhaps, than in the progress and welfare of the institutions they represent. This year they talked less about building fine halls and dormitories and more about building a fine, progressive American citizenship. Voices were heard extolling the blessings of adult education and demanding that more field workers of our own group be employed by federal and state governments to aid in bringing these blessings to those most in need.

Between most of our Land Grant colleges and the common people they are destined to serve an unfathomable gulf of misunderstanding has always existed. This is proven by the fact, stated so plainly by one speaker, that "the highest rates of illiteracy in several states serviced by Land Grant colleges were found in counties in which the colleges themselves were located." And he might have added for emphasis that a high degree of poverty is also prevalent in these same counties. We believe the influence of the colleges has not been able to bridge these gulfs mainly because faculty members and students have become more interested in education than in life. Existing and kicking up their heels in their own smug little worlds they have become blind to the condition and the desires of those living in the world around them. If any contact at all was desired, it was up to the other fellow to make it. And if help and service was desired the other fellow was supposed to come to the college after it,—the college was too big and too busy to carry it to him.

Booker T. Washington's motto was "Go forth!" GO FORTH AND SERVE! Go where your service is needed,—to the place where you can work with the people and be useful. During his days at Tuskegee, teachers and students were encouraged to establish friendly relationships with the people of the surrounding community,—to become interested in their problems and to volunteer to help them. Go into any community today where a little Tuskegee,—founded by a student of this great educator exists,—and you will soon discover that the people of that community are more progressive and more literate than the people of the average community serviced by the Land Grant college.

Our colleges must prove to the common people that there is no such thing as STANDING STILL,—that they must take the necessary means to advance themselves or they will surely go backward. Mass meetings should be held and study clubs formed in all the communities. Adult education will lead to economic cooperation and this will lead to economic independence. Let us have more field workers if we can possibly get them. Let us have more mass meetings,—more local organization,—more adult education.

In spite of their material progress, their larger faculties and student bodies,—our Land Grant colleges too, are going backward if they cannot inspire and help the common people to advance themselves.

### SOME FAULTY FRAZIERISMS

Dr. E. Franklin Frazier, professor of sociology at Howard University, in the course of an address to the presidents of our Land Grant colleges, declared that "the Negro upon completion of his education is not going back to the farm." If such a statement was worth making at all, good reasoning should have compelled him to have modified it somewhat.

No one expects all Negro students who have come from farm homes to return to those farms and homes after completing their education. Many should not return. They are the type who would never be contented with farm life. They are needed elsewhere. But we are thankful that many will go back to the farm. They are returning every year. They are becoming leaders and advisors,—serving their home communities,—proving by their work and conduct that they can make a good living on the farm, and that farm life can produce happiness and contentment.

Dr. Frazier is wrong when he states that "there is no place for the Negro to go on the farm when he finishes school." If he cannot find a place in the rural community where his talents and superior knowledge can be used to benefit his fellows, then, if the college has really educated him, the Negro graduate will make a place where he can serve. He will be able to find more useful employment to occupy his leisure time in the rural community than any one person can possibly do. So he will organize the farmers,—start a credit union—engage in cooperative endeavors,—get others to work with him, and his community will prosper and progress. If the Negro makes progress, as Dr. Frazier says, "to the extent in which he has been able to break down his isolation." certainly the educated farmer has a better chance to do this and a better reason for doing this, than has the city Negro.

Dr. Frazier says that "old ideas of education do not fit the present pattern of Negro life." Perhaps not, but most of these old ideas can be made to fit. They will prove to be more useful to the individual and to the Race than some of the new ideas of education now being advanced in many of our schools. If these new ideas of education are causing the Negro who should go back to the farm to go elsewhere,—if they are not preventing the city Negro from "losing his sympathetic touch,"—if they are not forcing the graduate, first of all, to love and serve his fellowmen,—then such new ideas are worthless, no matter how scholarly may be the one who possesses and teaches them.

### COMMONSENSE ECONOMY

The South is the Nation's Number One economic problem no matter how much proud southern citizens attempts to hide the facts that prove this statement is true. It would be better for everybody if leading Southern statesmen would come out in the open and fight for the rights of their constituents,—fight that their people might get more from government, from industry, from business, from their schools,—than to be forever urging economy. When people are poverty-stricken,—living more like animals than human beings,—it is time to talk about spending MORE, not LESS,—and in some way, to get more into the hands of the people to spend.

The prominent Mississippi senator who urges economy in government should read the report of the circuit jury in Adams county, his state, looking over conditions at the county's poor farm, they found them so bad that the report shocked all who read it. A hog was even sharing a room with one of the inmates. And he might remember too that his state pays only $3.50 a month in pensions to its aged. Slow starvation is the result. When such conditions exist, economy in government is senseless.

And that the people might get more money to spend and the state more taxes for support of its institutions, he should work hard to bring into his state industries that will furnish employment and pay good wages. These industries are needed, not only in Mississippi, but in all southern states. And investment bankers and big insurance companies are today sitting on the dollars that would provide sufficient funds to build these industries. These bankers should be persuaded to turn some of their money loose in the South,—and if they won't do it,—then it is the duty of government to spend some of it for them. Folks are bigger than dollars and their interests come first.

### MEXICO PUTS RELIEFERS ON FARMS

While reports are current that relief clients are starving in Cleveland, Ohio and Chicago, Illinois, northern cities in the United States, it is interesting to hear that Mexico is bringing home 20,000 of her citizens now living in this country. These Mexicans are in distress and their government is going to rehabilitate them on farms and give them long-term land, equipment and seed loans.

We believe many of our own relief problem in northern states might be solved successfully if these states would follow the example of the Mexican government, buy land with state funds, and put those on relief on small farms. If we are always going to have to carry on this relief business, as seems to be the case now, the sooner we discover a sensible way to handle it, the better. Present methods employed, simply giving the client enough to keep body and soul together,—are no good for the one on relief nor for the state.

### N. C. FARMERS GAIN

During the heart of the depression,—1930-1935, Negro farmers in the state of North Carolina purchased 1,395 farms. There are now 20,375 Negro farm owners in this state.

North Carolina's colored farmers are setting a good example for their brother-farmers in other states to follow. Strive to own the land you till that you may till the land you own. Then you become a REAL FARMER.

### FILIPINO FARMERS ORGANIZE

Three hundred thousand tenant farmers and farm laborers of the Phillippines have organized. The movement is to obtain justice from the large landlords and is the beginning of a campaign to make the tenants eventual owners of the land. Organization helps farmers everywhere. Your organization, brother-farmer, is the National Federation of Colored Farmers. Are you a member? If not, why not join and be one?

## PRODUCTION CREDIT

(Continued from Page 1)

bama, Mississsippi, and Louisiana share in the ownership of $1,033,000 of voting stock purchased by member-borrowers of these production credit associations.

The Farm Credit representative called attention to the savings realized by farmers who borrow through production credit associations, by reason of the low interest rate (4½%), and the fact that the farmer-borrower pays interest only for the time he actually has the money. Mr. King pointed out that with these savings farmers "are frequently able to save as much as one-fourth or one-third of their interest charges."

Farmers borrow from production credit associations for various purposes, such as the producing, harvesting, and marketing of crops; to finance the breeding, feeding, fattening, and marketing of livestock; and some borrow for general agricultural purposes including the repair, improvement, or alteration of farm buildings. "A large proportion of farmers use at least a part of their loans for either the purchase of seed, feed, fertilizer, spray materials, machinery, or farm supplies; or for the purchase of cattle, swine, or workstock; or to hire farm labor," he continued.

Mr. King called attention also to the advantages of financial planning for the year, and suggested that prospective farmer-borrowers can be greatly helped by discussing their financial plans with the secretary-treasurer of the local production credit association.

Production credit associations require each member-borrower to own shares to the extent of $5.00 for each $100 of his loan. In this way, as seen by Mr. King, the farmer-borrower, both white and colored, are gradually increasing their investment in these associations, "which is in accordance with the aim of the Farm Credit Administration that the member-borrowers shall eventually have complete ownership of the whole cooperative farm-credit system."

Washington, D. C.
November 27, 1939

### THE FARMERS' HYMN

(Official Hymn, National Federation of Colored Farmers. Tune: "My Faith Looks Up To Thee")

God bless us, we who toil
Upon the goodly soil
Which Thou has made;
Uphold us by Thy might,
Help us to know the right.
And ever, day and night,
Be Thou our aid.

Send plenteous sun and rain
On mountain hill and plain.
And valley wide;
Grant us prosperity,
Increase our faith in Thee.
O may we happy be
Whate'er betide.

Unite us heart and hand
In one fraternal band
Until the end;
That we may praise Thy name,
Of all men, Lord, the same;
Our God, whom we proclaim;
"The Farmer's Friend."

—Leon R. Harris.

## Virgin Islands Judge Is Home For Christmas

CHICAGO, Nov. 28 (ANP)—Chicago friends of Federal Judge Herman Moore of the Virgin Islands this week received word from the jurist that he will spend the Christmas holidays at his home here. His brief message said he would arrive in Chicago about Nov. 25 and remain until after the Yule season. He sailed from the Islands aboard the SS Borinquen of the Porto Rico Line.

# NEWS OF INTEREST TO MEMBERS OF THE N. F. G. F.

## FACTS ABOUT CREDIT UNIONS

**What a credit union is.** A credit union is a group of persons associated together in their daily life who agree to build up a fund with their savings and make needed loans from this fund, at reasonable interest rates, to members of the group. Usually the group consists of the employees of a single business firm, but it may be a professional group, a church, a country community, a lodge, a college faculty, or similar group involving common interests and a certain amount of acquaintanceship of members with each other.

**Authority for operation.** Credit unions are chartered either by the Federal government or by the government of a state which has enacted a credit union law. Such laws (in addition to the Federal law) now exist in forty-one states and the District of Columbia.

**History.** In modern times the credit union goes back to about 1849, when the first one was started among German peasants. It grad- in total assets.

**Federal Act.** The Federal Act was passed in 1934. It provides for the chartering and supervision of Federal credit unions. Its general provisions are very similar to those of state credit union laws. Chartering and supervision activities are entrusted to the Farm Credit Administration. There is no necessary connection between credit unions and farm credit, as nearly all credit unions so far organized are in cities; but since the work of the Farm Credit Administration deals largely with cooperative credit and credit unions are wholly cooperative in set-up, it seemed proper for the Federal Credit Union Section to be placed in the Farm Credit Administration.

**Number of Federal credit unions.** Up to the first of June, 1937, 2,204 Federal credit unions had been chartered. They comprised about one-third of the total in the United States. Many new Federal credit unions are chartered each month.

**Types of credit unions.** About two-thirds of all Federal credit unions are organized among employees of business concerns. Many large, well-known corporations in the United States have one or more credit unions set up among the employees of their various factories and offices. Two large meat-packing firms each have about 100 credit unions in their organization. An eastern oil company has 35. A Chicago mail order house has over 45. About 250 credit unions are organized among railroad employees, with every large system represented. The country's leading manufacturers of steel, aluminum, chemicals, etc., have credit unions.

A steadily growing number of credit unions are operated by teachers, school employees, and college faculty members. Post office em ployees have over 300, and many hundreds more are organized among other employees of the Federal government, and of various state and local governments. Public utilities have a large number of credit unions, and others are organized on a community basis in country districts, in churches and parishes, in labor unions, etc.

**Distribution of credit unions.** Credit unions are operating in every state of the Union and in Hawaii. At the end of 1936 Wisconsin led all other states with about 450. Pennsylvania led all other states in number of Federal credit unions, with 238. About one-hali of the Federal credit unions are found in the industrial northeast section (including Ohio, West Virginia, District of Columbia, Maryland, and states north and east of these.)

**How a Federal credit union operates.** Savings by members are made in the form of share purchases, each share being valued at $5. Savings may be made in amounts as small as 25 cents, and may be withdrawn at will, although the credit union may require two months' notice as in the usual savings bank—a provision seldom invoked. Regular saving by members is encouraged, and the cultivation of the saving habit is one of the chief purposes of credit unions.

Out of the fund accumulated from these savings, loans may be made to members of the credit union. Applications are passed on by a credit committee elected by the members. The interest rate may not exceed 1 per cent per month, including all charges incident to making the loan. (This rate compares with that of 3 or 3 1-2 per cent per month, the maximum rate permitted by many states as the legal charge on small loans, and with rates of 100 per cent or more per annum charged by illegal lenders.) Loans up to $50 may be made without security; larger loans must have adequate security. Loans may be made for useful purposes only. Repayments are made weekly, semi-monthly, or monthly, or according to any other agreed-upon schedule, usually over a period of 10 months or a year. In certain cases the time may be extended to a period of two years.

**Control and management.** Control and management are entirely in the hands of members of the credit union. A board of directors, a supervisory committee, and a credit committee are elected at the annual meeting of members, held in January. The board selects the officers from its own membership. The treasurer must be bonded. Federal credit unions are examined periodically by examiners of the Farm Credit Administration.

Emphasis is placed on the desirability, almost the necessity if best results are to be obtained, of having all the credit union's affairs carried on by the members themselves. The records of 28 years show that credit unions can manage their money affairs with every essential of success.

**Earnings.** All net earnings from loan operations or other sources may be returned to the members in ually spread to other European countries, to various parts of Asia, and in 1900 to Canada. The credit union movement in the United States is usually dated from 1909 when Massachusetts passed the first state credit union law.

**Extent of growth.** At the present time there are approximately 6,000 credit unions in the United States. While no full statistics are available, it is estimated that they have at least 1,350,000 members and, in round numbers, $100,000,000 or more the form of dividends if they so vote, except that 20 per cent of the net earnings are set aside in a reserve fund for bad loans. With well-established credit unions a dividend rate of 6 per cent per year is quite common. No officer except the treasurer may receive any compensation and the treasurer very often serves without pay, or for only a nominal salary, especially in the first year or two of the credit union's life. Experience has shown that the credit union can depend on this disinterested service of officials.

No one makes money out of the credit union except the members. It is purely cooperative in spirit and intent, with no other object than to help its members.

**Losses.** Actual statistics of Federal credit unions show losses charged off because of bad loans amounting to less than one-tenth of 1 per cent of all loans made. The records of state credit unions, covering the World War and the post-war period of financial stress as well as the depression years, show a similar nominal rate of losses from bad loans.

**Cost to business firms.** Credit unions do not require outside financial support, and there is no necessary cost to any firm whose employees organize a credit union. Many firms, however, find them so beneficial in maintaining employee morale, reducing garnishments and wage assignments, etc., that they are glad to provide desk space or a small room on the premises to serve as credit union office.

**How to start a Federal credit union.** Write for information on method of procedure, etc., to the Credit Union Section, Farm Credit Administration, Washington, D. C. You will get full instructions by mail. The personal help of a representative of that office may also often be obtained to explain credit union operation fully and to help a group organize a credit union. It is desirable that the group shall have at least 75 potential credit union members, although the credit union may be started with a much smaller number.

Farm Credit Administration,
Credit Union Section,
Washington, D. C.
June 7, 1937.

---

Marriner S. Eccles, Federal Reserve Board chairman, is urging higher taxes on small individuals and large corporations.

## Name Five Senators in Exposition Group

SPRINGFIELD, Ill., Sept. 29—The names of five senate members appointed to the Afra-Merican Emancipation Exposition Commission were released here late Thursday. They are Nicholas L. Hubbard, D., Mt. Pulaski; A. L. Marovitz, D., Chicago; Earl B. Searcy, R., Springfield; A. P. Benson, R., Batavia and William A. Wallace, D., Chicago.

Five other members of the commission were named last week by Speaker Hugh A. Cross of the house or representatives. Governor Horner is expected to appoint five citizens at large to complete commission.

## Farmer Grows 171 Bushels of Corn Per Acre

CHAMPAIGN, Ill.,—A tenant farmer astounded the agricultural world today by certifying for production competition a hybrid corn yield of 1,028 bushels from a six acre field—slightly more than 171 bushels to the acre.

Corn experts said they believed the farmer Roland Resler, who rents 180 acres farm six miles south of here, had established a record yield.

They said they had heard of yields of from 140 to 150 bushels an acre in Iowa and Indiana, but never as much as 171 bushels. The average for the entire country is about 26 bushels to the acre

Two neighbors of Resler, who helped him harvest and weigh the corn, swore to affidavits that the six acre field produced 1,028 bushels, 70 pounds to the bushel of corn of 13 per cent moisture content.

### Bushel Seeds Six Acres

Resler said he planted the field last May, using a bushel of seed for the six acres. Five or six kernels he said, went into each hill, 40 inches apart. Ordinarily corn belt farmers plant from seven to eight acres with a bushel of seed.

The field, Resler said, had been in sod for several years before he plowed it last March. It was dragged down with an ordinary road dray and double disced twice.

"The corn was so thick," Resler said, "that for a while I didn't think it would make a crop at all. But it kept right on growing and when we picked it, there were five or six big ears to every hill."

TELLS PLANS FOR NEXT YEAR

Resler said he expects to plant all his corn next year five or six kernels to the hill and thereby increase total production. He said his other corn this year yielded about 100 bushels to the acre. He sells his corn as a cash crop.

With his wife and six children—three boys and three girls—Resler has lived for six years on the farm which he rents from Coe college Cefidar Rapids, Ia. He is 43 years old.

## Smallest Crop of Cotton Since 1935 Predicted

### Harvest Of 11,845,000 Bales Forecast

An American cotton crop of 11,845,000 bales, the smallest since 1935, was forecast by the federal crop reporting board yesterday. The prediction was announced as the Agricultural Adjustment administration inaugurated a mail campaign to win grower approved of a plan designed to produce another small crop next year.

The forecast, based on conditions Nov. 1, was 83,000 bales lower than the board's October estimate, and compared with a 1938 crop of 11,943,000 bales and a ten year (1928-'32) average of 13,800,000 bales.

### Acre Yield Record Indicated

The crop report said the indicated yield per acre for the country was 234.1 pounds, the third highest of record and about 10 per cent above the average of the five most recent years. The average last year was 235.8, the second highest of record. In comparison with these recent years yields were much below average in Alabama, above in North Carolina and Georgia, slightly above average in Mississippi, Tennessee, and Texas and and considerably above average in the other important states.

Weather conditions were said to have been unusually favorable for picking and ginning of the crop, the report asserting that on Nov. 1, the percentage ginned was much above average. The amount ginned prior to Nov. 1, was reported at 10,085,260 bales.

ASK APPROVAL OF QUOTAS

Because of a record surplus of American cotton the AAA is asking producers to approve strict maketing quota on the 1940 crop at a referendum to be held Dec. 9.

If quotas are approved by the necessary two-thirds of the growers voting the production goal will be about the same as that of the last two seasons.

Administration farm officials said it is possible that the grower price of cotton may advance to the highest point since 1936 before the current marketing season is over, if present domestic consumption and export prospects materialize.

Cotton now averages about 9 cents a pound for middling 7-8 growth in the nation's ten spot markets. Some marketing experts expect it to go above 10 cents by spring.

Officials expect a government loan program announced yesterday to play an important role in the anticipated price rise.

That program will enable growers to withhold a portion of this year's crop from the market and "cash in" on the better prices if they develop.

The department of agriculture yesterday reported that Grman and the areas which controls Poland Austria, and Czecho-Slovakia —have had their raw cotton imports cut to the vanishing point since the European war began.

## The Retort Discourteous

THE two little colored boys had had a falling out, and were saying unkind things to and about each other, their kinfolks, their friends, anything that would leave a sting.

"An' look at you' mammy," added Sambo. "She takes in washin' don' she?"

"Sho she do," replied Hambone, defiantly. "You don't think she's lev it out on de line lessen you' pappy wuz in jail does you?"

## Taber Declares Farm Problems Still Unsolved

**Greatest Need Is Economic Balance Says Master National Grange**

Louis J. Taber, master of the National Grange, told the organization's seventy-third annual convention, November 15, at Peoria, Ill., that "we have not yet solved our farm problem, and it remains with us as one of the great unanswered steps toward recovery." An Associated Press account of his address follows:

**Farmer Poorly Paid**

"Proof that the farmer is not receiving his share of the national income is evidence by the fact, Taber said in his prepared keynote address, that in the last decade farmers received barely 10 per cent of the national income, including government benefit payments.

"The farmer's condition is brought into bold relief," he continued, "when we remember that during this same period he has educated, housed, clothed, and fed 31 per cent of the youth of our land."

During the last ten years, Taber said prices received by farmers were only equal to 73 per cent of the prices they paid for commodities, goods and services used in rural life. This makes the farm dollar 22 per cent below par and "it is more than coincidence that approximately 20 per cent of the nation's labor is unemployed.

"This proves that America's greatest need is economic balance. Such disparity cannot be corrected by legislation alone. Until labor and industry will meet agriculture in solving this problem, depression will continue. Payrolls, business activity and advancing farm prices go hand in hand."

**For Long-Range Program**

"Government, business, finance and labor must unite in a long-range broad program doing justice to tillers of the soil and (1) assuring every person in the nation an ample supply of food, clothing and shelter; (2) guaranteeing the farmers that they shall have a fair return on their products for the essential service which they render to society. Both of these objectives can be attained by cooperation on the part of all interested, and the wise statesmanship at the hands of government."

Taber asserted experience had shown that reciprocal treaties have not benefitted American agriculture as a whole.

"A study of tables showing our exports of cotton and other basic surpluses proves that the program thus far has not benefited these commodities," he said, "On the other hand, the very existence of these treaties has a tendency to depress prices."

## Farmer Gets 40 Cents Of Consumer Dollar

IF consumers find the price of foods burdensome, they cannot blame it on the farmer. He's getting only about 40 per cent of the housewife's dollar, according to the Bureau of Agricultural Economics.

The farmer's share rose from a low of 35 cents in 1932 to a high of 45 cents in 1937, the bureau said. Since that time about 5 cents has been whittled away.

## Raps Starving of Schools

CHICAGO,—Robert M. Hutchins, the vigorous young president of the University of Chicago, speaking at the opening of American Education Week in South Bend, Ind., took lusty wallop at "politicians, large taxpayers and cranks" who cripple the schools in the name of "economy."

Commenting on the remark of a preceding speaker, that "we have had more and more education in the last 25 years, yet the world is in worse shape than ever before," Hutchins said the statement might be true, but it was true despite education and not because of it.

"I can't understand why chambers of commerce, taxpayers and officials consistently clamor for a reduction of opportunities for our children," Hutchins continued. "When the depression came, that great body of educators, the Chicago Board of Education, closed the only public junior college in Chicago.

"Two out of every five school buildings in this country are 30 or more years old; one-third of the children of high school age are not in school, and only 150 of every 1,000 adults have had a high school education."

## Outlines Farm Program

He was at his best before the farmers, insisting that agriculture must get cost of production plus a profit, and that farm mortgages must be scaled down so farmers could remain on the soil.

"I believe in the organized labor," said Wheeler.

Washington correspondents are just waking up to the fact that Wheeler is very much in the running.

"He does almost everything a 'dark horse' should not do—and still gets stronger," writes Ludwell Denny in the Scripps-Howard papers.

* * *

## As You Go Through Life

DON'T look for flaws as you go through life,
And even when you find them,
It is wise and kind to be somewhat blind
And look for the virtue behind them.

For the cloudiest night has a hint of light
Somewhere in its shadows hiding;
It's better by far to hunt for a star
Than the spots on the sun abiding.

The current of life runs over away
To the bosom of God's great ocean—
Don't set your force 'gainst the river's course,
And think to alter its motion.

## Holds Aged are Good Surgical Subjects

**Special Correspondence**

CHICAGO, Nov. 2.—Persons from 40 to 60 years of age who undergo major operations have just as good chance of recovery as have much younger people, Dr. Elliott C. Cutler, professor of surgery in Harvard Medical School, told a gathering of surgeons this week.

The fact that persons have lived to be more than 65, Dr. Cutler said, indicates that they are strong and tough and can face the knife without undue fear.

## No Chicken Stolen

**(From the Afro-American)**

The daily press sometimes regards as frontpage news the arrest of a colored person for the theft of a chicken or a watermelon.

But few papers last week printed on page 1 the story of the conviction of Bishop Hayward S. Ablewhite, white, formerly head of the Protestant Episcopal diocese of North Michigan.

He was given one to ten year's for stealing a $4,000 choir fund and $69,000 in other monies belonging to his diocese.

## Relief for Farmers

More than 115,000 farm families in drought and flood areas are going to be relieved of destitution by the President, without seeking additional funds from Congress.

The railroads have been asked to reduce rates on feed shipments into drought areas.

## JERSEY COW HAS TRIPLETS, TWINS TWICE IN 28 MONTHS

Bloomington, Ill.—In July, 1937, a Jersey cow owned by Fred Pagel, who farms near Danvers, produced triplets. In October, 1938, she gave birth to twins. Then this month she produced another set of twins. The only loss was one of the triplets in 1937. Six living calves in three years is believed to be a record for Jerseys.

## ARREST THAT CHICKEN!

Three managers of chicken farms in Russia, so the story goes, were being questioned by an investigator. "What do you feed your chickens?" he asked the first.

"Corn."

"You're under arrest! We use corn to feed people!"

The second overheard this conversation, and tried to play safe.

"What do you feed your chickens?" came the question.

"Corn husks."

"You're under arrest! We use the husks to make cloth. And you?" he asked, turning to the third man.

"I give my chickens the money and tell them to go and buy their own food."

**A wise man will make more opportunities than he finds.—Bacon.**

## Busy Worker, Prosperous Farmer, Held Best Defense of Democracy

BUSINESSMEN have a vital stake in the prosperity of American farmers and workers, Senate B. K. Wheeler of Montana told a convention of United Grocery Manufacturers in New York this week.

"Employment of the 10,000,000 workers who, through no fault of their own, are without jobs, and fair prices for the farmers, will do more to preserve the democratic United States than all the navies and all the armies in the world," said the Senator.

"The government of the United States should always devote its diplomatic efforts toward effecting peace in Europe and Asia, but we cannot and must not allow our love of liberty and our desire, to have others enjoy it, lead us down the road to war, unless it be to defend these United States from actual invasion.

"More dangerous to democracy in the United States than any mad European dictator, more threatening to the republic than any distant warfare, are the unsolved economic problems that are still with us.

"Grave domestic difficulties have been all but submerged in a flood of war news and war propaganda. Recent increases in agricultural prices and the re-employment of thousands of workers by certain industries do not represent a solution of the farm or unemployment problems.

"A war boom cannot furnish either a permanent or a satisfactory solution to the economic situation confronting the United States."

## Gone But Not Forgotten

"I SUPPOSE you carry a memento of some sort in that locket?" said one woman to another.

"Yes, a lock of my husband's hair."

"But your husband is alive"

"Sure; but his hair is gone."

## A Church Saves Jobs

Rev. David C. Colony, rector of St. Luke's Episcopal Church, Philadelphia, Pa., doesn't believe in the advice given recently in this column—that the church should preach the ideals which lead to cooperative action rather than setting up business enterprises themselves.

To relieve unemployment in his community when even textile mills shut down he helped 300 employes buy out three hosiery one towel, and one carpet mill and set up producer cooperatives, employes putting in from $200 to $300 in stock and the RFC loaning $15,000. Now the workers of another hosiery mill are planning to take over the mill from the bank that foreclosed upon it.

The products of the Colony mills are sold through hosiery and towel "clubs" organized in local Episcopal churches.

**Sleep is the best cure for waking troubles.—Cervantes.**

## Calabash Pipes

The graceful Calabash owes its popularity to its light weight, its beautiful coloring and dry-smoking properties. Mark Twain, whose picture appears on our cover this month, was seldom seen without his favorite pipe—the Calabash.

Calabash pipes are made from gourds (Laginaria Vulgaris) which belongs to the same species of plant that includes the squashes, melons and cucumbers. Another mark of distinction that the Calabash has, is the fact that unlike man-made pipes, no two are alike. Every real pipe smoker has a Calabash in his collection.

**Can Be Shaped**

After years of extensive cultivation and study, it was learned that with great care and patience, the Calabash gourd could be made to grow in any desired shape.

While the gourd is still young, the delicate neck is placed on a flat board in which pegs are set in forming the ultimate shape. Day after day the pegs are moved and reset forcing the necks to grow in the desired shape. Great care and perseverance must be used in the process as the necks, at this early stage, are very fragile and liable to break. In this manner unlimited opportunity is afforded for the making of new shapes and forms.

**Sweet Smoking Pipes**

The Calabash is, by virtue of its large air cooling chamber, the coolest and dryest pipe made. All moisture from the mouth or impurities from the bowl collect in this chamber and never reach the mouth. As Calabash pipes are easily cleaned, this pipe gives a sweet and pure smoke.

The man with the philosophical turn of mind often prefers the Calabash to any other pipe. Many of the most brilliant artists, musicians and authors have been pictured smoking this delightful pipe. As one of America's better known authors recently said, "For a peaceful pipe, a pipe of sweet repose, I'll stick to my Calabash."

—From "Pipe Lore"

## War Held Result of Economic Smashup

**nes Macphail Delcares World Experiences Convulsion Of Dying System**

HAMILTON, Ont.,—War, unrest and depression can be attributed to "the breakdown of an economic system which no longer exists," Miss Agnes Macphail, first woman elected to the Canadian Parliament, told a gathering of women here this week.

The system failed to distribute what the country produced and the world is experiencing "the convulsions of the dying system," she said. A new social order must be built.

Democracy cannot continue under economic autocracy, she said. Apathy and indifference of people to the miseries of others "appalled" her.

"Working for the unfortunate is more Christian than all psalm-singing one can do," she said. "Each of us can be a good neighbor, and if we are not, then we haven't much to boast about."

# News Of Interest To Negro Farm Groups And Leaders

### 32 FARM BOYS FORM AGRICULTURE CLUB

CRAWFORDVILLE, Ga.,—Under the direction of Robert Macon, teacher of vocational agriculture in the Murden and Springfield high school, 32 boys have organized a new Farmers of America chapter with the following officers:

Herman Hackeney, president; J. T. Chatham, vice president; Carol Chatham, secretary; W. P. Hackeney, treasurer; and Thurm Wilson, reporter.

A requirement of the chapter is that each member carry to completion an approved, supervised project with projects varied to suit the personnel of the chapter.

Two boys are feeding out beef calves and plan to show them and sell them next spring at the best cattle show in Augusta, Ga. Eighteen are raising hogs and 12 are raising poultry. Each of the boys will have a field crop project along with the livestock work.

Miniature license plates that copy the plates issued by any state bave been designed to be carried on automobile key rings.

### NEW AGRICULTURE DEPARTMENT BOOK DEALS WITH JUST ABOUT EVERYTHING

By Eddy Gilmore

WASHINGTON, —(AP)—The Agriculture Department today dished out its new yearbook, "Food and Life"—1,165 pages dealing with just about everything from New Engla d baked beans to the feeding problem of goats.

"Goats," it says, "are very fond of browse, though they also relish good grass."

Of beans it has this to say:

"In New England, hot baked beans are often a customary section necessary for Saturday suppers, and cold baked beans for Sunday breakfasts. In the South boiled beans are often a customary second dish for both dinner and supper. In other parts of the country if beans are served for two meals in succession there is likely to be trouble."

Based on the assumption that everyone is interested in eating the new book should sweep the nation and become a best seller along with the Government's other big number, "Diseases of the Horse."

Food is not the only subject of the time.

If you wonder what is the iodine requirement for horses, you can get in a large dose on pages 722 and 723.

I you're puzzled about the calcium requirements for mules, there it is.

If your chickens were picking out one another's feathers, what would you do about it?

The book knows the answer and it tells you concisely: Use ruby-colored window panes or ruby-colored electric bulbs in the chicken houses.

There's philosophy, too, between those 1,165 pages.

"Man," says the book, "likes what he is used to, but he also likes a change."

In another section "Food and Life lists the minerals found in the human body. Did you know that yours contains tin, zinc, nickel, and several others?

But if you like to think that you have a heart of gold, read this:

The presence of gold in the human tissue has not been demonstrated."

However, there is silver—and it's found in the heart.

The book is on sale today at the Government Printing Office for $1.50.

### WRITES HOT REPLY TO DEFENDER OF ALABAMA POLL TAX

To the Editor of LABOR:

H. B. of Dothan, Ala., defends the poll tax in the "Mail Bag" column. He says "it was intended to help keep the white man supreme."

A more undemocratic, un-American thought cannot be expressed in words. We are still living under a form of government where all men are equal before the law. We want this form of government to continue to exist.

I would not object so much to a poll tax if its purpose were to raise revenue, but when its sole purpose is to deprive a very large minority of the constitutional right to vote. I can only listen with disgust to those who try to defend it.

There is only one kind of supremacy which I recognize in man—that of the mind. It makes no difference whether that mind is housed in a black or white body. To me intolerance, hate, bigotry, racial and religious prejudice are the most despicable of human traits. Their possession is a symbol of weakness and inferiority.

### JUST SAW WOOD

By Barton Reese Pogue

Don't blow your horn, or advertise
Your virtues to the world;
Don't put your talents on parade
With banners all unfurled;
If the folks you know don't seem to see
That you are mighty good,
Don't sell 'em "specs" to help their eyes—
Keep mum and just saw wood.

While men a hundred miles from here
Are talking of your worth,
The folks at home may hardly know
That you are on the earth.
But don't enlighten them, my friend,
The way you feel you should.
Although you'd like to prophesy—
Keep mum and just saw wood.

For he who saws is sure to sit
By fires that never dim—
The work he did in those dull years
Will all come back to him.
And when the home folks join the rest,
To praise him for his good,
He'll thank the Lord he kept his peace,
And silently sawed wood.

### NOTHING ELSE BUT

A Texas state liquor agent went out one morning into the woods looking for stills. He was walking along when he came to a Negro making a fire under a still.

The liquor agent asked, "Makin' liquor?" The Negro replied, "Ain't makin' water.'

The liquor agent then asked. "Gonna sell it?' "Ain't gonna give it away," was the reply.

The Negro looked up and seeing who was asking all the dumb questions, said, "Lawdee, are you a state liquor agent?" "Ain't no preacher," replied the agent.

"Gonna take me to jail?" asked the Negro. "Ain't gonna take you to church,' said the agent.

### FARM GROUP WILL AWARD FARM PLAQUE

GREENSBORO, N. C.,—Full information concerning the H. O. Sargent award, to be given to the former student of vocational agriculture with the best record in a farming occupation, was released by S. B. Simmons, national executive secretary of New Farmers of America, last week.

The plaque was presented to the organization at the fifth national convention last August by Mrs. Charles F. Milner a daughter of the late Dr. Sargent. Dr. Sargent was for a number of years, federal agent for agricultural education in the Department of the Interior and assisted in founding the New Farmers of America as well as the Future Farmers of America.

Because requirements had not been made to serve as a basis of award, Lester Albert, Delray Beach, Fla., retiring president, accepted the plaque from Mrs. Milner on behalf of the organization.

The S. O. Sargent plaque is to be presented each year to the candidate who is selected as winner by the three sectional advisors of the organization.

The candidate for the plaque must have been actively engaged in farming on an independent basis for at least three years and not more than 10, presenting evidences of originality in the utilization of the facilities on the farm and in the community, and the development of a live-at-home program.

In addition, he must have had at least four years of organized instruction in all-day, part-time and day unit classes. He is also required to have savings or ownership or equity in land or livestock amounting to $500.

### HAYES RETURNS TO OLD GEORGIA HAUNTS, THRILLS HIS HEARERS

By James E. Barnes.

ROME, Ga.—(SNS)—Returning to his old haunts in northwest Georgia the celebrated Roland Hayes appeared at the City Auditorium Friday in recital. Before many of his childhood friends he brought out in the true form of a master such numbers as "Crucifixion" and "African Chants."

The story of Roland Hayes is like many other success stories in that he came up from a barefoot boy, guiding a bullock-drawn plow on the Georgia farm of his mother, who was widowed and slave-born. He toiled his way to the height of musical fame. While he earned his living and helped to support the rest of his family, he studied voice.

He was a foundry helper in Chattanooga, a waiter, in Louisville, and an office boy in Boston. He gave recitals and lost his money on them, but indomnitably he returned for a hearing before the concert world until he triumphed in recital in Boston's Symphony Hall. From that time on, Roland Hayes has been a living chapter in the musical world.

### NEGROES STAND OUT IN GALA PEANUT FESTIVAL

DOTHAN, Ala.,—(SNS)—Negro participants' stood out with credit and distinctive complimentary notice in the parade here Friday that topped off the three-day celebration of the second annual National Peanut Festival.

Present last year but unable to attend this year on advice of his physician Dr. George Washington Carver, the world's foremost agriculture scientist, marched in portrait executed by John Hall, North Highland High student, and carried as a flat in the columns of the student that honored his name in in a celebration paying homage to the peanut, a plant from which Dr. Carver has extracted 285 useful products.

Clapped onward in an impartial way by the mixed street-standing spectators along the course of the parade, the colored section was in the middle of the parade, the boy scouts and World War veterans in another, neither being on the tail-end.

Froty Four-deep rows of North Highland High students paced to the blaring tunes of their two-year old brass band under the Director Holly Collins with the drum major making a grand display of baton maneuvers. The Boy Scouts, following behind the Negro veterans, glowed in their uniforms. They won first honors last year and the Negro high school took first prize for marching.

Running second to cotton as a cash crop, the peanut 25 years after introduction in the Wire grass section is today a key meal-ticket product. Three states Alabama, Florida, Georgia joined in the earthnut festvities.

God's men are better than the devil's men and they ought to act as though they thought they were.—Beecher.

## White Woman Tells of Being Raised by Negro

ATLANTIC CITY, N. J., Nov. 2 (Special.)—On the witness stand in Prerogative court today, Mrs. Viola Harris Gardner, 41 years old, testified that she was white, but that she had been raised by Negroes as a Negro and always had lived as a Negro.

Mrs. Gardner, now a resident of Baltimore, Md., appeared as her own principal witness in an effort to break the will of Miss Minnie W. Upham. Mrs. Gardner told Vice Chancellor W. Frank Sooey, who was sitting as vice ordinary, that she was the daughter of Miss Upham, who died leaving a $100,000 estate.

Miss Upham's will had a codicil in which she said that she never had a child and expressly disinherited "Viola Harris Gardner or any other persons claiming to be my child."

Mrs. Sarah Hazzard, 74 years old, colored, of Pleasantville, N. J., testified that she had visited the home of Leah Harris within a half hour of the time that Minnie Upham gave birth to her baby and saw Miss Upham's father give money to Mrs. Leah Harris, colored, to take care of the child.

## Negro Preacher's Prayer Hailed as "Classic" by Minister

To the Editor of LABOR:

An eminent and very pious minister of the Gospel recently handed me the following, which is supposed to be a copy of a prayer delivered by a Negro preacher:

"O Lawd, give Thy servant, this mawnin', de eye ob de eagle and de wisdom of de owl;

Connect his soul wid de Gospel-telefoam in the central skies;

'Luminate his brow wid de sun ob de heaven;

Saturate his hant wid love foh de people;

Turpentine his 'magination;

Grease his lips wid possum;

Loosen him wid de sledge hammer of Thy power;

Lectrify his brain wid de 'light'n of Thy Word;

Put 'petual motion in his arms;

Fill him plum full ob de dynamite of glory;

'Noint him all ober wid de kerosene oil ob salvation

And sot him on fire! Amen."

My friend, the minister, said: "I reverence that prayer as a classic." Louisville, Ky. H. P.

From "Labor"

## 100 Cities to Have Food Stamp Scheme

THE stamp plan of disposing of surplus farm commodities, now in operation in five cities, will be extended to 25 cities before Christmas and to 100 by next June.

Milo Perkins, president of the Surplus Commodities Corporation, made that disclosure this week at the Chicago convention of chain store operators.

Under the plan WPA workers are given free a 50 cent blue stamp for every dollar's worth of orange stamps they accept in payment of wages. The blue stamps may be exchanged for foods that are classified as surplus.

## QUINCY HORSE TRAINER, HIT BY RACE CAR, DIES

QUINCY, Ill., Nov. 12, (Special)—Quincy's best known horseman, Uncle Ike Taylor, 77 year old Negro, is dead—the victim of his sworn enemy, the automobile. He died in a hospital Oct. 16, of injuries received while crossing the Baldwin park race track when he was struck by a racing car which was being timed preparatory to races to be held later in the day.

Uncle Ike had trained many race horses and was the tutor of scores of riders in this vicinity The son of Virginia slaves, he had spent his life raising and training horses in the south and in Quincy. Members of a riding and driving club by which he had been employed many years will pay tribute to him at the funeral services.

## Hogg's Tales

"ARE you fond of Hogg's tales?" asked a lady of an old farmer the other evening.

"Yes, I like 'em roasted, with salt on 'em," was the response.

"No; but I mean have you read Hogg's tales?

"No; but I mean have you read hogs are all black or white. I don't think there is a red one among them."

* * *

The great duty of God's children is to love one another.—William Ellery Channing.

## Mercy

By Shakespeare

THE quality of mercy is not
Strain'd:
It droppeth as the gentle rain
from heaven
Upon the place beneath: it is
twice blest;
It blesseth him that gives and
him that takes;
'Tis mightieth in the mightiest:
it becomes
The thorned monarch better than
his crown;
His sceptre shows the force of
temporal power,
The attribute to awe and majesty,
Wherein doth sit the dread and
fear of kings;
But mercy is above this sceptred
sway;
It is enthroned in the hearts of
kings,
It is an attribute to God Himself;
And earthly power doth then
show likest God's
When mercy seasons justice.

## Social Security Now Aids 2,212,000 People

MORE than 7,355,000 Americans are now receiving relief in one form or another, it was revealed this week by the Social Security Board.

Of that number, 2,212,000 are being helped by permanent social security legislation, with payments of about $50,000,000 a month. There are now 1,845,000 "senior citizens" on the old age pension roll; 311,000 families, with 748,000 children, are getting monthly checks, as are 68,000 blind persons.

The Census Bureau reports that cotton of this year's growth ginned prior to Nov. 1 totaled 10,085,260 running bales, exclusive of linters against 10,124,773 last year and 13,160,423 in 1937.

## Recruits Find Soldiers Have Own Language

Not only does the soldier lead an entirely different life from his civilian colleagues, but he virtually speaks a foreign tongue, as the recruits of the 6th corps area are learning. To aid these "Johns," Maj. Leland W. Skaggs, recruiting officer, has composed a glossary of army slang.

"Battin' the breeze," the rookie learns, means holding a longwinded conversation "Cabbage" is American money. A soldier who likes his food is a "chow hound." "Goldfish" are canned salmon, and "circus water" is iced drinks with meals while the army cook is libelously known as a "hash heater" or "slum burner." To get coffee with cream and sugar the recruit says: "Java with sidearms."

He learns that a horse is a "hay burner," while a mule is aptly termed a "jug head." The bugler is a "wind Jammer," the first sergeant is the "top-kick," the second lieutenant a "shavetail," while the commanding officer is known as the "old man." Any soldier is "dogface," an infantryman is a "doughboy," an artilleryman a "red-leg," and a cavalryman a "yellow leg."

## Maj. J. R. Lynch, Grand Old Man of Negroes Dies

Maj. John R. Lynch, the grand old man of Chicago's Negro citizenry, died in his home at 4028 South Parkway. He was 92 years old.

Maj. Lynch was born a slave on a plantation in Louisiana. In the civil war he served as a cook for an Illinois regiment of the Union army. After the war he became a lawyer. In 1869 he was elected to the Mississippi house of representatives and during his second term became the first Negro speaker of the house. He also served in the United States house of representatives from 1873 to 1877. During the Spanish-American war he rose from a captain's to major's rank.

Maj. Lynch is survived by his widow, Cora. Funeral services held in St. Thomas' Episcopal Church, 38th street and Wabash avenue. Burial in Arlington National cemetery, Washington, D C.

## The Newly Weds

"I hope they will be happy," people said,
As if contentment was a thing
apart
That sometimes came by chance
to those who wed,
And was not native to the
humble heart;
Each couple is the master of its
fate,
Each holds within its hand the
golden key
That will unlock enchantment's
magic gate
Admitting it to lasting harmony.
True happiness is purchased with
a price.
That man and maid alike must
freely pay;
The currency is willing sacrifice
Which must be coined anew
each passing day;
But those who in their hearts
this treasure store
Will know felicity for evermore.

T. E. B. In Chicago Tribune

## Sure Sign of Plenty

Hostess: "Did you have enough to eat?"

Small Boy: "Yes ma'am. Didn't you see my mother look at me?"

**Woman's Missionary Society LITERATURE**

## SEC'Y WALLACE TALKS TO FARM UNIT AT TUSKEGEE

(Continued from page 1)

growers, whether white or members of the Race, whether tenant or land owner have had a hard time. They have been the victims, he said, of a system which made almost all farming a hazardous and profitless occupation.

A group of college presidents, white and Race state extension leaders and visitors from surrounding states, sat behind the secretary on the platform as Mr. Wallace described some of the methods through which the government had sought to aid the farmers and which had rebounded to the benefit of Race tillers of the soil.

The day was a great one for Tuskegee institute, which was celebrating its annual homecoming and Armistice Day. Secretary Wallace touched upon the latter when he reminded his hearers that "Wars abroad make us all realize what a privilege it is to be an American. Whatever our race or creed, we can be thankful that Europe's conflict has not spread to our shores."

President Patterson presided over the exercises which were held in Logan hall. Response to Secretary Wallace were made by President Benjamin F. Hubert of Georgia State college and Dr. George W. Carver, famed scientist who taught Mr. Wallace botany when the secretary was a lad in Iowa where he was born and where Professor Carver attended school.

The 800 members of the Tuskegee cadet regiment, Lieut. B. O. Davis, Jr., United States army, P. M. S. and T., under the immediate command of Cadet Lieut. Col. Nelson S. Brooks. passed in review for the secretary, who later saw Tuskegee's football team win over Knoxville college.

## New Stamp to be Dime Denomination

WASHINGTON, D. C.,—(ANP)—The new Booker T. Washington postage stamp will be of the 10-cent variety, it was learned here this week with announcement by Postmaster James A. Farley of the denomination designations for the Famous American series of stamps, to be issued soon by the Post Office department. The Washington stamps will be placed on sale at Tuskegee Institute, founded by the man whom the issue honors.

In making this announcement. the Postmaster General pointed out that the selection of the various denominations which will include a one, two, three, five and ten cent stamp for each of the seven groups of the series was governed by the date of birth of the thirty-five famous Americans who are to be honored in this new series of postage stamps.

In other words, the lowest denomination in each of the seven groups has been assigned to that date of birth precedes that of all others appearing in this particular group, with famous American of the most recent birth being awarded the highest denomination. This chronological birth order has been followed throughout the entire series.

Dr. Washington is the only Negro honored in the Famous American stamp issue.

## Wallace Stirr Urges Third Term for 'F.D.'

### Secretary of Agriculture Stands By Statemena Rebuked By White House

Secretary of Agriculture Wallace is still booming President Roosevelt for a third term. He first gave voice to the idea during a speech in San Francisco on Oct. 25. This drew a rebuke from Stephen Early, one of the President's secretaries.

On Wednesday, at Washington the Secretary of Agriculture smilingly declared to newspaper men that he had not changed his mind.

"I have no apologies to make for my statement." he declared. "None has been asked of me."

## EDUCATOR SAYS JEANES PASTORS ARE GREAT NEED IN THE SOUTH

NEW YORK CITY.—(ANP)—Addressing the annual meeting of the department of race relations, Federal Council of Churches at Riverside Church here, Dr. Arthur D. Wright, president Southern Educational Foundation stressed the need for Jeanes preachers in rural districts to serve the Church as effectively as Jeanes teachers serve Education. Dr. Wright said:

"In the same way as there are Jeanes Fund teachers in these rural communities working among all the people there is need or some try-out of the idea of a Jeanes preacher; somebody who has no attachment to any single denomination but who could go around and help all the ministers and all the churches toward a higher standard of leadership and service.

There is a problem in our entire South that calls for a more careful approach and more help such as can be given through church channels than that of those rural ministers. The Negro is jealous of his church; but he needs a trained ministry; he needs material help in improving the church edifice and equipment which will in turn give him a larger return from the spiritual side."

## DALLAS, TEXAS, MOURNS NEGRO VETERAN OF CITY HALL STAFF

Dallas, Tex.—The flag atop of the city hall flew at half staff yesterday for Addison Gaston, 64 years old, a Negro, who served as custodian at the municipal building for 31 years. He managed to stay on despite turnovers in administrations. "I had to pick 'em right at elections," he used to say. He died of appendicitis.

## PEOPLE STARVING IN CHICAGO, IS CHARGE

Chicago—Speaking before the food merchandising committee of the Housewives' League at the City Club yesterday, Lea D. Taylor, head resident of Chicago Commons, declared "that right now in Chicago starvation is digging the path for pneumonia and tuberculosis deaths to come," and added:

"We call ourselves civilized, but while we may be interested in starvation in China we are indifferent to starvation on the West Side in Chicago. They are starving today—call it by no other name."

## BOY TRIES GLOWWORMS

Summoned in Wonford, England for riding a bicyele at night without lights, a cyelist said his lamp was out of order so he tried glowworms to cast the necessary beams. A policeman said he found three glowworms in the lamp, which was giving a "faint glow." The lad was fined.

## IF RETURNS ARE TRUE, KENTUCKY IS SHY ON GOODS

Frankfort, Ky.—Tax assessment returns filed with the Kentucky revenue department show:

Eight counties are without a single chicken.

Two have no horses and 32 have no horse drawn vehicles.

Four have no musical instruments or radios.

Twelve have no jewelry, gold, or silver.

Five have no books and no libraries.

Four have no farm machinery or implements.

Property owners file voluntary assessments returns. The revenue department is skeptical.

## "First Lady" Named By Humanitarians

PHILADELPHIA,—Philadelphia's annual humanitarian awards, totaling $3,000, will be divided this year between Mrs. Eleanor Roosevelt and the Quaker's Service Committee. Mrs. Roosevelt will get $1,000.

Of Mrs. Roosevelt and the Quaker group the awards committee said: "Their yeoman efforts in uplifting and sweetening the lives of humankind through sympathy, understanding and perseverance undoubtetly merit eminent acclaim."

## DOUBLE VALUE FOR HIS MONEY

Sambo spent a large slice of his week's pay for a 30-minute flight in an airplane.

When he got his feet on the ground again, he said to the pilot:

"Ah shuah got mah money's worth on both dem rides."

"What do you mean?" asked the aviator. "You've been up once and had only one ride."

"No suh, boss," protested the passenger. "Ah had two rides—mah fust mah last."

## On the Barrelhead

FARMER—What will it cost me to fix my car?

Garageman—What's the matter with it?

Farmer—I don't know.

Garageman—Forty-eight dollars and fifty-three cents.

* * *

The desert is mute, and dead men tell no tales.—Laboulaye.

* * *

"I SHALL miss you while you are on your hunting trip dear," said the young wife. "And I do the same thing."

Tulare, Calif.—(IP)—A yam that weighed 10 pounds, 11 ounces was grown by Archie Hamilton in a plot at his home in Tulare. The yam proved to be excellent flavor.

## AGED TENNESSEE NEGRO FARM COUPLE, LIVE-AT-HOME CHAMPS

MEMPHIS, Tenn.,—(AP)—An aged Tennessee Negro farm couple who worked their way from share cropper poverty to land ownership—Edd and Alice Hendrix Bolivar, Tenn.—were today 1939 Mid-South live-at-home champions.

They defeated 13,290 other Negro farmers in Tennessee, Arkansas

## CANDIED APPLES PROVIDE A NOVEL NEW SWEETMEAT

### Two Kinds Of Coating, One With Nuts Or Popcorn

Apple eaters who also enjoy a bit of something sweet now and then are taking their apples on a stick these days. The apples are candy coated.

There are two types of coating suitable for dipping apples—the soft, chewy, caramel coating, or the hard, glazed taffy coating.

Caramel coated apples frequently are dipped in finely chopped nutmeats, and may be dipped in popcorn.

Nutmeats do not stick so easily to the glazed taffy coating, but this coating can be tinted a glorious red that would tempt anybody to defy his dentist.

**Caramel Apples**

1 Cup granulated sugar
1-2 Cup boiling water
1-2 Cup cream
1 Cup brown sugar
2 Tablespoons butter
1 Dozen small, firm apples
1 Dozen wooden skewers

Melt 1-2 cup granulated sugar in a heavy pan over direct heat. Add the boiling water and cook to a smooth sirup. In a separate pan cook the cream, brown sugar, butter and remaining 1-2 cup granulated sugar to the soft ball stage (234-238 degrees). Combine sirups and cook to firm ball stage. (244 to 248 degrees). Cool to lukewarm. Dip each skewered apple into the sirup and twirl until well-coated, then dip in ice water. If desired, dip in chopped nutmeats or popcorn. Place on oiled paper until caramel is well set.

### CINNAMON TAFFY APPLES

2 Cups sugar
1 Cup water
1-2 Cup corn sirup
1 Teaspoon cinnamon flavoring
1 Teaspoon red coloring
1 Dozen small apples
1 Dozen wooden skewers

Boil sugar, water and sirup together to hard crack stage (about 300 degrees). Remove from heat and add cinnamon and red coloring. Cool slightly. Meanwhile force skewer into core of each apple. Dip apples into the heavy sirup, draining well. Then place on buttered baking sheet to cool.

### FLOATING PUDDING

No youngster will ever turn down his noonday quota of milk when it's served in this interesting fashion. Making floating island pudding is easy when made with sweetened condensed milk. Blend 1-2 cup sweetened condensed milk with 1 1-2 cups water in top of double boiler. Add slightly beaten yolks of eggs and cook over hot (not boiling) water until mixture coats a spoon. Stir constanty. Cool and add 1-8 teaspoon salt and 1 teaspoon flavoring. Make a meringue of 2 egg whites and 4 table spoons sugar for the "island" garnish.

## WINTER CALLS FOR SPECIAL HAND CARE

By Betty Clarke

Now is the time for well groomed women to pay particular attention to their hands.

Here are some ways to keep down Old Man Winter's ravages.

Every time you wash your hands, dry them thoroughly and then rub in a few drops of lotion, using a washing movement and working the lotion above wrists.

Rub a little hand cream or olive oil into your cuticles once or twice a week. Then your cuticle won't be as likely to break.

Use a base under that new nail polish. Leave the half-moon clear, but cover the tips of the nails. When you apply the polish, take off just a little polish at the tips. That will help cut down on chipping.

Don't dig into the half-moon with a steel instrument. New nail forms there and if you should mar it the defect will get larger as the nail grows. Weakened spots are likely to split off at the edge of the nail. "This sort of thing misleads many people into thinking they have brittle nails.

If your nails really are brittle, you should watch your diet, take plenty of exercise and spend more time in the fresh air. It's a good plan to stop wearing polish now and then, too, and buff the nails vigorously instead.

Last, but not least, don't wear gloves that are very thin or very rough. Lots of people think heavy, rough mittens are best in cold weather; softly-lined gloves really would be better.

### UNBAKED FRUIT CAKE

3 Pounds seeded rasins
2 Pounds dates
1-2 Pound candied cherries
1-2 Pound crytallized pine apple
1-4 Pound citron
1-4 Pound candied orange peel
1-4 Pound candied lemon peel
2 Pounds figs
1 2 Cup grape juice
2 Pounds shelled pecans
2 Teaspoons cinnamon
1 Teaspoon nutmeg
1-2 Teaspoon salt
1 Orange, juice and rind
1 Cup sugar.

Chop fruits and nuts and mix with orange and grape juice. Line a crock with brown papers and insert two strips of cloth in crock to facilitate removing and pack very closely. This should stand in a cool place about ten days before cutting.

### A HINT: HOW TO MEASURE LESS THAN ONE CUP OF FAT

Here's a helpful hint for measuring butter, lard, or vegetable shortening when the recipe calls for less than one cup of at; Subtract the amount of fat needed from one cup. Fill cup with that amount of water, then add fat until one cup mark is reached. For instance, if 1-3 cup is desired, fill measuring cup 2-3 full of water. Add fat until water reaches 1 cup mark, and drain water off.

## CRANBERRY SHORTCAKE IS GOOD, TOO; TRY IT!

Who says the shortcake season is over? Strawberries aren't the only berries becoming to a shortcake—and the cranberry season is only beginning. A bit of pineapple and tart apple add to the deliciousness of a cranberry shortcake.

**Cranberry Shortcake**

1 Cup chopped raw cranberries
1 Cup chopped tart apples
1-4 Cup crushed pineapple
1 Cup granulated sugar
1-8 Teaspoon salt
1 Cup cream, whipped

Combine cranberries, apples, pineapple, sugar, and salt, and let stand until sugar is dissolved. Place between layers and on top of hot shortcake. Top with whipped cream.

### TURNIPS IN SWEDISH SAUCE

(Serves Six)

3 Cups cooked sliced turnips
2 Small onion, minced
1 Tablespoons butter
1 Tablespoon flour
1 Cup boiling water
1-4 Cup vinegar
1-2 Teaspoon salt
1-2 Teaspoon sugar
1-8 Teaspoon pepper
2 eggs yolks

Cook onion in butter until tender but not browned. Stir in flour and add water, vinegar, and seasonings. Cook until thickened, stirring constantly. Add to slightly beaten eggs, and cook for two minutes longer. Pour over turnips arranged on serving dish.

### GLAZED PARSNIPS

6 Medium cooked parsnips, sliced lengthwise
3 Tablespoons butter
2 Tablespoons sugar

Drain cooked parsnips; place in heavy skillet with butter and sugar creamed together. Cook gently until glazed, basting occasionally with the butter and sugar sirup.

Wayside weeds are found to be richer in vitamin C content than is spinach.

## SAGE JELLY, COLORED GREEN OR YELLOW, AIDS MEAT DISH

Looking for something different in the way of a meat accompaniment?

Then try sage jelly.

**Sage Jelly**

1 1-4 Cups boiling water
2 Tablespoons sage
1-4 Cup vinegar
3 Cups sugar
Yellow or green vegetable coloring
1-2 bottle fruit pectin

Pour boiling water over sage, cover, and steep for 15 minutes. Strain and measure 1 cup. Add vinegar and sugar and bring to a boil; add coloring to give desired shade. As soon as mixture boils, add fruit pectin, stirring constantly. Bring to full rolling, boil hard for half a minute. Remove from heat, skim, and pour quickly. Paraffin at once.

The name Topaz is misapplied to quartz many times. Topaz is often colorless or pale.

# Thousands of Acres Represented in The National Federation Convention

**Individuals Who Were In Attendance At The 1939 Session In Jefferson City Were Real Tillers Of The Soil**

Many thousands of acres of land owned by members of the National Federation of Colored Farmers were represented in the last annual convention which just closed in October in Jefferson City, Mo. They held their session at Lincoln University. One person alone, a Mr. Joseph Nunnelly of Blufftown, Mo., reported that he owned 1600 acres and that most of this was in cultivation. He stated to the convention that he is now living on the farm and in the house where he was born, and yet he has passed his seventy-second birthday.

It was inspirational hour when Rev. H. A. Boyd who publishes The Modern Farmer, the official organ of the National Federation of Colored Farmers, had the real dirt farmers and tillers of the soil, the backbone citizens of America, to stand up, give their name and address, and then tell the delegation present how much they own in actual acreage and how it was under cultivation. Most of them were very modest, and not all present would even accept that invitation, but by persistence and a little persuasion at least half of them did tell. The result was shown as follows:

Mrs. P. O. Wesley, Hayti, Mo.—74 Acres

Mr. C. L. Quinn, Hayti, Mo.—190 Acres

Mr. J. C. Matthews, Catron, Mo.—Owns 410 Acres, rents 320 Acres

Mr. Walter Riley, Tchula, Miss.—120 Acres

Mr. LaGora Sanders, Wright County, Mo.—160 Acres

Rev. W. L. Tate, Bee Lake, Miss.—38 Acres

Mr. Wm. D. Martin, retired farmer—20 Acres

Mr. Damon Gillespie, Poplar Bluff, Mo.—40 Acres

Mr. J. W. Mark, Tylertown, Miss. 116 Acres

Mr. J. E. Bearden, Tylertown, Miss.—40 Acres

Rev. S. D. Woods, Sikestown, Mo.—10 Acres Farm land and 10 City lots

Mr. W. S. Simmons, Catron, Mo.—359 Acres

Mr. J. W. Simmons, Tylertown, Miss.—130 Acres

Mr. Luther Hester, Tchula, Miss.—80 Acres

Mr. A. R. B. Payne, Tchula, Miss.—150 Acres.

Mr. J. B. Raiford, Tylertown, Miss.—200 Acres

Rev. R. C. Dority, Earle, Ark.—65 Acres

Mr. A. J. Jefferson, Tylertown, Miss.—Owns 40 Acres, rents 20 Acres

Mr. Robert M. Varnado, Tylertown, Miss.—12 Acres

Mr. R. F. Allen, Keytesville, Mo.—Owns 80 Acres, rents 100 Acres

Mr. J. E. Clayton, Houston, Texas—200 Acres

Mr. P. A. Hardiman, Bunceton, Mo.—72 Acres

Prof. A. L. Hammons, Jefferson City, Mo.—16¼ Acres, Hog Breeder

Rev. E. G. McEwen, Magnolia, Miss.—65 Acres

Mr. Jos. Washington, Middleton, Tenn.—42 Acres

Mr. N. W. Jones, Tylertown, Miss.—240 Acres

Mr. E. W. Williams, Vaughn, Miss.—Owns 44 Acres, Rents 60 Acres

Mr. Jas. Nunnelly, Bluffton, Mo.—1600 Acres

## Consumers' Bookshelf

THIS PROBLEM OF FOOD, by Jennie I. Rowntree. Public Affairs Pamphlet No. 33. 1939, pp. 32, illus. Address: Public Affairs Committee, 30 Rockefeller Plaza, New York. N. Y., 10 cents. A discussion of the importance of careful food selection and the need for a national policy on nutrition. Outlines definite aids which will help consumers select foods to meet adequate dietary requirements. Bibliography.

POULTRY COOKING CHARTS, by U. S. Bureau of Home Economic. A series of eight posters showing how to prepare birds for broiling, frying, roasting, braising, steaming, and stewing. The posters were on display for the first time at the World's Poultry Congress and are now available to the general public. Address: Superintendent of Documents. Washington, D. C., 50 cents.

POULTRY COOKING. 1939, pp. 8. Address: Bureau of Homes Economics, U. S. Department of Agriculture, Washington, D. C. Free. A leaflet discussing methods of preparing poultry for broiling, frying, roasting, stewing, and steaming. Includes recipes.

PERFORMANCE ANALYSIS OF SELECTED TYPES OF KEROSENE STOVES, by Merna M. Monroe. Bulletin 394. 1939, pp. 433-518, illus. Address: Extension Service, University of Maine, Orono, Maine. Single copies free Discusses the procedures and results of tests to determine what standards of performance may be expected from kerosene stoves under various conditions of operation. Outlines certain principles to be followed in the selection and use of oil stoves. Bibliography.

SHRINKAGE AND COOKING TIME OF RIB ROASTS OF BEEF OF DIFFERENT GRADES AS INFLUENCED BY STYLE OF CUTTING AND METHOD OF ROASTING, by Lucy Alexander, U. S. Bureau of Home Economics, and Nancy Clark, U. S. Bureau of Animal Industry. U. S. Department of Agriculture Technical Bulletin No. 676. 1939, pp. 36. Address: Superintendent of Documents. Washington, D. C., 10 cents. This bulletin presents technical information on the relation of shrinkage and cooking time of meat to the grade, the degree of fatness, the style of cut, whether standing or rolled.

## Gardner Claims a Record With 3 1-2 Pound Radish

Mike Silvasi of 1519 Fred street, Whiting, Ind., claims the Chicagoland radish growing championship. A radish grown in his garden is 19 inches in circumference and weighs 3 1-2 pounds. Each of his radishes averages between 1 1-2 and 2 pounds. Silvasi planted his crop of winter radishes in June and they are ripe now. He doesn't go in for mass production, but he recommends his radishes as being crisp, solid, **tasty and** without pithy centers.

## ANOTHER FIRE AT HOME OF HOWARD UNIV. PRESIDENT

WASHINGTON, Nov. 28—(ANP)—For the second time within a year President Mordecai W. Johnson and family were routed from their home on Howard University campus by fire last Wednesday night. Firemen reaching the scene found Dr. Johnson busily spraying a fire-extinguisher on blazing rubbish in the basement, and rang in a second alarm when flames were discovered creeping up inside the walls. For a time the 30-year-old structure was threatened with complete destruction.

Only last spring the president's house was found ablaze, before the family had removed back to it following the re-location and renovation incidental to clearing the site of the new library building. Damage was of sufficient extent to require some time for further renovation, during which time Dr. and Mrs. Johnson and their five children found temorary abode in Howard hall where they also had been during the period of removal of the house to its present location.

## Dr. J. E. Walker Sees Value In AAA Program Of U. S.

TAFT, Oklahoma, (ANP)—This all-Negro town was host Tuesday to 600 Negro farmers and agricultural leaders who gathered to hear Washington and state AAA officials discuss details of the Conservation program preparatory to the Southwide vote on marketing quotas which will be held on Dec. 9.

This was the concluding meeting of a series conducted among Negro farmers in Georgia, Florida, Alabama, Louisiana, Texas, Mississippi, Arkansas and Oklahoma.

An important feature of the series was the address in Forrest City Ark., by Dr. J. E. Walker, president Universal Life Insurance company of Memphis and president of the National Negro Business League.

Dr. Walker told the 1,000 farmers assembled in the high school auditorium that the AAA program had been of definite value to Negro business and cited instances showing how policy-holders in the Universal had been able to save their insurance from lapsing through payments made to them by the AAA. In concluding his address, Dr. Walker said "You owe it to yourselves to exercise the right and privilege accorded you under this democratic program to go to the polling places on Dec. 9, and cast your vote on this grave economic question affecting you and the South."

The series of meetings which began on Oct 28 was under the direction of E. A. Miller, director of educational work among Negro farmers and assistant to the director, Southern division AAA, Washington. He was assisted by P. K. Norris, foreign service, U. S. Department of Agriculture who discussed the international situation affecting cotton, and C. F. Clark, agricultural economist of the AAA.

Negro members of AAA staff who were also present on the tour were Mrs. R. R. Moton, James P. Davis and A. L. Holsey.

## Pig Has Two More Legs Than it Can Use, but Does Well

JACKSONVILLE, Ill.,—A pig with six legs is growing up to be an otherwise normal porker on the Fred Megginson farm near here. The extra legs, perfectly formed and appended by nature to the animal's hind legs, are eight inches long and do not touch the ground. The pig is eight weeks old.

**B. Y. P. U. Guide, Manual and Quarterlies**

The Baptist Young People's Union Forces of the nation can be supplied with B. Y. P. U. Guides, B. Y. P. U. Manuals, B. Y. P. U. Quarterlies and Magazines, Object and Pledge Charts, Gold-filled Pins. Celluloid Pins and other supplies for the young people, such as B. Y. P. U. Pennants and Arm Bands. Equip your Union with the necessary books, literature and paraphernalia.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The SUNDAY SCHOOL LESSON Commentary FOR 1940**

Once more the National Baptist Sunday School Lesson Commentary is on the market for 1940. The price is $1.00 per copy, postage paid. It contains all the lessons for 1940, with the authorized and revised versions; it has helps for many departments in the Sunday School. It should be in the hands of every pastor, superintendent and teacher. Bible students would do well to get one. It contains the subject and text of all the lessons for 1941.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Woman's Missionary Society LITERATURE**

The Woman's Home Mission Guide, price 15 cents; Y. W. A. Guide, 15 cents; Shepherd Boy's League Guide and Girl's Auxiliary combined, 15 cents; Starlight Band, 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Hope Magazine**

PUBLISHED MONTHLY

No better publication can be placed in the hands of women who are doing mission work and interested in the Fireside School development than Hope Magazine, published every month in the year, price 50 cents a year. It contains helps for every department of Woman's Mission Society Organizations, as well as suggestions for religious entertainments. For more than fifty years this Magazine has been an invaluable help. It was founded by the late Miss Joanna P. Moore.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## STATE AGENT FROM

(Continued from Page 1)

Security Administration, entitled: The Southern Negro on the Farm. "Farming is both a business and a way of life for half of all Negroes in America."

The census of 1930 shows that there were 882,850 Negro farm operators in the United States. These farm operators were operating farms with land and buildings valued at $1,402,945,799. On these farms were implements and machinery valued at $60,327,856.

**Tenant Problems**

Ninety five per cent of all Negro farm operators are in the South and seventy-five percent are tenants. Therefore, with the tenant system being one of the most discussed phases of the nation's economic problems, the Negro farmer is brought directly into the spotlight, whenever the tenant situation is discussed.

Because of the publicity received by this preponderant tenant class of Negro farmer, together with an erroneous notion that intelligence is not necessarily a requisite for anyone engaged in farming it has been observed that there are many people, North and South, who think of Negroes engaged in agriculture as being a down and out group, without a ray of hope striking their economic and social life. Yet, there is a progressive minority group of rural Negroes who are pointing the way to a more satisfying rural life.

A traveler who has never been South of Richmond, Virginia, or a southerner who has failed to be observant, would be surely disappointed if he should expect to see all the Negroes in the South living in dilapidated shanties, with cotton growing up to the door steps, or should expect to see the entire Negro farm family out in the field picking cotton surrounded by abject poverty.

There is a large group of Negroes who own tracts of land and who operate well managed farms. These farms often run into hundreds of acres. On these farm steads are beautiful homes, well furnished, often equipped with many of the modern home conveniences such as electric fixtures, refrigerators, radios, hot and cold water, bath rooms, and in some instances, electric ranges. These farms are inviting, being surrounded with lovely lawns, shrubbery and well planned landscaping.

Out on the farms, in addition to the scientifically balanced cropping system, are to be found pure bred or improved grade livestock, large flocks of pure bred chickens, some times numbering over a thousand to the farm. These same farmers raise hogs to the extent that surplus animals can be sold to nearby markets or even shipped to packing plants in order to have another source of cash income, instead of depending solely on the sale of cotton or tobacco.

Scores of these farmers co-operate with Negro Extension agents in North Carolina and other southern states and are putting into practice recommendations made by the United States Department of Agriculture and cooperating agencies for the improvement of agriculture and rural living.

**More Evidence Of Progress**

Further evidences of the substantial living which these Negro farmers are making may be obtained by visiting the pantry of one of these thrifty Negro farm wives. See there, the stored supplies of canned vegetables, fruits, canned beef, sausage, back bone, and various pork products. These housewives are meeting canning budget requirements according to the need of the size of their families. In these Negro families, where there are from 10 to 17 children the budget calls for over a thousand cans.

While his wife meets the food conservation requirements, the husband is to be found providing for the family and livestock on the farm by growing the amount of potatoes, fresh vegetables, grain, hay and other products as needed.

An increasing number of Negroes in the South realize that their best opportunities are in agriculture. These people, when ever given the opportunity, are earnestly at work to better establish themselves in the rural community life.

Farm tours arranged each summer by Negro county and home agents show almost unbelievable improvements, while thousands of Negro farmers attend state or district meetings to secure first hand information. This shows the Negro farmer is interested in his future status.

It is well to note, also, the attitude of the young Negro as seen in the enrollment of young Negroes in the 4-H Clubs, and the organization of New Farmers of America, both Junior National Farm Organizations.

Such Federal agencies as the Land Grant colleges, private institutions like Hampton and Tuskegee, the Cooperative Extension Service vocational agriculture the Farm Security Administration, and the Negroes' own organization. The National Federation of Colored Farmers that has just closed its tenth annual meeting which was held this year at Lincoln University, Jefferson City, Missouri, all of these agencies and others are making their contributions to increase the number of this progressive minority group of Negro farmers.

In conclusion, we wish for a broader application of those principles uttered by the great educator and statesman of North Carolina, Governor Charles B. Aycock, who said: "I would have all our people believe in the power to accomplish as much as can be done anywhere on earth by my people. The equal right to every child on earth to have the opportunity to burgeon out all there is within him."

## FIELD OFFICERS

(Continued from Page 1)

production. Consumption in 1938 was 28,455,000 bales, leaving a carry-over starting into the 1939 harvest of 21,913,000 bales.

The United States owns practically half of this—principally owned or controlled by the Government. With an estimated total American cotton supply of 26,051,000 bales this year, Secretary Wallace was required under the law to proclaim a 1940 cotton production quota (by acres). He has done so and has ordered a grower referendum on December 9. The quota for 1940 is a continuation of the one for 1939. Therefore, in any event, whatever reduction in production occurs next year must be the voluntary wish of cotton growers who see an improved opportunity in other crops.

It is the right and privilege of every cotton farmer to vote by secret ballot in this referendum on December 9.

Yours very truly,

Jas. P. Davis.

Head Field Officer.

JPD—s

## "BE THRIFTY"

(Continued from Page 1)

residences owned other than on farm property 669,640 at an estimated value of $900,000,000, church edifices 42,585 at an estimated value of $205,782,628, Building and loan Association assets of $1,865,775. Business enterprises, owned and operated by Negroes, further indicate the progress Negroes are making.

**Lack of Thrift**

"The magnificent showing made by Negroes in the acquisition of property and its management is to be highly commended. In spite of this fact, however much is left to be desired. The lack of thrift on the part of the Negroes, especially in the South, is grounded upon the fact that for some 250 years the Negroes were slaves. Following emancipation they were economically dependent upon white men. In this status they naturally excreised and developed little initiative. They relied upon the white men in all economic matters. As the years have passed, however, many members of the race have overcome this handicap and have developed to a marked degree both initiative and the habit of thrift.

"No man except by a gift has ever acquired anything of material value until he has learned to live within his income. Living within one's income requires a number of practices taken together might be properly called thrift.

"Saving a part of one's income must be consistent, continuous and habitual to be entirely successful. It must be planned. A certain percent of the weekly, monthly or yearly income should be set aside and invested in a definite way. There are a number of agencies available through which one may enforce upon himself the thrift habit and at the same time provide a safe means of accumulating savings. Among these are the usual saving accounts in banks, investment in Building and Loan Association stock, purchasing credit union stock, purchasing life insurance which builds up a reserve, buying a home under a long time amortization plan, such as the Federal Housing Administration offers. Any or all of these may be utilized to accumulate savings.

"The Credit Union Plan is one of the most important means for the accumulation of individual savings, as well as building up of financial resources for the establishment of business activities owned and operated by Negroes. I shall not go into this phase of the discussion further than to say that the penny, nickel and dime savings of a low income group may be utilized to build up financial resources of great magnitude.

**Calls On Ministers**

I attended a conference of ministers recently at which one of the subjects for discussion was how to find employment for young colored people emerging upon the threshold of active life. I had an opportunity to participate briefly in the discussion. My contribution was to the effect that Colored ministers and other leaders should not only attempt to locate jobs for their young people but should encourage through accumulated small savings financial resources sufficient to establish business enterprises and thereby create jobs.

"The accomplishments of the last few years in Nova Scotia through cooperation of such low income groups as fishermen, small farmers and miners provide a dramatic example of what can be done. Small savings by individuals have been pooled and today they run into millions of dollars. These dollars are put to work creating business enterprises to serve the participants both in the matter of creating employment and providing consumer goods at great savings.

"If the Colored race in the United States is to meet its full responsibility as citizens, it must learn to save, accumulate savings and invest them in enterprises that will provide financial resources for the race, employment for its members, and a larger participation in the affairs of the economic and political life of the nation."

## Achievement Week Held By Omegas In Atlantic City

ATLANTIC CITY, N. J. (ANP)—A special showing at a local theatre of the screen play "Way Down South," written by Langston Hughes and Clarence Muse was a highlight of the National Negro Achievement Week program, Nov. 12 to 18, sponsored here by Upsilon Alpha, youngest chapter of Omega Psi Phi fraternity. After the film presentation, Raymond G. Robinson, ex-grand basileus, spoke on the life of Hughes, famed poet and author, and an Omega frater.

The week-long celebration began with a public meeting on Nov. 12, with 500 persons present. Speakers included Thomas L. Husselton, executive secretary, Atlantic City chamber of commerce and J. Leroy Jordan, Elizabeth, N. J. On Thursday night, at the local PTA meeting, Nelson H. Nichols, Jr., addressed the group.

The celebration came to a close with two student assembly meetings: one at Indiana Avenue school with Lloyd M. Wright and Milton R. Palmer as speakers, the other at New Jersey Avenue school, James A. Overby and B. Napoleon Gupton, speakers.

Officers of Upsilon Alpha chapter are: Lloyd M. Wright, basileus; James A. Overby, vice basileus; Walter I. Johnson, Jr., Keeper of records and seals; Milton R. Palmer, keeper of finance; B. Napoleon Gupton, keeper of peace; Harry W. Scott, chapter editor and Taymond G. Robinson, chaplain.

## Chicagoans Aim At $1,000 Goal For Red Cross

CHICAGO, Illinois, (ANP)—A group of prominent Chicago women, headed by Mrs. Annie L. Pleasant, chairman, have organized a committee to canvass the Southside in the drive for American Red Cross memberships. They are trying to raise $1,000 by Nov. 30, the date set for close of the campaign. This is the first time in recent years that an organized effort for Red Cross funds has been made in the colored district.

Assisting as co-chairmen are: Dr. Wilehmenia Bowles and Mrs. La Ursa Snelson-Hedrick, who is also committee secretary. Captains of the various teams are: Mesdames Millie Hobson, G. Monroe. A. Blanche Williams, Cora Arnett, Annie E. Oliver, M. E. Bluitt. Emmett Williams, Irene McCoy Gaines, Annie Malone, Pauline J. Lawrence and Dr. Mary F. Waring.

# WHITE BAPTISTS OF S. CAROLINA ALMOST TAKE LIBERAL STAND

### Convention Discusses Justice to Negro But Finally Decides it is a Political Issue

GREENVILLE, South Carolina—(ANP)—Negro baiters and Southern advocates of "white supremacy" were given a decided jolt here last week when the Social Service commission of the 119th annual Baptist Convention, white, submitted a report recommending the granting to Negroes of almost every social, economic and political right they have been fighting for since Reconstruction Days.

The commission urged the Baptist leaders to "seek to accord the Negro his just and legal rights as fast as he is able to assume them," and this recommendation coupled with other equally strong and revolutionary, precipitated a controversy that waged on the floor of the convention and in committee rooms during the entire three-day session.

But when the fireworks had cleared, and the "conservative element" again held sway, the delegates voted to strike out the "controversial section" as being "more political than religious." The section of the Social Service commission report which frankly advocated justice and fair play for Negroes was read by the Rev. W. W. Leathers of Conway, S. C.

The immediate cause of the controversy was the section saying, "Every one agrees that wholesome restrictions should be placed about the ballot but every citizen who is qualified to vote should be permitted to do so. There is good reason to anticipate eventual social upheaval in any commonwealth in which a majority group composing 45 per cent of its population is denied the ballot simply because of its color."

This introduction to the report on the Negro covering over six pages threw the convention into a turmoil. One champion for the adoption of the report said, "To tax the Negro without letting him vote if he is qualified amounts to taxation without representation." Another said: "The South treats the Negro just about as badly as Germany treats the Jews."

Other excerpts: "The Negro has been unjustly discriminated against in our system of public school education. Negroes have not received justice in the provision for their health. . . . It is openly admitted that the Negro cannot obtain justice in our courts."

After deciding that the report was a "political issue" the convention voted to eliminate it. Negroes here declared that for a white Baptist convention to even discuss such matters in an open meeting is a step forward and augurs well for better race relations.

## Missouri Law School Given Bar Approval

ST. LOUIS, Missouri (ANP)—The new Lincoln university law school, opened in September in the old Poro college building, has complied fully with American Bar association requirements and is therefore an accredited institution, it was announced to the Lincoln board of curators last week by Will Shafroth, advisor to the section of the association on legal education and admissions to the bar.

Praising the administration of Dean Louis E. Taylor, Shafroth said he found the library, physical equipment, number of full-time teachers, admission requirements, length of course and number of students "entirely satisfactory" and asserted the institution was not makeshift in any respect.

# Millions of Tons of Sugar Sweeten America's Diet Each Year

## Consumers Guide Points to These Facts

Ring up your grocer some morning and ask him to send you five pounds of carbon, hydrogen, and oxygen atoms, well-mixed, and compounded into something edible and sweet. If he is as smart as you are in remembering your high school chemistry, this won't stump him in the least. Soon will come the delivery boy bearing a bag of sugar.

Give the order to some laboratory chemist, and you might get any one of a hundred different products, all called some kind of sugar, but as different from each other as a file of fingerprints.

Sugars there are a plenty, thanks not only to nature, but also to the ingenuity of the men and women who work with test tubes. Sucrose that comes from cane and beets and from maple sap, everyone knows. Dextrose, from corn starch is becoming increasingly familiar. But other foods can be made to yield their sugars, too. From milk comes lactose. From various types of berries comes mannose. From starchy cereals comes maltose. Scores of other sugars are beguiled from their hiding places by the laboratory G-men—all of them with different chemical make-ups, and different chemical properties.

To the scientist sugar is so many atoms of carbon, hydrogen, and oxygen built into a definite structure. Nature takes these atoms, shuffles and re shuffles them, and with the help of sun, wind and rain, makes sugar.

What man has learned to do is not only to extract sugar from the plants where nature has hidden it, but also to improve on nature by increasing the percentage of sugar found in the beet and in other sugar sources. Furthermore, men have learned how to split on sugar into two.

**This they have done, for example, with sucrose.** Sucrose is a sugar with a dual personality. Given the time, the place, and the right conditions, it can be divided into 2 separate and distinct sugars chemically different from each other.

One of the simple sugars that can be derived from sucrose is dextrose. The other is a sugar whose chemical name is levulose, sometimes known as fructose.

Separating this dual personality sugar into its 2 parts is done in the

(Continued on Page 16)

## Census Bureau Press Staff Adds Negro Consultant, Stenographer

WASHINGTON, D. C.—Two colored persons were named to the Washington staff of the Bureau of the Census this week by Roscoe Wright, the Bureau's Chief of Public Relations. They are Edward Lawson, Managing editor of OPPORTUNITY Journal of Negro Life; and Mrs. Lois P. Brock of Denver, Colorado. Mr. Lawson will serve as a consultant on the Census press staff, with Mrs. Brock as his secretarial assistant.

In announcing the appointments, Mr. Wright indicated that a special effort will be made in the 1940 Census to obtain com-

# *Pres. Leon Harris Addresses Church Group*

## NATION GROWS BIG CROPS

### Chicago Tribune Article Clipped for Information

Higher crop yields in 1939 more than offset a smaller planted acreage of all crop land, causing the year's production to exceed that of the predrouth year of 1923-'32 by about 4 per cent. This was shown yesterday in the final 1939 crop report of the department of agriculture. Total production was about 1 per cent smaller than in 1938.

The report showed crop land harvested this year totaled about 325 million acres, the smallest in almost a quarter of a century, compared with an average of about 354 million acres during the predrouth years.

**Crop Estimates Raised**

The government made upward revisions in its Nov. 1 estimates of the 1939 wheat, corn, flaxseed, and soy bean crops. The soy bean harvest was the largest on record, according to the report, as was the harvest of all types of tobacco.

Altho the corn acreage harvested was the smallest since 1898, production was 2,619,137,000 bushels, the largest with one exception since 1932. The Nov. 1 estimate was 27 million bushels smaller. Last year's revised harvest figure was 2,562,197,000 bushels, and the average crop in the 10 years, 1928-'37, was 2,309,764,000 bushels. The 1937 harvest of 2,651,284,000 bushels was the only one in the last seven years which exceeded the 1939 harvest.

**Hybrid Corn Boosts Yield.**

The department said the yield of corn was 29.5 bushels per acre, the best since 1921. Last year it was 27.8 bushels per acre, and the 10 year average was 23 bushels per acre.

Record yields of about 50 bushels per acre in Illinois and other big commercial states more than offset lower yields elsewhere. Hybrid corn has been planted extensively in the corn belt, and is credited with a large part of the increased yields there.

The final estimate of soy bean production was 87,409,000 bushels, up nearly 8 million bushels from the Nov. 1 estimate and by far the largest crop on record. Last year's revised crop estimate of 62,729,000 bushels held the previous record.

An indication of the rapid growth in importance of soy beans was found in a comparison of the 1939 harvest with the 10 year average crop of only 21,833,000 bushels.

Currently soy beans bring about 18 cents a bushel more than wheat in the Chicago market.

The soy bean yield per acre was 18.2 bushels, compared with last year's 16.8 bushels and the 10 year average of 14.7 bushels per acre.

**Wheat Estimate Raised**

Total wheat production for 1939 was placed at 754,971,000 bushels, up 15,000,000 bushels from the Nov. 1 estimate and slightly above the 10 year average of 752,952,000 bushels. Last year's crop was 931,702,000 bushels.

Winter wheat output was placed at 563,431,000 bushels, and spring wheat output at 191,540,000 bushels.

The largest tobacco crop in history

*Was Host*

PROF. SHERMAN D. SCRUGGS, President of Lincoln University, Jefferson City, Mo., who was host to the National Convention of Colored Farmers held in Jefferson City last October.

**This cut should have appeared in the last issue of The Modern Farmer, but though an oversight on the part of some one, the cut of Mr. Washington was sent in and was used with the name and wording of Prof. Scruggs under it.**

**The Modern Farmer apologizes to Prof. Scruggs for this error, and to the readers for the wording under the wrong cut. It takes pleasure however, in making the correction and in presenting to the readers of the Modern Farmer and of the National Federation of Colored Farmers, the host to the last Convention.**

## THE 1940 CENSUS UNDER WAY

### Provisions to Measure Negro Business Enterprises

Washington, D. C.,—Is Negro business improving, or is it on the decline? How many stores in the United States are Negro-owned? How much money passes over the counters to colored shopkeepers? How many persons are employed by Negro tradesmen, and how much money do they earn?

Answers to these and hundreds of similar questions are expected to be made available as a result of the 1940 Census of Business, which will start on January 2.

This Census, which will precede the larger Population Census by several months, will cover retail and wholesale trade, service businesses construction, and the operation of sales finance companies. Its results will be particularly interesting when compared with figures obtained in previous Business Census enumerations, taken in 1929 and 1935.

In 1929 there were 25,701 retail

(Continued on Page 16)

## POOR SOIL MEANS POOR PEOPLE

### Dr. R. M. Evans' Article Administrator AAA

Between two and three million farm families in the United States, live in poverty.

They are lean—these people—not necessarily in body, but in opportunity.

In 1929, according to the census, approximately 1,700,000 farms, or about 30 percent of the total number, had gross annual incomes of less than $600 a year. After deducting the costs of running these farms, the average family probably found itself with less than $300 of net income. That's not very much for a family to get along with for an entire year.

They are poor—in a land of abundance, in a land where at times the abundance is almost wasteful.

Some of them, of course, as in the case among all peoples and in all times, are poor because poverty and dimness and defeat were their inheritance when they were born. But most of these families suffer, not from a heritage of weakness, but from conditions that can be remedied.

They are poor, it may be, because they are trying to farm poor land. Or it may be that their farming practices are bad. They may have worn out the soil, or they may have let erosion eat great washes and gullies into their farms. And, again, they may have asked the land to carry too great a burden of people. as it might under a system of tenancy or sharecropping. And, finally, all of these farm families share with other farmers the hardships attendant upon low income.

The poverty-stricken fringe of our farming population, then, needs opportunity. The Agricultural Adjustment Administration program does much to supply the opportunity. Where the soil is depleted of its fertility, the program provides means of building it up with lime, with fertilizers, and most of all, with soil-enriching crops such as the legumes. The soil-improvement work on these farms is closely related to the rehabilitation program of the Farm Security Administration.

The Department's conservation program provides the means by which erosion may be controlled. It has a definite plan to raise the income of the farmer by making less and less necessary the excess production of farm products which has usually resulted in unprofitably low prices. These objectives in a newer and wiser agriculture are being reached Agreement with these objectives would be futile without having the means to achieve them. The dollar which goes from the AAA to the farmer and ranchman does this work before it can be spent.

There are poor people in the cities too. They have been helped by the free distribution, through relief channels, of surplus farm products. But the basic need of the poor who live in cities, like that of the poverty-stricken farmers, is opportunity. They need and they want work. They

(Continued on Page 16)

## "Co-operation Is Good Religion," He Declares

The following address, recently delivered to an Illinois church group by Leon R. Harris, president of the National Federation of Colored Farmers, emphasizes the moral values of cooperation. Because so many requested copies of this address, it is printed in full here.

Today, seventy-five yeares after our emancipation from slavery, the Negro group in the United States. is still sojourning among the mire and the muck of things. The largest minority group in the nation, we have the largest percentage of illiteracy, the largest percentage of poverty per capita. In proportion to our percentage of population, we have a smaller number of homeowners than any other group. We have not a single corporate or cooperative enterprise engaged solely in production. Our biggest business is farming, but this business is carried on by individuals, working alone. Next comes our insurance business, which like our banking business, does not produce anything tangible, anything people must buy, use, and wear out. As a group we are just a bunch of individualists. Like all individualists, we are exceedingly skeptical and selfish. We are the most disorganized and the most unorganized group in the nation. We have more leaders than any other group and we have less leadership than any other group.

I am not attempting to paint a dark picture. I am simply stating truths and facts. There is a bright side. We have the greatest athletes in the world. We have the greatest singers in the world. The greatest scientist in the world is a Negro. The greatest specialist on bone fractures in the world is a Negro doctor. But friends, this success which has brought honor and commendation to our race, has been achieved by individuals, often working and struggling alone. In fact, the Negro group seldom discovers how great, how wise, or how good a fellow-race man or race woman may be. But when the white race discovers these rare individuals of our group, then, and only then, do we shout praises for them from our housetops.

In this brief address I am not going to attempt to give the reasons why we are where we are, as a

(Continued on Page 2)

## BOOST IN FARM OUTPUT SPURS TREK TO CITIES

### TECHNICAL ADVANCES CUT NEED FOR RURAL LABOR

A bushel of corn or a bushel of potatoes can be produced on American farms with 20 per cent less labor than was required 25 years ago. Oats production necessitates 37 per cent less work than in the early years of the century.

These findings were announced yesterday by Charles E. Miner. Work Projects administrator, at, the conclusion of a four year

(Continued on Page 2 Col.. 4.)

## "Co-operation Is Good

(Continued from Page 1)

group. In fact, most of us know why. We have had to contend with race prejudice. Our enemies have placed burdens upon our shoulders and stumbling stones in our pathway. We have been victimized from within the race and from without the race. Our struggles have well nigh exhausted our energy and our patience. Only that rare faith with which we are endowed, a religious faith, a faith in the God of our forefathers, has buoyed our hope, strengthened our will, and enabled us to exist and struggle on. That faith we will keep.

There is a way out of the mire and the muck, but there is only one way out. There must be group action, the group must move forward as one. This means working together. But even working together can get us nowhere unless we have an objective in view, unless we have some purpose to accomplish. Working together without an objectice, we are like a mass of earthworms imprisoned in a post-hole. We struggle, but remain where we are.

Our objective and our purpose should be to work together for good. This method of working together has been defined as cooperation. Today, "COOPERATION," should be the biggest word and the best understood word in the Negro's vocabulary.

Cooperation is not a gospel of ifs-and-ands. Cooperation is the gospel of unselfish service. "If you'll help me, then, I will help you," is not cooperation. Cooperation is, "You help me, I help you," we rise together.

True and honest cooperation has brought salvation to all backward and oppressed groups who have practiced it. It is the most perfect democracy. The cooperative organization begins out among the people, not in the national center. It seeks the good of the neighborhood in which it begins. People who know one another and whose problems are the same, work together for their own interests. It is a union of the people about their own homes, neighbors working together to get the things they want and need. Working together for good.

Where can you find your opportunity, your opportunity to get out of the mire and the muck of things, your opportunity to cooperate with your fellows for the common good? That place is where you are, in your own community.

I have the honor of heading the largest Negro organization in the United States that is founded upon the gospel of cooperation. "Earn more," we demand, and our members plant their crops at a certain time, their livestock is farrowed at a certain time. Crops and livestock are produced together, preserved and marketed together, cooperatively, and they get better prices for their products because their products are uniform, they are graded to comply with marketing rules and regulations, they sell together and they earn more because they work for their own interests, all for one, one for all. They earn more.

"SAVE MORE," we demand, and our members purchase their home supplies and their farm supplies together. They take advantage of wholesale prices. They borrow together and have the advantage of lower interest rates. They save more.

"HAVE MORE," we demand, and our members depend upon their own horse-sense, upon their own ability. They learn independence. They get out of the "GIMME HABIT." They help each other erect their homes, piece their quilts, build their fences They have more because they give to each other, not to the other fellow who wants to live off them. They have more.

"BE MORE," we demand, and our members meet together, discuss their common problems and find the right solution. If the school is bad, they improve it. If the community church is weak, they work together to give it strength and power. If their is a cess-pool of corruption and evil in the community they work together to blot it out. They become better citizens and better Christians because they learn to love each other better. They gain all through cooperation.

Friends, you are part of the group sojourning in the mire and the muck of things. Do you want to get out? Do you want our racial group to get out? Then practice cooperation. Study cooperation. Forget your petty differences and organize a cooperative society. Establish a credit union, which is cooperative banking. Establish a consumers cooperative group and purchase a large percentage of your living necessities through your organization. Stop waste, and carelessness and extravagance. Help your group get rid of the stigma of poverty, of selfishness, of keeping each other down. Work together, and work together for good.

The statement is often made that our group cannot work together, that we cannot cooperate. Every little group of Negroes who have established and erected a church edifice, or, who have built and furnished a parsonage, give the lie to that statement. For if we can build churches we can build factories, we can own farms and marketing centers, we can improve our economic condition if we will. Yes, through cooperation we have erected many churches, we have prepared the way fairly well for the future life. But it is just as needful and just as Christian that we take steps to prepare for the present life, and for the lives of our children.

The first and the most perfect cooperative society was founded by Christ himself. The members were Christ and the twelve disciples. Each had his appointed task and each worked for the good of all. Good cooperation is the best Christianity I know of.

Last night I re-read the Eighth chapter of Paul's letter to the Romans. The leaves are loose in my Bible at this chapter because it has been read so often by myself and the members of my family. One verse from this chapter hangs on the wall of my home, above the radio. From this verse I have chosen the subject of this address. "All things work together for good to them that love God." A mighty statement! A glorious promise! Such a firm conviction emanating from the soul of a man who had tried everything in the pursuit of happiness and then had found that nothing but good would bring happiness.

Cooperation brings happiness because it is good. "All things work together for good." "To them that love God." And friends, love for God is so void, so empty, yes, so impossible, unless the fellowman is included.

You remember the great poem by Leigh Hunt, "Abou Ben Adhem."

Because Abou loved his fellowmen his name led all the rest. Yes, and he who loves his fellowman, who is ready and willing to serve his fellowman, who will work with his fellowman for good, yes his name shall be written on the pages of the Angel's book, recorded in heaven and in the hearts of men.

You may ask, "How may the cooperative movement be started in a community?" Usually it is started by some one individual who has become endowed with the spirit of service. Such an one is often enabled to revolutionize local economic conditions. That spirit, I am certain has entered into the heart of some one person in this audience.

I have said often in this address that we are dwelling amidst the mire and muck of things. Now I want to tell you what the poet has said. He says:

"Within the mire and muck of things.
hTere always, always, something sings."

What is it that sings to us, here where we dwell? Here in the mire and the muck of things? The Spirit of Hope which will not let us become discouraged, the spirit of Faith that bids us press forward, the the spirit of Love, which casteth out all fear.

Let us hear these songs as we ever strive, to work together for good.

## CENSUS BUREAU PRESS STAFF ADDS NEGRO CONSULTANT, STENOGRAPHER

(Continued from page 1)

plete coverage of minority groups within the United States. In some previous Censuses members of such groups were found to be reluctant to give detailed information about themselves. Some feared that the information would be disclosed to the general public, others that is might be used against them in case of a war draft or other general emergeney. Mr Lawson will stress the confidential nature of all Census information, and the extraordinary precautions taken to prevent its misuse. He will also distribute informational material prepared by the Census Bureau to colored persons throughout the conntry.

For two years, before he joined the staff of OPPORTUNITY, Mr. Lawson was employed as a Special Assistant in the Information Service of the Works Progress Administration. Mrs. Broek was formerly employed by the Supreme Camp of The American Woodmen, the largest Negro Fraternal insurance company; and for eighteen months worked in the Denver County Court, Colorado.

## BOOST IN FARM OUTPUT SPURS TREK TO CITIES

(Continued from Page 1)

survey by the WPA's national research projeet.

The report attributes to the new technology in agriculture an important influence on the migration from the farm to the city. Tractors and other mechanical equipment, the automobile, and improved farming methods have contributed to lessening the labor required, the investiators found.

### Production Rise Cited

"As use of these methods and aids spread," the report said, "the average workman on the farm was able in 1930 to produce 150 per cent more than he could in 1870. The output per person working on farms increased 37 per cent from 1909 to 1929.

"This increased productivity made it possible for 75 per eent fewer persons to produce an agricultural output 27 per eent greater in 1929 than in 1909.

"Increasing use of the combined harvester-thresher has displaced more than 100,000 of the 200,000 migratory workers who formerly found employment in the wheat belts."

There was a vast migration from the rural districts to the cities during the depression, according to the report. But in the same period, it explained, a horde of city workers migrated to the farms to look for work.

### Farm Exodus Continues

Young men and women continue to leave the farm, says the report Most of the men who migrate to the city are between 20 and 30 years of age. The report observes:

"The nature of the conditions under which these persons connected with agrieulture live and the economie pressure to which they are subjected determine their status as a reserve for industry. Some of them, those who now are growing up in a rural America which has no economie place for them, are for industry a potential reserve.

"Others, those who have made the transition to the cities,, oscillate between employment and unemployment in the urban markets as demand dictates, sometimes returning to the farm between periods of employment. Still a third group, thru continuation of adverse conditions in industry, are stranded on subsistence farms. These groups constitute a substantial proportion of those who now represent our unemployment and relief problems."

# BUSINESS LEAGUE BODY IN MEMPHIS PLANS CONVENTION

## R. E. Clay Of Nashville In Session Of League's Steering Committee

M E M P H I S —(ANP) At Monday's closing 1939 meeting of the Steering Committee of the National Negro Business league, held here in the district office, Universal Life Insurance company, first order of business was selection of dates and the city for the 1940 League convention.

Detroit, Mich., was chosen the convention city and the dates, Aug. 28-30 inclusive. The executive committee meets Aug. 27. Dr. F. D. Patterson, president of Tuskegee institute and chairman of the steering committee, presided at the meeting.

Other committee members present: B. G. Olive, Memphis; Carlton Gaines, Detroit and Joseph Gaddes, New Orleans. National officers attending were: Dr. J. E. Walker president NNBL.; R. E. Clay, general organizer; J. H. Coates, regional vice president; M. S. Stuart, member executive committee; Dr. J. B. Martin, regional vice president and Albon L. Holsey, League secretary.

A recommendation to merge the League's official publication NEGRO BUSINESS and SERVICE magazine, Tuskegee publication devoted to workers in service occupations, was presented by George W. Cox, and approved. An introductory subscription drive, with special rates to accredited League members, was announced under the merger. Present circulation of SERVICE Magazine is near the 10,000 mark. Circulated nationally it is widely read by waiters, railroad men, cooks, domestics, and hotel employes.

Announcement was also made at the steering committee meeting that the Booker T. Washington commemorative postage stamp will be issued on April 7. Dr. Washington was the founder and first president of the National Negro Business league and it is planned to have memorial programs in League cities throughout the nation honoring Dr. Washington on April 7, when the commemorative stamps will be issued by the U. S. Postoffice Department.

## HANGS HEAD FIRST IN WELL TO RESCUE HIS HUNTING DOG

BOONVILLE, Ind.—While hunting yesterday Roscoe Leslie's setter dog fell into an old uncovered well. Leslie's companions held his feet, let him down head first into the well, and he pulled the dog out unharmed.

# MRS. F. P. COOPER, ORIGINAL JUBILEE SINGER, SUCCUMBS

## Alumna of Fisk Had Taught in Memphis Schools 59 Years

M E M P H I S— (ANP)—Mrs. Florence P. Cooper, 83, dean of all Memphis teachers from the standpoint of service, died Thursday at her residence, following an extensive period of illness.

Mrs. Cooper received her education at Spelman seminary, Atlanta, and Fisk University where she was a member of the original Fisk Jubilee singers who were presented to Queen Victoria. She was a teacher in Memphis public schools for 59 years, retiring on a pension in 1934. Hundreds of young men and women will remember her for the good counsel, advice and assistance when they started out to teach.

Aside from her teaching duties, she pioneered in fraternal, civic, and church work, being an organizer of the Eastern Star in Tennessee and founder of the Orphans and Old Ladies home. She was a close friend and adviser to such noted women as Miss Nannie Burroughs, Mrs. Mary McLeod Bethune and Mrs. Church Terrell, of Washington, D. C.

Mrs. Cooper worked ardently in the church. She was a member of the First Baptist church of Memphis, an outlet of the great Beale Street Baptist church, in which her mother, as a slave, collected more money than any other member toward building of the fine edifice.

During the 54 years that she spent at one school, the last years were spent as assistant principal on retirement.

She was married to Edward Cooper for 63 years, her golden wedding celebration in 1926 being an outstanding social event in the Bluff City.

Surviving the deceased are a husband, Edward Cooper; Mrs. Pearl Hodges Bradley, Chicago, Ill., Mrs. Jessie Wilson, New York City, nieces; Mrs. Irene Patton, Chattanooga and Mrs. Jessie Brown, Mrs. Martha James, Omaha, grand nieces; and Robert Hodges, Cleveland; J. Edgar and Arthur Q. Hodges, nephews, Chicago, Ill., Mrs. A. B. Capshaw, Mrs. Loudella Dawkins, Memphis; Mrs. Elmo Capshaw, Chicago, cousins.

## OVER 150 TYPES OF JOBS OPEN TO BOYS IN CCC

More than 150 different types of employment will be available for young men who enter the Civilian Conservation Corps during the January enrollment period, according to Leo M. Lyons, executive secretary of the Illinois Emergency Relief Commission.

Applications for the January enrollment are now being taken by the commission at its certification offices at 1257 North Paulina street

"Each young man who enters the CCC is employed by the federal government and is assigned to some project which is designed to preserve our natural resources. As much of the work on these projects is specialized, he is frequently given vocational training. Thus, through entering the CCC, he may receive training in Diesel engine operation, telephone line construction, surveying, welding, or in some other technical field.

"Even if a young man in the CCC is not assigned to technical work, he may, if he wishes, obtain specialized training."

## EDITORIAL

FROM THE BIBLE:

"When they had heard the king, they departed; and lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was." —Matthew 2:9.

### PAGAN PRAYER

**Alice Brown**

You that uphold the world
Uphold me.
You that light the sun,
Make me see,
Bear with me my sorrow:
Help me meet the morrow,
Patiently.

O'er the road we may know not
To end we must fear not,
Guide us, O mighty One!
March with us, heroes!

### WHEN IT COMES,—WHAT?

Prof. John B. Canning of Stanford University, California, says that a migration of Negro workers from Southern cotton fields much more terrible than the migration from the dust bowl, is coming, and he predicts trouble in the areas to which these migrants move. Hostile receptions and exploitation of these migrants will result, he says, unless Congress can be persuaded to adopt preventives.

We believe that what should be done is everything possible to prevent the migration. The cotton belt is not a dust bowl. It is still possible to obtain food and shelter in the cotton belt. Why should thousands be forced to leave a section of the country where they can live and seek subsistence in section, where their labor is neither needed or wanted? Why force them to jump out of the frying pan into the fire?

Yes, this migration should be prevented. It can and must be prevented. These Negro sharecroppers, tenant farmers and farm laborers were born in the South—the South is their home—and home is the best place for them. And their home folks and neighbors, those who know and understand them, are responsible for their welfare.

How can this migration be prevented? First, white Southern planters, who own the most land and the best land in the South should be persuaded to sell some of it. Thousands of big land-owners in the South could sell enough from their holdings to provide farms of from twenty to forty acres for thousands who now need farms and the sellers would still remain big landowners. And they, and their communities would be much better off in the end. The federal and state governments should cooperate and provide a way that would enable these farmers to pay for their farms.

Secondly, state owned land in the South should be sold to these homeless and landless farmers. Much of this land, now lying idle, would support families and return something to the state.

Thirdly, a modern farm should be established and operated as a necessary adjunct to every Southern rural school. These farms would provide some employment for young men and women, and they would encourage many to stick to the farms for their livelihood, who, without such encouragement, might become floaters and migrants.

And last of all, it may be necessary for the federal government, through the Farm Security Administration, to adopt the proposal recently submitted by the Southern Tenant Farmers Union, and establish some labor camps near industrial centers to absorb some forced into migrancy Such camps, however, should not become permanent fixtures. Their very establishment would proclaim the fact that the South was unable to take care of its own, and as long as they were in existence the progressive South would be ashamed of them, and all true Southerners, white and black, responsible for them, should be ashamed of themselves.

The South can stop this migration if it will. The South should not let down its own citizens.

### FOR JUST HEALTH LEGISLATION

The National Federation of Colored Farmers will join with other national organizations under the leadership of the National Association for the Advancement of Colored People, to support the fight to insure equitable distribution of Federal funds in proposed health legislation due to come before Congress in January.

In a letter to Mr. Walter White, Secretary of the N. A. A. C. P., Leon R. Harris, president of the NFCF writes:

"Our organization will gladly and willingly co-operate with you. We have been especially interested in the proposed national health program, realizing that such a program should be of vital interest to Negro farmers. Our past two annual conventions have adopted resolutions favoring free or very low cost medical service to tenant farmers and sharecroppers."

The bill to provide federal aid to public health as now written contains no safeguards against discriminations. It must be amended to provide these safeguards. As usual, such an amendment will face opposition. Members of the NFCF are urged to support this fight for just federal health legislation.

### CALIFORNIA'S FARM FACTORIES

The time is coming when the farms of the South will compete with California's farm factories for the northern and eastern fruit and vegetable markets. Southern farmers who desire mostly to provide a comfortable living for their families, will find themselves competing against farm industrialists of the Far West who desire mostly to get or stay rich. When the fight starts, it will be a hard one.

Reduction of cotton acreage will compel Southern farmers to produce more vegetables, grain, meat and fruit. The surplus will be marketed and the nearest markets are those now dominated by California producers.

The fight will not be won unless Southern farmers will be fighting will have to fight together. The opposition will be powerful. But the Southern farmers will be fighting together for more than just markets and they will win in the end. They will be fighting for the existence of the American farm,—the family-size farm. They will not be fighting other farmers, but industrialists, who produce only to sell and to profit financially. Let the battle start.

### NO GOVERNMENT LOANS TO "ONE-CROPPERS"

Secretary of Agriculture Henry A. Wallace has announced that hereafter farmers who will not raise their own garden truck, meat and milk, will not be able to get any loans from the Federal government. The one-croppers, the few who are still with us, will have to seek financial help somewhere else.

This is a good decision the Secretary has made and it will meet the approval of all good citizens. Farmers who are unwilling or too indolent to help themselves progress and prosper deserve no help from the government or from any other source. We hope the ruling will affect the big one-croppers as well as the little one-croppers. Plantation owners who will not give their sharecroppers and tenants opportunity to raise gardens and keep a cow and some chickens, and big tobacco, rice, wheat and sugarcane planters who are virtually one-croppers, should also be penalized.

### A GOOD FARM SERMON

The annual Farmer's Sermon, delivered by the Rev. J. P. Washington, pastor of the Colored Christian Church, of Jefferson City, Mo., at the tenth annual convention of the National Federation of Colored Farmers, will be long remembered by those who were fortunate enough to heart it. It was an unusual sermon, one of those heart-to-heart, man-to-man discourses that inspire and bless. "Paul planted; Apolla watered; but God alone giveth the increase." Every farmer who heard it became a more thoughtful farmer, a more hopeful farmer, a better farmer. For despite the fact that we of today know more than our fathers knew, can farm better than our fathers farmed, are receiving help and assistence from the government and from sources that never helped our fathers, we are still dependent on the One who alone can give us success and prosperity.

"God alone giveth the increase." A thought for farmers to always remember.

### YOU AND THE CENSUS

When the census man comes to your home early in the New Year, tell him the truth—all of the truth—and nothing but the truth. The information he wants and what the government wants from you will never be published or made known to anyone who might use it to harm you. What you, and what all the other householders of your Group tell the census man, when it is all classified and figured up, will give our record for the past ten years. On that record we will have to stand during the next ten years. So it is very necessary that we make correct statements.

No one will see the statements you make except employees of the Census Department and these employees have been sworn to secrecy. They are responsible and they know they will be punished severely if they tell anything they may learn while taking the Census.

If we give all the true facts we will know exactly what progress we have made during the past ten years in agriculture, business, education and along all lines. We will know just how many of us are U. S. citizens.

*TO YOU AND YOURS—*
*A MERRY CHRISTMAS—A HAPPY NEW YEAR*

*BETHLEHEM*

*The Wise Men brought rich gifts,*
*Back in the days of old,*
*And laid them at His feet—*
*Myrrh, frankincense and gold;*
*These precious gifts the Wise did bring;*
*Fit tribute to the Baby King.*

*Men of the forceful, conquering Race;*
*Masters of air and land and sea;*
*As did those Wise Men,—seek His face,—*
*And sing this spiritual with me:*
*"Wasn't That A Mighty Day*
*When My Jesus Christ Was Born?—*
*Yes, Lord."*

*The Farmer-Shepherds came,*
*But naught had they to bring,*
*Save snatches of a song*
*They'd heard the angels sing,*
*And faith and love, but we are told,*
*Such gifts are worth much more than gold.*

*O heavy-laden, sun-charred Race,*
*He too has felt your secret pang;*
*As did those Shepherds—seek His face—*
*And sing the song our forbears sang:*
*"Wasn't That A Mighty Day*
*When My Jesus Christ Was Born?—*
*Yes, Lord."*

## PARK MOVES 50-YEAR OLD TREE

A big American elm which has become sort of settled in the 50 years it has stood on the west shore of Burnham park lagoon left its old home today. A squad of park district tree experts moved the tree, 40 feet high and 72 inches around, to the west end of the new park administration building near soldier field. Privately done, it would be a $1,000 job.

## $5 Gold Coin, Minted In 1851, Is Sold for $1,000 at An Auction

New York (Special)—A $5 gold coin minted in California in 1851 by Schultz and Co., was sold for $1,000 today at an auction of United States gold coins. The coin was said to be one of the best of the four or five specimens known of that privately minted type. It was bought by the Stack's coin concern for a client.

# NEWS OF INTEREST TO MEMBERS OF THE N. F. C. F.

## THE CONVENTION THAT MADE GOOD

### Expressions From Friends and Supporters of the N.F.C.F.

"I received this morning through Honorable Jewell Mayes, Commissioner of Agriculture of Missouri, a copy of resolutions adopted by your National Federation. They are so constructive that I sent them over to Secretary Wallace's office.

"We appreciate the strong support of your organization and that of the Negro farm operators in the entire country for our farm program. It was a real privilege to be at your convention and experience the fine spirit that dominated it."

Layfayette Patterson,
Special Assistant to Administrator, AAA, Washington, D. C.

**From Prof. L. B. Cash, President National Ass'n of Teachers of Vocational Agriculture.**

__"I wish to assure you that I voice the sentiment of the Vocational Agriculture staff of the U.S. A., Colored, when I say that we are with you to the end that Negro farmers may share more freely and equitably in the profits from the soil of our great country.

" I read the August copy of the Modern Farmber with great delight. My wife joins me in wishing that you may be permitted to serve your nation and our race in particular, for a long time."

**From Hon. Jewell Mayes, Commissioner of Agriculture, State of Missouri:**

"May you continue to march forward to ultimate victory, to that day when all of the 900,00 Negro farm operators in the United States may have a comfortable home and happier surroundings than they have today.

"I have adopted the doctrine of your national convention, which is in keeping with what I have long believed,—namely, that when you solve the economic problem of the colored man and his family that it will be comparatively easy to solve many other problems that have as yet remained unsolved and unsettled.

"I heard more real and original oratory during the two visits I made to your convention than I have heard from anybody in any organization for months and months and months."

**From Hon. Culbert L. Olson, Governor of California:**

"There are a number of colored farmers in various sections of our state but they are not organized. I am heartily in accord with the purposes of your organization, and wish you continued success."

**From Hon. Arthur Capper, U. S. Senator from Kansas:**

"Dear Mr. Harris:

"May I ask you to be good enough to convey my warmest greetings to the tenth annual convention of the National Federation of Colored Farmers. The growing interest of our Negro citizens in agriculture and the constantly increasing number of colored men who are engaging in farming are matters of much satisfaction to me. Through their activities on the farm they are not only improving greatly their own economic situation, but they are making a valuable contribution to the advancement of their racial group and to our citizenship as a whole. Your movement is a fine thing and it is my desire to encourage you in every way I can. I hope you may have a most successful convention and that out of it will come inspiration for the continued development of the splendid program to which you are devoting your energies. Please let me know whenever I can be of service."

**From Amos 'N Andy, Beverly Hills, Calif.**

"As per copy of letter, a pair of registered Hampshire pigs will be delivered on your order. We wish to take this opportunity of expressing the hope that the convention this year will be most successful from both an artistic and educational standpoint.

With kind regards to you and the Federation as a whole."

**From Dr. L. T. Boddie, Forsyth, Georgia:**

"Dr. W. F. Boddie is deeply interested in the deliberations of the convention. The issues involved have engaged his thought and energy over a period of many years. Ill and unable to attend, he greets you and hopes that our discussions ll be marked by candor and courage."

**From Dr. Charlotte Hawkins Brown, President Sedalia Institute, Sedalia, North Carolina:**

"I am in hearty accord with the program of the National Federation of Colored Farmers and feel that you are headed in the right direction. The future of the Negro race depends more largely on the industry that you represent than any other. More power and success for the organization."

**From President J. W. Holley, Georgia Normal and Industrial College, Albany, Georgia:**

"I assure you of my deep interest in the Negro farmers of America. You are cordially invited to hold your next meeting here in Albany as a guest of our Institution."

**From Prof. H. D. C. Douglass:**

"I trust that the meeting will be successful. You will have my full cooperation in the future as in the past. Best wishes to the farmers.

**From National Bar Association:**

"The National Bar Association composed of the Negro lawyers of the United States, extends greetings to you. We have always known that organizations such as yours, representing the Negro farmers of the Nation, have, are and will continue to do a good job toward promoting the economic welfare of the Group and making America a better place for all citizens, regardless of race, creed or color. Your Unit represents the biggest business of the race. The changing conditions of the times and the forward movement of the machine age, make it imperative that you keep abreast with these conditions. Your Tenth Annual Convention assures us that you have accepted the challenge and are doing your part."

Sydney R. Redmond, President.
John A. Davis, Regional Director.
George W. Evans, Secretary.

## GREETINGS FROM FRIENDS AND MEMBERS

**From the New Farmers of America, By S. B. Simmons, Executive Secretary.**

"I take this opportunity to extend the sincere greetings of the New Farmers of America to our National Federation of Colored Farmers, Inc.

We regret very much that thi. expression of appreciation of the fine work our organization is doing under your leadership is not made in person. We wish to assure you that efforts will be made to have a large number of N. F. A. members present to become better acquainted with the fine movement which is being carried out by the National Federation of Colored Farmers.

It is our sincere hope that a large number of colored farmers throughout the Nation will become identified with your organization.'" '

**From Mr. W. N. Elam, Washington, D. C, Federal Agent for Agr. Education.**

"I wish you and your organization every success. I believe it is rendering an excellent service.

**From D. F. Hall, Vice President, NFCF, State of Alabama.**

"It is greatly to my regret that I will not be able to attend the Convention on account of existing conditions. The farm crops in general throughout this entire section of Alabama have been almost a complete failure. Older farmers say that the most complete failure in many years.

Notwithstanding this, the Butler County Unit of the N. F. C. F. is still on the firing line and we mean to press our claim. We have discovered that if there has ever been a time when the colored farmer of Dixie needed to practice cooperation, that time is now. The government has put a ban on our great king, Cotton, their landlords have withdrawn from them and abandoned the farms. This leaves many sharecroppers and tenant farmers with the bag to hold. We are praying for the continued success of our great organization—the NFCF."

**From B. F. Pierce, President, Progressive Union No. 104, Halcyon Dale, Georgia.**

"We are doing fine at present It took a long time to convince the people they should be members o the Unit. We have got the teachers and the preachers going our way now, and we have a strong Unit.

"We have organized a hog club and plan to purchase some pure brew stock and raise some good hogs and put them out among the members and get our community filled with pure bred hogs. Then we are going to do the same thing with cows. By this time in 1940 we will have something worthwhil looking at.

"My wife has gotten the other women interested in raising chickens and turkeys and we will be or a boom soon.

"I am calling on the members fo their next annual dues. They are trying to get it up. Our Unit ha put new life into our community and I hope by this time anothe year we will be improved in growth and finance."

**From Rev. William Freeman, First Vice President, N. F. C. F., State of Arkansas.**

"As Vice President of the State of Arkansas I will say that you can depend on us as a link in the work. to do all we can do to foster and uplift the standard and principles of our organization. We all must remember that our work is not complete until we have rescued the low income farmer of our Race. May fellowship, love and peace abide with all."

## INTERESTING LETTER FROM GEORGIA MEMBER

### NFCF Helps Community

The following interesting letter has just been received from Bro. Aaron Grady, member of our Halcyon Dale, Georgia, Progressive Unit No. 104. Writing to Pres. Harris, Bro. Grady Says:

"I received your good letter a few weeke ago and was glad to hear from you. Everything is all right now. The Bank said they would give me more time and would cut my payments down so I could meet them. They have helped everyone who belonged to our Unit. We thank you for what you have done for us. We are glad to have someone we can ask for help who is able to help us. We have gained one hundred per cent since we have been taking your advice. The colored people are all willing to take hold now and put our program over. We want to raise some chickens here (cooperatively) and would like for you to give us some advice as to what way to do. We wish you a Happy NEW YEAR."

## PRIZE PIGS WON BY MISSISSIPPI MEMBER

The Grand Prize of the tenth annual convention of the National Federal of Colored Farmers, a pair of registered Hampshire pigs, donated by those true friends of colored farmers, the famous radio team of Amos 'N Andy, was awarded to J. W. Mark of Sandy Hook, Miss., a member of McGhee Creek-Enterprise Unit No. 101, of Tylertown, Miss. The prize was awarded for best sample of cotton.

Mr. Mark is a charter member of his Unit and serves as its Market Agent. That he is a good, progressive farmer cannot be doubted. His cotton he exhibited, and the fact that his Unit led all others in cooperative efforts last year, is abundant proof.

### Other Prize Winners

Other prize winners include Mr. E. W. Williams, Vaughan, Miss., for sweet potatoes; Mrs. E. W. Williams, for needlework; Mrs. Janie Hester, Tchula, Miss., for woven rugs; Mr. N. W. Jones, Tylertown, Miss., peanuts and sweet potatoes; Mrs. Robert Varnado, quilts and bedspreads; Mrs. James J. Washington, quilts; Mrs. P. O. Wesley, Hayti, Mo., and Mrs. Louise Morrissey, New Madrid, Mo., were awarded prizes for school exhibits of canned articles and domestic arts.

The H. G. Hastings Co., prize, five dollars worth of garden seed donated by the H. G. Hastings Co., Atlanta, Ga., was awarded to P. A. Hardiman, Bunceton, Mo., for one of the best exhibits of vegetables ever shown at a convention of the NFCF.

## COOPERATE IN TAKING CENSUS, PRESIDENT OF BUSINESS LEAGUE ADVISES NEGRO TRADESMEN

MEMPHIS, Tennessee,—The vital importance, socially and economically, of obtaining a new and up-to-date measurement of the extent and importance of the distribution industries was emphasized in an appeal issued this week by Dr. J. E. Walker, President of the National Negro Business League and of the Universal Life Insurance Company. Dr .Walker called upon all Negro wholesalers, retailers and other service groups to cooperate with the Business Census beginning January 2.

"The Census Bureau has made three surveys of the trade volume of business, in 1929, 1933, and 1935," Dr. Walker said. "The showing that our wholesalers, retailers and other distribution units make in the 1940 Census will afford an interesting and valuable basis for comparison to measure the growth of our distribution and service businesses.

'The 1940 Business Census will include a survey of approximately three million firms in the United States engaged in the distribution of goods and services. The 1935 Census of Business indicated that there were more than 23,000 Negro-owned and operated retail stores which made annual sales of nearly fifty million dollars and employed more than 12,000 full-time and part-time employees who received in wages over five million dollars. Negro service businesses, such as hotels, theaters, laundries, and banks, employed an additional 14,000 wage earners and distributed nearly six million dollars in wage payments.

It is important said Dr. Walker, "that every colored wholesaler, retailer and service establishment proprietor realize that the Negro's commercial importanee will be measured by the showing we make in the forthcoming census and it is, therefore, to our self-interest to cooperate fully with the Census enumerators who start work January 2."

Dr. Walker emphasized the assurance of the Census Bureau, that none of the figures of individual employers on volume, payroll and employment could be made use of, under the law, for any other purposes than a statistical measurement of sectional and national business. Each business man's figures are combined with others in such a way that confidential facts are never disclosed.

## FARMERS LEARN SELF AID FROM WPA TEACHERS

**Arkansas Administration Proves Boon to Share Croppers of State**

Little Rock, Ark—Under the supervision of McClinton Nunn, benefits of the Work Projects Administration are reaching the tenant farmers and sharecroppers in the plantation regions of this state, bringing aid that is both educational and practical to many Race families.

Operating under the Division of Professional and Service projects, 20 highly qualified Race teachers, both men and women, are teaching these agricultural workers to improve their own conditions as far as possible.

The teachers under Mr. Nunn's supervision teach such practical lessons as better health, thrift, citizenship, gardening, food values sanitation and a higher family morale among their pupils.

Meanwhile the campaign to reduce illiteracy among citizens of both races remains an important part of the WPA Education program.

In cooperation with various federal, state and county agencies, the teachers have conducted clinics for the detection and treatment of tuberculosis and for immunization against smallpox, typhoid and diphtheria. Operations for such treatment were not readily available to members of the Race of the state until the WPA started its adult education classes.

Enrollees in these classes have been taught to construct sanitary privies to replace old outhouses, which were chiefly responsible for typhoid epidemics among the population and to make screens for their doors and windows as an aid to the prevention of diseases carried by flies and mosquitoes.

Instruction has been given in simple handicraft work such as the making and mending of brooms, the making and repairing of chairs and various other household dand kitchen utensils. They also are taught thrift in homemaking through renovating garments and weaving rugs and other articles from discarded scraps.

Heretofore the leaders of these people have been woefully empty during the winter months but thanks to WPA teachers, canning has been extensively taught and as a result, plentiful supplies of canned fruits, vegetables and meats are on hand for the coming months.

Such canning activities have assured these families a better-balanced diet than they have ever known before.

Mr. Nunn, under whose handling the program is bringing such beneficial results, was born in a rural community in St. Francis county, Ark. He attended the rural schools in that county and completed his college work at Arkansas Baptist college in Little Rock. Following that, he attended Temple university, Philadelphia, specializing in mathematics.

For the past three summers Mr. Nunn has attended Fisk university Nashville, Tenn., specializing in rural school supervision, rural sociology and science.

### FAMILY AFFAIR?

He: If I kiss you, will you call your mother?

She: What do you want to do—kiss the whole family?

You won't hurt a smile by cracking one.

## NATIONAL BAR ANNOUNCES

### Seeks to Increase Race Representation on All Juries

ST. LOUIS, Mo.,—Atty. S. R. Redmond, president of the National Bar association announced the following program of 10 objectives which the association plans to accomplish during the year ending August 4, 1940.

1. To obtain increased representation for Negro lawyers on the state and federal judiciary and on the legal staffs of federal, state, county and city prosecutors to insure the impartial administration of the criminal law

2. To obtain an increased number of appointments of Negro lawyers by the courts as receivers, administrators, attorneys for the officers, guardians ad-litem, and assignment of counsel to represent indigent defendants in criminal cases.

3. To obtain increased race representatiion on all juries.

4. To wage a vigorous campaign in every community for equal educational opportunities for Negroes from the grammar school to the highest level.

5. To put forth the united strength of the National Bar association, and through its agency the strength of the entire Race to fight for the passage of the anti-lynching bill.

6. Publication of a law journal

7. Closer cooperation between the National Bar association and organizations whose objective is to promote the welfare of the group.

8. Unrelentless fight against discrimination in public places and with public funds.

9. Abolition of discrimination by all federal agencies.

10. Establishment of local free legal aid bureaus to assist those without funds.

Attorney Charles H. Houston of Washington, D. C., was appointed editor-in-chief of the journal.

The following regional directors were appointed: Irwin T. Dorten Boston, Mass.; William T. Garvin New York City; Maceo W. Hubbard, Elizabeth, N. J.; Daniel W. W. Ambrose, Charleston, W. Va.; F. W. Williams, Winston-Salem, N. C.; Austin T. Walden, Atlanta, Ga.; Charles W. Anderson, Jr., Louisville, Ky; Henry J. Richardson, Indianapolis, Ind.; Roy E Hughes, Columbus, Ohio. Euelid L. Taylor and Richard E. Westbrooks, Chicago; John A. Davis St. Louis, Mo.; Harold W. Flowers, Pine Bluff, Ark.; S. D. McGill, Jacksonville, Fla.; Primus C. Wade, Tulsa, Okla.; A. B. Latting, Memphis, Tenn.; Ray L. Williams, Omaha, Neb.; Walter A. Gordon, Los Angeles, Cal.; Thurman L. Dodson, Washington, D. C

## ONION GROWERS REJECT FEDERAL MARKETING PLAN

Washington, D. C. (AP)—The agriculture department announced today commercial growers in 34 major onion-producing counties of Idaho and Oregon rejected a proposed federal marketing program at their recent referendum.

The department said only 23 to 90 growers who voted in the referendum favored the federal plan. The 90 represented approximately 48 per cent of the total production in the area, the department estimated. The favorable vote of two-thirds of those participating was required.

Under the proposed program, inter-state shipments of onions could be limited according to varieties, grades and sizes when marketing conditions warranted.

## Janitor Confesses He Slew White Man About Colored Girl

NEW YORK, Jan. 5—(ANP)—Bloodstains noticed on a suspect's clothing by an alert detective while questioning him, led to the solving this week of a murder which police had termed a "gangster" slaying Major Greenfield, 34 year old apartment house superintendent, made a full confession to police after being confronted with evidence found near his basement apartment.

The slain man was Vincent Cangro, white, 45, ex-convict and policy runner whose record dated back to 1917. Greenfield told police that he killed the ex-con after they had quarrelled over a colored girl who was in his apartment.

According to the confession, the slayer told how he killed the white man and then wheeled his body through the streets in a baby carriage, to the vacant lot where the body was discovered by a passer-by.

The Bronx Gardens section of New York was busy with last minute shoppers at the peak of the Saturday night's rush, as Greenfield trundled his gruesome load past crowded stores, illuminated Christmas trees and radios from which came strains of Christmas carols. Greenfield wheeled the body for more than five blocks, but the body was so folded up and covered with blankets that no pedestrian could possibly tell what the carriage contained.

On reaching the vacant lot, Greenfield dumped the body and then hid the carraige in another lot nearby Detectives recovered the carriage later.

The jaintor stated in his confession that a colored girl whom he knew only as Annabelle, and whose address he did not know, visited him Saturday night. Cangro, with whom he was well acquainted dropped in on Greenfield later in the evening. While there, the white man got into an argument with the girl over some money and struck her in the face. The janitor then hit the man over the head with a claw hammer.

To make sure of his death, he then placed a sash cord around his neck and drew it tight. Police are seeking the girl but to date have not located her.

The slain man's body was found through the barking of a small terrier who was being exercised in the neighborhood. His master investigating the commotion raised by the terrier, found the body of the man called the police.

Because the man was a well known policy runner, police at first thought a policy war had brought on the slaying of the white man.

## WPA WORKER WINS NATIONAL FAME AND BETTER JOB

INDIANAPOLIS, IND.—(ANP) — Two months ago Harold Richie, of Terre Haute, Ind., was employed as a worker on a WPA Recreation project. Today he has a five-year contract with a private firm on the basis of the abilities he displayed on his WPA job.

When the youth was certified for a WPA job, Indiana WPA officials assigned him to the recreation project in Terre Haute. They were not aware of his remarkable talent when he and other workers on the project began constructing papier-mache figures and other displays for a large parade. The results of Mr. Richie's work were amazing. Aided by a brilliant imagination, the deft hands of the WPA worker created papier-mache figures that thrilled thousands of parade spectators. People along the line of march chuckled with glee when they saw the weird hob-goblins that weaved and bobbed on the parade trucks. They applauded a lifelike elephant and other realistic animals that passed befor them.

Mr. Richie's talent was much in demand for other parades sponsored by the WPA recreation division of Terre Haute. Then one day a representative of the International Float Masters of South Boston, Va., happened to view one of the parades. He recognized unusual talent immediately and inquired as to the modelor responsible for the the spectacular figures on the parade floats.

The result was that Harold Richie received a five-month contract with the South Boston firm.

From Terre Haute Mr. Richie went to Shamokin, Pa., where he helped to model figures for a huge diamond jubilee parade in that city. He built large pre-historic animals, an elephant, and a gigantic gorilla which was paraded in a cage. So successful was the Shamokin parade that the youth was immediately sent to Wilson, N. C. There he created another outstanding float which received praise from expert float makers. His creation was an animated sail fish, driven by a beautiful young woman. The giant fish fluttered his huge sails and was as realistic in papier-mache waves as his ocean brothers in South Sea waters.

Recently, Mr. Richie came back to Terre Haute for a short visit at the home of his mother, Mrs. Mary Richie. It was learned that his next trip will be to Springfield, R. I., then to Huntsville, Ala., where a cotton and tobacco festival will be held. Then he will journey to Bismark, N. D., and later to Tampa. On New Year's Day his creations were viewed by the thousands of visitors at the Festival of Roses in Pasadena.

## Collector's Specialty Is 4-Leaf Clovers

Wenatchee, Wash. —(UP)—Anybody can get all the four-leaf clovers he needs—or— wants—if he knows where to look, says Avory Brown, who once found 925 of the supposedly rare species in less than eight hours.

In one hour Brown picked 370 four-leaf clovers and nwo has a collection of approximately 6,000. He recently planted a crop of four-leaf clovers and hopes to end once and for all the endless search of others for the assertedly "lucky" symbols.

# *News Of Interest To Negro Farm Groups And Leaders*

## WORKERS MAY OWN HOMES AT $20.90 A MONTH, UNDER NEW PLAN OF FEDERAL HOUSING AGENCY

Uncle Sam's program to enable workers in the low-income groups to become home owners is now in effect. It may turn out to be one of the most popular of "New Deal" innovations, and, if its sponsors' expectations are realized, it should give a tremendous boost to the still lagging construction industry.

Under the plan, as it was explained this week by the Federal Housing Administration, it will be possible for any person with a lot valued at $150 or more to borrow up to $2,500 for the construction of a dwelling. All the cash he needs will be to cover the cost of searching the title of the lot and recording the deed.

The loans will be made by banks and building and loan associations, thousands of which in all parts of the country are cooperating. The F. H. A. gets back of the borrower, indorses his note and guarantees its repayment if the borrower should default.

When a loan is made, the lending agency takes a note which is repayable in 15 years or less, as agreed upon by the borrower and lender. If the amount is $2,500, the monthly payment would be $20.90, which covers principal, interest and charges. At the end of 15 years the note would be canceled and the home owner would have his property clear of debt.

How a worker desiring to take advantage of the plan should proceed was outlined for LABOR by a F. H. A. official.

"The first essential," he said, "is that the would-be borrower has title to a lot. If the bank chooses, it can make a loan covering the cost of the lot and dwelling, but only the cost of construction will be insured.

"The lot owner should go to a bank or building or loan association in his neighborhood and make application for a loan. By application to a regional office of the F. H. A. or to headquarters at Washington, the prospective borrower will be furnished a list of cooperating institutions.

"If the lending institution is satisfied that the applicant is worthy, it will make the loan, and the government will promptly insure its repayment. From that point on the borrower deals entirely with the lender, making such payments as have been agreed upon, running up to not longer than 15 years."

From "LABOR."

## FAMILY TAKES $300 AWARD IN FARM CONTESTS

**Share-Cropper And Wife Crowned 1939 Champs At Memphis Fete**

**By James H. Purdy, Jr.**
**In Chicago Defender**

MEMPHIS, Tenn., Dec. 15—An aging Tennessee farm couple who have battled their way slowly from sharecropper poverty to the security of land ownership were chosen as the 1939 mid south live-at-home champions at the annual live-at-home rally luncheon held at Manassas high school here, Thursday.

The couple are Edd and Alice Hendrix, of Route 3, Bolivar, Tenn., who own a 314-acre debt-free farmstead in Hardeman county. They received cash prizes totaling $300 and the live-at-home trophy, awarded to the family making the best record during the year in living at home, soil conservation, crop diversification and home improvement. They defeated 13,290 other mid-south Race farmers to win the coveted honor.

A sweepstakes prize of $250 was given by the Memphis Chamber of Commerce Agricultural Committee, while the $50 prize for winning first place in the Tennessee Landowner division was awarded by a local newspaper sponsor of the contest.

Raymond Skinner (white) chairman of the agricultural committee, awarded a silver loving cup to Nute and Tommie Smith, Route 2, Mariana, Ark., who were runners-up in the sweepstakes contest.

Before presentation of the prizes Dr. J. M. Gandy, president of Virginia State college for Negroes, in Petersburg, Va., lauded the sponsor for giving the Southern Race farmer an opportunity and an incentive to improve his economic status. Dr. Gandy urged that more attention be paid to food and feed crops, and less attention devoted to cotton and other cash crops.

Visitors were entertained with a luncheon in the Manassas high school dining room. A total of 450 attended this luncheon although reservations had been made for only 250 guests.

At the afternoon session, county certificates of honor were presented to 98 county winners of the three states by state extension agents, following which Walter Durham, (white) of the sponsoring paper, awarded $600 in cash to state landowners and tenant winners of the three states.

Mr. Durham also presented Shockley and Emma Persons of Hardeman county with extension trophy for producing the sweepstakes champion, and the Brown enrollment trophy for obtaining the largest number of contestants in one county.

Hendrix said: "The contest has caused us to keep a detailed record to see if we are gaining or losing on our farm operations. We have stored 1018 cans of 38 varieties of fruits and vegetables. 50 pounds of dried vegetables and 40 pounds of dried fruit. We have saved 300 bushels of corn, 16 tons of lespedeza hay, five tons of pea hay, two tons of soy bean hay, and 1500 bundles of fodder. We are well fixed for the winter by following the live-at-home plan."

Although Mr. and Mrs. Hendrix, ages 56 and 51 respectively, have no children of their own, they have adopted 10 orphans and given them educations, three of whom have received college educations.

Others receiving praise in this rally were Dock Netterville, Route 1, Wilson, Ark.; Henry Ivie, Route 2, Trenton; Sam Cook, Route 4, Magnolia; Miss and T. K. Welbourn, Route 2, Charleston, Miss.

## FOR COTTON QUOTAS IN 1940

Unofficial returns from the cotton marketing quota referendum held December 9 show that 91.2 per cent of the producers favor marketing quotas for the 1940 cotton crop. Present returns show 812,420 votes in favor of marketing quotas and 78,047 against. A favorable vote of two-thirds of the farmers balloting is required to put the marketing quota program into operation. This is the third consecutive year that cotton farmers have approved the marketing quota program.

### BUILDS SOIL THROUGH FEDERAL PROGRAM

FAYETTEVILLE, Ark. (ANP)—As a result of the Agriculture Conservation program, J. T. Hill, Negro farmer of Chidester, Ouachita county, says he has learned a lesson in the conservation and building of soil.

Prior to 1936, he told Price J. Young, county agent, he had practiced very few soil building practices. He averaged planting only 8 or 10 acres of cowpeas and made no provision for any meadow or pasture to provide grazing and hay for winter feeding.

Since the program came into effect, however, he has interplanted all of his corn with peas and, in addition, increased his acreage of peas alone to 23.4 in 1939. Some of this acreage was to be turned under and about 10 acres cut for hay. He also has 17 1-2 acres seeded to lespedeza is by far the best hay he can secure.

Hill's soil-building allowance for 1939 was $44.80, but his soil-building practices would be equivalent to $72.45. The greatest value he has received, he told the county agent, is in the benefits to his soil, not in the small amount from the government.

## U. S. HEALTH PROGRAM MAPPED BY COMMITTEE

Washington (AP)—Modification of a proposed national health program to meet immediate needs without too great an expense was considered by President Roosevelt's committee on health and welfare, meeting here.

Miss Josephine Roche, formerly assistant secretary of the committee, said it would report to the President "some time soon."

The health program as embodied in a pending bill by Senator Wagner (Dem. N. Y.) would appropriate funds on a matching basis with the states to extend public health services, build hospitals, provide free medical care for the needy, foster research, aid medical students and promote material and child welfare.

## HAILS 4-H YOUTHS AS PIONEERS OF A NEW FRONTIER

**Thomas Wilson Tells Them of Opportunities**

**By Marcia Winn**
**In Chicago Tribune**

The 4-H club boys and girls of North America were hailed yesterday as the modern pioneers. Not as pioneers in scientific husbandry, altho they are that, but as pioneers in a friendship which some day may solve the turbulence of the world.

The man who gave them this title is Thomas E. Wilson, chairman of the board of Wilson & Co., chairman of the national committee on boys and girls club work, a man who spends thousands of dollars each year on the 4-H members he first began to help in 1917.

**Gives 22d Annual Party**

Wilson spoke in the Medinah temple yesterday at his 22d annual 4-H party, a lavish affair for the outstanding boys and girls from the farms of North America, who are holding their annual conclave in connection with the 40th annual International Live Stock exposition in the International amphitheater.

Fifteen hundred boys and girls from 46 states—only California and Vermont were absent—and Canada attended. Each was there as a reward for specific attainment. Here a bashful, soft voiced boy from Georgia had won his state dairy contest. Here a pretty little girl from Connecticut, wearing short socks, had won her state gardening contest. Here a boy from Wisconsin, a bright red scarf around his neck, a green and white 4-H cap on his head, had won his state health contest.

Over on one side, in trim green and white uniforms, yellow sunflowers on their chests, sat the Kansas 4-H band. In a front row, jumping to their feet as the organist rolled out, "My Old Kentucky Home," was the delegation from Kentucky. Far in the balcony, screaming out the strains of "That's Where the Tall Corn Grows," was a husky group from Iowa.

**Head, Heart, Hand, Health**

On the stage the meat producing winner of Canada sat, a tall, shy boy. Near by sat an Indiana boy who made $4,968 from his 4-H meat projects and $14,273 from his other 4-H projects. To all of these, bound together by their 4-H slogan of "Head, heart, hand, and health," Mr. Wilson, their benefactor for two decades, spoke.

"To frequently," he began, "we hear it said that the last frontier in America is gone, that there no longer is any place for the pioneer spirit. But you who crave the adventure and excitement of pioneers still can find it open to you in all phases of modern life.

"America still needs pioneers to adjust science to the art of farming, and the world needs pioneers in the field of human relationships.

**World Torn by Hate.**

"With the approach of Christmas we are doubly conscious of this latter need. Instead of peace and good will, the world is torn by hate. Our way, the 4-H way, is the way of friendliness in its largest sense, the value of it learned in all the 4-H community and national projects.

"We must not wait for others to show friendliness first; rather, we should assume a kinder attitude toward persons in our community and then extend that toward America and the world.

"Working thus, these strata of friendship, when there are enough of them, shall weave a pattern of happiness for the world.

"You are the modern pioneers! A million and a quarter of you, convinced of the power of tolerance, can lay the foundations of a new world order."

### WISE GUY EH?

Teacher: "What inspired the pioneers to set forth in their covered wagons?"

Pupil: "Well maybe they didn't want to wait thirty years for a train."

# GENERAL INFORMATION ABOUT THE 1940 DECENNIAL CENSUS WHAT IS TO BE ENUMERATED

Approximately 132,000,000 people (Population census)

33,000,000 dwelling units (Housing census).

3,000,000 business concerns (Census of Business).

170,000 manufacturing establishments (Census of Manufactures).

7,000,000 farms (Farm census).

Approximately 12,000 mines and quarries (Mines and Quarries census).

**Dates of Beginning**

Censuses of Business and Manufacturing and Mines and Quarries will start January 2, 1940, and will require about six months for taking.

Censuses of Population, Agriculture, and Housing will start April 1, 1940, and will be completed in approximately one month.

**Field Personnel Required**

The working unit in the vast task of census-taking will be the Census District. There will be about 560 of these Census Districts, corresponding generally to Congressional districts except where the most efficient administration requires variance. A District Supervisor will be in charge of each Census District. He will open a local office late in December, 1939 or early in January, 1940, and employ the necessary staff to take the census in his district.

To train the 560 District Supervisors in census-taking and census procedure, a picked group of more than 100 men from all parts of the country is now being given a special course of instruction in Washington. Those who pass the examination will be sent out as Area Managers to the 103 Census Areas, each to direct the training of from five to seven District Supervisors and to act as regional manager between them and the Census Bureau in Washington.

The 560 districts have been broken into enumeration districts of which there will be 143,000. Generally speaking, there will be one enumerator in each of these districts, but in certain regions one enumerator will cover more than one district. Therefore, about 121,000 enumerators will be used for the Population and Farm Census. These enumerators, as well as clerks, stenographers, interpreters and other field workers, will not be selected until 1940. They will be selected locally. Applicants should NOT write to Washington They should await the opening of local offices, which will be announced in the local newspapers, and then apply to the local office for application blanks and general information concerning rates of pay, length of time the jobs will last, etc. Civil Service status is not required for census work in the field (outside Washington). Tests will be given in the local offices, however, to determine the qualifications of applicants.

Men and women will be eligible for census work on equal terms. War veterans or their widows are given prefcrence when equally well qualified with others.

Census workers will be required to devote full time to census work, and will be subject to the Hatch Act specifically forbidding Federal employees from taking any active part in political management or in political campaigns during the entire period of their employment by the Census Bureau.

**What New Material Will be Asked For in 1940**

Earlier censuses have concerned themselves principally with measuring quantitatively the expansion of the country in population, territory and resources. Now, with increasing evidences of national maturity, with area static, and with population increases slowed down, Census officials feel that the 1940 Census should include the gathering of information which would throw light on internal social and economic problems.

The population schedule for 1940 will, therefore, concern itself with working status, hours worked, unemployment and usual occupations. It will for the first time seek information on the amount of wages or salary for the past 12 months. It will concern itself with migration, requiring an indication of where the respendents lived five years ago. It will attempt to measure the degree of education and find out the highest school or college grade completed. The question on illiteracy will be eliminated because illiteracy in the United States has become almost a negative quantity except among the aged.

The approximately 20 questions to be included in the housing schedule will concern themselves with the type and age of structure; the number of rooms; conveniences in the home; if a radio is owned; mortgage status and home finance; owner's estimate of valuation; and estimated rental value.

The great change that has occurred in agriculture in the last decade will be recorded by the Farm Census of 1940. In addition to the important shifts of the various crops and classes of livestock, much information will be obtained about part-time farmers — suburbanites whose principal occupation is away from the farm. A segregation of the kinds of farm labor will show family labor, regular hired hands, day laborers, and piece workers separately. An approximation of farm income above or below the average will be possible from farm sales figures. These will also show the principal ource of income, that from crops, ivestock, poultry, etc.

New crops will be given special attention and more complete reports for minor crops will be made possible by the division of the United States nto nine regions.

The schedule will seek additional information on the mechanization of farms and the separation of commercial farm products from general farm products. Fur farms will be included for the first time.

**Miscellaneous Information**

If the enumerators travel 200 miles each to get statistics on 132,000,000 people, distributed at the rate of approximately 42 per square mile in the 3,026,789 square miles of continental United States, they will have to travel the equivalent of nearly 1000 times around the world at the equator.

If the enumerators ask 200 questions to get all of the required information regarding every member of 33,000,000 families, they will have to ask over seven billion questions.

---

The first census of the United States was taken in 1790 when the total population of the 17 states was 3,929,214, Virginia was then the most populous state with 747,619. Pennsylvania was second with 434,373. Massachusetts was third with 378,787 and New York was fourth with 341,020. Tennessee got in on the first census with only 35,691 and Kentucky was the next smallest with 73,677.

---

The Decennial Census of 1940 will be the Sixteenth. Every decennial census has shown increases ranging from 36.4 percent in the decade from 1800 to 1810, down to 14.9 percent in the decade from 1910 to 1920. The per square mile population in 1799 was 4.5 and in 1930 it was 41.3.

---

The 1940 Census will embrace, in addition to continental United States, Alaska, American Samoa, Guam, Hawaii, Panama Canal Zone, Puerto Rico, Military and Naval Services abroad, and the Virgin Islands. All of these outlying territories in 1930 had 2,151,023 population.

In 1900 the urban population constituted 40 percent and rural population 60 percent. In 1930, urban population had risen to 56.2 and rural had been reduced to 43.8.

---

Places of 8,000 and more population constituted 3.3 percent of the population in 1790 and there were only six such places. In 1930, places of 8,000 inhabitants or more constituted 49.1 percent of the population and there were 1,208 of them.

---

The stork flies through Census windows and makes about 6,000 new entries daily and the old gentleman who carries a scythe (who pals around with Taxes) comes every day to erase about 4,000.

### WILD PONIES INTERNED

New Forest, Eng. (UP)—Hundreds of wild ponies which have roamed at will in the New Forest for 800 years have been interned to save their lives during the blackout. Painted white stripes failed to save them from automobiles.

### U. S. OUTPUT OF WINE INCREASES IN YEAR

Washington (AP)—American wine production increased last year, in contrast to a smaller output of hard liquor.

The Treasury reported production of still wines in this country, including material for brandy, increased to 231,959,287 gallons in the fiscal year ended last June 30, compared with 228,726,368 gallons in the previous year.

## Air Schools

WASHINGTON, D. C. (ANP)—The Civil Aeronautics Authority announced the opening on January 15 of two schools to train Negro air pilots, one in New York and one near Chicago. The school at Harlem airport will be headed by Cornelius R. Coffey while Col. John Robinson, Illinois NYA aviation consultant, will be in charge of the ground school at Glenview, Ill.

## To Probe Ousting

DURHAM, N. C. (ANP)—A complaint, charging that textile mill owners are ousting Negro workers and substituting whites rather than pay Negroes the minimum of thirty-two and one-half cents an hour as required by the Fair Labor Standards Acts, was filed by the local NAACP with the Wage and Hour Division of the Department of Labor.

### OBEYED ORDERS

"Prisoner, did you steal that rug?"

"No, yer Honor. A lady gave it to me and told me to beat it, and I did."

## NOTED HARLEM BUSINESS MAN URGES COOPERATION OF NEGROES WITH BUSINESS CENSUS ENUMERATORS

NEW YORK, N. Y.,—Dr. C. B. Powell, First Vice President of the Victory Life Insurance Company, publisher of the Amsterdam News, President of the Community Personal Finance Corporation, and one of Harlem's foremost business men, pointed out this week that the cooperation of colored tradesmen with the enumerators who will take the 1940 Census of Business will undistorted picture of the place of the Negro in the business world is to be secured.

The Census of Business will begin January 2. It will cover retail, wholesale trade, service businesses and laundries, theatres and other places of amusement, hotels and tourist camps, and construction activities. It will be the first complete survey of its kind made since 1935.

"Negro business men all over schedule blanks for the 1940 Census of Business," Dr. Powell stated. "When completed, this Census will furnish the whole nation with a wealth of information about colored business enterprises that could be obtained in no other way. If the information is incomplete or gives a false picture in any way, Negro business is certain to suffer."

Dr. Powell pointed out that in past Censuses many small tradesmen were reluctant to give correct information about their enterprises, fearing that the facts would be disclosed to creditors, income tax collectors, or the like.

"Congress provides," he said, "that all information given Census enumerator must be kept in strictest confidence. Nothing about an individual business. Its ownership, volume of sales, or number of employees....will be allowed to reach the general public or even another government department. Whatever is finally revealed about Negro business will be released only in broad statistical form. Thus the people of the United States will be provided with a most helpful picture of Negro enterprise as a whole with no embarrassment to any individual through disclosure of his business secrets.

"I cannot too strongly urge complete cooperation of the Negro public with those who will be charged with taking the 1940 Census of Business."

Census blanks will be distributed by enumerators, and each business man will be given ample time to make his report. The field work will be completed within four or five months, during which tabulation will be under way. The basic facts secured will be published in 1940.

### SOUNDS REASONABLE

Teacher: If you had six chicken eggs and six duck eggs, how would you tell them apart?

Student: I'd put them in a bowl of water and see which ones floated.

—Chet Switat.

### WORST JOKE I EVER HEARD

I'm very fond of horseback riding.

Do you ride alone?

No, I take the horse with me.

—Bruno Kuzlik.

## Virginia Union Professor Addresses Civic Group In Motor City

DETROIT, Jan. 4 (ANP)—Dr. Gordon B. Hancock, widely known lecturer and writer, and head of the department of economics and sociology at Richmond's Virginia Union university, was the Emancipation Day speaker here on Jan. 1. He appeared under auspices of the Detroit Civic Association and federated organizations. His subject: "The New Emancipation for the New Slavery."

One of Jupiter's nine moons is about 20,000 miles from the planet and requires two years for one complete revolution.

## AGRICULTURE IN ALABAMA

(Sulligent News)

Seventy-two per cent of Alabama's citizens are dependent to a great extent on agriculture for a livelihood, which is evidence that agriculture needs to be increased and made to come in regularly throughout the year. Progress in certain sections of Alabama has been made in diversified farming.

To offset the losses in such staple crops as cotton and corn due to excessive rains, fruits and vegetables have been produced in some sections which has increased the cash income of the farmers in certain areas.

Several cars of Louisiana Porto Rican seed sweet potatoes have been shipped into Alabama. Alabamians could raise these sweet potatoes as well as Louisianans.

A man, sir, should keep his friendships in constaant repair.—Dr. Samuel Johnson.

## ENROLLMENT UP BY TENTH AT TUSKEGEE INSTITUTE

Tuskegee, Ala.— (UP)— Student enrollment at Tuskegee Institute, famed Negro college founded by Booker T. Washington, has increased 10 per cent this fall.

The student body now numbers 1,261.

Greatest enrollment increases were in the Schools of Mechanical Industries and Agriculture, which reported approximately 25 per cent increases each.

Other departmental increases were as follows:

Home economics, 12 per cent.

Education, commercial dietetics, nurse training, physical education, business and music, all between 3 and 10 per cent.

## School Board Fires Principal After He Is Arrested

CHATTANOOGA, Tenn., Jan. 4 (ANP)—John P. Greer, principal of the Park City School, last week was dismissed from his position by action of the school board, upheld by city commissioners, because of conviction on a charge of public drunkenness.

Greer, whose dismissal was unanimously approved by the department of education and the city commission, was ousted last year for similar charges but won a reinstatement when his appeal under the teachers' tenure law was upheld by the chancery court.

## SEEKS FARM AID

### Arkansas Senator Advocates Tax to Finance Federal Plan

Washington, (AP)—Setanor Miller (D., Ark.) advocated a tax to finance federal aid to agriculture upon his arrival today for the new session of Congress.

"We've got to pass some legislation to provide money for parity and other producers of cotton and other agricultural products," Miller told an interviewer. I'll be willing to support a processing tax, if that is the best answer, because we can't let the farmers down. I'm going to look into other suggested plans."

Miller added he would support continuation of the reciprocal trade agreements program, but said he favored a change to require senate ratification of any new pacts.

The senator was nursing a bad cold, and spent only a few hours in his office. He expressed belief the session would end by June 1.

### THE MARCH OF THE KINGLY MEN

Written for "Labor" by
ALICE THACHER POST

THOSE men are set a thing to do
For common folks like me and you--
To call each man as king to rule
Over that sovereign state—his soul;
To cast his ballot, speak his mind,
Obey his God, share with his kind,
With all this kingdom consecrate
To a self-governed People's State.

Those men are set to do this thing—
Call every man to be a king.

### HIS GREATEST CONCERN

THE explorer, bowing low, approached the chief of the savages. "I come to you from beyond the sunset," the white man began intoning, "from the Great White King——"

"Tell me," interrupted the chief, "Why don't you guys do something about the lousy radio programs you send over here?"

### MAKE THIS CAKE WITH GRAPEFRUIT AND BROWN SUGAR

If you like broiled grapefruit with a bit of brown sugar and butter on it, you are sure to like this grapefruit upside-down cake. It has all the rich brown sugar and fresh butter flavor of the apricot or pineapple upside-down cake, but the grapefruit sections add a tartness to the fruit crust that is new and different.

There is a simple trick to makeing upside-down eakes. Always use the juice drained from the eanned fruit for the liquid in the recipe. All the flavor of the fruit is eonserved and the cake is a little more moist than when made with milk.

* * *

Thus the first step in making this grapefruit upside-down cake is to drain one tall can of canned grapefruit sections and set aside the juice. Melt four tablespoons of butter in the bottom of an eight by eight two-ineh cake pan. Cover with one-half cups of brown sugar. Arrange the drained grapefruit sections on the bottom of the pan.

Cream one-fourth cup of butter or other shortening until it is soft, and add three-fourths eup of sugar gradually, ereaming until light and fluffy. Add one egg, well beaten. Sift cake flour once and measure one and one-fourth cups. Add one and one-fourth teaspoon of baking powder, one-fourth teaspoon of salt and sift together three times.

* * *

Add the sifted flour alternately with one-half cup of grapefruit juice, stirring until smooth between each addition. Add one teaspoon of vanilla and pour the batter into the cake pan. Bake in a moderate oven (350 degrees Fahrenheit) for 50 minutes or until an inserted cake tester comes out clean.

Loosen the cake from the top and sides of the pan immediately after the eake is removed from the oven. Serve upside down on a cake plate.

✦ ✦ ✦ ✦

### STUFF PEPPERS WITH SARDINES

Green peppers stuffed with savory mixture of sardines, cream eheese and chopper pickles are sliced to make an enticing salad. Wedges of rosy tomato, pale green endive and silvery sardines make the salad complete. It can be made ahead of time and put in the refrigerator to ehill until serving time.

Select firm medium-sized green peppers for stuffing. Blend together one package of cream cheese (three ounces), one can of mashed smoked sardines, three tablespoons of minced pickle and one-half teaspoon of lemon juiee. Season to taste with salt and pepper and stuff the peppers with the mixture. Wrap in waxed paper and chill.

When ready to serve sliee the peppers across with a sharp knife. Arrange on salad plates in overlapping slices and garnish with curly endive, whole sardines and quartered tomatoes.

✦ ✦ ✦ ✦

### INGENIUS USES LISTED FOR PIECES OF DRIED BREAD

Dried bread can be used ingeniously as a dainty accompaniment to a custard or light pudding. Dip narrow strips of the bread into condensed milk; roll each strip in shredded coconut and brown lightly in a moderately hot oven (375 degrees). When serving salad or soup, roll large cubes of dried bread in one beaten egg with two tablespoons melted butter added; roll in grated cheese seasoned with salt and a sprinkling of eayenne. Heat in moderately hot oven until browned.

✦ ✦ ✦ ✦

## KITCHEN TALKS

Here is a new kind of meat ball: Make meat patties the usual way and then insert inch eubes of bread soaked in chili sauce. Cover and bake or brown the meat cakes on top of the stove. Such a nice flavor, too.

* * *

Like a little novelty? Well, the next time you make tea biscuits saturate sugar cubes with fresh orange juice and push one cube down into the top of each tea biscuit. When baked, they should be a shining, golden brown on top and deliciously orange flavored.

* * *

Dates make fine confections. Try this one: Pit dates, stuff with peanut butter and roll in granulated sugar. If the peanut butter is too soft to handle easily, add enough confectioner's sugar to make a stiff paste.

* * *

Creamed oysters taste mighty good on cold, rainy nights. Instead of serving them on toast or buscuits, pour them over rusks, split, buttered and toasted. You will like the crispiness of the dish.

* * *

Cut out tiny pumpkin shapes from rich pastry dough. Bake them in a shallow pan. When time comes to serve the pumpkin pie, plaee one crust pumpkin on each piece of pie. Add a sprinkling of grated cheese to give a fine flavor.

* * *

Have you ever served this combination? Stuff apples, to be baked, with mince meat to about an inch from the top. Bake as usual and serve with a lemon sauce. Fine for winter nights.

* * *

Spanish rice makes a delieious stuffing for pheasant, duck or chicken. You brown a fourth cup of chopped onion and chopped green peppers in one-fourth cup of diced bacon. When well-browned, add two cups of cooked rice and one cup of tomato juice. Simmer until thick, then add a teaspoonful of poultry stuffing and a bit of chopped parsley and stuff the bird. SOoo good.

* * *

Save your left over scraps of soap. After they've hardened, put hem hrough the food chopper. Fine way to maye your own soap flakes . . but do be sure the soap is good and hard before you grind it.

* * *

If you have any left-over meat or gravy, put it to good use . . . make a pastry roll. Spread the chopped meat, mixed with gravy, on biscuit dough. Roll it up jelly-roll fashion and fit into a greased loaf pan. Bake in a moderately hot oven 400 degrees F., for 20 to 30 minutes. Serve warm with a vegetable sauce.

* * *

Have you ever spread hot buttered pancakes with spicy blueberry jam or raspberry jam? A pinch of cinnamon and another of cloves will do the trick.

✦ ✦ ✦ ✦

### WAYS TO WASH YOUR WINDOW CURTAINS

Washing window curtains is an important part of every housecleaning orgy, and whether they are made of silk, net, pongee or a synthetie fabric there is a right way to laundred each one.

Measure the curtains before you wash them so they can be stretehed to the correct dimensions in the drying.

Most eurtain materials today are guaranteed fast eolors, but to make sure, take a top eorner and squeeze it in soapy water. If the water becomes stained or the color loses any brightness the curtains must be washed in lukewarm water, dried ed with a moderately hot iron. quickly in a shady place, and iron-

**Treatment of Pongee**

Pongee curtains seem to last longer when a little borax or baking soda is added to the last rinse water. This counteracts the acid of bleaching produced by air and sun.

Net curtains twist out of shape and lose their finish unless special care is taken in laundering. If starched after the last rinse the finish will be restored. For the starch preparation, boil one tablespoon of starch and one quart of water thoroughly, then add one tablespoon of gum arabie in a little water.

Synthetic fabries must not be twisted or wrung. After rinsing let the water drip out. Iron while damp on the wrong side with moderate heat. For plain weaves a final polishing with the iron can be given to the right side.

✦ ✦ ✦ ✦

### CRANBERRY SHERBET

Whether your family are turkey or goose enthusiasts, you'll want to co-star the fowl with cranberries for your Christmas menu. Tart cranberry sherbet is a boon companion for either bird.

You may make this sherbet in the refrigerator where it will stay safely tucked away until you want it.

First wash and piek over cranberries and measure four cups. Add three eups of boiling water and one-fourth teaspoon of salt and eook until all the skins pop. Force the berries through a sieve, add three tablespoons of corn sirup and one and one-fourth cups of sugar and stir until thoroughly blended. Strain through a fine sieve and ehill.

Then combine the eranberry pulp with one-half cup of orange juice, two teaspoons of lemon juice and the grated rind of one-half lemon. Freeze in the refrigerator tray until mushy. Remove, serape the mixture from the bottom and sides of the pan and beat until smooth. Then fold in two stiffly beaten eggs whites and return to the freezing compartment until the sherbet is solid.

## SOME INEXPENSIVE RECIPES FOR FARM FAMILIES

1. **German Potatoes.** Slice white potatoes and onions, turn into greased skillet, add salt and pepper, cover and eook until done.

2. **Fried Tomatoes.** Slice green or ripe tomatoes, add salt and pepper, dip in corn meal, fry. Serve over baked white potatoes or rice.

3. **Dried Pea or Bean Soup.** Cook peas or beans in salt jowl until mushy. Season with salt and red pepper. Mash peas or beans and stir.

4. **Green Dumplings.** Cook green until done. Drop in thick corn meal dough. Allow to steam.

5. **Lentil Dumplings.** Cook lentils until done, add thick pancake batter. Allow to steam.

6. **Crackling Bread.** Make corn bread as usual. Add rendered pork (or cracklings) broke.

7. **Tomato Stew.** Stew tomatoes, add salt, meat drippings, and pepper. When done add stale bread crumbs. To vary add cold cooked rice.

8. **Spanish Rice.** Cook rice in plenty of water until done. Drain off water. Add tomatoes and seasoning. Allow to simmer a few minutes.

9. **Sucotash.** Toss left over corn, tomatoes, okra, and rice or diced potatoes in hot meat dripping, season and allowed to simmer a few minutes.

10. **Stewed Egg Plant.** Peel and dice eggplant. Cook until tender and pour off the water. Season with meal dripping salt and pepper. Add salt, stale bread crumbs and allow to bake.

11. **Corn Mush.** Add to rapidly boiling water a thick corn meal much. Cook until thick.

## Suggestions for Cutting Cost Edges in Food Buying

1. Buy staples such as flour, sugar, rice etc. in as large quantities as you can find storage space.

2. Buying at chain stores such as Kroger's, National Tea, Piggley Wiggley etc. usually insures lower prices and more stabilized brands of foods.

3. Become familiar with those brands of foods best suited to your family use and purse.

4. Buy by brand rather than price.

5. Learn the capacity of various sizes of canned goods. Determine the sizes that best suit your family needs and buy those sizes.

6. Remember that you pay for fancy boxes and other types of fancy packing and the product as often of very ordinary quality.

7. Buy bulk food rather than packaged food that has been kept under sanitary eonditions. Bulk food is usually cheaper.

8. Buy by weight rather than by count, you usually get more for your money.

9. Select your own fruits and vegetables, never order them by phone.

10. Never buy perishables or coffee in large quantities.

11. Buy fruits and vegetables that are in season. They are cheaper better flavored.

12. Remember that tough cuts of meat are cheaper and just as nutritious as tender cuts.

13. Ask for meat trimmings, use them for soups, etc.

14. Save pot liquors for soups and gravies.

15. Read labels carefully before buying.

## A RURAL CHURCH IS COMMUNITY CENTER

**Wholesome Recreation for Young And Old at Shannondale**

"Can a rural church be profitably used as a community center for recreational activities?" asks the Missouri Farm News Service and then answers the question as follows:

"The Shannondale Community Church in Shannon county is a rural church rendering notable service in many ways. One very significant service is that of furnishing wholesome reereation for young and old. Every Wednesday night is recreation night at Shannondale with a program motivated by the minister.

"There is much interest in a program of mass games, folk games, and games with music, with great use of the singing games played by our ancestors. Young and old come, some as far as a dozen miles, and it is nothing uncommon for young people to walk three to five miles to participate in the recreational program.

"Not all of the time is given to just playing. For example, one Wednesday evening the minister distributed an 'interest finder' to determine the special interests of the group. Then for the next half-dozen Wednesday nights the first half of the evening the large group divided into small groups, according to the interests of the members, with a leader for eaeh group. The small groups later reassembled for games and a general good time. Many families have found the church the center of community life, and those who play together are working together on all sorts of subjects."

It's un-American to expect a meal at noon. So declared the Elgin, Ill., school board when it suspended lunches in the Edward H. Abbott Junior High School. The board voted 4 to 3 to refuse food given by the Federal Surplus Commodities Corporation.

### WHITES OUTMARRY COLORED, FIGURES BRING OUT.

MONTGOMERY, Ala. (SNS)—In 1938 there were 30,208 marriages in the state of Alabama, 18,810 white and 11,398 colord, according to Leonard V. Phelps, Direetor of Vital Statistics in the State Department of Health.

Divorce statistics were unavailable by 'color' because the state law does not require the color of the parties concerned to be stated in the bill of divorce.

# BRICK CLEANER FINDS $12,900 IN OLD-FASHIONED GREEN BACKS WHILE WORKING WITH WRECKERS

## 70-Year-Old Laborer Turns Fortune Over to Woman; Cleric Gets It, Police Take It

Kansas City, Mo.—Joseph Johnson, 70-year-old laborer, who was cleaning bricks for 75 cents per 1000 as wrecker tore down an old house, found $12,900 in a tin box, last Wednesday.

Johnson saw the box when the cornice collapsed, and pried into it. His eyes bulged. Greenbacks—two bundles of large, old-fashioned bills were inside.

"The sweat just popped out on me!" the finder said a short while later.

He counted: $12,900 in 1000s, $500s and $100s.

Mrs. Rafale Rizuti, watching the house-razing, has reported to police she saw a Negro find "some big green papers" and rush away.

Johnson sent for a friend, Mrs. Kathryn Williams, to "come as quick as you can get her." He gave her his find and pleaded: "Go home and put this in the bottom of that little steamer trunk of yours—clear at the bottom so it will be safe."

Mrs. Williams went instead to a church and confided in Bishop William F. Taylor. They hid the money

About that time police learned that a deceased white man habitually hid money because he did not like banks. It was his house that was being wrecked.

Police called Johnson, who called Mrs. Williams, who led them to the church. Bishop Taylor then led them all into a labyrinth of white-washed stone passages under the church.

He reached up to a window ledge and pulled out $5700. He produced $1500 more from an old Swiss music-box, $600 from his pocket and $4900 from a cedar chest on the second floor. All but $200 was accounted for but police still had a big headache: Whose money?

They said that probably would be settled in court.

# FISK UNIVERSITY GETS GRANT FROM EDUCATION BOARD

## College Given Sum Of $2,500 To Use In Developing Dramatic Department

With a special grant of $2,500 from the General Education board to be used in developing dramatic work at Fisk university during the next three years, the Stagecrafters are well on the way to becoming one of the outstanding Negro organizations in this field. Part of the grant is being expended for new lighting equipment and a course in stage lighting will be given. The director, John Ross, who joined the Fisk faculty last September, studied stage lighting under the noted authority, Professor Stanley MacCandless of Yale university, designer of lighting set-up at Radio City and college theatres throughout the country.

The next production by the Stagecrafters will be "Names in Bronze" by Edward Reveaux on Jan. 12 and 13 in the little theatre. The scenery to be used at Fisk was built and painted by a technical crew of 14 students. Another crew of similar size are working on properties, lights and costumes. The class in play production has charge of all technical details. The sets and costumes have been reproduced from drawings made by Miss June Fletcher, a Fisk student who has studied at the Chicago Art institute.

The cast includes Clarence Foster, South Haven, Mich.; Calvin Scott and Samuel Adams of Houston; Val Dora Turner, Elizabeth Kennedy, and Yvonne White from Nashville, Audrey Beasley and Nancy Phillips from Cleveland, and Harriet Butler and Patricia Bacon from Chicago.

# CHICAGO'S FAMED BANK BUILDING IS NOW MEN'S HOTEL

CHICAGO, Dec. 28 (ANP)—Ten years ago the nation's lone Negro national bank and the pride of Chicago's Southside, the Douglas National Bank, is today the Palace hotel for men. It made its bow as a hotel last month with William C. Johns as general manager and Roy V. Huffine, his assistant, along with 10 other fulltime employes.

Organized in 1922, the Douglas made history in the race's financial circles. It was empowered to issue currency as a member of the federal reserve system and played a leading role in Southside business affairs. Then came the depression and in 1932, in common with many similar institutions of both races, it was forced to close its doors.

It's a far cry from a proud bank to a hotel for men, but the Douglas has changed into the Palace without any appreciable loss of dignity. The Palace management evidently intends to see to it that the hotel does not deterioriate into the convention "flop house."

The lobby is thoroughly modernized with comfortable lounging chairs and streamlined bridge tables distributed tastefully about. Indirect lighting is discreetly utilized. The first floor also has a recreation parlor, lunch room, smoke shop and barber shop.

Upper floors of the Douglas bank building, which once housed headquarters of the Overton Hygiene Co., Victory Life Insurance Co. and Chicago Sunday Bee newspaper as well as private offices, now contain hotel rooms, 350 in number. Each of these rooms has a locker closet and each floor boasts six shower baths adjoining the lavatories.

Rooms with larger lockers are for residential guests and the smaller for transients. The regular central heating plant is supplemented with emergency heaters on each floor. There is just one price for accommodations in all rooms: 35 cents nightly or $2.00 weekly.

Because of the acute housing shortage here and the large number of Southsiders on direct relief and WPA, the Palace hotel may be doing as well in its field as did its predecessor in the lush '20's when money was more plentiful and congestion not so great.

## Suit Settled

NEWPORT NEWS, Va. (ANP)—The civil suit of Mr. and Mrs. Henry N. Jordan versus the James River Bridge System and three defendants, for $21,000 damages because of injuries received by the couple in an automobile accident on the bridge last July 2, was settled by mutual consent of the parties.

## Student Confesses

PHILADELPHIA (ANP)—William Lane, 25, with a Bible in his back pocket, admitted 35 gasoline station robberies in the past year. Lane committed the robberies mornings en route to his job with a mid-town business firm.

# LEADING ADVENTIST TO TAKE PASTORATE IN PASADENA, CALIF.

PASADENA, Cal., Jan. 4 (ANP)—The appointment of the Rev. Owen A. Troy, prominent Seventh-day Adventist clergyman, as pastor of that denomination's attractive new Pasadena church was this week announced by officials of the Southern California conference.

Rev. Troy is widely known in church circles for the program of community service he initiated in the Shiloh church of Chicago, where a clinic, a branch book and Bible house, a parochial school and other progressive and cultural enterprises were maintained during his pastorate. Later he became the first of his race ever chosen business manager of his denomination's training school for Negroes in the deep South.

Rev. Troy is a native of Southern California, and the Pasadena charge returns him to a community in which his father, Theodore W. Troy, before retiring to his lower California ranch, served many years as president of the famous Los Angeles forum and became the first Negro to run for the state legislature in that city.

Upon his graduation from Pacific Union college, Rev. Troy began his ministry in Oakland. Only 22 at the time, he established the Market Street church and remained to pastor it during the first seven years of its existence. Regarded since high school days as one of the most accomplished violinists in the far West, Rev. Troy is also an experienced musical conductor. His wife, the former Ruby Bontemps, a bachelor of music from the Chicago Conservatory, has likewise directed many successful musical organizations. Both are interested in writing, having contributed to secular as well as religious periodicals and magazines, and Mrs. Troy has recently been made editor of the Pasadena section of the Los Angeles Eagle.

Rev. Troy holds an M. A. from the University of Chicago and has recently done residence work toward a doctorate.

PROOF ENOUGH

"Is he to be trusted?"

"I'll say he is. He worked in a Turkish bath for two years and never took me."

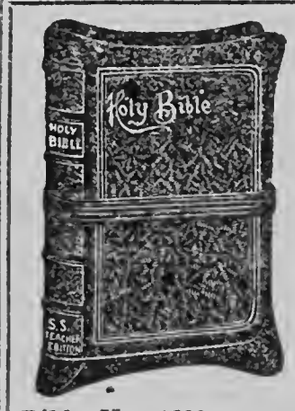
## American Library Association To Reconsider Abolishing Ban Against Meeting In South

CHICAGO, Jan. 4 (ANP)—After having observed a ruling for the past few years against meeting in any city where colored delegates would suffer discrimination, the mid-winter council meeting of the American Library association in session at Chicago Wednesday, Thursday and Friday of last week voted to reconsider this action.

The council, which directs the association policy, took its stand against segregation following the annual convention at Richmond, Va., several years ago, when Negroes suffered embarrassing discrimination. Previous to that time the meeting was held in various sections of the country.

The motion to reconsider the ban was made by Charles H. Brown, Iowa librarian and chairman of the third activities meeting, who said he had been approached on the matter by southern white members of the association. Brown said he was heartily in favor of having the convention in the South.

President Ralph Munn, of the Carnegie Institute library, Pittsburgh, was empowered to name a committee to reconsider the ban. The 1940 convention will be held in Cincinnati in late spring when it has been assured no discrimination will be practiced against Negro delegates.



Pulpit Bibles, Teacher's Reference Bibles, Students Bibles, with colored illustrations, designed for instructing grownups and children. Prices very attractive.

Bible No. 4630
Size 4½x6¾
Price $5.00

Bible No. 4612
Size 4½x6¾

## DRAW YOUR OWN COST-OF-LIVING CHARTS

FOUR CONSUMERS were in a huddle. Something was puzzling one of them.

"Every time I hear people say that war is going to make prices go up, I wonder is that such a bad thing, after all?" mused Consumer No. 1.

"What makes you think the country might be better off if prices went up?" asked the Expert, kibitizing this consumer conversation.

"Because when prices go up, incomes go up too. Don't they?" Consumer No. 1 replied.

"But do all incomes?" queried the Expert.

"Not mine," said No. 2.

"Nor mine," said No. 3.

"These two consumers seem to disagree," observed the Expert' "If I may be so bold, would you mind telling me why you are so sure your incomes will not go up if prices go up?"

"Because," No. 2 answered, "we earn salaries, and salaries usually go up more slowly than prices."

"There's something in that,' mused the Expert.

"And believe me," added No. 3, "it makes a lot of difference how fast my salary goes up. If prices jump up first, I'll be in a fix."

"I should think it would make a lot of difference to factory workers, too," observed No. 4, "if prices jumped up before wages did."

"But what about all the stores that sell?" asked No. 1. "If they get more for their goods, they'll spend more."

"If they can get people to pay higher prices," the Expert interjected.

"But you have to, if it's something you need," No. 1 remarked

"Come, come. You know you don't buy as much when prices are high," reproved No. 3.

"But what I meant," said No. 1, "was some people can afford to pay higher prices, and then the stores that get that money can hire more workers and pay better wages."

"You've got a point there," the Expert conceded. "If higher prices would mean more factories busy, and more workers, employed, and better wages paid, then higher prices would be a good thing."

"That was what I was trying to say a while back," interrupted No' 1.

"Exactly," continued the Expert. "And that's what might happen now, unless we get going too fast and run off the track.

"Just what do you mean by that?" asked No. 2.

"Why, this," said the Expert. "If prices go up faster than consumers' incomes go up, people aren't going to be able to buy even as much as they buy now."

"Take me, for instance," offered No. 3.

"I need a new pair of shoes, but if I had to pay any more for shoes than I paid last time, I couldn't afford to buy now."

"Of course there are lots of other people in the same fix you're in," added No. 4.

"Millions of people," No. 2 remarked.

"They're already spending every cent they have on necessities."

"And don't forget the people who have no incomes at all, except for the help they get from State and Federal governments," No. 3 reminded.

"Rising prices," remarked the Expert, "can hurt all of these people seriously, unless....."

"Unless what?" the four consumers chimed together.

"Unless higher prices make more jobs. If that happens, we'll all be a lot better off. But things can get into a mess, if we don't watch out."

"How do you mean?" pressed No. 1.

"Just this. A gradual rise can help to increase employment, but runaway markets will not. They'll only make things hard for us as consumers," the Expert answered.

"No buy, no sell. No sell, no make. No make, no job. Is that it?" asked No. 1.

"That's right," the Expert agreed.

"Then what we have to watch is how much prices go up, and how rapidly, and what happens to jobs and payrolls as prices rise," concluded No. 1.

"Well said" observed the Expert.

We lost out on the rest of this conversation, if it did continue. But we began gathering together some of the yardsticks that measure price changes and the direction in which prices have moved in recent years.

In this issue we publish a series of charts to show you what we found. These charts are based on studies of the cost of living, made by the bureau of Labor Statistics. We used pre-depression living costs as the post against which to measure more recent changes: in 1933, last year, and in June of this year. In each chart, we've allowed enough space so you can fill in two more bars, representing costs in September and December this year. When these later figures become available, we will publish them in Consumers' Guide.

How much any individual family's total cost of living changes depends, of course, on how it divides its expenditures among the various necessities of living. Out of every $100 spent, $33 went for food; $11 went for clothing; $17 went for a place to live. House furnishings took $4; fuel and light took $7; and all the other things absorbed $28. If your family divided its expenditures differently, the rate of change in living costs may hit you differently.

HERE'S HOW TO READ THE CHARTS. TAKE foods. For every $1.00 which food cost in the pre-depression years, 1925/1929, it cost 68 cents in the depression year of 1933; 75 cents last year; and 72 1-2 cents in June of this year. What's happened since war was declared abroad will show up when figures for September and December are published.

COMPARED WITH PRE-DEPRESSION LEVELS, the two main items in the cost of living which were lowest in June of this year were food and rent. Both were more than 25 percent cheaper than in 1925-1929. The two other groups that in June 1939 stood highest in relation to 1925-1929 costs were house furnishings and that large miscellaneous group called "other things." In this latter group are included such things as streetcar fares, soap, medical costs, laundry, personal care, educational costs, etc. As a whole, the cost of this group of necessities is within 3 percent of its 1925-1929 cost.

## TAKING NO CHANCES

An Irish bricklayer was on the top of the partly built house, and shouted to the foreman that he could not find his way down to the ground.

"You fool—come down the way you went up," shouted the foreman.

"Not on yer loife. I came up head first." the Irishman yelled back.

## Cats, Heirs to $41,000 Put on $9 Allowance

Milwaukee, (UP)—Sarah B. Hathaway's cats, which once shared her $41,000 estate, will have to get along on monthly allowances of $9 each.

The will of Miss Hathaway, who died in 1934, provided that her estate be used to support the cats. After their deaths, the will said, the remainder of her estate was to be divided among 11 nieces and nephews

Thirteen of the cats died and $16,500 was divided among the heirs. Yesterday County Judge Charles Hansen ordered distribution of $9,900 more of the estate among the heirs and ordered the executor to place each of the five remaining cats on a $9 a monthly allowance.

# ENRAGED CLIENT ATTACKS SOCIAL WORKER IN TEXAS

FORT WORTH, Tex.—(By R. L. Melton for ANP)—Monday, Miss Edna Kinchion, well known case worker for the city welfare department, was struck with a chair by an enraged relief client after she had refused him aid.

Samuel Welcome, 44, contends that what caused him to strike Miss Jinchion was her allegedly saying. "Don't talk back to me," following his pleading for food for his hungry family.

Miss Kinchion received medical treatment.

The uproar occurred in the Negro section of the city welfare department in the old post office building.

## Editor Honored

PITTSBURGH (ANP)—Robert L. Vann, editor of the Pittsburgh Courier, was elected a member of the Pittsburgh Chamber of Commerce, the first colored man to be so honored. Mr. Vann received the appointment in recognition of distinguished service to the city.

## ALLIGATOR FARM IN FLORIDA HAS 6,000 SPECIMENS

St. Augustine, Florida, (Special.—Tourists who like to look at alligators—without getting too close to them—can have their fill at the alligator-ostrich farm near this city. As a result of recent birth, there are now more than 6,000 specimens here. They range in length from a few inches to more than eight feet.

Among the rare birds added to the farm this season is an African scavenger, the long-legged wood ibis. A pair of egrets can be seen, and three baby ostriches are thriving.

The ranch also boasts of a blue heron, pelicans, peacocks, pheasants, Florida deer, monkeys, squirrels, wildcats and coons.

## SUNBEAM STARTS $25,000 FIRE IN AIRCRAFT FACTORY

Santa Monica, Calif. (ANP)—A shaft of sunlight, concentrated by an electric light globe, ignited a piece of wing fabric and thereby started a $25,000 fire at the Douglas Aircraft plant today. Two wing sections for a United States army observation plane were badly damaged.

**Woman's Missionary Society LITERATURE**

The Woman's Home Mission Guide, price 15 cents; Y. W. A. Guide, 15 cents; Shepherd Boy's League Guide and Girl's Auxiliary combined, 15 cents; Starlight Band, 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,

## MILLIONS OF TONS

(Continued from Page 1)

laboratory by boiling sucrose in a very weak acid. When the body ingests sucrose, it performs a process similar to what the chemist does in a laboratory. No sooner does sucrose go down the alimentary canal, than waiting enzymes get to work on it to begin the splitting process. This continues throughout digestion, which results in a cleavage into dextrose and levulose. These sugars are carried to the liver, but what happens next is a matter on which experts do not agree. The most generally reeognized fact is that the sugars are stored in the liver as glycogen, to be used as needed by the body for energy. The story is the same for the simple sugar, dextrose, which also is transformed into glycogen and stored in the liver.

**No matter how far back you explore** into the genealogy of the sugar family, sugarcane appears to be the patriarch of them all. Its use is as primeval as the African bush, and as modern as television. It gets recognition in the Old Testament. There is an ancient Indian legend concerning its origin. The Crusaders are credited with bringing it back with them from their travels. Today it is cultivated for its sweet juice in primitive Melanesia and in many other places, while in other parts of the world a great industry has been built up in its name.

**Not so ancient but almost as glamorous** is the history of the sugar beet. When Napoleon had embarked on his wars of conquest, French ports were cut off from their tropical sources of cane sugar. Frantic French scientists probed for substitutes in apples, pears, plums, quinces, walnuts, and chestnuts. Their luck was poor until one Benjamin Delessert—following upon previous experiments of 2 Germans, Marggraf and Achard—investigated the beet, and from it produced crystallized sugar. To Delessert went Napoleon's Cross of Honor.

That was more than a century ago. Since then the sugar beet has lived a life divided between laboratory, field and factory. Scientists have increased from 5 to 20 percent its sugar content, perfected the process of extracting sucrose from it, and the sugar beet industry has grown into great corporate magnitude. After a few false starts, the industry, under Government protection, took hold in the United States, and today about seventy thousand American farms look to the sugar beet as a profitable crop.

**A post war baby in the sugar family** but no longer in the wobby stage, dextrose is younger by far than sucrose. It was not until the 20's that researchers in the National Bureau of Standards, in cooperation with chemists in private laboratories, succeeded in making refined crystallized dextrose from corn. There followed several years of perfection of the process. Only in recent years has the industry begun to market refined dextrose in large quantities.

Some researchers hope that corn sugar—today not a top product in the whole corn industry—may some day work itself up to be one of corn's major byproducts. Its entrance on the sugar scene is recent, and dextrose manufacturers have refrained from making their production figures public. Outsiders guess that between 200 and 250 million pounds of dextrose flow out of corn sugar refineries each year.

(The Census of Manufacturers reports the production of 234,000 tons of corn sugar in 1937, but this includes dextrose in its unrefined state as well as the refined product.)

Corn is the principal commercial source of dextrose in this country, but it can be made in the laboratory from any plant containing starch. In some countries abroad, dextrose is manufactured from potatoes.

Although long used for special dietary purposes and as an infant food, refined corn sugar—or dextrose—today is used mostly in the manufacture of food products, such as canning, baking, and candy making. Very often dextrose and sucrose are combined.

Experts on sugar seem to agree that dextrose is less sweet than sucrose, but how much difference in sweetness there is between them is not agreed on.

Mention glucose to the ordinary consumer and he will probably think of corn syrup. Chemists in the laboratory, however, use the word glucose as merely another name for dextrose.

**Sugar that consumers use to sweeten** their coffee or tea and for other table use is today most often refined cane sugar or refined beet sugar or just plain "sugar," as you would call it over the breakfast table. And, of course, cane and beet sugar have long been mainstays too, in making ice cream, bakery products, beverages, candy, dairy products, confectionery, flavoring extracts and syrups, and so on.

Into the Nation's sugar bowl last year poured more than 6 million tons of refined cane and beet sugar. Some of these tons were routed to consumer kitchens. A smaller part went into candy factories, bakeries, ice cream plants, and other places that make sweets and even medicines. Still other tons were held in warehouses to be marketed later.

From our island possessions of Puerto Rico and the Virgin Islands, from the Territory of Hawaii, and from the Philippines came enough cane sugar to fill the sugar bowl four-tenths full.

Cuba added another three-tenths, while other foreign countries added a nominal amount.

Cane sugar produced in Florida and Louisiana raised the contents of the sugar bowl to the three-quarter mark.

Sugar from beets grown in 22 States from Ohio west to the Pacific coast brought the level to the top of the bowl.

**Congress for 6 years has declared how** the national sugar bowl was to be filled with cane and beet sugars. It has told the Secretary of Agriculture what share of the bowl was to be allotted to American sugar growers, and what share to producers abroad. And it has ordered the Secretary to decide how much sugar was to be poured into the bowl each year.

By such action, Congress wanted to do 2 things. First, it wanted to maintain sugar prices at equitable levels and barricade them against too sudden ups and downs. And, second, it wanted to be sure that American sugar growers were getting a fair share of consumers' sugar dollars.

Under the present law, the Secretary of Agriculture in December of each year decided what the size of the sugar bowl was to be in the following year. He did this by checking on supplies, by measuring prospective consumer demand for sugar, and by doing other things which Congress said should be done before any sugar quotas may be announced.

Today parts of this law are suspended. They are suspended because an emergency situation in sugar developed. Newspaper readers know partly why this happened. In the early part of September, when the overseas cables brought the news of another European war, sugar also jumped into the headlines. Housewives, remembering their experiences after the last World War, became unnecessarily alarmed that a sugar shortage was imminent. They bought far more than their normal purchases. As a result some temporary shortages occured. At the same time a great deal of speculative activity was present in the raw sugar market, and prices advanced rapidly. On September 11, the President by executive order, removed the quota barriers. In effect, he told producers in mainland United States, in Hawaii, in Puerto Rico, and in the Virgin Islands that they were free to send as much sugar to our consumer markets as they desired. Producers in Cuba and in other foreign areas were also free to send in as much sugar as they wanted to so long as they paid duties imposed on foreign sugar imports. That apparently served to reassure alarmed consumers. Since then raw sugar prices have dropped nearly to pre-war levels, but prices consumers pay for sugar had not moved back to the same extent when this was written.

**Getting the cane and beet to give up** their store of sucrose, and manufacturing dextrose from the corn kernel are complicated tricks. Corralling the sugar is only half the job; it takes a chemist's ingenuity and a technician's skill to refine the raw product to pure sucrose or dextrose, as the case may be.

Sugar cane juice goes through 2 separate processes before it becomes crystallized sugar. Cane stalks are first run between tremendous crushers and ground into a mass of pulp. The juice, obtained from this process of crushing, is heated, passed through a series of settling tanks to remove impurities, then dispatched to vacuum evaporators to be concentrated into a thick brown syrup, about one-third moisture. Then comes another session in vacuum pans, and the syrup is dumped into whirling centrifugal machines which separate the raw brown sugar from the molasses byproduct. That ends chapter one in the life of a pound of cane sugar.

Chapter 2 begins in the refinery which cleans the sugar, makes it white, and leaves a product almost 100 percent pure sucrose. The raw sugar is "washed" with a fine spray of water under pressure, then melted by adding hot water. The resulting liquor goes through a series of tanks for further cleaning and through filters to remove impurities. The liquor, now purified, is reconverted into crystal form, put through another treatment in centrifugal machines, and finally dried and graded according to the size of the crystals.

**Beets go through a somewhat similar** processing before the final yield of pure white sucrose is surrendered. The beets are washed and scrubbed. Then follows a precipitate trip to the slicer, where they exit looking like so many "shoestring" potatoes. Now comes another bath in a diffusion tank where hot water soaks the sugar from the beets, forming a juice which is carried along into a purifying tank, while what is left of the beets is sidetracked as a useful byproduct for feeding animals. A purification process follows and the cleansed juice goes into a filter press, then into a series of evaporators which reduce the thin juice to a thick syrup—now 55 percent pure sugar. The clear, sparkling liquor is channeled into a vacuum pan where the liquid is boiled to sugar crystals. From here, it goes into centrifugal machines which separate the almost-pure sucrose from the syrup, and after a drying and grading process, the sugar is ready for shipment.

**Manufacturing the Dextrose from** the corn kernel requires all of a chemist's resources and skill. Before anything can be done, the kernel germ and endosperm must come to the parting of the ways. This is accomplished by a process of soaking and rupturing the kernel. With the germ removed, the remainder of the kernel is ground between millstones, and the starch and gluten separated from the fiber and hull of the kernel. Another process separates the starch and the first victory toward capturing the pure dextrose is chalked up.

**Now begins a bit of mechanical digestion**—pulling the starch through a process broadly similar to the transformation it goes in the human digestive system. It is pumped into big tanks, and soaked in dilute hydrochloric acid, under pressure and at a set temperature. A liquor then emerges. When refined, filtered, and evaporated this is corn syrup. A short period more of this treatment and you have corn sugar 70 to 80 percent pure dextrose. These are at best only the rank and file corn sugar. To get the almost pure dextrose, corn syrup must be filtered and evaporated, then crystallized. After several days of crystallizing, into the centrifugals it goes, just as the syrup from cane and beets goes into the whirling tanks to divide the molasses from the crystals. In practically no time, the 2-mile-a-minute centrifugals get rid of the corn "Molasses" and leave a white refined corn sugar from 99.5 to 99.8 percent pure dextrose ready for whatever use to which it is to be put. Refined corn sugar is also sold in a hydrated form containing about 9 percent water.

## NATION GROWS

(Continued from page 1)

1,769,639,000 pounds for all types of tobacco was produced in 1939, the department estimated. The yield set a new peak at 911 pounds per acre. The crop was 121,000,000 pounds larger than the previous record crop of 1930, and was about 29 per cent ahead of 1938 production of 1,376,471,000 pounds.

—Chicago Tribune.

## THE 1940 CENSUS

(Continued from page 1)

stores operated by Negro proprietors in the United States. By 1935 the number had dropped to 23,490, large decreases being noted in the Southern states and small increases in the Northern ones. The total volume of sales by Negro-owned stores also dropped in the same period, from $101,146,000 to $48,987,000; and the total payroll fell from $8,528,000 to $5,021,000. Whether or not these downward trends have continued is one of the questions for which the Census Bureau will attempt to find an answer.

The results of its survey of service establishments should also prove of particular interest. A great many Negro enterprises fall into this category, which includes cleaning, dyeing and pressing shops, beauty parlors, laundries, shoe repair shops and shoe-shine parlors, and many other establishments rendering personal service.

There were 22,172 such Negro-owned enterprises in 1935, when the last enumeration of this type was taken. They did an annual business of $27,281,000 and paid 13,975 employees a total of $5,710,000 per year.

The Business Census will cover operations during the calender year of 1939 except for those firms which close their books on January 31. In such cases the reports will be taken on a fiscal year basis.

Information will cover the number of stores operated by Negroes in each kind of business, their sales, the number of active proprietors, number of employees both full-time and part-time and payroll for each group, as well as stocks on hand.

Field work of the Business Census will require the services of approximately 12,000 enumerators.

## CINCINNATI GETS HOUSING LOAN FOR SUM OF $5,371,000

CINCINNATI, [illegible] (By James T. Whitney for ANP)—President Roosevelt has approved a $5,371,000 federal loan for the construction of a Negro slum-clearance project in Cincinnati, according to a telegram received Wednesday by Congressman William E. Hess from U. S Housing Administrator Nathan Straus.

The Cincinnati Metropolitan Housing authority made application for the loan several months ago. A preliminary estimate fixes the total cost at about $5,968,000 the government loan representing 90 per cent of the amount.

The new housing project, according to George Garties, director of the local housing authority, will be constructed on an L-shaped site south of the Laurel Homes project. The site is bounded by Lincoln Park drive and John, Clark, Cutter, Court and Linn streets.

A number of streets and alleys are within this area, and it is the plan to have all of them vacated with the exception of Clark Street, which will be unchanged.

## POOR SOIL MEANS

(Continued from Page 1)

need a greater buying power on the part of farmers, so that shops and mills and factories may employ more men.

It is in this poverty-stricken part of our population that the farmer and the consumer meet on common ground. Neither one can prosper fully until these needy people are once more an active part of our economic life.

It is opportunity that is needed, and the Agricultural Adjustment Administration offers an opportunity.

"There is a point of balance—— where the welfare of both the farmer and the consumer is best served. And it is that point of balance that we are working toward. That is what the agricultural adjustment program is all about."—Secretary of Agriculture Henry A. Wallace.

## "FINIS" WRITTEN IN LLOYD GAINES CASE AT COLUMBIA, MO.

### Young Man Disappears And Lawyers Forced to Ask for Dismissal

COLUMBIA, MO.—(ANP)—Finis was written to the efforts of Lloyd Gaines to enter the University of Missouri as a law student, when the case was dismissed last Monday in Boone County Circuit court by Judge W. M. Dinwiddie.

Gaines has been missing for ten months and his attorneys, unable to plead a case for a client they can't find, requested dismissal of the suit. The case has been in the courts for two years, the Boone County Circuit Court and the State Supreme court both handing down decisions denying Gaines admittance to the University of Missouri.

On December 8, 1939, the U. S. Supreme court ruled that the University of Missouri must either admit Gaines or the state must proide "equal educational facilities within the state." When Lincoln University, with state funds, opened law school in St. Louis in the old Poro building, Gaines' lawyers filed another suit, contending that the Lincoln school still failed to provide him "equal educational facilities." It was this suit which last week was dismissed.

Still pending is another suit, filed by Miss Lucile Bluford a staff member of the Kansas City Call, who seek admission to the University of Missouri school of Journalism. Miss Bluford is a graduate of the University of Kansas.

# Nashville Man Placed On Advisory Board Named For Tuskegee Founder's Day

## President F. D. Patterson Chooses Rev. Henry Allen Boyd As Aide At Celebration Honoring Booker T. Washington

Tuskegee Institute, Ala., Jan. 19 (Special)—Arrangements are being perfected here for Founder's Day Celebration to be held on the morning of April 7th, at which time Postmaster General James A. Farley, will make an address at two o'clock in the afternoon. Tuskegee Institute, under the presidency of Dr. F. D. Patterson, is making arrangements to hold a triple occasion, and in order to do this they have announced the appointment of a large Advisory Board made up of representative citizens throughout the nation. This Advisory Board will push the Booker Washington Stamp Movement, because on that day the first postage stamp ever to bear the photograph of a race man, will be released.

Among the men appointed to serve on this Advisory Board and Committee is Rev. Henry Allen Boyd of Nashville, Tenn., who is secretary of the Sunday School Congress, secretary of the National Baptist Publishing Board's plant, secretary-treasurer of the National Negro Press Association and president of the Citizens Savings Bank & Trust Company. Rev. Mr. Boyd's appointment brings out the fact that he, together with his father, were life-long friends of the late Dr. Washington, and they were both life members of the National Negro Business League.

Dr. Patterson has just notified Secretary Boyd of his appointment, and has received from this publisher at Nashville, his acceptance. At the same time, Rev. Mr. Boyd placed his order for $50.00 worth of the Booker Washington Postage Stamps and Envelopes The management here in Tuskegee

# QUARTERLY HONOR ROLL ANNOUNCED AT STATE COLLEGE

According to a recent announcement from the Registrar's Office of A. and I. State College the Honor Roll list for the Fall Quarter, 1939, shows a decided increase.

Gwyndolyn Hale, Advanced Special Student, Nashville, holds first honors, having maintained an average of "A."

Those having an average of "A-" are:

Everil Harwell, Nashville; Edward Hale, Nashville; Fannie Foster, Nashville; William L. Porter, New Orleans, La.; Rushton Miller, Birmingham, Ala.; James W. Bailey, Nashville; Ethel L. Banks, Forrest City, Ark.; Mae Barbee, Springfield, Ohio; Jimmie Cartmell, Nashville; Johnetta King, Chattanooga; Albert Umphrey, Indianapolis, Ind.; and Edith Banks, Plainfield, New Jersey.

Students maintaining an average of "B" are:

Celeste McMahan, Knoxville;

# DEWEY TO START ON TRIP THROUGH WEST WEDNESDAY, FEB. 7

## Candidate Will Make Next Nation-wide Address on Lincoln's Birthday

NEW YORK, Jan 25—A campaign swing which will take him to the Pacific Northwest for a speech at a Lincoln Day mass meeting in Portland, Oregon, will be started by Thomas E. Dewey, candidate for the Republican nomination for President, on Wednesday, February 7, it was announced today at the Dewey headquarters in New York City.

The westward trip of the Dewey party will include stops at Chicago, Butte and Helena, Montana and Spokane, Washington. There will be a side trip from Spokane to the Grand Coulee Dam on Sunday, February 11. The ninety-mile trip from Spokane to the dam will be made by motor car. The party also will quit the overland train for the seventy-mile trip from Butte to Helena, and will return to Butte by motor to resume the journey.

Mr. Dewey will remain overnight in Portland after his speech on February 12 and will start his return trip to New York on the morning of February 13. The return itinerary calls for all day stops in Salt Lake City, Utah; Boise, Idaho, and Cheyenne, Wyoming, and a brief stop in Chicago. The party is due back in New York on Monday morning, February 19.

The Lincoln Day mass meeting in Portland will be held in the Civic Auditorium, under the auspices of the Multnomah County Republican Central Committee, of which Fred W. Bronn is chairman. Mr. Bronn has reported that public interest already manifested in the Dewey visit to Portland has made it necessary to provide arrangements for an overflow crowd to hear the speech. The auditorium has a seating capacity of more than 5,500.

The entire Republican organization of Oregon is cooperating with the Multnomah County committee on plans for the Dewey speech, which will be broadcast over a Columbia Broadcasting Company network. The invitation to Mr. Dewey from the Multnomah County committee was seconded by Kern Crandall, chairman of the Oregon Republican State Committee; Ralph Williams, Republican national committeeman from Oregon and United States Senator Charles McNary.

The Portland meeting will be the only one at which Mr. Dewey will make a formal speech on the Western trip. He will confer with Republican leaders at all of the scheduled stops.

*Operating*

Dr. J. H. Hale of this city who is in Union S. C., as guest surgeon in a state-wide clinic this week.

# DR. J. H. HALE GOES TO SOUTH CAROLINA FOR SURGICAL CLINIC

## Meharry Teacher is Making His Fifth Trip to Take Part in Demonstration

On Wednesday of this week Dr. J. H. Hale left Nashville for Union, S. C., where he will be the guest surgeon in a state-wide clinic, being held in the Community Hospital there in Union. The hospital is in charge of Dr. L. M. Long as Supt. and Dr. Hale is to operate on Friday of this week. It was reported from Union, S. C., that approximately one hundred physicians from every part of the state of South Carolina would be in attendance, as this is an Annual Clinic. The hospital is the gift of a fund from the Dukes Estate. The philanthropist saw the need of a modern hospital for Negroes and as a compliment to their thrift and industry here in the medical line he prepared hospitaliza ion through this fund. The Supt. Dr. L. M. Long, is a graduate of Meharry Medical College of this city. No city in South Carolina has ever been able to duplicate what is being done in Union in so far as the medical privileges, hospital work and clinic go.

Dr. Hale is to remain just one day. After the clinics are over during the day and after he had lectured to the physicians and surgeons, he will be the object of a big social affair in the form of a dinner, where men will lay aside their ideas of material medico and take up a social hour to give further honor and recognition to the former president of the National Medical Association, who is recognized throughout the nation for his skill in surgery as well as in the practice of medicine.

## Spelling Contest For D. C. Schools Set For March 9

On Saturday, March 9th the thirty-five schools of Davidson County will stage their annual spelling contest. The hour set is 11:00 a. m. The information was given out this past week by Mrs. Georgia Cash

# New Yorker Makes Address On Budget To Boston Crowd

## Charges New Deal Is Fooling Public In Promise To "Soak The Rich" For Its Spending Money

BOSTON, MASS, Jan. 25—Thomas E. Dewey, young and brilliant District Attorney of New York, in his quest for the Republican nomination for the Presidency, carried his message of hope to the American people and made his fourth attack on the New Deal before a gathering of 8,000 enthusiastic Republicans here on Tuesday night of this week. The address was broadcast over a nation-wide hookup and has been pronounced by thousands as the best speech Attorney Dewey has made thus far in his campaign.

Dewey's Boston speech was a masterful handling of the nation's staggering debt situation, a strong indictment of the New Deal for its failure to balance the national budget and for continually spending more money than it receives in taxes, thus loading on future generations the burden of paying for the extravagances of the present era.

Mr. Dewey charged that seven years of maladministration in Washington had temporarily held back the growth of the country but stated, "I deny that the American people are finished. America is at the morning of its destiny."

He stated that a budget, in every day use, means a statement of probable income and probable expense. "It does not seem to mean this to New Dealers," he stated New Dealers have looked up the word "budget in the dictionary, Dewey contended, and were pleased to find one definition which says a budget is "A collection or store, as of

# BUSINESS LEAGUE PRESIDENT HEARD IN ABLE ADDRESS

## Dr. J. E. Walker Of Memphis Sees Serious Economic Plight Facing Negro Race; Gives Timely Advice

At an introductory Mass Meeting at Lea Avenue Christian Church, Dr. J. E. Walker, M. D., President of the Universal Life Insurance Company; President of the National Negro Business League and Treasurer of the National Convention of the Disciples of Christ in America, delivered the principal address Sunday afternoon, January 21.

Dr. L. H. Crawford, President of the National Convention of the Disciples of Christ, has recently been called as pastor of this historic church. Dr. Crawford and his wife were formally introduced to the citizens of Nashville, at this meeting.

Dr. Walker delivered a challenging message on the American scene of Negro life. He related his own obscure birth three miles from a railroad in the backwoods of Mississippi and portrayed his gradual rise from obscurity to a place of national prominence as evidenced in his own accomplishments as a successful medical doctor and president of a million dollar, all Negro staffed insurance firm.

He claims that Negroes are facing a serious economic plight and that this is due to the fact that Negroes have not yet learned that "no business can succeed unless God is made a partner." He continued by showing that all schemes tried up to now on the Negro have failed. He gave as an example the efforts of a Negro bishop to take all Negroes back to Africa but due to the time it took that more Negroes would be born that they could find ships to carry them back. He pointed out that we had increased from 4,000,000 in 1865 to 15,000,000 at the present time.

He claimed that we are a prolific race because the record showed that the Indians diminished by coming in contact with the Anglo Saxon but that to the contrary, the Negro has increased and that one theory about the Negro dying out has been proven false.

The psychology used by whites to make the Negro feel that he is foreigner in this country has penetrated the thinking of the Negroes to such an extent that we have gone offside in thinking that our solution is social and political. In charging this thesis he said that

(Continued on Page 4)

# WANT FINGERPRINTS NOT PICTURES AS FUND IS SUFFICIENT

WASHINGTON, Jan. 25 (ANP)—Appropriating one half million dollars more this year for the Civil Service commission in its budget, congress will expect the commission to improve the service it renders to the government.

There are now sufficient funds to take care of any additional cost involved in the substitution of finger printing for the use of photographs on civil service applications and the commission now has no excuse to offer in this matter.

Heretofore when pushed on the point, the commission always pleaded it had no funds to take care of such expenditure as would be required. Now that congress has appropriated this money, pressure is expected to be brought to bear on the commission eliminating the photograph requirement in civil service and the substitution of finger prints which it is believed would go a long way toward the suppressing of prejudicial practices against Negroes applying for admission to examinations given by the commission and receiving appointments after passing those exams.

# "Thru The Darkness I See"

FRED C. WILLIAMS

## *Observations*

(Fred Williams Column)

FOR SALE AT A PRICE:—The House of representatives at Washington passed the Anti-lynch bill by vote of 251 to 132. What will happen to it when it reaches the Senate? Most persons believe that it will be thrown out of the window; that is if we can judge the action of the Senate by the past. Representative Mitchell created quite a hub-hub in Congress when he said, "The Republicans voting for the bill are trying to buy back the Negro vote." A Republican, trying to crack wise, wanted to know if the Negro vote was for sale. Mitchell's reply well fitted the occasion and the situation when he said "Yes, for justice and equal opportunities." This phrase will go down in history and I think Mitchell has given not only Congress but the entire country something to think about.

THE WARMTH OF COLOR:—History says Caesar conquered Egypt; Cleopatria conquered his heart and he took her to Rome, quartered her in a magnificient temple, so says archceologist who have just discovered the ruins. The Egyptians were a dark race of people, but historians have said that Cleopatria was Greek and Sir Arthur Evans, retiring from the Presidency of the archeological Society of Great Britain said in his farewell address that, "there was no doubt but that the Greeks were a race of Mullatos." Color in pictures, as well as in hu mans attracts and warms the cockles of the heart as well as the mind. History cannot recount the glories and Egypt without recalling Cleopatria's great conquest.

DECENCY AND EVIL ARE CONTRAST:— Out in Hollywood California, many members of our race both men and women are employed by members of the Hollywood colony and from time to time, strange stories of some of their activities leak out to the listening public. More recently we have discovered that some of these practices are being brought from Hollywood and reenacted in many apartments, hotels and bun galows by these employes, much to their discredit, as well as to our own chagrin when they are revealed. But we want to state that one of our own moving picture, Stars, producer and writer in the person of the esteemed Clarence Muse, is numbered among the most highly, decent and respectable members of the Hollywood Colony. He Lives In Hollywood, and His Home and Conduct; as well as that of his family, is above reproach and thus we take the satisfaction in the realization that some of the employees of the white morons should be pited for becoming influenced by the glamor of the surroundings in which they work and live.

RUMOR VERIFIED:—Irving Mc Duffie who has been valet to the President since 1933 has been changed to a position in the Treasury Department as Messenger. We have heard rumors of this transfer for several months and now since its verification, we believe that the race has suffered a loss for McDuffie as the President's valet was in a posi tion to answer truthfully and throughly, questions concerning our race; and the information thus furnished, has enabled the President to make decisions at his conference table by which we as a people have profitted.

WAS HE ALWAYS RIGHT?—Walter White of the N. A. A. C. P. paying tribute to the late Haywood Broun, president of the Newspaper Guild said, "Heywood Broun was a militant friend to the Negro, who day in and out kept faith with his belief in the righteousness of justice for all Americans whatever their race, color or creed." As a one time publisher of Negro newspapers and knowing what happened a few years ago to the Amsterdam News; I wonder.

## THE PACIFIST FAMILY

The Pacifist Home as a "Good-Will Center"

Good-will comes alive only when practiced in a normal situation in which individuals can live it unconsciously. The home is such an environment. In it people of varying ages, sexes, and interests, with no appearances to keep up, and nothing compelling them to "be nice" to each other, live together three hundred and sixty-five days a year.

Our problem, then is to learn how to practice good-will in these little worlds which we help to control. These suggestions, though somewhat obvious, do emphasize some of the goals toward which we may strive.

We can settle differences on an unemotional basis. Perhaps we get wrought up in public because we are used to reacting emotionally. It is relatively easy to refrain from blows and spankings, but very hard to be patient, serene, and non-violent in spirit. No less, however, is required of peacemakers.

We can substitute discussion for argument. Argument is much like war. In it, human wills are pitted against each other; each in sure he is right, his "enemy" wrong; and each becomes more confirmed in his opinion as he argues. Neither can change his position without losing face, nor can either "win," because neither will compromise. Discussion, which is group thinking, with a deside on the part of all to learn, is quite different—a good nonviolent substitute for the violence of argument.

We can look upon our homes as centers from which the good-will practiced there may radiate. We can entertain friends, acquaintances, strangers, refuges, people of other races. We little know what good we may, quite unconsciously, do. One mother wrote to her hostess, a woman of another race, after such a visit:

"In Van Dyke's Wayfaring Poems in Palestine there is a poem, 'The Distant Road,' and some of its lines are so much more expressive that any words of mine to say how much may visit in your home meant.

'Blessed is the man that beholdeth
the face of a friend in a far country,
The darkness of his heart is melted
by the dawning of day in him.
The multitude of mankind had bewildered and oppressed me
And I complained to God, "Why
hast Thou made the world so
wide?"
It seemed as if I had been reading
a book in a forcign language
And suddenly I came upon a page
written in the tongue of my
childhood.
This was the gentle heart of my
friends who quietly understood
me,
The open and loving heart whose
meaning was clear without a
word."

BISHOP TOSSES BOMB:—In addressing the Mite Missionary Conference of New York City, Bishop David H. Simms said, "I believe that God Almighty does not want dumb people to lead the church" and he stated further that the A. M. E. Church must get rid of the "Cry babies" and pay their pastors in proportion to the good that they do and the work which they perform. The Bishop struck a death blow to the ignorant but zealous preachers who think that they have been called to preach the Word of God, and perform their self appointed task to the detriment of their followers. Ignorance has no place in the church. Our religious institutions have been accepted as the forum of our enlightment and the teaching of its commandments. The A. M. E. Church is an all Negro institution that has and should continue to do great work.

"Since my little Billy came, I have had much agony of spirit in trying to work out some philosophy about the racial situation. Just the night before I came to your home I had been reading from Countee Cullen's 'The Shroud of Color.'

'My color shrouds me in, I am as
dirt
Beneath my brother's heel; there
is a hurt
In all the simple joys that to a child
are sweet;
or hast Thou, Lord, somewhere I
cannot see,
A lamp imprisoned in a bush for
me?

Not for me, but for little Billy—and the cross scemed heavier than I could bear, I came away from your home strangely comforted."

—From "Fellowship"

## Davidson County Tuberculosis Ass'n

Every week throughout the year an average of 1230 people died from tuberculosis in this country during 1938.

The previous year there were 1329 each week. We expct still urther improvement for 1939. Much headway is being made.

This terrific death, sickness and financial problem from tuberculosis can be solved. It is being solved.

However, the help of everybody is needed.

If you could follow the dollars you gave through the years for the purchase of Christmas seals—if you could go with them to the Tuberculosis Clinics, and into the homes of those stricken by tuberculosis, the Tuberculosis Hospital—you would see how your money has helped to restore their health.

You would indeed rejoice in having a part in this noble and deserving cause.

The Davidson County Anti-Tuberculosis Association works throughout the year for your protection on money collected from the sale of the tuberculosis Christmas Seals.

The money helps others, but above all it helps protect you, your family, and your pocketbook, because you are helping pay for this terriffic cost of tuberculosis, whether you know it or not.

You have our assurance that every dollar will be used to control tuberculosis in Davidson County. Won't you let us hear from the Christmas Seals we esnt to you in November?

With sincere thanks for your sympathetic interest in our work, we are,

Very truly yours,

MRS. S. I. BOLTON,
Executive Secretary.

Being a lover of freedom, when the revolution came in Germany, I looked to the universities to defend it, knowing that they had always boasted of their devotion to the cause of truth; but no, the universities were silenced. Then I looked to the great editors of the newspapers whose flaming editorials in days gone by had proclaimed their love of freedom; but they, like the universities, were silenced in a few short weeks. Then I looked to the individual writers, who, as literary guides of Germany, had written much and often concerning the place of freedom in modern life; but they, too, were mute. Only the Church stood squarely across the path of Hitler's campaign for snppressing truth.

I never had any special interest in the Church before, but now I feel a great affection and admiration because the Church alone has had the courage and persistence to stand for intellectual truth and moral freedom. I am forced to confess wh I once despised I now praise unreservedly. —Albert Einstein.

## Religion In A Free Country

Elba, La.—Religion is a potent factor in the lives of the American people. We hear pessimistic word concerning vacant pews at Sunday services. The motion pictures, blue moons and dance hall are said to have drained the churches. The losses are more superficial than profound.

Actually the growth of American churches has been uninterrupted during the last thirty years. During the ten years from 1926 to 1936 nine million new members joined the churches. Every year marks an improvement in the position of the churches. In 1936 more than 63 million members were recorded on the churuch lists. One out of every two Americans was attached to some church. The proportion with church affiliations increased instead of diminishing. They who say that the churches are losing in the United States do not know their America.

This record of steady growth of church membership in this country is in striking contrast with the experience of the churches in numerous other countries. During the last twenty years the Russian government has fought the Russian church as a deadly enemy. The German Nazis are engaged in a relentless struggle to subdue both the Catholic and the Protestant churches. They began with war on the Jews.

Most of the Mexican churches have been closed during the past ten years. Religious services have been outlawed and simple people, who congregated for worship have been shot down by government troops. War on the churches was one of the conspicuous features of the Spanish revolution.

Whenever dictators have seized power and suppressed the labrarics of the people the churches have been repuressed in these countries the allance between church and state was historically closed. When political power was captured at once the churches were feared and fought. Dictators fear any organization they do not control.

The complete separation between church and state established in our constitution has been the great bulmark of American churches. The government is a dangerous friend of any church in time of change. Free churches wholly unpolitical in support and in management have proved their capacity to survive and grow. The absurditities of the German fanatics intent upon rooting out Christian teaching and re-establilshing a worship of the ancient mythological divinities reveals fundamental weakness of the war against the churches. Neither am ancient Thor nor a modern Hitler is an adequate substitute for Jesus. Nor in the long run will a Lenin supplant the founder of Christianity. Hate is not permanently more desirable than good will.

Our churches have been strong and enduring because they appealed to the best instinct and ideal of a free people. Nobody has been compelled by governmental authority to join any church or to attend any religious meeting. Yet half of all Americans are counted church members and the overwhelming majority including those who attend no service derive their sense of right and wrong from the churches. In this country certainly, religion has been the teacher of morality. Our standards of right have been expressed and upheld by the churches.

Back of every advance in morality has been the teaching of a leader nurtured in one of the churches. The history of social reform in this country is a record of the activities of men and women who were awakened by religious experience.

The strength and growth of the churches are a great stabilizing influence in our national life.

The surface difference between the various denominations are wide enough, but the moral idealls upheld are fundamentally the same. Catholic, Protestant and Jews teach the ideas of right of justice of mercy and of the good life. The churches have kept their hold in America and have continued to grow because they fill a basic need in our lives. Ideals and aspirations make men different from other animals.

Merely to bring children into the world to struggle for material possessions or power has never satisfied men.

Other need which anly the churches have served have always driven men to religion.

As a people we have not experienced any great religious awakening or been stimulated by a widespread religious revival during recent years. The growth of the churches has been unspectacular but steady. The appeal has been quietly made and quietly answered by the millions in the fellowship of the churches. There is reassurance in this so long as the American people look to the churches for guidance in the problems of liie. We shall be strong and honorable, good neighbors to ourselves and to all the world.

The growth of our churches is a witness to the soundness of our character as a people.

By Rev. J. G. Resse,
Pastor of New Light B. C.
Elba. La.

## THE VILLAGE IS THE PEOPLE

A stranger halting at a village spoke to one of the inhabitants:

"What kind of people live here," he asked. "I have it in my mind to settle here."

"What kind of people did you live with before?" inquired the villager.

"Oh in the town I come from the people are mean and narrow."

"Then I'm sorry," said the villager, "but you'll find the same kind of people here."

The stranger drove on, and somewhat later another stranger accosted the villager and inquired about the people of the village.

"What kind of people did you live with before?" the villager again asked.

"The finest in the world," the stranger said with a smile. "Only business reasons forced me to leave."

"Then," said the villager. "you'll find the same kind of people here."

—The Canadian Baptist

## MISSIONARIES WORKING

There are 400 members of the parish, and every member tithes. they receive 40 stamps (less than twenty cents of ten pence) and their rice each week. On this, each gives one tenth. Because of this they have done more for religious work than any other church in Siam. They pay their own pastor and have sent two missionary families to spread the gospel in a community cut off from the outside world. And every member of this congregation is a leper.

—Dr. Hugh McKean in The Bible Banner.

NEGRO PRESS

WASHINGTON, D. C.,—WHAT ABOUT US, UNCLE? is the subject of an editorial which recently appeared in The Philadelphia Independent of which Ralph H. Jones is Editor:—

EDITORIAL

WHAT ABOUT US, UNCLE?—

President Roosevelt has been loud in his plea that the foreign dictator nations call off their wars He was exceptionally loud spoken in his plea for Finland.

We agree with him in principle. Any true American and exponent of democracy cannot truthfully approve of the "big fellow taking what the little fellow owns." We as a minority people certainly must be in the front ranks of those demanding a recognition of the rights of others but we still insist that President Roosevelt could do much more if he would raise his voice here at home for the recognition of full citizenship rights of Negroes.

Why should Negroes be secretly excluded from the wide scale industrial recovery? Why does not President Roosevelt call attention of the rest of the nation, and the industrialists in particular, to the fact that the recovery of America must include the industrial emancipation of Negro workers?

Why must President Roosevelt remain silent on the equalization of educational standards for Negroes of the South? Why must he remain quiet as to the need for passage of the anti-lynching bill? Why must he remain silent at the brazeness of the Ku Klux Klan which is again starting out on a race terroristic program?

We call upon President Roosevelt to not extend too great a hand across seas before he extends a much needed one here at home. We want to see the establishment of a true democracy here before we begin a hue and cry for it abroad. We further believe that we are heading for war when we interfere too much in European affairs—that is why the Neutrality Law as passed.

President Roosevelt must remember that in 1940 Negroes of this Nation will loudly ask.... "WHAT ABOUT US, UNCLE?"

## Food Processors Have Knife Out for New Farm Scheme

**Agriculture Will Seek 'Parity' Price Through Simpson's Domestic Allotment Plan.**

**CROP RESTRICTIONS OFF**

**Wheeler Claims That Manufacturers' Yells Indicate Where Burden Will Fall**

**(From Cooperative Consumer)**

Millers, packers and other food processors are sharpening their knives for a farm proposal which is to be submitted to Congress, with the backing of Secretary of Agriculture Henry A. Wallace and all leading farm organizations.

The manufacturers will have the support of the Treasury Department, which day by day becomes more "business-minded." Where the President stands has not been revealed, but he is expected to line up with his Secretary of Agriculture.

It is proposed to revamp the processing tax which the Supreme Court invalidated in 1935 and combine it with the "domestic allotment plan" which the late John A. Simpson, National Farmers' Union leader, advocated more than 15 years ago.

Through this combination about $300,000,000 would be raised yearly to pay farmers "parity" prices on their major crops. By "parity" is meant the farmer would get for his crops dollars that would have the same purchasing power as between 1909 and 1914.

**Wallace Explains Scheme**

As outlined by Secretary Wallace, here is how the scheme would work:

At the beginning of each marketing season the Secretary of Agriculture would estimate the quantity of a crop needed for domesic consumption during the year. He would also fix the "parity" price.

Each farmer who complied with the A. A. A. and other features of the farm program would receive certificates representing his share of the market for each commodity. He would sell his certificates to buyers, who could not lawfully purchase a commodity without them.

**No Planting Restrictions**

There would be no planting restrictions on farmers, but all crops produced above the domestic allotment would have to be sold abroad for whatever they might bring.

Secretary of the Treasury Henry Morgenthau, Jr., opposes the plan, contending it is a tax on consumption and will be reflected in higher food cost.

Wallace on the other hand, insists the bulk of the tax would be absorbed by manufacturers. That is also the opinion of Senator Burton K. Wheeler (Dem., Mont.) who is sponsoring the legislation in the Senate. He declared this week that the idea is the most practical yet offered.

"Whether wheat has sold at 40 cents or $1.40 a bushel," Wheeler said, "the price of bread has remained the same. The additional cost that millers will be compelled to pay is so small, in relation to the price of a loaf of bread, that the bakers will be unable to pass it along.

**Called Jade Winces**

**"The fact that millers and other processors are viciously fighting the proposal is the best evidence of where the burden is going to fall."**

In a speech before a farm audience at St. Paul, Senator Wheeler declared that the principal weakness in the existing farm relief setup is that it requires an appropriation at each session of Congress.

"No business man," he added "would long remain in business if a substantial portion of his income were dependent upon the will and whim of a politically-minded Congress— and no farmer can.

**Want Permanent Arrangement**

"Farmers Union representatives realistically recognized this when they came to me with the certificate bill—they know Congress. They are seeking parity payments that rest on a permanent basis—not on a political one. The certificate bill is self-financeing. With the funds derived from an indirect form of taxation, the farmer would receive parity payments. These benefits would be paid him as a matter of right. There would be no more begging—no more panhandling in Washington to secure that to which you are entitled.

"This legislation would not be a panacea or a cure-all for agriculture. It would not solve the farm problem. But it is direct and fair. It involves no compulsion. There would be no acreage restrictions. It would offer some protection against the financial ravages of drought and bad years."

## Business League

(Continued from Page 1)

our hope for the future lies in the economic field. He declared that our schools are sending out thousands of Negroes with all kinds of degrees but the one thing we needed more was the art of handling our money and making jobs for ourselves. "We are in Economic Slavery," says Dr. Walker: and unless we learn how to handle finance and business we will gradually be a pauper class losing all that our forefathers have done to make America what it is today. We have plowed the fields; dug the ditches, fought and died for American liberties and it is up to us to regain and take our rightful place.

**Triple Objectives**

The three things that Negroes should specialize in are, "Religion, Education and Money." It is time for Negroes to quit whining and complaining about their lack of opportunities because the young Negro has nothing in his way to be the best type of American citizen. "God is looking for people to serve him," says Doctor Walker and if the Negroes will educate themselves and take God in business with them there will be more Negroes back of the counter serving the people. Negroes will always eat, wear clothes and enjoy all that America offers. He will get all these things from Negroes if the Negro business man will only give service.

He admonished the Negro to follow the philosophy of Booker T. Washington, "Let down your bucket where you are" and never consider the "American flag as a dirty rag" because no place under the sun has 15,000,000 people in such a short space of time made as much progress as the Negro in America. Dr. J. H. Hale, Chief Surgeon of Meharry Medical College, was Master of Ceremonies. Others on the program were Rev. S. H. James, Mrs. Frankie Pierce, Dr. Mattie Coleman, Rev. W. S. Ellington, Mr. Henry Haley, Rev. R. C. Malory, and Hon. R. E. Clay, who introduced Dr. Walker. Prof. Merl R. Eppse introduced Dr. L. H. Crawford and Mrs. Crawford. The following business and professional people as well as many distinguished citizens were present. Mrs. S. Chandler delivered the welcome address. Nathan Webster, Robert E. Bagwell, Mrs. F. E. Quarrels, S. L. Ferguson, all of the Universal Life Insurance Company; Broughton Jones, D. W. Webster, W. W. Buttler, W. C. Watkins, all of the Union Protective Assurance Company; Thomas Darden, Nashville Representative, Pittsburg Courier and Chicago Defender; Arthur Overall, Modern Shoe Shop; Dr. Jefferson, Dentist; J. W. Patton, Patton Brothers Funeral Home; Kosse Gardner, Gardner Funeral Home; Mrs. Frankie Pierce, State Vocational Schools for Girls; Mrs. Nellie Frances, wife of a former Counsellor to Liberia; Moses McKissack, architect, Attorney W. S. Walker; Dr. I. L. Moore, Dentist.

DAD

Well, dad the years are rolling on.
You have seen a lot of life.
You have watched us kids as we grew up
Mid pleasure, work, and strife.

You have led a life of which we're proud
And only hope that we
Can do as well as you have done
In work and charity.

Your birthday now; gee, but it's great
To know your're just the same;
And may God grant you many more,
Come sunshine, snow, or rain.

—G. A. R.
In Chicago, Tribune

LOVE'S PHILOSOPHY

By PERCY B. SHELLEY

THE fountains mingle with the river,
And the rivers with the ocean,
The winds of heaven mix for ever
With a sweet emotion;
Nothing in the world is single;
All things by a law divine
In one another's being mingle—
Why not I with thine?

See the mountains kiss high heaven,
And the waves clasp one another;
No sister flower would be forgiven
If it disdained its brother:
And the sunlight clasps the earth,
And the moonbeams kiss the sea.
What are all these kissings worth,
If thou kiss not me?

130, 860 VISIT LINCOLN'S TOMB IN 10 MONTH PERIOD

Springfield, Ill.,—In the first ten months of this year 130,860 persons visited the tomb of Abraham Lincoln. The October total, 11,560, was the highest for that month since 1928. In announcing the figures, George Luker, superintendent of state parks and memorials recalled that the Lincoln monument was dedicated here 65 years ago —on Oct. 15, 1874.

## Pearl High Avenges Early Loss

**"Pro" Donaldson Hogs Spotlight as The Crimson Cagers Retaliate 26-14, 26-27**

**By H. J. Stockard**

Pearl High Gym, January 12—Ivey "Pro" Donaldson's jumping jive upset the strong Wilson County High school's apple cart 26-14 here Friday night to avenge Pearl's only cage setback of the year. While the girls held down their end of the program, to likewise retaliate for an early season defeat at the hands of these same Lebanon sisters by a 26-17 score.

Coach "Gup" Gupton sent his lads out to even up the score against the tough country-side folks, loaded down with confidence and determination and as a result, the Pearl following was rewarded as well as treated to a side show staged by their evasive forward "Pro" Donaldson. Erstwhile star of last year's soft ball wars, who collaborated with Senny and Andrews to preform magic tricks with the ball and kept their Lebanon adversaries in a state of delirium throughout the evening.

Donaldson's manipulating tactics broke through the usually strong Wilson defense to set up numerous baskets in the rough and tumble affair. It was Pearl's fifth triumph of the year against one loss.

**Segine Stars for Girls**

Miss Sadie Galloway's improved lassies completely dominated the girl's affair from the outset, paced by their veteran star, Miss Segine and closely followed by Silvertooth and Wright, whose brilliant play salted the game away during the early moments of the game. Their record also shows five wins against one loss.

Both teams will enter the mid-Tennessee Conference tournamnt likely to be held at the Pearl gym in March. The boys who finished third in the regular conference standing last year will be defending champions when the tourney gets under way.

| Pearl (26) | Boys | Lebanon (14) |

## College Fire's Damage $20,000

JACKSON, Miss., Jan. 25 (ANP)—Damage to the men's dormitory of Jackson College, the fourth floor of which was destroyed by five Monday afternoon, was estimated at $20,000. The blaze, which began in the attic, was whipped into action by a strong wind, and the new roof completed just last week, was gutted by flames.

The other floors of the four-story structure were damaged by water seeping through when thousands of gallons were poured into the windows and roof of the upper story. The fire made considerable headway, however, when low water pressure in the college area, held up efforts of firemen for some time.

This was the college's first fire since 1913 when the laundry building a frame structure was destroyed. It has been replaced by a brick establishment.

Prof. B. B. Dansby, president of the school, said the loss would be partly covered by a $12,000 fire insurance policy.

# NEWS OF INTEREST TO MEMBERS OF THE N. F. C. F.

## THE SOUTHERN NEGRO ON THE FARM

### His Problems and What The FSA is Doing About It

Farming is both a business and a way of life for half of all Negroes in America. Ninety-five percent of all Negro-farm operators are in the South, and more than three-fourths of these are tenants. Farm tenants fall, roughly into three classes:

1. Sharecroppers, who contribute labor only, receiving in return a share of the crop.

2. "Third and fourth" tenants, who supply equipment and bear some managerial responsibility and recieve larger shares of the crop according to their contribution of feed, fertilizer, and equipment, a third of the corn and a fourth of the cotton being a common rental.

3. "Standing renters," who rent the land outright, paying for its use either in cash or produce.

In the South, one-half of all sharecroppers are Negroes. The number of Negro croppers exceeds the number of white croppers in Georgia, South Carolina, Arkansas, Louisiana, and Mississippi. Mississippi has three and one-half times as many Negro as white croppers; Louisiana has twice as many. In other states where the actual number of Negro croppers is less than the number of white croppers. the proportion of croppers within the racial group is much larger among Negroes than among whites. In Kentucky, for instance, where 30,258 white croppers constitute only 30 percent of white tenants, the 2,736 Negro croppers are 65 percent of Kentucky's Negro tenants. Other states show even higher proportions. Mississippi's Negro tenants are 71 percent sharecroppers, and 82 percent of all Georgia's Negro tenants are in this class. Half of all Negro children growing to manhood and womanhood on Southern farms face the drudgery and neglect typical of most croppers' children of any race.

Chief among the evils which the poor man on the farm—small owner, tenant or laborer—has to face are poor housing, high mortality, insecurity and debt.

Bad housing and sanitation are reflected in hookworm and anemia. Faulty diet result in pellagra. The yearly toll from death and disase adds to the burden of indebtedness, while beneath all these hurtfull conditions lies the menance of insecurity, crippling both landlord and tenant in any effort toward progress.

I. WHAT IS THE FARM SECURITY ADMINISTRATION AND WHAT IS IT DOING TO CORRECT SUCH CONDITIONS WHERE THEY EXIST?

A. What It Is:

1. It is an agency of the United States Department of Agriculture, set up to help needy farm families which are unable to get help elsewhere

B. What It Does:

1. Makes rehabilitation loans at 5 percent interests, for periods of one to five years. With such loans, the farmer buys the things he needs to make a living from the land—wagons, mules, milk cows, seed, fertilizer, etc. Usually included in the loan are reserve funds sufficient to provide the family with food and clothing through a crop year. Farmers obtaining these loans cooperate with Farm Security Administration farm and home management supervisors in making and carrying out plans for each year's operations.

a. Every farm plan calls for the production at home of enough food to supply the farm family with a properly balanced diet, thus preventing dietary diseases and improving general health.

b. The farm plan also calls for the production at home of ample feed for the livestock, increasing the value of the stock and conserving cash.

c. The plan calls for the conservation of the soil by sound farm practices, such as crop rotation, planting of cover crops, and erosion control.

Through rehabilitaion loans, familes are learning to keep their books, make their budgets, and live within them. Approximately 50,000 such loans, representing 12.5 percent of the total have been made to Negro farmers in the last years. Negro farmers are 12.6 percent of America's farm operators.

2. It enables selected renters, sharecroppers or farm laborers with energy, ambition and a good record to become established as owners on desirable land through long-time loans in larger amounts, repayable over a period of 40 years. Cooperative supervision is a part of all loan agreement. During the first year of operation of the Bankhead-Jones Farm Tenant Act—1937—265 loans were made to Negro tenants, constituting 18:6 percent of the total for Regions IV, V. VI and VIII where Negroes on farms are found in appreciable number. Negro tenancy in this area is 34.1. Applications for 1937-38 were 19.3 percent of the total and for this year were 26.4.

a. In actual figures there were five times as many Negro applications this year as last year—26,989 as compared with 5,089. Figures for whites rose proportionately.

3. It is trying to develop better social and economic patterns in agriculture by establishing homestead projects. Some of them are new communities, while others consist of scattered individual farm. More than 1,000 Negro families were living on such projects in January, 1939.

a. Farmsteads on these projects are provided with houses, barns, and out buildings. Representatives of the Farm Secnrity Administration guide these homesteaders in their farm work, exactly as they help FSA rehabilitation borrowers.

b. In addition to this assistance, project farmers learn to farm cooperatively. Cooperative stores, gins and marketing services are acquainting them with the benefits of cooperatives.

c. Negro farmers, together with others, are profiting by this experience. They are established on 31 propects in 13 Southeastern States.

4. FSA also is setting up rental cooperatives, through which groups of tenants can improve their tenureship and living conditions by leasing large tracts of land through FSA loans, and operating them cooperativcly, usually with an option to buy within a given period.

a. Thirty such rental cooperatives are being set up for operation in the Mississippi Delta area. Color ratio on these projects is determined by the need in the area.

b. Projects on which Negro youths can secure "internesship" in modern farm practices are pointing the way for the coming generation.

c. By encouraging long-term written leases, FSA is trying to cure some of the worst evils of tenancy. Such leases benefit both owner and tenant, since they encourage better housing and better land use.

5. FSA supplies, without cost, a debt adjustment service which is available to all farmers. Volunteer local committees have arranged debt adjustments which have saved American farmers $78,807,693 in the last four years. There is no racial breakdown on these figures, but case histories on file at Farm Security Administration offices show that Negro farmers especially are benefitting by this service.

6. It offers loans to small groups of farmers unable to purchase livestock, heavy farm equipment and other needed services individually, enabling them to purchase these for community use. Negroes are making increasing use of these community services.

7. It is releasing land to its proper use by limiting loans to farmers established on land suitable for cultivation, and by assisting in the relocation of farmers situated on sub-marginal or cut-over lands.

a. It is restoring land to cultivating through erosion control by its clients, and by instructing and directing its borrowers in soil-building practices.

8. It is shaping patterns in rural education, by providing adequate school buildings and equipment on many projects. State and County

# News Of Interest To Negro Farm Groups And Leaders

## REDS CAN'T TAKE ROOT IN OUR SOIL, CAPPER ASSERTS

### Finds Farmers Also Oppose Naziism

American farmers stand firmly against communism, Senator Arthur Capper (R., Kans.) told the American Farm Bureau federation. He spoke at the afternoon session of the bureau's convention in the Stevens hotel.

"I have seen communists and Nazis parading in the cities, particularly in New York," Senator Capper said. "But not on the farm. We may have communism in the cities, but it is far from getting a foothold in the farming districts.

**Would Give Aliens a Year.**

"I have a bill pending which would give aliens a year in which to decide whether or not they want to become citizens. If they don't they ought to be put on a boat and sent back home."

The Kansas senator asserted that the Dies committee should be continued for its fight against communism.

Senator Capper attacked the reciprocal trade agreements which Secretary of State Cordell Hull defended in an address before the the farm bureau on Tuesday. The senator said that Secretary of Agriculture Henry Wallace is trying to raise the price of farm products, while Secretary Hull, thru his trade agreements, is lowering the price.

**Finds Plans Contradictory**

The senator said that Secretary Hull is preparing trade agreements that will lower the tariff on cheese, corn, broom corn, beef and veal, both cured and pirkled, and flaxseed.

"The picture is this," he said: "The United States government is subsidizing American farmers to reduce production to bring supply [illegible] with effective demand. This is thrn the AAA. Now we find that under the same administration the state department is preparing to lower tariff protection on some of the same products for the purpose of increasing the supply in the United States.

"An increase in the supply, unless there is a corresponding increase in the demand means lower prices. It just doesn't make sense."

## HOUSING AGENCY PLANS MODERN HOMES ON FARM

### Rural Slum Clearance May be Next Step Taken By the USHA

Rural slum clearance soon will be an integral part of the United States Housing Authority's national program, and if a bill now pending in Congress is approved the federal agency will sponsor the erection of thousands of farm dwellings not only for rental purposes but also for sale.

Plans already have been made for beginning construction of the first of these farm homes early next year, to ren tfor around $4.25 monthly, according to Nathan Straus, head of the USHA. Since a monthly "labor credit" is to be given to each tenant for caring for the house, repairing and painting it, the actual rent to be paid will be considerably lower than would otherwise be possible. The USHA estimates that the labor credit will amount to about $3 monthly.

Twenty-nine county housing authorities have been organized in 13 states to cooperate with the USHA in this new branch of its program and construction work next spring will be initiated in four counties in Indiana, Illinois, Mississippi and Georgia, where about 800 such houses have been projected. The cost would range from $1,500 to $2,000, depending on climatic conditions and including the site and other items would run between $2,000 and $2,600.

Most of the houses will consist of five or six rooms, including three bedrooms, living, cooking and dining space, a work porch and storage space.

Income restrictions would be about the same as are applied to the USHA urban low-rent housing. Family income must not exceed five times the rental, except in the case of larger families, where it might be six times the rent. In figuring the income of these families consideration would be given to net profit from sales of farm produce and the value of farm products raised on the place and consumed by the family.

Some observers profess to see many problems arising from attempts to estimate income that way. Rentals, too, will be so low that many prospective tenants would be excluded, as has been the case in the city projects. No farm family appears to be eligible whose total income, including the value of produce it raises and consumes, is as much as $50 a month.

The United States Housing Act as it reads now does not permit occupant ownership of USHA-aided houses of any type, but the bill now before Congress would change that. This measure, which calls for an additional appropriation of $800,000,000 for the USHA, of which $200,000,000 would be earmarked for rural houses, also would permit a farmer to occupy one of these homes on either a long-term lease or a purchase agreement. A farm owner also might acquire title to USHA houses built for his tenants or share-croppers.

In any case, demolition of one substandard farmhouse for each new one erected under USHA auspices would be mandatory.

Mr. Straus estimates that this program would accomplish the rehousing of about 100,000 rural families. He points out that recent federal surveys indicate that about 4,550,000 farm families in this country now live in substandard homes.—New York Times.

---

A man visited a doctor complaining of a pain in the back. The doctor examined him and the pain quickly vanished. "I call that quick work, doc," said the patient; "was it rheumatism?"

"No," replied the doctor, "your suspenders were twisted. Five dollars, please."

## Klan Protests Negro Official in Farm Security Administration

**Circular Appears After Tuskegan Visits Section**

Greenville, S. C. —(ANP)—The boldness which prompts the Ku Klux Klan to flout constituted authority and set itself up as a law unto itself reached a new high this week when a Klan circular flouting the authority of a branch of the Federal Government made its appearance here.

The Klan circular was distributed over Greenville County, Tuesday night, December 7. The circulars are dated October 24, but they did not appear until this week. They undoubtedly refer to a visit of William Street, Negro Field Section, Farm Security Administration, said to be from Tuskegee.

There has been a rumor here for some time that a Negro who holds an executive position with the Farm Bureau was to be located in the upper part of South Carolina. Apparently the Klan wishes otherwise, and if he is scheduled to come many believe that he will get an assignment to some other place, so strong is the Klan here.

## Selassie Favors Aid To Finland

LONDON, Jan. 18—(ANP)— Although it is not possible for Ethiopia to help since the Abyssinians "continue their heroic resistance against the agressors in several parts of the country," Haile Selassie sent a telegram last week to the League fo Nations at Geneva expressing sympathy for Finland.

His telegram also said, "if Ethiopia had obtained arms and financial and technical assistance, a defense sufficient to stop the invader would have been possible."

## Rust College To Be Rebuilt

HOLLY SPRINGS, Miss., Jan. 18—(ANP)—Plans for rebuilding Rust College, destroyed last Monday by fire with a loss of $100,000, were discussed by the school's building committee Friday night.

President L. M. McCoy said a temporary mess hall and barracks for male students will be constructed at once. Girl students will be cared for in the Elizabeth L. Rust hall.

The buildnig committee is composed of Dr. M. J. Holmes, general secretary of the board of education for Negro schools of the Methodist Church; Bishop A. P. Shaw of New Orleans, Dr. G. W. Newman of Indianola, Dr. E. S. Scarbrough, field worker for the college, and President McCoy.

## BETSY IS WORTH WEIGHT IN GOLD AND LITTLE PIGS

HATFIELD, Mo.—George Puttoff estimated he has earned $3,200 from one brood sow.

"The sow has produced 331 pigs for me iin 20 years," Puttoff said, "and 320 of them have been marketed at an average of $10 a head.

"Last spring I sold her 39th litter, 11 in all, for $13 a head. She had hard luck with her fall litter, and only three were saved. She lost her hearing and could not hear them squeal when she laid on them.

## AMERICA IN FOURTH STAGE

America, having passed through three stages of its development, is now in the fourth stage, that of human relations, says J. O. Christianson, superintendent of the school of agriculture, University of Minnesota. The first stage of our development was the formation of colonies. The next was the period of westward expansion. The third was our economic growth. Now, he says, we are learning how to live together, to make the best possible use of what we have.

## COLORED RACE TO BE HARD HIT BY ECONOMY OF FDR

### Federal Agencies Affecting Negroes Will Get Less Funds This Year

WASHINGTON, Jan. 18 (ANP)—Of importance to every Negro in the United States, yet casually regarded by most, President Roosevelt's eight billion dollar budget, now ready for congress, offers an analysis to the 1941 situation which should warrant the closest attention.

All along the lines, where Negroes benefit most in the social aspect of the government, cuts have been inaugurated which bode the Negro no good.

Of especial interest is the all important aspect of relief, which some believe the Negro has learned to regard as his divine inheritance. In the new proposal, one half billion dollars has been lopped off, which now makes the item read $1,300,000,000 estimated to care for 1,350,000 persons as compared with the last year total of a half million more or 1,850,000 persons. Under the commonly accepted ratio of 10 per cent of the population sharing in the relief, this means quite a reduction for Negroes.

In the CCC camps, the 1941 estimate asks for 1,227 continental camps as compared with the present 1,500 continental camps. The enrollment of these camps will be limited to 245,000 men as compared with the present 295,000 enrollment. The sum of $230,000,000 is asked in the budget for the camps.

The NYA will get only $85,000,000 as against the almost $100,000,000 asked in the revised 1940 budget. The sum is believed to be adequate to provide relief for some 600,000 youths per month. In the old budget, 706,000 youths were provided for monthly, a drop this year of 106,000 which quite naturally will affect the number of Negroes enrolled.

For the operation of the new tuberculosis unit at Freedmen's hospital, $71,200 is asked for for six months trial.

In the 1941 budget, Howard university loses some $3,000, the new figure being $741,960 against $745,000 for last year. Freedmen's is raised from $484,840 to $579,625.

Due to the elination of a unit in the recorder of deeds office, this organization loses $1,900 as against last year's estimate.

Interesting, however, is the increase in the budget of the department of justice where it is anticipated there will be a 12.5 per cent increase in the U.S. prison population during 1941 over the present. Statistics issued by the department show a larger percentage of Negro prisoners than whites as compared with the total population.

The Farm Security administration has been asked to operate on an 80 percent estimate of its present budget.

All along the line, there has been a general decrease in the appropriations, except in the national defense, which has been given fund hitherto mentioned only in awe.

## CO-OP TO BE RUN BY FSA UNIT

### Basic Training For Youth To be Offered

Washington, (ANP)—Plans for an "interneship" farm project to be conducted on land adjoining Flint River farms, Montezuma, Ga., are nearing completion, according to information, released this week by the Farm Security office here.

The project which has for its chief purpose the training of young farmers under typical farm situations, will be operated on a cooperative basis. Units vacated by farmers who have completed training will be taken by new families

Operated in this fashion, the project will provide internships in cooperative operation and modern farm methods for a large number of new families, enabling them within a reasonable length of time, to maintain themselves and conserve the land they use in accordance with accepted, progressive agricultural practice.

Within the 40 year period of operation planned for it, between three and four hundred families will receive basic training during their internship residence of this 40-unit tract. Each family will contribute its quota toward property payments. At the end of the 40 years, when payment is complete, the land will be added to Flint River farms, the parent project, where 102 Negro families are already established on an ownership basis.

Young married farmers from 18 to 30 years old are now being selected from among many applicants. Each family of three to five persons will be situated on a one-horse farm, in a comfortable five-room cottage, with five acres of land, poultry house, smoke-house, garden lot and cow barn. Cash crops will be raised under guidance of trained agricultural experts, on land used cooperatively with labor on the coop farm and elsewhere on the project, paid for at the prevailing rate of 75c a day, plus dividends from the crops.

Existing housing will be used temporarily until new, modern farm homes are completed. Supervision and direction will be supplied by the personnel of the Flint River farms project, with the cooperation of state officials.

## FARM INCOME GAINS 63 PER CENT IN 7 YEARS

The 1939 cash income of American farmers was estimated at $7,625,000,000 by the Department of Agriculture this week, that was declared to be a 63 per cent increase in seven years.

During this year total government benefits to farmers will reach $675,000,000, the Department said.

Meanwhile, the prices of important farm commodities have skyrocketed to the highest levels since 1937.

# News Of Interest To Negro Farm Groups And Leaders

## LOWER THIRD LIVES ON SLENDER BUDGET

### Thirteen Million Families Below Minimum Requirements

"The level of living maintained by the entire lower third of the nation falls below the minimum requirements for healthful and demiddle third are able to enjoy what is customarily called an 'American' standard of living," concludes in National Resources Committee in its recent study of "Concent living, and few even of the sumer Expenditures in the United States."

The top half of one per cent of the nation received nearly 10 per cent of the $59 billion consumer income in 1935-36—or almost the same sized slice of the national income as did 13 million families, one-third of the total families in the United States at the other end of the scale.

The lower third of the nation, with incomes under $780, spent 50.2 per cent of their income on food, whereas the upper half of one per cent, with incomes of $15,000 and over, spent only 6.2 per cent of their income on food. Though spending over half of their income on food, the lower third account for only 18.4 per cent of the nation's food bill and spend only $1.60 per capita weekly for food. Moreover, this figure includes the estimated money value of home-produced food, amounting to 23 per cent of food expenses for families with incomes below $500. For farm families, the value of home-produced food represents 50 per cent or more of total food "expense."

## VERY ENCOURAGING NEWS

No more encouraging news has reached the pages of our newspapers than the fact that in Texas twenty-five per cent of the 76,000 Negro farm families own their own farms.

This is indeed a happy sign and a trend that should be followed as quickly as possible by the other farmers of our race, ninety per cent of whom are in the South.

That contrary to popular belief the farm offers a genuine outlet to the economic chaos that now faces the black worker is also revealed in the same story.

An example of the unlimited possibilities that lie ahead for the tiller of the soil was given in the case of 18-year-old William S. Hart, of Bay City, Texas, a member of the 4-H club, who earned a net profit last year of $443.08, enough for him to enter Prairie View State College this fall, to pursue an agricultural course. (Editorial, Atlanta Daily World.)

## BOOKER T. WASHINGTON STAMPS ON SALE IN APRIL

The Booker T. Washington memorial stamp, first issued by the United States government in honor of a Race citizen, will be put on sale for the first time at Tuskegee Institute, Ala., April 7, it was announced this week by the United States Post Office department.

The stamp, which will be brown in color, will be of the 10 cent denomination and will be available to post offices throughout the country following the first day sale at Tuskegee.

## SHARECROPPERS TELL PLIGHT AT MEETING HELD AT CAPITOL

WASHINGTON, Jan. 25 (A. N. P.)—Stories of unbelievable cruelty, unjust treatment, hardships usually associated with pioneers in a barren land, were the stories told Tuesday night when some 25 sharecroppers, here for a two days conference with government officials, met at Pierce hall so they could further plan for the betterment of their fellows in the benighted and Klux-ridden Southland.

White and black, they stood together and sang the songs which they have transcribed into labor songs, the old Negro shouts and hymns which now exhort workers to organize and unionize against a common enemy, the farmer-landlord.

Confronted with these hardy unfortunates, their stories rang true as one after another, they recounted highlights of their miserable existence for the benefit of those who had never seen a sharecropper. And until you see a sharecropper and hear his humorous pathetic story, no amount of reading can adequately express the plight of these folk.

Don Henderson, International President of the UCAPAWA said:

"People have to learn to lead themselves in the South," he said. "This is the first time in the history of the country any delegation of this kind and size has been to Washington. And it is not an effort to put the government on the spot. Government officials as a whole have been fine with one exception.

"We are trying to organize three groups. First, the migratory workers of whom there are now 40,000 on strike; second, the sugar-beet workers in the Rocky Mountain area; third the larger group in the South engaged in agricultural problems.

"Because of certain officials in the Farm Security administration, there have been no evictions this year like there were last January."

From East Texas, Mrs. Mollie Robinson, of Rust county, a frail dark brown skinned woman, seemingly unequal to the task to which she set herself, was the next speaker.

"The problem of the South needs immediate attention," she said, "tenant farmers, sharecroppers and farm laborers are being swept from farms to relief. Farmers are dispensing with their services rapidly. Families which formerly worked the farms are being supplanted by tractors and machinery."

From Tallapoosa county, Alabama, Josie Hart, a brave organizer, whose son had been framed on a highway robbery charge and sentenced to 15 years in penitentiary, was also a speaker. He told of the threats of the KKK and made his audience roar when he told of the activities of the white-sheeted mobs.

"The Ku Klux Klan is watching the Negroes" he said they advised colored residents of the country, and these Negroes came back with the taunt, "The Negroes are watching the Ku Klux Klan, too!"

"The Kluxers raided two meetings," he went on. "On the first night, they whipped a few heads, that was all the damage they did. But on the second night they shot down a member of our meeting and put 33 of us in jail. That was all there was of us. But they didn't have nothing on us 'cept we was holding a meeting there in the woods, so they had to let us go."

The first meetings held by this group were held in the thickest woods late at night when no white person would be around to tell the sheriff or the landlords.

"Landlords were trying to find ways to frame Negroes and to keep them on the farms at low wages," said Mr. Hart," they fought against the WPA employment of Negroes so they could work the farms for 40 and 50 cents per day."

In several occasions, Mr. Hart declared the sheriff of the county threatened his life.

Ed Clark, of Louisiana, told of the flagrant violation of the wage and hours acts in his section of the country, where the minimum wage for cane field workers was $1.50 for a nine hour work day. Bosses paid Negro workers from 75 to 80c per day and told them they ran their business and no government could come in and tell them what to do. Whenever the union sought to aid these workers, stool pigeons told bosses who represented the unions.

"We stopped buying at their store, they call the commissary but we call it the robbersary, because that's all they do. And we organized our own store which is now a going concern," Clark asserted.

Mr. Clark declared that workers in his state had never received any government checks for cotton conservation and when he told them they could get paid for it, they immediately wrote to Washington, which in the past had been forbidden by the white bosses on pain of eviction and even worse fates. Upon receipt of their checks from the department of agriculture, irate white bosses began taking steps for the eradication of the labor agitators.

Miss Elvira Dale, 63-year-old delegate from Arkansas, said white folk in her section of the country think more of their dogs than they do of their Negro citizens. She has seen hundreds of grown Negroes in Crittenden county, she declared, who couldn't buy the cheapest dress and had to wear dresses made of flour sacks. They had little food, and even now the county and many others in the state are desperately in need of relief. Mrs. Dale declared her life was threatened when it was learned she was going to Washington to confer with the officials there.

The principal speaker, however, was the Rev. Owen Whitfield, who won fame in the Missouri sharecroppers eviction last year when he led a demonstration of some 1,700 white and black sharecroppers.

"The bosses play the whites against the Negroes and the Negroes against the white," he said. "When one demands rights they are replaced by the other group and vice versa. I used to be considered a good preacher some 10 years ago but I preached a different kind of gospel from the kind I now preach. I am preaching now about a present God in the hearts and minds of men—the brotherhood of man and I am seeking to build a heaven here on earth. Heaven is a state of mind representing peace—held is misery. I have stopped building or trying to build a city beyond the sky. Instead of looking toward the sky for help, I am going to look reactionaries in the face. There is no one here in Washington to represent us, so we came here ourselves. We want no more puny excuses or mimeographed letters. We are going to hand our troubles on the White House door.

"Why is there a talk of surplus commodity when there are 15,000,000 folks starving? I hear they are going to build a laboratory to try to determine new uses for cotton. That isn't needed. There are enough folks down South needing a plain cotton dress, cotton overhalls, cotton jumpers to use more cotton than we got stored away."

Taking a pot-shot at Theodore Bilbo, the U. S. senator from Mississippi, Mr. Whitfield declared that Bilbo's days were numbered.

"I worked on a plantation ten years to be a head nigger. That's what they call them down South, head-niggers. I used to get up before anyone else on the plantation did to get in good favor with my boss. I didn't know any better. But as I look back and see what a fool I was,. I regret I didn't know any better in those days.

Mr. Whitfield recounted the difficulties the sharecroppers had after the crops were in and they had to search around for food, the store on the plantation being closed to them. Loud laughter greeted some of his witty sallies and the audience was deeply moved by his accounts.

Dr. Alexander's office lent all possible help to these unfortunates and after devoting an entire day to the program planned the delegates were then received the AAA and the housing authority.

The group remained in Washington Thursday and then turned homeward, a long cold trek in their broken down busses and old rambling wrecks of automobiles. However, they felt that some good had been accomplished through presenting their problems directly to the departmental heads in order that some relief may be granted them.

## RUST COLLEGE, IN MISSISSIPPI, IS DESTROYED BY FIRE

### Loss to School at Holly Springs is Estimated as $100,000

HOLLY SPRINGS, Miss., Jan. 18—(By James Purdy, r., for ANP)—Early Monday morning Rust College, the 75-year-old institution and home of the famous Rust singers, was destroyed by fire with an estimated loss of $100,000.

Investigation revealed that evidently the blaze started in the furnace chimney of the college about 7:00 A. M. and spread to the fifth floor of the structure, where sparks ignited the discarded furniture and other college belongings that were stored there.

The fire was discovered three hours after it had begun, and had gained too great a headway for local fire fighters to successfully combat.

The 250 students housed in the five-story structure, that served for dormitory, office and class rooms, escaped uninjured and saved their clothing and other effects, although little furniture or office fixtures were saved.

Firemen battled heroically to prevent the fire from spreading to the home of L. M. McCoy, the president, and the nearby five homes of the teachers. The laundry and other out buildings were saved from the blaze.

President McCoy, who said that the building was partically covered by insurance, announced that Mississippi Industrial College, directly across from Rust, would absorb the Rust students for the present. He made no announcement as to plans for the reconstruction of the institution.

There were more than 250 students at the college at the time of the fire, representing every state in the U. S. A. and Panama.

Rust is located in what is commonly called the "Red Clay Hills" and is one of the oldest Negro colleges in Mississippi. It was founded in 1866 under the sponsorship of the Freedmen's bureau of the Northern Methodist Church and was first named Shaw University in honor of Dfl. S. P. Shaw, who contributed large funds generously towards the erection of its first buildings. The college burned once before during the reconstruction days.

The first president was R. A. McDonald (Rev.), a white minister. Dr. L. M. McCoy, present president, stressed practical agricultural methods, and the school was an accredited institution with high ratings. Funds for its operations were supplied by the Northern Methodists.

The Rust College singers, trained by Natalie Doxey, were widely known over the country.

## THERE'S SKELETON IN FRONT PARLOR

Dallas, Tex.—The home of S. B. Heyler of Dallas is crowded—not only with visitors but also with a collection of the bones of a prehistoric animal. Heyler has taken in the remains of a huge beast discovered in Pecos County near the New Mexico border. The ribs are the size of a barn rafters, the four-foot tusks as big around as fence posts and the leg bones as large as a tree trunk. The jaws are three feet across at the base and about four feet long.

Switzerland has established a "war economy syndicate" for foodstuffs.

## The Southern Negro

(Continued from page 5)

school authorities cooperate in supplying competent staffs to teach subjects carefully correlated with life. Negro tenants particularly are welcoming this educationals guidance.

9. It is supplying medical aid through the establishment of group medical care associations, through which clients receive service of physicians and nurses at minimum rates, supplanting fear, neglect and superstition with skilled assstance.

III. HOW IS THIS PARTNERSHIP BETWEEN THE FSA AND THE FARMER DIRECTED?

A. By close cooperation between FSA supervisors and borrowers, planning together for the development of each farm unit affected: the cash crop, garden produce, canning, farm procedure, and setting up of farm bookkeeping, including budget and inventory.

IV. WHAT HAVE BEEN THE RESULTS OF THIS PARTNERSHIP?

A. Increased self-respect as evidenced by repayments—often made ahead of time.

B. Increases in net worth in terms of increased canning, livestock and equipment and improved diet and housing.

C. General improvement in tenureship and in owner-tenant relationships.

D. Increased ownership.

E. Increased knowledge of modern agricultural methods.

F. Improvement in health and living standards.

## Thorobreds Wins 3, Lose 2 On Road—Victors Over North Carolina At Home

FRANKFORT, Ky., Jan. 11—The Kentucky State College Thorobreds returned home Tuesday after a six-day trip through West Virginia, Pennsylvania and Ohio. On this trip, five games were played, the Thorobreds winning over Farrell, Pennsylvania's "Steelers" 20-16, Monessen's Big Five 36-21, and romping over Wilverforce University 63-42. West Virginia State College Yellowjackets defeated the Thorobreds 36-29 in the first road game, while Pittsburgh's Big Five scored the second win 37-33 at Pittsburgh. In the latter two games the Kentucky boys made but 13 foul shots out of 42. Poor foul shooting had much to do with both defeats.

George Brown, 1940 football captain, was the outstanding star on the road, accounting for 54 points in five games, and played a brilliant floor game. Captain "Pee Wee" Mason, Matthews and Love also performed capably. After returning home on Tuesday, the Thorobreds encountered a strong North Carolina State Five and defeated them on Wednesday 48-40. Towering over the Kentucky team by a considerable margin, the North Carolinians could not cope with the Kentucky speed-demons, Mason, Sleet and Brown. After the first five minutes, the rangy North Carolina boys never came closer than six points, and the eight point margin garnered in the first half by Kentucky was retained to the end of the game. North Carolina came to Kentucky boasting a 7 point win over West Virgina, and but a three point loss to Wilberforce.

Jack Love and Shelton Matthews, freshmen luminaries, led the Kentucky scoring with 12 and 10 points, respectively; Colbert, rangy North Carolina forward, accounted for 12 points.

## Harlem Job Group Enjoys Banner Year

As the Harlem Labor Union neared the end of the calendar year according to a release from Columbus A. Austin, Director of Public Relations, the Union enjoyed the best year of its history, and broke all records for the number of members working during the Christmas holidays.

In a sworn statement before Samuel Richardson, Notary Public, Francis O. Minor, Chairman of the Steering Committee of the Union, declared that his Union had the following numbers of working of working members as of December 20, 1939: 500 retail salesmen and salesladies; 250 bartenders and restaurant workers; 18 Pawnshop clerks; 82 butchers; 26 movie cashiers, ushers, etc.; 53 grocery, fruit and vegetable and miscellaneous clerks; and 31 shoe repairmen.

Mr. Minor further averred that during the Christmas Season he placed 138 extra salespeople in stores in the 125th Street area; 34 extra bartenders and waitresses in Grills; 14 extra butchers and 8 extra clerks in grocery stores.

Asked for a New Year message, Mr. Minor said, "As we face 1940, we feel that the New Year will be a banner one. The public and merchants have co-operated with us in every detail and I would like to extend the thanks of the entire membership of the Union for the support that we have received. Especially do we commend the merchants who, during the holidays, called upon us for additional sales clerks to such an extent that we had to appeal to other job-drive groups for workers.

"We will continue to fight ceaselessly for more jobs for our people The only way that we can add to the thousands of Negroes who owe their jobs to the work done by the Harlem Labor Union and its parent organizations is by constantly urging all to SHOP IN HARLEM IN STORES THAT EMPLOY NEGRO CLERKS."

**Facsimile Copy**

Before me, Samuel Richardson, Notary Public, appeared Francis O. Minor, Chairman of the Steering Committee of the Harlem Labor Union, who swears that to the best of his knowledge and according to records in the Union offices, the following numbers of persons were employed in various Harlem Firms as of December 20, 1939:

500 Sales clerks
250 Bartenders
18 Pawnshop clerks
82 Butchers
26 Movie cashiers and Theatre workers
53 Grocery, fruit and miscellaneous clerks
31 Shoe repairmen

Francis O. Minor further swears that extra help hired during Christmas Season numbered:

138 Sales people in the 125th St. area
34 Bartenders and Waitresses
14 Butchers
8 Grocery and miscellaneous clerks

In addition, Francis O. Minor declares that all available unemployed members of the Harlem Labor Union were used and in addition, his Union secured jobs for five members of the Greater N. Y. Coordinating Committee.

Sworn to before me this twenty-ninth day of December 1939.

Francis Minor
Samuel Richardson

NOTARY PUBLIC SEAL
Notary Public, New York County
New York County Clerk's No. 113
Commission Expires March 30, 1941

"I expect her to produce her 31st litter in the spring."

Mrs. Puttoff added: "Betsy will stay right on the farm until she dies of old age. George would not part with her for the price of the farm."

## PRODUCTION CREDIT ASSOCIATIONS HOLD ANNUAL MEETINGS

WASHINGTON, Jan. 18 (ANP)—Annual meetings of produceion credit associations are being held beginning January 2 and extending through the middle of February, according to a report from the office of Cornelius King, Negro representative of the Farm Credit administration. These associations comprise some 525 cooperative credit organizations that provide short-term credit, at a low rate of interest, to more than 256,000 farmers. Approximately 150,000 farmers in the United States will attend these meetings this year, if the attendance record compares favorably with that of 1939.

In the production credit associations of eight southern states having a fairly large Negro population and membership (Texas, Louisiana, Mississippi, Alabama, Georgia, Florida, North and South Carolina) some 50,000 individuals will probably attend the annual meetings. From 10-25 per cent of the member-borrowers in the states mentioned are of the Negro race. "I am hoping," said Mr. King, "that a large number of Negroes borrowers will attend the meetings of these co-operative credit organizations.

Substantial savings interest charges are realized by farmers who borrow through the production credit associations. According to the farm credit aide, "Many Negro farmers are availing themselves of this credit, not only because it is adapted to their farming operations but also because the interest cost is 4 1-2 percent a year."

Annual meetings of production credit associations present an opportunity for all farmers to secure information relative to the operations and services of these farm credit lending units.

## Republican Leader Of Baltimore Given Testimonial

BALTIMORE, Md., Jan. (ANP)—In one of the largest demonstrations of the kind ever witnessed by this section, Marse S. Calloway, Baltimore Republican leader, recently was given a public tribute by fellow citizens as an endorsement of his useful service to the community.

The tribute, in the form of a testimonial, was promoted by a citizens' group headed by the Rev. E W. White, and brought together notables from many parts of the country as well as a cross-section of the leading business, fraternal and civic organizations of Maryland.

Bethel A. M. E. church was the background for the bevy of attestations which lauded the character and leadership of Mr. Calloway. Outstanding spokesmen from every phase of cultural achievement stressed his activity in school and church affairs, his zeal in civic projects, and his ever-ready willingness to aid any worthy cause or citizen.

Foremost among the speakers was former Governor Harry Nice, whom the genial Marse Calloway calls "the best governor Maryland ever had."

Others honoring Outstanding Citizen Calloway were: Perry W. Howard, Republican National Committeeman of Mississippi; Francis Rivers, assistant state's attorney of New York City; Dr. Wm. Tompkins, recorder of deeds for the District of Columbia; Linwood G. Koger, of the American Legion; Raymond Pace Alexander, Philadelphia lawyer; Edward S. Lewis, Baltimore Urban league secretary; and Dr. Dwight O. W. Holmes, president of Morgan State college.

Carl Murphy, editor of the Afro-American, acted as master of ceremonies, and presentations to Mr. Calloway included a gavel, gift of the committee in charge of the testimonial, and cash contributed by civic organizations and individuals.

## Atlantic City's First Baby For '40 Is Colored

ATLANTIC CITY, N. J., Jan. 11 (By Frank Canty Jr. for ANP)—While merrymakers celebrated the birth of a new year the stork paid a flying visit to a local hospital leaving a precious little bundle as a New Year present for Mr. and Mrs. F. Calhoun. The female prize package, weighing eight pounds, first 1940 delivery in Atlantic City, arrived exactly at 1:03 a. m. Jan. 1.

For years it has been a custom of local merchants to shower the first arrival of the year with gifts of every description, even a bank account. As for being No. 1 candidate, it can not be taken from young Calhoun, but as to receiving gifts, well that's another story, for it is already circulated that the Calhouns had not resided in Atlantic City for a year, therefore the baby is not eligible for gitts. The report is hoped by many not to be true, under which is termed a new ruling.

## Kelly Miller

**By William Pickens For ANP**

Shakespeare implies that the good that men do, should live after them and that the evil should be buried with them. Kelly Miller's life was so outstandingly full of good that the evil can easily be overlooked. He was a prolific writer. Strange to say, he got his early reputation for brain-power by being both a mathematician and a Negro, because foolish prejudice had always contended, and still contends, that the mind underneath a highly pigmented skin is peculiarly unmathematical.

Many of those who respected and admitted him, did not always agree with his philosophy,—often disagreed with it. In his later years he seemed more often to take an unusual turn in his thinking. He did not always stick to a line of thinking which he had long pursued. It would not be so easy to tell whether he was with this side or that in much of his mental career. For an elderly man, he was much attracted to the new and unusual,—and yet was never "radical." The spirit of compromise breathed through his style. He could jump from Republican to Democrat, from conservative to New Deal.

His opinions, however much at any time at variance with the general opinion or with his previous opinion, carried a certain respect. That is because he knew how not to be too positivist in his expressions. Sometimes he seemed to call attention to the other side,—the other side which so many men are so apt to forget.

By all the rules of justice, he ought to have been elected president of Howard university about a generation ago, and at subsequent times. But internal fights, and the jealousy between him and another dean of the school, and the "accidents" of human history stood in the way. He was a far abler man than some of those under whom he served.

He had a definite and permanent place in the history of his race and his country. He will long be remembered. His death is the closing scene in a colorful, honorable, and unique career.

### HARD BOUNCE

A BRICKLAYER working on top of a high building carelessly dropped a brick which landed on the head of his Negro helper below.

You-all bettah be careful up dere," the helper shouted up. "You done made me bit mah tongue."

### RIDING TO A FALL

First Student: "The dean says he is going to stop smoking in the college.'

Second Student: "Huh! Next thing he'll be asking us to stop too."

## ASK PEONAGE PROBE IN NORTH CAROLINA

New York City. The Department of Justice at Washington was asked by the National Association for the Advancement of Colored People this week to investigate an apparent condition of peonage in the vicinity of Yanceyville, N. C.

The N. A. A. C. P. request sent to Henry A. Schweinhaut, head of the Civil liberties unit of the Department of Justice, cited an advertisement which appeared recently in the Yanceyville Caswell Messenger as follows:

**"NOTICE——I forbid any one to hire or harbor Herman Miles, colored, durng the year 1939. A. P. Dabbs, Route 1, Yanceyville."**

The Chapel Hill, N. C., weekly investigated in the area covered the advertisement and reveals that the insertion of such notices reminiscent of slavery times, is not uncommon in that area of North Carolina.

Although such practices long ago were outlawed by the U. S. Supreme court, the North Carolina investigator reported that the people in the area ignored this fact and that judges and politicians had not dared to act in a contrary manner. The N. A. A. C. P. urged the Department of Justice to take action under the peonage laws.

### ADMINISTRATION CHIEF APPEAL TO ALA. FARMERS

Tuskegee Institute, Ala—Following the conference theme, "Helping the Farmer to Help Himself," H. W. Hochbaum, chief division of field coordination, extension service Department of Agriculture, Washington, appealed to hundreds of the farmers assembled at the forty-ninth annual Tuskegee Negro Farmers' conference which closed here Wednesday.

Mr. Hochbaum was presented by T. M. Campbell, field agent agricultural extension service, Department of Agriculture, Washington.

Dr. F. D. Patterson, president of Tuskegee institute welcomed the farmers.

## LINDBERGH'S CLAPTRAP

(The Amsterdam News)

It's always been said that an expert in one field usually makes a fool of himself whenever he goes piddling around in another. The most recent example of a man making a fool of himself in a field in which he displays crass ignorance is seen in the article by Colonel Charles Lindbergh in the Readers Digest for November.

Calling his article "Aviation, Geography and Race," the colonel, in his piece, declares the current World war, saying that it is a threat to the domination of the world by the white race, since it may give the black, yellow and brown races a chance to usurp the top spot now held by the "Nordics." Throughout the article the "sapinet" colonel beats his breast about the greatness of the whites, and of course, decries all other races. He says it's a good thing the whites rule the air through aviation and asks for a continuation of such as a barrier against possible world bossism by any other race or races.

It is hoped that just because Lindbergh was the first one to bridge the Atlantic in an airplane that his idea of races is not accepted as authoritative. If it is it will only go to prove how sadly off humans are of the a, b, c's of knowledge and culture; for the silly, childish and benighted racial view Lindbergh has only goes to prove that machines are still the master of men—at least the first man to fly the Atlantic.

## Football Team At State College Tendered Banquet

Approximately forty football men were complimented by President W. J. Hale and the institution at a banquet and dance in their honor, Friday evening, January 19.

The team, which loses through graduation twelve men, was highly praised by coaches and officials present for their fine playing record and sportsmanship for the season past.

Special mention was made of outstanding players including "Chaney" Humphrey, who was named All-American, William Brodnax, Captain Charles Goodman and others.

The address of the evening was made by President Hale, who indicated that the important principles of football were simply the fundamental principles that underlie life and living—honesty, loyalty, abiding faith, determination and hard work. He challenged the men to carry into life what the game had put into them; for after all the purpose of the game extends far beyond the winning. Much applause followed the impressive address made by the President.

Dr. J. H. Hale, college physician and chief surgeon, Meharry Medical College; Director G. W. Gore; head Coach Simmons and former Coaches Davis, Munday, and Strange gave brief but stimulating remarks.

An elaborate four course menu was served in the college cafeteria. Dancing in the recreation hall brilliantly closed the evening of entertainment for the football team, 1939-40.

## To Play Chicago

FRANKFORT, Ky., Jan .11—The Kentucky State College "Thorobreds" will be the opponents of "Fats" Jenkins' famous Chicago Crusaders in Chicago on Monday, January 22nd. This will make the initial appearance of the Thorobreds in the Windy City as representatives of the hardwood.

The Crusaders will have a decided height advantage on the Thorobreds, but, in all probability, the Kentucky boys will possess the most speed. In Captain Mason, Brown, Sleet and Matthews the Thorobreds possess five speed demons. The Kentucky reserves are just as fast.

Chicago fans should see quite a game on Monday, the 22nd.

# UNION-REVIEW OF BAPTISTS PASSES 46TH 'MILESTONE'

## Religious Paper Is Official Organ Of National Body; Founded By Dr. R. H. Boyd

Forty-six years ago the late R. H. Boyd launched a religious newspaper and designated it as a Denominational Digest, to chronicle the happenings among the Baptists in particular and members of a minor group in general, that they might read more about themselves in the various states through their organizations, associations and in local communities. The paper was first known as the National Baptist Union, because it purported to have a unified interest in the Baptist Churches, large and small, in the Baptist Sunday Schools, B. Y. P. U. Societies and Church Auxiliaries. Then later on the National Baptist Review was launched, so for a time there were two organs published regularly.

The first editor of the National Baptist Union was the lamented Dr. E. W. D. Isaac. He continued in that field as a journalistic writer and quill-pusher even when the National Baptist Review was launched, with Prof. J. D. Crenshaw as its editor. Both papers continued to cover the field, over-lapping in a measure, until wise counsel hit upon a plan of merging the two publications, eliminating duplication and cutting down over-head expense. Thus, they came together as the National Baptist Union-Review. Since The Union was the older of the two, it was decided to continue the volume and number gained by the elder paper.

This combined publication which is going to practically every state in the Union and many foreign countries, is now directed in its editorial policy by Benjamin Jefferson Davis of Atlanta, Ga., a Baptist layman whose trenchant pen is known throughout the world, because for many years he was editor of the Atlanta Independent, a fearless secular journal that issued for a number of years in the Georgia state capital city. Thus, the National Baptist Union-Review has had but three editors in the forty-six years of its existence. One has gone to the great beyond, but two are still living making their contribution.

This publication which came out this week as Volume 46, Number 1, is now spreading the nation with its denominational information, its race news items, its "Every Woman's Page" and its brilliant editorials. This denominational journal is published by and printed at the National Baptist Publishing Board's plant located at 523 2nd Avenue, North, which plant is directed now by the son of the founder, who serves as manager of the publication. According therefore, to its volume number, it is the senior religious journal or secular journal published here in the Athens of the South, the religious headquarters of the nation, by Negro leadership. Through it the Baptists are pushing what they call the "Henry Allen Boyd Plan," which invisions the greatest possible development of denominational strength ever spread out in tangible form before any organized religious group.

This journal is advocating through its editorial columns from week to week, the inner development of the New Testament Church idea among local congregations. It is encouraging District Associations, State Conventions and the National Body in developing a Three Point Program which was presented and adopted after having been recommended by the President of the National Convention.

There are already plans under way for a Semi-Centennial Celebration not only of this weekly newspaper, but the National Baptist Publishing Board's plant, which will soon be fifty years of age.

## Science Club At State College Elects Officers

The following officers have been elected by the Theta Omega Pi, the Physical Science Club, at Tennessee State College.

President, Mr. Earl Leggett, Gary, Ind.

Vice-president, Mr. Duncan Scott, Savannah, Ga.

Secretary, Miss Irene Baker, Kalamazoo, Mich.

Asst. Secretary, Miss Marietta Jordan, Lake Forest, Ill.

Treasurer, Mr. Marshall Talley, Washington, D. C.

Chaplain, Mr. Clarence Carter, Sylvester, Ga.

Sergeant-at-arms, Mr. Aggie Anderson, Keeling, Tenn.

Reporter, Miss Bertha Parker, Bowling Green, Ky.

Prof. Dennis A. Forbes is the Adviser of this club.

"And so Clara took that old man for better or for worse?"

"Not exactly; she took him for worse, but the old fellow got better."

## FOUR OF FAMILY PERISH IN FIRE

Social Circle, Ga., (SNS)—Ed Holland, his wife, Mamie; son, Robert; and an infant baby, perished in a tenant house fire near here at midnight Sunday.

The Hollands were living in a five-room tenant house on the farm of A. J. Watson.

Four other children of the Hollands were saved by a brother who was not in the house when the fire broke out.

## Beat Pittsburgh

FRANKFORT, Ky., Jan. 11— The Kentucky State Thorobreds avenged two previous defeats by Pittsburgh's "Y" team tonight by scoring an easy 52-32 win. Pittsburgh never threatened, the Kentuckians having a comfortable margin throughout the game. Perhaps, the easy fashion by which the Thorobreds won was quite a surprise for the large crowd that came to see a close game. Then, too, only last Friday Pittsburgh defeated Kentucky at Pittsburgh by a score of 37 to33.

Tonight it was a different story. The "Smoky" City lads found the Kentucky gym too much for them, and the Kentucky boys too good. The score at the half was 31-11 in favor of Kentucky. Both teams scored 21 points in the second half For Kentucky, George Brown led the scorers with 12 points. Sleet and Matthews followed with 10 points each. For Pittsburgh, E. Meyers was the high point man with 8 points.

## RECORD SHOWS 3 LYNCHINGS FOR '39; 25 AVERTED

Tuskegee Institute.—The department of records and research issued a statement this week through Dr. F. D. Patterson, pointing out that there were three lynchings this year.

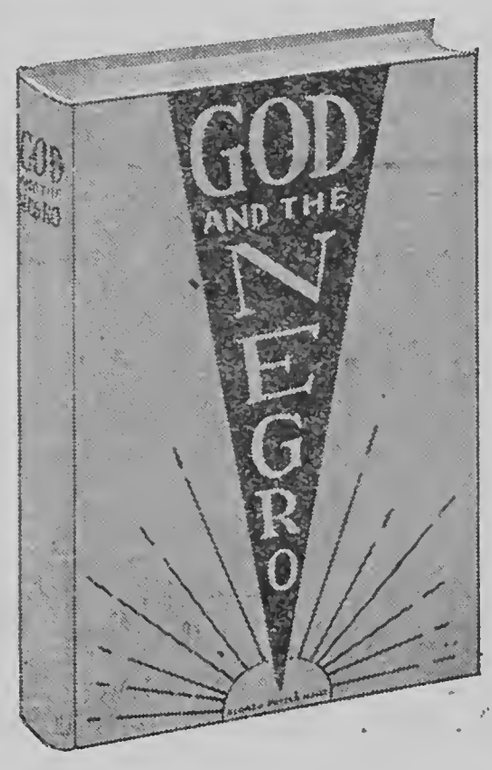
These lynchings took place in Florida and Mississippi, two in the former and one in the latter. The report also shows that 25 lynchings were averted through the shrewdness of law officials. Five of these were white and 20 members of the Race.

In making a comparison of the lynch record since 1935, the figures show that six persons were lynched in 1938; eight in 1936 and 1937; 20 in 1935.

Of those lynched this year, one was white and two were race members.

"Prisoner, did you steal that rug?"

"No, yer Honor. A lady gave it to me and told me to beat it, and I did."



GOD
And The
NEGRO
Is a new book just off the press

This publication is written by one of the most eminent scholars of our day and generation. Born in America, reared in Haiti, educated in the best schools of England, a protege of one of the world's most celebrated prelates, bishops and educators. ## HERE IS "FOOD FOR THOUGHT" ECONOMICALLY SPEAKING

**From Chicago Defender**

At the first meeting of the Student Labor Problems Council of Chicago university, Ishmael Flory, representing the Dining Car Workers and other organizations connected with Negro welfare, stated that 99 and 75-100 of the 15,000,000 Negroes in the United States are still enslaved with nothing to sell but their physical labor. The freedom of the Negro, Flory said, depended upon powerful labor organizations.

**The Federal Government**

The Hon. Paul McNutt, Federal Security Administrator, in his opening remarks at the National Youth Administrative conference which was held in Washington, D. C., Dec. 13-14 said: "We have approximately 4,000,000 young people out of school, totally unemployed, seeking work. The two Federal agencies, the Civilian Conservation Corps, and the National Youth Administration are providing some work-training and wages to almost a million American youth.

**Dangerous Problem**

"Still youth unemployment is at a dangerously high level. It is absolutely imperative that we give thought to the question of HOW TO PROVIDE our young people with opportunities for productive and income-producing work. This is a problem on which we must concentrate until we find a satisfactory solution.

**Shift In Education**

"Things are being and have been tried—many varieties of work projects and combinations of work and training. Perhaps most necessary of all is some shift in the emphasis in our educational system, particularly in the secondary school period.

**Two Vital Problems**

"This shift of emphasis should probably be from the academic or college preparatory work to vocational or life utility types of subjects which will aid the induction of a youth into industry and into adulthood. What changes should be made in the curriculum of our schools to better fit the youth for entry into our complex and highly competitive labor market and, secondly, how can productive work opportunities be provided for youth out of school and unable to find employment in private industry? I don't know two more vital problems before us than these two.

**Agencies**

"These are the questions we have called you here to help us find an answer. What and how much can be done through private industry? How much should be and can be done by governmental agencies, Federal, state, and local? What changes should be made in our public schools and training programs so as to turn out young people better prepared to find opportunities for private employment? How can the stake which labor has in determining what training should be provided, what hours to be worked what wages to be paid in some of these training projects be safeguarded? LABOR HAS A STAKE. How can it be safeguarded?

"I feel very humble in stating such a tremendous problem to you, but do so in the realization that you have been considering it in some phase or another for a very long time."

**Findings of Conference**

There is in the United States an urgent problem arising from the widespread unemployment of youth. The conference is firmly convinced, on the basis of a number of comprehensive studies which have been made and reported and as a result of the experience of the American people in recent years, that immediate and vigorous action is necessary if very serious consequences to the nation are to be avoided. One-third of the young people of this country between the ages of 16 and 25 who are out of school are unable to secure employment. At least 4,000,000 young people between these ages are out of school and unemployed. This constitutes between one-third and one-half of the total unemployed in this country.

**Provide For Youth**

The conference is also convinced that all young people who are out of work and out of school must be provided with opportunities for employment or with opportunities for assistance to continue in school.

To the extent to which private enterprise does not provide jobs for youth who are out of school, unemployed, and seeking work, public employment should be provided.

When young people are employed through the use of public funds, work projects should be selected, so far as possible, which are not in competition with private enterprise. These work projects should be such as contribute to the needs of youth and to the public welfare.

The program provided by the educational system in all its branches should be so organized as to emphasize useful work experiences gained through cooperation with business, agriculture, and public employment.

The development of an adequate program for the realization of the plan of work and training here outlined requires not only participation by the Federal Government but also participation in local communities of representative citizens who will take effective action to meet so far as possible the situations with regard to unemployed youth that exist in these communities.

**Large Sums Needed**

It is quite impossible to meet the urgent needs of unemployed young people of the present time without the expenditure of larger sums of public money than are now devoted to the solution of the employment problems of young people.

The conference recommends that an investigation be conducted by a committee of this conference to determine the amount which can properly be recommended for the enlargement of the program of the National Youth Administration so that it shall not be limited, as it now is, in providing for unemployed youth.

This committee is also directed to consider what steps should be taken to carry out the arrangements that are now being organized between the work projects of the National Youth Administration and educational institutions.

## VEGETABLE LOAF MAKES TEMPTING LUNCHEON DISH

Here's a vegetable loaf that takes a bit of this and a bit of that and makes them into taste-tempting luncheon or supper dish.

**Vegetable Loaf.**

1 egg
1 cup ground or chopped raw carrot
1 cup cooked green beans, cut in small pieces
1 small onion, minced
1 cup tomatoes, canned or cooked
½ cup ground peanuts
1 cup boiled rice
½ teaspoon salt
Pepper

Beat egg and combine with remaining ingredients. Mix well and turn into a greased loaf pan. Bake in a moderately hot (375 degrees) until mixture is firm. Remove loaf to hot platter and garnish with parsley and crisp bacon.

## HOW TO CARVE A TURKEY—IN SIX EASY MANEUVERS

A beautiful, brown-crusted turkey deserves to be carved at the table. It wouldn't be turkey dinner without the carving ritual any more than it would be Christmas without holly wreaths and lighted trees.

Turkey isn't the easiest carved piece of meat to be set before a host, but the man who knows the rules soon becomes expert. And the rules are few and simple:

1. Remove nearest leg by holding leg bone firmly with left hand and cutting thru the skin around the leg from left to right, at the point where the thigh joins the body of the bird. Bend the leg back away from the body and cut down thru to the joint. By pulling the leg with the left hand and forcing it away from the body with the knife, the hip joint is dislocated and the leg separates from the body easily. If necessary, use the point of the knife to sever the thigh from the back. Remove leg to second platter.

2. Remove wing on same side. Use same method as for leg, cutting thru the shoulder joint. Remove to platter.

3. Cut slices from breast. Hold turkey in place by inserting fork firmly astride the breast bone beyond the highest point or insert the fork thru the ribs from the side. Cut slices of breast meat beginning where wing was removed, slicing downward parallel to the breast bone.

4. Separate leg and thigh. Hold end of drumstick with left hand and locate point at which thigh bone and drumstick meet with knife. This is over the round bone just to the right (on the thigh side) of the point of the joint. Cut down thru the ligaments.

5. Slice dark meat from thigh bone and from the drumstick unless bird is so small that this piece may be used as one serving.

6. Remove dressing from vent end of bird and place spoonful along with one slice each of dark and white meat on each dinner plate.

This procedure may be varied somewhat at the carver's convenience, but in general the steps are the same. If desired, the meat may be sliced from the drumstick and thigh before the breast is sliced. Some carvers also prefer to cut the drumstick from the bird, slicing from the thigh while it is still attached to the body.

Second helpings may be cut from the other side of the turkey.

While the actual carving is performed by the host, the hostess plays the important part of setting the stage for the ceremony. She must see the turkey is done enough to slice evenly without being so overdone that the meat falls apart. She should also make sure that the knife is razor-sharp before it is placed on the table.

For the carver's convenience the turkey should be placed on the table with the breast to his left. The platter on which the bird is so proudly displayed should be a large one and there should be a second and smaller platter for the removed leg and wings. Garnishings may be removed to this platter by the carver before he begins.

It is also wise to place a carving cloth—a large dinner napkin will do—under the carving platter to catch spurting meat juices and crumbs. And be sure to remove all skewers, cords, and such in the kitchen.

## CHOP HOOEY

A Federal Trade Commission complaint charges Fong Poy, Oakland, Calif., Chinese herb firm with making false claims regarding the curative powers of its herbs. The Chinese concern is extremely modest concerning the efficacy of its product, claiming only that it will cure heart trouble, high blood pressure, colds, influenza, asthma, pyorrhea, blood disorders, cross eyes and other eye troubles, cancer, stomach troubles, dysentery, pains, dizziness, hardening of the arteries, goiter, bronchial trouble, coughs, sinus trouble, liver and gall bladder ailments, diabetes and other disorders of the kidneys and bladder, nervous attacks and disorders, arthritis, obesity, headaches, neuritis and piles.

## FARM YARD SURGERY SAVES INJURED PULLET

New London, Conn. — (UP) — Coast Guardsman William F. Burke's first attempt at farm yard surgery saved one of his wife's pullets from starving to death.

The bird suffered a deep gash in its breast which made it impossible for the craw to retain food. Burke washed the wound with boric acid, emptied the crop with a match stick and sewed the slit with a needle and cotton thread.

Those who love evil are not often loved devotedly.

# LOOKING FORWARD

By Franklyn Waltman
Publicity, Director Republican Na tional Committee

Efforts to pump up the "draft Roosevelt" for a third term movement still continue but with little more visible evidence of progress than several months ago. Indeed, so little progress has been made that the White House inner circle are becoming somewhat desperate.

This was evidenced by the reckless manner in which the Ickes-Corcoran-Cohen managers of the "draft Roosevelt" movement pushed Attorney-General-Designate Robert H. Jackson out on a limb in his Cleveland Jackson Day speech. They made a catspaw out of the genial young New Yorker—and his pay was severely scorched.

Making a speech more fitting for a ward boss than the Government's chief law officer, Mr. Jackson's big point was that Mr. Roosevelt must be renominated if the Democratic Party is to retain the support of the large bloc of independent voters who are not permanently wedded to their major party. In fact, he inferred no other Democrat could hold the support of that group of voters.

**Independents Oppose Third Term**

Well, neither can Mr. Roosevelt. It so happens that a week or so before Mr. Jackson spoke, Dr. George Gallup's American Institute of Public Opinion took a straw vote poll among these independent voters. It found that 73 per cent of these independent voters in 1936 cast their ballots for Mr. Roosevelt.

The Gallup interviewers asked these independent voters: "If President Roosevelt runs for a third term in 1940, will you vote for him?" Of those asked the question, 53 per cent replied "NO." In other words, whereas 73 out of each 100 independent voters in 1936 voted for Roosevelt, today only 47 out of each 100 would vote for him—a loss of 26 in each 100 independent voters.

These findings rather conclusively knock the Honorable Jackson's contention into a cocked hat. Thus falls another stratagem of the White House inner circle to scare the rank and file of Democrats into crying for a third term nomination. Mr. Jackson, as usual, was uttering quite a bit of nonsense. It was unusual, however, for him to be tripped up so quickly by the Gallup straw vote, on which the New Dealers set great store.

**No Third Term Enthusiasm**

The truth of the matter is that there is no enthusiasm for a third term for Mr. Roosevelt any place, except in the White House and among a small clique which has profited by the presence of Mr. Roosevelt in the White House and will continue to profit if he remains there. Whatever advocacy is given to a third term, outside of these circles, is laboriously pumped up in left-wing quarters.

If this sounds like a partisan exaggeration, listen then to a non-partisan, objective Washington Correspondent who twice has been awarded the Pulitzer Prize for his writings— a man noted for his accuracy and sound political judgments —Arthur Krock of the New York Times.

"There is reiterated clamor that he (Roosevelt) run again," Mr. Krock recently wrote, "but it is coming mostly from his own staff or from political persons who want to ride to office on his coat-tails. No legislatures have lately besought him to stand again, as many did Jefferson and Jackson. No torch-light processions of householders and taxpayers march through the streets of American cities to this end.

**Remains "A Family Affair"**

"Thus far the third-term line-up remains a family affair, with some significant silence among its members. Secretary Hull, Secretary Woodring and Postmaster General Farley have not joined it, and the Vice President is already a candidate to succeed his chief. The call was organized and is being managed by Secretary Ickes and Thomas G. Corcoran, and it has been wired for sound by a number of writers and speakers attached to the New Deal. In the Cabinet, supplementing Mr. Ickes, are Secretary Morgenthau, Attorney General Murphy, his soon-to-be-successor Robert Jackson, and Secretaries Hopkins and Edison. Such Senators as Mr. Guffey of Pennsylvania, whose only chance of re-election depends on a third Presidential candidacy, are in the 'draft.'

"And another striking group of petitioners includes Mayor Hague, Democratic boss of New Jersey; Mayor Kelly, Democratic boss of Chicago; Governor Horner, down-state boss of Illinois, and other representatives of political machines which have more than one reason for wishing no change in the Federal controls, including the inquisitorial."

These are the people who are now bellowing that Mr. Roosevelt is indispensable—that he must be renominated—that no other Democrat can be elected. Oh, but how red their faces will be when the Democratic National Convention names another!

## THE HAPPINESS OF WORK

**By Channing Pollock, condensed From Radio Broadcast**

A well-known dramatist once told me: "There are three stages of authorship. First, that in which a man wants his play produced, and doesn't care whether he gets any money out of it or not. Second, that in which he wants the money, too. And, finally, the stage in which he wants the money, and doesn't care what happens to the play." I don't agree. There are only two stages of One, the stage in which you love the work for itself, and regard the money as a by-product, and the other that stage in which you oughtn't to be doing it anyway. I never have been able to understand the id a of work as something of which you do as little as possible for as much as possible. I've written and published millions of words, and, the day any magazine appears with a story of mine, I still get up an hour earlier to rush to the newsstand, and carry it home in triumph. Sometimes I read it on the street corner. Of course, I think authorship is the most enthralling job in the world, but there's a friend of mine in the country who votes in favor of cabinet-making. When I told him that one of the greatest moments in my life was that in which I finished a certain scene in my play, "The Enemy," he showed me a desk with an invisible drawer he'd made for the fun of it, and pooh-poohed the idea that anyone could get that kind of happiness out of pencils and paper. The truth, I suppose, is that the amount of interest in any work is exactly the amount the worker puts into it. Years ago, I wrote the true story of a messenger boy, who used to carry my manuscripts to the editors—and bring them back. That boy was so kind and courteous, that I wrote to the president of the telegraph company urging his promotion. Later on, I asked the lad whether he'd heard anything of my letter. "Sure," he answered, "they offered me a lot more money, but I declined it. They wanted to send me down to Wall Street, but—gee—brokers would bore me to death. Up here, I talk to you, and Rex Beach, and George Gershwin, and carry their stuff around for them. Mr. Beech's novel that's on sale now; I get the book reviews every Sunday to see how it's going. I carried that book to the publisher, so it's my novel, too."

Anybody who doesn't feel that the chair he's making, or the ship he's steering, is his chair, or his ship, has missed one of the two or three greatest thrills in life. I love Eddie Guest's line, "There's no trick to growing old; anybody can do it who has time enough. The author of **Treasure Island,** Robert Louis Stevenson, who said, "Make us happy and you make us good," said, also, "I know what happiness is, for I have done good work." In his will, J. M. Barrie, who wrote "Peter Pan, promised to leave to the Author's Club "the most precious possession I ever had—my joy in hard work."

There are dirty jobs, of course: dull jobs, devastating jobs. Even in those, it may be possible to find something. I'm not sure of that. But I am sure that 90 per cent of all work is loaded with happiness, if you look for it. One of the friends I understand best was a day laborer on Long Island. In the 33 years I knew him, he became a kind of field-boss. One day he felt tired and he told his boss, "I'm 65 years old, and I think I'll quit."

"Why, John," the owner said, "I thought you were the kind of man who died with his boots on."

John looked ashamed of himself, and kept the job. A year later he had a stroke, and was taken to a hospital, where his life terminated three weeks afterward. Nearly a month after that, John's son told the owner of the business, "Of course, father went entirely cockoo at the end."

"Nonsense!" the boss exclaimed. "I saw him every day, and he was as sane as you are."

"You don't know," the boy answered. "Ten minutes before he died, the old man put his finger on the bell and kept it there 'til the nurse came. Then he yelled, "Quick, nurse, I want my boots on!" She put 'em on, and he died that way."

At 57, I've only about 50 years left to work, and I'm sorry about that. And the days are only 24 hours long, and I'm sorry about that too. But I hope to die with my boots on, passing along to the world J. M. Barrie's "most precious possession," and mine— "my joy in hard work."

## BIBLE IN 1,000 TONGUES

Four men sit at a rough table in a little house in an African jungle clearing. Two are dark-skinned natives. Two are Europeans. Before them lie eight or ten printed books, some notebooks, a pile of carefully corrected manuscript, and before one of them a partly written sheet. They are conversing in a language unknown to us. One reads aloud in English:

"And there are also many other things which Jesus did, the which, if they should be written every one, I suppose that even the world itself could not contain the books that should be written."

He speaks again in the unknown tongue, looks for the agreement of his three colleagues, and after further conversation writes down:

"Yesu akeri bekere besa bevuku ovongo. Ya o zuku infuna nda zi zama, nda ye nda, bua mantea nturai nasonga boke lebo minkanda mi mama."

Little do they realize that a milestone in the spiritual history of the human race has been passed. For the pile of manuscript, carefully wrapped and registered, goes to a city some five thousand miles away; a compositor patiently thumps out on his typesetter keyboard the words of the manuscript, meaningless to him; a printing press picks up sheets of paper and slides them out with the strange words impressed; a binder folds and sews; a packer nails shut cases of bound books, and stencils a label "Bendela, Congo Belge, via Matadi,"— and a scribe enters on a list "No. 1000, Sakata." It is the thousandth recorded language or dialect into which some part of the Holy Scriptures has been translated and published.

—Eric M. North in American Bible Society pamphlet.

A beggar held out two hats to a passerby. "Mister," he said, "will you gomme a nickel for a cup of coffee?"

"Sure," replied the passerby, 'but what's the idea of the two hats?"

"Well,' said the beggar, "business was so good that I had to open a branch."

The Rev. T. P. Seibenmann recently advertised "Seats Free" at his church at Dublin, Ga. There was such a startling influx of worshippers that he took another look at his church notice. A letter was missing. It read, "Eats Free." There are still many who are more interested in the loaves and fishes than they are in the bread of life.

—Methodist Protestant Recorder.

# AN ATHEIST PRAYS

By Alexander Bedenkoff
Condensed from America

Prayer is a powerful force. Not only religious but even godless people, at their critical moments, seek consolation in prayer. There are many examples in history, among which is that of V. B., a Russian nobleman. It was in November, 1917, when the Bolsheviks overthrew the Kerensky government. V. B. was then living in Moscow with his mother. We cite here his own narative:

Day and night some individuals, armed to the teeth, went from house to house, unceremoniously ransacked papers and arrested people without reason. With every ringing of a bell the inhabitants of the house saw in their imagination a picture of arrest, and death at the wall.

I was in a most difficult and embarrassing state at that time. In the first place, I was an officer of the imperial army, so a counter-revolutionary who ought to be shot at sight. In the second place, I was alarmed about my mother, who, in case of my arrest, would die of heart failure.

One noon, our doorbell suddenly was heard. Some seconds later, our maid brought my mother a visiting card. A visiting card in such times! On the card was printed: Kropotkin. Of course, neither I nor my mother could guess it was famous Prince Kropotkin, the father of anarchism. The name of the Prince Kropotkin was familiar to everyone from schoolboy to grownups, not only in Russia but everywhere. I knew that the Prince had lived in exile, mostly in Paris; but after the March revolution he came back to Russia and was received with enthusiasm.

To our great surprise, as we entered the anteroom there stood Prince Kropotkin himself. There could not be any doubt. Whoever had once seen his picture, his characteristic beard, his slightly winking intelligent eyes looking through glasses, never could be mistaken. He was clad in simple but decent clothes. He held his hat in his left hand.

"What can I do for you?" asked my mother.

"I am exceedingly sorry for intruding," he began gently, "but I should like—to examine your apartment— with your very kind permission."

There was nothing to do but comply with the Prince's wishes. My mother let him pass ahead. He entered one room and then another without stopping, as if he lived there before or knew the arrangement of the lodgings. He entered the dining room, looked around and suddenly wended his way to the room that was occupied by my mother.

"Oh, pardon me," my mother said when the Prince was going to open the door. It is my sleeping room."

He stopped for a moment before the door, looked at my mother and then, as if embarrassed, with some vibration in his voice quickly, "Yes, yes—I know. Excuse me—but I must enter this room."

He put his right hand on the doorknob and began to open the door slowly, then suddenly pulled the door and disappeared into the room.

I was so indignant at the Prince's behavior that I was tempted to reprimand him. I approached the room, flung open the door—and suddenly stood rooted to the spot. Prince Kropotkin was kneeling before the image-case in the room of my mother and was praying. I saw him making the sign of the cross, doing the genuflection. I did not see his face, nor his eyes, as I looked at him from behind. His kneeling figure, his ardent prayer, made him appear so humble as he whispered slowly the words of the prayer. He was so absorbed that he did not notice he was not alone.

Suddenly all my rage, my hatred toward this man had evaporated as a fog under the rays of the sun. I was so moved that I gently closed the door behind me and slowly stepped back.

"He is praying! You understand? Praying," I said to my mother.

"Praying! When, then ——"My mother was so amazed she did not finish her sentence.

Prince Kropotkin stayed in my mother's room about 20 minutes. At last he came out. He came out as a child who had fallen into error, not raising his eyes as if acknowledging his fault—but smiling. He came near my mother, took her hand, kissed it and then said in a very low voice, "I thank you very much for allowing me to visit your house. Don't be angry with me——You see—in that room my mother died. It was a great solace to me, being in her room again——Thank you—thank you very much."

# YOUTH IS ETERNAL

Benjamin Franklin, whose 233rd birthday anniversary we celebrated on the 17th of this month, was 70 years old when he undertook the most difficult task of his life. He was 72 when he negotiated the treaty of alliance with France, which made victory and independence possible.

Franklin was 76 years old when he negotiated the peace treaty with Great Britain, and at 81 he organized America's first anti-slavery society.

What makes a man obsolete? Franklin never became obsolete. With him, life began again at 70 for then he commanded a new and hazardous career. While in France he was not only a diplomat, but he created the American navy, financed the revolution, and acted as judge in prize courts.

Some business concerns make it a rule that when a man reaches a certain age he must retire. They throw away mellowed experience. England held on to Disraeli and to Gladstone and to Balfour of our own day as long as they lived. Their value could never be measured by years. Their value lay in their eternal youth.

Who knows when age has come upon another? Is it gray hair? A faltering step? A stooping posture? Or is it when the mind loses virility? And is the sage who can speak with real wisdom in his early thirties?

Let no young man scoff at the men of years, for tomorrow passes and yet another day is gone. Each individual too soon finds that the calendar has to be torn, and a new one takes its place.

But each of us is ambitious to remain everlastingly youthful—to play gaily at 60, to be interested in all of life at 70, to keep one's wits at 80. Years are the artificialities of calendar makers. If the spirit is young, the years are not even remembered. If the spirit remains young, one can sing a song at 80 as at 18—but at 80 it will have more meaning.

# WHAT KIND OF A SAINT TO BE

We have so many "soft saints." They are lovely in disposition, unright in soul. But their minds, instead of being places of sunlight, are masses of drifting fog; a haze of wishes and illusions——They will do anything for the Kingdom of God but think. The church has no need greater than that of hard saints, with fire not around the head, as in conventional pictures, but fire in the head, a continual state of mental disturbance; saints who can do hard thinking in a day which desperately needs thinking; saints in whom the higher brain centers are not paralyzed. For the deepening of the spiritual life, then, books which help that process of hard thinking are definitely spiritual instruments.

—Halford E. Luccock.

# ALSO IN SOULS

"Reform must begin in the souls of individuals who are willing to remake themselves and willing then, in turn, to form small groups to put into practice on a small scale the ideals which they advocate for society as a whole."

Aldous Huxley, Ends and Means.

# Negroes And Education

**No race has made greater progress than the Negro race in the United States. Starting at the close of the War Between the States with no institutions, no material possessions, no organizations of any sort, they have now 120 institutions of higher learning, with 35,000 students of college grade, 2,457 of collegiate professional grade, and twice the entire number studying college subjects. The first Negro collegiate graduate in America was from Bowdoin College in 1826. The number of Negroes now holding academic and professional degrees is 32,478. Of this number 63.8 per cent are men and 36.2 per cent are women. By 1880 most of the college trained entered the ministry, but now almost all of them are entering the professional field. Nearly 200 Negroes have incomes of $5,000 or more a year The medium high school salary of teachers is $1,300. The need for Negro college graduates is becoming more and more imperative. There is one white physician to every 728 white people but only one Negro physician to every 3,125 Negroes. There is one white teacher for every 110 white children but only one Negro teacher for every 218 Negro children. The Home Mission Board is endeavoring to help our Baptist Negroes in the education and training of their ministry. We consider this one of our most imperative missionary tasks.**

A friend of mine, still happily alive, was one day speaking to her friend, the daughter of Karl Marx. The talk turned, as serious talk so many times turns, to religion. The daughter of Karl Marx said, "I was brought up without any religion. I do not believe in God." Then she added a little wistfully, "But there is in an old German book I once came across a German prayer, and if a record of that prayer exists, I think I could believe in Him."

"What was that prayer?" asked her friend. Then the daughter of Karl Marx repeated slowly, in German, the "Our Father."

—Father McNabb in the Listner

# MISSIONARY NEEDED

Saint Stephen of Hungary is credited with having introduced Christianity into eastern Europe 900 years ago. Perhaps it would be well if another saint would make his appearance in certain parts of Europe today. —Voice of Missions.

# LITTLE JACK HORNER

Little Jack Horner, sat in a corner,
Eating his Christmas pie;
He put in his thumb and pulled out a plum,
And said, "What a good boy am I.'

This familiar old nursery rhyme dates back to an incident in the year 1536. "Jack Horner" was in reality John Horner. For years king Henry VIII of England tried to find fault with the community of Benedictine monks at Glastonbury Abbey. These monks, together with their abbot, Richard Whiting, had steadfastly refused to subscribe to the Oath of Royal Supremacy. As a matter of policy, the abbot desired to transfer the deeds to several manors in Somersetshire to Edward Seymour, brother of Jane Seymour, then the queen. But how could this be accomplished with the abbey being watched on all sides? A pie was specially baked as a Christmas present and sent to Edward Seymour. John Horner was selected by the abbot to deliver the present. But the pie was unusual in that beneath its crust were baked the valuable deeds. In his journey Horner "put in his thumb and pulled out a plum," that is, he extracted one of the deeds, the title to the Manor of Mells, where the Hornor heirs live to this day. So even now the nursery rhyme reminds them that the roof over their heads is there because their ancester, John Horner, was a thief.

Aloysius Horn in Columbia.

## Woman's Missionary Society LITERATURE

The Woman's Home Mission Guide, price 15 cents; Y. W. A. Guide, 15 cents; Shepherd Boy's League Guide and Girl's Auxiliary combined, 15 cents; Starlight Band, 15 cents, with other literature for every department of the Woman's Mission Societies and Circles, are now ready. These include Missionary Society Buttons and Badges.

Send all orders for Woman's Missionary Literature to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## Hope Magazine
PUBLISHED MONTHLY

No better publication can be placed in the hands of women who are doing mission work and interested in the Fireside School development than Hope Magazine, published every month in the year, price 50 cents a year. It contains helps for every department of Woman's Mission Society Organizations, as well as suggestions for religious entertainments. For more than fifty years this Magazine has been an invaluable help. It was founded by the late Miss Joanna P. Moore.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,

## New Yorker Makes

(Continued from Page 1)

news, anecdotes, etc., widely used in a colloquial or figurative sense."

"In round figures," he stated, "our national government will take in five billion dollars this year, according to its own estimates. It is going to spend at least nine billion. Five from nine leaves four billion dollars in the red."

"What does this financial hocus-pocus mean in personal terms. How much is the administration taking out of your pocket every day? What does it mean to your children and mine? Are your children and mine going to be free men or are they being sold into a bondage of debt by an irresponsible and spendthrift administration?"

Some people think the rich pay all the taxes. It has been proclaimed from the White House and from every rostrum in America that the New Deal, by soaking the rich, would make the poor better off. There are two kinds of politicians—one comes to power by pretending to soak the rich and be the friend of the poor; the other tries to tell the truth."

The speaker showed that if the government took the income of all of the "rich" of the nation, including that of all persons who earned as much as five thousand dollars a year, for the year of 1937, which was the most prosperous year of the New Deal, "it still would have been three and one quarter billion dollars short of paying the government expenses for that year."

He then submitted figures to show that it is the people of moderate means who pay the bulk of government taxes. but do not realize it, as the taxes are hidden in the cost of the necessities of life purchased by average Americans.

The government collects twenty dollars in tax on every $700 car that is bought; there is a $3.00 tax on every radio costing as much as $33.00; it collects six cents in taxes for each 15-cent package of cigarets bought; seven dollars is the tax on a refrigerator that costs as much as $150.00; there are taxes on gas and oil, a half-cent tax on every pound of sugar and a tax of two and a quarter cents a pound on every automobile tire that is bought. "The New Deal is digging its hand into your pocket every time you turn around. If you want to powder your nose, it takes ten per cent of the price of the powder. If you want to telephone your mother, it takes at least ten cents on every telephone call that costs more than fifty cents. All these and similar taxes on your daily needs mount to more than two billion dollars a year for the General Government.

"So who foots the bill for all this spending? It is every one of us—rich man, poor man, beggar man, thief. The total spending of all government in this country is greater than everybody in the whole United States earns in three months of one week out of each year."

Dewey cited, as an example of his own attitude toward spending the money of taxpayers, that as District Attorney of New York he had cut the cost of running the office from one million, one hundred and fifty thousand dollars a year to eight hundred and eighty-six thousand dollars. He also stated that a Republican legislature had cut the proposed expenses of the Democratic Governor of New York state twenty-five million dollars, without sacrificing any of the essential services of the state.

"We are all agreed, said Dewey in conclusion," that we are getting many things from the government that are good. We are all agreed that we are not going to economize at the expense of the unemployed or the aged. Just as we must pay interest on the New Deal's debts, we must keep faith with those with whom the New Deal has broken faith. The next administration must pay every dollar of relief money due every American until he has recovered his American birthright, and opportunity to earn his livelihood in his proper place among his fellow men.

"Only a new administration can sweep clean the budgetary litter of the New Deal. Only a new administration can re-open the gates of boundless opportunity for the people of this young and growing nation. Beyond these gates lies the natural heritage of the American people.

## Nashville Man Placed

(Continued from Page 1)

will work with the Advisory Committee in an effort to see that the entire order of Booker Washington stamps is disposed of within a week or ten days, thus showing to the authorities at Washington, from the President of the nation down to the most humble member in the post office department, that the issuing of these stamps honoring the founder of Tuskegee, was a long step in the right direction in giving recognition to the founder of Tuskegee Institute, who was a great leader of the race.

The late Dr. Washington is one of the five outstanding educators being honored in this series of postage stamps, but is the only race man given the recognition by the Post Office Department.

Dr. Patterson said: "Realizing that these stamps will be invaluable as the years go on, we are urging the purchase of the Booker Washington Stamps on the part of Negroes and interested friends throughout the nation, along with the special Memorial Envelopes which are being prepared for the occasion. We are inviting a group of outstanding Negroes to serve as members of the Executive Committee which will sponsor this celebration."

Many responses are already pouring into Tuskegee from these leaders signifying their intention to serve.

The Christian way of life offers an opportunity for all to serve whether they be lowly folk or the world's wealthy.

# COLLEGE CHURCH HOLDS FELLOWSHIP MEETING AT A. AND I.

### Young People from all of City's Educational Institutions Attend

The Church School of the A. and I. State College sponsored on Sunday, January 13, under the leadership of Miss Gwyndolyn Hale, a fellowship meeting which brought together many of the leading colleges of the city with representation from foreign countries including Cuba, Brazil and Trinidad.

Institutions bringing greetings and student members from afar were Ward Belmont College, Scarritt College, Vanderbilt University, and Peabody College.

The program, the theme of which centered around the fundamental and basic principles of international cooperation—friendship and love—revealed the true spirit of Christian living. Much color was given the program by the relating of customs and ideals of the native countries of the visiting friends.

Participation in the program included addresses by Miss Ruby Van Hosser, teacher of Religious Education and Sociology, Ward Belmont College; Mr. Allen Early, President of the Student Christian Association, Vanderbilt University; Miss Agnes Dowsey, Scarritt College; Mr. Agenor Andrade, Peabody College; Miss Sara Fernandez, Scarritt College; Mr. Carlos Perez, director of Young People's Christian Work, Cuba, now in attendance at Scarritt College; Mrs. Perez, who accompanied Mr. Perez; and Mr. Yacub Syne of Trinidad, in attendance at the A. & I. State College, who welcomed the group on behalf of the College.

It is the opinion of the administration that much is to be gained by the wholesome relationships that are established for the student body. The Church School, under the faculty direction of Mr. R. E. Clay, by bringing outstanding speakers and personalities to the campus, has figured largely in developing a spirit of goodwill and fellowship between individuals and institutions. Through the liberal cooperation and support of President W. J. Hale, the Church School, which is a definite phase of student activity, has become to be one of the most influencing factors of campus life.

The winter quarter continues with a series of religious entertainment largely sponsored by organizations—fraternities, sororities and clubs—with addresses, dramatizations and musicals.

## Spelling Contest

(Continued from Page 1)

Frierson, the supervisor of county schools here in Nashville. They plan three prizes, first, second and third, and they have called upon the business men of this city, with a number of professional men to contribute the funds for the purchase of these prizes, which will in a measure, encourage the students to advance themselves in orthography, and thereby improve their English.

This contest is to be held in the auditorium of the Morris Memorial Building at Fourth Avenue and Cedar Street. Mrs. Frierson expects the largest attendance at eleven o'clock Saturday, March 9th that any Davidson County school entertainment has ever drawn to one of their affairs.

### ULTRA MODERN

Two modern little girls, on their way home from Sunday school, were discussing the lesson.

"Do you believe there is a devil?" asked one.

"No," said the other promptly. "It's like Santa Claus: it's your father."

# MRS. S. H. FREEMAN HEADS DIVISION FOR CRUSADE ON CANCER

### Meharry Doctors also on Committee Named for State-wide Drive on Dreaded Disease

That the Negro population of the state may participate in the 1940 campaign to reduce the death rate from cancer, Mrs. Rogers N. Herbery of Nashville, commander of the Tennessee Division of the Women's Field Army of the American Society for the Control of Cancer, has appointed Mrs. S. H. Freeman of Nashville, a leader in educational, civic, health and church activities, as deputy commander of the Negro Section of the Tennessee Division.

An advisory committee to the state-wide Negro section has also been appointed, those to serve on this committee being Dr. William P. Quinn, chairman; Dr. J. H. Hale, Dr. W. H. Grant and Dr. D. T. Rolfe, all of the Meharry Medical College faculty. Dr. E. L. Turner, president of Meharry College and Dr. H. S. Shoulders, also of Nashville, a member of the Cancer Committee of the Tennessee State Medical Association, are ex-officio members of the committee of which Dr. Quinn is chairman. The appointment of Mrs. Freeman and the advisory committee was made by Mrs. Herbert in connection with her recent visit to Meharry College when she explained the aims and purposes of the Women's Field Army, which was organized in 1936 to aid in the work of controlling cancer, which is one of the leading causes in the United States of death and suffering.

The slogan of the Women's Field Army is "Early Cancer is Curable. Fight it with Knowledge."

In order to bring the message of cancer control before as large a group as possible preliminary to starting the work of organizing state-wide units of the Negro Section, Mrs. Freeman announces that a tea will be given at the Nurse's Home at Meharry Medical College Sunday afternoon, January 28, at 4:00 o'clock, to which all officers of women's clubs and other organizations of the city and members of these groups are invited.

A program will be given in connection with the tea with Mrs. Freeman presiding. Speakers will include Mrs. Herbert, Dr. Turner, Dr. Shoulders and Dr. Quinn. Dr. Quinn and the other members of the Advisory committee will assist Mrs. Freman in welcoming the guests.

This will be the first year for the Tennessee Division of the Women's Field Army to have a Negro Section and it is felt under the leadership of Mrs. Freeman that a strong and effective state-wide organization will be set up, ready to paign in April, when the effort will participate in the intensive cambe made to call the attention of the people in every walk in life to the fact that much of cancer in its early stages can be cured and to urge that those having any symptoms of the disease consult their family doctor or other reputable physician at once. The second phase of the campaign will be to enroll members in the Women's Field Army, men and women, at an annual fee of $1.00, the money to be used in promoting the educational work.

Mrs. Freeman brings to her new position active experience in various lines of work and wide contacts. She is a member of the faculty of Pearl High school and is the wife of an instructor at Meharry Medical College. During the summer she does demonstration work for the General Board of Education at Fisk University, and is active in church circles and civic movements. She is editor of the official journal of the Women's Auxiliary to the National Medical Association.

## Pearl High Boys and Girls Trim Pulaski Cagers 17-16, 34-23

By Henry J. Stockard, Jr.

Pearl High Gymn, Jan.—The Pearl High School Cagers added another victim to their Middle Tennessee Conference race tonight. When the Boy's and Girl's teams scored a twin victory over the strong finishing, Hardwood Gladiators of the Bridgeforth High School, Pulaski by the scores of 17-16 and 34-23 before nearly 200 spectators.

The Crimson Girls won 17-16 in an extra beat on B. McMahon's tree throw to stave off a near "tragic" rally, put on by the Bridgeforth Lassies paced by Vance and Crenshaw, whose goals were responsible for tying the regular session at 16 all. Segine and Silvertooth Collaborated to give Pearl a comfortable 14-10 lead at the end of the 3rd quarter, which quickly melted away, but for the magnificent defensive play of McCoy and Wrigh the Giles Countians would have forged ahead and possibly won. Seginies 12 points were high, Vancies 6 were best for Bridgeforth.

The Bridgeforth Boys's start was as cold as the zero weather outside, and "Pro" Donaldson and Co. quickly took charge to domiuate the play from the outset, without allowing the Giles Gents much of a chance to lead at the half 19 to 4. The down-floor passing of Seeney and Carion and the agilety of Jackson. Donaldson and Andrews in manipulating the ball into scoring position proved most destructive in Pulaski's 34-23 defeat.

Not until the second half, while playing against the Crimson Scrubs was Bridgeforth able to make any progress. With a sub, Linsley Reynolds of the Pulaski, Reynold's dynasty in there pitching 7 goals to share the starring honors with Gentry and Abernathy The Tiger Varsity went back in late in the 4th period to "ice" the game and take some of the fever out of the Giles Boys before giving away again to the Subs
